Q. If Mr. Emery's oil was loaded from one of those tanks when the tank was nearly empty would he not receive a much larger proportion of deposit than if he got fresh oil through the pipe direct from the wells?—A. He would at no time have got oil from the pipe line below the sediment line.

Q. How do you know that?—A. Because that is the order and custom of the line.

Q. How do you know that somebody did not violate the order?—A. If he had made the statement as being an exceptional case of sediment that would be a different thing, but he states that inferior oil was persistently supplied to him, knowing that it was inferior oil.

Q. But when you first denied this and gave the explanation you gave as an explanation the fact that it was impossible by reason of the fact that this was a continuous stream of oil flowing through the pipe line and could not have been in this condition; but you withheld from us the facts that you had accumulating tanks at Milton and this oil might have been taken from the tanks when nearly empty.—A. He made no such statement. He stated that oil of an inferior quality was persistently furnished to him.

Q. Because it contained a great percentage of sediment, so much so as to render it of much less value than if it had been fresh oil?—A. Those tanks were used constantly.

Q. Were you ever there to see any of his cars loaded?—A. No, sir.

Q. You were not?—A. No, sir.

Q. How many tanks are there at Milton?—A. I do not know.

Q. You do not even know that?—A. No, sir.

Q. Are there not five or six?—A. I do not know.

Q. You know nothing about it?—A. I do not know how many tanks there are there.

Q. Nor from what tank his oil was loaded?—A. No, sir.

Q. Nor whether his oil was loaded from a tank which was nearly empty or not?—A. No, sir; but I know that it was not below the sediment line.

Q. How do you know that?—A. From statements of employes, and I know the testimony on that point would be very clear and explicit in any investigation.

Q. But you never saw this done?—A. Not personally.

Q. Yet you swear that the statement made was false?—A. That we persistently delivered him inferior oil; yes, sir.

Q. His testimony was that the oil he received by reason of containing a large amount of sediment was of less value than of fresh oil.—A. And the impression he tried to give the committee was that it was done for the purpose of squeezing him out of the business. I say that that is false.

Q. You have stated that his statement that the oil he received was sediment oil is false, and yet you know nothing about it.—A. I know all about that which anybody could know who did not have absolute personal knowledge.

Witness dismissed.

The committee then adjourned until 11 o'clock on Saturday, April 28, 1888.

---

APRIL 28, 1888.

The committee met at 11 o'clock a. m. Present: The chairman, Mr. Smith, and Mr. Bunnell.

Mr. CHOATE. I believe Mr. Archbold wants to correct a statement he made yesterday.

Mr. ARCHBOLD. I want to correct my statement made yesterday in regard to the capacity of a through trunk 6-inch line of pipe. I think I stated it in my testimony to be between 6,000,000 and 7,000,000 of barrels. I should have said just half that amount, three to three and a half millions.

By the CHAIRMAN :

Q. That is the present capacity with the pumping power you have at the present time ?—A. Yes, sir.

Q. Of course you agree with Mr. O'Day that the amount of oil that might be passed through a 6-inch pipe depends upon the pressure you put upon it, and as you state the capacity you mean with the machinery that you have now in use ?—A. Yes, sir.

By Mr. GOWEN :

Q. That would depend very much upon the grade of the line. A descending grade line would carry much more oil than one that goes over the hills. It would require a greater force of pumping power there ?—A. Yes, sir.

By the CHAIRMAN :

Q. Your statement as to the capacity of your lines relates to them as they at present exist ?—A. Yes, sir.

By Mr. GOWEN :

Q. You have spoken about your business methods being better than others, and your knowledge and experience enables you to get good results, etc. Have you not a large amount of expenditures which other people have not, in consequence of having dismantled and thrown out of existence a great many establishments in order to consolidate the business into fewer ones ?—A. I think the consolidation of the business into large and thoroughly modern establishments has more than counterbalanced, in the aggregate business, any such expense.

Q. Still you do not answer my question. Is it not a fact that you have a great many idle refineries that you have left idle ?—A. No, sir ; we have not a great many idle refineries.

Q. How many have you, or have you dismantled ?—A. There have been in the history of the business, beginning from the start, a great many of the original little concerns dismantled.

Q. Dismantled after purchase by you ?—A. After purchase by us.

Q. How many of those do you suppose ?—A. I can not state.

Q. Fifty ?—A. Possibly, in the aggregate, fifty.

Q. The whole capital of which has been paid, except to the extent that the material would answer as junk ?—A. Such parts of the material as were available for the business were used.

Q. Have you not also in various parts of your business under employ a great many gentlemen at very large salaries, whose salaries were given to them as a compensation or consideration to you of the surrender of their business to you ?—A. I do not think they have.

Q. How many have you ?—A. I can not undertake to say.

Q. Do you mean to say there are none ?—A. There may be possibly isolated cases of that kind of a reserve force. As a rule we are busy men, and try to keep our employes busy.

Q. Are there not now in your employ a great number of people at high salaries about and connected with the establishments which at one time they owned and which you now own ?—A. No, sir ; they are not idle.

Q. I did not say anything about idleness.—A. We have many men, of course, employed in the various establishments at salaries.

Q. Who were previous owners of those establishments ?—A. Some of whom were.

Q. How many of them ; from twenty to fifty in the United States ?—A. I can not answer.

Q. Do not some of those get salaries as high as \$20,000 a year?—A. I do not think so.

Q. Many of them get \$10,000 a year, do they not?—A. I do not think so.

Q. What is the highest salary any of them get?—A. I do not know of a salary as high as \$10,000 under any such circumstances.

Q. You have recently bought Mr. Malcolm Lloyd's refinery, have you not?—A. Yes, sir.

Q. He remains in your service, does he not?—A. Yes, sir.

Q. He gets a salary, does he not?—A. Yes, sir.

Q. As treasurer?—A. He is in the service of our Philadelphia branch of the business.

Q. As treasurer of the organization?—A. I believe that is so.

Q. What salary does he get?—A. I decline to state it.

Q. If you decline to state a thing it can not be because you do not know it?—A. Whether I know it or not, I do not say; but I decline to state it.

Q. When you decline to answer a thing it is not because you do not know. You do know that fact, do you not?—A. I do know what his salary is.

Q. You also know the salary of other people in similar positions, do you not?—A. I do in some cases; I happen to in that.

Q. Do you decline to answer all such questions?—A. I do.

Q. You have also in your organization a large amount of very large salaries, have you not—in the Standard Oil Trust?

Mr. CHOATE. Is that considered material to this investigation?

Mr. GOWEN. The materiality is simply in reply to Mr. Archbold's testimony that their better business methods enable them to do work cheaper than other people. Now if I can show that they have an enormous expense which other people do not have, it is certainly evidence to show that they have not better methods. Here is an item of expense that other people do not have.

The CHAIRMAN. I do not see myself that there is any objection growing out of the natural desire of persons in business not to disclose their private affairs, applicable to the general question whether salaries are paid to the officers of this Standard Oil Trust. When the question of amount is raised the objection returns to the same point where it was when Mr. Lloyd was examined, and upon that occasion, after the committee had met in executive session, the witness was excused from stating the amount. I suppose that ruling will have to be applied here to-day, as in the absence of the majority of the committee I have no power to change it.

Mr. SMITH. I would like to make a few remarks on this point. I suppose Mr. Gowen's idea is to show—or what he proposes to show—that greater salaries can be paid by this combination, and are paid, than if these gentlemen were in a private enterprise of their own. Now, the question arises in my mind if such salaries can be paid by this great combination, or this combination of these several refiners, transporters, etc., more so than if they were privately engaged in the producing and refining of oil, what causes that? What is the cause, and from whom does this amount of money come that produces these large salaries?

The CHAIRMAN. Now, Mr. Smith, ordinarily I would not take up this discussion except in executive session; but since you have made that statement permit me to recall to your memory the fact that the committee in discussing this matter came to the conclusion that while it was pertinent and proper for us to know that salaries were paid, and that wit-

nesses might be interrogated as to whether they received salaries, that it would not assist us in determining what legislation was necessary to know the exact figures. That is the conclusion of the committee with which I can not interfere, and which you will permit me to suggest to you ought not to be discussed except in executive session.

Mr. SMITH. I do not want to know anything about the amount in dollars and cents just to a cent, but the question is, have there been large salaries paid, or are they now paid? That is the question.

The CHAIRMAN. That question as I say is put here, and I in response to the inquiry made here say that the form of the question as I recall it does not seem to me to be objectionable; but the amount is not called for by this question—is not covered by it.

Mr. GOWEN. No, sir.\* As I understand the ruling of the committee, without the order of the committee I will not ask for the amount. The whole object of this examination is to show that this business is by reason of the manner in which it is conducted subjected to a much greater expense than its competitors are; that they are really paying and have to pay more money and that it is more extravagantly managed. Therefore, they can not produce cheaper than their competitors, and as their competitors are ruined and they are prosperous there must be some other reason for the difference.

Mr. SMITH. What I want to show in this respect is the bearing of these things upon the public business of the country. It is public property and the public has a right to know it.

Mr. GOWEN. Certainly.

(Question repeated.)

The CHAIRMAN. I will put the question as I suppose the rule of the committee requires.

By the CHAIRMAN:

Q. You have a corps of officers connected with your Standard Oil Trust in addition to the officers of the several corporations?—A. No, excepting the trustees themselves.

Q. The trustees themselves?—A. The trustees themselves.

Q. Are they paid salaries?—A. Yes, sir.

Q. And those salaries are in addition to the salaries paid to the officials of the corporations whose stock the trust holds?—A. No, sir; those trustees in so far as they are related, and I believe they are all related with different ones of the corporation, have no salaries in the corporation.

Q. Other people are paid salaries in the corporation, people other than the trustees. Where other people are employed they are paid salaries, are they not?—A. Yes, sir.

Q. So that you have a set of salaries paid to the trustees under the trust agreement, and a set of salaries paid to the officers of the several corporations in all cases except where the trustees are officers?—A. Yes, sir.

By Mr. GOWEN:

Q. How many trustees are there?—A. Nine.

Q. And the chairman of those trustees gets a larger salary than the others?—A. I decline to answer that.

Q. I do not ask the amount; is it larger or smaller than the others?

The CHAIRMAN. I do not see any objection to stating whether those salaries are graded.

The WITNESS. It is larger.

Q. Are you also an officer in some of these subordinate companies?

A. Yes, sir.

Q. Do you receive any salary at all from any other?—A. Yes; I do.

Q. From what companies?—A. I receive a salary from the Acme Oil Company and from the Atlas Company.

Q. Any others?—A. No, sir.

Q. Then you can correct your previous answer that where one of those trustees received a salary he was not paid additional salary?—A. Yes, sir; I must correct that.

Mr. DODD. Let me ask him why he makes the distinction. Is it not a recent change?

The WITNESS. Yes, sir; it is a very recent change in that regard. That I had not in my mind when the question was first asked.

Q. Do you mean a recent change in your system?—A. In my case.

Q. Only in your own case?—A. Yes, sir.

Mr. GOWEN. I think at this moment I will give in evidence this list from the report of the investigation relative to trusts in New York, a list of corporations the stocks of which are wholly or partially held by the trustees of Standard Oil trusts.

*List of corporations the stocks of which are wholly or partially held by the trustees of Standard Oil Trust.*

	Capital stock.	S. O. Trust ownership.
<b>New York State:</b>		
Acme Oil Company, manufacturers of petroleum products.....	\$300,000	Entire.
Atlas Refining Company, manufacturers of petroleum products....	200,000	Do.
American Wick Manufacturing Company, manufacturers of lamp wicks.....	25,000	Do.
Bush & Denslow Manufacturing Company, manufacturers of petroleum products.....	300,000	50 per cent.
Chesebrough Manufacturing Company, manufacturers of petroleum.....	500,000	2,661-5,000.
Central Refining Company (limited), manufacturers of petroleum products.....	200,000	1-67, 2 per cent.
Devos Manufacturing Company, packers, manufacturers of petroleum.....	300,000	Entire.
Empire Refining Company (limited), manufacturers of petroleum products.....	100,000	80 per cent.
Oswego Manufacturing Company, manufacturers of wood cases....	100,000	Entire.
Pratt Manufacturing Company, manufacturers of petroleum products.....	500,000	Do.
Standard Oil Company of New York, manufacturers of petroleum products.....	5,000,000	Do.
Sone & Fleming Manufacturing Company (limited), manufacturers of petroleum products.....	250,000	Do.
Thompson & Bedford Company (limited), manufacturers of petroleum products.....	250,000	80 per cent.
Vacuum Oil Company, manufacturers of petroleum products.....	25,000	75 per cent.
<b>New Jersey:</b>		
Eagle Oil Company, manufacturers of petroleum products.....	350,000	Entire.
McKirgan Oil Company, jobbers of petroleum products.....	75,000	Do.
Standard Oil Company of New Jersey, manufacturers of petroleum products.....	2,000,000	Do.
<b>Pennsylvania:</b>		
Acme Oil Company, manufacturers of petroleum products.....	300,000	Do.
Atlantic Refining Company, manufacturers of petroleum products..	400,000	Do.
Galena Oil Works (limited), manufacturers of petroleum products..	150,000	86½ per cent.
Imperial Refining Company (limited), manufacturers of petroleum products.....	300,000	Entire.
Producers' Consolidated Land and Petroleum Company, producers of crude oil.....	1,000,000	65-132 per cent.
National Transit Company, transporters of crude oil.....	25,455,200	94 per cent.
Standard Oil Company, manufacturers of petroleum products.....	400,000	Entire.
Signal Oil Works (limited), manufacturers of petroleum products..	100,000	38½ per cent.
<b>Ohio:</b>		
Consolidated Tank-Line Company, jobbers of petroleum products..	1,000,000	57 per cent.
Inland Oil Company, jobbers of petroleum products.....	50,000	50 per cent.
Standard Oil Company, manufacturers of petroleum products.....	3,500,000	Entire.
Solar Refining Company, manufacturers of petroleum products.....	500,000	Do.

*List of corporations, etc.—Continued.*

	Capital stock.	S. O. Trust ownership.
<b>Kentucky:</b> Standard Oil Company, jobbers of petroleum products.....	\$600,000	Entire.
<b>Maryland:</b> Baltimore United Oil Company, manufacturers of petroleum products .....	600,000	5,059-6,000.
<b>West Virginia:</b> Camden Consolidated Oil Company, manufacturers of petroleum products.....	260,000	51 per cent.
<b>Minnesota:</b> Standard Oil Company, jobbers of petroleum products.....	100,000	Entire.
<b>Missouri:</b> Waters Pierce Oil Company, jobbers of petroleum products .....	400,000	50 per cent.
<b>Massachusetts:</b> Beacon Oil Company, jobbers of petroleum products.....	100,000	Entire.
Maverick Oil Company, jobbers of petroleum products.....	100,000	Do.
<b>Maine:</b> Portland Kerosene Oil Company, jobbers of petroleum products....	200,000	Do.
<b>Iowa:</b> Standard Oil Company, jobbers of petroleum products.....	600,000	60 per cent.
Continental Oil Company, jobbers of petroleum products.....	300,000	62½ per cent.

I will also offer here in evidence this statement of an appeal to the executive of Pennsylvania, which was proved by Mr. Campbell, and which contains the contract of the South Improvement Company:

[Compliments of Lewis Emery, jr., Bradford, McKean County, Pa.]

## AN APPEAL TO THE EXECUTIVE OF PENNSYLVANIA.

*An address to Gov. John F. Hartranft, invoking the aid of the State against the unlawful acts of corporations, presented August 15, 1878.*

The 20th section of the first article of the constitution of Pennsylvania provides in its "Declaration of rights":

"The citizens have a right in a peaceable manner to assemble together for their common good, and to apply to those invested with the powers of government for redress of grievances or other proper purposes, by petition, address, or remonstrance."

The third section of the seventeenth article of the constitution provides that—

"All individuals, associations, and corporations shall have equal right to have persons and property transported over railroads and canals; and no undue or unreasonable discrimination shall be made in charges for, or in facilities for, transportation of freight or passengers within the State, or coming from or going to any other State."

And the seventh section provides that—

"No discrimination in charges or facilities for transportation shall be made between transportation companies and individuals, or in favor of either, by abatement, drawback, or otherwise, and no railroad or canal company, or any lessee, manager, or employé thereof shall make any preferences in furnishing cars or motive power."

And the twelfth section directs that—

"The general assembly shall enforce by appropriate legislation the provisions of this article."

The third section of the sixteenth article provides that—

"The exercise of the police power of the State shall never be abridged, or so construed as to permit corporations to conduct their business in such a manner as to infringe the equal rights of individuals or the general well-being of the State."

And the thirty-first section of the schedule declares that—

"The general assembly at its first session, or as soon as may be after the adoption of this constitution, shall pass such laws as may be necessary to carry the same into full force and effect."

**JOHN F. HARTRANFT, Governor of Pennsylvania:**

**SIR:** The undersigned, members of a committee appointed by the general council of the Petroleum Producers' Union for that purpose, address to you, as the official head of the Commonwealth, a plain statement of facts, to a great extent known to be true from personal knowledge, and all material parts of which are susceptible of proof by competent evidence.

We address you, not only as individuals whose personal interests have been affected, whose property has been rendered comparatively valueless, and whose capital and labor are bound against their consent to increasing the gains of grasping corporations, but as citizens of the great Commonwealth of Pennsylvania, apparently prostrate, and powerless to control one of its greatest products and the immense business that annually flows from it.

The petroleum production of Pennsylvania is confined geographically to the north-western portion of the State, extending from its border upon New York State nearly to Pittsburgh, and is the chief interest in the counties of McKean, Warren, Forest, Crawford, Venango, Clarion, Butler, and Armstrong.

The amount of money invested in well property, constantly to be renewed and kept good, represents at least \$20,000,000, and while the value of the lands upon which the wells are located is not easily determined, it represents many times the value of the well property.

Petroleum should yield at the wells, with its transportation and sale unfettered, \$25,000,000 to \$35,000,000 annually, while as an article of export it ranks third among the products of the nation and as first among its manufactured exports.

For transportation outlets it has the Pennsylvania Railroad to the sea-board at an average distance therefrom of less than 400 miles. The New York Central and Lake Shore Railroads reach Oil City by way of Cleveland, Ohio, 764 miles from the sea-board, and Titusville, by way of Dunkirk, N. Y., 571 miles to the sea-board, and the New York, Lake Erie and Western and Atlantic and Great Western Railways reach Oil City by way of Meadville, 550 miles to the sea-board.

#### CONDITION OF THE TRADE IN 1871.

At that time the lines of the Pennsylvania Railroad in the oil region were dotted with refineries, located at Tidionte, Henry's Bend, Oleopolis, Oil City, Corry, Titusville, Miller Farm, Rouseville, and other points on the Oil Creek Railroad, at various points on the Philadelphia and Erie Railroad, and on the Allegheny Valley Railroad, these roads being tributaries of and controlled by the Pennsylvania Railroad, while upon its main line extensive refineries were located at Pittsburgh and Philadelphia. The refineries at Cleveland, Ohio, confined themselves in a measure to the Western domestic trade, and those of Portland, Boston, and New York had generally specialties in the trade.

The markets were filled with buyers of crude and refined; information as to stocks, production, and consumption was open and obtainable, and values were regulated by the law of supply and demand.

In its relation to this trade, western Pennsylvania almost exclusively possessing this product, with ample refineries in its midst; with its great State railroad penetrating the producing region and by it having the shortest route to the sea-board; with the Allegheny River as an additional means of transportation to Pittsburgh, the western terminus of the Pennsylvania Railroad, and with Philadelphia, its eastern terminus, as an exporting point, Pennsylvania had, and was entitled to, the control of the refining and transportation of its own product.

#### CONDITION OF THE TRADE IN 1877-'78.

Now this is all changed! The refineries on the lines of the Pennsylvania Railroad have been demolished, excepting where reached by rival railroads, and this business has been transferred to Cleveland and New York, the refineries remaining in this State having passed into the ownership and control of a foreign organization, as has also the local transportation from the wells, by means of pipe lines to the lines of the railways.

The transportation of every nature is subject to its dictation; it possesses every avenue of information; it affixes its own value to the crude product when purchasing, and the refined products when selling; it establishes its own rates of compensation to be paid the railways, and the laws of commerce which govern values in other products are in this a part of the history of the past. So far as the petroleum trade is concerned an enterprise or investment therein is only a wager as to what step the Standard Oil combination will next take. With the world consuming double the amount of our petroleum that it did in 1871, the \$30,000,000 which should be received from the crude product has dwindled to its half; the \$15,000,000 which should be the profit of Pennsylvania refineries has been transferred to Ohio and New York, and the \$20,000,000 which should have swelled the earnings of the railways have gone, no one dare say where; but the colossal fortunes acquired since 1872 by every member (so far as its members are known) of this now world renowned organization are proofs of the success attendant upon a scheme no less unlawful than gigantic, and which has all the outward and visible signs of inward and spiritual corruption. To-day a

foreign corporation is the absolute master of the production and its value, of transportation by pipe lines, transportation by railroad, and the compensation therefor, of storage and refining, and the profit thereof, and dictates prices through the world, of the first, or among the first of the products of Pennsylvania and of the United States, and this to the impoverishment of thousands of citizens and the destruction of each of these interests within the State. That this has been accomplished through and by means of the co-operation of the Pennsylvania Railroad, its management and influence, is matter of record.

The first attempt to monopolize the trade was initiated by the conveyance, by R. D. Barclay, Thomas A. Scott's private secretary, and S. S. Moon, the legislative agent of the Pennsylvania Railroad, to a party composed principally of Cleveland and New York men, headed by an agent of the New York Central and Erie Railways, of a charter granted by the legislature of Pennsylvania for a different purpose, under which they organized for the seizure of the petroleum trade, retaining the charter title of "the South Improvement Company," the then managers thereof being the managers of the organization now known as the Standard Oil Company.

With the South Improvement Company, not a member of which lived in the oil region or was an owner of oil wells or oil lands, the Pennsylvania Railroad hastened to execute a contract (January 18, 1872) giving it the sole and exclusive control of all petroleum shipments thereon, regardless of ownership, and securing this by the payment by the railroad of a rebate or drawback to the South Improvement Company, of such a sum as would have inevitably driven all others out of the trade; and lest there might be doubt as to the intent to so do, it was expressly stipulated in the fourth article thereof that that was the result aimed at, and the Pennsylvania Railroad therein bound itself, so far as it legally might, to aid in accomplishing it. (See copy of contract annexed hereto.)

The action of the legislature and of Congress, and the uprising of the people against this unparalleled iniquity, destroyed the combination for the time being, the railroads having pledged themselves to never attempt a similar outrage. (See agreement hereto attached, dated March 25, 1872.)

The local transportation of crude petroleum had been gradually changing from movement by barrels to carriage in pipe lines from the wells to tankage located on the lines of railway, the principal of which pipe lines, at this time known as the Pennsylvania Transportation Company (formerly Allegheny Transportation Company), was under special charters of the legislature, and owned and controlled by Messrs. Scott, of the Pennsylvania, and Fisk & Gould, of the Erie Railways. The legislature had been petitioned at various times since 1866 to pass a free pipe law, but the various bills introduced for that purpose could never overcome the opposition of the Pennsylvania Railroad in the legislature. During the excitement attendant upon the rise and fall of the South Improvement Company scheme the effort was renewed, and the legislature enacted a law, restricted to the eight oil producing counties, but the Pennsylvania Railroad influence was strong enough to exclude Allegheny County from the operation of the act, thus shutting out western Pennsylvania from Pittsburgh, the terminus of the Pennsylvania Railroad, the natural outlet of the oil region, and the natural refining point of the United States.

The succeeding efforts to pass a free pipe law, either general in its nature or to permit construction of pipe lines to lines of railway within the State, or to include Allegheny County in the law of 1872, have been defeated invariably by the opposition of the Pennsylvania Railroad, and the law of 1874, known as the Wallace act, was so framed and enacted as to leave it doubtful whether it had not succeeded in withdrawing from the eight counties referred to all the rights conceded to them by the act of 1872, a wrong which no subsequent legislature has been able to redress.

Under the law of 1872 pipe lines owned by citizens in the oil region had been organized and were in operation, giving free access to the railways, but after the passage of the Wallace act (April 29, 1874) the Standard combination, which had never really abandoned the South Improvement scheme, systematically undertook their destruction by forcing them into insolvency and then absorbing them. This required railway co-operation, and various means were employed therein, notably among which is the scheme adopted by the ring and promulgated by the railroads, October 1, 1874. (See circular attached hereto, dated September 9, 1874.) An explanation is necessary to understand why the railroads should unite: first, to carry oil received by them through pipe lines that had combined to maintain a given rate for pipeage, 22 cents per barrel cheaper than on oil received from pipe lines not so combining; and second, to further weaken the refineries remaining in western Pennsylvania, by depriving them of their geographical advantage of proximity to the crude product, to the coal used as fuel, and to the exporting ports, by *free transportation* of crude petroleum to the ring refineries in other States. Various pipe lines had already been forced out of existence, had been bought up and united under the name of the United Pipe Lines, which was owned one-third by the Standard Oil Company, one-third by the Lake Shore and New York Central Railroads, and one-third by individuals who were

members of and directors in the Standard Oil Company. The Pennsylvania Railroad had as its particular feeder a similar organization, known as the Empire Pipe Line. This explains the first point referred to above. The second, so far as the Pennsylvania Railroad is concerned, is inexplicable upon any ordinary hypothesis or under any known theory in railroad politics. The scheme was a success; pipe lines one after another succumbed, and refiner after refiner was bankrupted and his works absorbed.

This effected, the monopoly, backed by the New York railroads, in one of which it exercised unlimited power, felt strong enough to demand of the railroads that it should be given the future sole conduct of the trade under the old South Improvement plan. Upon this the Pennsylvania Railroad apparently awoke to its danger, resisted the demand, and in July, 1877, President Scott announced as the policy of the Pennsylvania Railroad open and free trade to all shippers of petroleum. It was then conducting its oil traffic through its ally, the Empire Transportation Company, which possessed a system of pipe lines (before referred to) extending over the oil region, controlling a large portion of the production, with ample tankage, with a large rolling-stock upon the Pennsylvania Railroad, and owning or controlling a refining capacity nearly equal to one-half the consumption of the world. In the following month (August, 1877), immediately after the riots at Pittsburgh, which were in their extent the natural outgrowth of railroad freight discrimination against that city, the monopolists succeeded in convincing the officials of the Pennsylvania Railroad that it was to their or its interest to force the Empire Company, its cars, its pipe lines, its tankage, and its refineries into their hands. The people of western Pennsylvania protested in a communication to the president and directors of the Pennsylvania Railroad in September, before the extent of the proposed iniquity had become fully known to the public, which communication seems never to have reached the board of directors. (Copy hereto attached, dated September 11, 1877.) The outrage was finally consummated October 17, 1877, and the Pennsylvania Railroad was left without the control of a foot of pipe line to gather, a tank to receive, or a still to refine a barrel of petroleum, and without the ability to secure the transportation of one, except at the will of men who live and whose interests lie in Ohio and New York.

Into those hands had now passed the last refineries of Pennsylvania, the last means of transportation from the wells to the railroads, and the last means of carriage to the markets of this country and of the world. The South Improvement scheme (less its chartered organization as in 1872) was at last an accomplished fact, and in the successful designing, prosecution, consummation, and operation of which it is impossible not to believe that railroad officials were personally interested.

#### CONGRESSIONAL LEGISLATION.

As the conspiracy was evidently gaining strength, the people of Pennsylvania united in an effort to induce Congress to again interfere, as in 1872, and in 1876 it directed an investigation, which was conducted in a dilatory manner by a committee; a prominent member of the Standard Oil Company, and not a member of Congress, presiding behind the seat of the chairman. Vice-President Cassatt, of the Pennsylvania Railroad, was the only prominent railway official who appeared in obedience to the subpoenas of the Speaker of the House of Representatives, and he refused to give the committee any information as to the matter under investigation, and the counsel of the Pennsylvania Railroad, ex-Senator Scott, appeared before the committee in justification of his so doing. The financial officer of the Standard Oil Company appeared before the committee, accompanied by a member of Congress, also a member of that company, and promptly refused to give the committee any information as to the organization, or the names of its members, or its relations with the railroads. The influence and power of the combination was apparent. The committee never reported, never complained of the contempt of its witnesses, and all the evidence and record of its proceedings effectively disappeared. In 1877-'78 a bill was introduced by Representative Watson, of western Pennsylvania, seeking to prevent discrimination in interstate commerce, which has been reported by a committee, but which can hardly overcome the covert opposition which it meets.

#### RECENT STATE LEGISLATION.

All efforts to obtain a free pipe law in this State having through a series of years proved unavailing, although New York in its efforts to control the trade in Pennsylvania petroleum had enacted such a law, a bill was prepared enforcing in this State the third and seventh sections of the seventeenth article of its constitution. This bill, known as the anti-discrimination act, provided that shippers of property by car-load from any point on a railroad within the State to any other point within the State should be charged equal rates and given equal facilities. Copies of the proposed law were sent to the prominent railroad officials in the State, but its provisions were so fair and protective to every citizen of the State and to every legitimate railroad interest that neither before the judiciary committee of the senate, which reported it favorably by an unanimous vote, nor in the senate, which passed it with but one dissenting voice, nor before the judiciary committee of the house, which

reported it unanimously, did any railroad stockholder, official, or legislative agent appear to offer an objection to its becoming a law. Yet it was killed in the house by the familiar means employed by legislative agents in disposing of measures objectionable but not debatable. Had the bill become a law it would have rebuilt the refineries of the State, with Philadelphia (whose petroleum trade under the monopoly has gradually dwindled to a fraction of its former magnitude) as the exporting point, with the Pennsylvania Railroad as the transporter thereto, and the people of western Pennsylvania might have arisen from a community of miners, working for the benefit and under the rule of a foreign corporation, to their former condition as citizens of a prosperous mining and manufacturing section of the State.

#### RESULTS AND EFFECTS OF THE SUCCESS OF THE CONSPIRACY.

Upon or with the New York railroads no appeal or representation of the people of this section would have any weight or influence. Their managers reside in Cleveland and New York, and are subject to the daily manipulations of the monopoly managers, while in our own State, to all efforts for emancipation or toward the restoration of trade to its natural channels, the Pennsylvania Railroad and its power is as a Chinese wall. Its president and vice-president admit the preferences in rates given to the monopoly, and boldly announce their intent to continue in so doing; they claim the legal right to so do, and challenge resistance; they obstruct all efforts of producers, shippers, and refiners by delaying or restricting facilities; by threatening other railroads with severance of connections and deprivation of general traffic if they transport petroleum for parties outside the monopoly; they refer applicants for rates and facilities over the Pennsylvania Railroad to the Standard Oil Company, and offering their personal services as negotiators for such rates and facilities, assure all that there is no hope of success in the trade unless by a coalition with the Standard.

We have thus far given not more than an outlined sketch of this enormous monopoly, its plan, its growth, and its results. We have not burdened your excellency with details of individual oppression and outrage, but we should fail to discharge our duties to ourselves and as citizens if we neglect to recite some of the means by which the most deplorable results are produced to our State and section. Wrong is constantly perpetuated and right driven from us. True it is that in many things the monopoly has been unwittingly aided in its schemes by unwary concessions as to the management of its business by producers of petroleum themselves, but they had a right, as men pursuing an honest calling, to believe that they were dealing with honest men, and not with a gang of public plunderers, leagued together by no better tie than the sordid desire of gain, to be acquired by methods of corruption and lawlessness.

By the theory of the law, corporations derive their powers from the people of the commonwealth in general assembly convened; they have no powers not delegated to them by the people; they take nothing by implication; they are public servants, invested for the public benefit with extraordinary privileges, and their charters may be taken from them when they cease to properly perform the duties of their creation. The railroad and pipe-line companies are common carriers of freight for all persons, are bound to receive it when offered at convenient and usual places, and to transport it for all, for reasonable compensation, without unreasonable discrimination in favor of any. These are but simple statements of well-established legal principles, never doubted in any court, but affirmed by every tribunal that has ever considered them. Yet the people who granted these special privileges are now upon the defensive, their rights denied by the corporations, and they are challenged to enter the courts to establish them, while in the meantime they are inoperative, to the irreparable injury of their business. They have yielded to the railways that they have created a part of their sovereignty, and given them the right to take private property for public use, but restricting such taking strictly to such use. Yet where the narrow strip of land used as a railway road-bed runs through valuable oil lands, this combination is strong enough to demand from the railways its transfer to them, that they may and do thereon sink their own oil wells, and thereby drain the oil from the adjoining lands whose owners gave the strip for public use by a railroad.

The owners of lands along the line of the Allegheny Valley Railroad, producing petroleum from those lands, with their own pipe line running to their own shipping racks by the side tracks of that railroad, are unable to obtain cars in which to load their product for transportation, at any rate of freight, while their tanks overflow. Shippers of petroleum are refused cars, or are promised them, only to find the promises broken, and their contracts rendered impossible of fulfillment, while the monopoly demands and is given all the cars belonging to the railroads, it permitting its own private cars to meantime stand idle, so that the railroad may assert its inability to accommodate all.

Owners of tanks connected with the monopoly pipe lines, with ample storage therein for their own product, are refused transportation from their own wells upon the ground that "their tanks are full," a barefaced and daily demonstrated false-

hood. Other producers of petroleum are refused transportation by the pipe line, on the plea of want of capacity to carry, and at the same time are informed that their oil will be carried if they will sell it to the ring, "immediate shipment."

If the applicant's tanks are overflowing, or if he needs money and complies with their terms, he is offered a price from two and a half to twenty-five cents below the market value. If he accepts and sells a fixed amount of his oil, the pipe line removes all but five or ten barrels, delays for days and weeks to take the remainder, and refuses to pay for any until all is taken. This is known as the "immediate shipment swindle."

By their use of the petroleum of others stored in their tanks and lines; by the over-issue of pipe-line certificates; by refusal to perform their public duties; by open defiance of the law and impudent evasions of its provisions, the pipe line and railroad companies leave to the people, whose creatures they are, but two remedies—an appeal for protection, first, to the law of the land, next, to the higher law of nature.

These corporations have made themselves the interested tools of a monopoly that has become the buyer, the carrier, the manufacturer, and the seller of this product of immense value. It needs no argument or illustration to convince that in such a position this foreign corporation is in direct antagonism to the producer, the laborer, and the consumer.

The South Improvement conspiracy embraced in its scheme the ownership of the oil-producing territory, wells, and machinery. If the present course of its successor can not be stayed, it is merely a question of time when the ownership of the oil production will fall into its hands, through the impoverishment of thousands of our citizens and their inability to contend longer.

That monopolies are dangerous to free institutions is a political maxim so old as to have lost its force by irrelevant repetition, but if anything were needed to awaken the public sense to its truth, the immediate effect of this giant combination is before us. Throughout the oil region, as wherever it does business, it now has its own acid works, glue factories, hardware stores, and barrel works. We have seen that it is master of the railroads, and owns and controls all the refineries, all the pipe lines. All these enumerated industries controlled by them employ large numbers of laborers, dependent for the support of themselves and their families upon the daily labor given or withheld by this powerful conspirator. At the flash of a telegraphic message from Cleveland, Ohio, hundreds of men have been thrown out of employment on a few hours' notice, and kept for weeks in a state of semi-starvation and justifiable discontent, deceived meanwhile with delusive promises of work, until the autocrat of a foreign corporation, maintained and upheld by the chief among Pennsylvania corporations, gives leave from within the borders of a foreign State for the Pennsylvania laborer to earn his bread.

Along the valley of Oil Creek and the Allegheny Valley, where a few years since the smoke of busy refineries and their attendant industries darkened the air, piles of rusted iron and heaps of demolished brick work mark the results of the conspiracy: where a few years since busy men crowded to and fro in the pursuit of lawful trade in a great staple, there is now silence and emptiness. The producer, once surrounded with competitive buyers of his product, now goes with crowds of his fellow victims to wait his turn for leave to sell it at a dictated price to a single agent of a single purchaser.

To permit to stand unattacked the foul principles of such an organization, to permit them to be fastened, as lawful or right, upon the policy of the commonwealth or the nation, is to lay the foundation for the exile of capital, endless injury to the public interests, endless oppression of the laborer, riots, tumults, and the decay of the state.

So far as this public wrong is within the scope of executive interference, we ask that immediate steps be taken to enforce, by legislative enactment, the wise provisions of our State constitution, and, by such legal processes as are necessary, compel obedience to law and the performance by chartered companies of their public duties.

COMMONWEALTH OF PENNSYLVANIA, *County of Crawford, ss :*

Personally appeared before me, a notary public for Pennsylvania, at Titusville, in said county, B. B. Campbell, E. W. Codrington, Lewis Emery, jr., George H. Graham, J. A. Vera, H. O. Robbins, L. H. Smith, R. B. Brown, D. S. Criswell, A. J. Salisbury, A. N. Perrin, W. B. Benedict, H. W. Bumpus, and Sam Q. Brown, who, being duly sworn, depose and say that the statements contained in the foregoing address are true when within their own knowledge, and when derived from information by others they believe them to be true.

Subscribed and sworn before me this 13th day of August, 1878.

[SEAL.]

SAMUEL GRUMBINE,  
Notary Public.

*Contract between the South Improvement Company and the Pennsylvania Railroad Company, dated January 18, 1872.*

Agreement made and entered into this eighteenth day of January, in the year eighteen hundred and seventy-two, by and between the South Improvement Company, a corporation organized and existing under the laws of the State of Pennsylvania, party hereto of the first part, and the Pennsylvania Railroad Company, on its own behalf, and on behalf of all other railroad companies whose roads are controlled, owned, or leased by it, or with which it has sufficient running arrangements, which other roads are herein described as the connections of the said Pennsylvania Railroad Company, party hereto of the second part, witnesseth:

Whereas the party hereto of the first part has been organized for the purpose, among other things, of increasing, facilitating, and developing the trade in and the conveyance and transportation of petroleum and its products, and for that purpose proposes, among other things, to expend large sums of money in the purchase, erection, and construction of, and maintaining and conducting works for storage, distillation and refining, warehousing and transportation, and in various other ways, upon the inducement, among other things, of this contract;

And whereas the magnitude and extent of the business and operations proposed to be carried on by the party hereto of the first part will greatly promote the interest of the party hereto of the second part, and make it desirable for it, by fixing certain rates of freight, drawbacks, and rebates, and by the other provisions of this agreement, to encourage the outlay proposed by the party hereto of the first part, and to facilitate and increase the transportation to be received from it.

And whereas it has been agreed by and between the party hereto of the second part, for itself and its connections, the Erie Railroad Company, for itself and its connections, and the New York Central Railroad Company, for itself and connections, that the business of transporting by railroad crude petroleum and its products toward the Atlantic coast, from the points of production and refining, on their lines of road, shall be allotted by the party hereto of the first part to the said three companies, in the proportion of 45 per cent. of the whole to the Pennsylvania Railroad Company, for itself and its connections, including the Philadelphia and Erie Railway, the Northern Central Railway, the Allegheny Valley Railroad, Camden and Amboy Railway, the Pennsylvania Company, and all other railroads which are or may be controlled, owned, and leased by it, or with which it has or may have sufficient running arrangements; 27½ per cent. of the whole to the Erie Railway Company, for itself and its connections; and 27½ per cent. of the whole to the New York Central Railroad Company, for itself and its connections, and that the transportation beyond Cleveland and Pittsburgh over the railroads of the said companies and their connections, in other directions than toward the Atlantic coast, west from said points of production and refining, shall be allotted by the party hereto of the first part, in the proportion of one-third thereof to the party hereto of the second part, for itself and its western connections, and the remainder to other railroads:

Now, therefore, this agreement witnesseth, that the parties hereto, for themselves and their successors, in consideration of the promises, of the mutual execution hereof, and of the mutual advantages hereby conferred, have covenanted and agreed, and hereby do covenant and agree each with the other, as follows:

#### ARTICLE FIRST.

The party hereto of the first part covenants and agrees:

1. To furnish to the party hereto of the second part, for transportation, such a proportion of the crude petroleum and its products, owned or controlled by the party hereto of the first part, as shall give to the party hereto of the second part 45 per cent. of all the crude petroleum and its products sent from the points of production and refining toward the Atlantic coast by the said Pennsylvania, the Erie, and the New York Central Railroads and their connections, and 33½ per cent. of that which is sent west of Pittsburgh and Cleveland by those railroads and their connections.

2. To provide suitable tankage at the points where petroleum is produced, on the railroads of the party hereto of the second part and its connections, in which to receive crude petroleum preparatory to shipment, with the necessary pipes, pumps, racks, and other appliances for its convenient transfer in bulk into railroad cars.

3. To deliver to the railroads of the party hereto of the second part, and its connections, at the places of shipment, and to receive from them, at the places of destination, all crude petroleum and its products transported over their roads for the party of the first part.

4. To provide at the places of destination on the sea-board necessary and suitable yards, wharves, warehouses, sheds, tanks, pipes, pumps, and motive power for the reception of petroleum and its products and loading vessels therewith.

5. To provide, maintain, and operate the works necessary to refine crude petroleum upon the largest scale practicable, and with such skill, and on such a system of organization and division of labor, as will secure both efficiency and economy; and for that purpose and for the purpose of developing and increasing the petroleum trade of the country, to provide and maintain all suitable and necessary means and facilities.

6. To keep records of the transportation over the railroads of the party hereto of the second part, and its connections, and so far as it can obtain the same over the Erie and the New York Central Railroads and their connections, of all petroleum and its products, showing the number of barrels of 45 gallons each in bulk, and the number of barrels of 47 gallons in barrels, carried by each road, with the points of receiving and delivery, and the amount of freight received by each road for such transportation, which records shall at all reasonable times be open to the inspection of the duly-constituted representatives of the party hereto of the second part.

Monthly abstracts of all such records shall be regularly sent to the party of the second part.

7. To pay the party of the second part weekly for all transportation over its roads and its connections, of petroleum and its products, such gross rates and half rates of freight as are hereinafter specified, less the rebates and drawbacks hereinafter provided to be retained by the party hereto of the first part for its own use.

## ARTICLE SECOND.

The party hereto of the second part covenants and agrees:

1. That the party hereto of the second part will pay and allow to the party hereto of the first part, for its own use, in all petroleum and its products, transported over the railroads of the party hereto of the second part and its connections, for the party hereto of the first part, rebates, and on all transported for others, drawbacks, at the rates hereinafter provided, except in the case specified in Article Third.

2. To deliver to the party hereto of the first part, all petroleum and its products in packages, transportation over the railroads of the party hereto of the second part, and its connections, by whomsoever shipped, and consigned to the party of the first part, at the warehouses of the party of the first part, at the sea-board and inland, at the depots of the party of the second part, at the places of destination, and to deliver all petroleum and its products, in bulk, owned by or consigned to the said party of the first part, at any point required on the line of the railroads of the party of the second part and its connections.

3. To transport and deliver petroleum and its products over the railroads of the party of the second part, and its connections, at gross rates, which shall at no time exceed the following, without the consent of both parties hereto:

From any point on the Oil Creek and Allegheny River Railroad to Oil City, Union, Corry, or Irvineton, which are herein designated as *common points*, on each barrel of 45 gallons in bulk and on each barrel of 47 gallons in barrels, 30 cents.

## ON CRUDE PETROLEUM.

From any common point (for each barrel of 45 gallons) to—

Cleveland.....	\$0.80
Pittsburgh.....	.80
New York.....	2.56
Philadelphia.....	2.41
Baltimore.....	2.41
Boston.....	2.71

All other points, except those on the Oil Creek and Allegheny River Railway, to the places of destination last named, the same rates as from the *common points*.

## ON REFINED OIL, BENZINE, AND OTHER PRODUCTS OF THE MANUFACTURE OF PETROLEUM.

## From Pittsburgh (for each barrel) to—

New York.....	\$2. 00
Philadelphia.....	1. 85
Baltimore.....	1. 85

## From Cleveland (for each barrel) to—

Boston.....	2. 15
New York.....	2. 00
Philadelphia.....	1. 85
Baltimore.....	1. 85

## From any common point (for each barrel) to—

New York.....	2. 92
Philadelphia.....	2. 77
Baltimore.....	2. 77
Boston.....	3. 07

From and to all points intermediate between the points aforesaid such reasonable rates as the party of the second part shall from time to time establish on both crude and refined.

From Pittsburgh, Cleveland, and other points, to places west of Pittsburgh and Cleveland such reasonable rates as the party of the second part may deem it expedient from time to time to establish.

4. To pay and allow to the party hereto of the first part, on all petroleum and its products, transportation for it over the railroads of the party of the second part and its connections, the following rebates, and on all transported for other parties drawbacks of like amounts as the rebates from the gross rates, the same to be deducted and retained by the party hereto of the first part for its own use from the amounts of freights payable to the party of the second part.

## ON THE TRANSPORTATION OF CRUDE PETROLEUM.

	Rebate per barrel.
From the gross rate from any common point to—	
Cleveland.....	\$0. 40
Pittsburgh.....	. 40
New York.....	1. 06
Philadelphia.....	1. 06
Baltimore.....	1. 06
Boston.....	1. 06

From the gross rate from all other points and the six places of destination last named rebates the same as on the rates from the common points.

## ON THE TRANSPORTATION OF REFINED OIL, BENZINE, AND OTHER PRODUCTS OF THE MANUFACTURE OF PETROLEUM.

	Rebate per barrel.
From the gross rates from Pittsburgh to—	
New York.....	\$. 50
Philadelphia.....	. 50
Baltimore.....	. 50
From the gross rates from Cleveland to—	
Boston.....	. 50
New York.....	. 50
Philadelphia.....	. 50
Baltimore.....	. 50
From the gross rates from any common point to—	
New York.....	1. 32
Philadelphia.....	1. 32
Baltimore.....	1. 32
Boston.....	1. 32

From the gross rates to and from all points intermediate between the above points a rebate or drawback of one-third of the gross rate shall be paid.

From the gross rates from Pittsburgh, Cleveland, and other points to places west of the meridians of Pittsburgh and Cleveland a rebate or drawback of one-third of the gross rates shall be paid.

5. To charge to all other parties (excepting such as are referred to in article 3), for the transportation of petroleum and its products, rates which shall not be less than the gross rates above specified, and should at any time any less rate be charged, directly or indirectly, either by way of rebate, commission, allowances, or upon any pretext whatsoever, the same reduction per barrel shall be made to the party hereto of the first part, from the net rates provided for them, on all transportation for them during the period for which such reduction shall be made to others.

6. To permit the party hereto of the first part, if, in its judgment, the currents of trade should so require, temporarily to increase or diminish the proportion, as herein provided, to the party hereto of the second part, for itself and its connections, as the whole business of transporting petroleum and its products, as between the party hereto of the second part, the Erie Railway Company and the New York Central Railroad Company. The party of the second part in such case to receive from the party hereto of the first part, in full payment or indemnity for the excess or deficiency, one-half the net schedule rates on such excess or deficiency; the other half to be paid pro rata to the said other companies whose apportioned quantity of transportation shall thus be varied; but such diversion of business shall not, at any time, exceed one week, nor be repeated without an interval of at least sixty days, unless with the consent of the party hereto of the second part. Also, that whenever, from time to time, as aforesaid, a temporary diversion of a part of the apportioned transportation of the party of the second part, to the other railroads aforesaid, or to either of them, shall become necessary, cars of the party of the second part may be loaded by the party of the first part and sent away over such other railroads, or either of them, but the cars so sent away shall be returned without unnecessary delay, and in as good order as when taken, to the railroads of the party of the second part, and mileage at the usual rates paid for their use while absent.

7. To furnish with as much regularity as possible, at all times, good and sufficient cars, and other means suitable and necessary for the safe and prompt transportation of all crude petroleum and its products, either bulk or in barrels, which the party hereto of the first part shall desire to send from one point to another (and which shall be supplied with as much regularity as possible), on or over the railroads of the party of the second part and its connections.

8. To make manifests or way-bills of all petroleum or its products transported over any portion of the railroads of the party of the second part or its connections, which manifests shall state the name of the consignor, the place of shipment, the kind and actual quantity of the article shipped, the name of the consignee, and the place of destination, with the rate and gross amount of freight and charges, and to send daily to the principal office of the party of the first part duplicates of all such manifests or way-bills.

#### ARTICLE THIRD.

And it is hereby further convenated and agreed by and between the parties hereto that the rebates hereinbefore provided for the party hereto of the first part may be made to any other party who shall furnish an equal amount of transportation, and who shall possess and use works, means, and facilities for carrying on and promoting the petroleum trade equal to those possessed and used by the party hereto of the first part.

#### ARTICLE FOURTH.

And it is hereby further convenated and agreed by and between the parties hereto that the party hereto of the second part shall at all times co-operate, as far as it legally may, with the party hereto of the first part, to maintain the business of the party hereto of the first part against loss or injury by competition, to the end that the party hereto of the first part may keep up a remunerative, and so a full and regular business, and to that end shall lower or raise the gross rates of transportation over its railroads and connections, as far as it legally may, for such times and to such extent as may be necessary to overcome such competition. The rebates and drawbacks to the party of the first part to be varied *pari passu* with the gross rates.

#### ARTICLE FIFTH.

It is hereby mutually agreed by and between the parties hereto that for the purpose of meeting such exigencies as may from time to time require change of the rates of transportation herein provided, each party, on ten days' written notice from the other, shall appoint a person on behalf of such party, and the two persons thus appointed shall have power to change and adjust the rates, which shall go into effect on being approved by the said parties hereto.

## ARTICLE SIXTH.

It is further mutually agreed by and between the parties hereto that the gross rates of freight to the party hereto of the first part shall at all times be kept as near to the net rate as is consistent with the interests of the party hereto of the first part, and that whenever, in the judgment of the party hereto of the first part, it is expedient to lower the rebate below the rate above specified, it may do so, and from time to time raise the same again; not, however, above the rate hereinbefore specified. The party hereto of the first part from time to time shall notify the party of the second part in writing of the change required, whereupon the party hereto of the second part shall forthwith make a corresponding change of such gross rates.

## ARTICLE SEVENTH.

It is further mutually agreed by and between the parties hereto that this agreement shall continue and remain in force for the period of not less than five years, and shall not then nor thereafter terminate until one of the parties shall have given twelve months' written notice to terminate it.

## ARTICLE EIGHTH.

It is further mutually agreed by and between the parties hereto that if any doubt, question, difference, cause, or suit shall at any time or times hereafter arise or happen between the said parties to these presents touching the construction of these presents, or any clause, matter, or thing herein contained, or any other matters, cause, or thing whatsoever, in anywise relating to or concerning this agreement, and such doubt, question, difference, or dispute shall not be fully settled by the parties to these presents within one calendar month after the same shall arise, then, and in every such case, upon the request in writing of either of the said parties hereto, specifying such doubt, question, difference, or dispute, it shall be committed and referred to the hearing and arbitration of three disinterested persons; one of them to be chosen by the party of the first part, another of them to be chosen by the party of the second part, and each party, on ten days' notice in writing from the other, shall make such choice and appoint a disinterested person in behalf of such party, but if either party on such notice shall, within such ten days, fail to make an appointment, the person appointed by the other party shall choose the second disinterested person, and the third disinterested person shall be chosen within one calendar month next after such request, and the award, order, or determination of the said three persons, to be chosen as aforesaid, or any two of them, shall be binding and conclusive on the parties hereto, and shall be performed and kept by them without any further suit or trouble whatsoever; provided such award, order, or determination be made in writing, under the hands of the said three persons, or of any two of them, within the space of sixty days after all the persons shall be so selected as aforesaid. And for the further and better enforcing the performance of the award so to be made as aforesaid, the reference or submission for or in respect of the same may, at the option of any of the parties to these presents, from time to time be made as a matter of course a rule of court in any court of record.

In witness whereof the said South Improvement Company and Pennsylvania Railroad Company have caused their respective corporate seals to be hereto affixed, and these presents to be subscribed by their respective presidents the day and year first above written.

[SEAL.]

SOUTH IMPROVEMENT COMPANY,  
By P. H. WATSON,  
*President.*

[SEAL.]

PENNSYLVANIA RAILROAD COMPANY,  
By J. EDGAR THOMPSON,  
*President.*

Attest: JOS. LESLEY, *Secretary.*

*Agreement between railroads and the petroleum trade. Executed the 25th of March, 1872.*

That all arrangements for the transportation of oil after this date shall be upon a basis of perfect equality to all shippers, producers, and refiners, and that no rebates, drawbacks, or other arrangements of any character shall be made or allowed that will give any party the slightest difference in rates or discrimination of any character whatever.

That the present rates from Oil City, Union, Corry, Irvineton, Pittsburgh, Cleveland, and other competing points shall be and remain in full force at following rates:

ON REFINED OIL, BENZINE, ETC.

	Per barrel
From Oil City, Union, Corry, and Irvineton to—	
Boston.....	\$1. 65
New York.....	1. 50
Philadelphia.....	1. 35
Baltimore.....	1. 35
From Cleveland to—	
Boston.....	1. 65
New York.....	1. 50
Philadelphia.....	1. 35
Baltimore.....	1. 35
From Pittsburgh to—	
New York.....	1. 50
Philadelphia.....	1. 35
Baltimore.....	1. 35

ON CRUDE OIL.

From Oil City, Union, Corry, and Irvineton to—	
Boston.....	1. 50
New York.....	1. 35
Philadelphia.....	1. 20
Baltimore.....	1. 20
Cleveland.....	. 50
Pittsburgh.....	. 50

And said rates shall not be liable to any change, either for increase or decrease, without first giving to William Hasson, president of the Producers' Union at Oil City, at least ninety days' notice in writing of such contemplated change.

In the distribution of cars for shipments, it shall be done without discrimination. On the basis as hereinbefore stated, the parties respectively agree to carry out the arrangements in good faith and work for the mutual interests of each other.

In witness whereof the parties have hereunto affixed their signatures this 25th day of March, A. D. 1872.

For the Lake Shore and Michigan Southern Railroad Company :  
H. F. CLARK, *President*.

For the Erie Railroad Company :  
O. H. P. ARCHER, *Vice-President*.

JOSIAH LOMBARD, Jr.,  
*New York Refiners.*  
B. VAUGHAN, *Boston Refiners.*

[The New York Central and Hudson River Railway Company; general freight agent's office, Grand Central Depot.]

NEW YORK, *September 9, 1874.*

DEAR SIR: Commencing October 1, 1874, the following rates on refined and crude oil shall govern all lines:

The rates on refined oil from all refineries at Cleveland, Titusville, and elsewhere in and adjacent to the oil region shall be as follows:

	Per barrel.
To Boston.....	\$2.10
Philadelphia.....	1.85
Baltimore.....	1.85
New York.....	2.00

Net rate on Albany 15 per cent. less, from which shall be refunded the amount paid for the transportation of crude oil by rail from the mouth of the pipes to the said refineries, upon the basis of 14 barrels of crude oil to the refineries for every 10 barrels of refined oil forwarded by rail from them (the refineries) to the Eastern points named.

Settlements of this drawback to be made on the refined oil forwarded during each month.

No rebate on these rates will be paid on oil reaching refineries direct by pipes.

On crude oil the rates from all initial points of rail shipments in the oil region shall be as follows:

To Boston, \$1.75 per barrel.

To New York, \$1.50 per barrel (net rate on Albany 15 per cent. less).

To Philadelphia, \$1.50 per barrel.

To Baltimore, \$1.50.

From which shall be refunded 22 cents per barrel only on oil coming from pipes which maintain the agreed rates of pipeage.

A barrel shall in all cases be computed at 45 gallons.

You will observe that under this system the rate is even and fair to all parties, preventing one locality taking advantage of its neighbor by reason of some alleged or real facility it may possess.

Oil refiners and shippers have asked the roads from time to time to make all rates even, and they would be satisfied. This scheme does it, and we trust will work satisfactorily to all.

Respectfully, yours,

J. H. RUTTER,  
*General Freight Agent.*

The formal mutual agreement prescribed by President Scott, as between his road, the Empire Transportation Company, the Empire lines, and the petroleum trade, was agreed upon and reduced to writing July 20, 1877, but not executed. The riots at Pittsburgh commenced July 22, and disorder followed throughout the State for nearly a month. August 25 the Pennsylvania Railroad gave in its adhesion to the present monopoly scheme. When public suspicion as to its existence was aroused, the following communication was delivered to President Scott:

*To the President and Directors Pennsylvania Railroad Company:*

GENTLEMEN: About July 1 last the undersigned were of a delegation from the oil region of our State, asking of your road an assurance that its course during the preceding two months, in giving to all producers and shippers of petroleum equal facilities and impartial rates, might be formally made its permanent policy.

In an interview with your president at that time that assurance was given, coupled with the requisition that such support should be given it by the producers and shippers as would repay it for the exertion it must make in defending that policy, and guarantying that such support should be continuous and permanent.

The people of the oil region were only too glad to enter into such an agreement, and steps were immediately taken of a practical nature to carry it out.

It was understood that it could not be *immediately* done.

After the formal abandonment by the trunk lines of the South Improvement Company in 1872 your road for some months faithfully adhered, we believe, to the pledge then given by all the trunk lines that no discrimination should thenceforth be permitted. We believe, also, that it stood alone among the roads in adhering to it, for gradually the persons constituting the South Improvement Company were placed by the roads in as favorable a position as to rates and facilities as had been stipulated in the original contract with that company. At this time the line of your road in western Pennsylvania, including that under your influence and control, was dotted with refineries capable of producing a large proportion of the refined oil needed by the world.

The policy of the Standard Oil Company, the successor in everything but name of the South Improvement Company, has resulted in the dismantling and abandonment of every one of those refineries (as soon as they fell into their possession) which could not be reached by some other and a rival road to yours, and now there are in the oil region proper but few refineries and those universally owned by the Standard Oil Company, those in Pittsburgh being owned or controlled by that combination or by the Conduit or Empire lines. The use and export of crude oil is but a small proportion of the consumption, and time and money were required to re-establish this great product upon its former basis, and these people were glad to furnish all needed means to accomplish this end, as are also capitalists at other points not strictly within the oil region, yet upon your lines.

We are met in the midst of this preparation by assertion of agents of the combination, and as accepted news by the press, that such a combination is entered into or under consideration by your road and the Empire Transportation Company, the Erie, Central, Lake Shore, and Baltimore roads of the one part, and the Standard Oil Company of the other, as would preclude your road from carrying out the policy announced by your president at the interview heretofore referred to.

We believe there is danger that such a result may be reached, and we, in behalf of those whom we represent, in making our efforts to prevent its accomplishment, or if accomplished to defeat it, as the first step, address this communication to you, desiring to present its aspect as affecting your road from our standpoint.

So far as we and the general public are affected, you will not question that the present scheme is but the repetition of the South Improvement scheme, never abandoned by its authors, and seeking the sole and absolute control of all petroleum produced, purchased, refined, and shipped within the States of Pennsylvania, New York, Ohio, or West Virginia.

The overproduction of 1873-'74-'75, and the consequent almost entire destruction of petroleum values, gave the Standard Oil Company, with its organization and capital, almost the desired monopoly. The equalization of consumption and production in 1876-'77 brought that combination to the same point that they were in 1872—utterly unable by reason of geographical position, if for no other, to monopolize this product without the co-operation of all the transportation, and then only under a contract similar to that of the South Improvement Company, and including all of its dangerous and extraordinary features. None other can serve them, and so they stand to-day, and we believe that your road can enter into no compromise, treaty, or arrangement which will serve the ends of the monopoly, under any less stringent stipulations and devoid of the liabilities thereof.

Under such an arrangement it is probable that the Central and Erie have transported its oil during nearly all of this year. It is now an open secret in the producing region that no charges follow the shipments over at least one of these roads, and crude oil is delivered in New York, in shipping order, at prices which barely repay the cost of packages and contents, with little or no remainder for transportation charges. This aid to the scheme of the combination is possibly given in view of the high tariff and consequent large revenue promised to be derived hereafter, when the scheme has been made a success, and all opposition in trade and transportation extinguished.

Suppose your opposition to be withdrawn and you join the alliance, when does your profit come in? We are entitled to impartiality. As we are advised, the law, common and statute, provides for it; it pronounces those participating in such a scheme conspirators against the public weal, and there is no court upon your line but what will enforce by mandamus and injunction the impartiality that we ask. The combination will promise you an immediate increase of revenue. If we are well advised, will you realize upon that promise? Can you make a contract with them that if we do not succeed in destroying it will be to their interest to keep? You will not have a refinery left; and they are now completing pipe lines from Pittsburgh to Oil City, and can deliver the oil received by all their pipe lines, independent of your road and its branches. In case of a contract with them executed but afterwards broken, from what source will you derive your oil traffic, and what court will enforce the broken contract in your favor? We urge that you can not enter into any arrangement with the monopoly that can be permanently useful to it and to you, and doubt if it can be made temporarily so.

Suppose that you decline to enter into such a treaty, or any such scheme, but announce and adhere to the opposite policy. There is no law, not even that of necessity, to compel you to serve the ends of the Standard Oil Company.

If Messrs. Vanderbilt and Jewett believe that their aid alone is insufficient to the establishment of the monopoly, for how long will they carry its oil as at present, for nothing, when they could have full rates by uniting the railroad interest and leaving the Standard Oil Company to do its business in common with all others?

If the Pennsylvania Railroad, having the geographical position in its favor, will announce and adhere to the policy of impartial and competitive rates, in three or six

months it can have all the facilities and extent of business which the Standard Oil Company can give the competitive roads, and by men who have all to gain by so doing.

We ask consideration of our views and of our assurances of good results from their favorable consideration.

If you choose to place the matter in the light of an experiment, its trial can cost you nothing but the failure to realize upon the immediate fulfillment of the promises of the common enemy, and that realization we believe will not be permitted.

Very respectfully,

B. B. CAMPBELL, of Pittsburgh.  
E. G. PATTERSON, of Titusville.

PHILADELPHIA, September 11, 1877.

### TESTIMONY OF BENJAMIN BREWSTER.

BENJAMIN BREWSTER, sworn and examined.

By Mr. GOWEN :

Q. Where do you reside ?—A. New York.

Q. What is your age ?—A. Fifty-nine.

Q. What is your business ?—A. I am in the oil business ; vice-president of the National Transit Company.

Q. Have you any other position in connection with the management of the Standard Oil Company ?—A. I am a trustee of the Standard Oil Trust.

Q. When did you first become connected in any manner with the oil business ?—A. In active participation ?

Q. In any way with the oil business.—A. Either in 1880 or 1881.

Q. In what capacity did you first engage in it ?—A. I came in as an adviser, perhaps, but when the National Transit Company was formed I have been vice-president since its organization.

Q. Then your first connection in the oil business was with the National Transit Company ?—A. Substantially that.

Q. Had you ever been interested in the refining of oil in any manner ?—A. Never.

Q. Or the production of oil ?—A. Never.

Q. What business were you engaged in before you went into this ?—A. I was a resident of California from 1849 to 1867 ; then I was in the railroads in New York after that. Afterwards I was vice-president of the Omaha Railway, and then went into the Standard.

Q. Had you anything to do in California with the sale of oil ?—A. Nothing whatever.

Q. Were you in any way commercially connected with it ?—A. No, sir.

Q. Now, do you remember the period at which the Tide-water Pipe Line first commenced business as a competitor of your company ?—A. I do.

Q. Can you tell us what the railroad freights on oil were about that time or afterwards ; any freights that your company paid ?—A. I can not ; I know there was a sharp fight in the reduction of rates. What the rates were or how long continued I do not know.

Q. Was not that sharp fight by the railroads in consequence of this new competition brought about by the Tide-water Pipe Line ?—A. It must have resulted from some cause, and very likely that was it.

Q. Do you know of your own knowledge, or in any manner, of any discussion—and now when I ask you this question I do not care where this discussion took place or how—between your interest and the trunk lines as to what treatment should be given to the question of oil freights in consequence of the introduction of this new competition ?—A. I do

not. If any such meeting was ever held anywhere I was not cognizant of it, and did not hear of it.

Q. Have you never heard it stated or charged by some of your people that they were willing to pay at that time whatever rate the railroads wanted, but that the railroad companies determined to put down the rate in order to prevent the introduction of this new competition?—A. I do not think so.

Q. You do not?—A. I do not.

Q. Can you remember the lowest rate to which the transportation of crude oil on the trunk lines at that time went?—A. I have already said I do not know the lowest rate. You have suggested 15 cents, but my impression was that it did not go as low as that.

Q. How low have you knowledge?—A. I have in my mind a rate of something like 25 cents, but I am not certain of that. I was comparatively new to the oil business at that time.

Q. Twenty-five cents a barrel on oil to New York from the coal fields would be about  $3\frac{1}{2}$  mills a ton a mile, would it not?—A. That is a matter of figures which of course you know. It was understood at that time—I recollect that—that the business was being done on a losing basis.

Q. The committee do not know, and although I know, I am not a witness. I would like you, as a business man, to put down on the minutes of this committee just what those figures amount to.—A. If you will give me the data and the committee say I shall furnish the figures, I can make the computation.

Q. The practical distance of the coal fields from New York is about 500 miles by railroad?—A. It was so testified yesterday, and I believe it is, but I am not positive.

Q. There are about 7 barrels of crude oil in bulk to the gross ton, are there not?—A. Yes, sir.

Q. In round numbers?—A. Yes.

Q. About 7 barrels to the ton?—A. Yes.

Q. Twenty-five cents a barrel, therefore, would be \$1.75 a gross ton.—A. Yes, sir.

Q. One dollar and seventy-five cents a gross ton for 500 miles would be  $3\frac{1}{2}$  mills per gross ton per mile for the transportation?—A. That seems to follow.

Q. I must get something down as a fact upon the minutes. Have you any knowledge in your experience as a railroad man of the cost of moving freight by railroad?—A. Not as an expert.

Q. You have been connected with railroads?—A. Merely in an advisory capacity as a director, and one time vice-president; but not as a manager.

Q. Now, Mr. Brewster, to go back to the National Transit Company; you are the vice-president?—A. Yes, sir.

Q. You have been the principal manager of it, really—the executive manager of it?—A. In certain ways.

Q. Who is the president?—A. Mr. Griscom.

Q. Does he take an active part in it?—A. He does not.

Q. He is one of the managers of the Pennsylvania Railroad as well, is he not?—A. He is a director.

Q. And largely engaged in other business in Philadelphia?—A. Yes, sir; president of the steam-ship company.

Q. Is he a stockholder in the National Transit Company?—A. I do not think he is, except as a director.

Q. I notice that your trust holds 94 per cent. of that stock. Do you know who holds the other 6 per cent.?—A. I think I do.

Q. Can you give us the names?—A. Not unless so advised by the committee; it is a private matter.

Q. I am not asking you to give the amounts which they hold, but only the names of the people who hold that stock without regard to the amounts.—A. I shall decline to answer that, unless——

The CHAIRMAN. What is the question?

Mr. GOWEN. The question is whether he will give us the names of the minority who hold the other 6 per cent. of the stock of the Transit Company. The Trust holds the other 94 per cent. The question is solely as to who the people are, and not as to the amount which each holds.

The CHAIRMAN. Is this gentleman the officer having charge of the stock list?

Mr. GOWEN. He is the vice-president, and says he knows the fact.

The CHAIRMAN. I see no objection to that. Under the ruling of the committee—and I state that in order that the witness and his counsel may understand it—as made in the sugar-trust investigation, the names of the persons interested in those various matters have been disclosed, but not the extent of their interest.

Mr. CROUSE. This question calls for the disclosing of the names of the men who are not at all connected with this business that we are investigating. I do not know that there is any harm in it. I just state it as a fact.

The CHAIRMAN. As I understand it, this is an inquiry to furnish a list of the names of the stockholders of one of the corporations included within the Standard Trust organization.

Mr. GOWEN. Yes.

The CHAIRMAN. The Standard Trust being a stockholder for 94 per cent., and somebody else being a stockholder for 6 per cent. Now it seems to me that under the ruling of the committee that testimony is proper.

The WITNESS. My point is, if you please, Mr. Chairman, that it is purely a private matter as to who may or who may not hold the outstanding shares of this stock, and that is a matter which can not interest the public, or is not germane or pertinent to the inquiry of this committee. It is a disclosure of private business which is not called for under this line of inquiry. That is my feeling about it.

The CHAIRMAN. Of course the practical situation is this: a majority of the committee is not here, and we can not therefore go into executive session to determine a question of that sort, and it is therefore impossible for me to announce any ruling as coming from the committee. I can only say to you that the ruling of the committee upon a similar line of inquiry with regard to the Sugar Trust required that that information should be furnished, we thinking it was pertinent to the question and indicating clearly what the extent of the union of these interests was. I am unable to say more than that to you now. I simply suggest to you that it will be impossible for me to excuse this witness from the witness-stand, this question being asked and he declining to answer it, until the majority of the committee shall determine whether or not they will require the answer.

The WITNESS. I wish to give all the information here I can; but the feeling I have is that it is probing into a private matter which is not called for.

Mr. GOWEN. You must let us be the judge of that?

The WITNESS. I am speaking of the feelings which move me in taking the position I do.

By Mr. GOWEN:

Q. The ruling of the chair is that I have a right to that answer, so I shall press you for an answer.—A. I decline to answer it at this time. Perhaps after discussion with my counsel I shall.

Q. I do not want to annoy you. When you tell me you will not answer, I shall either apply to the proper authority or not press the question. Do you know who owns the outstanding interest not controlled by the Standard Trust in the Bush and Denslow Manufacturing Company?—A. I do not.

Q. I am going through this list in the same way. In order to save time, if you will say to me that you do not or will not answer questions directed to ascertain who owns the minority interest in all these corporations in which the Standard Oil Trust is interested, I will take that answer until I can apply to the proper authority.—A. If you please, I will make an answer that will save time. I may or may not know; but I will make that answer.

Q. Do I understand you to say that you will decline to answer, even if you have knowledge as to whom the people are who own the minority or other interests in the various companies and associations in which the Standard Oil is interested?—A. That is my present answer for the same reason.

Q. That you will decline to answer?—A. Yes, sir.

Q. And you will decline to answer, although the question is directed solely to the names of the people, without regard to the amount which they may hold?—A. Precisely.

Q. Now, Mr. Brewster, you have a contract with the Pennsylvania Railroad, by which you agree, as Mr. Archbold says, to give to them 26 per cent. of the business?—A. Yes, sir.

Q. Since the making of that contract the rates upon crude petroleum going east have been the same on the Pennsylvania Railroad and in your pipe lines identically?—A. They have.

Q. You receiving, in addition to the rate for your main line, a rate on your local lines of pipe—the pipage lines?—A. That being a separate service.

Q. And you also receive a compensation for the separate service of storing oil in tanks, do not you?—A. We do. And I would like to make one remark in regard to this local pipe service which has not appeared here, and which, perhaps, the committee do not understand. This local pipe service is measurably on the same principle that the United States carries a letter 1 mile or 1,000 miles for 2 cents. We undertake to connect with the wells throughout the regions, whether it is a small well or a large well, whether it is near or remote, and I think the testimony of the producer will be that we have been diligent and faithful in that service.

Q. Then there is another item.

By the CHAIRMAN:

Q. Now on that point, before you pass to another item, do you, in fact, connect with every well?—A. We do in fact connect with every well that we are requested to, unless a man should ask something that is absurd; that we would decline to do. I wish to say further, that this 20 cents is collected in when the work is done. We lay this pipe and make this expenditure. We take this oil into the line subject to that lien, and oil that has been in the tanks five years or ten years we have collected nothing for doing the service. That is to say, this local pipage charge is collected only when the oil is delivered; so that when we had

30,000,000 of oil in the tanks, we had collected not one cent for the service of collecting that. I think it is only fair that the committee should understand something of the nature of the service.

Mr. GOWEN. I was not driving at anything with reference to the charges for it, but only with reference to doing the business. But since you have spoken of it, the 30,000,000 of oil on storage were not in the pipe lines, but in the tanks?—A. Yes, sir.

Q. You receive a rate for that?—A. Yes, sir; but not until it is delivered.

The CHAIRMAN. What Mr. Brewster means is, that the expenses are incurred by them, and it is not repaid to them until the certificate, as I take it, for the oil is presented.

Mr. GOWEN. Yes.

The CHAIRMAN. That is the only fact I want to get.

By Mr. GOWEN:

Q. The actual flow of oil out of the pipes has amounted nearly to 26,000,000 barrels a year?—A. Yes, sir. Now we are beginning to make this collection, but up to the time when we accumulated 40,000,000 of barrels of oil, 39,000,000 and had built nearly 40,000,000 of tankage we were spending money much faster than we collected.

Q. But that was a certain amount of capital which you were to get out whole on eventually. I mean was not the flow of oil out of your pipes every year within 10 to 15 and one year probably 20 per cent. of the total amount that flowed in?—A. More than that. I mean to say there was a greater percentage of accumulation there for several years, and substantially now you see it is the same. I only thought it was fair for the committee to understand just what the service was.

Q. But the accumulation of 39,000,000 was the largest ever known. It was the accumulation of an overproduction, extending back over several years?—A. Yes, sir.

Q. There has not been any year within the last eight or ten in which you did not get 20,000,000 to 26,000,000 barrels out of your pipe lines every year, the highest being 26,000,000 and the lowest in that time being 20,000,000?—A. Perhaps so.

Q. Actual shipments?—A. Yes, sir.

Q. Now I want to ask you about storage and tanks. In the storage and tanks the longer it remains the greater the deposit is of sediment in the bottom?—A. I believe that to be true.

Q. And when that tank is drawn off the upper oil free from sediment is better than the lower?—A. Only that is merchantable oil. That is the only oil we have the right to deliver.

Q. The other oil, which is not merchantable, is frequently taken out of the tanks, manipulated in some manner to make it flow, and is sold as unmerchantable oil. You must get rid of that product?—A. To a certain extent.

Q. That deposit may even be as deep as 4 to 5 or 6 feet in the bottom of a large tank?—A. I can not swear as to that; but I think that would be a very full deposit.

Q. From 4 to 6 feet. You do not think it should be that much?—A. I do not know.

Q. Now, in taking oil into the tanks for storage, the practice is to give to the man when he calls for his oil that has been in store exactly the same amount of gallons that he put in, is it not?—A. That is what we agree to do.

Q. And you lose whatever evaporation or other loss there may be in storage?—A. Yes, sir.

Q. You lose that and have to make it up?—A. The line loses that.

Q. In taking oil into your pipe lines for transportation you make a certain deduction from the amount that is taken in in order to cover waste?—A. Taken into the local lines?

Q. Yes.—A. We do.

Q. What is that percentage?—A. Two per cent.

Q. In other words, a man puts in 1,000 barrels of oil, of which your local line gets credit for 980?—A. That is as I understand it.

Q. The 1,000 barrels of oil which are put into the tank for storage, when it is taken out the man is entitled to an equal thousand?—A. We must deliver a thousand.

Q. Now, can you tell me as a matter of fact whether the gain upon the 2 per cent. which you take into the lines is equal to or overcomes the depreciation which you suffer on the oil which is stored in tanks?—A. It does not.

Q. What proportion of it do you suppose belongs to it—a half?—A. It depends upon how long you store the oil. So long as you store the oil you must be continually buying to keep your oil together. I am giving you the facts. On the 1st of September of each year we make an inspection and we make up our deficiency. I have not those figures at hand, but it requires a considerable fund to maintain our stock of merchantable oil, and it is no small thing to buy half a million barrels of oil and cancel the certificates.

Q. Half a million barrels is upon an enormous business for the whole year?—A. Yes, sir.

Q. Half a million barrels of oil would be 2 per cent. of 25,000,000?—A. Yes, sir.

Q. Could you tell me as the exact result of any one year's operation how far the 2 per cent. allowance which you get on oil taken into the pipe lines has overcome the loss which you make on the oil in the tanks?—

A. I can not tell you, except that I know that there is a very considerable expense to the pipe lines in addition to that.

Mr. GOWEN. I do not care to ask you any more questions, except subject to the committee or the House.

The WITNESS. If you will allow me I will consult with my counsel about it.

By Mr. SMITH:

Q. Can you state how many square miles are embraced in the oil region of Pennsylvania?—A. I do not know.

Q. Is the oil country north of Pittsburgh contiguous?—A. I should say it was; almost any of these gentlemen can tell you better than I can.

Q. Can you state the longest line of local pipe in that district that you have?—A. Connecting with a single well?

Q. Yes.—A. I can not. I know that we are asked now to connect with a well 9 miles, a single well.

Q. And you charge 20 cents a barrel for forcing oil through 9 miles of pipe?—A. We charge 20 cents a barrel for collecting this oil and laying this line. The contract is we shall receive 20 cents from them when the oil is delivered, which may be next year or ten years from then. I merely state that as being the understanding.

Q. This 9 miles of pipe which you have spoken of leads from where; from your receiving station to the well?—A. From the receiving tank to the well.

Q. The producer has a tank of his own in which he pumps his oil; is that so?—A. The well tankage.

Q. And all you have to do is to lead your pipe to that tank so as to tap that tank?—A. That is what we do.

Q. Are you obliged in some cases to have a pump right there at the tank to force it either by pressure or suction?—A. Pressure.

Q. Do you apply suction?—A. I do not think so.

Q. Do you think that 20 cents is a fair charge for conveying oil through a 2-inch pipe 9 miles?—A. That question covers perhaps more ground than you are aware of. If your well is a 5-barrel well, you probably would not get enough out of it to pay for the expense you are put to in laying that line. If it were 1,000 barrels it would be very cheap. As I said before, we do the business on the same principle that the United States carries a letter 1 mile or 1,000 miles for the same price. That must be generalized, if you please, as the elevated railroads in New York.

Q. What kind of pipe do you use?—A. Wrought-iron pipe.

Q. What is the cost per foot?—A. I do not know; perhaps 20 cents; I am not certain about that.

Q. By buying it in large lots?—A. Perhaps I am wrong about the price; I do not know.

Q. Did you ever tap a tank that was less than 1,000 barrels?—A. I should say 50-barrel tank.

Q. The testimony here goes to show that the tanks are generally of 1,000 barrels capacity, and when they are filled, whether with 5 barrels or 500 barrels, it is measured and tapped?—A. Are you right about that?

Q. So far as I can get at the testimony furnished, they are 1,000-barrel tanks.

Mr. GOWEN. I think that the testimony showed that they did not give a certificate for less than 1,000 barrels. They never issued a negotiable certificate for less than 1,000, and any fractions of 1,000 were credited on their books until it amounted to 1,000 barrels.

Mr. SMITH. Perhaps I am wrong. (To the witness.) You charge 20 cents a barrel whether it is 9 miles or one-half a mile?—A. We do.

By Mr. GOWEN:

Q. The 20-cent charge for the local pipeage covers the distance to the point at which you deliver it to the main pipe or the railroad. It covers your entire system to the main pipe?—A. Yes, sir.

By the CHAIRMAN:

Q. Where you speak of a well where you are to lay a pipe 9 miles long, do you mean it is 9 miles to the point where you reach the railroad, the main line, or is it 9 miles to the point where you connect with the rest of your local system?—A. Nine miles to the receiving tank.

Mr. GOWEN: He means he must lay a pipe 9 miles to get oil from the well at which he went to.

The CHAIRMAN. This is the impression I have got from his testimony. You lay pipes to each well and you bring them down to a point where two wells meet. From that point you only carry one pipe?—A. Wherever it is practicable as a matter of engineering and is cheapest and best.

Q. By the time you meet the railroad you have put into this local pipe line oil from a dozen wells?—A. That may be. I would like, if you please, to say that it occurs to me the testimony may have been improperly reported, but Mr. Kirk, in his evidence regarding my con-

nection with the Producers' Protective Association, it seems to me, left it in rather a muddled condition. I would like to say that at a suggestion from the producers Mr. Archbold and I met a committee at Saratoga, where a full discussion of the situation was had. The impression prevailing among these gentlemen was that their distress was due to arbitrary methods on the part of the Standard Oil Company; that oil was unduly depressed by the Standard Oil interest.

By Mr. GOWEN:

Q. Depressed in price?—A. Yes, sir. Our position was and is that the Standard Oil Company does not, never has, and never intended to make a market, and to make a price for crude oil. Our statement to the committee, which can be verified by every gentleman present, was that we did not anticipate and would not undertake to make the price of crude oil; that the general public, the trading market, could and would make and did make it in the past; that what we would undertake to do was to take that oil and bridge it to the consumer at the lowest reasonable price. Now later, oil advanced. On this arrangement oil has fluctuated since. The Standard Oil Company have pursued simply their ordinary course of buying at the market, whatever it was, and selling their refined in accordance with that price. Now oil advanced to 96 or 98 cents. The corresponding price of refined should be 7 $\frac{3}{4}$ ; about that. It varies, say, an eighth of a cent per gallon on every 4 or 5 cents advance or reduction in the price of crude. We do not know much about it, but as near as our impression is the selling of it came from the West; the market was broken by Western sales, but we do not know positively about that. Now, the producers came to us, Mr. Kirk among others, and said, "Hold your price of refined oil." We said, "It is an unnatural position to be in. The exporter knows what this oil is selling for; you are holding it at an eighth above and you are going to stagnate the prices—stagnate the business. It is bad for you and for us; it is an unnatural position to be in. What we want to do is to let the pendulum swing, and the commercial market will fall and you will check your trade less, and it will be better in the end for all of us." But we did listen to the desires of the producers, and held oil at a price above where it should really have been, not to our benefit or theirs either.

By Mr. SMITH:

Q. To whose benefit?—A. Nobody's benefit. It was an unfortunate thing, and it was a mistaken business judgment, as I looked at it, to have cut loose from the principle that crude oil at 50 cents means a certain price of refined, and at a dollar means another price. It was an unfortunate thing for both of us. I simply want to state the fact as it is.

Q. You seem to have been very innocent in the business transactions with the large corporation you represent.—A. I should be very glad to take you into our confidence now, and you will find it is very innocent. I am one of those who do not believe that sharp practice makes money. I believe in being straightforward; that there are certain laws that govern commerce as much as the law of gravitation, and that supply and demand control; that while you temporarily interrupt it you do not and can not interrupt it permanently; no set of men can do it. Mr. Kirk has reported me as saying at Buffalo, I think, that I could put oil up 2 cents or 3 cents a gallon and the world would take it. Now, what there was of that certainly was not my opinion, as you will see from the nature of things. In discussing the matter the question was raised that higher crude oil would affect refined oil, American petroleum. Our re-

sponse to that was that we believed that the producer is entitled to a fair return for his money; we believe that the country is more prosperous and that we are all more prosperous.

Q. Where is the demarkation line on a fair return?—A. That is a question on which we might differ; but when I say a fair return, I mean what a jury will say is a fair return.

The CHAIRMAN. I do not want to interrupt you in answering, but I think you are going very far from the facts which are important here.

The WITNESS. I am answering testimony which was given here as to my assertions, and I think the impression left upon the committee was a mistake. I think the thing was left in rather a muddled condition.

Mr. GOWAN. So far as I have called you as a witness, and so far as I have examined any witnesses in this case, they have been directed to a subject not at all connected with anything that Mr. Kirk testified to, nor was I here nor do I know anything about that. If you want to make any statement as to that, there is no objection to it coming in here as something entirely apart from what I am driving at.

[Here the witness held a consultation with his counsel.]

The WITNESS. After advising with my counsel I am of the opinion that it would be disclosing personal matters, and therefore I decline.

By Mr. GOWEN:

Q. That is, you decline to give the names of the people owning the minority stock in your various corporations?—A. Yes, sir.

Q. Now, you have stated that this question of the price of any oil or any commodity depends upon the law of supply and demand?—A. Yes, sir.

Q. What do you consider to be the law of demand; does that not greatly depend upon the number of people who are in the market to buy anything?—A. If you will allow me, the demand is not the parties who are buying; it is the consumer. He is the man who makes the demand; it is the consumer who makes the demand.

Q. The question is as to the price of crude oil. Now, practically you are the only purchasers for at least 75 per cent. of that product, are you not?—A. By no means; no, sir. We may be the consumer or may be the manufacturer of 75 per cent., but that we are the only buyer is by no means true, Mr. Gowen, and the statistics will show you that we are the buyers of an infinitesimal part of the oil trade.

Q. You are speaking now of a stock exchange purchaser, who is distinguished from a legitimate, business purchaser?—A. If you say "buyers," I will state to this committee that we are the buyers of credit balances, if the committee understand what that is, as they are offered to our agents throughout the oil regions at the bidding price, or on the exchanges at a high or low price. I do not believe there is such a market for crude material in the world as the Standard makes for crude oil.

Q. You issue a negotiable certificate, in thousand-barrel lots, for oil that goes into your system of pipage; that is a negotiable instrument which is dealt in on the stock exchange or oil exchanges of a great many commercial centers?—A. Yes, sir.

Q. In consequence of that there is arising a gigantic speculative dealing in this particular, which in time fixes the price of this commodity irrespective of any business demand for it?—A. Reasonably so. That applies to all merchandise; it is not an exception.

Q. Now, just confine yourself to the oil. With reference to the absolute mercantile use of this product of crude oil, you gentlemen manufacture at least 75 per cent. of it, do you not?—A. We manufacture 75 per cent. of the amount that is manufactured. I think about  $6\frac{3}{10}$  per cent. of the crude is exported.

Q. How much of the crude exported, or, at least, what proportion does the crude exported bear to the total shipment of crude oil in a year?—A. What is the idea?

Q. How much of the crude oil that is shipped from the oil region in a year is exported as crude, either in percentage or barrels?—A. The figures I have in my mind are about one and a half or two millions of barrels of crude exported. That is what I have in my mind.

Q. One and a half million barrels would be about 8 per cent. of the total shipments in crude. The total shipment is twenty-six million.—A. That is the total consumption. The total consumption is about twenty-six millions; that is not all exported.

Q. I know it is not all exported.—A. You say the amount exported.

Q. No. What proportion of the total amount of crude oil that is shipped in a year and leaves the wells? How much of that total 26,000,000 goes abroad in the shape of crude oil?—A. That would be about 8 per cent.

Q. Of that you have about 6.3 per cent. ?—A. Yes, sir.

Q. That would give you practically 5 per cent. of the whole. Six and three-tenths per cent. of 8 would be equal to 5 per cent. of the whole. Six and two and a half tenths per cent. of 8 would be equal to 5 per cent. of that given amount?—A. Yes, sir.

Q. Therefore your business in crude oil is equal to 5 per cent. of the total production of crude oil that in one year leaves the wells?—A. Yes, sir.

Q. Now to go back to this question of supply and demand. Suppose you were the only manufacturer of crude oil in the United States, and there were no other refiners and no purchaser but yourself; don't you think you would fix the price at almost whatever you thought right, and would be only governed by moral questions in controlling it?—A. My answer is no; emphatically no.

Q. Why?—A. Because in this country the eyes of the people are looking for investments; they are looking for that which is cheap and buy it, and for that which is dear and sell it, and no man or set of men can occupy that position and hold it.

Q. That is no answer.—A. At the moment many things may be done; but my point is this, that the reaction is like a relapse of typhoid fever. My point is this, that the Standard Oil Company can never afford to sell goods dear.

Q. That has not answered the question.—A. I have answered the question; I say, "No."

Q. If you were the only purchaser of oil in the United States for refining purposes, would not you have it in your power to fix the price?—A. If we were the only purchaser, and guaranteed by law that nobody else should come in, "Yes." But we have no franchises that everybody else can not obtain. That is not our position, and it is not right to assume it.

Q. Yes, it is. How could anybody else come in if you were the sole refiners in the United States?—A. Have you ever known any one man to occupy a field, or any one corporation, a great while without being discovered?

Q. You could not hold it long, but in the short time you occupied it you would make \$300,000,000 or \$400,000,000?—A. Oh, no. You are not under oath, but you are getting as wild as some of these people have been who are under oath.

Q. If you had the total control of the petroleum refining of this country for two years and nobody else had a refinery, could you not practically make the price of crude whatever you pleased?—A. Within reasonable limits. They would get to dipping tallow candles in the old-fashioned way if we got it too high.

Q. A barrel of refined oil has often been sold in the past as high as \$10 or \$20, has it not, in the long past?—A. Yes; I take it for granted it is so. Twenty dollars is a little extreme.

Q. Often between \$10 or \$20? Now \$10 a barrel for refined oil would only be 20 cents a gallon for one of the best illuminating materials in the world—50 gallons to the barrel?—A. I can not get these things through my head as quick as you do; but I will assume that is so.

Q. Do you think 20 cents a gallon is really or would be considered an extravagant price for a man to pay for so good an illuminating substance?—A. I believe refined petroleum at 20 cents a gallon is cheaper than any illuminating substance that I know.

Q. In the world?—A. That I know of.

Q. Now, if you had control of this business for two years and got 20 cents a gallon for your product, which is \$10 a barrel, and paid \$1 only for oil at the wells, you would make \$100,000,000, would you not?—A. I must say with all respect that I am reminded of Mrs. Toodle's baby. If she had a baby, and it should grow up and should fall into the fire, what a terrible calamity that would be. It is as remote as that.

Q. Why?—A. Because this is a live country and nobody has any special franchises.

Q. That is the only reason?—A. That is an absolute reason.

By Mr. SMITH:

Q. Do the oil certificates issued to producers sometimes circulate as currency?—A. No, sir.

Q. They do not?—A. I never heard of such a case.

Q. Can not they be used that way?—A. I never heard of such a case.

Q. Won't they pay a debt?—A. Not unless the receiver is willing to accept them.

Q. Exactly.—A. You can trade barleycorns if both parties are willing.

Q. I know, but barleycorns will not circulate as easily as those certificates.—A. They are not currency in any sense of the word, Mr. Smith.

The CHAIRMAN. Mr. Brewster, I can not excuse you. You will have to be here on Monday morning.

Mr. Choate, as counsel for the witness, presented the following reasons for his refusal to answer question as above shown:

We think the witness ought not to be required to answer the question, "Who owns the 6 per cent. of the stock of the National Transit Company?" other than the 94 per cent. owned by the trustees of the Standard Oil Trust because it has no bearing on the nature or operation of the Trust, or on any question that can possibly come before Congress for legislation on the subject. It is wholly immaterial to any question submitted to this committee by the resolution under which they are acting who owns the 6 per cent., it appearing that the Trust has no interest in them.

The decision of the committee, by which, in investigating the Sugar Trust, they required the witnesses to name the parties interested in the Trust, is wholly distinct from this. We have fully and freely disclosed the names of all parties interested in the Trust.

Mr. CHOATE. Mr. Chairman, is there any objection to excusing Mr. Brewster until Tuesday morning, so as to enable him to go to New York, and the committee notifying him in the mean time whether he will be required to return?

The CHAIRMAN. We will make it Tuesday morning. That will give us an opportunity to have a meeting of the committee on Monday, and we will notify you during the day on Monday in case the committee decide to excuse you.

The understanding is that Mr. Brewster is excused until Tuesday morning, and is required to be here at that time, unless notified to the contrary during the day on Monday.

The committee then adjourned until Monday, April 30, at 11 o'clock a. m.

---

WASHINGTON, D. C., *April 30, 1888.*

The committee met at 2 o'clock p. m.

Present, the chairman and Messrs. Bynum, McKinney, Grimes, Crouse, Smith, and Buchanan.

### TESTIMONY OF DAVID MOREY.

DAVID MOREY, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. In New Orleans.

Q. What is your business?—A. I am the general freight agent of the southern lines of the Illinois Central Railroad Company.

Q. Have you the charge of the rates on oil shipped over your line?—A. I have, originating on the southern lines of the Illinois Central.

Q. Where do these southern lines extend?—A. From Cairo to New Orleans.

Q. Do you remember a printed circular advancing the rates on oil to private individual shippers—or rather what changes have you made in the rates on oil in your line to private shippers within the last three years?—A. I have made no difference in rates. They have all been the same to all shippers.

Q. All shippers?—A. Yes, sir.

Q. Have you made a difference in oil carried in tank cars as compared with the rates on refined oil carried in barrels?—A. We did have a different rate, but now they have been changed.

Q. When was that change made?—A. It was about the first of April.

Q. Of this present year?—A. Yes, sir.

Q. Prior to the 1st of April of this year what was the difference in your rate per 100 pounds between the rate on oil carried in barrels and oil carried in bulk in tank cars?—A. I do not know that I could answer that exactly without having the tariff.

Q. You were asked to bring the tariff with you, were you not?—A. No, sir; I think not.

Q. Yes, at least the subpoena is returned as having been served on you to bring all the rates?—A. I did not understand that I was to bring the rates.

Q. Have you the subpoena in your pocket?—A. Yes, sir.

The WITNESS (exhibiting subpoena). In which paragraph is that referred to?

Mr. GOWEN (reading subpoena handed to him by the witness). "The rate of freight charged and received;" that is the paragraph.

The WITNESS. The general officers of the Illinois Central Railroad are at Chicago, and the records are not kept on the southern line. Mr. Fairman is here, the freight auditor of our road in Chicago, with those documents, as far as he could work them up in the limited time he had.

Q. Do you mean you have got in your office no records of the rates you have charged in the last three years on oil?—A. Yes, sir; we have.

Q. What have been the rates per 100 pounds on oil in tank cars, and per 100 pounds on oil in barrels?—A. I have not got them with me. Mr. Fairman has the copy of the billing, which I understood this subpoena calls for.

Q. Can you tell us what the rates were?—A. I could from memory. The rate from Marietta to New Orleans was \$1 per barrel during a portion of the time, I think all the time.

Q. Carried in what manner?—A. In wood.

Q. What was the rate per barrel on oil carried in tanks or per 100 pounds?—A. I do not think there was any oil shipped in tanks from Marietta. From Cleveland to New Orleans it was from \$85 to \$100 per tank.

Q. Can not you tell us exactly?

The WITNESS. Mr. Fairman, have you got that billing?

Mr. GOWEN. While he is getting that please state whether the rate on oil in tanks continued over your lines running southward the same for two or three years.—A. Yes, sir; I think they were the same for those three years.

Q. How often during those three years were the rates changed on barreled oil?—A. I do not think they were changed at all from Marietta. From Cleveland, I believe, the rate ranged from \$1.57 to \$1.50 and \$1 during that time. I can not tell the dates.

Q. On barreled oil?—A. Yes, sir.

Q. How many barrels to the tank do you allow when you make a rate per tank instead of per 100 pounds?—A. It is considered that they would range to-day from 85 to 100 and a very few 125 barrels; but I do not know that any of those latter ever went South over our line.

Q. But you had a fixed rate per tank on oil at so many dollars for a certain distance, did you not?—A. To New Orleans; yes, sir.

Q. Do you not know that those tanks vary from 70 to 120 barrels?—A. The tanks sent to our line were represented to contain about 85 barrels, and from that up to 100 barrels; in some very few instances 120 barrels, but I think they would average under 100.

Q. Did you ever gauge them?—A. They have a book showing the gauge of the different tanks.

Q. But did you ever gauge them?—A. No, sir.

Q. Or have them weighed?—A. Sometimes.

Q. As a general thing did you have them weighed?—A. No, sir.

Q. Then you had a fixed rate on these oil tanks irrespective of their capacity?—A. Yes, sir; we had a rate per tank that was considered safe to carry not to exceed 40,000.

Q. But when a man ships oil in barrels over your road, no matter whether he put 50 or 100 barrels into the car, you always charged him for the number of barrels?—A. Yes, sir.

Q. State whether the rate per 100 barrels for oil in barrels was not higher per ton per mile than the rate for oil in tanks?—A. It was somewhat higher per ton per mile in barrels.

Q. How much higher, do you suppose?—A. I never made the calculation.

Q. You are a freight agent and you ought to know more than any of us about it?—A. I would suppose about 20 to 25 per cent. higher.

Q. Did you never have a rate per 100 pounds on barreled oil as well as a rate per barrel during this time?—A. Do you mean a rate to New Orleans or to a local station?

Q. Any rate going South?—A. The rate to the interior local points was the same per hundred in barrels or tanks. To New Orleans, where we had the water competition, it was made so much per tank and so much per barrel.

Q. But were these interior points if the rate was the same per barrel or tank—did you then gauge or weigh the tank to ascertain how much it held, or did you charge simply per tank?—A. The tanks were delivered to us by our connections and we accepted their way-bill rates to us.

Q. In those cases were they shipped at a rate per barrel, per tank, or per 100 pounds?—A. To the interior points they were shipped per 100 pounds.

Q. Do you remember signing a printed circular which was sent amongst others to Mr. George Rice raising the rates on oil in barrels shipped South by him?—A. No, sir; I do not remember it. I do not think I ever signed such a document.

Q. Were you present, or if you were not there state whether your representative was, at a meeting held at Louisville, about March 14th last, to discuss the position your roads should take in regard to the then recent decision of the Interstate Commerce Commission?—A. Yes, sir.

Q. Were you present?—A. Yes, sir.

Q. Kindly state who were there present?—A. J. M. Culp, general freight agent of the Louisville and Nashville Railroad; B. F. Mitchell, general freight agent of the Newport News and Mississippi Valley Railroad; H. Collbran, general freight agent of the Queen and Crescent Route; H. Coope, contracting agent of the Ohio and Mississippi at Cincinnati. I believe that was all.

Q. Any others?—A. No, sir.

Q. Was there any representative of the Standard Oil Company there?—A. No, sir.

Q. Did you have any conversation with any one representing the Standard Oil Company?—A. In the meeting?

Q. Or at or about that time on the subject of the rates?—A. I saw a representative of the Standard Oil Company before and after the meeting.

Q. Who was he?—A. Mr. Howard Page.

Q. State whether or not he has general charge of rates on refined oil in that section?—A. I think he has.

Q. Did you discuss that matter with him—the question as to what your rates should be in view of the decision of the Interstate Commerce Commission?—A. No, sir.

Q. Did you have a general conversation with him on the subject?—A. Yes, sir; rates were simply referred to, but I did not ask his recommendation nor did he give it to me.

Q. What was the result of that conference with reference to rates of oil in tanks and on oil in barrels?—A. We decided to make the rates uniform per hundred.

Q. Per 100 pounds?—A. Yes, sir.

Q. Has it been made so?—A. Yes, sir.

Q. You are quite sure of that?—A. Yes, sir.

Q. Now, then, what action was taken by that meeting upon the subject of the amount on the empty tank-cars?—A. It was not really decided at the meeting what each line would do. It was discussed, and afterwards the different lines agreed to pay three-fourths of a cent mileage each way upon the cars going south loaded.

Q. Pay it on each car?—A. Yes, sir; going south loaded with petroleum.

Q. And coming back empty?—A. Or loaded.

Q. You paid three-fourths of a cent?—A. Yes, sir.

Q. Was there anything said or done in that connection about making a charge for carrying empty cars back if they were not loaded?—A. Yes, sir.

Q. Did you take any action upon that subject?—A. There was no agreement made at that meeting. It was simply a conference, and the matter was referred back to the general managers for their recommendation.

Q. What was the result on your own line of any recommendation that you may have sent back?—A. As to what?

Q. As to charging on empty tank-cars going back, provided they were not loaded?—A. We decided to pay mileage each way upon the tank-cars going south loaded with petroleum. The other lines had decided to do that, and we also had to do it or retire from the business.

Q. And that is now your present practice, is it not?—A. Yes, sir.

Q. What is the distance between Cleveland and New Orleans?—A. It is 550 miles from Cairo to New Orleans. I have not the distance from Cleveland to Cairo.

By the CHAIRMAN:

Q. Where do the cars come on to your line?—A. At Mattoon, when they come direct from Cleveland.

By Mr. GOWEN:

Q. It is 1,000 miles from Cleveland to New Orleans, is it not?—A. (After consulting Mr. Hill.) It is 995 miles from Cleveland to New Orleans.

Q. Well, that is within 5 miles of a thousand?—A. Yes, sir.

Q. Now, do you or not, on any other system of traffic, pay a mileage rate on cars going back empty?—A. We pay it on all cars going back empty.

Q. All cars?—A. All foreign cars.

Q. You pay the same mileage rate on empty cars that you do on loaded cars?—A. Yes, sir.

Q. Do you not know that on that occasion, or subsequent to this meeting, or in consequence of the meeting, probably an arrangement was made by which people who did not submit tank cars to be loaded for coming back were to be charged 3 cents a mile for transporting them back empty?—A. That was discussed, but was never put into effect.

Q. Were you requested by anybody to adopt such a plan?—A. I do not think I was; no, sir.

Q. Who advocated that?—A. I do not know that anybody did. It was a general discussion in the meeting whether or not it would be policy to do it.

Q. Who introduced that?—A. I can not say.

Q. With reference to the volume of traffic on your road, does the largest amount go south or go north—in tonnage?—A. Some seasons of the year the largest goes south and others north.

Q. How is the yearly average?—A. It is largest going south.

Q. How much larger is it going South on an average—10 or 20 per cent?—A. Yes, sir; I should think about 25 per cent.

Q. Now, if anybody else in your service knows better than yourself about the tariff rates on oil which were called for there in tank cars and in barrels over the various lines on your roads, with the times when they were changed, I will relieve you from further questions about it?—A. I believe Mr. Tucker knows more about it than I do.

Q. In the past and prior to this time on the 14th of March when you had this meeting was it customary for you to allow mileage on tank cars?—A. It was, back as far as the fall, I think, of 1887—I beg your pardon, it was 1886, I think.

Q. You allowed that to the owner of the car, did you not?—A. Yes, sir.

Q. The Standard Oil Company own a considerable number of tank cars, do they not?—A. I do not know who owns them.

Q. You know the Union Tank Line?—A. It runs on our road.

Q. That is the principal line on your road?—A. That is one of the lines; I believe they have more cars than any other line.

Q. The bulk of the cars belong to the Union Tank Line?—A. Yes, sir.

Q. Now, this rate of three-fourths of a cent per mile per car running both ways goes to the owner of the car, does it not, for the use of the car?—A. Yes, sir.

Q. If an individual shipper on the line of your road who has no cars of his own, and uses the cars of some other railroad upon which he loads his freight before it reaches your line so that you get the loaded car from some other road, and that car goes over your road loaded and comes back empty; in that case am I to understand that the three-fourths of a cent per mile is also allowed on such a car?—A. We allow three-fourths of a cent a mile on all foreign cars loaded or empty.

Q. That three-fourths of a cent a mile in such a case goes to the owner of the car, the railroad company?—A. In every case; yes, sir.

Q. State whether or not when oil is shipped in a tank, assuming the tank not to be full and you are informed of that fact, do you carry that smaller cargo at the same rate as if it had been full?—A. Our present basis is to charge for the full capacity of the tank.

Q. No matter what it contained?—A. Yes, sir.

Q. When did that go into effect?—A. On the 1st of April.

Q. That was about the time the interstate commerce act went into effect?—A. No, sir; it was just after the interstate commerce decision was rendered.

Q. Oh, you mean April 1 of this year?—A. Yes, sir.

Q. Prior to that had it been customary for you to carry oil at a proportion of the same rate for the tank full or half full?—A. We charged for the tank whether it was half full or full.

Q. You did that prior to the interstate commerce decision?—A. Yes, sir.

Q. And continued doing so?—A. Yes, sir.

Q. How often within, say, three years from the time of your meeting in March last, have the rates on oil in tank cars been changed?—A. I do not think there was any change in the rate on tank cars in those three years except what I said from Cleveland to New Orleans. I gave you two rates from Cleveland, \$85 and \$100:

Q. How often during that time were changes made on the rates of

oil carried in barrels?—A. I do not think there were any more changes than there were on oil carried in tanks.

Q. Are you sure of that?—A. Yes, sir.

Q. Was not the rate on barrels advanced in those years?—A. I think the rate of a dollar per barrel from Marietta to New Orleans has been in effect for three or four years.

Q. Without any change?—A. Yes, sir; I do not recall any change.

Q. What was the estimated weight of cargo of a tank car loaded with oil?—A. Not to exceed 40,000 pounds, and the bulk of them weighed a great deal less.

Q. Did you not have a rate fixed on a basis of 24,000 pounds at one time?—A. No, sir; that was frequently the number upon the way-bill, but where the rate is made per tank the way-bill rate is not the actual weight, but is only estimated for tonnage purposes.

Q. The rate was always so much per tank car?—A. Yes, sir.

Mr. FAIRMAN. Mr. Chairman, I represent the Illinois Central Railroad Company as general solicitor, and would like to ask the witness some questions, at the convenience of the committee, of the examination he has gone through.

The CHAIRMAN. The committee have not up to the present time felt it necessary to have the examination protracted in that way. I do not know what the committee may determine upon your request, but the usage has been that the witness has been allowed to make such additional statement at the close of his examination as he felt necessary to supplement his testimony.

By Mr. BUCHANAN:

Q. You testified in response to questions asked you by Mr. Gowen that your charge was the same in the case of each tank car; that it was uniform as to the tank-cars. Have you in the course of business ascertained the average capacity of those tanks?—A. We have ascertained that the average capacity of a tank-car was from 75 to 120 barrels.

Q. But I am speaking of the average, not of the extremes?—A. No, sir.

Q. You are not able to give the committee the average capacity, then, of the tank-cars? You also testified that your rates were higher on barrels than in tanks. Can you give the committee your reason for that difference?—A. They were higher before April 1 of this year, but not now.

Q. I am asking you the reason for that difference. I understand you to say that the difference ceased on April 1?—A. The tank cars are furnished by the shippers at considerable cost. Transportation lines have no investment to make in them, and it is considered a much safer plan to carry oil. There is less danger of fire, and there are other reasons. I consider that it is of much more advantage to the railroad companies to charge a less rate upon tank oil than upon oil in barrels. The barreled oil we generally load to about half the capacity that we do in tanks as to weight. We load 50 to 60 barrels to a car instead of 85 to 120; and when the car is used for coal oil we either have to keep it exclusively in that service or allow it to remain on side tracks for a long time to get the odor out of it, so that we can carry other freights in it. We can not carry coal oil with other goods without damaging and destroying them in a great measure; and, taking it altogether, the freight is much more desirable in tank cars than in barrels, in my opinion.

Q. You spoke also of a three-fourths cent mileage on cars?—A. There is the same mileage on those as on other cars. There is no discrimination.

Q. Is that three-fourths of a cent per ton ?—A. It is three-fourths of a cent per car per mile.

Q. You also stated that you charged the same per tank whether the tank be full or half full. In point of actual practice, what proportion of cars are run less than full ?—A. Well, I suppose they generally fill them, as they have to pay for them.

Q. I am asking if you have any knowledge on the subject of what proportion of cars are transported that are less than full ?—A. No, sir. There is another advantage in tank cars: When oil is shipped in barrels the transportation company has to load and unload it, while in the tank cars the owner loads and unloads it; and they also furnish the tanks for holding the oil at its destination, whereas in many cases in carrying barrels the railroads have to furnish platform or storage room to store the oil in, and if it is put into a storage room it damages the other freight there unless you are very careful. I think it is a much more desirable freight in tank cars than in barrel cars.

By Mr. GOWEN:

Q. Who is Mr. George W. Gillett ?—A. He is my assistant.

Q. Will you look at this paper and see if you recall that correspondence [handing paper to witness] ?—A. We had nothing to do with that circular; we were not a party to it.

Q. But this letter of Mr. Gillett's speaks of the resolution passed in Saint Louis in May last as having long since been canceled, and adds: "We can quote you nothing better than the regular rate." That refers to some change in the rate at that time, does it not ?—A. I have not the whole correspondence here. Mr. Rice had, I think, another letter on that subject.

Q. But you told me in answer to my questions that during these three years there had not been any change in the rate on oil in barrels. State whether, after reading that letter, you think there must not have been some change; for your assistant in that letter speaks of a circular made in May having long since been canceled, and that he could therefore quote nothing better than the regular rate.—A. That circular, if I remember, was never in effect in our lines south of Cairo.

By Mr. SMITH:

Q. Do I understand you to say that you convey empty tank-cars back for three-fourths of a cent per mile ?—A. The same as any other foreign car.

Q. Does that cover your expense ?—A. We pay mileage both ways on foreign cars.

Q. You pay mileage and also convey them on your lines ?—A. Yes, sir.

Q. Is that the way railroads generally do business, pay for handling cars over their lines ?—A. Yes, sir; foreign cars.

By Mr. BUCHANAN:

Q. You use those cars for transporting goods over your lines belonging to parties other than yourself, and you pay the mileage rate for the use of those cars ?—A. Yes, sir.

Q. And you charge the freightage for the transportation of the goods ?—A. Yes, sir.

Q. When you own the cars yourself you would have no mileage to either collect or pay ?—A. No, sir.

By Mr. BYNUM:

Q. Do you pay this amount to other individuals who have private cars?—A. Yes, sir; to all alike, except on tank-cars hauling petroleum.

Q. I am not speaking of oil cars, but all cars, say the dressed beef cars, do you pay on those?—A. Yes, sir.

Q. To all shippers having private cars, then, you pay this mileage?—A. The only class of cars we pay no mileage on are tank-cars hauled South empty for loads.

Q. How long have you been paying that mileage?—A. Since the fall of 1886.

Q. I understood you to say that a change had been made since the interstate commerce decision?—A. The rate was changed after that decision, April 1, 1888.

Q. You had not been paying mileage before that?—A. Yes, sir; we had been since the fall of 1886.

Q. The same as since that decision?—A. Yes, sir.

Q. I understood you to say that there had been a change made at the meeting in Louisville?—A. A change in the rates on oil per 100 pounds.

Q. Had you paid before that the same mileage that you have since paid?—A. Yes, sir.

By Mr. SMITH:

Q. Are those rates higher now than they were before that decision?—A. The rate is a little higher now upon oil in tanks and perhaps a little lower upon oil in barrels.

By the CHAIRMAN:

Q. Do I understand, Mr. Morey, that the rates charged upon your roads and under these various tariffs have been the same to all shippers?—A. Yes, sir; so far as I know they have been.

Mr. GOWEN. Except the difference in the method of shipment—there was a different rate in tank-cars and in barrels?

The WITNESS. Yes, sir.

By the CHAIRMAN:

Q. But I understand that difference applied to whoever owned tank-cars?—A. There were several parties who owned tank-cars for the shipment of oil, and they were all treated alike so far as I know.

Witness excused.

### TESTIMONY OF HORACE TUCKER.

HORACE TUCKER, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Chicago, Ill.

Q. What is your position?—A. General freight agent of the Illinois Central lines north of the Ohio River.

Q. Have you a reference to the figures so that you can give us the rates on oil in tank-cars as compared with the rates on barrels during the last three or four years?—A. To any given point?

Q. Yes.—A. There have been two changes made since 1885. Since April 1, 1885, until about November 1, 1886, we charged on oil in tanks and in barrels \$2 per barrel.

Q. From where to where?—A. From, say, Cleveland to New Orleans. On November 26 we met a severe competition at Marietta. That forced the rates from Cleveland to New Orleans pretty nearly half.

Q. What were they made ?—A. Eighty-five dollars per tank and \$1 a barrel on barreled oil.

Q. State whether the rate \$85 per tank was a fixed rate charged on all tanks, irrespective of the quantity they contained.—A. The tanks were then supposed to contain 90 barrels.

Q. Answer the question first and explain afterwards.—A. I am trying to answer it.

Q. No; the question was, state whether that charge of so much per tank-car was irrespective of the quantity it contained.—A. It was.

Q. Now, then, make any explanation you please.—A. It was that the Standard oil tank averaged 85 to 90 barrels. Occasionally we would get one that would run over 100 barrels, but those were few and far between.

Q. You didn't get many that would hold 120 barrels ?—A. No, sir.

Q. Are you sure of that ?—A. Yes, sir.

Q. What means, after having adopted a fixed rate irrespective of quantity, did you have to ascertain the capacity of each tank passing over your line ?—A. We had several of them weighed and tested.

Q. Several of them ?—A. Yes, sir.

Q. But these cars were passing daily ?—A. Certain numbers would contain over 100 barrels.

Q. When you found one that contained 120 barrels you charged no more ?—A. I don't think we found that one.

Q. But if you had would you have charged more ?—A. No, sir.

By Mr. BUCHANAN :

Q. How long has your road been engaged in the transportation of oil in tank-cars ?—A. I should say since 1879.

Q. During that period had you had sufficient acquaintance with the business to know from cars actually transported what the average capacity of tank-cars transported over your lines was ? In other words, were you in a position when you fixed the rate of \$85 to know whether or not that would be a fair rate on the average tank ?—A. We did not fix the rate at \$85 until the year 1886. Previous to that time the rate was based on the actual capacity of the tank car.

Q. Why was the rate \$85 fixed ?—A. It was forced upon us by competition from Marietta.

Q. What kind of competition ?—A. Well, the rate in effect, say from Marietta to New Orleans, forced the Cleveland rates.

Q. Who competed with you ?—A. Our Southern competitors.

Q. But not being acquainted with their names I am asking to obtain them.—A. Well, I might say the lines that centered in Marietta; that forced us to adopt the same rates or surrender the business.

By Mr. SMITH :

Q. Did you have any river competition ?—A. River competition on barrel oil, but not on tank oil.

Q. Did you have any river competition from Marietta ?—A. Yes, sir; but the boats dislike to take oil on account of its permeating the vessels and spoiling their trade.

Q. Did they not convey oil in barges ?—A. Not that I know of, except that they put oil into the hold, and that was liable to damage them.

Q. Damage the barge ?—A. Yes, sir.

Q. How could that happen ?—A. It happened several times on the Mississippi to our knowledge.

By Mr. GOWEN:

Q. I understand you to say that in an inland line of transportation by rail, when at the end of your line you meet a competition with water that requires it, you feel in such a case a necessity of changing your rates even if it involved the necessity of making the rates on barrels and tanks nearly the same?—A. That you have to do, or entirely surrender the business.

Q. You found that a necessity?—A. Yes, sir.

Q. Why would you make a difference due to competition by water that you would not make from competition by rail?—A. We meet both competitions, whether by river and rail or all rail.

Q. But you see what I am driving at. Can you see any reason, as a railroad man, why, if competition by natural navigation involves a necessity of making rates equal on your road to all kinds of shippers of that article— A. To that competitive point.

Q. Why inland competition by another railroad or any other competition should not involve the necessity of giving both competitors the same rate?—A. That we have done.

Q. I am not examining you with reference to what you did.—A. I am not the party; I am not the initial line, but we tell our neighbors to go ahead.

Q. But I want your answer as a railroad man and as an expert, if there is any reason why, if competition by natural navigation involves the necessity of making the same rate to two competitors on the railroad line, why any other competition should not give any other competitors just the same rates on the inland line?—A. That would force a lower rate.

Q. Suppose two individuals—now I am not trying to draw anything out to hurt you, but I have a railroad expert on the stand and I wish to get some information from him. I deem that you are doing what ought to be done on all your other lines except that line to the south. Now, then, if John Smith and Peter Jones are shipping oil, one in tank cars and the other barrels, from Cleveland to New Orleans, and the rate has been less in tank barrels than in cars. We will say that at New Orleans the competition is developed by reason of the navigation of the Gulf or the Mississippi, which, in your judgment, makes it necessary for you to make both of those rates which theretofore have been different, identical, in order that you may meet that competition by both classes of shipment. That being the case, can you give, as a railroad man, any reason why, when an inland line which has not the competition by river or gulf but has the competition by rail, the same amount of competition should not induce the inland line to make both rates the same?—A. Not the same; there should be a comparative difference between tank and barrel cars.

Q. Not if competition forces the reduction. If the same general competition forces the reduction in one case, would you not make the rates the same in other cases?—A. In justice to all shippers, I should say yes.

Q. Can you see any good reason why that should not be so?—A. I can see no good, valid reason.

Q. If you make a difference on your inland rate which, in consequence of competition, enabled the man who shipped in tanks to meet that competition and excluded the man who shipped by barrels from meeting that competition, you would consider that you were not doing justice to the shippers, wouldn't you?—A. It has always been conceded by all

lines that there should be a vast difference between hauling in tank cars and by barrels.

Q. But suppose your competitor who makes the competition fixed the same rate in tanks and barrels?—A. If we were to meet that we would have to fix an equal rate for the shipper.

Q. For both?—A. Yes, sir; we should have to. We should take that barrel oil, and if any of our competitors shipped barrel oil we should equalize the rate as far as we could.

Q. I will not discuss the question whether barrel oil and tank oil should be carried at different rates, because that was decided by the Interstate Commerce Commission. You propose to obey that, do you not?—A. Yes, sir; we are obeying it.

By Mr. BUCHANAN:

Q. I gather from your last answer that you do give equal rates?—A. Yes, sir; we do.

Witness excused.

### TESTIMONY OF JABEZ A. BOSTWICK.

JABEZ A. BOSTWICK, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. I reside in New York.

Q. What is your business?—A. I am now in the railroad business.

Q. You were at one time connected with the Standard Oil Company of Ohio, were you not?—A. Yes, sir.

Q. In what capacity?—A. As stockholder.

Q. Were you an officer?—A. Yes, sir; I was an officer; I was a trustee or director.

Q. You were, I think, once one of the trustees of the Standard Oil Trust, were you not?—A. Yes, sir.

Q. How long have you been in the oil business?—A. About fifteen years or a little over.

Q. Were you an officer of the American Transfer Company?—A. Yes, sir.

Q. When was that organized?—A. I can not tell you the date of the organization.

Q. Was it twelve or fifteen years ago?—A. I think fully fifteen years.

Q. What was its capital?—A. One hundred thousand dollars.

Q. Had it any bonded debts outstanding?—A. It was a private matter entirely of my own. No, sir; it had no debt.

Q. How many miles of pipe did it own; do you remember?—A. That I do not remember.

Q. Roughly; you know more about it than I do or anybody else—give it as nearly as you can.—A. It is pretty hard for me to say. You know a pipe-line has a great many ramifications.

Q. One hundred miles or 50?—A. I should think perhaps 50 or 75 miles.

Q. It was practically a property which you owned and used in the name of a company simply for convenience?—A. Yes, sir.

Q. And passed that over to the Standard Oil Company of Ohio; did you not?—A. I sold it out, but I can not tell you whether to the Standard Oil Company or not without referring to the books.

Q. But it got into the ownership of the Standard Oil Company?—A. Yes, sir; it got into the pipe-line ownership.

Q. It got into the ownership of the pipe-line, which the Standard Oil Company controls?—A. Yes, sir.

Witness excused.

### TESTIMONY OF J. D. ROCKEFELLER.

J. D. ROCKEFELLER, sworn and examined.

By Mr. GOWEN:

Q. I will ask you a very few questions, because I have had Mr. Flagler, Mr. Archbold, and Mr. Brewster on the stand and do not propose to ask you the same questions?—A. I should be very grateful to the committee if I can be excused as soon as possible.

Q. You were president of the Standard Oil Company of Ohio?—A. Yes, sir.

Q. And now of the Standard Oil Trust?—A. Yes, sir.

Q. You have been connected with the oil business for a great many years?—A. Yes, sir.

Q. Do you remember the South Improvement Company of 1872?—A. I remember there was such a company.

Q. Can you tell us who were the owners of that—what interests each of you gentlemen had in it?—A. I do not know that I can tell you all the owners. I can give you nearly all, if not all.

Q. I want the names particularly of gentlemen who either now or in the past have been interested with you gentlemen who were in the South Improvement Company?—A. I think they were O. T. Waring, W. P. Logan, John Logan, W. G. Warden, O. H. Payne, H. M. Flagler, William Rockefeller, J. A. Bostwick, and myself. I would like to state that this is from recollection and I may have mentioned the names of one or two gentlemen who were not in it.

Q. Was Mr. Bushnell in it?—A. I could not state from memory; I should think not.

Q. Was Mr. Waring connected with the Standard Oil Company at the time of the South Improvement Company?—A. He has never been.

Q. Were the two Logans connected with the Standard Oil Company?—A. No, sir; nor have they ever been.

Q. Mr. Warden has been intimately connected with that company and was one of the trustees, was he not?—A. Yes, sir.

Q. Mr. Payne also was one of the trustees originally, was he not?—A. Yes, sir.

Q. Mr. Flagler is one yet?—A. Yes, sir.

Q. Is William Rockefeller one of the trustees?—A. Yes, sir.

Q. He still retains his position?—A. Yes, sir.

Q. Mr. Bostwick was once one of the trustees?—A. Yes, sir.

Q. He has retired?—A. Yes, sir.

Q. You are the president, are you not?—A. I am.

Q. Was Charles Lockhart in the Standard Oil Company's service in any way or in its ownership?—A. Yes, sir.

Q. In which; of Ohio?—A. Of Pittsburgh.

Q. Now, can you tell me the number of barrels of crude oil that were refined in the year 1887 by all the interests which now constitute or are connected with the Standard Oil Trust?—A. I can not.

Q. Who can give us that information?—A. I can have that forwarded to you.

Q. Will you do so?—A. I will, with pleasure; yes, sir. May I send it through my counsel, Mr. Dodd? Unfortunately Mr. Dodd is called to New York on account of the serious illness of his son.

Mr. GOWEN. Mr. Flagg is here.

The WITNESS. Very well; I will send it to him.

Q. When does your fiscal year end in all these establishments; have you a fixed time?—A. I think, January 1st.

Q. If it should not happen to end on the 1st of January you can give it to me for your last fiscal year?—A. I think it ends on the 1st of January.

Q. Since last January you have secured interest in some other refineries, have you not, that you did not control last January?—A. Since the 1st of January of what year?

Q. Eighteen hundred and eighty-eight.—A. I do not recall at the moment.

Q. Logan, Emery & Weaver have testified that you bought them out.—A. I do not remember the date of that purchase. I have not it in my mind.

Q. I will ask you, then, to add at the bottom of that statement, after refreshing your recollection, a statement of the capital of all refineries which you may have secured interest in or control of since the 1st of January, 1888. Is not the principal factor in regulating the price of crude oil in other parts of the world than America, the oil which comes from the Caspian Sea; is not that the principal factor?—A. That is the largest product—what we call the Russian product.

Q. Is not that the only principal product that you have to contend with?—A. That is the large percentage of it.

Q. There is an Austrian product also, is there not?—A. Yes, sir.

Q. That does not interfere much?—A. To a very limited extent. I am not able to state now the amount of the production of the Austrian oil; that has been a factor for a number of years; but I do not remember how much they produce.

Q. State whether you or any of your interests have any control of the Russian fields or ownership in them?—A. No, sir.

Q. Have you been negotiating for them?—A. No, sir.

Q. Has not one of the gentlemen who was connected with your establishment been appointed consul on the Black Sea at some port—at Batoum?—A. Not that I am aware of.

Q. Have you any agents abroad located at that point?—A. I do not recall that we have. Our agents abroad would travel.

Q. Who has charge of that department in your company; that is, the department of investigating and looking after foreign competition?—A. Our people who sell; any of our salesmen.

Q. But who at home has general charge of that department?—A. It would not come to us. It rests with the gentlemen who sell the oil in those countries.

Q. But you have an interest in the sale of the oil?—A. I mean our American oil.

Q. You have agents abroad selling your oils on your own account?—A. Not often. We prefer to sell the oil in this country. Sometimes in this Russian competition we have to do anything that we can to secure the trade.

Q. I just want to get at the manner in which the business is done. What percentage of your product of refined oil do you send here and get rid of at once without the necessity of following it up further?—A. I can not answer that.

Q. Who does know among you gentlemen; would Mr. Archbold or Mr. Brewster know that?—A. That could be ascertained in our office in New York. We sell just as little abroad as possible.

Q. The bulk of the product you sell here at once?—A. We try to.

Q. To people who ship it abroad on their own account?—A. Yes, sir; we try to.

Q. State from your knowledge of this business whether if it were not for European competition in the same article there is any other illuminating substance known in the world that could compete with refined petroleum even if refined petroleum were 30, 40, or 50 cents a gallon?—

A. I do not know where the line of the competition would come. We think our American petroleum is a very cheap light. It is our pleasure to try to make it so. I do not know where the line would be drawn between it and other illuminants.

Q. For instance, other illuminating substances are either animal or vegetable oils, are they not?—A. Yes, sir.

Q. There are whale oil and rape-seed oil, or oils of similar character?—A. Well, they get oil from the shales, you know.

Q. Then there are mineral oils produced from shales?—A. Yes, sir.

Q. And from some coal slates?—A. Yes, sir.

Q. At what price for petroleum do you think that mineral or vegetable oils could be produced in competition with it?—A. I could not answer that.

Q. You certainly must know more than anybody else in this room about that.—A. I could not answer that. I do not know at what point the two would come together.

Q. The price of whale oil is about \$1.80 or \$1.60 per gallon, is it not?—A. I do not know the price of whale oil.

Q. Within your experience how high has been the price—we will take the New York price—how high has been the price per gallon on refined oil?—A. I could not state from recollection. I could get that.

Q. Has it been as high as 40 or 50 cents per gallon?—A. Yes, sir.

Q. Up to that time did it meet with any competition that reduced it in price except from mineral oils of the same character?—A. I could not answer that. I do not know to what extent the competition might have been checked by the price of 40 or 50 cents. That was a number of years ago, and I was not sufficiently conversant with the other oils, in which I had no dealings whatever.

Q. I suppose you can safely answer this question: At 25 cents as the wholesale price of refined oil in New York there is no other product except petroleum which could interfere with it, is there?—A. I do not know at what price gas can be manufactured; gas is cheaper than it was. I do not know at what price our petroleum would stop and other illuminants take its place.

Q. But leaving out gas, there are no illuminating oils known which at 25 cents a gallon for petroleum could compete with it?—A. I do not know about other oils.

Q. How about the Scotch shales?—A. I do not know what the Scotch people get for their shale oil.

Q. Will you get the price lists for us?—A. Yes, sir; I can send them to you.

Mr. GOWEN. We asked two questions of Mr. Archbold and Mr. Brewster, and both of them declined to answer until the will of the committee was known. Now if you, Mr. Rockefeller, will tell us without waiting for the action of the committee, I will ask you those questions; but if you will say that you will not answer them I will not ask you.—A.

If you please, Mr. Gowen, I prefer not to answer those questions which they declined to answer.

By Mr. BYNUM :

Q. Does the Standard Oil Company or Trust own any other property except the oil property ?—A. That is the general line of property.

Q. I know that is the general line of property, but do you own any other property ?—A. There are some other things that are collateral to the business that come in.

Q. What other properties do you own ?—A. The glue and acid and such things, and mechanical devices and appliances that have come in in connection with our business—barrel-making and so on.

Q. Only incidents to the oil business ?—A. Yes, sir.

Q. Do you own any interest in natural-gas fields in Ohio ?—A. Some of those interests we have in the trust or its connections.

Q. Have you any interest in the natural-gas fields in Indiana ?—A. I am unable to state whether we have or not. I am not connected with that department in a way that would enable me to know.

Q. Who could answer that question ?—A. Mr. Brewster could have answered, perhaps not specifically as to parcels of land, but generally. It would be easy to ascertain that.

Q. Is there any one here that can answer that ?—A. I presume not.

Q. Could you furnish a statement in a general way, I do not care specifically, as to what interest the trust has in Indiana now, either in stocks of any natural-gas company or in leases upon lands ?—A. I think I can easily do so ; yes, sir. I will send it to you through Mr. Flagg.

By Mr. BUCHANAN :

Q. You speak of some cognate interests ; I think you said glue and acid making, etc.—A. To some extent we manufacture around our refineries those things we use ourselves.

Q. But included in the trust, is there the capital stock of any corporation devoted exclusively to the production of glue and its kindred products ?—A. No, sir ; that comes in in the regular manufacturing plant.

Q. As I understand it your trust is composed of a number of trustees who have issued certificates, representing that trust, in exchange for the certificates of capital stock surrendered to you by a number of different corporations. Is my understanding correct ?—A. Yes, sir.

Q. Included in those corporations, whose stock has thus been surrendered and exchanged for certificates of the Standard Oil Trust, is there any corporation whose exclusive business it is to be engaged in the manufacture of glue and its kindred products ?—A. No, sir. The glue making and barrel making would come in in the same corporation ; for example, the Standard Oil Company of Ohio would manufacture its own glue to a certain extent, and its barrels or other things that were collateral to the oil industry.

Q. Then such product of these corporations is consumed entirely by or within the corporation aggregating the combination ?—A. I suppose substantially so.

Q. I wish to know accurately, as nearly as you can give me, whether there are any of the products of these corporations engaged in the manufacture of these articles thrown upon the general market ?—A. I should say not. The object of having those products is to utilize them in our own manufacture.

Q. Can you speak with any degree of confidence as to whether any

of this product is thrown upon the general market?—A. It is my impression that it is absorbed within our own business.

Q. Testimony has been given before the committee indicating the existence of what is known as the Cotton-Seed Oil Trust. Are you one of the trustees in that trust?—A. I am not; I have no connection with it, and never have had.

By Mr. SMITH:

Q. Are you in the iron business, that is to say, the Trust?—A. Not at all; no, sir.

Q. Do not you manufacture the hooping that you require for your barrels?—A. We do not.

Q. Are you engaged or interested in any soap manufactory in New York?—A. No, sir.

Q. Have you a line of pipe for natural gas to Buffalo?—A. There is such a line of pipe to Buffalo.

Q. Do you supply customers all alike there?—A. I suppose so; I am not familiar with the details.

Q. Well, Mr. Rockefeller, in getting testimony here we find among you officials that there is a very great shortness of memory in not knowing this or that or the other, and yet the testimony goes to show that you are doing an immense business, and there seems to be nobody that knows anything positively about it.—A. If you will allow me, it would be quite impossible for me to be familiar with the details of all of those interests that are represented in the trust. My belief is that their prices are the same. I have no knowledge on that point. I should be quite happy to give it if I had it.

Q. Does the trust keep books?—A. No, sir; that business would be done by each company.

Q. How do you equalize matters between yourselves?—A. I do not understand, Mr. Smith.

Q. If every one of these corporations go it alone, what reason is there to have a trust?—A. They do manage their own business independently.

Q. They report to the trust, do they not?—A. If they make any profit they turn it in to the trustees.

Q. Do I understand, then, that every trustee carries a small memorandum-book and jots it down for himself?—A. No, sir.

Q. Do you keep books in the ordinary course of business?—A. These corporations all keep books, and they keep their own accounts.

Q. I understand that, but I mean the Trust itself.—A. No, sir; we have no system of book-keeping.

Q. That seems to be a new thing in business, that a company can do an enormous business without books; and if this committee could discover where these books are kept, if there are any, we would not bother you gentlemen much.—A. All these gentlemen keep careful books, Mr. Smith; they keep careful accounts, each for himself; each concern keeps its own set of books carefully.

Q. Mr. Rockefeller, we have the testimony here that the trust has a line of pipe on the right of way of the Chicago and Atlantic Railway from the Lima field to Chicago. Is there no account kept of that—the contract, etc.?—A. Do you mean to say that the trust has it?

Q. The trust seems to own it.

The CHAIRMAN. You are mistaken in the testimony, Mr. Smith; the testimony is that the National Transit Company owns that.

The WITNESS. Yes, sir; yes, they have that.

By Mr. BUCHANAN:

Q. How many of these trustees are there in this Standard Oil Trust?—A. There are nine.

Q. And they receive from any of the subordinate corporations earning them the dividends?—A. They do; yes, sir.

Q. And when those dividends are received they apportion them among the holders of the trust certificates?—A. They do; yes, sir.

Q. Who actually handles that money?—A. The treasurer of the trust.

Q. Who is he?—A. Mr. Brewster.

Q. Does he keep books of those transactions?—A. He has a record, to know what money comes in.

Q. Call it record, or books, or whatever is most appropriate. Does he keep a record of receipts from these different corporations and payments made to holders of certificates?—A. He must have some record. I do not know just what his system of book-keeping is. There must be some record; yes, sir.

Q. You are the president of the nine trustees?—A. Yes, sir.

Q. You have never seen those books?—A. I do not think I have ever seen those books.

Q. Has any member of that nine, to your knowledge, ever seen those books?—A. I do not know that they have. If such accounts are kept, Mr. Brewster must have seen them. They must have been made by his subordinates.

Q. How long is it since the formation of this trust?—A. The trust was formed in January, 1882.

Q. Has the treasurer during that time ever rendered any account or report to the trustees?—A. Yes, sir.

Q. In writing?—A. Yes, sir.

Q. Did he at any time submit his books for inspection?—A. I do not know that he submitted his books to the trustees for inspection.

Q. Or to any of the trustees?—A. I may state that any accounts or books are examined by regular accountants. In connection with any business we have, there are accountants who examine all papers and accounts. There are many of such accountants.

Q. Do these trustees have stated meetings?—A. They do.

Q. When?—A. About once in a quarter.

Q. Where?—A. In New York.

Q. Is any record kept of the transactions of those meeting?—A. Yes, sir.

Q. By whom?—A. By the secretary.

Q. Who is he?—A. Mr. Flagler, he is the secretary.

Q. Where is that book of records kept?—A. That is kept in New York.

Q. At what place in New York?—A. At 26 Broadway, I suppose. Mr. Flagler would be the custodian of it.

By Mr. GOWEN:

Q. Can you tell us the relative rate at which certificates of the Standard Oil Trust were issued against the shares of other companies that were taken in?—A. They were issued for value.

Q. But, for instance, take the Standard Oil Company of Ohio; what was the par value of its stock?—A. I could not tell that; I do not remember.

Q. What was the par value of a share of stock in the Standard Oil Company of Ohio?—A. At the time? That I could not tell.

Q. Can not you tell whether it was \$50 or \$100?—A. I think it was above par.

Q. But what was the par?—A. I did not understand your question before. The par was \$100.

Q. The nominal par?—A. Yes, sir.

Q. Now, the nominal par of the certificate of the Standard Oil Trust is \$100, is it not?—A. Yes, sir.

Q. And what was issued as representing \$100 of par is now selling at about \$160, according to Mr. Flagler's testimony?—A. In a small way; no large amounts could be sold.

Q. How many shares of the certificates of the Standard Oil Trust were issued for one share of the stock of the Standard Oil Company of Ohio?—A. I could not tell that from memory. I can not remember about those different companies.

Q. Were the shares of the Standard Oil Company of Ohio taken into the trust at a higher rate than the par value?—A. It was according to the properties possessed, and according to whatever the possession of that company was at that time. It was probably more than par at that time; considerably more, I should say.

Q. Did you ascertain the value that you should give for these shares of the different corporations which were taken into your trust by their market value at the time or by appraisement of the property?—A. By valuation of their properties.

Q. By appraisement?—A. Yes, sir.

Q. Therefore you have some record at some place that will show exactly the relative amount at which the certificates of the Standard Oil Trust were exchanged for the various shares of these different companies, have you not?—A. I suppose there is such a record.

Q. Can you furnish us with a list showing in all of the cases of the corporations who are mentioned in your trust agreement which is here in evidence—can you give us the amount of Standard Oil certificates that were issued against them?—A. I suppose I could get that.

Q. Will you do that when you send me the other statement?—A. Is that one of the things that you asked Mr. Archbold and Mr. Brewster, and which they declined to give?

Q. No, sir; that is not one of the things. What we want now is a statement of the amount of the certificates of Standard Oil Trust issued in respect of or against the shares of the other various corporations that were taken into the trust, showing the amount of each.—A. I will do what I can with that.

Q. Will you send that with the others?—A. Yes, sir.

By Mr. BUCHANAN:

Q. There was a question asked by Mr. Gowen. Do you remember, after this appraisement was taken of the value of the property of each corporation, what the aggregate was?—A. About \$70,000,000.

Q. What was the issue of trust certificates?—A. Seventy millions. They are \$100 a share.

Q. So, then, you mean to be understood as saying that the issue in the aggregate of trust certificates was equal or about equal to the aggregate of the value of property held by the subordinate corporations?—A. I do.

By Mr. BYNUM:

Q. What branch of your corporation or trust has charge of these natural-gas companies?—A. It is in connection with the pipe system; it would be in that division.

Hon. HENRY BACON,

*Chairman of Committee on Manufactures :*

DEAR SIR: Your committee requested Messrs. Rockefeller, Archbold, and Flagler to furnish you with certain information. The information desired of Mr. Flagler is contained in his letter of this date. Mr. Archbold is absent, and I have been requested to furnish to you the information desired of him and Mr. Rockefeller.

1. The number of barrels of crude oil, refined or otherwise, dealt in and consumed in 1887 by companies whose stocks were held wholly or in part by the Standard Oil Trust was 19,837,531 barrels of 42 gallons each.

2. The refining capacity of refineries acquired by the Standard interests since January 1, 1888, is 2,000 barrels per day.

3. We have been unable to obtain any price-list of Scotch shale oils.

4. Neither the Standard Oil Trust nor any of the companies whose stocks it holds has any interest in the Indiana gas fields. Some interests were taken in gas fields near Indianapolis, but the enterprise was abandoned and all the interests acquired were sold to other parties last fall.

5. I have directed to be sent you by express a schedule of tank cars as issued by the Union Tank Line. I believe this covers all the information asked for, except one question asked of Mr. Rockefeller, to wit:

Can you furnish us with a list showing in all of the cases of corporations mentioned in your trust agreement the amount of Standard Oil Trust certificates issued against them?

Mr. Rockefeller asked if this was one of the questions asked of Messrs. Archbold and Brewster, and being told by Mr. Gowen it was not, said he would send the information.

While this question was not in its exact form put to Mr. Archbold it was in substance proposed to him when he was asked the amount of certificates issued for stock of the Acme Company.

This he declined to answer, and in doing so was, as I understand, sustained by the committee. Mr. Rockefeller should not, therefore, be held to a promise made under a mistake of that nature.

As his counsel I object to his furnishing the information, upon the ground that it is a purely private matter, and can be of no possible service in shaping any future legislation upon the subject before the committee. I further call the committee's attention to the fact that it has passed upon this subject, not only in the case of Mr. Archbold's refusal to answer, but also when the witnesses in the sugar companies' case declined to give similar information. I have therefore deemed it my duty as counsel to instruct Mr. Rockefeller to decline to answer that question, and submit to the judgment of the committee whether it is a proper question to be insisted upon. The fact is already testified by Mr. Rockefeller that the property of each corporation was appraised and the certificates were issued upon the basis of said appraised values.

Yours truly,

S. C. T. DODD.

MAY 23, 1888.

ROOM OF THE COMMITTEE ON MANUFACTURES,  
HOUSE OF REPRESENTATIVES U. S.,  
Washington, D. C., May 25, 1888.

Mr. S. C. T. DODD:

MY DEAR SIR: Your favor of the 23d inst. has been received and contents noted. In regard to the question to which Mr. Rockefeller, under your advice, has declined to answer, I am directed by the committee to say that the import of the question as quoted by you is somewhat different from what it was understood to call for by the committee and myself. The committee reached a conclusion in the "sugar-trust investigation," and in the ruling upon the question put to Mr. Archbold, that it was not of importance for the purpose of legislation that they should have specifically the amount of trust certificates against the certificates of capital stock delivered to the trustees, but that it was important that they should have specific information, first, that the properties of the various corporations whose stocks were turned over to the trustees were actually and fairly appraised; second, that they should know whether the amount of the trust certificates issued to the stockholders of each corporation were exactly equal in amount to the appraised value of the tangible property of the corporation or was less or more, and if more, what in addition to the tangible property was included to make up the difference; and, lastly, whether the appraised value of the property of the various corporations were exactly equal or less or more to their capital stock. This information was furnished by the "sugar trust" people without specifying any amount in any case, and it was accepted by the committee as a sufficient reply to its inquiry upon this subject. I am instructed by the committee to inform you that a similar reply from Mr. Rockefeller will be

deemed by it a satisfactory response to the question put to him, and which he promised to answer. Please advise me whether he will furnish this information.

I am, very truly, yours,

HENRY BACON,  
*Chairman.*

26 BROADWAY, NEW YORK, May 31, 1888.

DEAR SIR: In answer to your request for further information contained in your letter of 25th instant, I respectfully reply, in behalf of Mr. Rockefeller.

1. The properties of the various corporations whose stocks were turned over to the trustees were actually and fairly appraised.

2. The amount of the trust certificates issued to the stockholders of each corporation was in excess of the appraised value of the tangible property of the various corporations, intangible property, such as good-will, patents, trade-marks, etc., being included in the valuation.

3. The appraised value of the property of the various corporations was in some cases greater than the nominal capital stock of said corporations, and in other cases less than the nominal capital.

Yours truly,

S. C. T. DODD.

HON. HENRY BACON,  
*Chairman of Committee on Manufactures.*

### TESTIMONY OF CLEMENT A. GRISCOM.

CLEMENT A. GRISCOM, affirmed and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Philadelphia.

Q. What is your business?—A. Shipping and commission merchant.

Q. You are president, are you not, of the National Transit Company?—A. Yes, sir.

Q. How long have you been connected with that company?—A. I think since the formation of the company, in 1881 or 1882.

Q. Under what charter was that formed; under a charter obtained from the State of Pennsylvania?—A. Under a charter obtained from the State of Pennsylvania.

Q. A special charter?—A. A special charter.

Q. Do you remember when it was obtained?—A. I can not answer that.

Q. Prior to 1874?—A. Yes, sir.

Q. Do you know what the charter had been used for up to the time it was taken?—A. I think it was a charter sold at public sale by the State.

Q. What was the name of the company when it was chartered; do you remember?—A. I have not thought of it for years. I believe it was the Southern Security Company, but I would not like to be considered as accurate.

Q. Had that Southern Security Company engaged in other business at one time, if you know?—A. It was a charter sold for taxes by the State and purchased by us.

Q. It must have been engaged in some business?—A. That is a fair inference.

Q. The charter was sold by the State for taxes, therefore the State must have had a lien against it for some accrued taxes on something it did?—A. That is a fair inference.

Q. Or on its capital stock?—A. Yes, sir.

Q. How long prior to its use by the National Transit Company was it so sold?—A. I could easily ascertain that for you.

Q. Will you send it?—A. Yes, sir.

Q. What is the total capital of the National Transit Company?—A. That I can not answer off-hand. I will send that to you.

Q. It is somewhere in the neighborhood of \$25,000,000, is it not?—A. Yes, sir; twenty-five or twenty-six millions.

Q. Of that amount it has been testified here that the Standard Oil Trust controls 94 per cent.—A. It is about that.

Q. Will you tell us who own the remaining 6 per cent.?—A. I most respectfully decline to answer that question under the advice of counsel.

The CHAIRMAN. The matter will be taken up in executive session.

Q. You are a director of the Pennsylvania Railroad Company, are you not?—A. Yes, sir.

Q. How long have you been that?—A. About three years.

Q. You were not a director, then, at the time of the formation of this company?—A. No, sir.

### TESTIMONY OF JOHN LLOYD, Jr.

JOHN LLOYD, Jr., sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Lynchburgh.

Q. Virginia?—A. Yes, sir.

Q. You originally lived in Philadelphia?—A. Yes, sir.

Q. How long since you left Philadelphia?—A. Last May.

Q. Were you in business with Mr. Malcolm Lloyd?—A. Yes, sir.

Q. Is he your brother?—A. Yes, sir.

Q. Were you one of the firm?—A. No, sir.

Q. You were in what business with him?—A. I was in the refining of petroleum.

Q. From what years?—A. I do not know; I think about eighteen years altogether; seventeen or eighteen.

Q. Up to the period at which you left Philadelphia?—A. Yes, sir.

Q. Now, how did you receive your oils at that time?—A. Over the Pennsylvania Railroad, and previous to that over the Empire Line.

Q. But the Empire Line was a transporting line upon the Pennsylvania Railroad?—A. Yes, sir.

Q. Therefore you received practically altogether by means of the railroad lines of the Pennsylvania Company?—A. Yes, sir; I believe so.

Q. Now, can you tell us what the rates you paid on crude oil were to your refinery?—A. No, sir; I can not think of that.

Q. Did you receive rebates?—A. Yes, sir.

Q. On crude oil?—A. Yes, sir.

Q. How much for a barrel?—A. I can not remember that.

Q. As near as you can?—A. About 10 or 15 cents; something of that kind.

Q. Did you ever get more than that?—A. I was not in possession of any books or accounts. I can not tell from memory. I have not been in the oil business for going on two years now.

Q. Up to what time did you receive this drawback of 10 or 15 cents?—A. I got it two years ago. I have not been in the business since.

Q. Have you any means of ascertaining what the amounts were?—A. No, sir.

Q. What did you do with your refined oil?—A. We exported it and sold it to the home trade.

Q. Did you ship any of it inland to the home trade by rail?—A. Yes, sir.

Q. State whether you had any rebates on refined oil shipped inland to the home trade.—A. I do not remember of any.

Q. Did you ever ship refined oil to New York for the purpose of having it shipped there to the foreign trade, or did you ship it to the foreign trade exclusively from Philadelphia?—A. We always loaded at our wharf in Philadelphia.

Q. Then you have no means of ascertaining the amount of rebates that you received on crude oil?—A. No, sir.

Q. But you received those rebates up to the time you left Philadelphia?—A. I do not remember the time, but within a few months probably.

Q. Can you remember the highest rate per barrel that you received?—A. No, sir; I can not remember that.

### TESTIMONY OF FRANK HARRIOT.

FRANK HARRIOT, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Baltimore.

Q. What is your business?—A. General traffic manager of the Baltimore and Ohio road.

Q. How long have you been in that position?—A. About two months.

Q. What position had you before that?—A. General freight agent.

Q. For how long?—A. Six years.

Q. Can you remember in 1886 an application made to you by Mr. George Rice for shipments over some of the southern connections of your road, of oil?—A. I can remember a general application for various rates found there.

Q. The latter part of 1886?—A. Yes; I should think it was about that time.

Q. December, 1886?—A. I can not fix the month exactly.

Q. Do you remember naming a rate for him in connection with your southern connections, giving him a rate for shipment of oil?—A. I think there was a rate made, but I can not remember it.

Q. You remember the fact?—A. Yes, sir.

Q. Shipments were commenced, were they not?—A. Yes, sir; I think they were.

Q. State whether or not within a week or two you did not withdraw the rates [exhibiting to witness a paper]. That purports to be a copy, but it may revive your recollection.—A. Yes, sir; I remember that.

Q. You remember the fact?—A. Yes, sir.

Q. That you believe to be a copy?—A. Yes, sir.

Q. (Reading:)

DECEMBER 15, 1886.

GEORGE RICE, *Ohio Oil Works*:

See your letter 13th. I find that for the present we will have to withdraw rates on oil to southern points, as the various lines in interest will not carry them.

FRANK HARRIOT,  
*General Freight Agent, Baltimore and Ohio Railroad.*

You remember that?—A. Yes, sir.

Q. Now tell us by and upon whose suggestion or at the instance of what lines you withdrew those rates.—A. If I remember right, the southern roads objected to the continuance of these rates on the score that the oil was not unloaded, the charges were not paid, and the cars were kept standing. Now, I know nothing of the facts myself, but I am perfectly willing to send you that correspondence, if you wish it.

Q. But this telegram was written on December 15, 1886, was it not?—  
A. I don't know; you have the date.

Q. [Showing witness the telegram.] Just look and see whether it was not December 15.—A. Yes, sir.

Q. And was it not only within a week or two of that that the rate had been fixed?—A. It had been only a short time. I think he had been shipping more than a week.

Q. He shipped from Marietta, Ohio, to what point; do you remember?—A. No, sir.

Q. Where upon your lines did that oil first reach you?—A. Parkersburgh, and left us at Strasburgh.

Q. With whose line did you connect at Strasburgh?—A. The Virginia Midland, or what is known as the Richmond and Danville system.

Q. Now, can you send to this committee a statement showing the date at which your rates were given to Mr. Rice, and also the correspondence with these other companies that resulted in your notifying him that these rates had to be given up?—A. I think I can.

Q. Will you do that?—A. Yes, sir; I think I have all the correspondence. We should have, at least.

Q. Will you send that to-morrow?—A. I will try to do so to-morrow. I will have to look back two years among a lot of old files, and I may not be able to do it to-morrow.

Q. But within a day or two?—A. Yes, sir.

Q. [Showing witness a paper.] Just look and see if that will recall anything further to your recollection upon this subject.—A. I will send you all the correspondence. I remember some of the circumstances connected with it, but not all of them. I would like to give you the whole of it.

OHIO OIL WORKS,  
Marietta, Ohio, December 13, 1886.

C. E. WAYS,  
A. G. F. A., Baltimore, Md.:

Your rates on oil from here to southern points via Strasburgh, per your letter of November 15, was given at so much per 100 pounds. I accepted your rates and requested the same to be issued. The C. W. and B. gives its agent here orders to bill all such oil by the barrel, at an estimated weight of 400 pounds. Now, the C. W. and B. has always heretofore billed at 380 pounds per barrel, while the L. and N. average it 375 pounds per barrel, and no other road exceeds 380 pounds. I desire to know if this was done by your orders, and if you are not satisfied with taking the same general average as carried by all other lines (which does not exceed 380 pounds). I have just returned from the South, and made several sales on basis of 380 pounds, and as the oil market is very low it about cuts off what little profit there was.

Please advise.

Yours,

GEO. RICE.

OHIO OIL WORKS,  
Marietta, Ohio, December 15, 1886.

C. E. WAYS,  
A. G. F. A., Baltimore, Md.:

Inclosed please find dispatch received this day from my agent at Chattanooga, Tenn., in regard to car of oil started from here December 1 (60 barrels) 22,800 pounds (billed at 380 pounds per barrel); and also one car sent to Birmingham, at 380 pounds, since which they are billed and averaged at 400 pounds per barrel (and at a barrel rate), figured on this basis.

The rate given me by you November 15, of 30 cents per hundred, and on 22,800 pounds as above, comes to \$68.40 as against \$132 per this dispatch. I have refused to pay this excess of freight, for I hold a through bill of lading therefor, which is in accordance of our agreement.

This is a very great annoyance and delay to me, and the oil will remain there in the car subject to your orders and risk. How could this have been done when it was shipped on a through bill of lading, and who is to blame for this?

Please answer by return mail.

Truly, yours,

GEO. RICE.

[Telegram.]

BALTIMORE, MD., December 15, 1886.

GEO. RICE,  
Ohio Oil Works, Marietta, Ohio :

See your letter 13th. I find that for the present we will have to withdraw rates on oil to southern points, as the various lines in interest will not carry them out.

F. HARRIOTT.

[Telegram.]

MARIETTA, OHIO, December 16, 1886.

FRANK HARRIOTT,  
G. F. A., B. & O., Baltimore :

What particular lines refuse to carry out previous agreement? Also state present rate to Chattanooga.

GEO. RICE.

[Telegram.]

BALTIMORE, MD., December 20, 1886.

GEO. RICE,  
Marietta, Ohio :

Can do nothing at present with oil rates from Marietta to the South, and if we can not get along better than we have during last two weeks we will never put them in.

F. HARRIOTT.

OHIO OIL WORKS,  
Marietta, Ohio, December 20, 1886.

F. HARRIOTT,  
G. F. A., B. & O. R. R., Baltimore, Md.:

I inclose copy of dispatches, which speak for themselves. Yours of to-day I don't understand as to this part: "If we can't get along any better than we have during the last two weeks, we will never put them in." This sudden abrogation of rates is pretty tough within two weeks after I had commenced to ship (December 1) per rates given me November 15, and which you countermanded December 15, because as you say the various lines in interest will not carry them out. Now the Piedmont Air line wire you to continue the oil rate and they run to Atlanta and Birmingham. If any other line objects will you be so kind as to inform me? This sudden termination of rates has caused me great annoyance and trouble, and, with cars in readiness to leave, after making arrangements in the South to send my oil there, supposing I would have a due and reasonable notice of this change, is inexcusable, unless better explained. Can you do so?

Yours,

GEO. RICE.

[Telegram.]

BALTIMORE, MD., December 21, 1886.

GEO. RICE, Marietta, Ohio :

The reasons are shortage of cars, the impossibility of getting cars returned from the South, the overcharges, and the low rates of our company. This is all against the traffic.

F. HARRIOTT.

[Telegram.]

RICHMOND, VA., December 21, 1886.

FRANK HARRIOTT, Baltimore, Md.:

Rice telegraphs you are unwilling to continue the oil rates from Marietta. Please explain why.

SOL HAAS.

[Telegram.]

BALTIMORE, MD., December 22, 1886.

SOL HAAS,

*T. M. A. R. R. Va. & C., Richmond, Va.:*

Your dispatch regard to oil. We can not get cars to do the local traffic of our line. We have a great number of cars South now and the rate is much lower on the oil than on plenty of other traffic offering, for which reasons I suspended the rates.

F. HARRIOTT.

[Telegram.]

MARIETTA, OHIO, December 23, 1886.

F. HARRIOTT,

*G. F. A., B. & O. R. R., Baltimore, Md.*

I sold Atlanta two cars, based on your rates; one has gone forward. Will you protect the other? Advise me and agent here.

GEO. RICE.

[Telegram.]

BALTIMORE, MD., December 23, 1886.

GEORGE RICE, *Marietta, Ohio.:*

Have asked Mr. Fraser to instruct his agent at Marietta to take the one car for Atlanta.

F. HARRIOTT.

OHIO OIL WORKS,

*Marietta, Ohio, December 31, 1886.*

C. E. WAYS,

*A. G. F. A., Baltimore, Md.:*

On November 15 last you gave me through rates to southern points on oil in car lots from Marietta. I accepted said rates and requested you to issue same. I commenced to ship or started the first car from here December 1, and on the 8th the fourth car was started, and, with oil sold ahead and shipments getting ready to send to agencies, comes an arbitrary telegram from Mr. Harriott, dated December 15, in which he says: "For the present we will have to withdraw rates on oil to southern points, as the various lines in interest will not carry them out." On receipt of this telegram I immediately wired Sol Haas, traffic manager of the Richmond and Danville system (the principal connecting line into the South), the contents of above dispatch, and asked him why he objected. On December 18 Haas responded as follows: "Have requested Mr. Harriott to continue the oil rate; overcharge will be promptly refunded." This shows that "the various lines in interest" had not refused to carry out the through rates as given me by you November 15. On December 21 Mr. Harriott wires me other reasons as follows:

"The reasons are shortage of cars, the impossibility of getting cars returned from the South, the overcharges, and the low rates for our company. This is all against the traffic."

The overcharges spoken of here certainly could not affect you, for you received all that you agreed to do, or was entitled to, in the first place, while I was the sufferer, and compelled to pay \$132 on the first car of 60 barrels into Chattanooga, as against a bill of lading I hold of \$72 (or \$60 overcharge), almost double. The next car was charged \$120 as against \$72, or \$48 overcharge. Is this not a fine state of affairs? And in connection with my being shut off so arbitrarily on a telegraphic notice, without any notice ahead whatever, is very significant, and I call upon you for an explanation for this summary and outrageous treatment, which can not be stigmatized too strongly. I await your answer.

Truly, yours,

GEO. RICE.

BALTIMORE, MD., January 5, 1887.

GEORGE RICE, Esq.,  
*Marietta, Ohio.:*

DEAR SIR: See your favor December 31, to Mr. C. E. Ways, regarding oil traffic in the South. Mr. Ways was not to blame for the withdrawal of the rates. After looking at the traffic and finding that the freight was overcharged (which you yourself admit, you saying that you hold bill of lading), I was confident that the Baltimore and Ohio Railroad Company was going to be charged with you on account of these overcharges.

You will admit that the rate is a very low one so far as Baltimore and Ohio proportion is concerned, and then the long detention to our cars in the South made it necessary for us to take some action regarding the traffic. I think you generally sell your oil in the highest market you can reach. We generally wish to carry the highest paying freight we can obtain; and when I saw cars leaving our road and not returning for thirty to sixty days, while we at the same time were so short of equipment that we could not take care of our local traffic, I gave the order to stop taking your traffic. This is no more than I have done on western traffic of other kinds over our road. It is the same as I do on New England traffic via Globe line, having refused to handle a single car to go into New England, as they were detained there the same as in the South. At 12 o'clock noon, to-day, the Richmond and Danville Railroad Company's system had 217 of our cars. This is the explanation which you say is due you, but I can not see the outrageous treatment to which you refer.

Yours, truly,

F. HARRIOTT, G. F. A.

### TESTIMONY OF GEORGE M. TAYLOR.

GEORGE M. TAYLOR, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Philadelphia.

Q. What is your age?

Mr. SCOTT. Mr. Chairman, if I am permitted at this stage of your investigation, when an officer of the Pennsylvania Railroad Company is called, I desire, with all respect to your committee, to raise the question of the right of the committee to examine the witnesses by counsel.

The CHAIRMAN. Your appearance here is as counsel for the witness?

Mr. SCOTT. I am instructed by the company of which he is an officer to appear for him and raise that question.

The CHAIRMAN. Do you desire to say anything upon that subject, because the committee will go into executive session to dispose of the question?

Mr. SCOTT. I do desire, Mr. Chairman, to say something on that subject. That is the reason I put the inquiry whether I will be permitted to do so.

The CHAIRMAN. We will hear now, with the consent of the committee, your suggestions upon that subject.

Mr. SCOTT. I desire in the outset, Mr. Chairman, in what I have to say, to express most decidedly the feeling that I am treading upon somewhat delicate ground before the committee in raising a question about the propriety of their past action.

I wish, however, as I have already done, to disavow all feeling of disrespect to the committee, and especially to disavow anything in the form of personal feeling with reference to the counsel himself who is conducting your investigation. The question which I raise is one which I think, upon a moment's reflection, you will see is a very important one to companies standing in the position in which the Pennsylvania Railroad Company does stand, in view of the numerous investigations that are now being ordered by Congress, in view of existing legislation in the State which created it, and in view of Congressional legislation which has already made it subject to another tribunal. It is not from any captious spirit that this question is raised.

I must go back a little to show you, if I can, the impropriety of a Congressional investigation of this character by counsel. It is one of the fundamental rules of parliamentary bodies—one I take it with which all the members of this committee are familiar, for it is to be found in every copy of Jefferson's Manual—that when a subject is committed to a committee for investigation it is committed to those who are favorable to the investigation. The language of the old cases in which this question was raised is that a child is never to be put out to a nurse who is unfriendly to its life or its existence.

Now, I called your attention, when I had the honor of being before your committee before, to the fact that when this committee was raised, members upon the floor of the House were especially solicitous that there should be committed to it an investigation not only of the Standard Oil Company, but of the Anthracite Coal Combination of Pennsylvania.

Mr. BUCHANAN. You desire, of course, to be entirely accurate. This committee is not a special committee. It is a regular committee of the House. I suppose you knew when this matter was intrusted to it.

Mr. SCOTT. I am obliged for the correction. I was aware that it was the standing Committee on Manufactures of the House, and not a special committee raised for this investigation. But it was to this standing committee that the special resolution directing a committee on trusts was committed, and the remark which the honorable member of the committee (Mr. Buchanan) makes, I think, will only illustrate more strongly the propriety of the position to which I wish to call your attention.

Had it been proposed to add members to the committee, or to raise a special committee under the parliamentary law, any member of the House who arose and expressed himself in opposition to the investigation of any one of the trusts that were enumerated or that were referred to in the debate would have been disqualified from being appointed upon that committee, from sitting upon it, and the old authorities go to the extent of saying that it would have been his duty to rise and ask to be excused from serving upon it.

Now, Mr. Chairman, in the kindest sense in the world I wish to say of Mr. Gowen, a distinguished member of the Pennsylvania bar, that he was disqualified from serving as a member of that committee, and if he was I wish to call your attention to the impropriety of submitting to his guidance in the investigations that are intrusted to you. I shall not undertake to characterize Mr. Gowen's connection with the anthracite coal combination of Pennsylvania, one of the subjects committed to you. That was done in such strong and decided language, by a friend of the honorable gentleman himself, one whose capacity for wielding the English language would have enabled him to do justice to that subject far more than I—when that distinguished gentleman was before a committee of the senate of Pennsylvania, and Mr. Gowen was there as the representative of the Reading Railroad Company—I mean the late eminent and honorable Jeremiah S. Black, whom I am glad—

The CHAIRMAN. Now, Mr. Scott, you will pardon the interruption, but the question which you have suggested here is the competency of this committee to employ counsel with regard to this investigation.

Mr. SCOTT. Yes, sir.

The CHAIRMAN. I desire you to understand, and that was expressed to you before, that Mr. Gowen's connection with this committee as counsel is restricted to the examination into the so-called Standard Oil Trust, and to submit to your judgment that in discussing the question of the competency of the committee to employ counsel for that purpose it is neither likely to aid us in reaching a correct conclusion, nor can it be agreeable to us that you should review Mr. Gowen's connections with other matters about which this committee has not sought his aid or advice.

Mr. SCOTT. I appreciate fully the statement which you make in endeavoring to show how consistent it is for Mr. Gowen to be the adviser of this committee if confined to one special subject which has been committed to you.

The CHAIRMAN. That is the purpose for which he is employed and the only purpose to which your objection now applies.

Mr. SCOTT. I am treating the whole subject committed to you as being involved in the propriety of Mr. Gowen's appearing as the counsel of this committee, and of course, if the committee deem that it is proper to submit themselves to the guidance, in one aspect of this examination, of a gentleman who in another has been characterized in the manner in which I was going to quote it by Judge Black, that is a question for this committee.

Mr. BRECKINRIDGE. We are dealing now with the Standard Oil Trust, and not with the anthracite coal combination, and it is not in order for him to take up a subject that the committee has not under consideration, and possibly may never have under consideration. It seems to me very obvious that if so loose a line of discussion were permitted that our investigation would be spread out all over creation without ever reaching anything in a determinate manner.

The CHAIRMAN. It seems to me that the discussion has gone beyond the point that was called for by the objection, and I think it becomes proper for me to offer that suggestion to you with deference to your years and experience.

Mr. SCOTT. I appreciated before the question to which I refer under embarrassment, as I say, in addressing as a tribunal the gentleman's client, the committee. Therefore, if you say I shall not go on with that subject, I submit at once; but before I pass from that and go to the next point I do desire to say, and I say it in all kindness, that as you are now investigating the business of the Standard Oil Trust in its effects upon the community, if my information is correct—and if it is not I shall receive in the kindest mode a correction from Mr. Gowen—Mr. Gowen is also the counsel of the Tide-Water Pipe Line Company, and that company is in a pool with this National Transit Company, which you are investigating.

I pass from that, and I go now to his position with reference to the Standard Oil Company, and I do it with great reluctance, sir. It is a duty, because the interests of the company which I represent are, we think, very largely involved in this question of propriety.

The CHAIRMAN. I think I will have to ask you to suspend a moment. I desire to have the opinion of my associates upon this committee, in executive session, as to how far this discussion shall go before you proceed. It is obvious that the objection which you make to the employment of counsel by the committee is an objection which develops itself into an objection to the particular person employed by the committee.

Mr. SCOTT. No, sir; if you will permit me—pardon me; my original objection, if I was not fortunate enough to state it clearly, was that there is not authority enough in the committee to employ any counsel.

The CHAIRMAN. That is my understanding, and the discussion is now proceeding, as I apprehend it, into a discussion of the question whether the particular person who has been employed as counsel by the committee is a proper person. Whether the committee will hear you upon that question or not is a subject which I think they had better determine in advance in executive session.

Mr. SCOTT. The reason I desire to say that is that I wish to illustrate, by the position of the counsel, the policy of the general rule I stated, that no committee, without the express authority of Congress, has the right to employ counsel.

The CHAIRMAN. With the approval of my associates upon the com-

mittee we will go into executive session to ascertain how far this discussion will go.

Mr. BUCHANAN. As I understand, Mr. Scott was just reaching that point, the point in the case as to our power to employ any counsel.

The CHAIRMAN. The point which Mr. Scott was upon, his last sentence, was whether Mr. Gowen was a proper person to be employed as counsel, because of his relations to the Standard Oil Trust, and as it had reached that point it seemed to me that we had reached a point where the discussion in executive session would be profitable. If that is the opinion of the majority of the committee we will take that order.

Mr. SMITH. I think, if my memory serves me right, Mr. Scott also hinted at the idea that we had no power, unless we had direct instruction from the House, to employ counsel.

Mr. BUCHANAN. That is his position, as I understand it.

Mr. SCOTT. I would prefer, if it be desired, to consult the elementary law upon that subject in Jefferson's Manual. I presume you are all familiar with it.

The CHAIRMAN. We would be glad to take the page on which it appears before we go into executive session.

Mr. BUCHANAN. My point was, before we went into executive session, that we should hear Mr. Scott upon our power to employ counsel at all.

Mr. SCOTT. I await the order of the committee upon that subject. It is certainly not agreeable to me, but it is imposed upon me. (To the chairman.) Is it your desire that I withdraw?

The CHAIRMAN. I expressed to the committee the view which I entertain upon it, that the discussion has branched off from the question of the power of this committee to employ counsel at all into a question of the propriety with which the committee made its choice in selecting the present counsel. Whether that question shall be discussed before the committee or not is one about which I prefer the committee shall deliberate in executive session.

Mr. GOWEN. I think before going into executive session you ought to hear me in answer to the allegation of Mr. Scott.

The CHAIRMAN. I think we will dispose of that at the same time, if you please.

Mr. GOWEN. I wish simply to say that any statement that Mr. Scott made or insinuated that I am in any manner professionally connected with anybody that makes it improper that I should act here, is absolutely, totally, and maliciously untrue.

Mr. SCOTT. Is it untrue that you are the counsel for the Tide-Water Pipe-Line Company? Answer me that.

Mr. GOWEN. I was the counsel for it, and offered to return them my fee if it was in any manner supposed that my engagement with it prevented my being employed in a public duty against the Standard Oil Company, and no fee that I ever received from the Tide-Water Pipe Line Company led me to do anything except to be hostile to the Standard Oil Company, to prevent them getting control of that organization.

#### EXECUTIVE SESSION.

(After executive session.)

The CHAIRMAN. The committee in executive session have had under consideration the objection made by counsel to the examination of this witness by the selected counsel of the committee, and have concluded that the objection should be overruled.

Before proceeding the committee further desires to enter upon the record the decision upon the two points left undecided in the testimony

of the witnesses called on Saturday, and have concluded that they will not require answers to be made giving the amounts of the individual holdings of trust certificates issued by the Standard Oil Trust, and will not require answers to the question calling for a disclosure of the names of the holders of shares in other companies, the stock of which belongs only in part to the Standard Oil Trust; and under that ruling the two witnesses whose attendance was required here for to-morrow morning, Mr. Archbold and Mr. Brewster, are excused.

Mr. Taylor was recalled to the stand.

Mr. SCOTT. As I stated to you, and I wish to state it now publicly, having been informed that certain papers were wanted, those of them that were required and which were in the possession of the secretary of the Pennsylvania Railroad I have with me and propose to produce. I will further state that the witnesses are here to be submitted to the examination of the members of the committee; but I insist on the objection that the committee has not the power to examine through counsel. I shall instruct the witnesses accordingly, and if you desire that question to be made I hope it will be made in such a manner as to bring it to a direct issue at once.

**GEORGE M. TAYLOR (Recalled).**

By Mr. GOWEN:

Q. Where do you reside?—A. In Philadelphia.

Q. What is your business?—A. I am auditor of freight receipts of the Pennsylvania Railroad Company.

Q. How long have you been in that position?—A. As nearly as I can recollect, since 1872 or 1873, perhaps 1874; I am not certain.

Q. Mr. Taylor, you were subpoenaed, among other things, to produce certain papers, and among them an agreement between the Pennsylvania Railroad Company and the South Improvement Company, made on the 18th of January, 1872. Have you that paper with you?—A. No, sir.

Mr. SCOTT. So far as I have control here of the witness I announce to the committee, as I have already done, that my belief is that counsel has not the right to interrogate him any more than any outside party, and my instruction to him is to answer the inquiry of any of you gentlemen of the committee, and I instruct him not to answer otherwise, and so far as I have any right to submit my opinion here, it is that he ought not to answer.

By Mr. GOWEN:

Q. My question to you was whether you had that agreement?—A. Under Mr. Scott's direction I can not answer that question.

Q. You are on the witness stand now and must answer one way or the other. Do you decline to answer?—A. By direction of Mr. Scott I decline to answer the question.

Q. Have you any copy of the agreement between the Pennsylvania Railroad Company and the producers of petroleum represented by Benjamin B. Campbell, made about the end of the year 1879 or 1880?—

A. By direction of counsel I decline to answer.

Q. Will you produce that paper, Mr. Taylor?

Mr. SCOTT. I have that paper.

The WITNESS. I have not the paper to produce, and I could not do it any way; but I am under the direction of counsel, as I say.

Q. Do you know where it is?—A. No, sir.

Q. Have you not just heard that it is in the possession of counsel for your company, in this room?—A. Not that I know of.

Q. Then, Mr. Taylor, can you tell us whether any rebates on refined petroleum have been paid to anybody by the Pennsylvania Railroad within the last six years?—A. I can only say, as I did in reply to the other question, that by advice of counsel I can not answer.

Q. Do you say you decline to answer?—A. By advice of counsel; yes, sir.

The CHAIRMAN. This seems to me to bring into exercise a power that is so unusual that I can not feel that any personal sense of dignity or pride of opinion should interfere with the orderly disposition of this case, and I will therefore ask you myself, Mr. Taylor, whether you have in your possession or know of the existence of the contract between the Pennsylvania Railroad Company and the South Improvement Company.

The WITNESS. No, sir; I have never heard of it until I came here, or until I got the subpoena asking me to produce it.

Q. Do you have, or do you know of the existence of this other contract between the Pennsylvania Railroad Company and Benjamin B. Campbell and others?—A. No, sir.

Q. That is not in your possession?—A. It is not, and I never saw it.

Q. And you have not the contract with the National Transit Company?—A. I have not, but I understood it would be here; therefore I did not bring a copy with me.

Q. What is your position in the Pennsylvania Company?—A. Auditor of freight receipts.

Q. Does that position require you to know, and do you know, of the freight rates upon that company's lines, with relation to petroleum?—A. Incidentally, yes, sir; in the examination of the manifests.

Q. Will you state, please, whether at the present time there is any difference in the tariff rates for transportation of refined petroleum on the lines of your company in favor of or against any one of its shippers?—A. If there is I do not know of it.

Q. Is the rate uniform to all shippers over that road, so far as you know?—A. So far as I know; yes, sir.

Q. On refined petroleum?—A. On all kinds of freight.

Witness excused.

### TESTIMONY OF JOHN S. WILSON.

JOHN S. WILSON sworn and examined.

By the CHAIRMAN:

Q. You are one of the officers or employes of the Pennsylvania Railroad Company?—A. Yes, sir; I am general traffic agent.

Q. Where do you reside?—A. In Philadelphia.

Q. Is that where your office is, too?—A. Yes, sir.

Q. In the discharge of your duties in that capacity are you familiar with the freight rates over that road?—A. Yes, sir.

Q. And with the tariff rates made to all persons?—A. Yes, sir; I make them.

Q. Will you state, please, whether at the present time there is any discrimination in rates between the shippers of refined oil over that road or any of its branches?—A. There is not.

Q. Do you know of the existence of this contract between the South Improvement Company and the Pennsylvania Railroad Company?—A. I do not.

Q. When did your connection with the Pennsylvania Railroad begin?—A. September 15, 1882.

Q. Are any of the papers called for by the subpoena which was served upon you in your possession?—A. No, sir.

Q. Or under your control?—A. No, sir.

Witness excused.

The CHAIRMAN. Now, Mr. Scott, if you will, we will be glad to have those papers.

Mr. SCOTT. At your call, Mr. Chairman, I will say that I directed inquiry to be made for all papers named in your subpoena, and I was informed by the secretary that he had no contract with the South Improvement Company. He told me he had the agreement with B. B. Campbell, representing the producers, and I have with me a full copy of it, with the indorsements upon it, which I place at the service of the committee. The original contract I, of course, do not wish to take from our files, but if you desire to have it compared you, of course, can do so.

The CHAIRMAN. It is produced as the copy of the agreement?

Mr. SCOTT. Yes, sir.

The CHAIRMAN. The original being on file with the company?

Mr. SCOTT. Yes, sir.

The copy of the agreement referred to, and produced by Mr. Scott, is as follows:

It having been alleged by persons engaged in the production and shipping of petroleum and the products of petroleum that discrimination has been practiced in the rates of freight and in the distribution of cars by the Pennsylvania Railroad Company in such manner as to be injurious to the business of such producers, and bills in equity having been filed, in the name of the Commonwealth, in the western district of the supreme court of the State of Pennsylvania for the purpose of restraining such discrimination.

It is now hereby agreed by B. B. Campbell, representing the producers at whose instance such bills have been filed, and the Pennsylvania Railroad Company that he, the said Campbell, will request the governor and attorney-general to agree that the said bills shall be withdrawn, and upon such withdrawal, the Pennsylvania Railroad Company doth hereby agree that it will enter into written contracts with the said B. B. Campbell, representing said producers, and with all such producers as shall, within sixty days after the date hereof, signify their assent to this agreement by signature to the same or duplicate thereof, which written contracts shall stipulate that the Pennsylvania Railroad Company will make known to all shippers of petroleum and its products all the rates of freight intended to be charged to all shippers upon such petroleum and its products; that the said Pennsylvania Railroad Company will not pay or allow to any shippers of petroleum or its products any rebate, drawback, or commission upon the shipments of such petroleum or its products different from or greater than that which shall be paid to any other person shipping or offering to ship like quantity; and that any discrimination that may be made in favor of shippers of the larger quantities shall be reasonable, and shall, upon demand made, be communicated to all persons shipping, or who are now or may be hereafter in the business and desire to ship petroleum or its products. That the Pennsylvania Railroad Company further agrees that upon its own road and upon any other road or roads upon which it shall furnish cars and engage in the business of a common carrier of petroleum or its products it will not practice any discrimination in the distribution of its cars, but will make fair apportionments in such distribution among all applicants for cars having actually in their custody and ready for shipment at the time of their application the petroleum or its products for the shipment of which they ask facilities.

PHILADELPHIA, *February 12, 1880.*

B. B. CAMPBELL.

Attest as to signature of B. B. Campbell:

JOHN H. HAMPTON.

THE PENNSYLVANIA RAILROAD CO.  
By THOMAS A. SCOTT, *President.*

Attest as to signature of Thomas A. Scott:

JOHN SCOTT.

Mr. SCOTT. The contract with the National Transit Company you told me you did not require to be produced.

The CHAIRMAN. The substance of it was proved from officers of the company.

Mr. SCOTT. The remaining call was for contracts with the Standard Oil Company or companies affiliated with it with reference to rates. I submitted your call to the secretary, and he informed me that there were no such contracts on file; so that is a full answer to the requisition of the subpoena.

Mr. BUCHANAN. Mr. Scott, I understood you to say to the committee awhile ago that the secretary of your company had not been subpoenaed.

Mr. SCOTT. When your decision was announced to the meeting in executive session I stated that when that subpoena was served it was served upon three officers—the general freight agent, the auditor of freight receipts, and the auditor of disbursements—and I found that none of them had those papers; but knowing that the secretary was the proper custodian of such papers, I sent the subpoenas to him and requested him to furnish me with all the papers he had on file called for in the subpoena. I did that for the purpose of facilitating, not delaying, that investigation.

The CHAIRMAN. The secretary was subpoenaed not for this morning, but for one day last week.

Mr. SCOTT. In answer to that I will say that the secretary was summoned by subpoena, as to which the statement was made here last week that it was not authorized by the committee.

The CHAIRMAN. My recollection certainly is that no criticism was made of that subpoena by any member of the committee, and that there was no suggestion that it was not authorized.

Mr. BLAIR. Mr. Chairman, may I have the attention of the committee for a moment?

The CHAIRMAN. Yes, sir.

Mr. BLAIR. May it please the committee, I appear here on behalf of the Missouri Railroad Company. Several of its officials have been summoned to appear here to-day. They are not here, and can not be, for the reason that they are already under subpoena from the civil court of Missouri, the circuit court of the United States. There is another reason, because the subpoena calls for so many papers that I am informed it will take a month to prepare them.

I suppose, in the first place, it is not important which witnesses are here so long as they are informed upon the subjects of your investigation; and second, I suppose there are some special points which the committee wishes to inquire into, and that does not require that all our papers, covering two or three years, should be produced.

The CHAIRMAN. You can do as other gentlemen similarly situated have done, confer with the counsel of the committee and learn from him just what is required, and there will be no difficulty in reaching a conclusion that will be satisfactory to both of you, I am sure.

The committee then adjourned until 10 o'clock, Tuesday, May 1, 1888.

---

WASHINGTON, D. C., May 1, 1888.

The committee met at 10 o'clock a. m. Present: Mr. Bynum (in the chair), Mr. Smith, Mr. Buchanan, Mr. McKinney, Mr. Grimes, and Mr. Crouse.

Mr. GOWEN. I understand that Mr. Baxter, who is counsel for the

Louisville and Nashville Railroad, intended to make an application this morning to the committee upon the subject of the necessity of his witnesses attending, although those witnesses have been subpoenaed and were directed to be here on Monday. But at the suggestion of one of the gentlemen of the House, Mr. Butler, I agreed, with Mr. Bacon's consent, that if they were here this morning it would answer. Now, I would like to know if Mr. J. M. Culp is here.

(Neither Mr. Culp nor the other witnesses of the Louisville and Nashville road being present, Mr. Gowen proceeded:)

Mr. Baxter, counsel for the Louisville and Nashville road, gave me notice yesterday that he had prepared an argument, or a petition, which he said he would give me a copy of, but I have not yet received it, raising this question before the committee—I understand he intends to take the position that under the Kilbourne case Congress has no right to compel the attendance of these witnesses or the production of the papers. If he intends to raise that question I would like it to be introduced before the examination of the witnesses.

Mr. BYNUM. I should like very much to hear that question before the full committee. The chairman will be here at 12 o'clock.

Mr. SMITH. If the gentleman is not here to produce these papers, this committee is not obliged to wait.

Mr. BYNUM. Mr. Baxter was here yesterday and desired to present the matter then, but did not have an opportunity on account of other matters.

Mr. SMITH. I understand that, but he was notified, as well as the rest of us, that we would be here at 10 o'clock, and that he should be here and have his papers all ready to present them.

### TESTIMONY OF A. J. MASSETT.

A. J. MASSETT, sworn and examined.

By Mr. GOWEN :

Q. Where do you reside?—A. Cincinnati.

Q. What is your business?—A. Steam-boat and forwarding agent, general freight agent of the Southern Transportation Line, running from Saint Louis to New Orleans.

Q. That line is engaged in the transportation of freight upon the Ohio and Mississippi Rivers, is it not?—A. Yes, sir.

Q. And on other rivers as well?—A. We connect with lines that radiate from the Mississippi River, and also from the Ohio River, and also connect with steamers running from Pittsburgh and Wheeling to Cincinnati.

Q. Do you make through bills of lading with all these people?—A. Yes, sir.

Q. Now state what you know upon the subject of the transportation of oil by river lines, and especially in respect to the interference you have had by the efforts of the Standard Oil Company, or through agents of theirs, to prevent it, and what has been done and what the matter resulted in. You can go on in your own way.—A. Most of the carrying of oil by our steamers has been done for outside independent refineries.

Q. Those not in the Standard Trust?—A. Not in the Standard Trust or Standard pool. We most generally took their oils at Cincinnati, brought by the Wheeling packets mostly from Marietta, Parkersburgh,

Q. Have you not just heard that it is in the possession of counsel for your company, in this room?—A. Not that I know of.

Q. Then, Mr. Taylor, can you tell us whether any rebates on refined petroleum have been paid to anybody by the Pennsylvania Railroad within the last six years?—A. I can only say, as I did in reply to the other question, that by advice of counsel I can not answer.

Q. Do you say you decline to answer?—A. By advice of counsel; yes, sir.

The CHAIRMAN. This seems to me to bring into exercise a power that is so unusual that I can not feel that any personal sense of dignity or pride of opinion should interfere with the orderly disposition of this case, and I will therefore ask you myself, Mr. Taylor, whether you have in your possession or know of the existence of the contract between the Pennsylvania Railroad Company and the South Improvement Company.

The WITNESS. No, sir; I have never heard of it until I came here, or until I got the subpoena asking me to produce it.

Q. Do you have, or do you know of the existence of this other contract between the Pennsylvania Railroad Company and Benjamin B. Campbell and others?—A. No, sir.

Q. That is not in your possession?—A. It is not, and I never saw it.

Q. And you have not the contract with the National Transit Company?—A. I have not, but I understood it would be here; therefore I did not bring a copy with me.

Q. What is your position in the Pennsylvania Company?—A. Auditor of freight receipts.

Q. Does that position require you to know, and do you know, of the freight rates upon that company's lines, with relation to petroleum?—A. Incidentally, yes, sir; in the examination of the manifests.

Q. Will you state, please, whether at the present time there is any difference in the tariff rates for transportation of refined petroleum on the lines of your company in favor of or against any one of its shippers?—A. If there is I do not know of it.

Q. Is the rate uniform to all shippers over that road, so far as you know?—A. So far as I know; yes, sir.

Q. On refined petroleum?—A. On all kinds of freight.

Witness excused.

### TESTIMONY OF JOHN S. WILSON.

JOHN S. WILSON sworn and examined.

By the CHAIRMAN:

Q. You are one of the officers or employes of the Pennsylvania Railroad Company?—A. Yes, sir; I am general traffic agent.

Q. Where do you reside?—A. In Philadelphia.

Q. Is that where your office is, too?—A. Yes, sir.

Q. In the discharge of your duties in that capacity are you familiar with the freight rates over that road?—A. Yes, sir.

Q. And with the tariff rates made to all persons?—A. Yes, sir; I make them.

Q. Will you state, please, whether at the present time there is any discrimination in rates between the shippers of refined oil over that road or any of its branches?—A. There is not.

Q. Do you know of the existence of this contract between the South Improvement Company and the Pennsylvania Railroad Company?—A. Not.

Q. When did your connection with the Pennsylvania Railroad begin?—A. September 15, 1882.

Q. Are any of the papers called for by the subpoena which was served upon you in your possession?—A. No, sir.

Q. Or under your control?—A. No, sir.

Witness excused.

The CHAIRMAN. Now, Mr. Scott, if you will, we will be glad to have those papers.

Mr. SCOTT. At your call, Mr. Chairman, I will say that I directed inquiry to be made for all papers named in your subpoena, and I was informed by the secretary that he had no contract with the South Improvement Company. He told me he had the agreement with B. B. Campbell, representing the producers, and I have with me a full copy of it, with the indorsements upon it, which I place at the service of the committee. The original contract I, of course, do not wish to take from our files, but if you desire to have it compared you, of course, can do so.

The CHAIRMAN. It is produced as the copy of the agreement?

Mr. SCOTT. Yes, sir.

The CHAIRMAN. The original being on file with the company?

Mr. SCOTT. Yes, sir.

The copy of the agreement referred to, and produced by Mr. Scott, is as follows:

It having been alleged by persons engaged in the production and shipping of petroleum and the products of petroleum that discrimination has been practiced in the rates of freight and in the distribution of cars by the Pennsylvania Railroad Company in such manner as to be injurious to the business of such producers, and bills in equity having been filed, in the name of the Commonwealth, in the western district of the supreme court of the State of Pennsylvania for the purpose of restraining such discrimination.

It is now hereby agreed by B. B. Campbell, representing the producers at whose instance such bills have been filed, and the Pennsylvania Railroad Company that he, the said Campbell, will request the governor and attorney-general to agree that the said bills shall be withdrawn, and upon such withdrawal, the Pennsylvania Railroad Company doth hereby agree that it will enter into written contracts with the said B. B. Campbell, representing said producers, and with all such producers as shall, within sixty days after the date hereof, signify their assent to this agreement by signature to the same or duplicate thereof, which written contracts shall stipulate that the Pennsylvania Railroad Company will make known to all shippers of petroleum and its products all the rates of freight intended to be charged to all shippers upon such petroleum and its products; that the said Pennsylvania Railroad Company will not pay or allow to any shippers of petroleum or its products any rebate, drawback, or commission upon the shipments of such petroleum or its products different from or greater than that which shall be paid to any other person shipping or offering to ship like quantity; and that any discrimination that may be made in favor of shippers of the larger quantities shall be reasonable, and shall, upon demand made, be communicated to all persons shipping, or who are now or may be hereafter in the business and desire to ship petroleum or its products. That the Pennsylvania Railroad Company further agrees that upon its own road and upon any other road or roads upon which it shall furnish cars and engage in the business of a common carrier of petroleum or its products it will not practice any discrimination in the distribution of its cars, but will make fair apportionments in such distribution among all applicants for cars having actually in their custody and ready for shipment at the time of their application the petroleum or its products for the shipment of which they ask facilities.

### TESTIMONY OF A. J. MASSETT.

A. J. MASSETT, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Cincinnati.

Q. What is your business?—A. Steam-boat and forwarding agent, general freight agent of the Southern Transportation Line, running from Saint Louis to New Orleans.

Q. That line is engaged in the transportation of freight upon the Ohio and Mississippi Rivers, is it not?—A. Yes, sir.

Q. And on other rivers as well?—A. We connect with lines that radiate from the Mississippi River, and also from the Ohio River, and also connect with steamers running from Pittsburgh and Wheeling to Cincinnati.

Q. Do you make through bills of lading with all these people?—A. Yes, sir.

Q. Now state what you know upon the subject of the transportation of oil by river lines, and especially in respect to the interference you have had by the efforts of the Standard Oil Company, or through agents of theirs, to prevent it, and what has been done and what the matter resulted in. You can go on in your own way.—A. Most of the carrying of oil by our steamers has been done for outside independent refineries.

Q. Those not in the Standard Trust?—A. Not in the Standard Trust or Standard pool. We most generally took their oils at Cincinnati, brought by the Wheeling packets mostly from Marietta, Parkersburgh,

and various points, and at certain times we have had suits to defend. Our boats were libeled under the plea that we were violating certain sections of an act of Congress relating to the carrying of oil by steamers, and in every instance we have been exculpated by the district court of the United States, notably in two instances, one at Vicksburg, the latter part of 1882, or the early part of 1883, where suit was brought on the steamer *U. P. Schenk*, which was libeled at Pittsburgh. That suit was defended by our company at Jackson, Miss., and our boat was released, and we authorized to continue with the carrying of coal oil. We carried it at that time under the permission given by printed authority by the United States local inspectors, a copy of which I hold in my hand, giving us authority to carry refined petroleum between points and places subject to the provisions of section 4472 of the United States Revised Statutes, to such points as Memphis, Tenn., Vicksburg, Miss., Natchez, Miss., and New Orleans, La., on the plea that the rates of freight by water were so much less than those by rail. We were authorized under the meaning of that section, and under the rulings and decisions made by different United States district judges, to carry it on our passenger steamers, with suitable restrictions, to these points.

Q. I understand that the laws of the United States had forbidden certain transportations of petroleum upon vessels carrying passengers, except under certain conditions, and among those conditions there was this: that where no other route was practicable, you were then allowed to carry petroleum under certain defined articles?—A. Yes, sir.

Q. Did not the court, and notably Justice Matthews, decide that where the rate by railroad was so high as to exclude the business that there was therefore no other practicable route, and that you were entitled to carry it?—A. Yes, sir; that was the decision of Justice Matthews. It was the first decision he rendered.

Q. Now, state whether, at the time covering the period embraced in these decisions in which it was held that the rate by railroad was so high as to make that route impracticable, the Standard Oil Company and their affiliated interests had not been shipping by rail.—A. They had. They had never shipped anything by us except to points not reached by rail.

Q. State whether or not during that period their competition by rail had enabled them to ship oil over the railroads, they were shipping oil over the railroads.—A. I believe they were. I am not conversant with all their business, but I suppose they were. They were not shipping it by our boats.

Q. Can you tell us what difference existed at that time between the open public rates on the railroad, which any individual refiner might make use of, and your rates. I do not require you to go into details as to every station, but give us, in a few cases, the principal ports, and generally the proportions that existed between the two rates, to the best of your knowledge?—A. On oil shipped from Marietta, Ohio, to Vicksburg, Miss., our rate by water was \$1.30 per barrel. I do not know exactly what the rate was by rail from Marietta at that time, but it was considerably higher, so brought out in the testimony produced before the court at Jackson, Miss. Of that rate we obtained \$1 from Cincinnati, and the packets from Marietta to Cincinnati got 30 cents, which was sufficiently low to enable these outside independent refineries to put their oil into Vicksburg and Natchez as against the Standard Oil Company people.

Q. Shipping by rail?—A. The steamer *Schenk* took oil there—I think 56 barrels, shipped by George Rice, of Marietta. On her arrival at

Vicksburg she was libeled on the ground that she had no right to carry petroleum to Vicksburg, on the ground that there was a direct rail connection from Marietta. We gave a bond to fight the suit in the United States district court.

Q. How many times were you libeled?—A. I can not state the number of times. That was one notable instance. This decision of Justice Matthews was on the Memphis cases. There were several libels issued there.

Q. As many as half a dozen?—A. As far as our line was concerned, I think not.

Q. How many times?—A. I do not recollect particularly of more than two, but we were threatened a great many times.

Q. Do you know of any other steamers being libeled?—A. The Memphis and Cincinnati Packet Company.

Q. Did you receive at any time any notification or threat that if you did not cease carrying oil for these individual refiners you would be libeled?—A. One of our agents at the point where the rail routes reach notified us that we should be very careful or we would have trouble in carrying oil to those points. We addressed a communication to John G. Carlisle, Representative from our district, to get some authority from the inspectors, and this permit was issued by the inspectors subsequent to that.

Q. Do you know anything about the Anchor Line ceasing to carry oil?—A. Only that they did not carry oil to any point reached by rail.

Q. Then that line has gone out of competition with rail lines?—A. Except to outside points.

Q. There is no competition with rail lines to outside points?—A. They take it and ship it over the short packets, as we call them, from point to point.

Q. Now, do you remember that some time this spring, within a few weeks, the Interstate Commerce Commission decided that the railroads south and west must carry oil for the same rate per hundred pounds when carried in barrels as when carried in tanks?—A. Yes, sir; I am acquainted with that fact.

Q. Prior to the announcement of that decision you carried no oil for the Standard Oil Company or affiliated companies?—A. Except to points not reached by rail.

Q. Now, since the announcement of that decision state whether application has been made to you by the Standard Oil Company to carry oil.—A. I think Mr. Howard Page, their representative at Louisville, applied to me about that time to make a contract for the carrying of their oil.

Q. State what occurred. Did he want a lower rate than the public rate?—A. That question stopped right there. I told him we had no rates to give him except the regular rates. The question of price was not discussed by him with me at that time; just simply a general agreement to carry oil for them. He wanted to make an arrangement with me for the carrying of oil. If I recollect aright, I believe he visited me twice on that subject. I agreed to meet him at Louisville and discuss the matter, but we never met, for the reason that I was afraid we would not get the oil and that the railroads would know what we were doing.

Q. State publicly your reason.—A. It was that the railroads would find out our programme in making an agreement of that kind, and I preferred not to do it, as we were not getting their business at any time.

Q. You were apprehensive that if you agreed with him he would get a better rate from the railroad company?—A. Yes, sir.

Q. Has the standard or any of the companies affiliated with the standard-sent oil over your roads to competitive points?—A. I think they may have after the special rate was made for them by the rail lines.

Q. Do you know Mr. John C. Galt?—A. Yes, sir.

Q. What is his position?—A. General manager of the Cincinnati, New Orleans and Texas Pacific.

Q. Did you hear him admit that he had been subpoenaed to come here?—A. No, sir; I went to see him on Saturday to know if he was coming. I did not want to come myself, because it would be a great detriment to my business.

Q. What did he say?—A. He said he was not ready, and that they were in correspondence with Mr. Bacon on that subject.

Q. Did he say whether he was coming or not?—A. No, sir; he said he could not bring the papers and correspondence until he got further time.

Q. Did he advise you about coming at all or suggest anything?—A. I asked him if he was coming Sunday morning, and he said he could not come, but that they would be represented here by counsel.

Q. Did he say anything to you about the necessity of your coming?—A. No, sir.

By Mr. BUCHANAN:

Q. You have been speaking about your boats being libeled for transporting oil on passenger vessels. Can you tell me at whose instance those libels were issued?—A. I can not. We never investigated into the facts.

Q. At whose instance did it purport to be?—A. All we know is that the United States marshal served us with a process of the court to answer to the charges.

Q. You never investigated to see who was the moving party?—A. No, sir; we never did. By inference we took it that it was some one connected with the Standard Oil Company.

Q. That is the inference which you drew?—A. Yes, sir; we had no positive data to establish that fact.

Q. I understand that was the inference which you drew; but the testimony would be more valuable to the committee if you could give us some positive data?—A. I have not the data, because we never investigated who the parties were.

Q. You do not know whether the suits were instituted by order of the health authorities of any city or by any public authority of any kind?—A. At the time we had correspondence from our agents stating that the United States courts had taken action against us, but they did not say who was the author of the affidavits against us.

Q. You knew that the United States courts would not institute those actions themselves, did you not?—A. Yes, sir; generally we knew that.

Q. There must have been a moving party in court, and you did not investigate who that moving party was?—A. We did not.

Q. You say you have been charging a rate of \$1.30 from Marietta to Vicksburg. How many pounds does a barrel of oil, including the barrel, weigh?—A. We have always estimated it by common agreement and consent at 400 pounds to the barrel.

Q. Your freight rates then were \$1.30 for 400 pounds of freight, as nearly as you could get at it?—A. Yes, sir.

Q. Is that above or below your ordinary freight rate between those points for other articles?—A. About the average. At that time when

we made that rate we were getting \$1 a barrel on whisky of about the same weight.

Q. Why did you give a preference of 30 cents a barrel to whisky over oil?—A. It came from a point 400 miles up the river. That was for the purpose of paying transportation from Marietta to Cincinnati. Our rate on whisky was \$1 a barrel.

Q. Then they were alike for the same distance?—A. Yes, sir.

### TESTIMONY OF HARLOW DOW.

HARLOW DOW, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Memphis, Tenn.

Q. What is your business?—A. Dealing in petroleum products and illuminating oils.

Q. How do you deal in it; buy and sell?—A. Yes, sir.

Q. State whether you deal in the oils of the Standard Oil Company organization or outside of it.—A. I buy from independent refiners. I have never sold any oil to the Standard Oil Company.

Q. Then you are in competition with the Standard Oil Company?—A. Yes, sir.

Q. Over what district of country does your competition extend?—A. The whole surrounding territory of Memphis, Tenn.—Mississippi, Arkansas, the entire trade of Memphis.

Q. You make Memphis your distributing point?—A. Yes, sir; all that section of the country from every direction—eight great lines of railroad.

Q. Are you acquainted with the lines of railroad running northward from Memphis, the Chesapeake and Ohio line?—A. Thoroughly acquainted with it.

Q. What is the corporate name of that company?—A. It was formerly known as the Chesapeake and Ohio, and latterly as the Newport News. We call it the Chesapeake, Ohio and Southwestern.

Q. That is the Chesapeake, Ohio and Southwestern?—A. Yes, sir.

Q. Now, are you acquainted with the towns along the line of that railroad north from Memphis, say, for a 100 miles?—A. I am.

Q. Do you know Covington?—A. Thoroughly acquainted with it.

Q. How far is it from Memphis?—A. Forty miles.

Q. Do you know Ripley?—A. Yes, sir; it is just beyond.

Q. About 60 miles from Memphis?—A. Yes, sir; in that neighborhood.

Q. Do you know Dyersburgh?—A. That is still beyond, 76 miles from Memphis.

Q. Do you know Newburn?—A. Yes, sir; it is 83 or 84 miles.

Q. Do you know Obion?—A. That is still beyond. These five towns are along the line of the road of the trade of Memphis.

Q. Now, state whether or not, in shipping to these towns from Memphis, there are any of the towns except Dyersburgh large enough to take full car loads at a time.—A. Not a single one that could receive a car load of oil. Their capacity is insufficient to handle it.

Q. Now, state whether you know as a fact that your competitors, the Standard Oil people, are shipping to these towns in less than car-load lots.—A. All oil that goes over the road from Memphis goes to these towns in less than car-load lots.

Q. In the same manner that your oil does? I mean all that goes by rail.—A. Yes, sir.

Q. Now, if you have any memoranda you can refer to it to refresh your recollection, and I want you to give us the rate per barrel on oil that has been charged to you by this company to these different towns, and the rate per barrel that is charged to the Standard Oil Company.—

A. To do that I had better go back to the first commencement of that road. You see it has been a new rate and they have changed two or three times. I can give the changes, commencing about four years back, before they entered into an alliance with the Standard Oil Company, and the changes that took place after their alliance with them. I have brought all of my oil, pretty nearly all of it, over the Chesapeake and Ohio road. When they first started they were anxious for freight, and they gave me a very favorable rate of freight, and they extended favors, to not only myself but to the world, to Dyersburgh, Ripley, and Newburn, owing to their being in competition with river navigation. Dyersburgh is the most important town in West Tennessee. It is growing rapidly, has two banks, a school, and churches. It is a very important town, from the fact of its being connected with Memphis by river navigation, and to compete with that river navigation they made a freight rate pre-paid to me—I was probably the one to whom it was of the most benefit—\$1 a barrel to those three towns. That was soon after the road opened.

Q. How long did that continue?—A. It continued from the time it commenced, which was probably about eighteen months, up to the fall of 1885. The Standard Oil Company sent a man to Memphis in the early part of 1884, soon after they commenced to organize for this trade, a man by the name of Meninger. They opened an office in the center of the city, and for one year this rate continued, until he left. He found that he could not compete in the way he was doing. My trade was growing rapidly, and I was doing well, and they found it necessary to get rid of me in the oil business. Before he left he went to Cairo. Simultaneously with his leaving for Cairo, this rate of \$1 to Dyersburgh was canceled, and it was given out by the Standard Oil Company that these towns would then be filled and supplied from Cairo. It was supposed that it would be done; that he was going there to supply these towns from Cairo, Ill. Simultaneously with his going up there this rate of \$1 to Dyersburgh was canceled. When he went to Cairo, in the fall of 1885, they then made these rates. I have a memorandum showing the rates, which have continued with slight variations, at the time of the commencement of the interstate-commerce law, but really practically the same. Here are the rates that are now in force, but they are practically the same rates as then established from Covington to these five important towns on the Chesapeake and Ohio Railroad. Memphis is 40 miles to Covington. The rate is 26 cents 100 pounds, or \$1.04 per barrel, 400 pounds to the barrel. That is first-class rates of freight, and the fourth-class rate is a mileage rate, that is 15 cents a hundred pounds, or 60 cents for 400 pounds. Now going on to Ripley, 60 miles—

Q. That which you have stated is from Memphis to Covington?—A. Yes, sir.

Q. From Memphis to Covington, 40 miles, the first-class rate for less than car loads is 26 cents a hundred, or \$1.04 a barrel?—A. Yes, sir.

Q. From Memphis to Covington the fourth-class rate would be 60 cents a barrel?—A. Yes, sir.

Q. Now, then, do you know whether the Standard Oil Company, on less than car-load rates, gets the benefit of fourth-class rates?—A. I know it in a way that I will show directly; I know they do.

By Mr. CROUSE:

Q. Is that lower from Memphis?—A. Yes, sir.

By Mr. GOWEN:

Q. How do you know it?—A. Let me go on and state Dyersburgh in connection with that. Now, passing to the town of Ripley—

Q. What is the fourth-class rate to Ripley?—A. The fourth-class rate is 19 cents a hundred, 76 cents a barrel.

Q. What is the first-class rate?—A. Thirty-three cents a hundred, \$1.32 a barrel.

Q. Now go to Dyersburgh.—A. It is this important town.

Q. Now give us the rates.—A. Forty-five cents is the present rate, reduced from 50 cents to 45 cents.

Q. That is the first-class rate?—A. Yes, sir; \$1.80 a barrel.

Q. What is the fourth-class rate?—A. Twenty-eight cents a hundred, or \$1.12 a barrel, a difference of 68 cents.

Q. Now go to Newburn?—A. Newburn is 47 cents a hundred pounds for first-class rate; that would be \$1.88 a barrel. The fourth-class rate is 30 cents a hundred, or \$1.20 a barrel, making a difference of 68 cents a barrel.

Q. Now to Obion?—A. Fifty cents a hundred, making \$2 a barrel.

Q. What is the fourth-class rate?—A. Thirty-three cents a hundred, making \$1.32 a barrel—a difference of 68 cents.

Q. Now state whether in shipping by rail from Memphis to any of these points in less than car loads you have to pay first-class rate.—A. On every barrel I ship less than a car load to one consignee.

Q. Now, how and at what rate does the Standard Oil Company get its oil over this road to the same point in less than full car loads?

Mr. CROUSE. From Memphis?

Mr. GOWEN. From Memphis to the same points.

The WITNESS. They have been getting their oil at fourth-class rates in 10-barrel shipments; nothing less than 10-barrel shipments.

Q. How do you know that fact? I want to know how you know the fact that they are getting it at fourth-class rates in 10-barrel loads.—A. This agent said so.

Q. Who is he?—A. Meninger. He did not tell me, but he told a man that I sent to him.

Q. He told one of your agents?—A. Yes, sir. Then I was convinced of it in another way by positive proof; after sending one or two men to this agent of theirs and getting it indirectly from them that the freight was at such a price. I had heard of it all the time in various ways, and this was more proof of it. I knew it, but was not positive. Now, then, B. F. Mitchell lives in Louisville.

Q. Who is he?—A. He is the general freight agent of the road, with headquarters at Louisville. These men at Memphis were under him and I could not do anything. They knew nothing. I did not know Mitchell and he did not know me. I was looking for him. One morning about 9 o'clock I heard he was in Memphis, and I became very much interested in seeing him. I bursted into his office and told him who I was. I told him I had proof that he was carrying oil for the Standard at fourth-class rates of freight. He said, "They are cutting the price and you are complaining." I said, "No, sir; I am cutting the price. I ask no favors and only ask to be placed on a footing with the Standard

Oil Company." He said, "I am giving them fourth-class rates of freight on account of their being heavy shippers." That was Ben Mitchell, who is the head man in the freight business in Memphis of that company.

Q. He admitted that fact to you, did he?—A. Yes, sir; and afterwards acknowledged that they were not treating me right.

By Mr. BUCHANAN:

Q. I do not understand from your statement just who it was who said this.—A. Mr. Mitchell said it in the presence of the agent at Memphis, who said nothing.

Q. It was the agent who said nothing?—A. Yes, sir. Afterwards he admitted that they were virtually treating me bad.

By Mr. GOWEN:

Q. What is Mr. Mitchell's title?—A. General freight agent and head man of the road.

Q. And this he said in the presence of the local agent at Memphis of the same road?—A. Yes, sir.

Q. And that local agent who then said nothing, you say, afterwards practically admitted the fact?—A. He said we are not treating you right. He said that even a great corporation was afraid of them, and we can not come in contact with them.

Q. Now, going back to each of these towns and stating in actual figures per barrel, the difference of rates now from Memphis to Covington according to your statement would be 44 cents against you?—A. Yes, sir.

Q. To Ripley 56 cents?—A. Yes, sir.

Q. To Dyersburgh 68 cents?—A. Yes, sir.

Q. To Newburn 68 cents?—A. Yes, sir.

Q. To Obion 68 cents?—A. Yes, sir.

Q. And the difference of 68 cents a barrel as between you and them in the three towns of Dyersburgh, Newburn, and Obion is in towns, the nearest one of which is about 75 or 76 miles and the farthest one only 95 miles from Memphis?—A. Yes, sir; about that.

Q. Now, state whether or not in consequence of this competition against you you have been able to introduce your oil in any of these towns except Dyersburgh?—A. I had a good trade in those towns and lost it entirely. For instance, take this little town of Newburn.

Q. Give us the fact.—A. The fact is I had a good trade in Newburn, and sold to thirteen out of the sixteen or seventeen men in that line of business there, and I was in the town a few weeks ago and could not sell a barrel without a loss.

Q. Does that same condition exist in Covington and Obion?—A. Except they reduced the freight a little more in Covington than other places. You might haul it by wagons. In fact I haul it in wagons now.

Q. Over what length of distance do you haul oil in wagons in order to compete with the railroads?—A. Forty miles south of Manito. All the oil I sell there is in the town of Manito on the Illinois Railroad.

Q. Do you understand that the rates against you on that railroad are so high that you can for a distance of 40 miles transport your oil by wagon and meet the competition better than you can by using their own road?—A. Infinitely better.

Q. Now tell us about Dyersburgh. How did you meet the competition there?—A. As I remarked before, they had given a dollar rate to the world.

Q. Now, only answer my question. How did you meet the competition at Dyersburgh?—A. By river.

Q. Now, does not the Mississippi River run parallel practically to this railroad for a great length?—A. The entire distance to Newburn.

Q. How far from the railroad crosswise is the river?—A. About 17 miles.

Q. Is there not a branch river that empties into the Mississippi, near Dyersburgh, by which you can get— A. Yes, sir. I ship near the mouth of Forkadier River. Steam-boats are running there every day. I shipped 20 barrels last week to that town.

Q. Since the interstate commerce decision, have the rates on this railroad to the several points you have named been changed so as to give you as fair a chance as the Standard Oil Company has to introduce your oil in competition with them?—A. There has practically been no change whatever. They have simply had a revision.

Q. What was it; can you state what it was?—A. As far as I can remember, the rate formerly to Dyersburgh was 48 or 50 cents. Now I see it is 45.

Q. At 45 cents to Dyersburgh would make \$1.80 a barrel?—A. Yes, sir.

Q. Is that the present rate?—A. Yes, sir; I think about \$1.92 was the rate before.

Q. Do you mean, then, to say that this difference between first-class rates and fourth-class rates, the latter of which is given to the Standard Oil Company and the former of which you have to pay, has been practically maintained since the passage of the interstate commerce law?—A. They are still shipping, and on last Thursday they shipped 10-barrel lots, and the price is so low as to rule me out.

Q. Up to last Thursday?—A. Yes, sir; to the town of Ripley 10 barrels, and to the town of Obion 15. They ship every week one or two lots, and they ship all oil that goes to that road in less than 10-barrel lots.

Q. Within what period of time was it that you last visited this town in order to see whether you could compete with them?—A. About three weeks ago to-day.

Q. You then found the same state of things existing?—A. Yes, sir.

By Mr. BUCHANAN:

Q. I understand your question to be practically whether to-day or within a very short period of time the Standard Oil Company could secure the shipment of a 10-barrel lot at a less figure than he could. That is what I want to know distinctly from him.—A. They did at that time and they have kept up the same 10-barrel shipment to the present day, and they have sold their oils in these five towns at less than I can put it there, the difference in the price which I pay and they pay being far greater than the profit on the oil.

Q. Have you not made application to them to know whether you will be allowed to ship a 10-barrel lot at the same rate that is given to the Standard Oil Company, to wit, the reduced rate?—A. I have asked them a hundred times.

Q. Since this interstate-commerce decision which you have spoken of?—A. I have asked them for it.

Q. Since this decision?—A. Yes, sir; a dozen times.

Q. Your remedy seems to be plain under the law which already exists.—A. I can not prove positively that the money is paid so and so. I only know that Mitchell acknowledged to me that time that these were fourth-class rates on car-load rates of freight. Now they deny it; but the same state of facts exists. You will see now what they are.

doing at Dyersburgh. When I shipped 20 barrels up to Dyersburgh at \$1 about two weeks ago, they were shipping oil during the same time for \$1.12. I had 12 cents the advantage of them.

By Mr. GOWEN:

Q. You had 12 cents the advantage of them by using the river?—

A. Yes, sir. I shipped 20 barrels last Thursday. It is a large town and I have the trade there. I can not compete at those other towns.

Q. Will you look at this paper [handing witness a paper]? State what it is and where you got it.—A. It is a bill of lading for 10 barrels of coal oil over the Louisville and Nashville Railroad to Brownsville.

Q. From where?—A. Memphis to Brownsville, a distance of 74 miles, over the Louisville and Nashville.

Q. At what rate was that?—A. Eighty cents a barrel.

Q. Who shipped that oil; whose oil was that?—A. It was my oil.

Q. Where did you get that bill of lading?—A. I had better tell you the whole circumstances.

Q. Yes. What I want to know now is what, in October, 1886, your rates were over the Louisville and Nashville Railroad on 10 barrels of oil from Memphis to Brownsville, and what the rate of the Standard Oil Company was at that time?—A. This is the Standard Oil Company rate. The rate to me was \$1.68, more than double.

Q. Then you made a mistake in saying that it was your rate before?—A. No, sir; I did not say it. This is my oil that I got over their roads.

Q. Now tell us how you got that.—A. In July of the preceding year the Chesapeake and Ohio road raised the freight coming south over that road to me from 75 cents to \$1.27. I brought in about 1,000 barrels of oil by river at 50 cents a barrel to Memphis, to prevent paying \$1.27. I made \$600 or \$700 on that oil, and it practically kept me in the trade by a fortunate circumstance of a rise in the Ohio River in July or August. I brought it down there, and owing to the intensity of the hot weather, it being a perishable article, it became necessary for me to provide storage for this oil, and J. H. Coffin, in whose name these 10 barrels were shipped, having been an agent of the Standard Oil Company, had just built a large, cool warehouse, and he wanted me to store with him. I stored a large portion of this oil with him in a cool cellar to keep it from evaporation and so on. He says, "You are storing with me, and this Standard Oil Company has given me this rate of freight on 10-barrel lots. It is nothing to me; my trade is merchant here. If it is any use to you you may ship your oil on my tickets as a favor, and you can save a good deal of money on a few barrels." I did not care much for it, but I said, "I will try one or two of them."

Q. What did you do?—A. I sent around 10 barrels. I shipped it to this man and I sold him one or two barrels. I told him to give me some cheap oil. I sent 10 barrels to him that morning and used the dray tickets. He went around to the depot and got this bill of lading. To me it would have been \$1.68.

Q. At the time when you found their rate was 80 cents a barrel, and you were shipping some of your oil on the dray tickets of their agent, your rate was \$1.68?—A. Yes, sir.

Q. That was a difference of 88 cents a barrel?—A. Yes, sir.

Q. That was 88 cents a barrel for a distance of 68 miles?—A. Yes, sir; 10-barrel lots.

Q. Could you stand such competition as that?—A. No, sir. Before that I went up there and sold to every man in the place, nearly. They were

glad to see me in opposition to the Standard Oil Company. I lost them, except one man who was so prejudiced that he would not buy from them. He is my only customer there, and I sell to him, but I can not make anything on it. I can not sell it at a profit there. We do not begin to make any profit on oil merchants.

Q. You do not begin to make a profit equal to the difference of freight?—A. No, sir; not the half of it.

Q. What railroads in that section of the country are there that discriminate against you and in favor of the Standard Oil Company?—A. Three. We have eight roads, but three discriminate against us.

Q. Which are they?—A. Chesapeake and Ohio, Louisville and Nashville, and the Mississippi and Tennessee, now the Illinois Central.

Q. That is all—the Louisville and Nashville, the Chesapeake and Ohio, and the Illinois Central, formerly the Mississippi and Tennessee?—A. Yes, sir.

Q. Now state whether or not, in the district over which these three railroads that discriminated against you are located, except at places where you can get river navigation, you have or have not been practically driven out of the business.—A. I can not do any thing with them at all.

Q. Except where you can get river navigation?—A. That is all. The trade that I get on those three roads is undesirable to them. There are a great many stations where there is but a single house or two, and no agents, where I have to prepay freight. I get letters frequently for oil, and a good portion of the oil I sell I have to prepay the freight on. I get letters like this: Mr. Dow, send me so many barrels of oil. I sell single-barrel lots, and to towns where there are but one or two merchants, and I ship to them, but I have to charge them more than I do at the large towns.

Q. State whether you had a tank-wagon and team for distributing oil in some of these towns.—A. Yes, sir; it paid very well to have a tank-wagon. I built one, and it cost me, together with the horses and harness, \$450. I run it about a year and was making money. Then they put it down to 7½ cents, distributing around groceries. I stopped the wagon and it has been idle in the stable ever since.

Q. Can you give us the traffic in refined oil—what was the business in 1886; or, if you have it for last year, give us that?—A. It increased from 1876.

Q. Tell us what the figures were.—A. Eleven thousand eight hundred and seventy-three, in 1876. Then in proportion to the growth it run up to 100 per cent., nearly 21,364, in 1886 and 1887. The present year the inspector was sick and could not give me the figures when I was coming away; but this year it will be a large increase; for last year it was 21,364.

By Mr. BUCHANAN:

Q. I would like to know exactly what effort you have made to secure from these railroad companies, since the announcement of the decision of the Interstate Commerce Commission, a rate upon your oil the same as is given, as you understand, from a combination of circumstances which you observed, to the Standard Oil Company?—A. I was simply going to their offices repeatedly charging them with carrying this oil over the road. They said if it was a different price they did not know it, and I could never get it.

Q. How recently have you done that, the last time?—A. I was in the office of the Louisville and Nashville within a month. They had a

new man there. I went in and asked him some questions about a certain town. I then asked this new man in the office of the Louisville and Nashville—the man who gives the freight rates, on Main street—if he had any 10-barrel rates to give; he told me he had not. He acknowledged he did not know what he was talking about. He said, “We did give the Standard Oil Company agents 10-barrel rates, but we have recently quit them.” I told the men out in front that they had better post their man. This new man acknowledged it. He said to me, “We have given them, but we are not now giving any 10-barrel rates at all.”

Q. I am seeking to ascertain, as a legislator, whether any loopholes still exist subsequent to this interpretation of the Interstate Commerce act by the Interstate Commission by which one shipper can obtain a preference in rates over another shipper. I am seeking to ascertain that as a fact. As I understand you, you say that you know it from this aggregation of circumstances which you have observed and which impels you to the belief that they have obtained such a rate, but have not personal knowledge?—A. Only as Mitchell acknowledged to me that he had.

Q. I am speaking about the acknowledgment or the information since this last interpretation by the Interstate Commerce Commission. What was the date of that?

Mr. GOWEN. It must have been in March.

Mr. BUCHANAN. Say two months past.

The WITNESS. I have no positive knowledge, except from the circumstances. The Standard ships in tanks, and part of one of these shipments was shipped in 50 barrel tanks. On a shipment of 50 barrels they get a lower rate of freight. Mitchell told me the rate of freight on those tanks; they get an advantage on those 50-barrel tanks.

By Mr. GOWEN:

Q. Were these shipments to these four or five towns made in tanks or barrels?—A. Both.

Q. If they ship 10 barrels in a tank do they get the benefit of that fourth-class freight on it?—A. Yes, sir.

By Mr. BUCHANAN:

Q. That is the next inquiry I proposed to make, as to how these shipments were made, whether in tanks or barrels, or both?—A. Both.

Q. What has been the largest amount in barrels of your dealings in oil since you went into business?—A. For a year?

Q. Yes; the largest amount.—A. My trade run up 100 barrels a week at the time when they raised the freight on the Chesapeake and Ohio from 75 cents to \$1.27. I was then selling 100 a week, 400 a month, or 4,000 or 5,000 barrels a year.

Q. How much decline has taken place in the volume of your business owing to these circumstances which you have detailed before us?—A. I am not selling now over one half the amount I did at the time that freight was raised. It ought to have been a large increase.

Q. Up to that time your business had been on the increase; up to the time of the raising of those freights?—A. Oh, increasing rapidly; and simultaneously with this advance from 75 cents to \$1.27 they put the price of oil down in Memphis nearly 1 cent a gallon.

Q. You stated that during that time, the time previous to the raising of these freights, they had given you a very favorable rate. What do

you mean by that?—A. A favorable rate, coming from Marietta and Pittsburgh, of 75 cents in 100-barrel cars. I considered that a very favorable rate.

By Mr. GOWEN:

Q. That was to Memphis?—A. To Memphis. We did not care what the rate was to these towns, so it was uniform.

By Mr. BUCHANAN:

Q. Was that rate you have just spoken of given to any shipper that applied, or were you favored with a special rate?—A. Do you mean from the north coming south?

Q. I mean what you call a favorable rate. You say you were given a very favorable rate at the commencement of your business.

Mr. GOWEN. In 100-barrel cars going south?

Mr. BUCHANAN. Excuse me, I am asking these questions, if you please. I now ask you whether that rate which you denominated a favorable rate was open to any one desiring to ship similar lots?

The WITNESS. This rate was prepaid. It was sold to me paid to Memphis, and the oil came at a price prepaid in that way which allowed me to compete, but when the price was raised to \$1.27 it was put up 52 cents a barrel and the price charged to me.

Q. Will you be kind enough to answer my question, which is plain and simple? The favorable rate which you speak of as given to you, was that a rate that was open to any one desiring to ship similar lots?—A. Yes, sir; that was always an open rate to the world up to that time.

By Mr. CROUSE:

Q. What we are trying to get are facts. Of course we must draw our own inferences. I desire to ask you a few questions, because your answers to questions already put have had a tendency to confuse me. Going back to the time that you and another agent were located at Memphis; what time was that; what year was that?—A. That agent——

Q. Now just answer the question?—A. In the spring of 1884.

Q. That agent, however, for some reason or other did no business?—A. No, sir; he did not succeed.

Q. He went to Cairo?—A. Yes, sir.

Q. After he went to Cairo you said they then had commenced this discrimination against you?—A. Yes, sir.

Q. Who was there at Memphis after he left to direct these shipments from Memphis in 10-barrel lots that were given more favorably to whom-ever it was than to you?—A. They had their works there, a mile and a quarter, where they stored their oil, and they had men there, and they discontinued the office in the heart of the city.

Q. You stated that after he left this 10-barrel rate was given and used against you.—Yes, sir.

Q. Who was there to direct these shipments?—A. I reckon they have had half a dozen men; I can not tell now.

Q. Then the answer is that when this agent, who did not do any business, left, some one else came?—A. No, they discontinued that particular office which he had to get the merchants' trade, and the men at the works then conducted the business and shipped from the works.

Q. You mean from the refinery?—A. No; they didn't refine oil there. They bring it there refined and draw it off and barrel it.

Q. What do you mean by the works?—A. I mean they brought pretty much all their oil over the Louisville and Nashville road in large 100-barrel tanks, and bought second-hand barrels, and rebarreled it at the

works, and sent it from the works to the depot to be distributed in 10-barrel lots.

Q. What year was that?—A. He came in 1884, staid a year, and went away. He came in May or June. He must have left about November, I think. I think he staid there about a year and four months.

Q. That would bring it to what year?—A. The last of 1885.

Q. Now, I want to ask one more question with reference to the present rate. After the interstate-commerce law went into force you have testified that with a slight variation or revision of rates the same state of affairs continues?—A. Yes, sir.

Q. That is, your rate was first class and their rate was fourth class on 10-barrel lots?—A. The same thing continued. Everything went in 10-barrels lots, and the price continued all the time.

Q. From the time that the interstate-commerce law went into effect up to the present time?—A. Yes, sir.

Q. On that point you testified that it was by inference that the same rate continued. Prior to that you stated that the freight agent acknowledged it.—A. Yes, sir.

Q. But since that you have testified that it was by inference, because you could not compete in the trade.—A. I will say this, that while I repeatedly demanded these rates, on one particular Thursday I went to see Ben. Mitchell, and I found he was there. I went to the depot on that Thursday to see what they were doing. I charged him in his office with still continuing 10-barrel lot shipments, and he denied it and said it was not true. He said he was not shipping 10-barrel lots. I said, don't be so fast; go to your telephone and ask your agent. He telephoned to him, and he said there were two lots at the depot then. He denied it, and I begged him to go down there with me. My office is within two squares of that depot, and I saw the shipments every week.

Q. That is not what I want to get at. As a matter of course the 10-barrel shipments undoubtedly continued.—A. I have no positive proof of that further than I have given.

Q. On what do you base your inference?—A. From the fact that in these five towns on this road, two or three on the Illinois Central, and half a dozen on the Louisville and Nashville, I am driven out of these towns and can not sell a barrel there. I can meet them on equal terms and beat them and get my share of the oil single-handed and alone without going after it. I keep no clerks or drummers, but they send theirs all over the country, and I could force their trade to come to me.

Q. The knowledge you have on that subject is a strong inference because of the state of the trade?—A. The same state of facts exists to-day as when the proof was positive that they did give these 10-barrel shipments.

Q. Now, if you do not know it I do not want to take up the time of the committee. That is just what we want to know. The question is, do you know it as you did before. You knew it before, because they told you point-blank that they were large shippers and they had given them a different rate. Now, that comes to the point that is very interesting to everybody, viz, does this still continue? Now, on that subject your knowledge is not positive, but you infer that it continues because your trade at these several points has gone into the hands of your opposition. You infer it, but have you any knowledge on the subject?—A. No positive legal knowledge.

Q. And that knowledge is based upon the fact that you have lost the trade and the circumstances surrounding?—A. The circumstances surrounding the direct fact that while they can ship to Dyersburgh for \$1

they pretend to pay \$1.80. They are not prepared to pay the usual rates of freight. I pay at the same rate, \$1.80. I have the trade there and have not anywhere else, and send 20 barrels there while they send 5.

By Mr. GOWEN:

Q. In other words, your rate by river to Dyersburgh is about \$1?—A. Yes, sir.

Q. And the first-class freight from Dyersburgh is \$1.80?—A. Yes, sir.

Q. And they are competing with you at Dyersburgh?—A. Yes, sir; I have the advantage of them there.

Q. By rail?—A. Yes, sir.

Q. When was it that you had this first conversation with Mitchell when he admitted that they were giving them fourth-class rates; how long ago?—A. I have no data. The agent left for Cairo in 1885. Then I was hearing of it all along and looking for Mitchell, but could not catch him.

Q. When was it?—A. I must have been six months looking for him. That would bring it up to the last of 1885 or the first of 1886.

Q. When was it you had the conversation with Mitchell in his office when at your request he telephoned the agent at the depot?—A. That was last November.

Q. Since the passage of the interstate law?—A. Yes, sir.

Q. On that occasion, last November, when he telephoned to his agent and ascertained that they were shipping in 10-barrel lots, did the question of their getting fourth-class rates for that come up then?—A. Yes, sir; he denied it.

Q. After he heard that these barrels were being shipped, did he still deny it?—A. Yes, sir; he said it was untrue. He begged me to go to Louisville, saying he would pay my expenses any time, and he would spread his books out and show so and so. I said the books did not prove anything; they proved different from what they were.

Q. I want to know whether you at that time called his attention to the fact that these 10-barrel shipments were still going on at fourth-class rates?—A. I did.

Q. Did he admit it?—A. He saw he was beat, and I didn't say anything more.

By Mr. BUCHANAN:

Q. I would like to know whether he admitted the size of the shipments or the rate, or both.—A. No, sir; he denied the rate.

By Mr. GOWEN:

Q. After that?—A. Yes, sir; after I got him cornered and forced him to admit it.

Q. He did not admit the fact that these 10-barrel lots, even after he found they were going, were going at fourth-class rates?—A. No, sir.

By Mr. BYNUM:

Q. He just admitted that they were going in 10-barrel lots?—A. Yes, sir.

By Mr. BUCHANAN:

Q. You stated, in response to a question of mine, that these shipments were being made by the Standard Oil Company in tanks and in barrels both, to these competitive points.—A. Yes, sir.

Q. Will you state what kind of tanks those are?—A. They are iron tanks, supposed to hold a barrel of 50 gallons. They ship them to

their customers, and charge, I think, \$10 apiece for them. And they are returned to them and refilled at Memphis.

Q. They are not, then, the large 100-barrel tanks that have been spoken about in the testimony heretofore?—A. No, sir.

Q. They are 50-gallon tanks?—A. Yes, sir; barrel tanks.

### TESTIMONY OF C. B. MATTHEWS.

C. B. MATTHEWS, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Buffalo, N. Y.

Q. What is your business?—A. Refining and selling petroleum.

Q. Are you in competition with the Standard Oil Company people or in league with them?—A. I have always been in competition with them.

Q. What is the size of your refinery?—A. We make lubricating and illuminating oils, and the capacity is about 1,500 or 2,000 barrels a week.

Q. How long have you been in business at that establishment?—A. Since 1881.

Q. What is its name?—A. Buffalo Lubricating Oil Refinery Works.

Q. You say you make illuminating oils and lubricating oils?—A. Yes, sir.

Q. Do you utilize any of the others by process of refining?—A. We make benzine and gasoline to a small extent.

Q. Any other?—A. Filter oil; make vaseline, cosmoline, and all lubricating oils.

Q. Now, go on and tell us, in your own way, how you use—go back to the year 1881 or 1882 and state how you were supplied, or your district was supplied with oil, by what means, either by rail or pipe, what became of them, how the rates were, and how they were changed, and to what extent they were changed?—A. When I began building the refinery, in the spring of 1881, I built adjoining the grounds of the Atlas Refining Company. The Atlas Refining Company was an independent company at that time, and they were constructing a pipe line from Rock City to Buffalo.

Q. Where is Rock City?—A. It is about 70 miles from Buffalo, southward.

Q. Nearer the oil field?—A. Yes, sir; on the edge of the Bradford oil district.

Q. The Atlas Company was then an independent company?—A. Yes, sir.

Q. And engaged in locating and constructing this line?—A. Yes, sir; they assured me that we should get crude oil at our works for 10 cents a barrel pipeage, and they would have their line completed in a few days. Meantime the Standard Oil Company hurriedly laid a line to Buffalo, along the line of the Buffalo, and Southwestern and Erie road, and began pumping oil there, although they had no refineries. The Rock City Pipe Line was prevented from completing their line by the Erie road refusing to give them a crossing, and the Standard were buying up parties in interest along the line of the right of way, and serving injunctions on the Rock City Pipe Line people, so that they had fifteen or sixteen injunctions at a time, and as soon as the Atlas would raise one injunction they would put on another, so that some months were occupied in getting this independent line through, and it cost them over \$100,000—the restrictions and the stoppage which was occasioned

by the Standard and Erie road in trying to prevent them from laying this line. They continued to use this line for a few months, but their business was afterwards destroyed and they sold to the Standard, and the Standard took up this line which they had laid along the Erie road, and are now operating the Rock City Line. When they assumed control of the Rock City Line, in 1882, the rates of pipeage went up from 10 cents to 25 cents per barrel.

Q. State whether at that time the railroads also advanced their rates?—A. The railroads advanced their rates from 15 to 25 cents per barrel.

Q. That is, about the same time?—A. Yes, sir; from the same points at the same time.

Q. Now, go on.—A. There were several roads leading directly from the oil country to Buffalo; one of them the Buffalo, New York and Philadelphia, and the other the Rochester and Pittsburgh, or the Buffalo, Rochester and Pittsburgh, which was being built; also the Erie road; also the New York Central had connections to Buffalo from the oil regions. I tried to obtain the same rate of 15 cents by the Green Line, which is a transportation company owned by the Pennsylvania Railroad and is operated over the lines of the Buffalo, New York and Philadelphia. I talked with the officers, including Mr. Brundred and Mr. Murray and other officials, and complained of their bad faith in advancing the rate, as they had agreed that I would not have to pay over 15 cents a barrel bringing oil to Buffalo. I was unable, by any argument, to lead them to think that they should keep faith with me.

Subsequent to this I went to the office of Mr. Johnson, the general freight of the agent Buffalo, New York, and Philadelphia Road, and complained to him in regard to it. I told him that the Green Line was not giving us a sufficient amount of oil; that we were greatly restricted, could only operate our works a portion of the time, they claiming to me that they had not got tank cars to transport the oil. I told him I did not believe this; that they had twelve or fifteen hundred tank cars, and I thought they had sufficient tank cars. I said to Mr. Johnson that his company owned quite a number of tank cars, and I thought they should ship oil in their tanks. He declined to do it. He said there were those who had been in the business longer than I had who should have the preference. I told him that the quality of the oil which the Green Line were giving us from Olean was a very poor quality, and I wanted his road to permit me to ship from other points where I might get oil fresh from the wells. He declined to give me any assistance in these directions. Then I told him that I would procure tank cars and put them at the service of his company in our business. He said he could not receive our tank cars and ship them. I asked him why. He said they had a contract with the Green Line, giving the Green Line the exclusive right to ship oil from Olean over their road. I asked him if he meant to give me to understand that his road, as a common carrier, had no right to ship this class of freight over its tracks if I furnished the tank cars. He said that it amounted to that; I might put it in any shape I chose, but that is what it amounted to.

Q. Did he give any reason for it other than the existence of the contract; did he give any other business reason?—A. I asked him if the Standard Oil Company shipped any crude oil from Olean over his road to Buffalo, and he said that they did not. I asked him what right, then, the Standard Oil Company, if they did not patronize his road, had to dictate that I could not patronize his road. He said the Standard Oil Company gave them large freights outside of the oil business, and they

were so strong they could not be ignored in these matters. I undertook then to arrange with the Rochester and Pittsburgh road, and came to New York and saw Mr. Walston Brown—I believe he was the president of the road—and he talked very pleasantly with me. He said they would be glad to do our business, and asked me what rate I wanted. I told him I thought 10 cents would be a very reasonable rate; we could pay that; we had formerly obtained it at that rate from the pipes. He asked me if we would furnish the tank cars. I said we would prefer that the road would do it. He said they would be glad to furnish the tanks, and that he would meet me in Buffalo the following week. The following week he came to Buffalo, and I sought an interview with him, and hardly succeeded in getting one. He told me that the matter had been turned over to the general superintendent or general freight agent, and that I would have to see him. I asked him if he was going to carry out the understanding and agreement that he made with me in New York. He said that they were not situated in regard to oil matters just as he had supposed they were. I sought frequent opportunities to talk to Mr. Merchant about it, but it resulted in the practical denial on their part to ship crude oil to me, by reason of their connection with the Erie road and other interests that were in harmony with the Standard. One reason he alleged was that they were using the same bridge at Kinzua, I think, with the Erie people, and if they did not harmonize with the Erie in oil matters they might be denied the use of this long and expensive bridge. From time to time various local freight agents came into my office to solicit business, and I invariably asked them to ship our crude oil, and they usually were delighted with the prospect of a good paying business, and invariably would come back in a few days and say they were mistaken as to the desire of their company to do that business.

Q. Up to this time of which you speak, state whether or not you found it possible to get a steady supply of crude oil for your refineries.—A. I found it impossible. I might say this conversation I had with Mr. Walston Brown was prior to the final refusal of the Buffalo, New York and Philadelphia to do this business.

Q. That is, it was prior to your interview with Mr. Johnson?—A. Yes, sir.

Q. Now, then, what other methods, if any, did you take in order to obtain oil?—A. Finding myself blocked in these matters in obtaining crude of good quality, I entered into relations with a company building a refinery at Oil City, known as the Keystone, formerly known as the Eclipse, but afterwards the Keystone. This company had a pipe line, in main line and in feeding lines, of perhaps 50 miles.

Q. To where did that main line lead?—A. It delivered oil to Oil City, Pa., and obtained it from the Tarkill and the Cogley Run district about Oil City. This pipe line cost about \$70,000, and earned a net profit of about \$40,000 in the first six months of its operations.

Q. What was the charge for the use of the pipe line in order to make up this profit? What sum did you use as the amount charged for the use of the pipe?—A. Twenty cents.

Q. The same as the other local lines?—A. I think part of the time there was some concession made, so that we pumped it a little less than that, but I can not say how much less. After our line began to get this oil the Standard people discovered the oil was more valuable, and offered a premium of 15 cents on this oil we were buying from the producers. We were shipping oil to Buffalo for my company's business. This Keystone Company was made up of several interests, in-

cluding Clark, Warren, Corry, and Cleveland, and Oil City had more interest in it, besides individuals outside. We found very great difficulty in bringing our oil from Oil City to Buffalo, it usually taking three or four weeks for a car to make a round trip from Buffalo to Oil City, a distance of 140 miles.

Q. Whose cars were those?—A. Mostly cars belonging to the Keystone Oil Company.

Q. Did you keep a record at any time of the period occupied for a round trip of these cars?—A. We had such a record at Buffalo.

Q. From the best of your recollection, how long did it often take for a car to make a round trip?—A. The average would exceed three weeks.

Q. For a haul of about 120 miles?—A. No; 140 miles.

Q. That is, a round trip of 280 miles?—A. Yes, sir.

Q. What became of the Keystone?—A. It was ruined by reason of its inability to handle its oil and market its product over the railroad and steam-boat line. In shipping oil from Buffalo West, I found that after the passage of the interstate commerce law the boats on the lake doubled their freight between Buffalo and Chicago and Milwaukee and Detroit, and those points which amounted to a doubling of the rates, and the rates were also advanced by land-carriage.

Q. Were those boats run in any way in connection with the railroad company?—A. Nearly all the boats on Lake Erie are owned by the railroad company. All the principal lines have a line of boats; the New York, Erie, Pennsylvania, Lackawanna, Grand Trunk—every road of any importance has its line of boats.

Q. You found after the passage of the interstate commerce law that the boats on the lake doubled their rates?—A. Yes, sir.

Q. Now, were the rates on the railroad made to be identical with the rates on the boats? Do you remember that?—A. They were nearly so.

Q. Was the advance made simultaneously or nearly so?—A. It was to us; yes, sir.

Q. Now, did you make any?—A. I might say here that the rates were not quite doubled in car shipments, but they were doubled and more than doubled in 10-barrel and smaller shipments.

Q. Did you make any effort to get a place in Chicago to barrel oil in car tanks?—A. Yes, sir; last summer I spent a good many days in Chicago trying to make an arrangement to lease grounds of railroads, and I was unable to do so.

Q. To how many railroads did you apply for that purpose?—A. I think three or four.

Q. Can you give us their names?—A. I applied to the Pittsburgh and Fort Wayne, to the Chicago and Atlantic, and to the Michigan Central. The Pittsburgh and Fort Wayne have leased their ground and given exclusive privileges to parties who were shipping oil in connection with the Standard.

Q. Had any others given such exclusive privileges to the Standard Oil Company?—A. They did not so claim or admit.

Q. Is it a fact to your knowledge that the Standard Oil Company has in Chicago a place connected with the railroad system of Chicago, at which they barrel oil that comes to Chicago by tank cars?—A. They have such places; yes, sir.

Q. In connection with which railroads?—A. I understand it to be in connection with the Michigan Southern, but I would not be positive.

Q. It was the Pittsburgh, Fort Wayne and Chicago you said that had made exclusive arrangements with people connected with the Standard?—A. Yes, sir.

Q. Did they say that to you and make use of that as a reason why they could not give you facilities?—A. They said they had leased the grounds and asked me to go and see the parties to whom they had leased and try to make arrangements with them. I did, and was unable to make arrangements.

Q. These parties you say were in the interest of the Standard Oil Company?—A. They were receiving oil from the Standard Oil Company.

Q. Have you any means of knowing, or have you devoted any time to the examination of the subject of how many independent refineries are now in existence in the United States that are not in any manner affiliated to or connected with the Standard Oil Trust or its people?—A. I have considerable knowledge on that subject.

Q. Have you any statements or lists of them?—A. I have not. I have seen the list that I understood was furnished by Mr. John D. Rockefeller. That list I considered very incorrect and misleading.

Q. Do you refer to the list that Mr. Rockefeller furnished under examination before the Senate committee of New York?—A. Yes, sir.

Q. In what respect do you consider it misleading?—A. Some of the companies put down as independent have contracts and affiliations with the Standard which amount to their being under the Standard's control, and some of the companies put down as independent are not in operation at all, and have not been for some time.

Q. Could you take up that list and mark opposite each one any facts you know with reference to whether they are under Standard control, or whether the Standard Company has interest in them, or whether they are out of business, and how long they have been so out of business?—A. I can do it so far as I know the condition of things.

Q. So far as your knowledge extends?—A. Yes, sir.

Q. Will you do that to-day or to-morrow?—A. Yes, sir.

Q. Now, you have had something to do with natural gas, the distribution or delivery of natural gas in Buffalo?—A. Yes, sir; I was one of the incorporators of a company that sought to bring natural gas to Buffalo to cheapen our fuel.

Q. What was the name of that company?—A. It was called the People's Gas Company.

Q. Did you make any efforts to secure the right of way along the railroads to lay these gas lines?—A. Yes, sir; we sought permission to lay our line along a branch of the New York Central and run from Buffalo to Dunkirk; also along the line of the Buffalo, New York and Philadelphia and were denied in each and every case. We asked the franchise of the city to lay lines in the city, and we were told that, being an independent concern, we could get the franchise for the city for \$60,000.

Q. To be paid to the city?—A. No, sir; we did not so understand it; to the parties having the city matters in charge. We failed to get the franchise. The Standard people got it by their superior commercial skill which Mr. Archbold has mentioned here.

Q. Did the Standard Oil Company then secure the right of laying the pipe lines along the streets?—A. Yes, sir.

Q. In the name of what corporation is that right exercised; that is, the Standard Company? What is the name of the company?—A. I can not give the definite name of the company. It was understood that the Standard owned and controlled this line leading to Buffalo, but there was a local organization getting up in Buffalo, of which Mr. O'Day was the head. Its stock was distributed among the Standard

men and newspapers, and the relatives of some aldermen had this stock; and it was placed where it would do the most good in progressing the work.

Q. Now, did the Standard Oil Company, or the corporation that is in the Standard Oil Company's interest and owning this natural gas-pipe system, secure the rights of way along the railroads?—A. That I do not know. They crossed some of the roads, and I never heard of any disagreement between them as to any rights that they desired to have.

Q. You have stated that, when the Atlas Company first attempted to lay its pipe, the Erie Railroad Company refused it the privilege of crossing its line of railroad with the pipe?—A. Yes, sir.

Q. They proposed to cross underneath and bury it out of sight?—A. Yes, sir.

Q. State whether or not the railroad company has given the right of way to the Standard Oil Company, or interests affiliated therewith, to lay their pipes either crosswise or longitudinal along the lines.—A. It has given such rights of way.

Q. You have stated in your conversation with Mr. Johnson that you told him that you were suffering from a scarcity of cars, and that you were receiving oil from the Olean region?—A. Yes, sir.

Q. State whether those two statements which you made to him were facts; whether they were true?—A. They were facts.

Q. You have been interested in some criminal proceedings for conspiracy, I think, against some people connected with the Standard Oil Company in Buffalo?—A. Yes, sir.

Q. State when they were commenced, what they were for, and what the result has been, as nearly as you can give it to us.—A. Five of the Standard officials were indicted in September, 1885, charged with a conspiracy to injure trade and commerce.

Q. Who were they? Can you give us their names?—A. John D. Archbold; Henry H. Rodgers, of the firm of Pratt & Rodgers, New York; Ambrose MacGregor, Hiram B. Everest, and Charles M. Everest, the latter two gentlemen being the executive officers of the Vacuum Oil Company, one of the Standard Trust Companies, and located at Rochester. The overt act alleged was the employment of the superintendent of our works to blow up our stills and burn up a quantity of oil. We paid this superintendent \$100 a month for work, and they paid him about \$4,000 and expenses; and after he ran away from our place they secreted him in Rochester, Boston, and California. Those facts were proved on the trial. We also charged them with preventing us from obtaining crude oil for the supply of our factory and from obtaining shipments of refined oils away. It was also proved on the trial that they employed detectives in our refineries. One man we were paying for doing work in the refinery—cooperage and such work—they paid him more money for spying than we paid him for work. He was some time in our employ, and made his report to Mr. Dodd, the author of this book which has been used here in evidence, and he got his pay from Mr. Dodd. It was so shown at the trial. Two of these gentlemen were convicted.

Q. Which two?—A. Mr. Hiram B. and Charles M. Everest. They were convicted a year ago this month, and no sentence has yet been passed upon them.

Q. In what court were they convicted?—A. In the court of oyer and terminer.

Q. Of what county?—A. It is called the supreme court, New York State, and the county of Erie, New York.

Q. State whether or not this superintendent, whom you say they se-creted for some time, returned, and whether his testimony was used in this case?—A. Yes, sir; he returned and told where he had been and whom he had talked with, and what led him to this perfidy regarding my company and its men, and he testified to the facts which led to the conviction of these men, which was corroborated by numerous other testimony.

Q. What became of the other three defendants who were not con-victed? Were they acquitted, or put on trial?—A. They were put on trial and excused by the judge.

Q. Was a nolle prosequi entered as to them, or did the jury acquit them?—A. They were not given to the jury. They had admitted to the hiring of these men and to certain things in their answer to a civil com-plaint which was relied upon as evidence to convict them. But when the trial had begun it was found there was some State statute which barred us from using this admission on their part. I think they were excused by the judge.

Q. And they were not acquitted by the jury?—A. No, sir.

Q. Now, outside of what was proved in the case, any allegation in the case, I want you to give us from your actual knowledge what oc-curred in your refinery, what act was done towards blowing it up, and just describe how it was discovered, what fire there was and what injury, if any.—A. The first still that was run at our refinery was run by this man whom they had corrupted, and he weighted down the safety-valve on the still with very heavy weights, and immediately when he began to fire the still he ordered an intensely hot fire, so that the front portion of the furnace was red hot. He used very strong language to the men firing the still, who were ignorant men, not acquainted with this business at all, and told them to make it very hot, and said that they did not fire it as hot as they should; and when it was extremely hot, he went over into an adjoining factory and remained there for some time. The still being new, the weights were not sufficiently heavy to keep down the safety-valve entirely, and it allowed some of the vapors and gases to escape.

Q. Notwithstanding the weights on the safety-valve?—A. Yes, sir; and fortunately the wind was in the right direction to take these gases away. The contents of the still were destroyed and had to be thrown away, and the walls of the still itself were injured.

Q. How many barrels would such a still contain?—A. Two hundred barrels.

Q. About 1,000 gallons?—A. Thereabouts.

By Mr. SMITH:

Q. If that still had exploded would any lives have been lost?—A. That would almost certainly have been the case—men were working all about there.

Q. At what pressure were those safety-valves generally kept so as to permit the escape of the vapors and gases? How much pressure per square inch do you expect to carry in your still during the process of distillation, or refining, or whatever you call it?—A. I should think about 20 or 30 pounds.

Q. What rate of pressure per square inch do you think it took to-raise the safety-valve after it had been weighted down?—A. I do not know; they were heavy weights, and I could not say as to that; I was not there myself.

Q. You saw it afterward, did you?—A. Yes, sir.

Q. Did this man who had been your agent admit on the trial of this case that he had been employed to do this or hired to do it by some of these defendants?—A. Yes, sir; we subpoenaed the books of the Vacuum Oil Company to show the payments of money, and they refused to bring the books, but sworn statements were made, showing that the Vacuum Oil Company had paid this man various sums of money amounting in expenses and salary to between \$3,000 and \$4,000.

Q. Did you have the testimony of those firemen that were ordered to fire up taken in this conspiracy case?—A. Yes, sir; that was taken at the trial.

By Mr. BYNUM:

Q. Was that testimony preserved, Mr. Matthews?—A. Yes, sir.

Q. Is it on file in the case?—A. The district attorney has all the testimony taken in the case. I might say that this man was secreted in California, and his wife did not know where he was, and in order to communicate with him she had to go to the Standard Oil Company's office in Rochester to send and receive messages from her husband.

By Mr. GOWEN:

Q. Was that shown on the trial?—A. Yes, sir; all those matters and very many more that I can not name here.

By Mr. SMITH:

Q. Are you sure that this Standard Oil Trust has a corps of detectives?—A. It was so proven in this case—private detectives.

Q. Do they ever employ armed men?—A. Yes, sir.

Q. Where have they been employed?—A. Men have come to our works in their employ, and tried to get admission on Sunday, and at other times when the works were not in operation, and have claimed that they were armed. That is all I know about it.

Q. Have you any knowledge that the Standard Oil Trust ever employed Pinkerton's men?—A. I have no knowledge on that subject.

Q. I understand you to say that the Standard Oil Trust has a natural-gas line to Buffalo?—A. Yes, sir.

Q. Has gas been cheapened any to the consumers?—A. Well, this is the only line that goes to Buffalo. Fuel has been increased in price ever since the natural-gas line came into Buffalo.

Q. What kind of fuel?—A. Coal; since the natural gas came there we have paid higher for coal than at any time in the last ten years.

Q. Are you still paying that?—A. Yes, sir. It was claimed that the admission of natural gas would cheapen fuel in our cities; but over a year's practical operation has shown that coal has advanced in price.

Q. Was there any other cause than what you have mentioned to enhance the price of coal? Was there a less output?—A. Our railroads have charged 30 cents per ton more for coal to be used in Buffalo than coal to be re-shipped to Canada and other points. I brought this matter up in our board of trade recently, and the railroads have, as I understand, issued an order now so that persons using coal in Buffalo will get the same freight rates as charged on coal to be shipped elsewhere.

Q. How long since you brought this before the board of trade?—A. About two weeks.

Q. Is the natural gas used the same as manufactured gas for illuminating purposes?—A. It is in many cities, but there was an agreement made in Buffalo that natural gas should not be used for illuminating purposes, and by that agreement the old gas companies were not hostile

to the natural-gas company in getting their rights of way. They harmonized with them.

Q. What is the natural gas used for then?—A. Natural gas in Buffalo is used only for household purposes. Factories are not permitted to use it. There may have been one or two factories that have used it in Buffalo, but I think there are none now. The fuel the factory people are desirous of introducing in Buffalo for manufacturing purposes is this Ohio crude oil.

Q. Then they do not furnish gas for manufacturing purposes for the reason that they want to get their crude oil from the Lima district into the manufactories?—A. I so understand it. I would like to say that natural gas is used, and has been used, as fuel in Titusville and Oil City and other cities, and a year ago the independent refineries during the early part of winter, when the demands were the greatest for manufactured oil for burning purposes, the Standard shut off their supply; while at the same time the Standard were supplying natural gas to their own oil refineries, and these independents were subjected to hardships by refurnishing their furnaces to use coal and other fuels that they might obtain.

Q. Can this gas be used for manufacturing purposes; that is to say, for raising steam?—A. It is considered very valuable fuel for steam purposes.

Q. And they only use it in Buffalo for household purposes—cooking, etc.?—A. That is the only way that it is used that I am aware of.

Q. You stated in your testimony that the powers that were in Buffalo wanted a bonus of \$60,000 for the permission of laying the pipes in the streets, did you not?—A. Yes, sir.

Q. Were some of those gentlemen directly connected with the city government?—A. Yes, sir.

Q. Can you state in what capacity?—A. As members of the Buffalo common council.

Q. In your capacity of citizen of the State of New York is that the usual practice of getting franchises?—A. I understand it is necessary to furnish an inducement to get a franchise, any valuable franchise.

Q. Are you aware that the Standard Oil Trust has any interest in the Colgate Soap Company of New York?—A. They have an interest in that company.

Q. How do you know that?—A. By the testimony of members of that company and associated interests.

Q. Where was that testimony taken?—A. In New York.

Q. By whom?—A. Well, I do not know the name; it was by a commission.

Q. Authorized by the State of New York?—A. It was taken in a patent litigation which my company had with these Standard Oil interests. That recalls to my mind that when I began the manufacturing of oil the Standard interests brought suit against my company on four or five United States patents, and that to my knowledge there are several thousand patents, or more than one thousand patents, relating to manufactures of oils and greases, and a good many of these are under the control of the Standard. They said they would sue us once a month, and if that did not break us up they would sue us once a week on these patents. These suits were finally brought to a determination, and they all resulted in favor of my company—the defendant company—except one, and in that they got a master and obtained nominal damages of 6 cents. These litigations cost me \$25,000 or more to defend them.

Q. And from that you discovered that they had an interest in the Colgate Soap Company?—A. Yes; they and the Cheesebrough Manufacturing Company.

Q. What does the Cheesebrough Company manufacture?—A. Vaseline, cosmoline, and various products of that character.

Q. Can you state if Armour, Fairbanks, Washburn, and Pillsbury are interested with the Standard Oil Company?—A. Only as they are associated in railroads in common with these men.

Q. Armour and Fairbanks are of Chicago, are they not?—A. Yes, sir.

Q. Where are Washburn and Pillsbury located?—A. Pillsbury is in Saint Paul or Minneapolis.

Q. Minneapolis, is it not?—A. Yes, sir; I think so.

Q. What is his business?—A. He is a manufacturer of flour.

Q. What is Mr. Washburn's business?—A. Manufacturer of flour.

Q. You say they are merely interested with the Standard Oil Company in transportation. What interest is there between flour and oil in its transportation?—A. The company that gets the advantage in transportation secures a monopoly of the business. That is all I know about it.

Q. What has flour to do with the Standard Oil Trust transportation?—A. Nothing that I know of, only their officers are associated in the same railroads.

Q. Then it is by mutual association in transportation companies where they meet?—A. That is as far as I can trace the relationship.

Q. Armour is a heavy dealer in oil, is he not?—A. Yes, sir.

Q. Have you any knowledge of the Standard Oil Company being interested in slaughtering and packing meats?—A. I have no direct knowledge of that fact.

Q. It is only hearsay?—A. Nothing but circumstances that point in that direction. I wish to say in regard to my company that our business has been destroyed, and that the Buffalo Lubricating Oil Company, of which I was the president, is not doing business; they have been crushed out. The business I am now doing is principally a mercantile oil business, and not connected with the deceased company.

Q. How were you squeezed out?—A. Well, I have given some of the principal methods here. I might say further that I have found oil selling very cheap where there was competition; I have found that a very good quality of oil must be made to sell in competitive markets; I have found that where there was no competition prices were very high, and that a very poor quality of oil was being used; and I have found that by the Standard's controlling more than half of the territory of the United States, so that independents could not ship there, they have been able to reap such large profits in those districts that they could sell where there was competition at a point below the cost of manufacturing for the purpose of destroying the competitor.

Q. Let me go back to one question I asked you some time ago. In the patent suits you had with the Standard Oil Trust could you furnish this committee with that part of the evidence that connects the Standard Oil Trust with the Colgate Soap Company?—A. I suppose I have that testimony in the records. If I have, I can furnish it with pleasure.

Mr. SMITH. I will refer that to the counsel if he wants it.

By Mr. GOWEN:

Q. Will you send that evidence, or an extract bearing upon this point?—A. I will send any of the testimony in those various suits that you may desire.

Q. I only want the part bearing upon the Standard's connection with the Colgate Soap Company.—A. I will send it, sir.

Q. You stated that on these numerous patents that were outstanding for processes connected with the refining or manipulation of products of petroleum, the great number of which you thought the Standard Oil Company had, that there had been a threat of suing you once a month, or once a week if necessary, in order to squeeze you out. How did you find that out? What evidence did you have on that subject?—A. I proved that by a witness as having been said by Mr. Charles M. Everest, one of the convicted parties in this matter.

Q. Was it in that criminal suit you spoke of or in another?—A. That was proven in a civil action which our company brought against these men for conspiracy and destroying our business.

Q. Is that action still pending?—A. There has been a decree of court sued out; it is not settled. I would like to say, in regard to the pipe-line system, that the Standard Oil Company, nor any prominent man in the company did not invent the pipe-line system. The first pipe line was built at ——— by a man who was a very large manufacturer, and he has been beggared by Standard tactics. The first long line in the country was opposed thoroughly by Standard people. Their piping interests have come to them through the ideas and energies of other people.

Q. Can you give us the name of the first person who successfully laid pipe for carrying oil?—A. His name is Samuel Van Sickles; he now lives in Buffalo. He laid a pipe of five miles to Titusville, and was so taunted and jeered at by men of his time that he had to take his meals at the back door of his hotel. He worked along amidst the ridicule of his associates.

Q. In what year was the first pipe line laid?—A. Well, I can not give you that; it was prior to 1870.

By Mr. BUCHANAN:

Q. You spoke about your attempts to lay a pipe line, or a line for conducting natural gas from the gas fields to Buffalo, and you spoke about your being hindered in that work by successive injunctions, and I inferred from what you said that you have arrived at the conclusion in your own mind satisfactorily that those injunctions were at least sought to be obtained by the Standard Oil Company or in its interests. It would assist this committee somewhat if you were able to give us the definite circumstances upon which you base that conclusion.—A. The laying of this line was progressed by the Atlas Oil Company, a company that I was associated with.

Mr. GOWEN (to Mr. Buchanan). You ask about gas.

Mr. BUCHANAN (to the witness). I said gas, but in recalling the testimony I think you spoke of oil. However, it was a pipe line of some sort.

The WITNESS. Regarding this oil line, I want to say that the knowledge I have of that—perhaps the most direct knowledge—is that Judge Barker, one of the judges of our supreme court, in his decision in the case where this matter was litigated, charged the Erie Railway Company and the Standard Oil Company with having—I think he used the word “infamously”—opposed the laying of this line. It was some such expression as that which occurred in his decision in the judicial determination of these matters.

Q. I am speaking now of the laying of the successive injunctions.

Do you refer to a decision of Judge Barker in one of those injunction cases?—A. Yes, sir.

Q. Can you furnish the committee with a reference to that decision?—

A. I think I can.

Q. You spoke of another matter which, while it is not directly in the line of inquiry of this committee, may in the broad scope of the resolution, be considered as at least subsidiary, about a price which was demanded for the franchise in the city of Buffalo. What definite information have you about that? How far at that time was the city government of Buffalo under monetary influence, to state it mildly?—A. It was very deeply under such influences.

Q. But what definite information have you that this company would be compelled to spend \$60,000 in order to obtain the franchise?—A. The attorney of our company so informed us.

Q. His name, please.—A. His name was James F. Gluck; and also conversations with various citizens closely connected with the common council, and remarks from members of the common council pointing in that direction.

Q. Remarks heard by yourself?—A. Yes, sir; in some cases.

Q. Well, did you make any further effort, after ascertaining the state of the market for franchises, to obtain one?—A. I think we subsided about that time. We argued the matter, however, as well as we could. I might say that a gentleman received a \$1,000 check as a retainer to make an argument before the committee from the Standard Oil Company, and it has been so proven; and it was not a very able argument either, so far as I could judge. This attorney's name was Henry W. Box, the attorney who testified that he received the \$1,000 check. He is attorney for the gas-light and street car companies, and various other city institutions.

Q. The trial for conspiracy of which you speak I remember reading about in the newspapers at the time, and my impression is that the indictment was nolle prossed as to the other defendants, on the ground that the testimony in support of the indictment was not sufficient to warrant the case going to the jury in regard to those defendants. Is my recollection correct or not?—A. It is substantially correct. I recall now that the judge charged the jury that they must acquit. So that, although I said the jury did not hear the case, they did in that way.

Q. Under instructions from the court?—A. Yes, sir.

Q. You stated that the others were not yet sentenced. Were any of the numerous appeals and counter appeals, and proceedings and supplementary proceedings, etc., which seem to be incident to practice under the New York code, resorted to in their cases to prevent a final judgment?—A. They asked the judge holding the court at the time of their conviction for a stay of, I think, sixty days, and subsequently they asked for a new trial, and quite a time subsequent to that the motion for a new trial was denied; and that is as far as the proceedings have gone.

Q. The point of my inquiry is this, has the case been returned to the judge, before whom they were convicted, for final judgment; and, if so, is that judgment still withheld?—A. The judge told me only a few days ago that they would be arraigned for sentence shortly. I do not know the processes by which it is brought up.

Q. That is the specific fact which I wanted to know.—A. I might say that in our State a conspiracy of this kind, no matter how hei-

nous, is considered a misdemeanor, and the extent of the penalty is very light.

Q. But the point of my inquiry was whether an appeal had been taken which precluded the judge before whom they were convicted from passing sentence; and I suppose you are not familiar enough with those proceedings to tell me?—A. No, sir.

Q. You spoke about your efforts to obtain in Chicago some ground, by renting, for your purposes, and that you were referred to parties to whom the railroad companies had already leased the ground, and you were prevented from obtaining it. Was there anything to prevent your obtaining other ground in Chicago that would answer your purpose; and, if so, what?—A. The ground, to do us any good, would have to be on a railroad, so that we could bring oil in bulk and barrel it. What I desired to do was to get a position where I could barrel oil and handle it in the same manner that the Standard Oil people were doing.

Q. Now, if you will answer this question, you will have answered my former question. Was all the ground of that character already leased out to other parties, and did those parties refuse to allow you to obtain any of it?—A. All the ground that I was able to hear of that was adapted to my purposes was already leased.

Q. Of course the committee desire to know, to exactly what extent business men are circumvented from entering into competition with this Standard Oil Trust, and it would assist us materially if we could have the definite facts as to the amount of effort put forth by these men to obtain facilities for such competition. Now, to what extent did you put forth such efforts in Chicago?—A. Well, I spent a week or ten days there and in that vicinity, and also sent men to New York to treat with parties in New York that assumed to control the Chicago and Atlantic, and talked with local parties. I went to Cleveland several times and talked with a man there by the name of Cochran who was connected with this Erie system; and we spent considerable time and money all through the past year in our endeavors to get facilities from the railroads for doing our business.

Q. And with the result you have stated?—A. Yes, sir.

By Mr. BYNUM:

Q. What are the rates at which natural gas is furnished in Buffalo?—A. Twenty cents a thousand feet.

Q. How far is it brought there—about 40 miles?—A. I suppose that it is brought from the Bradford oil districts or that vicinity, and it is brought perhaps 80 miles, but the lines supply other towns on the way to Buffalo.

Q. Is that the stipulated price in the ordinance, or is there any?—A. The price in the ordinance, as I recollect it, was that they should not charge to exceed 75 cents a thousand feet. The mayor asked to have stipulated that they should not charge to exceed 60 cents or thereabouts, and the Standard refused to accept it on those terms, claiming that it would be restricted, that it would be severe on them. The mayor desired that they should furnish the city free as they had furnished other cities, or nearly or substantially free. The grant was finally passed over the mayor's veto.

By Mr. SMITH:

Q. At 70 cents?—A. It was 75 cents.

Q. But there was a limit set?—A. Yes, sir.

Q. And you stated they charge 20 cents now?—A. Yes, sir; and it has been found to be more expensive than coal at \$6 a ton or \$5.50.

Q. How is that?—A. Well, requiring more money to pay for the fuel to secure a given amount of heat. The coal price has advanced \$1 a ton since the gas was admitted there, or in the neighborhood of \$1 a ton.

Q. Is that hard or soft coal?—A. Hard coal I speak of. Soft coal has been higher; that is, I have had to pay more this winter than before the natural gas came into Buffalo.

Q. What did you state the price of hard coal is in Buffalo?—A. The last I paid was \$5.75 per ton for hard coal.

Q. Is that a gross or net ton?—A. Well, it claims to be 2,000 pounds.

By Mr. GOWEN:

Q. Did not you state that in this criminal suit the judge held that under a statute of New York the testimony taken in a civil action which connected some of these defendants with this transaction could not be offered in evidence to convict them?—A. No, sir; I said that the answer which Archbold, Rogers, and McGregor had made under oath in one of our civil cases—that that could not be read in evidence against them in a criminal proceeding.

Q. That it could not be?—A. Yes, sir.

Q. Why?—A. Because the statute forbade it.

Q. That is, there was a statute of New York which forbade the reading of an answer made under oath in a civil proceeding as against the same man who made it in a criminal proceeding?—A. Yes, sir.

Q. Do you know when that statute was passed?—A. I do not; but the district attorney relied upon this as proof conclusive, and that dropping, we had not time to gather other proof which we would have produced if we had known about this.

By Mr. BYNUM:

Q. How is the gas in Buffalo measured; through meters?—A. Yes, sir.

Q. Have you had any experience in the use of gas from meters at 20 cents a thousand?—A. I have never used natural gas in my house.

Q. And from what you learn from those with whom you are acquainted, at 20 cents a thousand through meters natural gas is as expensive as coal at \$6 a ton?—A. I have been told by a large number of consumers of natural gas that it is more expensive than coal at \$6 a ton for winter use; but for summer use, when only a fire of short duration is required, this gas takes the preference, as they can turn it off and on, and being measured by the thousand, they like it better for summer fuel.

Witness excused.

The following is the list furnished by John D. Rockefeller, president of the Standard Oil Trust, to the committee on general laws on the investigation relative to trusts and published by the New York legislature March 6, 1888:

List of outside refineries, January 1, 1888.

	{ 1	200		

a Being built.  
b Brooklyn, on New Jersey side of North River.  
c Elizabethport; run by A. E. Foster, 156 Maiden Lane, New York.

## TESTIMONY OF SOLOMON HAAS.

SOLOMON HAAS, sworn and examined.

By Mr. GOWEN:

Q. What is your business?—A. I am traffic manager of the associated railroads of Virginia and the Carolinas.

Q. What system is that?—A. The Atlantic Coast Line, the Seaboard Air Line, and Piedmont Air Line, and Richmond and Danville.

Q. Do you remember an application made to you to name, in connection with some lines of the Baltimore and Ohio, a rate of freight on oil for a Mr. George Rice, of Marietta, Ohio?—A. Yes, sir.

Q. Can you remember what the rate was and where the shipment was to go to?—A. No, I do not remember what the rates were. I remember the shipments were to be made from Marietta to quite a number of points in our territory, but I have forgotten the points.

Q. What do you know about that rate having been given up, or abandoned, or withdrawn; and if so, by whose direction it was done?—A. I think Mr. Rice telegraphed me that the Baltimore and Ohio were refusing to continue to quote those rates.

Q. Will you look at that letter and see if that revives any recollection of yours upon the subject [handing witness letter]?—A. I think this was written before the rates were made.

Q. How long after the rate was made was it withdrawn?—A. I do not remember.

Q. Was it within a couple of weeks?—A. No, I think not; they ran several months.

Q. At whose suggestion was it withdrawn?—A. I do not really know that the rate ever was withdrawn. I simply understand from the correspondence between Mr. Rice and the Baltimore and Ohio road that they declined to work the rate any longer.

Q. They declined?—A. Yes, sir.

Q. You had no objection to the rate?—A. No, sir.

Q. You would have been willing to take the traffic?—A. Yes, sir; I think the reason alleged was something with reference to our not returning cars promptly, or refusing to furnish cars, or something of that kind.

Q. But you know that the rate was satisfactory to you, and that it was suspended at the suggestion of somebody else?—A. I do not know that the rates were satisfactory, but they were the best we could get, no doubt.

Q. And you were willing to take them?—A. Oh, yes; certainly.

Q. And you made no objection to the rate yourselves?—A. No, sir.

Q. And the oil had to reach your line over the other lines?—A. Yes, sir.

Q. You stated that it may have been several months after the rates were given that they were terminated. How long after the first shipment was made upon the rates were the rates withdrawn?—A. The correspondence will show it. I do not know that the rates have been withdrawn to this day. I think the rates are still there.

Q. But are not used?—A. There are no shipments made on them.

Q. How long did the shipments continue under those rates? Was it two weeks?—A. I do not know; I think the time was very short.

Witness excused.

## TESTIMONY OF H. S. DEPEW.

H. S. DEPEW, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. In Saint Louis.

Q. What is your position?—A. Traffic manager of the Mobile and Ohio Railroad.

Q. How long have you been in that position?—A. Since October, 1886.

Q. Do you make rates over that road for freight traffic?—A. Yes, sir.

Q. Are you familiar with the rates on oil over your line from the time you became traffic manager to the present time?—A. I only know of their being made; I could not give you the figures.

Q. But you were subpoenaed to bring those figures.—A. No, sir.

Q. Have you your subpoena with you?—A. Unfortunately, I have not. It is at my hotel, but it does not mention rates. I did not understand that the rates were to be produced, and I did not therefore provide myself with them. I can furnish them.

Q. (Reading from copy of subpoena procured from another witness.) You were subpoenaed to show all shipments of oil, crude or refined, or products of petroleum, for the years 1886, 1887, and 1888; the rate of freight charged and received; the length of haul, and the rebate.—A. Mr. Layet, our comptroller, has those.

Q. They are here?—A. Yes, sir.

Q. Can you from memory give us a statement of what your rates have been on oil going south on the two methods of shipment, by barrels and tank cars?—A. They are both the same.

Q. Now?—A. Yes, sir.

Q. Have they always been the same?—A. Yes, sir.

Q. Per hundred pounds?—A. Yes, sir.

Q. Do you carry oil in tank cars at any other rate than at the rate per hundred pounds?—A. Kerosene, you mean?

Q. Petroleum?—A. I think not. We carry very little oil over our line. What little we do is received from other lines coming from Louisville and Cincinnati. We carry very little.

Q. And your rates are the same whether it is carried in tank cars or in barrels?—A. Yes, sir; locally on our road.

Q. How about other roads?—A. I could not tell you exactly. The figures will show that.

Witness excused.

## TESTIMONY OF GEORGE LAYET.

GEORGE LAYET, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Mobile, Ala.

Q. What is your position?—A. Comptroller of the Mobile and Ohio Railroad.

Q. Have you a statement of the rates on oil on your road?—A. Yes, sir; I have a statement here of what I understand to be an answer to the subpoena.

Q. Will this statement show rebates, if any, allowed?—A. There were none paid.

Q. You treated everybody alike?—A. Yes, sir.

Q. And your rate was the same per hundred pounds in tank cars or in barrels?—A. Yes, sir; that is my understanding.

The statement produced by the witness, and marked for identification G. B. E. 1, is as follows:

**TESTIMONY OF MALCOLM LLOYD.**

**MALCOLM LLOYD, sworn and examined.**

**By Mr. GOWEN:**

**Q.** You were asked last week to produce a certain statement of rebates. Have you got it?—**A.** Yes, sir.

**Q.** Will you produce it?—**A.** I must ask to be excused from producing it.

**Q.** Why?—**A.** Because I think, on consideration, that it is interfering with my private rights.

**Q.** But you have that statement?—**A.** Yes, sir.

**Q.** But decline to produce it?—**A.** I ask to be excused.

**Q.** We can not excuse you, and I want to know if you decline to produce it.—**A.** I have admitted, Mr. Gowen, that I have received rebates, and that I have received rebates from the Pennsylvania Railroad; and I think, so far as the public are concerned, that that should be sufficient to conserve the public interests. Now, the mere fact of whether I received one price or another, I can not see is a fair thing to ask me. It is unfair, or I at least think so, because here in the room there are gentlemen who are having suits brought against the Pennsylvania Railroad. Those suits are being prosecuted, and whether I am to be called as a witness in those suits or not, I do not know; but if I am, I would rather not produce those rebates here if the committee will excuse me.

**Q.** The reason I ask you this question is that Mr. Cassatt, in the testimony which he gave in the year 1879 or 1880, which has been offered in evidence here, and in which he testified that certain rebates were allowed to the Standard Oil Company, also testified that one other person received rebates, but for the same amount, and that that other person was Malcolm Lloyd.—**A.** Yes, sir.

**Q.** Hence I would like, in your case, to know what those amounts were, but if you refuse to produce them, I will not bother you further.—**A.** I will not produce it. I do not mean to say that I am going contrary to the ruling of the committee. I do feel, however, that as long as I have admitted the fact, as long as you have it, as Mr. Gowen says, in Mr. Cassatt's evidence, and as long as I may be called on in the course of a very short time to go into court and testify as to these matters, I simply ask to be relieved by the committee. I think the public interests, as far as the committee are investigating the Standard Oil Trust and railroads and rebates will be sufficiently conserved by what I have given them. Now, going further, it may have a matter of private interest involved in it.

**The CHAIRMAN.** The committee will pass upon this after the recess. The committee then took a recess until 2 o'clock.

**AFTER RECESS.**

**TESTIMONY OF EDGAR HILL.**

**EDGAR HILL, sworn and examined.**

**By Mr. GOWEN:**

**Q.** Where do you reside?—**A.** Cleveland, Ohio.

**Q.** What is your business?—**A.** General freight agent of the Cleveland, Columbus, Cincinnati and Indianapolis Railroad.

**Q.** How long have you been in that position?—**A.** Since September, 1885.

Q. You are shipping oil over your line; who has charge of the rates upon it?—A. I have.

Q. You were subpoenaed to produce statements showing the rates to different people and the rebates and all that. Have you prepared such a statement?—A. We have prepared a statement and got as far along with it as we could; being so far back we did not have time to get the whole of it; but I think I have enough with me to answer the questions.

Q. Have you that statement with you?—A. Not a complete statement.

Q. Why did you not produce it?—A. We did not have time to get it up.

Q. How much of it have you made up; have you any statements?—A. I have some of the tariffs showing the rate.

Q. But you were subpoenaed to produce a statement of the shipments during 1886, 1887, and 1888.—A. We could not get it ready; we did not have time.

Q. That only goes back for a little over two years.—A. Our subpoena says for ten years back.

Q. Have you the subpoena with you?—A. Yes, sir; I think I have [handing the subpoena to Mr. Gowen.]

Q. (Reading:)

All shipments of coal oil, crude or refined, or of other products of petroleum, over said lines, or any of them, during the years 1886, 1887, and 1888, the names of the shippers, the extent and amount of shipment, the kind of cargo, and the weight or bulk thereof, the rate of freight charged and received, the length of haul, with point of origin and destination on said line, the amount of deductions, allowances, or rebates paid, allowed, credited, or claimed on each shipment, and the amount of car service allowed, paid, credited, or claimed on each.

A. We have not got that.

Q. Why not?—A. We had not time to get it up. It would take at the lowest calculation about a month, with ten men, to comply with that request.

Q. Other railroad companies have made it and brought it here without any trouble.—A. I don't think they have made such a statement as that calls for.

Q. The second statement, yes.—A. We could not get it in that time.

Q. Did you make any attempt to answer that subpoena?—A. Yes, sir; we put some men to work and they are on it now.

Q. What is the result of that work, where is that paper?—A. It is in Cleveland.

Q. Why didn't you bring it here?—A. I could not get it ready.

Q. You could get some of it ready?—A. Yes, sir.

Q. Did you bring any of it?—A. I am prepared to answer any question about the rate.

Q. We want the statement that you were subpoenaed to produce.—A. We did not have time to get it.

Q. When did you set men to work on it?—A. This subpoena was served on me on Saturday evening a week ago, and we put them to work Monday morning.

Q. You mean Monday of last week you set them to work?—A. Yes, sir.

Q. Who are they?—A. Men in the auditor's office.

Q. Who?—A. Clerks.

Q. What are their names?—A. I don't know.

Q. How do you know they were set to work?—A. I know they were set to work. Our auditor is here. If you call on him he can tell you about it.

Q. It was in his department?—A. Yes, sir.

Q. Were the rates on oil upon your road carried in tank cars as distinguished from oil carried in barrels on shipments south or west?—A. During what time?

Q. In those three years.—A. Do you mean the quantity of oil shipped?

Q. What were the rates per barrel or ton on tank cars, or per 100 pounds?—A. To what point?

Q. To any point?—A. We had a rate of \$37 a tank from Cleveland to East Saint Louis; that was one rate.

Q. Thirty-seven dollars a tank?—A. Yes, sir.

Q. Was that \$37 a tank the proportion that was coming to you from your own line? You don't run from Cleveland to East Saint Louis?—A. The C. C. C. and I. runs from Indianapolis.

Q. Over what line does it run?—A. Over the Saint Louis.

Q. That was a joint rate?—A. Yes, sir.

Q. What pro rata did you get?—A. I don't remember now; it is 283 miles; I don't remember exactly now what the percentage is.

Q. At the same time that that rate of \$37 a tank existed what was the rate in barrels?—A. It averaged in barrels during those times.

Q. Tell us what it was any one time.—A. The rate was 47 cents a barrel, and then it was reduced to 43½ cents.

Q. Was it ever advanced?—A. Yes, sir.

Q. When?—A. On the 5th of April, 1887.

Q. What was it advanced to on the 5th of April, 1887?—A. We have the same rates to-day that it was advanced to then—62 cents a barrel and 47 cents a barrel.

Q. What did the 62 cents a barrel and the 47 cents a barrel apply to?—A. Forty-seven cents in tank, actual capacity, and 62 cents a barrel for 400 pounds. It figures exactly the same per 100 pounds.

Q. Thirty-seven dollars a tank?—A. That was the rate prior to that time.

Q. What is the rate on tank oil, or what was the rate put to in April, 1887?—A. In tanks?

Q. Yes.—A. Forty-seven cents a barrel.

Q. That would be \$47 a tank for 100 barrels?—A. Yes, sir.

Q. And 62 cents a barrel for 400 pounds?—A. Yes, sir.

Q. How did you arrive at any conclusion that that equalized it?—A. By estimating what a barrel of oil weighed in bulk. We estimated it at 315 pounds, and a barrel of oil and wood is 400 pounds.

Q. The barrel does not weigh 85 pounds?—A. You mean the empty barrel?

Q. Yes.—A. I think it does.

Q. You think an empty barrel weighs 85 pounds?—A. I think it does.

Q. Don't you know it only weighs a little over 75 pounds?—A. No, sir; I do not.

Q. What are the four points in the United States with reference to your trade that you call basing points for the equalization of oil rates?—A. Chicago and Saint Louis.

Q. I mean points of shipment.—A. Oil shipped to?

Q. No, from.—A. Pittsburgh, Cleveland, Parkersburgh, and the valley points.

Q. And Marietta?—A. Parkersburgh and Marietta, yes.

Q. Are the rates made in the South and West the same from Cleveland to Parkersburgh as from Marietta to Pittsburgh?—A. No, sir; I do not think they are the same.

Q. Can you give us what the rates are from those different points?—A. I can give you the rates from Cleveland.

Q. You have just given us those.—A. I think the rate from Parkersburgh is the same. We are not interested in the Parkersburgh oil. We have no rate from there.

Q. Have you any from Pittsburgh?—A. No, sir.

Q. Any from Marietta?—A. No, sir. I can get those, if you want them.

Q. We do want them.—A. They are not in my territory.

Q. Are those not the four basing points, as it may be called, upon which rates of oil are made by the railroad systems of the South and West?—A. Yes, sir.

Q. They are, are they not?—A. Yes, sir.

Q. Now can you tell me whether the rates from those four points are generally the same; suppose you are shipping oil to Saint Louis, would the rates from Parkersburgh and Marietta be the same as the rates from Cleveland?—A. I think they are the same. We are not interested in Parkersburgh oil. We don't use the tariffs. Our road don't go there.

Q. Your road don't go to Cleveland?—A. Yes, sir; it does.

Q. Directly?—A. It starts there.

Q. Does it go to Pittsburgh?—A. No, sir; our road is from Cleveland to Indianapolis. Then we have two branches, one to Columbus and one to Cincinnati.

Q. If oil were sent to Pittsburgh over your road or any portion of it, at what point would it strike your road if the oil went to Saint Louis? Would you get any of that?—A. No, sir. We have no connection with any road leading from Pittsburgh to get any oil.

Q. If it were shipped from Marietta, going west or south over your line, at what point would that reach you?—A. They might give some of it to us at Cincinnati, or some at Indianapolis.

Q. If you get oil from Marietta, either at Cincinnati or at Indianapolis, can you tell us whether the through rates on that oil going to Saint Louis are made the same as the through rates from Cleveland?—A. I think they are.

Q. How does the distance between Marietta and Saint Louis by your route compare with the distance from Cleveland to Saint Louis?—A. I think it is 545 miles from Cleveland to Saint Louis. I do not know exactly what the distance is from Marietta to Saint Louis. I have not figured it up.

Q. You are a railroad man, and you know a good deal about those subjects, can not you tell us?—A. I think it is 210 miles from here to Cincinnati, and from Cincinnati is—

Q. What is the entire distance?—A. About the same distance, 575 miles.

Q. Now, you have several times, have you not, advanced the rates on barreled oil over your territory in the last three years?—A. We have made very few changes in them.

Q. Have you not made some changes; have you not advanced the rates?—A. Here were the rates in effect June 1.

Q. Of what year?—A. Of 1883; corrected on June 14. Some revisions were made, but I do not think there were very many.

Q. If you have statements there of the rates covering the whole period from the beginning of the first of those down to the present day, I wish you would give them to us, please.—A. Here is a tariff we got out June 1, 1885. I do not think these rates were changed very much. June 1, 1885, the rate was reduced to some of the points, I see.

The CHAIRMAN. Can not we get a condensation of this somehow?

Q. Are those sheets that you have now in your hand tariff sheets?—

A. Yes, sir; Nos. 1, 2, and 3, and corrections during the time we had to furnish them.

Q. What period do they cover?—A. From 1883 up to 1887.

Q. Up to what portion of 1887?—A. April.

Q. What have they been since April, 1887; have you any of those?—

A. Yes, sir. They have been revised. Those are the present rates; but there have been no changes in them since April, 1887.

Q. Were there any changes from January 1, 1886, on barrel oil to New Orleans and southern points?—A. I really do not remember about that. I find that I did not bring any rates to New Orleans at all. I have none with me.

Q. You were subpoenaed to bring all the rates over your line?—A. I know; but I neglected to bring them.

Q. Do you know Mr. Fraser, the general freight agent of the Cincinnati, Washington and Baltimore?—A. Yes, sir.

Q. Do you remember of telegraphing him on the 16th of August, 1885, asking him to advance rates on oil from Cleveland to New Orleans, to take effect at once, to \$2 a barrel?—A. I think there was some correspondence of that kind about that time.

Q. At whose suggestion was that done?—A. To the best of my recollection it was done at the suggestion of the Chesapeake and Ohio and Southwestern.

Q. Was that one of the lines in the through line?—A. Yes, sir; and one of the routes.

Q. Mr. Mitchell was the general traffic manager of that line?—A. The general freight agent.

Q. Do you know whether at the same time he telegraphed or wrote to Mr. Fraser to secure such an advance?—A. I think he did. The idea was to get a uniform advance from Parkersburgh and Cleveland.

Q. To \$2 a barrel?—A. Yes, sir.

Q. Now, at that rate at that time, what was the rate on tanks of oil from Parkersburgh or Cleveland to New Orleans?—A. I do not remember. The rate goes as low as \$85 a tank, regardless of the quantity, and our idea was to get the rate back into line. We had a rate of \$100 there quite a while, and I think it was some time in 1886 that it was made \$85 a tank.

Q. Now take up those tariff sheets if you please, and looking at them give us, so that we need not use the whole of those papers.—A. Understand that these rates are the printed tariff rates. Those that I have been speaking of are net rates.

Q. Do you mean to say you gave net rates different from those printed on the tariff sheet?—A. Yes, sir.

Q. How much are the printed rates on the tariff sheet?—A. So much a barrel.

Q. Was it on the printed tariff sheets the same whether it was sent in tanks or barrels?—A. We only printed tariffs on oil in barrels, not on oil in tanks.

Q. Now, is all the oil that is sent over your lines by the Standard Oil Company or their associates sent in tank cars?—A. No, sir.

Q. Is it sent in barrels?—A. A good deal of it.

Q. How much?—A. I can not tell you the proportion; I suppose about 30 per cent. of it, though.

Q. You were asked to produce here a statement of the rebates allowed by you on oils. Have you such a statement?—A. The statement is in process of being made. We have not got it with us.

Q. When will that statement be finished?—A. I can not tell you. It will take about a month to finish it, I guess.

Q. Do you think it will take so long?—A. Yes, sir; with five men.

Q. Will that statement, when finished, contain exactly what is called for, so that by turning to each shipment you can see exactly the gross rate and the rebate allowed upon it?—A. I hardly think you want a statement of that kind.

Q. What kind of a statement are you preparing?—A. I am preparing a statement to show you what the net rates are.

Q. The net rates only?—A. The net rates and vouchers showing the net rates.

Q. That means the rate after all allowances and rebates were deducted?—A. Yes, sir.

Q. Have you not shipped or permitted tank cars of oil to go to Cleveland and Mobile and New Orleans at \$70 a tank?—A. Not to my recollection.

Q. You have not?—A. Not to my recollection.

Q. Have you not carried on such a prorate so that your proportion of the prorate amounted to only \$16.80 per tank?—A. I have no recollection of any such rate.

Q. What is your recollection as to the lowest sum that was your part of the share of any other rate on tank cars of oil carried from Cleveland to Mobile or New Orleans?—A. I can not give you that, because the lowest rate was \$85 dollars a tank, that I can remember. Our prorate of that I do not remember what it was, because we had two or three different routes to send it and figured differently.

Q. Oil going from Cleveland to Atlanta, Ga., would go over a portion of your line?—A. Yes; if they would give it to us.

Q. Describe where that would leave your line as it went southward from Cleveland?—A. It would depend altogether as to how it was consigned by shippers. We have a route at Indianapolis and we would prefer to have it there. We have a road to Cincinnati, which is a short distance.

Q. You prefer to take it by the road that would give you the longest mileage on your own system, naturally?—A. Yes, sir.

Q. What is the lowest net rate that you can remember that you carried oil for in tank cars for anybody connected with the Standard Oil Company from Cleveland to Atlanta?—A. We never made a through rate from Cleveland to Atlanta on tank cars.

Q. You never participated in a through rate?—A. We did not.

Q. You are sure of that?—A. Yes, sir; our rate was from Cincinnati.

Q. Do you know a firm of Chess, Carley & Co.?—A. Yes, sir.

Q. That is a part of the Standard Oil Company?—A. I always thought so.

Q. Please look at that voucher (handing it to the witness) and state what that represents?—A. This represents an overcharge on a shipment of oil from Cleveland to Atlanta.

Q. Now, at what rate was that oil from Cleveland to Atlanta charged in the first place?—A. I don't know what that through rate is.

Q. The gross through rate at which that was charged originally?—A. It shows it was charged here on 21 tanks, \$3,307.50; that is the through rate.

Q. Now, what amount of that \$3,307.50 was deducted?—A. According to this there is \$1,505.70 deducted.

Q. That was the rebate or allowance?—A. Yes, sir; overcharge.

Q. That would reduce it to \$1,801.80?—A. Yes, sir.

Q. That would be about \$90?—A. That through rate was divided. Our rate was \$24 a tank to Cincinnati. We had nothing to do with the through rate.

Q. Your line was allotted a portion of that \$1,505.70?—A. Our local rate from Cleveland to Cincinnati.

Q. How much of that \$1,505 allowance came to your line?—A. Three hundred and eighty-eight dollars and fifty cents, according to this paper.

Q. That was your share of the allowance, was it not, \$388.50?—A. Yes, sir; we should have charged \$24 a tank; we overcharged it \$388.50 on the 21 tanks.

Q. That \$24 a tank represented the net rate which was coming to your line as part of the through rate from Cleveland to Atlanta?—A. No, sir; we had nothing to do with the through rate.

Q. That shipment went over your line?—A. Yes, sir; the rates were made up of a combination of two locals.

Q. Certainly your line was a part of the through route?—A. Yes, sir.

Q. You received, as being a party to that through route, of this allowance of \$1,505.70, \$388.50 did you not?—A. Yes, sir.

Q. And the result of the reception of that money was to reduce your net rate to \$24 a tank car by the mileage that it passed over your line?—A. Yes, sir.

Q. What was the extent of that mileage?—A. Two hundred and forty-four miles.

Q. From what point to what point?—A. Cleveland to Cincinnati.

Q. The difference between the tariff rate as published and the net rate to which it was reduced made the sum on that one shipment alone \$388.50 for the mileage you had from Cleveland to Cincinnati?—A. It would seem so.

Q. Now the difference of that reduction amounted to about 45 per cent. of the whole?—A. Just about.

Q. That is, as compared with the published rates, the difference taken off amounted to about 45 per cent. of the whole?—A. They show for themselves.

Q. I want to get your answer to that question? You can take your time and make it up. It is about that.—A. It is about 45 or 50.

Q. It would not be 50. You were asked to produce correspondence and telegrams between Fraser, Mitchell, and others on the oil rates.—A. That summons was not served on me until last Friday, and I had to leave Saturday. I did not get that up.

Q. Why not?—A. I had not time. I could not get it up; it is five years' correspondence.

Q. Did you make any attempt to get it up?—A. Yes, sir.

Q. Have you any of it here?—A. No, sir; they are working on it at home.

Q. Will you send us copies of all that correspondence, especially between yourselves and Fraser, Mitchell, and Morey, on the subject of oil rates?—A. Yes, sir.

Q. Do you carry cotton-seed oil and turpentine over your line?—A. Yes, sir.

Q. As return load on tank cars?—A. Wherever we can get it.

Q. What are the rates on that?—A. I can not tell you just now; I have not a record of those.

Q. Will your statement which you are to send us show that?—A. Yes, sir.

Q. Will it show the net rates?—A. It will show everything.

Q. Will it show for the last three or four years what the tendency on your rates has been, downward or upward?—A. Those tariffs will show that.

Q. Do you not at the end of the year, in making your returns, ascertain the exact rate per ton per mile for hauling freight?—A. The tendency has been upward within the last few years; 1887 over 1886 was an increase; I think 1886 over 1885 was an increase; I do not remember the exact figures.

Q. Can you tell us what your return shows as the average rate per ton per mile which you received for hauling in 1885, 1886, and 1887?—A. I can not tell you.

Q. Was it as high as a cent?—A. No, sir.

Q. Was it under 7 mills?—A. I think it was about 7 mills. I have not those figures with me.

Q. Is 7 mills, as a general thing, less than the average of Western roads?—A. I think in 1886 it was about 6; in 1887 it was 7 and something.

Q. With reference to the volume of traffic moved over your line, north or south, which is the greater in tonnage?—A. Our east-bound tonnage.

Q. Moving northward?—A. Yes, sir; what we call east-bound; ours is east and west.

Q. The west-bound is less?—A. Yes, sir.

Q. Freight going southward goes westwardly over your road?—A. Yes, sir.

Q. In carrying tank cars over your line do you allow mileage both ways?—A. Yes, sir; invariably.

Q. Do you also allow mileage on empty cars of other companies that you do not own yourselves?—A. Yes, sir.

Q. Have you any knowledge of the Standard Oil Company shipping oil in less than car-load lots over your line at the same rate as car-load lots?—A. No, sir.

Q. Do you know that?—A. Yes, sir.

Q. You are sure of it?—A. Yes, sir.

Q. You say they have not done so?—A. They have not done so.

Q. What is the difference on your line between full car loads and less than full car loads?—A. I did not go into less than car-load rates; did not bring any with me; I only brought car load-rates. The less than car-load rates, according to the official classification, was first class, I think.

Q. Have you a circular which was issued, I think, in the year 1886, signed by a number of the companies of the South and West, upon the subject of oil rates?—A. I do not think I have.

Q. Will you look at that and see if you recognize it [handing witness a paper]?—A. I do not think I ever saw one of those before.

Q. You do not recognize that?—A. No, sir.

Q. Now, when do you think those statements will come here?—A. It will take some time to get them up, and I would rather refer you to our auditor on that subject. He is here.

Mr. GOWEN. I will call him then.

## TESTIMONY OF P. A. HEWITT.

P. A. HEWITT, sworn and examined.

By Mr. GOWEN :

Q. Where do you reside ?—A. Cleveland.

Q. What is your business ?—A. Auditor of the Cleveland, Columbus, Cincinnati and Indianapolis Railroad Company.

Q. How long have you occupied that position ?—A. Since October 22, 1881.

Q. You have nothing to do, I suppose, with the fixing of rates or of the rebates on freight ?—A. No, sir.

Q. State whether you have control of vouchers for disbursements on your line ?—A. I have the custody of those.

Q. Who certifies to their correctness ?—A. The general freight agent and the general manager.

Q. Then any allowances of rebates on freight would not go through your department, except after they had been vouched or paid ?—A. No, sir ; they would go through there for my audit and approval before they were paid, and turned over to the treasurer afterwards.

Q. Do you exercise any supervision over the question of whether they shall be paid or not, or do you accept the certificate of the general freight agent or general traffic manager as correct on that subject ?—A. I accept the approval of the general freight agent and general manager.

Q. And then you certify to their correctness ?—A. As to the figuring and recording of them.

Q. The system of your railroads requires that your certificate should be put upon them to make them a valid voucher ?—A. They go to the treasurer for payment.

Q. And if it is sent to the treasurer with your signature on together with that of the general freight agent and general traffic manager, it is paid ?—A. Yes, sir.

Q. Do they then come back to your department ?—A. Yes, sir ; the original, with the receipt attached

Q. Now, you have been subpoenaed and asked to produce a statement of all these. Have you been working at it ?—A. Yes, sir.

Q. How long do you think it will take to make that up ?—A. If I understand the summons correctly—of course it is a very indefinite thing to state positively as to the period of time it will cover.

Q. Look at No. 2 there ?—A. No. 2, as I understand it, and you have to take No. 3 with it also in order to have the statement complete. You asked me to give you a statement of all the oil carried for a period of four years and three months. You ask me to give you the number of shipments and by whom shipped.

Q. Yes.—A. The weight, rate, and amount of freight ?

Q. Yes.—A. Then you ask me to give the rates of rebate to apply to each shipment. Then you ask me to give the car service. Now, in order to give you the rebates and car service would necessitate me putting in the billing report of each, the date of the shipment, the number of the way-bill, and number of the cars, in order to get the car service.

Q. The manifest itself that passes through your office would contain all that information, except car service and rebates ?—A. Yes, sir.

Q. And the manifest would enable you to ascertain from its number exactly where to turn in order to get at the car service and rebates ?—A. Yes, sir.

Q. So that it is a mere mechanical operation to get the rate?—A. I would like to explain to you, in order to show that it is more than a mechanical operation. To illustrate: You asked Mr. Hill some questions in relation to the subpoena. Immediately on getting your summons I went to the office on Monday morning. I got it Saturday night at my house. I telegraphed the general manager, and before I got his reply Mr. Hill went to see the president. I received a message to go to work actively and get up this statement for the committee, and before noon on Monday I had fifty men at work. Now, this fact has developed itself. We worked those men four days and partly paralyzed our business at the Cleveland station. It is an incomplete statement which I will show you; but I figured it would take from eight hundred to one thousand sheets of statements like this [showing Mr. Gowen a paper].

Q. To get up the items for two or three years?—A. Yes, sir; and we confined ourselves to car service alone.

Q. What is the annual passage of oil over your roads?—A. I have not the figures. This will develop it, and I think it will be about 34,000 car-loads in two years. That would be from 12,000 to 15,000 car-loads a year.

Q. Do you say that on a business of 12,000 or 15,000 car-loads a year it will take that number of sheets to get a statement of it?—A. Yes, sir. It will be from 40 to 50 on a sheet, and four times 8 would be 32; that would be 32,000 items for two years; 16,000 for one year.

Q. That is covering each car-load.—A. You ask me for all shipments.

Q. Your shipments are in more than one car-load. You may have a manifest of 50 car-loads?—A. No sir; we have a way-bill for each individual car.

Q. If the Standard Oil Company ships one train-load of oil from Cleveland to points south or west over your line, is there a separate manifest made for each car?—A. Yes, sir.

Q. Do the Western railroads adopt that system?—A. That is the way we do. I can not answer for anybody else.

Q. Do you mean to say you would have 100 manifests for 100 cars if they were shipped for one man to another person?—A. Yes, sir. Suppose we take one load out of Cleveland and the car broke down on the road, we would have our settlement thrown out, and we might have \$15,000 or \$20,000 due us and we would have to hold it back.

Q. You say your practice now is to have a separate manifest for each car, even if 100 cars are shipped from one consignor or a consignee?—Yes, sir; always.

Q. I do not want to put you to any such trouble as that.—A. I thought perhaps you did not.

Q. I never heard of that system being enforced where the number of cars, no matter what it was, that passed in one train went from one consignor to the same consignee at another point. Can you, then, make this statement up which will show to us the gross rates on oil and the net rates, deducting draw backs on oil shipped by companies connected with the Standard Oil Company and by people who are not connected with it? Can you just make the distinction between those two?—A. I do not know that I grasp the idea. Do you mean to cover the period asked for in the summons; a complete statement?

Q. No, sir; not a complete statement. Just wherever there was a difference of rates?—A. Just one shipment?

Q. Yes. We do not care, or I do not care, about any duplication of shipments, but in every case where the rate was gross or net to the Standard Oil Company, or any of its affiliated interests, which would include the Chess-Carley Company or the Waters-Pierce or anybody you shipped for, wherever that rate is different from the rate another person got I would like to see it. Can you make that up?—A. Yes, sir.

Q. How long will it take to do that?—A. I can not tell positively. Perhaps we will have to cover all this period. We will have to go through every voucher. You see I can only work a limited number of men on that—perhaps two or three weeks.

Q. Your rates are published, I suppose? You have a published sheet of rates to everybody?—A. The general freight agent has shown me that tariff.

Q. I notice there is a difference in these published rates of yours, which is a special rate shown in the third item. The voucher would be made for a rebate or allowance, would it not?—A. Usually called an overcharge.

Q. When overcharges are paid by your treasurer, to what account are they charged in the general cash-book of the company?—A. To audited vouchers, and the distribution is made in my office.

Q. It is not made in the treasurer's office?—A. No, sir.

Q. He charges everything to the auditor whether freight, or other distribution?—A. Yes, sir.

Q. In your system of accounts in your own office, to what account do you place vouchers for overcharges?—A. We charge them right back to our general freight earnings account.

Q. You have no separate account?—A. We charge that to freight earnings.

Q. You have no separate ledger account?—A. No, sir.

Q. Then, in order to ascertain these items, you would have to turn to your ledger and see all the charges against freight earnings and find out what they were for?—A. Yes, sir; we would refer back to the register and get what they are for.

Q. Make up a statement showing what the gross and net rates were and all rebates allowed on the one side to people connected with the Standard Oil Company, and on the other side to those who were not connected with the Standard Oil Company.—A. I wish you would designate which are each.

Q. Don't you know that?—A. No, sir; I might make a mistake.

Q. Do you do business for the Waters-Pierce Company?—A. Yes, sir.

Q. That is one. You know that, don't you?—A. No, sir; I do not.

Q. Do you do business for Chess, Carley & Co.?—A. Yes, sir.

Q. That is another. If you will permit me I will give you a printed list of the companies that are connected with the Standard Oil Company; then you need not divide anything among those that are not in that printed list.

The CHAIRMAN. Covering what period?

Mr. GOWEN. 1886, 1887, and 1888. I will see that the witness gets that.

Q. Have you the correspondence that was asked to be produced by your subpoena, between the freight agents of the different roads upon the subject of oil rates?—A. It would be in the freight department,

*Cleveland, Columbus, Cincinnati and Indianapolis Railway—Comparative statement of oil rates from Cleveland, Ohio, prior and subsequent to passage of interstate commerce law.*

## TESTIMONY OF A. G. BLAIR.

A. G. BLAIR, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Toledo.

Q. What is your business?—A. I am in charge of the freight business on the Wheeling and Lake Erie Railroad.

Q. Were you formerly general freight agent of the Cleveland and Marietta road?—A. Yes, sir.

Q. In what years?—A. From the fall of 1882 until February, 1885.

Q. That road went into the hands of a receiver?—A. Yes, sir.

Q. Who was appointed receiver?—A. Phineas Pease was the first receiver.

Q. When you had charge of that road or were acting as its general freight agent or traffic manager did you make any arrangement with Daniel O'Day about the shipment of oil over that road for his company; and, if any, will you please say what it was and what the rates were?—A. The negotiations for an arrangement were commenced, but before any conclusion was reached the road went into the hands of a receiver and it was immediately turned over to that receiver, and I know nothing about the contract.

Q. What did the negotiations lead to? Upon what basis were they being conducted? And state what Mr. O'Day desired.—A. He desired that the Cleveland and Marietta Railroad should carry the oil taken from a field called the Macksburg field.

Q. At what rate?—A. I think the rate was 30 cents per barrel, being handled entirely in tank. This was crude oil.

Q. And at what rate was it to be carried by the Standard?—A. There was but the one rate made, supposing the charges were identical.

Q. Did you not make any agreement or negotiation, or enter into negotiations upon the subject of an agreement with him under which you were to give him a rebate and allowance on the oil that was to be carried for other people, as well as that carried for himself?—A. If my recollection serves me right, we did not reach figures.

Q. You know that the arrangement was carried out with Mr. O'Day. He did make an arrangement with Pease?—A. I simply heard so.

Q. Will you look at that letter for the purpose of refreshing your recollection upon the subject? That goes back to a time when you were managing the railroad [handing the witness a letter].—A. This is four years old.

Q. Yes. State, if you can from recollection, at the time that letter was written, which was 1885, what were the rates over your line on crude oil or refined.—A. The rates to Marietta—the products of the Macksburg field went to Marietta and the rates were 30 cents a barrel at that time.

Q. From Macksburg to Marietta?—A. Yes, sir; that was the rate that was made at the time this pipe-line company was sought to be established at that point.

Q. Did you not have a rate to Cincinnati?—A. Yes, sir.

Q. What was it?—A. I can only say from recollection that it was 40 cents.

Q. Wasn't it 45?—A. Possibly.

Q. Wasn't it then 20 cents to the Standard Oil Company?—A. I know I never made any such arrangement.

Q. Did they not have a better rate over your road than other people had, either by rebate?—A. No, sir.

Q. Never?—A. No, sir; not by my instructions. I was entirely ignorant of it if it had been made.

Q. Look at that letter and see whether it is your signature?—A. It is not.

Q. It is not?—A. No, sir. The letter was dictated by me, but it is not my signature.

Q. Is it your letter?—A. Yes, sir; this letter refers to the shipments from Macksburgh to Marietta. Do you mean from Macksburgh to Marietta? You said Cleveland.

Q. First I said Macksburgh to Marietta, then I asked you about Cleveland?—A. I understood you to ask if one-half of the rate made to Cleveland to the Standard Oil Company was made to other people.

Q. Before examining you about Cleveland I will ask you about the rate to Marietta?—A. I do not understand your question.

Q. What was the rate to Marietta?—A. I have nothing to keep back concerning this Marietta matter. That was a contract made not with O'Day, but with parties named Brundred & Dale, a previous contract to the one we are talking about.

Q. What was that contract?—A. The contract is now in the possession of the Cleveland and Marietta road. Of course all the records were turned over to the receiver. I have not the papers and could not get them.

Q. Look at that letter.—A. Of that 30 cents a barrel rate for the work of collecting and loading the oil into tanks, the shipper was to get 15 cents and the railroad company the other 15 cents.

By the CHAIRMAN:

Q. Who is the shipper? Is that the Standard Oil Company?—A. No, sir; Brundred & Dale. There are two distinct arrangements in this matter that you must not mix up. If you do you will mix me up.

By Mr. GOWEN:

Brundred & Dale at that time controlled the pipe line leading from the Macksburgh oil field?—A. Yes sir; I want to state that the first arrangement I had all to do with, and the second I had nothing to do with—the arrangement with O'Day.

Q. The arrangement with Brundred was upon a through rate being made. That rate was divided between you in fixed proportions?—A. Yes, sir.

Q. And they got the benefit of that, and other people did not?—A. That was the situation.

Q. And this letter of yours to Mr. Terry correctly states the condition of things as it then existed?—A. Yes, sir; there is no denying the fact.

Q. I will offer this letter in evidence.

The WITNESS. I have an explanation to offer if you will allow me.

The CHAIRMAN. You can make any explanation you wish.

The WITNESS. These parties came to us—that is, Brundred & Dale—with a statement that they would have to establish a pipe line from the Macksburgh field to Marietta, in case they could not collect the oil at Macksburgh and load it on the cars of the Cleveland and Marietta Railroad. They gave us the choice. We accepted for the railroad what we thought to be the best for the owners of the property, which was in fact this contract specified in that letter.

Q. The result of which was that Mr. Rice who shipped oil over your road was paying more than other people?—A. I do not know whether he paid any more or not. Brundred & Dale said they would fix the matter with Mr. Rice. I understood afterwards they had. At least, Mr. Rice came into my office and I made some reductions to him. He said it was perfectly satisfactory.

Q. Brundred & Dale owned the pipe line which subsequently came under the control of O'Day and the Standard Oil Company?—A. I think one sold out to the other.

Q. But it was the identical business; the identical pipe line?—A. I believe so.

Mr. GOWEN. I will offer this letter in evidence. It is as follows:

[Dictated.]

WHEELING AND LAKE ERIE AND CLEVELAND AND MARIETTA RAILROADS,  
Toledo, Ohio, November 14, 1884.

DEAR SIR: I hand you a letter written me by Mr. Rice on the 13th of November in reply to one I wrote to him upon the subject of oil shipments from Macksburgh to Marietta. He gets oil to Pittsburgh, a distance of 80 miles, for 15 cents, but does not say anything about the manner of getting it from Pittsburgh to Marietta. I presume that while the river is accessible they can get cheap crude oil, but I think a responsible all-rail route is entitled to some consideration alongside of other transportation that can be used but a few days in the year. We have rates in effect from Foxburgh, Pa., to Marietta of 45 cents per barrel. Please note what he says about being unable to buy oil at Macksburgh to compete with Parker's Landing oil, also note what he says about the probable largely increased traffic, providing the rates are lower.

I do not like to be bulldozed into any arrangement with him, and I must ask you and Mr. Dale to get together in this matter and conclude what is best to be done. You can say to Mr. Dale that if Rice knew that we were only getting 15 cents for hauling this oil, instead of 30 cents, he would think we were doing our work cheap enough. As it is, I had hard work to convince him before that the 30-cent rate was low enough, while the fact was we were getting but 15 cents. As the matter stands to-day the Ohio Transit Company are getting 10 cents per barrel on Mr. Rice's oil and this company getting 15 cents. If it is desirable to reduce it another 5 cents and this 5 cents will be equally divided between the Ohio Transit Company and the railroad company, I have no objection to the arrangement being made. This would be equal to the railroad company receiving  $12\frac{1}{2}$  cents net per barrel and the Ohio Transit Company  $7\frac{1}{2}$  cents on Mr. Rice's oil. If you think he would be satisfied with the 20-cent rate without any further drawback, mileage, or other payments, and it can be divided as above stated, it may be well enough to make the arrangement. Is it true that he bases his demand for a reduction in rates from Macksburgh to Marietta upon the fact that he can get less rate, all other things being equal, than we are charging him? I presume he refers to the pipe-line. Please confer with Mr. Dale in this matter thoroughly and give me your reply, and if necessary I will have an interview with him. Please return Mr. Rice's letter with your reply.

Yours truly,

A. G. BLAIR,  
G. F. A.

J. E. TERRY, Esq.,  
General Agent Cleveland and Marietta Railroad, Marietta, Ohio.

Q. The company there known as the Ohio Transit Company was the line represented by Brundred & Dale?—A. Yes, sir; I was confused on the start. There are two companies.

### TESTIMONY OF J. L. DICKEY.

J. L. DICKEY, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Atlanta, Ga.

Q. What is your position?—A. Assistant general freight agent of the Western and Atlantic Railroad.

Q. Where does that line run from and to?—A. From Chattanooga, Tenn., to Atlanta, Ga.

Q. What is its length?—A. One hundred and thirty-eight miles.

Q. What line does it connect with on the north in order to form a through route south?—A. With the Nashville, Chattanooga and Saint Louis, and the Queen and Crescent.

Q. Now, do you remember in the year 1886 rates being raised on oil upon that line from \$35 to \$100 dollars per car?—A. Between Chattanooga and Atlanta?

Q. I think it was.—A. Yes, sir.

Q. Why was such a difference as that made?—A. I can tell you that the rate of \$35 was a special which we had given to Mr. Rice. In other words, the rate of \$100 per car-load, or 25 cents per 100 pounds, was regular tariff rates from Chattanooga to Atlanta. I mean the agreed rates between our line and the East Tennessee, Virginia and Georgia Railroad, which parallels us between Chattanooga and Atlanta.

Q. You had given a rate of \$35 a car to Mr. Rice, and he had been shipping on that rate?—A. Yes, sir.

Q. For how long?—A. I can not state exactly the time, but a considerable time.

Q. At the time this rate was raised \$100 a car from \$35 a car, had you communications with other railroads or with other people upon the subject of raising the rate?—A. Yes, sir; we had some.

Q. Who were those people?—A. The East Tennessee, Virginia and Georgia authorities.

Q. Was the Standard Oil Company shipping oil over your line at that time?—A. They were shipping oil from Cincinnati to Atlanta over our line.

Q. Were you not carrying their oil at that time for \$22.50 a car?—A. We were accepting our proportions of a through rate from Cincinnati. I do not think that is exactly the amount, but somewhere in the neighborhood.

Q. You had nothing to do with making the rates, had you?—A. No, sir.

Q. You simply took the prorate of the initial line that had the right to make the rate and bill it through?—A. Yes, sir.

Q. And that you think was \$22.50 per car to the Standard Oil Company?—A. Yes, sir.

Q. Over how many miles did that go?—A. One hundred and thirty-six miles it is given to us; about 132, I believe, if given to us at the junction south of Chattanooga of the Cincinnati Southern, or the Queen and Crescent; or, if given to us by the Nashville, Chattanooga and Saint Louis, 132 miles.

Q. That rate to the Standard of \$22.50 was not raised at the time this rate to Mr. Rice was raised?—A. No, sir; you understand the raise that you are talking about was simply the withdrawal of the special and the re-establishment of the agreed rates from Chattanooga to Atlanta.

Q. Over what length of railroad did this rate of \$100 per car to Mr. Rice apply?—A. One hundred and thirty-eight miles on our line, which was a short line.

Q. Over what length of mileage does the rate of \$22.50 a car to the Standard Oil Company apply?—A. Over the same distance, if given to us at Chattanooga.

Q. It is practically a discrimination of over 300 per cent.?—A. No, sir; I do not think it is.

Q. Why not?—A. In one case we were expecting a revision of the through rate, and in the other we were taking a shipment which was

local to us. We were charging on that the agreed and published rate from Chattanooga to Atlanta.

Q. The result was that the Standard Oil Company was receiving a railroad service at \$22.50 a car over the same length of mileage that somebody else was paying \$100 for. Was not that the result?—A. Yes, sir.

Q. Don't you think it was pretty severe on those who paid \$100?—A. You can take this in connection with it. The oil offered by the Standard people was in tank cars, and the rates in tank cars were very much less at that point between all points than by shipment in wood barrels or other packages.

Q. Don't you know that on northern and eastern roads for a long time the railroads have been carrying oil in tanks and barrels at the same rate?—A. I am not advised as to what the testimony has been on northern and eastern lines. I know our association, which is the Southern Railroad and Steam-ship Association, have had a difference all the time.

Q. You are not aware that the trunk lines—the eastern lines—are carrying oil in barrels at the same rate that they carry oil in tanks?—A. I suppose the rates are the same now.

Q. I mean prior to the interstate-commerce decision?—A. No, sir.

Q. Don't you know that prior to the interstate-commerce decision upon that subject an association of western railroads had recommended putting oil in barrels and oil in tanks under the same classification?—A. I do not know that that was brought to my attention; it might have.

I do not remember particularly about that.

Q. What was the weight of 100 barrels in a car, practically 40,000 pounds?—A. Yes, sir; about that, I guess.

Q. And 100 barrels in a tank car would weigh about 31,500 pounds?—A. Somewhere in that neighborhood.

Q. Thirty-one thousand five hundred?—A. I suppose somewhere in that neighborhood. The net weight of a barrel of oil would be 320 or 315 pounds, I think.

Q. Do you think it would be possible for anybody shipping oil in barrels to compete in the market with a man shipping oil in tanks if the former had to pay \$100 on 40,000 pounds, and the latter \$22.50 on 31,000 pounds?—A. No, sir; I do not think so. I will explain right there that we offered to make a concession to Mr. Rice. He called on me with reference to his oil shipments to Atlanta and talked the matter over. He said that he had difficulty in getting into that market, and I assured him that we were not inclined to charge any more on his shipments than on other people's, if they were made under the same conditions. He complained that he had no tank cars. I told him that our rates from Chattanooga to Atlanta were fixed and agreed rates, and I did not very well see how we could make a low rate; that I could only do it by accepting a portion of the through rate, or what the through rate would be under the established figures in barrels from Cincinnati through, and treating it as a new shipment. I told him to help him out we would undertake to handle his business at a rate of \$35 a car-load, which was about the same that we were shipping on barrel shipments from Cincinnati through. I also told him at the time that I doubted my authority to make that arrangement with him, but we would presume upon our right to do that and would put that rate in effect for him; but I gave him no length of time. I doubted whether we would be able to sustain ourselves to keep it up. Mr. Rice understands the circumstances in regard to that rate. It was not any inclination on the

part of our company to withdraw that rate, but the circumstances were such that we could not do anything else. Those are about the facts. We simply restored the agreed published rates.

Q. When the interstate commerce act went into effect last spring you made some changes in this car-load rate under which Mr. Rice would have come, did you not; you reduced it 20 cents a hundred probably?—

A. Yes, sir; I think so.

Q. That would be 80 cents a barrel, or \$80 a car for 100 barrels?—

A. Yes, sir.

Q. But the rate on the Standard Oil Company's tank cars still remained at \$22.50?—A. You must bear in mind that the Standard Oil Company was not shipping between Chattanooga and Atlanta. On the other hand, Mr. Rice's shipments were local between Chattanooga and Atlanta, and of course they had to take the established rates between those points. If you compare the rates which were in effect all over the country on oil in barrels for a distance like ours, you will find that the rates that Mr. Rice complained we were charging him were not higher rates than those that usually obtained throughout the country.

Q. But the \$80 rate, to which his car-load rate was reduced, was over 300 per cent. higher than the \$22.50 rate which the Standard Oil Company was getting?—A. Yes, sir.

Q. And although the circumstances were not the same in respect to the initial point and one of through billing, the fact is the same that both consignments passed over an equal distance of your road?—A. Yes, sir; still in one case one was a through shipment from an initial point on the Ohio River, and the other was a local shipment between local points in our territory, not exactly in the same State, but very nearly so.

Q. Have you heard of the recent decision of the Interstate Commerce Commission?—A. Yes, sir.

Q. Have you made a change in your rates since then?—A. Yes, sir; the initial lines from the Ohio River are charging the same on oil, whether in barrel or tank. In other words, charging 100 pound rate.

Q. What is the rate they are now charging from Cincinnati to Atlanta on oil in tank cars?—A. Thirty-seven and one-half cents per hundred pounds.

Q. That would be \$37.50 per tank of 100 barrels, as compared with \$22.50, which it was before?—A. Per hundred pounds.

Q. I beg your pardon. That would be considerably over \$100 a tank?—A. Yes, sir.

Q. Have you then raised the rate on barreled oil to make it equal to that?—A. The rate has been lowered on barreled oil. It was higher per hundred pounds from Cincinnati to Atlanta prior to the change of rates. In other words, the rates are the same whether in barrels or tanks.

By Mr. BUCHANAN:

Q. I would like to know the distance between Chattanooga and Atlanta?—A. One hundred and thirty-eight miles.

Q. On oil which you ship from Chattanooga to Atlanta, your local rate was 80 cents a barrel?—A. Our local rate at the time Mr. Rice negotiated with us first was 25 cents per hundred pounds, which would amount to \$1 a barrel.

Q. And your proportion of the through rate on oil reaching you from other initial points—A. In wood, at that time, was about \$35. We agreed to treat the shipments at that time, although we did not feel that we had exactly the right to do so inasmuch as he billed from a

point to Chattanooga and then shipped local from there—we agreed to bill his shipments at about the proportion we would if he had billed through.

Q. The result of it was that oil carried from Chattanooga to Atlanta was charged a higher rate from the initial point at Chattanooga, than oil carried from a point on the Ohio River to Chattanooga and then billed through?—A. Yes, sir.

Q. On what principle were those rates adjusted in that way?—A. On the same principle throughout the country.

Q. This was absolutely higher?—A. Yes, sir; because it was between what you might term local points, while the other was between through points.

Q. What conditions existed which justified the rule that you say obtains in charging more for local rates than they do through rates?—A. No transportation company could very well afford to put all of its local business on the basis of its proportion of through rate.

Q. I am not speaking of proportions of through rates; I am speaking of an absolute charge for an absolute distance. Did it cost you any more to haul that oil from Chattanooga to Atlanta, when its initial point was Chattanooga, than to haul it from a point on the Ohio River when its initial point was north of Chattanooga?—A. No, sir.

Q. The rate which Mr. Rice desired to obtain from you in the first instance was a rate that was not the open rate?—A. It was not the established open rate.

Q. He desired a lower rate than your open rate?—A. Yes, sir.

Q. What grounds did he give for making that application?—A. He gave the grounds that, under the tariff as applied to oil shipments in wood, he could not reach that market as against the rate given on shipments in tank cars.

Q. Did he apply for a rate on shipments in wood cheaper than you were giving to other shippers in wood?—A. No, sir.

### TESTIMONY OF A. H. LOGAN.

A. H. LOGAN, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Philadelphia.

Q. What has been your business?—A. The petroleum business.

Q. State whether or not you were a partner of Mr. Emery in the refining business in Philadelphia.—A. Yes, sir.

Q. That was the refining business which was recently turned over to the Standard Oil Company?—A. Yes, sir.

Q. What was the name of your firm?—A. Logan, Emery & Weaver.

Q. Had you charge of the business in Philadelphia at the refinery?—A. Yes, sir.

Q. State whether you are a practical refiner of oil?—A. Yes, sir.

Q. How long have you been engaged in that business?—A. Directly and indirectly for fifteen years.

Q. Confining yourself to the time at which, within the last two or three years, your refinery received oil by railroad over the Pennsylvania Railroad, which oil came to it at Milton by the pipe line, state what the character of that oil was with reference to its quality?—A. When we first began receiving oil at Milton the quality was about as

good as we had been getting from the oil regions directly ; but for the past year and a half the quality has been very bad.

Q. What percentage of refined oil, illuminating oil, did you get out of fairly good crude oil ?—A. To be exact, we should get 81 per cent. of Bradford oil.

Q. What percentage of refined oil did you get out of this bad oil ?—A. Ten per cent. for part of the time.

Q. Over what length of period did the receipt of this bad oil continue ?—A. Steadily for about a year.

Q. Now, the first product of illuminating oil that you get in the process of refining is what you call winter white ?—A. Water white.

Q. What proportion of that quality of oil which is designated as water-white oil did you usually get out of good crude petroleum ?—A. When we are running the oil, that is, a good quality direct from the wells, we get about 20 per cent. of water-white oil—over 20 per cent.

Q. What per cent. of water-white oil did you get out of this ?—A. Nine per cent.

Q. That is the most valuable product of illuminating oil, is it not ?—A. Yes, sir.

Q. State whether or not the quality of this bad oil was such as to require more fuel for its manipulation than would have been required for your oils ?—A. I can answer that very pointedly. Any one can understand that it was harder to run, took more time, and of course took more fuel, and besides it was much harder on the stills.

Q. What, in your judgment, was the commercial value, or the difference in commercial value, per barrel of crude oil of this bad oil as compared with what it would have been if it were good, merchantable fresh oil ?—A. To take the extremes it would be nearly 20 per cent. ; 20 cents a barrel.

Q. Now, with reference to the total number of barrels of oil used by you over the period during which you received this bad oil, can you tell us about what proportion of the oil that you received in that period was bad and what was good ; you say, I think, it extended over about a year and a half, did you not ?—A. Yes, about that time ; 90 per cent. of it was bad oil.

Q. You think 90 per cent. of it was bad ?—A. Unmerchantable oil.

Q. Now, you have been in the oil region a great deal ?—A. Yes, sir.

Q. You are very familiar with it ?—A. Yes, sir.

Q. Have you ever lived in it ?—A. No, sir ; not immediately in the oil regions.

Q. How long have you been connected with the oil trade in any capacity whatever, or in any position ?—A. Nearly twenty years ; just twenty-one years.

Q. Now, in those storage tanks, state whether or not there is not a deposit at the bottom which is considered unmerchantable oil ?—A. Yes, sir ; it is called the sediment. There is in all tanks an accumulation of that sediment.

Q. The greater the amount of sediment contained in any oil the less valuable it is ?—A. Yes, sir.

Q. State whether or not, in drawing off a tank, they have not got an instrument they call a thief, a glass tube which they put down into the tank in order to find out at what point of the tank this deposit exists ?—A. Yes ; they do.

Q. And do not they, in drawing off good oil, have something that moves up and down, as the case may be, to draw off the good oil and not touch the deposit ?—A. Yes, sir.

Q. Now, when they come to deal with this deposit in the tank, how do they manipulate that or treat it in order to get it to the market?—  
A. I do not know how that is done. I believe they steam it up and get what oil they can in that way; and I understand that they have been cleaning out a great many tanks, and steaming this sediment and separating it in that way.

Q. State whether or not, within the period that you now speak of, the amount of petroleum stored in the Pennsylvania regions above the surface of the earth in tanks has not been decreasing?—A. Yes, sir.

Q. State whether or not the Standard Oil Company has not been cleaning out and taking away a great many of their tanks in order to erect them in the Lima field to hold the oil that is accumulating there?—  
A. Yes, sir; it is.

Q. State whether or not, when any particular character of oil or kind of oil is put into a through pipe line, that oil will not pass on and keep its relative position, so that when it comes to a place of delivery they can see exactly what kind of oil is coming when it comes out?—A. Certainly.

Q. Is there not a great difference in the oil produced in different regions in Pennsylvania?—A. Yes, sir.

Q. And do they not all pass through the main pipe to market?—A. Not all of them; they have some special oils; some oils that are used for special purposes, shipped by tanks altogether.

Q. But there are different regions of oil which are united through a system of local pipes reaching the same main pipe?—A. Yes, sir.

Q. Take the Washington oil for instance; that comes to your market through the same pipe line that brings the Bradford oil?—A. Yes, sir.

Q. Is not the Washington oil considered commercially much better oil than any other?—A. Yes, sir.

Q. What does it bring?—A. A premium of 8 cents.

Q. Higher than any others?—A. No, sir; the lower region is 8 per cent. premium compared with the Bradford.

Q. That oil, which is worth 8 cents per barrel more than the oil at the upper regions, passes to the market in the same pipe that carries the other oil?—A. Yes, sir.

Q. It takes its relative position in the tank?—A. Yes, sir.

Q. It does not displace what is ahead of it or what is coming out after it?—A. No, sir.

Q. When that reaches the delivery station at Milton or the tanks in New York, the moment it appears the men can tell it?—A. Yes, sir.

Q. The person having control of the distribution and delivery of oil, if he chooses, can direct to you or any other shipper just such character of oil as he pleases?—A. For that matter it could be kept in tanks at Milton separate and ready for delivery to the different refineries.

Q. When that oil is passed through this pipe line, which at Milton has a station for either putting it into the tanks or loading it into racks on the railroad, or which continues beyond Milton to the sea-board ports, the man who watches the flow of oil at that point, the moment he sees any particular oil coming, can either direct it to tide-water, turn it into a tank, or can, by turning another cock, load it into tank cars if he pleases?—A. Yes, sir; just as he chooses.

By Mr. BUCHANAN:

Q. It is your judgment, then, that different kinds of oil in the same pipe do not mix?—A. No, sir; not to any extent. I want to say that it is not my judgment that it is the difference that is allowed between

what is called lower country oil and fresh Bradford oil at all—the difference of 8 cents. I do not think that Washington oil, for example, is worth that much more than Bradford oil is.

By Mr. GOWEN :

Q. As a matter of fact you do not ?—A. I do not.

Q. In the market does it bring that ?—A. Yes, sir ; it brings more.

Q. Is it not readily distinguished from the Bradford oil by color alone ?—A. Yes, sir.

Q. So that it is, in a commercial point of view or in a transportation point of view, entirely practicable out of one particular pipe line, which may contain in the same two or three hundred miles of its length five or six different qualities of oil, to deliver each of the different qualities at its destination, or to direct its destination differently or otherwise ?—A. Yes, sir ; there is no trouble about that.

Q. Now, I will ask you whether, as a refiner and shipper of oil, you have ever made application to packet or other lines of shipping to carry your oil from Philadelphia on the ocean or by inland navigation to seaboard ports of the United States ?—A. No ; we never have.

Q. Have you ever met with any refusal on the part of any one to carry oil for you away from Philadelphia in the packet lines ?—A. No, sir ; we never attempted to ship oil in that way.

Q. You never attempted to supply the Atlantic coast of the United States with refined oil by ocean ?—A. No, sir.

Q. Your shipping has been to foreign markets ?—A. Yes, sir.

Q. Do you ship it direct or ship it on your own account ?—A. We sell it direct.

Q. You do not sell on commission ?—A. No, sir.

By Mr. BUCHANAN :

Q. You spoke of there being a difference in quality of the product of different fields. Is there any difference in the products of different wells in the same field ?—A. No, sir ; there is a slight difference on account of the different sands. There are second and third, and some places fourth sands. There is a little difference in the character of the oil coming from the different sands, but the difference in the appearance of it is not of much consequence.

Q. Is there any variation in the character of the product of any one well at different periods ?—A. No, sir.

By Mr. GOWEN :

Q. Mr. Emery testified here (and as he was your partner I do not ask you to go over the same ground again) that you were practically driven out of business by the discrimination against you and the receipt of bad oil ?—A. Yes, sir ; every possible obstacle was placed in our way.

Q. Now, I will ask you, in your judgment, if you had had the same facilities that your rivals connected with the Standard Oil Company have had, and received the same kind of oil with regularity, whether you would have been driven out of your business ?—A. Certainly not.

Q. Do you know any better place than that at which you were located for the purpose of a refining establishment ?—A. No, sir ; there is no better refinery doing the work.

Q. Are they doing the work at that refinery now ?—A. No, sir ; they have never done anything with it since it has been idle.

Q. That refinery was located on the Delaware River ?—A. Yes, sir.

Q. Where you could have ships come from all parts of the world ?—A. Yes, sir ; we had every possible facility for making illuminating oil.

**EDGAR HILL—Recalled.**

By Mr. GOWEN:

Q. I understand that you wanted to make some statement as to how you have conducted your business since the passage of the interstate-commerce act.—A. Yes, sir.

Mr. GOWEN. You have the right to say what you desire in that connection.

Mr. BUCHANAN. Not only that, but the committee desire to know.

The WITNESS. I would like to say that since the passage of the interstate-commerce law our rates have been the same to all persons in every respect.

By Mr. GOWEN:

Q. Under similar circumstances?—A. Yes, sir; under similar circumstances.

Q. But you did maintain after the passage of the interstate-commerce law, a different rate on oil in tank cars from the rate on oil in barrels, did you not?—A. No, sir; we claim that it is the same.

Q. Did you maintain the same rate?—A. Yes, sir.

Q. Then this recent decision of the Interstate Commerce Commission has had no effect on your rates?—A. No, sir.

Q. And since the passage of the interstate-commerce law your rate upon oil in tank cars has been the same per hundred pounds as your rate in barrels?

By the CHAIRMAN:

Q. The difference in rates which you have charged on oil in tanks and oils in barrels has been what? I think you stated it when you were on the stand before.—A. I claim it is the same per hundred pounds.

Q. What is the rate?—A. Take from Cleveland to East Saint Louis, it is 47 cents a barrel in tanks and 62 cents in barrels.

Q. And the difference, as I understood your testimony this morning, you claim to be for the weight in the barrel?—A. Yes, sir.

By Mr. GOWEN:

Q. That will not make quite the difference, will it, Mr. Hill?—A. Well, according to the way we figure it, we claim it is exactly the same.

Q. If you carry 315 pounds for 47 cents, according to the rule of three, you ought to get less than 62½ cents for 400 pounds.—A. Well, you know those rates are estimated.

Q. But 315 pounds for a barrel of crude oil is an exact rate, and 400 pounds for a barrel of oil shipped in barrels is an overestimated rate.—A. Four hundred over the estimate?

Q. You know it is the amount at which railroads generally calculate it, but the barrels do not actually weigh that.—A. We claim that they weigh more, those that we ship.

Q. Of refined oil in barrels?—A. Yes, sir; we call them 400 pounds, but there is no barrel of oil shipped that weighs less than 400. It weighs more than 400 pounds, although we call it 400.

By Mr. CROUSE:

Q. I wish to ask Mr. Hill, simply to get it clear in my mind, if it is the intention and the practice to charge just the same for oil in tanks as oil in barrels, except the weight of the barrel added?—A. That is it.

Q. That is the intention?—A. Yes, sir.

Q. And if it is not done absolutely, it is because of the variance of the weights of the barrel?—A. Yes, sir.

By Mr. SMITH:

Q. Is there a difference in the charge made between the handling of the barrel and the handling of the tank—tank cars? You understand you have to handle the barrel on the way, do you not?—A. Not always.

Q. But there is more labor about a car loaded with oil in barrels, is there not?—A. Yes, sir; if we handle it there is.

Q. Is there any charge for that over your line?—A. No, sir.

Q. The charge is only made for the difference on the barrel?—A. Yes, sir.

Q. Does the shipping of oil in barrels in cars affect the car so that you can not use it for other kinds of freight?—A. Yes, sir; very materially. We do not permit oil to be loaded in our box cars at all.

Q. What kind of cars do you use?—A. We use cattle cars.

Q. Has it any effect upon cattle?—A. No, sir.

Witness excused.

### TESTIMONY OF E. W. HOWE.

E. W. HOWE, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Memphis, Tenn.

Q. What is your position?—A. General freight agent of the Louisville, New Orleans and Texas Railroad.

Q. You were asked to bring with you a statement of the rates and rebates on oil carried over your road for the years 1886, 1887, and 1888. Have you made up such a list?—A. No, sir; I have not.

Q. Why?—A. I was only served with the subpoena Friday afternoon and left for Washington Sunday night, so that I had no time to prepare the statement.

Q. Can you tell us if there is any difference in the rate on oil in tanks and oil in barrels going south over your road?—A. No, sir; there is no difference at all at present.

Q. When was that change made?—A. At the time of the late decision of the Interstate Commerce Commission.

Q. Up to that time what were they?—A. From Louisville 75 cents per barrel and \$50 per tank car.

Q. If the car held 100 barrels that would be 55 cents a barrel?—A. Yes, sir.

Q. What is the usual capacity of a tank car?—A. I have learned a good deal more about it since this investigation than I ever knew before.

Q. Some of them will hold 120 barrels, will they not?—A. A hundred and ten any way.

Q. Since that decision of the Interstate Commerce Commission you look out for the weight pretty closely?—A. Very carefully; yes, sir.

Q. You will get your full freight?—A. Yes, sir.

Q. You do not intend in the future your company shall carry greater bulk except for greater payment?—A. No, sir.

Q. Up to the time you made the change, since the Interstate-commerce decision, and say two years prior to that, had there been any change in the rate on tank cars?—A. I do not know. I only took the

road in August, 1886. From that time up to date there had been no change that I know of.

Q. From the time you took the road up to the time of the Interstate-commerce decision had you made any changes on barrel rates?—A. I do not make the rate beyond Louisville, but there has been no change over our line from Louisville—only from Memphis to New Orleans.

Q. You prorate with the initial company?—A. Yes, sir.

Q. Can you tell us of any rebates or allowances having been given on this \$55 rate during the time you have been connected with the road?—A. No, sir; I can not. I have not had time to look over my record.

Q. But would you not remember it if it had occurred during the time you had jurisdiction?—A. Yes, sir.

Q. Do you remember any such case?—A. No, sir.

Q. Can you tell whether there were any?—A. No, sir.

Q. Will you when you get home look over your records and inform the committee if any rebates were allowed, what they were, and to whom given; that is, who was the consignor?—A. Yes, sir.

Q. You can do that?—A. Yes, sir.

Q. Only confining yourself to cases where there were rebates, assuming that if there were none the rate was a public rate?—A. Yes, sir; I will do that.

#### STATEMENT OF COAL OIL AND NAPHTHA SHIPMENTS.

OFFICE OF THE GENERAL FREIGHT AGENT,  
LOUISVILLE, NEW ORLEANS AND TEXAS RAILWAY COMPANY,  
MISSISSIPPI VALLEY ROUTE,  
Memphis, Tenn., June 14, 1888.

DEAR SIR: I hand you herewith a statement showing instances of billing covering shipments of coal oil and naphtha over this company's line from March, 1886, to May 5, 1888. The items checked in pencil, on right-hand margin of the first page, were overcharged in rebilling at Louisville and refunded to the same rate as shipments made about the same time, as shown in the same memorandum. Upon careful examination I do not find any instances in which this company has participated in rebates to the Standard Oil Company or any other concern.

Yours, truly,

E. W. How,  
General Freight Agent.

HENRY BACON, Esq.,  
Chairman Committee on Manufactures, House of Representatives,  
Washington, D. C.

Witness excused.

The CHAIRMAN. Is Mr. Lloyd here?

Mr. GOWEN. Yes, sir; and has stated he would decline to furnish the statement of rebate which when here last week he promised to furnish, unless directed by the committee. During your absence he was examined and gave the reason for that refusal. The reason I think he differs from anybody else, and why the amounts paid to him should be ascertained, is that in Mr. Cassatt's testimony given in the year 1879, fixing the amount of rebate at 49 cents and 51½ cents and 64½ cents to the Standard Oil Company, Mr. Cassatt also testified there was one other shipper who received rebates, but not to the same amount, and that was Malcolm Lloyd, of Philadelphia. I would like to know what he got at that time, so as to compare it with the amounts paid to the Standard Oil Company. Mr. Lloyd stated that he admitted the fact that he got the rebates and continued to get them, but does not think he ought to be asked to tell what they were, as he may be asked to testify in a private suit in Pennsylvania upon these points.

### MALCOLM LLOYD—Recalled.

By the CHAIRMAN:

Q. Have you been subpoenaed?—A. No, sir.

Q. In any private suit?—A. No, sir; but I feel that as long as Mr. Cassatt has testified to the fact of these rebates being paid, and as long as I have admitted having received them, that so far as the public good is concerned, and so far as any good which will come from my evidence to the committee of that fact is concerned, I do not feel that I ought to be called upon to do more. It is a purely private matter. There is nothing I care about hiding in the matter, but the Pennsylvania Railroad officials were here, and I supposed as a matter of course that information should have been gotten from them.

The CHAIRMAN. Mr. Lloyd, they were excused, I should say to you, because we supposed we had the information through you. We had your promise to furnish it and it was entirely idle to go over the question again.

Mr. BUCHANAN. The committee had the fact that you had received these rebates, that you had promised the committee you would produce the statement of them, and that you were no longer in receipt of those rebates, having gone out of business. That was the matter that was presented to the committee.

Mr. LLOYD. Yes, sir.

Mr. GOWEN. I was going to say that so far as I am concerned I understand Mr. Lloyd to have admitted that he received these rebates practically up to the time he went out of business.

Mr. LLOYD. No, sir.

Q. What did you say when you were here last week?—A. That I had received no rebates in the last three years.

Q. Of any kind?—A. No, sir.

Q. On crude or refined?—A. No, sir.

Q. Mr. Cassatt's testimony was that the Standard Oil Company received from the upper region 49 cents and from the lower region 51½ cents, included in that being the sum of 22½ that was paid to the American Transfer Company. Now, bearing in mind those two, the aggregate of 49 and 51½, I will ask you whether your rebates were less or more than that?—A. In what year?

Q. Up to the year 1880.—A. I could not answer without some calculation. Those rebates were simply based upon the equalization of oil to make shippers, as far as I could understand, even in their manufacturing and in their positions.

Q. Were those rebates less or more than 49 cents a barrel from the upper region?—A. In 1879 and 1880?

Q. Yes; up to that time.—A. They were less.

Q. And were they less than 51½ cents from the lower region?—A. I did not ship oil from the lower region.

Q. You got all yours from the Bradford region?—A. Yes, sir.

Mr. GOWEN. That is all I care about if the committee is satisfied with that.

The CHAIRMAN. We can dispose of that in a few moments in executive session.

The committee then went into executive session, and afterwards adjourned until 11 o'clock on Wednesday, May 2, 1888.

---

WASHINGTON, D. C., *Wednesday, May 2, 1888.*

The committee met at 11 a. m.

Present: The chairman.

### TESTIMONY OF A. F. BROADDUS.

A. F. BROADDUS, sworn and examined.

Mr. GOWEN. Mr. Broaddus and Mr. J. M. Culp are officers of the Louisville and Nashville Railroad, and I have just been handed by Mr. Baxter, who is their counsel, an application to the committee to relieve these gentlemen from testifying. Mr. Baxter desires to take that question up now, I understand.

Mr. BAXTER. Mr. Chairman and gentlemen of the committee, I have had prepared for the convenience of the committee the substance of what I wish to say, and as my objection goes not to any particular question, but to the examination of these witnesses at all on the matters of inquiry submitted to the committee, I have placed in the first section of my argument the resolution under which this honorable committee is acting.

In the second section will be found the schedule which accompanied the subpoena which was served upon Mr. Culp and Mr. Broaddus, which subpoena charged them to appear before the committee and testify concerning the matters of inquiry submitted by said committee, and to bring before it the books and papers mentioned in that schedule. The schedule, as you will see, on page 3, calls for the papers or documents of the company during the last ten years relative to shipments of petroleum, whether in bulk or by barrel, in tank cars and in barrels, and also various other matters that I will not detain the committee by enumerating. Since the subpoenas were served the counsel of the committee has been kind enough to reduce that period of ten years to five, and has notified me that the examination of the witnesses, as you will find stated in section three of my argument, on page 4, "will be directed to railway discrimination in oil rates, enabling monopolies to control the oil traffic; and that said witnesses will be asked to testify as to oil rates and drawbacks, and produce books and papers relating to the same; also

as to rates and drawbacks on freight carried as back-loading in tank cars."

These two gentlemen are officers of the Louisville and Nashville Railroad Company. Mr. Culp is the general freight agent, and Mr. Broadus division freight agent of that company, and are here in obedience to the subpoena, and state here their objections to be required to give the testimony called for in section 3. It was understood that that is all the counsel of the committee desires to interrogate them in regard to.

Mr. Baxter then read his argument, which is as follows:

*House of Representatives, Fiftieth Congress. Before the Committee on Manufactures. In the matter of the application of J. M. Culp and A. F. Broadus to be excused from testifying.*

#### ARGUMENT.

##### I.

On January 25, 1888, the House of Representatives passed the following resolution:

[Fiftieth Congress, first session.]

CONGRESS OF THE UNITED STATES,  
IN THE HOUSE OF REPRESENTATIVES,  
January 25, 1888.

Mr. Bacon, from the Committee on Manufactures, submitted the following, which was agreed to:

Whereas it is alleged that certain individuals and corporations in the United States engaged in manufacturing, producing, mining, or dealing in some of the necessities of life and other productions have combined for the purpose of controlling or curtailing the production or supply of the same, and thereby increasing their price to the people of the country, which combinations are known as associations, trusts, pools, and like names; and

Whereas such combinations not only injuriously affect commerce between the States, but impair the revenues of the United States as derived from its duties on imports: Therefore,

*Resolved*, That the Committee on Manufactures be, and the same is hereby, directed to inquire into the names and number and extent of such alleged combinations, under whatever name known, their methods of combination or doing business, their effect upon the prices of any of the necessities of life and of all productions to the people of the country, upon its internal or foreign commerce, and its revenues from impost duties, together with any and all other matters relating to the same which may call for or suggest legislation by Congress, and report the same to the House, with such recommendations as the said committee may agree upon. And for these purposes the Committee on Manufactures is authorized to sit during the sessions of the House, to employ a stenographer, to administer oaths, examine witnesses, compel the attendance of persons, and the production of papers. And the expense of such investigation shall be paid out of the contingent fund of the House.

Attest:

JNO. B. CLARK, *Clerk*.

##### II.

J. M. Culp, the general freight agent, and A. F. Broadus, a division freight agent of the Louisville and Nashville Railroad Company, have been summoned to appear before said committee "to testify touching matters of inquiry committed to said committee," and to bring with them the books, documents, and papers mentioned in a certain schedule, a copy of which is as follows:

"(1) The said J. M. Culp is to bring with him all rebate and drawback books, and all other books, accounts, and statements of the Louisville and Nashville Railroad Company, and of his department of said company, showing—

"*First*. Amounts of, or entries or accounts of, all rebates, allowances, drawbacks, deductions, or car service paid, allowed or credited to, or claimed by, any and all shippers over the railroad lines of said company, or any of them, or any part or branch thereof, during the last ten years up to the date hereof, for or on account of any shipments of petroleum, crude or refined, or the products of petroleum, whether in bulk or by barrel, or other shipments, or for or on account of any shipments of any other oil, or turpentine, or material or product whatever, carried in tank cars over said lines or any part thereof,

**"Second.** All shipments of coal-oil, crude or refined, or of other products of petroleum over said lines, or any of them, during the years 1886, 1887, and 1888, the names of the shippers, the extent and amount of shipment, the kind of cargo, and the weight or bulk thereof, the rate of freight charged and received, the length of haul, with point of origin and destination on said lines, the amount of deductions, allowances, or rebates paid, allowed, credited, or claimed on each shipment, and the amount of car-service allowed, paid, credited, or claimed on each.

**"Third.** The extent to which any car which carried crude or refined petroleum, or the products of petroleum, over said lines or any part thereof, was loaded as return freight with any material whatever, the character of such return freight, the name of its consignor and consignee, the weight and bulk of cargo, the rate charged, and the rate paid for freight thereon, and the allowance, drawback, rebate, and car-service paid, allowed, credited, or claimed on each such shipment and car; and what car-service, if any, in addition to above, was allowed on each of any of the above cars passing empty over said lines, whether on return trip or in being transferred for loading from one portion of said lines to another.

**"(2)** Also, to bring with him all contracts in writing or print, or memorandum of any kind of any verbal contracts, and all letters received by him or his department or by said company, and copies of all letters sent by him or his department or said company pertaining, relating, or referring to shipments, rates, charges, allowances, rebates, drawbacks, deductions, or car-service upon, or by reason of, or on account of, shipments of crude or refined petroleum, or the products of petroleum, or of any back-loading transported over said lines, or any part thereof, in cars which had carried crude or refined petroleum, or any products of petroleum, for the last ten years up to the present date."

### III.

Since the subpoenas were served, the counsel for the committee has reduced the period of ten years, mentioned in the schedule, to five years, and has said that the examination of said witnesses "will be directed to railway discrimination in oil rates, enabling monopolies to control the oil traffic;" and that said "witnesses will be asked to testify as to oil rates and drawbacks, and produce papers and books relating to the same; also as to rates and drawbacks on freight carried as back-loading in tank cars."

### IV.

In order that the committee may fully appreciate the motives which influence said witnesses in objecting to testify in regard to the matters above referred to, it is proper to inform the committee that George Rice, a citizen of Marietta, Ohio, on the 19th day of July, 1887, filed complaints before the Interstate Commerce Commission against said Louisville and Nashville Railroad Company and ten other railroad companies, charging said companies with having discriminated against him and in favor of the Standard Oil Company of Kentucky in the shipment of petroleum, and especially in charging lower rates on oil shipped in tank cars than on oil shipped in barrels.

The hearing of testimony before the Interstate Commerce Commission occupied the time from November 21 to November 28, 1887, and the transcript of the testimony made a volume of 529 printed pages. The argument of counsel consumed several days in January, 1888, and the present counsel for this committee appeared on that occasion as counsel for said Rice and made an argument on his behalf.

The Interstate Commerce Commission decided that the rates on oil in barrels should be the same as on oil in tanks, and the Louisville and Nashville Railroad Company, while respectfully differing from said Commission, adjusted its rates on oil so as to conform to said decision; and they have continued in conformity therewith ever since.

The said Rice also filed a bill against said company in the United States circuit court at Louisville, Ky., charging certain discriminations against him in favor of said Standard Oil Company, which discriminations appeared to have happened before the act of Congress "to regulate commerce" was passed. The bill was dismissed upon demurrer, upon the ground that there was no law in force at the time the alleged discriminations were made which rendered them illegal.

The said Rice is in daily attendance upon this committee, and his former counsel, in conducting the examination of witnesses, has made use of certain correspondence which the said Rice has had with divers persons.

While the witnesses whom I represent recognize the perfect right of Mr. Rice and his former counsel to appear before this committee, they are unwilling to submit to a re-examination of the same matters that were settled by the decisions of the Interstate Commerce Commission and of the United States circuit court above referred to.

If Mr. Rice is not satisfied with those decisions he has his remedy by appeal or other appropriate revisory judicial proceeding; but as this committee has no judicial

*powers, Mr. Rice has no right to ask this committee to grant him a rehearing or new trial of the cases which have been disposed of in the proper judicial tribunals.*

And it is respectfully submitted that it is not treating either of those tribunals with proper respect to allow Mr. Rice to obtain by indirection, before this committee, a rehearing or review of their decrees.

J. M. Culp, one of the witnesses now sought to be examined, was examined by Mr. Rice before the Interstate Commission, and his testimony, covering seventy-two printed pages, is accessible to this committee.

It is respectfully, but earnestly, insisted that a citizen ought not to be harassed and annoyed by being subjected to repeated examinations upon the same matters, requiring his absence from important official duties.

## V.

If the decisions of the Interstate Commerce Commission and of the United States circuit court can not be reviewed or reversed by this committee the testimony called for from these witnesses will be wholly irrelevant and utterly worthless for any judicial purpose, except that it may enable Mr. Rice to discover some fact which he failed to discover on the hearing before the Interstate Commission, and upon which newly-discovered testimony he may institute some new proceeding in some tribunal that he supposes has jurisdiction of the subject-matter.

But it is beneath the dignity of this committee to allow itself to be used by private litigants as a Spanish inquisition, to extort confessions from witnesses to subserve the purposes of future litigation between individuals; and it is not believed that this committee will allow its process or its powers to be abused for any such purpose.

## VI.

Up to this point I have addressed myself to the discretionary action of the committee, and have sought to show that, even if the committee had the power, it ought not to exercise it, to compel the witnesses to answer, considering the peculiar and sinister circumstances under which they are interrogated.

But I now come to the *jurisdictional* questions in the case.

They will be found to involve two important constitutional points, each worthy of the gravest consideration:

*First.* They involve, in the language of Mr. Justice Field, "the right of the citizen to protection in his private affairs against the unlimited scrutiny of investigation by a Congressional committee."

*Second.* They also involve, in the language of the same justice, the power of Congress to compel witnesses "to furnish information upon any subject which, in its judgment, it may be important to possess."

While it is expected that this committee will, as it ought to, uphold the privileges and prerogatives of Congress, as they may be found to exist, yet I feel assured that the committee will be equally jealous of the constitutional rights of the citizen, especially as the sanctity of his private affairs is directly involved, and his personal liberty is indirectly involved.

Fortunately for this committee, all of the questions involved here have been decided by the Supreme Court of the United States in *Kilbourn vs. Thompson* (103 U. S. Rep., p. 168), and *Boyd vs. United States* (116 U. S. Rep., p. 616).

Those two cases were reviewed, and their principles applied, by Justice Field and Judges Sawyer and Sabin "in the matter of the application of the Pacific Railway Commission," reported in 32 Fed. Rep., and also in pamphlet form.

This committee is relieved of all responsibility, except that of applying the principles decided in those cases to the facts of this case.

## VII.

In the *Kilbourn* case it appeared that the firm of Jay Cooke & Co. were debtors of the United States, and it was alleged that they were interested in the "real-estate pool" in the city of Washington, and that the trustee of their estate and effects had made a settlement of their interests, with the associates of the firm, to the disadvantage and loss of numerous creditors, including the Government of the United States. The House of Representatives, by a resolution reciting these facts, authorized the Speaker to appoint a committee to inquire into the matter and history of said "real-estate pool," and the character of the settlement, with the amount of the property involved, in which Jay Cooke & Co. were interested, and the amount paid, or to be paid, in said settlement, with power to send for persons and papers.

Kilbourn appeared before the committee and was asked to state the names of "the five members of the real-estate pool and where each resided." He declined to answer, and was imprisoned by the House for contempt.

The Supreme Court decided that "there *was no power* in Congress, or in either house," on the allegation that an insolvent debtor of the United States was interested in a private partnership, to investigate the affairs of that partnership, and consequently *no authority* to compel a witness to testify on the subject.

In the matter of the application of the Pacific Railway Commission, it appeared that Congress appointed a commission to investigate "the books, accounts, and methods of railroads which have *received aid from the United States*," and to inquire and report whether "said companies, or either of them, or their officers or agents, have paid any money or other valuable consideration or done any other act or thing, for the purpose of influencing legislation."

Mr. Stanford, president of one of the companies, was asked by the Commission "whether any portion of the moneys, covered by certain vouchers, was paid to certain parties for the purpose of influencing legislation." He refused to answer; and it was held by Justice Field and Judges Sawyer and Sabin, that he could not be compelled to answer.

The decision was not placed upon the ground that the answer of the witness might tend to criminate him, nor alone upon the ground that the courts of the United States could not be required to act as adjuncts to Congressional committees; but the court took the broad position that the United States had no interest in the expenditures of the Central Pacific Railroad Company under vouchers which have not been charged against the Government in the accounts between them; and that the Commission had "*no power* to investigate such expenditures against the will of the company and its officers."

The case before this committee is a much stronger case for us than either of the cases cited, because none of the "associations, trusts, or pools" which this committee is authorized to investigate are indebted to the United States, *nor has the United States any claims or demands against the Louisville and Nashville Railroad Company*, nor against any of the other railroad companies who may be supposed to have discriminated in oil rates to enable said monopolies to control the oil traffic.

In a word, the Supreme Court held in the Kilbourn case that, though the United States were interested, as a creditor of Jay Cooke & Co., in recovering the funds which had been wrongfully put into the "real-estate pool," the interest was one which the Government must assert by *judicial*, and not by legislative, proceedings, and that such testimony as the Government might need to assert its interest must be procured through the *judicial*, and not through the legislative, department.

### VIII.

The very act of *compelling a witness to testify* is in its essence a *judicial act*, and no one who is not vested with *judicial powers* can *compel* a witness to testify in any case.

Each House of Congress is vested by the Constitution with *judicial powers* in *certain cases*; and in *those cases*, which are enumerated in Kilbourn v. Thompson, either House may exercise the *judicial power* to compel witnesses to testify.

Each House is vested with the *judicial power* to determine the qualification of its own members, and therefore in all contested-election cases it may exercise the *judicial power* to compel witnesses to testify.

The same is true of the House of Representatives when formulating articles of impeachment, and of the Senate when it is sitting as a court of impeachment.

But the Constitution confers no *judicial power* upon either House to *determine questions such as are being investigated by this committee*.

The only power which either House possesses in regard to *such questions* is the *legislative power* to *investigate and report* upon such evidence as witnesses may voluntarily give, or as the committee may gather from public records or other open sources of information.

In the language of Justice Field in the matter of the Pacific Railway Commission—

"There is no doubt that Congress may authorize a commission to obtain information upon any subject which, in its judgment, it may be important to possess. It may inquire into the extent of the productions of the country of every kind, natural and artificial, and seek information as to the habits, business, and even amusements of the people. But in its inquiries it is controlled by the same guards against the invasion of private rights which limit the investigation of private parties into similar matters. In the pursuit of knowledge it *can not compel* the production of the private books and papers of the citizen for its inspection, except in the progress of *judicial proceedings*, or in suits instituted for that purpose, and in both cases only upon *verments that its rights are in some way dependent for enforcement upon the evidence those books and papers contain.*"

This committee has the conceded power to *investigate* the "associations, trusts, and pools" referred to in the resolution of the House; and it may *investigate* all railroad companies who may have discriminated in favor of said monopolies. It may subpoena witnesses, call for books and papers, and receive all testimony that may be *voluntarily* given by the witnesses.

But when it attempts to *compel* a witness to testify against his will, it assumes a *judicial* power, which under the Constitution it cannot exercise.

## IX.

In the Kilbourn case, the very point of the decision was that the investigation into "the matter and history of said real estate pool" was the assertion of a *judicial* power; that it related to a matter "wherein relief or redress could be had only by a *judicial* proceeding," and therefore "that the power attempted to be exercised was one confided by the Constitution to the *judicial*, and not to the legislative, department of the Government."

And so, in this case, I submit that if the Louisville and Nashville Railroad Company has discriminated against George Rice, or any one else, in favor of the associations, trusts, or pools referred to in the resolution, relief or redress can be had only by *judicial* proceedings before the courts, or the Interstate Commerce Commission, and therefore that this committee has no power to *compel* Messrs. Culp and Broadbush to testify in regard to it.

ED. BAXTER,  
*Of Counsel for J. M. Culp and A. F. Broadbush.*

After the delivery of his argument the following proceedings took place:

Mr. BAXTER (after having read the following paragraph):

The Interstate Commerce Commission decided that the rates on oil in barrels should be the same as on oil in tanks; and the Louisville and Nashville Railroad Company, while respectfully differing from said Commission, adjusted its rates on oil so as to conform to said decision, and they have continued in conformity therewith ever since.

The committee will see from that that Mr. Rice has, by his application before the Interstate Commerce Commission, covered all of the ground since the interstate commerce law was passed, and by his bill filed before the United States circuit court at Louisville he undertook to cover all of the ground before the interstate commerce law was passed. So that the two proceedings which Rice has had in the courts of the country against the Louisville and Nashville Railroad may be said to cover all of the period of time which any inquiry by an investigating committee can cover. These two proceedings cover all of the time and all of the transactions that could possibly have arisen between said Rice and the railroad company.

Mr. BYNUM. I do not wish to interrupt Mr. Baxter, but it does seem to me that this is entirely irrelevant and not treating this committee with sufficient dignity. There is no evidence of those facts here at all. It is mere assumption.

Mr. BRECKINRIDGE. They certainly do relate to the time of inquiry.

Mr. BAXTER. It may show the motives of these witnesses to say that it is not from any captious spirit or from any thought of disrespect that they decline to appear here as witnesses. One reason that we have is that, Mr. Rice being here and taking the interest he does in the question, it looks to us as if he was trying to get some discovery through this committee in relation to the Louisville and Nashville Railroad which he could not get from the judicial tribunals, and therefore we are asking this committee to shield us and not allow that to be done. I mean no disrespect whatever to this committee, but am simply trying to exculpate these witnesses. I withdraw anything, Mr. Bynum, that you or any member of the committee can construe as meaning anything of the sort.

The CHAIRMAN. I think I understand the feeling of the committee entirely with regard to the kind of objection that you suggest, sir, to the examination of these witnesses, and I am quite confident that the examination will develop that this committee will not in the future, as it has not in the past, inquire about anything of any witness except to procure the information which in the judgment of the committee is needed, in order that we may be able to report intelligently to the House the nature of the operations and transactions which have resulted in the creation of this enormous trust combination controlling a very large portion of a very important traffic in this country. Mr. Rice's presence here is hardly the subject of comment. You are here too, and he might as well object to your being here as for you to object to his being here. He is here as other gentlemen are here; but we are not aware of any effort on his part to exercise any influence with regard to this investigation or examination, any more than we are aware of any upon your part; and I do not think there is anything in that which requires comment. So far as I am concerned, I take no exception to your making the comment, but I indicate to you that it is based upon a mistake in facts.

Mr. BAXTER. I had not the slightest idea that any member of this committee was disposed to aid Mr. Rice in anything of the kind. I was simply asking the committee not to allow him to do it.

The CHAIRMAN. That we should not have done even without the request. But you will see this with regard to it, and I think that is a distinction which I do not wish the gentleman to overlook, because it is not the way in which lawyers are accustomed to look at matters. We are not here trying anybody. Your road is not upon trial, the Standard Oil Company is not upon trial, nobody is upon trial. We are simply inquiring with regard to facts, and if the jurisdiction of the United States courts is not broad enough to reach any mischief that ought to be remedied, if the interstate commerce bill is not broad enough to correct any evil that anybody may be suffering from, if additional and new legislation is required, the duty with which this committee is charged is to suggest that to the House; and to do so, we must look into and inquire as to the facts and occurrences which have happened before this, to the end that when we go to the House with a recommendation as to additional legislation, we may have with us the information which induced us to believe that legislation necessary. And instead of being here to try any question, we are here simply to get at the facts by which the legislative branch of this Government may have in authentic form the information necessary to guide it in future legislation. Therein is the difference, as I apprehend it, between the situation here and the situation in the Kilbourn case, to which your brief makes reference.

Mr. BYNUM. That is to say, he was proceeding upon the assumption that this committee was simply the tool of private parties in seeking information from private individuals. There is no evidence of that fact, and no truth in the assumption.

Mr. BAXTER. I said nothing with the intention of reflecting in any way upon the committee, nor did I say that the committee was intending to do anything of the kind. I simply wanted to point out to the committee that in the pursuit of an investigation, which I recognize their full right to make, they might unknowingly, if I had not stated the facts of the litigation between Mr. Rice and the railway company, the committee might not know the effect which their investigation might produce upon our rights.

The CHAIRMAN. Personally, I feel that a statement of that fact, isolated and alone, is of value to the committee, because I say to you very frankly that the committee does not intend to take any step here which shall be solely for the benefit of any private individual. Upon the other hand, we can not excuse witnesses from testifying to facts which are proper for us to know because that testimony may be collaterally, and in some other place, of value to some private person. We can not either widen the investigation or restrict it with reference solely to private interests.

Mr. SMITH. Mr. Baxter states here in the eighth division of his argument:

This committee has the conceded power to investigate the associations, trusts, and pools referred to in the resolution of the House, and it may investigate all railroad companies who have discriminated in favor of said monopolies. It may subpoena witnesses, call for books and papers, and receive all testimony that may be voluntarily given by the witnesses, but when it attempts to compel a witness to testify against his will it assumes a judicial power which, under the Constitution, it can not exercise.

Now, I do not believe that this committee has tried to compel any one to testify against his will.

The CHAIRMAN. But Mr. Baxter has not yet reached that point in his argument.

Mr. CROUSE. I wish to inquire if, in view of the objection made by Mr. Bynum, Mr. Baxter still desires to pursue the course he has marked out here, and ask these witnesses to be excused from testifying, which I hope he will not do after the statement made by the chairman; but if he still intends to do that, would not the objection made by Mr. Bynum be wholly obviated if he just skips all of his brief referring to that matter and goes to that portion of it which objects to the jurisdiction of the committee in the case.

Mr. BRECKINRIDGE. I will remark in that connection that Mr. Baxter, looking out for private interests that may be involved, takes a line of argument that we ought not to review any occurrences that have been the subject of a decree. Other gentlemen, with the same end in view, held that we ought not to make an examination into occurrences that may be the subject of a decree. If Congress is to be denied inquiry both into matters adjudicated and into matters not adjudicated, there would be no inquiry at all. That would bring the committee at once to a standstill. The fact is, we are not seeking to reopen questions adjudicated by the courts. We have nothing to do with adjudications that have occurred. We are not seeking to reopen points determined or lay the basis for future adjudications. We have nothing to do with that. But we can not excuse a citizen who has been engaged in schemes of this character simply because there has been a trial. We have nothing to do with that trial. This is not a retrial. It is a general inquiry upon questions of public policy, and if it is a matter that has not been adjudicated, if it is a matter of living dispute, and the inquiry trenches upon private interests in nowise relative to public property, the committee has, I believe, uniformly, upon a showing of that character, waived all inquiry; but also if it relates to matters adjudicated but is illustrative of this general policy and objection is made to answering a question, either through suggestion of counsel or at the instigation of the witness himself, upon the ground that it unnecessarily involves private interests, the committee has uniformly waived that inquiry. The fundamental mistake Mr. Baxter is making is in supposing we are rehearing a case as a court would rehear, or reopening a decree.

of a court. We have nothing to do with that, and I think he need have no fears of any such thing if he carefully follows the course of this inquiry.

**Mr. BAXTER.** My position, with the permission of the committee, is this: That if any committee of either house of Congress, or the houses themselves, possess judicial power to make an investigation of this kind they can not only send for persons and papers, but can compel, like any other judicial tribunal, witnesses to testify. But if a committee is only exercising legislative powers, while it can send for persons and papers it can not compel witnesses to testify, and in that I rely upon the judgment of Mr. Justice Field in the matter of the Pacific Railway Commission, in which he uses this language:

There is no doubt that Congress may authorize a commission to obtain information upon any subject which, in its judgment, it may be important to possess; it may inquire into the extent of the productions of the country of every kind, natural and artificial, and seek information as to the habits, business, and even amusements of the people; but in its inquiries it is controlled by the same guards against the invasion of private rights which limit the investigation of private parties into similar matters. In the pursuit of knowledge it can not compel the production of private books and papers of the citizen for its inspection, except in the progress of judicial proceedings or in suits instituted for that purpose, and, in both cases, only upon averments that its rights are in some way dependent for enforcement upon the evidence those books and papers contain.

**The CHAIRMAN.** Will you permit me to interrupt you for a moment? I am familiar with that decision somewhat, and there is a question of construction of that language upon which I would like to have your opinion. The first sentence is:

There is no doubt that Congress may authorize a commission to obtain information upon any subject which, in its judgment, it may be important to possess it may inquire.

Does that last "it" mean Congress or the Commission?

**Mr. BAXTER.** Either Congress or the Commission.

**The CHAIRMAN.** Which does he mean?

**Mr. BAXTER.** I suppose he means Congress.

**The CHAIRMAN.** I think he means the Commission.

**Mr. BAXTER.** Well, I suppose the Commission has the same power as Congress.

**The CHAIRMAN.** I think not.

**Mr. BAXTER.** I presume if the Senate, for instance, possesses judicial power and wishes to make an investigation, it may transmit that power to a commission.

**The CHAIRMAN.** Will you please refresh my recollection as to when that Pacific Railway Commission was created exactly?

**Mr. BAXTER.** It was created under the act of March 3, 1887. Whenever the Senate acts as a court of impeachment, it possesses judicial power and consequently could send for persons and papers, and could compel witnesses to testify, and I assume, for the purposes of this question, that any commission or committee which the Senate might appoint in regard to that to get up testimony on the subject would also have such judicial power. At least I do not feel that it is necessary for my purposes to contend that this committee has not the same power as the House. My argument goes to this extent, that the House of Representatives itself has not the power to compel witnesses to testify.

**The CHAIRMAN.** You see the importance of the inquiry I make as to whether that word "it" refers to the Commission or to Congress. I do not know which the judge meant, with certainty, yet it seems to me he meant the Commission. If so, it brings us back to the other question

whether the houses of Congress, in their legislative capacity, have the power to delegate any portion of their authority to any commission. I do not think they have. I think that decision may stand without affecting or disturbing the question as to whether the houses of Congress have power to investigate matters and compel witnesses to testify.

Mr. BAXTER. If that is so, Mr. Chairman, it would seem to me that whatever power the houses would have, no committee would have the same power.

The CHAIRMAN. That is the question. The House may do by its members what it may do itself. The investigation in the Pacific Railroad case was not by any members of the House. It was not even during the existence of the House which called it into being. And just as the Forty-ninth Congress could not itself have conducted that investigation after the 4th of March, 1887, so any authority it created could exercise no legislative function after that time. This committee is the House for the purposes of this investigation, and has the powers of the House.

Mr. BAXTER. That is where all my argument is made. I assume myself as having been summoned by the House, and I deny the power of the House, as well as the power of the committee, to compel our witnesses to answer.

The CHAIRMAN. But do not let us misapprehend each other. What I inquired was whether you considered that word "it" in the opinion of Judge Field referred to the powers of the House of Representatives or to the powers of the Commission, which the House had created out of individuals who were not members of it, and which was exercising the function after the House which had ordered the investigation had itself ceased to exist? This is important in determining the weight to be given to that authority, as you will see.

Mr. BAXTER. I have not read the opinion with reference to the precise point now suggested. The impression on my mind made by that opinion was that neither house of Congress, nor both combined, can compel a witness to testify except in a judicial proceeding, or where it is exercising judicial powers. Leaving out the cases of impeachment by the Senate, and the cases where the House of Representatives is preparing articles of impeachment, and the cases where either house is judging the qualification of its own members—those cases in which the Constitution gives those houses judicial power—neither of those houses possesses judicial power, either separately or combined; nor can they, by any act of legislation, delegate either to a committee or commission the exercise of this general power under the Constitution of the United States; that the Constitution expressly provides that the legislative department, the whole department, Senate and House, shall not exercise any judicial power except in those instances mentioned by Mr. Justice Miller in the Kilbourne case, and I assume that as the very act of calling a witness and compelling him to testify is in its essence a judicial act that no tribunal or committee acting under the direction of either house of Congress can compel a citizen to testify. If he says, I decline, that is the end of it. If he sees proper to come forward and voluntarily give his testimony, very well, but unless the committee is acting under some clause of the Constitution that gives that committee or the house which appointed it, or both houses, some power over the subject-matter, then I submit that neither can exercise it.

Mr. SMITH. Then, I understand your idea is that we can not even compel witnesses to appear.

Mr. BAXTER. Yes; you can do that. Under section — of the Revised Statutes you can bring a witness here and pay his expenses.

Mr. SMITH. But after he gets here he can keep his mouth shut?

Mr. BAXTER. Yes, sir; if you are merely in the pursuit of information, as Mr. Justice Field says I can write to any gentleman in New Orleans that I am investigating a certain matter, and I may ask him to come here, and may pay his expenses, but when he comes he can tell me if he wants to, or he need not if he does want to. Under a section of the Revised Statutes which imposes a fine of \$1,000 for the failure of a witness to come when summoned by the House, you can compel his attendance. But when he does come, you can not compel him to testify, if you are merely in pursuit of information. Your object here is to get information in regard to the framing of a bill to regulate these trusts, associations, and pools. That is a matter clearly within the power of Congress, and any citizen of the United States who possesses any information upon that subject that he thinks would tend to enlighten you and enable you to discharge your duties intelligently is bound, as a public-spirited citizen, to come here and give that information to you, and no man who has not some really good motive behind to justify him in his conscience would be at all justified in refusing to do so. But when he says, I do decline for private reasons, which I am ready to explain to the committee if they desire—or if they say, no, sir, we do not want to hear your reasons, then he can say I have reasons which in my own mind are satisfactory for declining to testify. Then, the committee says we will make you testify—but where is your power? Is the power to order a man to jail legislative or judicial? Has any legislative department of this Government the power to order a citizen to jail? Has it power to issue a warrant? Has it power to order the sergeant-at-arms to imprison the citizen? Are not all these things judicial powers; and if the committee can find anywhere that the Constitution has authorized it to sit judicially upon any of the questions it is investigating, then I concede that the judicial power of compelling testimony results. But if the committee is simply sitting to gather information to enable it to act intelligently, then, in the language of Mr. Justice Field, “in its inquiries it is controlled by the same guards against the invasion of private rights which limit the investigation of private parties into similar matters.”

Mr. GOWEN. You claim this exemption as an exemption to the citizen under some constitutional prohibition, do you not?

Mr. BAXTER. Yes, sir.

Mr. GOWEN. Do you claim that a corporation as a corporation is entitled to the benefit of any of the protections which are thrown around a citizen in the bill of rights?

Mr. BAXTER. I say it has been so held by Judge Sawyer. In the case of the Central Pacific Railway Company he held that that company was entitled to precisely the same exemption as Leland Stanford, its president. But I did not put it upon the private privilege of the citizen. Where I make my fight is that Congress has no judicial power against a corporation, or a citizen, or anybody, that the bare act of ordering a citizen to jail is a judicial power, and whether he is an officer of a corporation and whether the object of the investigation is to get at the acts of the corporation or to examine his own private books cuts no figure at all. It does not make a particle of difference in my theory. Mr. Stanford said to the Pacific Railway Commission, I decline to answer; and the question came up then whether he could be sent to jail for refusing to answer, and the circuit court of the United States stated he could not, and that whether he was the president of a corporation or a private individual, and whether he was asked to disclose the affairs

of the company or to produce his own check book, it was beyond the power of Congress to force him to give testimony or to delegate the power to a commission to do so.

Mr. SMITH. Did the judges not even hold that Congress could not go into court and get that evidence?

Mr. BAXTER. On the contrary they said:

It can not compel the production of the private books and papers of the citizen for its inspection, except in the progress of judicial proceedings, or in suits instituted for that purpose, and in both cases only upon averments that its rights are in some way dependent for enforcement upon the evidence those books and papers contain.

Now, if the United States has any interest in the question as to whether the Louisville and Nashville Railroad has heretofore discriminated in its oil rates in favor of these trusts, associations, or pools, if it can show that it has any interest, it may file a bill against the Louisville and Nashville Railroad in any court, call for a discovery and production of its books and papers, and it can get the information whether the officers of the company want to give it or not. But Congress can not delegate to a committee of either house the same power that would be possessed by a United States circuit court upon the filing of that bill of discovery. If Congress could do that it could proceed to exercise all powers here which a court could.

Mr. BRECKINRIDGE. Let me interrupt you. Do Mr. Culp and Mr. Broadus object to any particular question, or do they object to testifying altogether?

Mr. BAXTER. I made my objection that broad so as to raise the whole question. As I said before, I hope there is no citizen of the United States who would decline to give this committee any information that he thought would enable it to pursue its duties intelligently except in so far as such information would injuriously affect the interests of the company which he represented.

Mr. BRECKINRIDGE. Is the committee trying to do that?

Mr. BAXTER. I protest again and again that I am not intending to intimate anything of the kind. I merely intend to guard against the asking of questions the answers to which may be used by other parties for the purpose of enabling them to lay the foundation for litigation against the Louisville and Nashville Railroad.

Mr. BRECKINRIDGE. Is not that crossing the bridge before you come to it? Of course, this is a very important question, but like many other questions it may not be necessary to raise it.

Mr. BAXTER. In section 3 you will see that I was notified by counsel of the committee that the examination of the witnesses "will be directed to railway discrimination in oil rates, enabling monopolies to control the oil traffic;" and that said "witnesses will be asked to testify as to oil rates and drawbacks, and produce papers and books relating to the same; also as to rates and drawbacks on freight carried as back loading in tank cars." That is precisely the question that was investigated before the Interstate Commerce Commission. It was the supposed discrimination of the Louisville and Nashville against private shippers that was the subject of those investigations.

Mr. BRECKINRIDGE. But right there; suppose the line of inquiry of the committee does not go beyond the line of testimony given before the Interstate Commerce Commission. I presume you would have no objection to that line of inquiry?

Mr. BAXTER. Yes, sir; my objection is that it is repeating here what I have already answered there, and I do not want to be twice examined about the same matter.

**Mr. BRECKINRIDGE.** It is merely a matter of convenience then ?

**Mr. BAXTER.** Suppose the committee make an exculpatory report so far as the Louisville and Nashville is concerned, and say that not only did that road not discriminate against shippers, but that it treated all with fairness and justice; I could not avail myself of that report in any court.

**Mr. BRECKINRIDGE.** We are not trying the Louisville and Nashville, and we are not a court.

**Mr. BAXTER.** I understand that.

**Mr. BRECKINRIDGE.** And we might elicit precisely the same evidence in the main that was elicited before some court, but in a connection that would be available for our legislative purposes; and now, if you deny us that evidence simply because it would be furnishing precisely the same data, you would be falling back upon a purely technical objection. You may say, Go search the record. But from a legislative stand-point we are making an entirely independent inquiry, and so long as that inquiry does not go beyond what you are willing to tell and what you have told and are willing should be known, the objection is entirely unnecessary unless you desire to put the committee to additional labor.

**The CHAIRMAN.** I would suggest that the record before the Interstate Commerce Commission is no part of the record of this committee, and there is no way of putting it in that record except by calling witnesses and proving its contents.

**Mr. BAXTER.** Will the committee excuse me for a few moments? I am called to the Supreme Court. I will file my brief with the committee.

**The CHAIRMAN.** What I desire to say on this question I wish to say in your presence, Mr. Baxter, and I shall be glad to have you remain for a few moments. Charged as I have been under resolutions of this committee from time to time with the direct management of these investigations, I have tried to familiarize myself to some extent with the law applicable to investigations of this kind. So far as I know, there is not any decision of the Supreme Court, or of any member of it, which precisely determines the question as to the power of Congress to compel answers of witnesses in investigations ordered with regard to matters over which it has legislative power. The Supreme Court, in the *Kilbourn* case, in the opinion of Mr. Justice Miller (103 U. S., p. 189), says:

Nor, taking what has fallen from the English judges, and especially the later cases on which we have just commented, is much aid given to the doctrine that this power exists as one necessary to enable either house of Congress to exercise successfully their function of legislation.

This latter proposition is one which we do not propose to decide in the present case, because we are able to decide it without passing upon the existence or non-existence of such a power in aid of the legislative function.

Thus it will be apparent that the Supreme Court of the United States, in determining the *Kilbourn-Thompson* case, specifically and in terms announced that the question of the right of the legislative branch of this Government to make inquiry and to compel answers in regard to a matter which was within the legislative function was a subject which the court would not pass upon and would not decide. And I am not familiar with, and I am not referred to, any case in which the Supreme Court ever has passed upon that question.

In the decision of Mr. Justice Field in the *Pacific Railway Commission* case, I apprehend, after careful reading of it, that Mr. Justice Field there determined that Congress had no power to create a commission

to make inquiry and investigate which would have the power to punish for contempt, and that he went no further.

Now, that is as far as I know the judicial branch of this Government has gone in settling the constitutional question which Mr. Baxter raises. The legislative branch of the Government, however, has gone a good deal further. It has repeatedly asserted its power to do this, notably in the Credit Mobilier investigations, and it has put upon the statute books a statute which can be predicated only upon the existence of that power, and which goes further than Mr. Baxter seems to understand it does, at least as I apprehend it. The statute is—

That every person who, having been summoned as a witness by the authority of either house of Congress to give testimony or to produce papers upon any matter under inquiry before either house or any committee of either house of Congress, willfully makes default; *or who, having appeared, refuses to answer any question pertinent to the question under inquiry*, shall be deemed guilty of a misdemeanor; and whenever a witness summoned as mentioned in section 102 *fails to testify*, and the facts are reported to either house, the President of the Senate or the Speaker of the House, as the case may be, shall certify the fact under the seal of the Senate or House to the district attorney for the District of Columbia, whose duty it shall be to bring the matter before the court for its action.

So that not only by its usages and the repeated exercise of its power from time to time since the formation of the government has the legislative branch asserted this authority, but it has gone further and enacted that the refusal to testify and answer questions pertinent to a matter under inquiry by either house shall be a misdemeanor, which could only be predicated, of course, upon the proposition that the house had the right to make the inquiry and the right to put the question.

Now, I do not see that it is competent for a committee, whatever may be the individual opinion of the members of it, having been charged with the duty of conducting such an investigation, to assume the responsibility of excusing any witness generally or refraining from conducting an investigation under the rules of the House or for the information of the House in the face of the fact that the House has constantly and uniformly exercised the power, and Congress has enacted a statute which makes the refusal of the witness to submit to it a misdemeanor. It seems to me we are powerless to adopt any other rule than the one which the usage of the two houses, and the statute make in the interpretation put upon their own constitutional power by the Senate and House concurrently. Of course that statute has also received the Executive sanction, so that by two branches of the Government at least we have explicit sanction of the theory of the existence of the power, and as to the other branch simply a refusal to pass upon the question of its existence. That is the exact status of the question as I comprehend it.

Mr. BRECKINRIDGE. I would like to ask Mr. Baxter a question in that connection. This relates solely to the power of either house of Congress with reference to their legislative function. This is a necessary incident to the exercise of their legislative function under the ample power given by the Constitution to any branch of the Government to exercise whatever power is clearly indispensable to the proper discharge of its functions. And in no case has Congress exercised, unless perhaps in the Kilbourn case, a judicial function, which is of course not involved here at all.

The CHAIRMAN. There is no case in which the Supreme Court has determined that investigation by either house of Congress was judicial and not legislative.

Mr. BAXTER. I understand the Kilbourn case just as you do. I understand Judge Miller to say that he is not going to undertake in that

case to say that Congress in the exercise of its legislative power can not compel witnesses to testify, but he says that wherever the matter to be investigated is of a judicial character that then Congress can not compel witnesses to testify; and he proceeds to say that the questions that were under inquiry by Congress in the Kilbourn case were judicial in their nature, and that therefore Kilbourn could not be compelled to testify. Now, the inquiry in that case and the inquiry in this case can not be distinguished, at least as I understand the inquiries counsel is going to make.

He wants to prove that certain discriminations were practiced by the Louisville and Nashville Railroad in favor of certain associations, trusts, and pools in the oil business. Now, I say that is precisely as judicial a question as was put to Kilbourn, to wit, what has become of certain funds in connection with the real-estate pool in Washington? That is what the Kilbourn case went off on.

The CHAIRMAN. I call your attention again to the difference between the investigation now pending and the Kilbourn case. I read from the opinion of Justice Miller:

The preamble [to the resolution] then refers to "the real-estate pool," in which it is said Jay Cooke & Co. had a large interest, as something well known and understood, and which had been the subject of a partial investigation by the previous Congress, and alleges that the trustee in bankruptcy of Jay Cooke & Co. had made a settlement of the interest of Jay Cooke & Co. with the associates of the firm of Jay Cooke & Co., to the disadvantage and loss of their numerous creditors, including the Government of the United States, by reason of which the courts are powerless to afford adequate redress to said creditors.

Several very pertinent inquiries suggest themselves as arising out of this short preamble.

How could the House of Representatives know, until it had been fairly tried, that the courts were powerless to redress the creditors of Jay Cooke & Co.? The matter was still pending in a court, and what right had the Congress of the United States to interfere with a suit pending in a court of competent jurisdiction?

Again, what inadequacy of power existed in the court, or, as the preamble assumes, in all courts, to give redress which could lawfully be supplied by an investigation by a committee of one house of Congress, or by any act or resolution of Congress on the subject? The case being one of a judicial nature, for which the power of the courts usually afford the only remedy, it may well be supposed that those powers were more appropriate and more efficient in aid of such relief than the powers which belong to a body whose function is exclusively legislative. If the settlement to which the preamble refers as the principal reason why the courts are rendered powerless was obtained by fraud, or was without authority, or for any conceivable reason could be set aside or avoided, it should be done by some appropriate proceeding in the court which had the whole matter before it, and which had all the power in that case proper to be intrusted to any body, and not by Congress or by any power to be conferred on a committee of one of the two houses.

The resolution adopted as a sequence of this preamble contains no hint of any intention of final action by Congress on the subject. In all the argument of the case no suggestion has been made of what the House of Representatives or the Congress could have done in the way of remedying the wrong or securing the creditors of Jay Cooke & Co., or even the United States. Was it to be simply a fruitless investigation into the personal affairs of individuals? If so, the House of Representatives had no power or authority in the matter more than any other equal number of gentlemen interested for the government of their country. By "fruitless" we mean that it could result in no valid legislation on the subject to which the inquiry referred. (103 U. S., 194.)

Now, that is exactly what I understand it determined. The court determined that in that particular matter there was nothing which came within the legislative functions of the houses of Congress, and that therefore the whole investigation was unauthorized, and was a direct interference with the exercise of the ordinary powers of the judicial branch of the Government, and that therefore Congress was in error in undertaking the investigation. Now, in this case, we come here with a resolution of inquiry into certain alleged combinations which are affecting the revenue of the Government—which are affecting the interests

of its private citizens—as alleged, and we are required to find out, first, what these combinations are, how they are operated, by what means they have grown up to their present size and importance and have acquired the influence they have upon private interests, and to report back to the House that testimony, with our recommendation as to what legislation, if any, is needed to correct any wrongs, if any are found to exist. It is clearly within the legislative functions; just as clearly as the other was without, as I apprehend it.

Mr. BAXTER. You will find this language in that opinion you were reading from a while ago:

If the investigation which the committee was directed to make was judicial in its character and could only be properly and successfully made by a court of justice, and if it related to a matter wherein relief or redress could be had only by a judicial proceeding, we do not, after what has been said, deem it necessary to discuss the proposition that the power attempted to be exercised was one confided by the Constitution to the judicial and not to the legislative department of the Government. We think it equally clear that the power asserted is judicial and not legislative.

Now, the power the committee asserted in that case was a power to follow a trust fund into the real-estate pool. Of course the committee disclaimed in that case the idea of being a court of chancery or having the power to make decrees in the case such as could be made by a court of equity. But the committee did try to get, all the same, testimony that a court of equity would have gotten to enable it to found a decree. And the point in the Kilbourn case is this, that whenever a legislative committee finds itself gathering evidence on a point that would fit a judicial case, then it knows it is beyond its prerogatives. In this case the counsel has notified me he is to call for answers in reference to alleged discriminations which have been made by the Louisville and Nashville Railroad in favor of the Standard Oil Company. Now, every word that a witness deposes upon that point would be entirely competent in an action for damages or relief, and as soon as the committee finds the testimony is taking that turn that it could be used for that kind of purpose, then it is going beyond its power and the power of Congress, no matter what the object of Congress in appointing the committee may have been nor the expectation as to what kind of report the committee should make. I am perfectly aware that the committee is not going to try to render judgment against the Louisville and Nashville or any other railroad. I know that this committee intends to report what it finds, and to suggest a remedy. But the question is, the nature of your investigation; and whenever you find that you are examining a witness upon the same points as would be proper to be brought out in a court of justice, upon an issue either of law or fact, then this committee is acting judicially, and if a witness says, "I decline to answer," I do not think Congress can compel him to answer. That is what the Kilbourn case and the Central Pacific case hinged on.

The CHAIRMAN. That is not the impression I had, or at any rate it is different from the view I entertain, whether I am right or you. The determination as to whether an inquiry is proper or not is not dependent upon the character of the question, or the use that might be made of the proof, or the fact that it might be material in a judicial proceeding. It is dependent solely upon the question whether it is pertinent for the purpose of providing Congress with the necessary information to legislate intelligently. Now, in the Kilbourn case they did not propose to legislate. There was nothing for them to legislate about, and there was no suggestion in the resolution that they would; and therefore it was an intrusion upon the judicial branch of the Government, which is charged with the duty of settling disputes under exist-

ing laws. In this case we are seeking information, not to settle disputes, but to enable us intelligently to correct existing laws. That is the distinction as it seems to me.

Mr. BAXTER. I understood that the object of the Kilbourn investigation was to get up information to enable Congress to——

The CHAIRMAN. Not at all. This is the language of Mr. Justice Miller :

If so, the House of Representatives had no power or authority in the matter, more than any other equal number of gentlemen interested for the government of their country. By "fruitless" we mean that it could result in no valid legislation on the subject to which the inquiry referred.

Now, that is the test. Is this information necessary in order that valid legislation may be enacted? If so, the inquiry is pertinent and proper. If not, it is impertinent and improper.

Mr. BAXTER. Justice Miller says the Kilbourn committee seems to have been appointed without any idea of reporting.

The CHAIRMAN. Of reporting legislation?

Mr. BAXTER. Any valid legislation; and the reason given for that was because such legislation would be *ex post facto*. And in this case, if the committee were to report that the Louisville and Nashville had been guilty of discrimination, there is no valid legislation Congress could pass that would punish them.

The CHAIRMAN. If we should report that the Louisville and Nashville Railroad Company had pursued a certain policy, which had resulted in certain things happening to the injury of private citizens, and that therefore legislation should be adopted which would prevent in the future that policy, the testimony would be pertinent and the legislation would be proper and valid.

Mr. BAXTER. But it would not correct the evils that are supposed to exist in this case, any more than legislation based upon the report in the Kilbourn case would have remedied the evils which were supposed to exist there. And therefore, in that respect, these cases are alike. No legislation that this committee can suggest in its report will reach the evils in the past.

Mr. BRECKINRIDGE. But we can provide a remedy for them in the future.

Mr. BAXTER. Yes, sir.

Mr. BRECKINRIDGE. That is the whole line of our inquiry.

The CHAIRMAN. And therefore the committee must know what the evils were that it may correct them.

Mr. BAXTER. As I understand the case, wherever you want information to guide you in legislation, you must get it voluntarily or must go into court if you wish to compel witnesses to testify.

The CHAIRMAN. That is the question upon which, as I understand, you produced no authority from the judicial department determining it, the Supreme Court having disclaimed any such determination in the Kilbourn case, and the usage of the legislative and executive branches are against you, and the statute passed by the legislative branch and approved by the Executive is also against you.

Mr. BRECKINRIDGE. Allow me to interrupt for one moment. Mr. Baxter, that is a question you have not argued. It is the first time that question has been raised.

Mr. BAXTER. Which question?

Mr. BRECKINRIDGE. That we have no right to interrogate witnesses if it was in the line of future legislative policy.

Mr. BAXTER. You will find that discussed in my brief.

Mr. BRECKINRIDGE. I have not read your brief only so far as your remarks have gone.

Mr. GOWEN. I do not wish to take up time unnecessarily, but I wish to make this statement: I claim and urge before this committee that Congress or the legislative power has abundant authority to legislate upon the past, and that there is no known prohibition in the Constitution preventing them doing that. I claim, in other words, that if Congress ascertains as the result of an examination into the past that any given sum of money has been erroneously or improperly extracted from the treasury of any railroad company it can legislate in order to give the courts jurisdiction of that subject, and grant them the power to enforce a remedy that will require the restoration of that money.

Mr. BAXTER. That would give a new remedy. My proposition was that Congress could not denounce as a crime or a tort what was not such at the time it was done. I must beg the committee to excuse me for a few moments, as I have been summoned to the Supreme Court. I expect to be detained but a short time.

The CHAIRMAN. Very well, Mr. Baxter. We will not proceed with the examination of your witnesses until your return.

### EDGAR HILL—Recalled.

By Mr. GOWEN:

Q. When you were on the stand before, you left with the understanding that you were to furnish certain statements. Since then we have been informed by your counsel that you probably might testify from recollection as to certain facts, in which case we would relieve you from furnishing those statements. Now, I want a statement of the various rates allowed by you, either as rebates, allowances, or net rates, to the Standard Oil Company or any of its affiliated interests for the transportation of oil over your road?—A. I want to state this morning that prior to the passage of the interstate-commerce act we were transporting oil and paying rebates on oil to quite a number of points from Cleveland.

Q. To whom?—A. To different parties.

Q. To the Standard Oil Company?—A. Yes, sir; and to other parties. I can not, under the advice of counsel, give you the amount of the rebates paid.

Q. That is just what we want to know, in order to ascertain whether, in the payment of those rebates, there was a discrimination. If you say to me that you will refuse to give us that, I will not inquire further about it.—A. I simply request to be excused from giving that information. We paid these rebates.

Q. If you put it in the form of a request, the request can not be granted; but if you decline, then we will have to resort to any method there may be to compel the production.—A. If the committee are bound to have this information, and will not excuse us, I suppose we will have to give it; but I would like to be excused from giving it.

By Mr. SMITH:

Q. Was there any difference in the rebates between the parties?—A. I decline to answer that question.

By Mr. BRECKINRIDGE:

Q. What is the date of these transactions?—A. Prior to the passage of the interstate commerce law.

The CHAIRMAN (Mr. BYNUM). Then I understand you to decline to state whether the rates were the same or whether there was a difference; whether some persons were getting greater rebates than others? I will not ask you what the rebates were, but whether they were the same?—A. Under similar circumstances and conditions they were the same, we claim.

Q. And under different conditions they differed?—A. Yes, sir; according to the volume of the business.

By Mr. GOWEN:

Q. The volume of the business was one of the circumstances?—A. Yes, sir.

Q. And the character of the car in which it was moved was another?—A. Yes, sir.

Q. In other words, you justify a greater rebate as due to a larger amount of traffic?—A. Yes, sir.

Q. And the ability to give you a larger amount of traffic was, doubtless, a reason urged for getting a greater rebate?—A. That is correct.

Q. Since the passage of the interstate commerce act have you made any difference in the relative difference that existed between your rate on car-load lots and your rates on less than car-load lots?—A. I do not think we have.

Q. Taking the question of barreled oil, can you remember what your rate—how your rate on less than car-loads compared with the car-load rate prior to the passage of the interstate commerce law?—A. As I stated yesterday, I did not make any figures on less than car-loads, and I do not know exactly how they compare. I have not made any comparison at all.

Q. Can you tell what class car-load rates were on oil before the interstate commerce bill passed?—A. No; we always had a special classification, and have yet.

Q. What classification was oil in less than car-load lots?—A. First class.

Q. First class?—A. I think so.

Q. Before the passage of the interstate commerce law?—A. I think so. I know we changed the classification on the 5th of April.

Q. You mean classifications as well as rates?—A. If the classification was changed of course the rate was changed.

Q. That is what I want to know. I am not getting at the question of mere rebates, or difference to one shipper from another, but I want to know if any change was made in the rates.—A. I have not that with me, but will give you the relative rates in car-load lots, and less than car-load lots, as they are now.

Q. I want the less than car-load in comparison.—A. I can give you that.

Q. If you will put them both in one statement I shall be obliged to you. State what the classification and rate per car-load and less than car-load, respectively, were before the passage of the interstate commerce act, and what the classification and rates, respectively, were on car-loads and less than car-loads after the passage of the interstate commerce act.—A. I have already stated that there was no change in car-loads, but there might have been on less than car-loads.

The CHAIRMAN (Mr. BYNUM). You will have to remain until after the committee decides the question of compelling your answer, which we will do before we adjourn.

By Mr. GOWEN :

Q. Just look at this voucher on the Queen and Crescent Line of March 2, 1885, to Chess Carley & Co., and the voucher on the Queen and Crescent Line to Chess Carley & Co. of August 21, 1885, and state whether in both of those cases there was not a rebate allowed Chess Carley & Co. on barreled oil.—A. This seems to be an overcharge claim on a shipment from Cleveland to Chattanooga.

Q. It is the first and last clause.—A. Here is a shipment of July 2 from Cleveland to Chattanooga, 50 barrels of oil that are billed at \$105, should have been \$64.05. That is overcharge.

Q. That overcharge was refunded, was it not?—A. Yes, sir.

Q. And turning to the first one, it is the same thing, is it not?—A. Yes, sir; 60 barrels of oil from Cleveland to Chattanooga, billed at \$126, should have been according to this \$76.86.

Q. Then in that case the overcharge was refunded, was it not?—A. Yes, sir.

Q. And both of those were allowances of overcharges, as you call them, on barreled oil, were they not?—A. Yes, sir.

#### TESTIMONY OF T. S. DAVANT.

T. S. DAVANT, sworn and examined.

By Mr. GOWEN :

Q. Where do you reside?—A. Knoxville, Tenn.

Q. What is your position?—A. General freight agent of the East Tennessee, Virginia and Georgia Railroad Company.

Q. You have charge of rates, have you not?—A. Yes, sir.

Q. You have been asked to bring a statement of the rates or allowances paid on oil shipped over your road. Have you that statement?—A. No, sir.

Q. Why not?—A. I did not have any to make up.

Q. That was a very good reason. You made no allowances?—A. No, sir.

Q. You carried for everybody at the same rates?—A. Yes, sir.

Q. Did you carry oil in tanks at the same rate as in barrels?—A. Locally, yes, sir.

Q. On through business?—A. On through business there was a difference in the rates.

Q. What was the difference, can you tell us?—A. I can not from recollection; no, sir. I can not remember the figures.

Q. Why did not you bring them? You were asked to bring a statement of shipments showing rate at which oil was carried for the last two years and a half.—A. I do not remember whether I was or not. I have my subpoena here. (After taking subpoena out of his pocket and examining it, the witness said:) My understanding of this document was that it was sought to develop the fact whether or not our company had paid rebates.

Q. It also asked for rebates on each shipment of oil—you see in that No. 2.—A. I have not got the rates on oil with me, sir.

Q. Can you give us from the best of your recollections any information as to the relative difference on through rates between oil carried in tanks and oil carried in barrels?—A. I can not right at this moment, but can in a very little time.

Q. While you are here you mean?—A. Yes, sir.

Q. Have you papers from which you can get them?—A. Yes, sir.

Q. Who has those papers here?—A. I think I can get them from the Richmond and Danville office.

Q. Do you know George Rice?—A. Yes, sir; I know of him.

Q. Mr. J. J. Griffin was your assistant, was he not?—A. Yes, sir.

Q. Have you any recollection of Mr. Griffin or yourself naming a rate or giving a rate to Atlanta to Mr. Rice of \$35 a car and permitting him to ship under it?—A. I have some recollection as to that.

Q. Well, Mr. Rice at that time was shipping oil on the Western and Atlantic, was he not?—A. Yes, sir.

Q. And did not you profess a desire to have his business and name this rate in order to get a shipment over your line?—A. I do not know. My recollection of that transaction is this—and several letters passed between myself and Mr. Rice on this subject—and as I remember the transaction was about this: rates between Chattanooga and Atlanta were matters of agreement between the Western and Atlantic and our road. We found that the Western and Atlantic had a special rate—was charging a special rate on oil of which we had no knowledge, and we developed the fact by hauling a car-load of oil for Mr. Rice.

Q. You made use of that to ascertain what their rates were?—A. Probably so.

Q. And after ascertaining that you withdrew that rate from him?—A. Rates were advanced.

Q. But that made a difference with the other road which he may have been charged with betraying, did it not?—A. I do not know.

Q. Do you think that when he accepted that rate of \$35 he had any reason to anticipate that that would be used adversely to him?—A. I do not know. That transaction was conducted by Mr. Griffin, and I am not prepared to admit that it was Mr. Griffin's intention to take any undue advantage of Mr. Rice. He did not get the information from Mr. Rice in the first place.

Q. State whether or not at the time of those shipments the rate from Chattanooga to Atlanta was not \$80 per car on barreled oil as against \$22.50 to the Standard Oil Company on tank-cars?—A. That is not my recollection.

Q. Or on barreled oil?—A. I do not think that at that time we had any rate at all from Chattanooga to Atlanta on tank oil.

Q. You think not?—A. I think not.

Q. Do you not know that this rate on barreled oil from Chattanooga to Atlanta was then raised to a hundred dollars?—A. It was raised to the tariff at which it was before the reduction.

Q. Was not that \$100 dollars?—A. I do not know whether it was or not.

Q. Do you not know that when the rate on barreled oil was \$100 the rate on tank oil was \$22.50?—A. No, sir; I do not.

Q. Can you while here ascertain what those relative rates were at the time of which I speak?—A. Yes, sir, I will telegraph home for them at once.

Q. Where do shipments of oil come from—where do they reach your line?—A. At Bristol and at Chattanooga.

Q. From what connecting lines of road?—A. At Chattanooga, from the Cincinnati and Southern, and the Nashville, Chattanooga and Louisville.

Q. What other point?—A. Bristol, from the Norfolk and Western.

Q. Is the Western and Atlantic a competing line?—A. Yes, sir.

Q. Are your rates generally the same?—A. Yes, sir.

Q. Do you maintain them the same in consequence of agreement?—A. Yes, sir.

Q. And you had reasons to suspect that they were carrying oil cheaper than the agreed price?—Yes, sir.

Q. And it is in consequence of ascertaining that fact that Mr. Griffin made this rate to Mr. Rice?—A. I can not speak positively, but I suppose it was. But, as I say, that transaction was conducted by Mr. Griffin.

Q. Look at this bill (handing bill to witness) and see whether a claim was made against you by Mr. Rice for the difference between a rate equal to what had been previously named to him of \$35 a car, and the rate of a hundred dollars a car to which it was subsequently advanced?—

A. I do not know that a regular claim was made, although Mr. Rice I think did in his letters to me claim that I should pay him the difference.

Q. Have you no recollection of a claim being presented?—A. We have a separate claim department. We have a claim agent, and claims generally go to him. I would not necessarily have knowledge of them.

Mr. GOWEN. That is all, except that you will give us those things I referred to.

The WITNESS. I will.

EAST TENNESSEE, VIRGINIA AND GEORGIA RAILWAY,  
FREIGHT DEPARTMENT,  
Knoxville, Tenn., May 4, 1888.

HENRY BACON, Esq.,  
Chairman Committee on Manufactures,  
House of Representatives, Washington, D. C. :

DEAR SIR: In pursuance of my promise to Mr. Gowen, I beg to hand you herewith the rates on oil from Louisville and Cincinnati to Macon, Atlanta, and Savannah, Ga., during the years 1886, 1887, and 1888:

To—	From Cincinnati—		From Louisville—	
	Per barrel.	Per tank.	In barrels.	In tanks.
1886.			<i>Per cwt.</i>	<i>Per cwt.</i>
Macon, Ga.....	\$2. 24	\$115. 00	44. 8	83. 2
Atlanta, Ga.....	2. 24	115. 00	39. 3	80. 9
Savannah, Ga.....				
1887.				
Macon, Ga.....	2. 24	66. 40	44. 8	83. 2
Atlanta, Ga.....	2. 24	61. 80	39. 8	80. 9
Savannah, Ga.....				

The rate to Savannah from Cincinnati was made \$60 per car on January 17, 1888, and changed to 40 cents per 100 pounds on March 29, 1888. No rate was in effect from Louisville. The above rates to Macon and Atlanta remained in effect until March 29, 1888, when they were made as follows, in tank-cars or barrels:

To—	From Cincinnati—	From Louisville—
	<i>Per cwt.</i>	<i>Per cwt.</i>
Macon, Ga.....	.37	.33
Atlanta, Ga.....	.37	.33
Savannah, Ga.....	.40	.40

During this time there was no difference in the rates on oil in tank-cars and in barrels between points on our own line.

Yours, truly,

T. S. DAVANT,  
General Freight Agent.

At this point Mr. Baxter returned and Mr. A. F. Broadus was recalled to the stand.

By Mr. GOWEN:

Q. Where do you reside?—A. Louisville.

Q. What is your position?—A. I am general freight agent of the Louisville, Cincinnati and Lexington division of the Louisville and Nashville Railroad.

Q. Just describe what territory your division covers or what lines of roads?—A. Between Louisville and Cincinnati and Louisville and Lexington, and the branches of the road which are the Shelby branch and the Cumberland, Ohio and Northern division.

Q. The extreme northern and southern limits of your division are, then, Cincinnati and Lexington?—A. The extreme northern limit is Cincinnati; eastern, Lexington; and western, Louisville.

Q. Will you look at that circular—

Mr. BAXTER. Will you let me see it first, please?

(Mr. Gowen handed the circular to Mr. Baxter, and after receiving it back from him, handed it to the witness.)

Q. And state what it is or whether you recognize it?—A. Yes, sir; I recognize it.

Q. What is that paper?—A. It is a circular requesting that the rates from points east of a certain line from Lake Michigan or Michigan City to Cincinnati *via* Fort Wayne and west of Pittsburgh and Buffalo to Memphis, Greenville, Huntington, Vicksburg, Natchez, Port Hickey, Baton Rouge, Mobile, and New Orleans, shall not be less than the rates current from Cincinnati at the same time.

Q. From Cincinnati or Chicago?—A. From Chicago; yes, sir.

Q. State whether or not, upon oil, the result of the adoption of that circular was not a considerable advance on the rates as they had existed previously?—A. Well, sir, I do not know what the rates were previously from Pittsburgh, etc.

Q. Had your rates on oil ever before been based on Chicago rates?—A. Perhaps not.

Q. Was not that an innovation that had never before been introduced?—A. This was a general circular and was intended to fix the rates on freights generally, and not on any one article in particular. I think it is exceedingly doubtful if any thought at all was given by any member or any person who signed this circular to the effect on the oil rates. It was probably not considered at all, because there was no oil shipped from Chicago to these points.

Q. Why was it, therefore, if there had been no oil shipped from Chicago, that Chicago was made the basis of establishing a rate which, when established, generally applied to oil? Can you give any reason for that?—A. No, sir; I was not in the meeting and therefore do not know what arguments were used to make this basis.

Q. Prior to that, had not Cleveland, Pittsburgh, Parkersburgh, and Marietta been the basing points for establishing rates on oil?—A. I do not think they were ever used as basing points.

Q. But there are oil shipments from all of those points?—A. Yes, sir.

Q. And Chicago is not an oil-producing place, is it?—A. I think not.

Q. Did you not yourself admit that you could not understand why Chicago rates should be applied under that circular?—A. I did not admit that, I think.

Q. You did not?—A. I said I did not know what the arguments were. I was not present at the meeting.

Q. I would like you to produce, if you have it, the statement that was asked for in the subpoena as to the rates at which oil was carried for various parties over your department or over your lines during the last five years.

Mr. BAXTER. Will you kindly let me know the object of that inquiry?

Mr. GOWEN. To show discriminations in favor of the Standard Oil Company and its affiliated interest, which have resulted in enabling those interests to maintain a monopoly of the oil trade, to the injury of competitors.

Mr. BAXTER. And you wish to apply that to the Louisville and Nashville Railroad, of which he is an officer, showing discriminations by that company.

Mr. GOWEN. Or any other company he knows of. I want to introduce this as part of the general testimony before this committee, showing that this monopoly could not have maintained its existence so long as it has but for the discrimination made in its favor by common carriers in violation of their obligations as such.

Mr. BAXTER. Mr. Chairman, I except to the question; and if the committee will hear me, I would like to finish what I have to say on that point before it is decided.

The CHAIRMAN. (Mr. BYNUM). I understood the argument was completed. The chairman has ruled on the question. Do you wish to proceed further?

Mr. BAXTER. If the Chair has ruled on that point I do not care to go on.

The WITNESS. I did not bring those statements.

Q. Why not?—A. I was forbidden by the vice president of the road to take any papers out of the office at first; but, later, I got a telegram on the evening of the 30th to bring as many papers as I could get together. But that telegram did not reach me until 9 o'clock, at my house, on the evening of the 30th, day before yesterday, when it was too late to obtain clerks to work up the information.

Q. Who is the vice-president of the road?—A. M. H. Smith.

Q. Where does he reside?—A. At Louisville.

Q. When he forbade you to take any papers out of the office, did he know that you were under subpoena from the House of Representatives to produce them?—A. I suppose so.

Q. Did you inform him of that fact?—A. He was informed of the fact.

Q. What reason did he give for directing you not to bring the papers?—A. The papers were not under my charge in the first place. I do not know what his reasons were. He simply ordered me not to do it.

Q. I am going to ask you a question which you may perhaps consider impertinent. To whom do you suppose you owe the greater allegiance, to the Government of your country as represented, by Congress, or to the vice-president of the Louisville and Nashville?—A. To the Government of the country I should say, at the first blush.

Q. Why, then, did you not obey its mandate and disregard that of the vice-president?—A. The papers were not under my charge. I could not have got them.

Q. I will go into the same question orally and without the papers. Will you give us from memory the rates which, say, up to the passage

of the interstate commerce act, had been maintained or allowed on your road to various parties on oil shipments?

Mr. BAXTER. I suppose the object of the question is the same as the other?

Mr. GOWEN. Yes.

Mr. BAXTER. The exception is the same.

Mr. BRECKINRIDGE (to Mr. Baxter). Does this relate to matters that have already been adjudicated?

Mr. BAXTER. I do not know what will be the effect of the demurrer to that bill in Louisville. That covers the period prior to the passage of the interstate commerce act.

Mr. BRECKINRIDGE. Has this information ever been given elsewhere?

Mr. BAXTER. I do not know that it has.

Mr. BRECKINRIDGE. This information is not, as far as you know, a matter of record, is it?—

A. Not that I know of.

Mr. GOWEN. I would say to the committee that I can not admit for one moment the validity of any excuse, or ground for excuse, to a witness for not answering a question that is pertinent to this issue, because that question, when answered, or the information elicited by the answer, may be used in some other proceeding. In the case of the Pennsylvania Railroad the committee excused witnesses from answering because we had testimony from other witnesses which had placed upon record the facts sought to be elicited. Now, this committee is engaged in an examination into the question whether railway discriminations have not enabled the Standard Oil Company to secure and maintain its practical monopoly of its oil trade. That is one, as I take it, of the most vital questions that can be examined into, because, no matter what may be said as to the propriety of permitting monopolies to grow up or combinations to exist in this country, there can be no doubt in the mind of any reasonable man that a monopoly which is secured and maintained only by railway discriminations and by the violation of the obligation which a railroad company, as a common carrier, owes to the public, to treat each shipper alike, is not only obnoxious to the law, but is obnoxious to the sense of natural justice which must move every citizen of the United States. Now, the fact that an inquiry of such magnitude bearing directly upon the point at issue and about which, when ascertained, there can be an opportunity for legislation by Congress, applicable, as I say, to the past as well as to the future, that fact alone should compel this committee to hear the testimony, and it is no answer to that fact that injury may result to some railroad company by this information getting out. Why, if it please the chairman, that is the very thing that ought to result.

The CHAIRMAN. So far as the chair is concerned the only question he is called upon to rule is simply whether the question is a pertinent question; and the question whether the committee will require the witness to answer or not is one for executive session. So far as the chair is concerned he is ready to rule that question perfectly pertinent and should require an answer.

The WITNESS. I wish to add that so far as those papers are concerned it would be a matter of months to get the information together, and the question in my mind was which of them should have the preference, because we could not get them all.

The CHAIRMAN. It is not a question now as to the papers. You stated the papers were not in your possession, and that is a sufficient

answer. The question now is, whether you have knowledge of the fact of these rates being paid. That is all that is asked for.

By Mr. GOWEN :

Q. Give us those rates. What were the rates on oil on your line up to the passage of the interstate commerce act ?

Mr. CROUSE. Won't you simplify it by giving from point to point ?

Q. Take oil that went from Cleveland south over your lines. What were the rates from Cleveland south ?—A. I could not possibly begin to remember any rates. I could not give you any actual figures from memory at all. There were hundreds of thousands of rates issued.

Q. State whether or not there was a rate on tank oil passing over your line southward from Cleveland up to the period of the passage of the interstate commerce act ?—A. Your question is whether there was not a rate from Cleveland southward.

Q. Yes.—A. Perhaps there was. I suppose there was.

Q. But was there not a large amount of oil passing over your line ?—A. Yes, sir ; there must have been rates.

Q. What were those rates ?—A. I can not answer from memory.

Q. Can not you answer as to any one of them ?—A. I could not answer what the rate was to any one point at any particular time.

Q. What was the relative difference in rates between oil in tanks and oil in barrels ?—A. I could not answer that from memory.

Q. Can you make no reference to it at all that will aid this committee in ascertaining what it was ?—A. No, sir ; I could not give you any figures.

Q. Were you not an assistant in the general freight agent's office at that time ? That is your title now, is it not ?—A. I was at that time ; yes, sir.

Q. How could you ascertain those rates ? Where would you have access to them ?—A. Rates to what point, for instance, would you take ?

Q. Take first rates going southward over your line. —A. From Cleveland ?

Q. Yes.—A. We might have some of them perhaps in our office at Louisville. Others should be in the Cleveland office.

Q. Now, Mr. Broadbush, do you mean to say to me that there would be any difficulty whatever in turning back your manifest and record and determining exactly the rates at which you carried oil ?—A. At any particular time ?

Q. Yes.—A. No, sir ; if you set the time.

Q. What were the shipments of oil over your lines per annum, do you suppose, in 1886 or 1887 ?—A. I do not know.

Q. Have you any knowledge upon that subject ?—A. I do not know ; perhaps 40,000 or 50,000 tons.

Q. Do you not know that your net rate, after all allowances and rebates on oil carried for the Standard Oil Company or the Chess-Carley Company, or the Waters-Pearce Company, or companies affiliated to the Standard Oil Company, were greatly less than were charges for oil to individual shippers in competition with them ?—A. That I respectfully decline to answer, under advice of counsel.

Q. Do you not know that your rates were often, when reduced to charges per barrel of oil carried, less than half the rates that you charged others—that your rates to the Standard Oil Company were less than half the rates you charged others ?—A. I know that there was a difference between the rate on oil in barrel and in tanks, but I could not say what the relative difference was.

Q. Do you not know that it was often as much as one-half?—A. I can not recall whether we have had it as much as one-half or not.

Q. Who did you communicate with on the subject of rates on oil to the Standard Oil Company? Who among the officers of that company, or who did you come in contact with, that represented that company or any of its affiliated interests?—A. Communications were addressed to the company.

Q. What was the name of the company?—A. Standard Oil Company, you say?

Q. Any of the companies connected with the Standard Oil Company?—A. The Standard Oil Company primarily, Chess-Carley Company.

Q. Had they any agent in your vicinity that represented them?—A. The Chess-Carley Company had.

Q. Who was he?—A. They had a general office in Louisville and a number of offices.

Q. Who were they?—A. Mr. F. D. Carley was formerly there.

Q. Any others that you can remember?—A. Latterly, Mr. Howard Page.

Q. Do you remember attending a meeting in Louisville about the 14th of last March on the subject of oil rates in consequence of the then recent decision of the Interstate Commerce Commission on the subject?—A. No, sir.

Q. Did you attend such a meeting?—A. No, sir.

Q. Did Mr. Culp?—A. I do not know.

Q. You remember that decision to which I refer, do you not?—A. Yes, sir.

Q. Now state, if any, what changes were made in your rates on oil in consequence of that decision?—A. I would like to say that I have no charge whatever of the rates south of the Ohio River—I mean south of Louisville—and was not familiar and am not familiar with what has been done recently with regard to rates south of Louisville.

Q. Over any portion of your territory do you know whether the relative difference, or any difference whatever, is now maintained per hundred pounds in the rate on oil in tanks as compared with the rate on oil in barrels?—A. My understanding is that the lines south, our line included, apply the same rate per hundred pounds upon oil in tanks as upon oil in barrels per car-loads.

Q. When was that done?—A. Subsequent to the decision of the Interstate Commerce Commission; I can not give you the date.

Q. The fact has come to your knowledge?—A. Incidentally.

Q. Has it not come to your knowledge in order that it may be applied by you in the management of your business?—A. It was always so, so far as my division is concerned. We never made any difference on the local rates.

Q. But your division of the rate, when it is a part of the through rate, has to prorate, I suppose, with all other companies on the through rate?—A. Those rates would not be under my jurisdiction.

Q. Do you know of private or secret rates or rebates paid to the firm of Chess, Carley & Co. on oil?—A. I must decline to answer that question.

Q. State whether or not there is not in your office or in one of the offices of your company or department a book called a rebate book, or some similar name, in which a record is kept of all drawbacks for secret or special rates allowed Chess, Carley & Co. up to the time they went out of business, and to the Standard Oil Company subsequently?—A. I decline to answer that question.

Q. What weight per car-load were the rates to the Standard Oil Company or Chess-Carley Company based upon?—A. What weight per car-load?

Q. Yes.—A. They were not made by me. I can not answer that question.

Q. Well, I do not want to take any advantage of you. You see this is another way of getting at the same thing you have declined to answer. Can you not tell us how many pounds per car-load were charged for tank car-loads?—A. It was divided in times past. It began a good while ago when the maximum rate of all car-loads was 20,000 pounds. I can not say what they are charging at present.

Q. Up to what period was the estimated weight of 20,000 pounds carried?—A. I can not answer that.

Q. Was it not carried up to within a year past?—A. Possibly; I do not know.

Q. Do you not know that fact?—A. Well, I should say it was.

Q. Now, can you tell us up to what period within the past year?—A. No, I can not.

Q. Is not the weight of 100 barrels of oil in a tank 32,500 pounds?—A. It is about that.

Q. And the weight of 120 barrels in a tank would be about 39,000 pounds, would it not?—A. About that.

Q. Now, as a matter merely of arithmetic, and only for the purpose of getting it upon the minutes, if a car weighing, say, 39,000 pounds was transported and charged only as 20,000 pounds that would be but little over one-half the rate it ought to pay, assuming that it should pay by weight, would it not?—A. Yes, sir.

Q. When oil was shipped by Chess, Carley & Co. over your line, whose statement did you take as indicating either the quantity or the weight of the oil?—A. It was on the bill of lading weight, I suppose.

Q. Did you ever weigh the oil?—A. I did not; no, sir.

Q. Or your company?—A. Not that I am aware of.

Q. Or gauge the tanks?—A. I think not.

Q. You are familiar, are you not, with the trade circular that is issued giving the numbers and the capacity and weight of the various tank cars that are in existence in the United States?—A. I have not seen such a circular. I have heard of it.

Q. You know that there is such a circular issued?—A. I have heard that there was, but I have never seen it.

Q. Have you any arrangement with other roads to maintain rates on oil?—A. No, sir.

Q. Had you last year?—A. Not to my knowledge.

Q. Do you know that your road, the Newport News and Mississippi Valley, the Illinois Central, the Ohio and Mississippi, and the Mobile and Ohio agreed to maintain rates on oil?—A. No, sir.

Q. You do not know that?—A. I do not know that.

Q. Do you know that your rates are identical?—A. Well, I say I did not know that. There is a general agreement to maintain rates from points common to two or three of the lines.

Q. When was that agreement made?—A. It is not a formal agreement.

Q. An understanding?—A. Yes, sir; it is an understanding.

Q. By whom was that made?—A. That is an understanding made whenever rates are changed.

Q. All the companies agreed to maintain these same rates?—A. Yes, sir; that is the understanding.

Q. Can you tell what your rates on cotton-seed oil and turpentine are as compared with the rates on coal oil?—A. No, sir; I can not.

Q. Are they one-half as much as the rates on coal oil?—A. I can not answer that.

Q. You ought to know something about it. Are they not very much less than the rates on coal oil?—A. I do not know, indeed; I absolutely can not answer.

Q. Does not traffic of that kind pass over your division?—A. None except through traffic over which I have no control.

Q. Mr. Culp would know that?—A. Possibly.

Q. Somebody in your company must know it?—A. I do not.

Q. What officer has charge of that?—A. Mr. Culp.

Q. He is general freight agent, is he not?—A. Yes, sir.

Q. As a railroad man, can you tell me if it costs any more to haul a tank loaded with turpentine or cotton-seed oil than it does to haul a tank loaded with coal oil?—A. No, sir; nor silk or jewelry.

Q. But is not the value of cotton-seed oil greater than the value of coal oil?—A. Yes, sir; I think it is.

Q. And is it not one element of railroad charges to charge more for a more valuable product on account of the risk in transit?—A. Well, I suppose that is taken into consideration in some cases.

Q. Not in all?—A. Not necessarily all.

Q. Would you carry a cargo of silk at the same rate as a cargo of pig-iron or iron ore?—A. If that was the only way to get it I expect we would. If necessary to make as low rate on silk as pig-iron I have no doubt railroads would do it.

Q. But would not the loss of one car-load of silk involve a loss of more money than the freight payments would amount to in a year?—A. It might.

Q. But as a general thing?—A. You are right. As a general thing that is so, but not entirely, of course.

Q. If cotton-seed oil is a more valuable product than coal oil would not the railroad require a higher rate?—A. If there were no other circumstances.

Q. What other circumstances would there be except competition to get the freight?—A. Well, one thing would be the price of the article in various markets. The difference in the prices.

Q. That is the question of whether the article would bear the rate?—A. Yes, sir; that is one circumstance.

Q. Do you not know that the cotton-seed oil traffic in the South is practically controlled by a trust?—A. Well, I only know from hearsay, I know nothing about it from my personal knowledge. I only know what I have seen in the papers.

Q. What?—A. That most of the mills were controlled by one or two companies.

Q. Now, if two parties are engaged in the transportation of oil southward and rates on cotton-seed oil going northward carried as back load are very much less than what the fair rate should be with reference to the market value or other considerations, and if only one party shipping petroleum could get any back load, would not that party have an advantage over the other in the shipment of petroleum resulting from the reduced rate that he has got on his cotton-seed oil?—A. I will have to trouble you to state that question again.

Q. If there were two competing shippers of petroleum shipping oil southward over your line and only one of them could get cotton-seed oil back and if the rate on cotton-seed oil was made much lower than it

ought to bear with reference to its market value, or the price at which it could be sold, would not that shipper of petroleum who could secure the back, loading and get the benefit of that rate have an advantage over the man who could not?—A. Well under the circumstances you state, I should say he would.

Q. Unquestionably?—A. Unquestionably.

Q. Therefore does it not follow that if the entire cotton-seed oil business of this country is thrown into a trust, and that trust coalesces or combines with the largest shipper of petroleum, whereby that shipper alone can get the benefit of a low rate as back loading, that that shipper of petroleum, by reason of that combination, would have a great advantage over the man who could not?—A. That is the same question.

Q. It is the same question only directly applied. What is your answer?—A. Yes, sir.

Q. Then are there not several methods, that among others, by which if a railroad company desires to give the benefit of a discrimination to one of its shippers, it can make that discrimination while at the same time it is maintaining exactly the same rates on the original cargo that goes south?—A. I should think not. I do not see why, if we maintain the same rate in both directions for all parties, there is any discrimination.

Q. But if only one party can get back loading, and if the result of the back loading is to diminish the cost of the whole venture, including the first loading, does not the man who gets the back loading have an advantage over the man who can not?—A. In what respect does he? I do not see that he does.

Q. I will put it in this way: Suppose a man sending 100 barrels of oil at your fixed rates, which are identical to all, who as the result of that venture over your line makes 20 cents a barrel on his business, and that man, by loading his cars with cotton-seed oil coming back can make 50 cents a barrel on his cotton-seed oil, would not that man have a great advantage in business as against a man who shipped the coal oil only and made the 20 cents, but had no chance to make the 50 cents a barrel on the back loads?—A. You mean to say if the railroad refused to give him a chance to get the back loads.

Q. Or if he could not get it in any way?—A. Why, certainly, if the railroads refused to give him the same favors.

Q. Does it make any difference to that man whether the railroads decline to give him that rate, or whether, by virtue of a combination which controls the product and enters into an alliance with his competitor in the oil trade, he can not get any cargo on which the rates shall apply, is he not just in the same box?—A. That is asking a question of mercantile matters which, it seems to me, is outside of all railroad business with which I am familiar. I do not know anything about their dealings in cotton-seed oil. Certainly the railroads do not control it.

Q. But you have admitted that if the railroad refused to give this man a rate by which he was enabled to get a back load, he would be at a serious disadvantage?—A. Yes, sir.

Q. Now, if the railroad does give him a rate, and he has no cotton-seed oil to carry, what is the use of the rate?—A. In that case he would not want a rate.

Q. And, therefore, he would be in the same box?—A. Therefore the railroad would not refuse him a rate.

Q. No; the railroad would not refuse to give him a rate?—A. Not if he did not want a rate.

Q. If they were certain he had no business to carry over it?—A. No, sir.

Q. Do you not know, as a fact, that the Standard Oil Company and its affiliated industries practically are the only ones that control transportation of cotton-seed oil?—A. I do not.

Q. Do you come in contact with that question at all?—A. I do not know what the Standard Oil Company has to do with the cotton-seed oil trade, personally.

Q. State whether or not you pay mileage both ways on the cars of the Standard Oil Company, loaded and empty?—A. I think we do. I am reasonably sure of it.

Q. State what that rate is.—A. Three-fourths of a cent, I think.

Q. Mileage each way?—A. I think so. I can not state that positively; it is out of my department; but I am reasonably sure that is the rate.

Q. Have you any recollection of Mr. George Rice, of Marietta, applying to you to know whether he could put his own tank-cars on your line?—A. He never did apply to me, or to the company, to my knowledge.

Q. Did you not, or somebody in your office, with your knowledge and consent, state that you would charge him from  $1\frac{1}{2}$  to 3 cents a mile for hauling his empty cars back?—A. I do not know.

Q. Have you any knowledge on that subject?—A. No, sir.

Q. State whether or not you paid commissions or compensation of any kind to any one for securing you oil business upon your road.—A. Not to my knowledge, and I could almost say positively not.

Q. Are you sure of it?—A. Well, I am reasonably sure of it.

Q. If such compensation or commission were paid what would be the method by which the money would be drawn from the treasury of your company. Would it be through the freight department?—A. Well, it is a kind of dealing that I am almost sure our company never went into, and therefore we have no method of paying any such amounts.

Q. Do you know what your rates are, or the difference between the rates, when they apply to full car-loads and when they apply to less than car-loads?—A. Yes, sir.

Q. What is the difference, say, in your territory?—A. First-class and fourth-class.

Q. That is, you charge for less than car-loads first-class rates, and for full car-loads fourth-class rates?—A. Yes, sir.

Q. When was that classification adopted?—A. Well, July, 1881, is as far back as I can remember; perhaps before that.

Q. And it has remained ever since?—A. Yes, sir.

Q. Did you make any change upon that subject when the interstate commerce act went into effect?—A. No, sir; my line is all in the State of Kentucky, except from Cincinnati.

Q. I will ask you whether you were examined as a witness in the case of George Rice against the Louisville and Nashville Railroad before the Interstate Commerce Commission?—A. No, sir.

Q. Mr. Culp was, was he not?—A. Yes, sir.

By Mr. BRECKINRIDGE:

Q. How long have these tank cars for oil been in use on your road?—A. Prior to 1880. I do not remember the year, some year prior to 1880, possibly as far back as 1875.

Q. Has your road charged at all times uniform prices to parties, or have your prices been free from any discriminations as regards hauling coal oil in tank cars?—A. That is one of the questions I will have to decline to answer.

Q. I ask that at the request of your counsel. I will put in this way, whether, during this whole period, the rate on tank cars has been open and equal to all alike. Do you still decline to answer? Perhaps you know more about this case than the counsel.—A. I decline to answer.

Mr. BRECKINRIDGE. Your counsel, you know, requested that I ask that.

The CHAIRMAN. He declines now on his own responsibility.

By Mr. BRECKINRIDGE:

Q. On whose responsibility do you decline to answer?—A. Under the general instructions of my counsel.

Q. I will repeat the question. Are the rates that have been charged on tank cars open to any and everybody that has tank cars, or who offers tank cars for shipment?—A. Yes, sir.

Q. Has that uniformly been the case?—A. There have been, possibly, some differences. I can not recall any, but I do not like to answer positively without remembering.

Q. So far as you know?—A. Yes, sir; so far as I can remember.

Q. I understand your answer to be that so far as you know the rates are the same to all parties?—A. The charge on oil in tank cars to all parties has been the same.

Q. Is the same true where a car is loaded with barreled oil? Has the tariff been uniformly the same to all parties?—A. Possibly not.

Q. You are not so certain about that?—A. No, sir.

Q. Can you answer with certainty that it has not, or with certainty that it has. Have you any certain knowledge on that subject?—A. I do not think they have been the same. They have not been the same at all times.

Q. Are these tank cars of a uniform capacity?—A. No, sir; they vary considerably in capacity.

Q. When they first began to be used, were they for awhile of uniform capacity?—A. When they first began to be used on our line they were, I think, all of uniform capacity.

Q. When did you first remark the difference in the capacity of different cars?—A. I did not notice the difference at all. I would not see them. My duties do not require me to see articles of freight which are handled. I am in the general office and would not naturally see the cars.

Q. Do you know what the present capacity is of what would be called a large tank car?—A. No, sir.

Q. Do you remember the capacity of the early tank cars?—A. I do not remember positively; probably about 65 or 70 barrels.

Q. I think it was elicited a while ago that the present capacity of a tank car was considerably more than that. Was it not, Mr. Gowen?

Mr. GOWEN. Yes, sir; they run up to 120 barrels.

Q. I think you concurred in that testimony?—A. The question was what the weight of 120 barrels would be.

Q. Has your road uniformly charged the same amount per car, without regard to the differences in the sizes of the cars?—A. It has to some points; yes, sir.

Q. And to other points it has made a distinction between the sizes of cars?—A. Yes, sir; because the rate was per hundred pounds to some points and per car to other points.

Q. Per car, regardless of size?—A. Yes, sir.

Q. To what points did you have a pound rate and to what points a car rate?—A. I can not recollect that.

Q. How is the ownership of these tank cars distributed, as far as you know? Does your road own any of them?—A. We owned a number of cars. I can not state whether we do now or not. We did own a number of car bodies upon which tanks were placed, and my recollection is that the tanks themselves belonged to the Chess-Carley Company and the cars to the railroad.

Q. Who owned the tanks, then, that went over your road?—A. Some of that kind went over; and some of the kind that belonged to the Union Tank Line.

Q. So far, then, as you know, all the tanks that went over your road belonged either to Chess-Carley Company or the Union Tank Line?—A. So far as I can recollect. There may have been others.

Q. Is there a general ownership of tank cars outside of those two concerns?—A. Oh, yes, sir; I think there are a number of lines and companies that have tank cars.

Q. But so far as you know, they never passed over your road?—A. So far as I know; I do not remember; I have no doubt that some of them have been used over our road.

Q. Did they fail to pass over your road because of their being excluded in any way?—A. I do not know that, sir. I recall now that there were a good many kinds of cars that did pass over our roads.

By Mr. GOWEN:

Q. If there is the same rate on tank cars to everybody and they are all treated exactly alike, honorably and fairly, by the railroad company, yet only one shipper can get tank cars, the rest are not much better off for having the rate are they?—A. No, sir.

Q. You would think not?—A. I would think not.

Q. It is quite safe for a railroad company which desires to be honest and discriminate at the same time?—A. Our railroad company has no tank cars of its own.

Q. Oh, no; but is it not quite safe for a railroad company which desires to be honest and at the same time to prevent any other person from shipping, except one person, to make a broad open rate to everybody when they know that only one person can take advantage of it?—A. Quite safe, I should think.

Q. Did Mr. Rice ever ask you to let him have some of your trucks upon which these tanks of other persons were carried?—A. No, sir; he never asked me and I do not know that he ever asked any officer of the company. He may have done it.

Q. But do you permit those tank cars, the tanks of which belong to Chess, Carley & Co., and the trucks of which belong to your own company, to be used by anybody but the owner of the tanks?—A. I ought to have explained that I do not know exactly under what conditions the Chess-Carley Company obtained those bodies from our company. I was never familiar with the arrangement; possibly they may have leased the cars. I do not know that they have, or what their arrangement is.

Q. That is, what the details of the arrangement are; but the fact is that Chess, Carley & Co. have secured the use of those cars?—A. Yes, sir.

By Mr. BYNUM:

Q. What proportion of the cars going south over your line loaded with petroleum come back loaded with cotton-seed oil?—A. I could not give you the exact proportion, but I should say most of them.

Subject to Southern Railway and Steamship Association classification, with the following exceptions:

No single shipment will be carried for less than 100 pounds first-class rate.  
Ale and beer in wood—When shipped in full car-loads, there will be allowed 4,000 pounds of ice or packing, per car, free, and all excess to be charged same as beer.  
Minimum weights for car-loads of light or bulky freights will be 20,000 pounds, unless a lower one is provided for in the body of the classification.  
Minimum weight on heavy freights will be 24,000 pounds when this weight can be loaded in common cars.  
And we hereby notify all concerned that on and after June 1, 1886, we will not accept, south of Cincinnati, Louisville, Evansville, or Cairo, less than our agreed percentages of the minimum through rates named above.

Very respectfully,

H. COLLEMAN,

## TESTIMONY OF J. M. CULP.

**J. M. CULP, sworn and examined.**

**By Mr. GOWEN:**

**Q. What is your business or occupation?—A. I am the general freight agent of the Louisville and Nashville Railroad.**

**Q. Where do you reside?—A. Louisville.**

**Q. How long have you occupied that position?—A. Over seven years.**

**Q. You have charge of making rates, I suppose, on business over the lines as general freight agent? You make the rates, do you not?—A. Yes, sir; subject to approval.**

**Q. By whom?—A. By the traffic manager at present.**

**Q. How long have you had an officer called a traffic manager?—A. Since the 1st of last January.**

**Q. Do you report to him?—A. Yes, sir.**

**Q. Prior to that you did not report to any officer I suppose, except the president or board of directors?—A. I reported to the vice-president.**

**Q. You have been asked to bring with you or to produce a statement showing the rates charged by your company on oil and the rebates allowed to various parties for the last five years. Have you got such a statement?—A. No, sir; I have not.**

**Q. Why not?—A. I did not have time to get up the information in time to bring it with me.**

**Q. Were you directed by anybody not to bring any papers from the office?—A. Yes, sir.**

**Q. By whom?—A. By the vice-president.**

**Q. Mr. M. H. Smith?—A. Yes, sir.**

**Q. And he knew, when he so directed you, that you were under subpoena to produce those papers?—A. I do not know.**

**Q. You do not know that fact?—A. I presume he did, but I do not know it.**

**Q. In what manner; what led to the intercourse between you on that subject?—A. He served notice upon me.**

**Q. In writing?—A. Yes, sir.**

**Q. Have you got it?—A. No, sir.**

**Q. Where is it?—A. In my correspondence.**

**Q. At home?—A. Either here or at home. I have a lot of correspondence with me.**

**Q. If here, will you kindly let me have it?—A. By direction from the vice-president or traffic manager I will.**

**Q. And not without?—A. No, sir.**

**Q. In other words, you consider then that your allegiance is primarily due to your superior officer in the railroad company and not to the United States?—A. The records of the freight department of the Louisville and Nashville Railroad are not my property. They are the property of the road. I do not control the road and have no right to take any of its papers.**

**Q. Have you not in your department a book showing the rebates or allowances or net rates at which oil has been carried by Chess, Carley & Co. over your line?—A. By advice of counsel I respectfully decline to answer that question.**

**Q. Will you tell us from memory, if you will not produce the papers, what the rates on oil have been, the net rates, to Chess, Carley & Co. over your line?—A. I could not possibly remember the rates.**

There are hundreds of thousands of rates over our road and I make no profession to carry any of them in my memory.

Q. But can you not tell us what proportion of the rate per barrel the rate to Chess, Carley & Co. was as compared with what other people paid?—A. I have no recollection, sir.

Q. You mean to say under oath here you could give us no information upon that subject unless it was derived from the production or examination of the papers?—A. I could not give any correct information, any information that I would be willing to swear to.

Q. You could not?—A. No, sir.

Q. Do you not know as a fact that your tank rate on through oil was less than one-half the rate on barreled oil?—A. The rate on tank oil has been less than the rate on barreled oil. Those rates are posted in our depot, were filed, and are filed with the Interstate Commerce Commission and are matters of public record.

Q. But that is the public rate. What was the secret rate to Chess, Carley & Co. prior to the passage of the interstate commerce law?—A. I decline to answer.

Q. What was the secret rate to Chess, Carley & Co. subsequent to the passage of the interstate commerce act, and prior to the recent decision of the Interstate Commerce Commission?—A. Since the interstate commerce bill became a law there has been no discrimination in rates as between individuals.

Q. Except that tank oil went cheaper than barreled oil?—A. That is not discrimination between individuals.

Q. But that is a fact, is it not, that the rates on tank oil are cheaper than on barreled oil?—A. Yes, sir.

Q. Were you one of the signers of that circular which has been offered in evidence [referring to exhibit marked G. B. E. 2]?—A. My name appears upon that circular.

Q. You authorized the issue of that circular, did you not?—A. I can not recollect; I presume so.

Q. State whether the effect of this circular was not to apply Chicago rates to the roads that are here named.—A. If carried out it would apply Chicago rates as a minimum.

Q. Had that system of applying rates been in existence before on these lines? Had Chicago governed these rates prior to that circular?—A. The rates on our line have been more than Chicago rates.

Q. But that is not the question. Had Chicago rates governed these rates prior to the adoption of this circular?—A. There was no fixed correlation of rates between rates to Chicago and to these points.

Q. Prior to the adoption of this resolution?—A. Yes, sir.

Q. State whether or not, as a fact, the result of this circular did not raise the rates on barreled oil which they controlled.—A. I can not state as to the fact, but my belief is not.

Q. Do you not know that although the classification on oil in barrels was reduced from fifth to sixth class in this circular, as a matter of fact the cost of moving a barrel of oil over your road was increased in consequence of the application of this rate to oil?—A. I do not know it. It may be proper to state that the question of oil was not likely thought about when that resolution was passed. It was intended to prevent lower rates from being made from the section covered by this resolution than rates from Chicago on articles that were shipped in common from the section.

Q. But Chicago was not a shipping point or producing place for oil, was it?—A. No, sir.

Q. State whether or not prior to the adoption of this circular Parkersburgh, Pittsburgh, and Marietta had not been the basing points for rates on oil.—A. Prior to the adoption of the circular the authorized basis of rates from each section was that they should be less than the rates given from Cincinnati, and this resolution provided that they should be not less than rates from Chicago. (No answer.)

Q. If I am to understand from you that you will decline to answer all questions that will give us any knowledge of the exact rate or rebate or allowance at which oil was carried for Chess, Carley & Co., in comparison with the rates paid by others; I will not ask you any more questions upon that subject. Am I to understand that?—A. I can tell better when you ask the questions.

Q. State whether or not, as a fact, the rates allowed to Chess, Carley & Co., and to their successors, the Standard Oil Company, were any lower than the rates allowed to other people?—A. I decline to answer that question.

Q. State whether or not drawbacks or allowances or other payments were not made to Chess, Carley & Co., on petroleum, which were not allowed to other people?—A. I decline to answer that question.

Q. State whether or not Chess, Carley & Co., or their successors, the Standard Oil Company, did not obtain through you or through persons in your employment knowledge of all other shipments of oil and the rate at which it was established.—A. No, sir.

Q. You were asked by the subpoena to produce all the correspondence between yourself and the Standard Oil Company?—A. Yes, sir.

Q. Have you produced that?—A. No, sir.

Q. Why?—A. For the same reason that I do not produce rates and rebates, etc.

Q. That is, you were directed not to do it by your superior officer?—A. That I did not have the time to do it, after receiving notice to do it.

Q. But if you had had time would you have produced it?—A. If instructed to do so.

Q. You were instructed not to do it?—A. Yes, sir.

Q. Then would you have produced it?—A. No, sir.

Q. Then your failure to produce it is also to be ascribed to your instructions from your superior officer?—A. Ascribed directly to my want of time to do it.

Q. Is not your correspondence outward and inward contained in books on file in the office?—A. Yes, sir; contained in files.

Q. Would it have been difficult to have laid your hand upon those files?—A. It would have taken a great deal of time.

Q. How many books would the correspondence of three years with the Chess-Carley Company be contained in?—A. Our books of correspondence do not contain only the correspondence with Chess-Carley Company, but I do not exaggerate when I say hundreds of thousands of people, and are very voluminous. Then our rates are kept in rate books, of which there are hundreds.

By Mr. SMITH:

Q. Where is the headquarters of your business?—A. The president's office is in New York.

Q. Of the Louisville and Nashville line?—A. Yes, sir.

By the CHAIRMAN:

Q. Where are the executive offices, Mr. Smith means?—A. In Louisville.

By Mr. SMITH:

Q. Is the vice-president of your road in Louisville?—A. His headquarters are there.

At this point the committee took a recess until 2.30 o'clock.

AFTER RECESS.

JOHN M. CULP—Recalled.

By Mr. GOWEN:

Q. I understand now that you are willing to give us some information, if not as to rates, as to the relative difference of rates between Chess, Carley & Co. and other people, or whether you have given them preferential rates. Did you not give preferential rates to Chess, Carley & Co. and the Standard Oil Company, which were not given to other people?—A. Prior to the 5th of April we did give in some instances less rates to the Standard Oil Company and Chess, Carley & Co. than we gave to other shippers. Those companies gave us their business to all points that we could reach, and gave us a large and regular business, and we gave them lower rates in some instances.

Q. I understand you that you justify your action on account of them giving you a large amount of business?—A. They gave us a large amount of business, and gave us business to many points that other shippers did not give us business to; did not ship business to Memphis, New Orleans, Vicksburg, and Mobile by river and by other routes than ours.

Q. Now, you allowed them mileage both ways on their tank cars, did you not, going and returning?—A. No mileage whatever was paid them on the cars or boats which were furnished by the Louisville and Nashville Railroad.

Q. On their other tank cars?—A. My belief is three-quarters of a cent a mile was allowed in both directions.

Q. Did you charge Mr. Rice at any time for hauling his empty cars?—A. Not that I am aware of.

Q. Did you not inform him that you would charge from a cent and a half to three cents a mile for hauling back his empty cars?—A. I think I did. Because I told him that we would charge him a cent and a half to three cents a mile for hauling his empty cars back, it did not follow that we would not pay him mileage the same as we do on all foreign cars.

Q. What is your rule with regard to paying mileage on foreign cars?—A. Three-fourths of a cent.

Q. You never charge the foreign cars of other companies for hauling them back empty?—A. If we receive a car-load transported over our line, we return it empty. We do charge the railroads for hauling empty cars.

Q. For instance, if empty cars from a foreign factory are going over your road in transit you charge for hauling them?—A. Yes, sir.

Q. You were not making any charge to the Standard Oil Company on their tank cars?—A. But most of their cars were coming back loaded, and the proportion of tank cars returned empty was, I think, quite as law, or perhaps less than that of box cars, in my opinion.

Q. In that instance you not only made no charge for hauling them back empty, but you paid them a mileage for carrying back empty cars. You paid the Standard Oil Company three-quarters of a cent a mile?—A. Yes, sir; and we would have paid that to Mr. Rice.

Q. If you paid him three-quarters of a cent a mile for hauling back his empty cars and charged him from a cent and a half to three cents for carrying them, he would have come out of the little end of the horn, would he not?—A. No, sir; if he had furnished us a like portion of return load we would have charged him nothing either.

Q. Did you not refuse to give him a rate on turpentine as a return load from Mobile, where he had an agency, and was doing business?—A. I do not remember.

Q. Can you not remember that?—A. No, sir; I can not.

Q. You were at the meeting in Louisville on March 14, 1888?—A. Yes, sir; I believe that was the date; it was in March.

Q. That was a meeting called to adjust rates on these southwestern lines, due to the interstate commerce decision for carrying oil?—A. Yes, sir.

Q. Do you remember who called that meeting?—A. I think the executive officers of the several lines instructed their freight agents to meet at Louisville. I was instructed by my traffic manager.

Q. Who were present at that meeting?—A. Mr. H. Colburn, general freight agent of the Cincinnati, New Orleans and Texas Pacific; B. T. Mitchell, general freight agent of Newport News and Mississippi Valley, western division; D. B. Morey, general freight agent of the Illinois Central Road, southern division; H. Coop, commercial agent of the Ohio and Mississippi Railway at Cincinnati, and myself.

Q. Had you any communication with any representative of the Standard Oil Company upon the subject of the rates you were to adopt?—A. No, sir.

Q. Upon the fact that you had a meeting there?—A. I had said to a representative that we were going to revise our oil rates.

Q. Did you have any communication with him upon the subject?—A. No, sir.

Q. Who was the representative?—A. Howard Page. After the meeting I notified Mr. Page that the meeting had adopted the same rates on tanks as on barrels.

Q. Now, in adopting the same rates on tanks as on barrels, did you make that rate per hundred pounds?—A. Yes, sir.

Q. How many pounds did you count to a gallon or a barrel of oil when carried in a tank?—A. An average of  $6\frac{3}{10}$  pounds to the gallon.

Q. You adopted that average of  $6\frac{3}{10}$  pounds to the gallon when carried in tanks?—A. Yes, sir.

Q. Don't you know, as a matter of fact, that refined oil, illuminating oil, weighs  $6\frac{1}{2}$  pounds to the gallon?—A. I have understood that refined petroleum does.

Q. Why did you adopt a lower rate?—A. Because we ascertained that  $6\frac{3}{10}$  was the average of naphtha, refined petroleum, and lubricating oils as fixed by the New York Exchange or Board of Trade.

Q. Do not lubricating oils weigh  $7\frac{1}{2}$  pounds?—A. We took what they had determined as an average. I had no reason to believe I was mistaken.

Q. You took what you believed to be the rate of the board of trade who deal with the subject?—A. Yes, sir.

Q. If the average weight that you have adopted is an average based upon petroleum, naphtha, and benzine, does it not follow that a man who ships nothing but refined petroleum and pays for 400 pounds per barrel is somewhat at a disadvantage as against his competitor who gets his oil carried at a little less rate than its actual weight, because the aver-

age weight of refined petroleum and naphtha may be lower?—A. I think not, because the man who ships the naphtha is at a disadvantage. That is to say, he pays more than he otherwise would. But I am not aware of there being any refiners who ship refined petroleum alone and do not ship naphtha.

Q. You think they would ship about the same quantity?—A. My understanding is they ship the same proportion; but I am not fully advised as to that.

Q. Can you tell me whether your rates on coal oil from Cincinnati to Savannah are not 40 cents a hundred pounds now?—A. Yes, sir.

Q. Is not the return rate on turpentine 25 cents?—A. I can not tell.

Q. Don't you know it is greatly less than the rate on coal oil?—A. It is usually very low as against the water competition from Savannah; but I do not remember whether it is 25 cents or more.

Q. Is not turpentine a much more valuable product commercially than coal oil?—A. Yes, sir.

Q. Four or five times as much?—A. I am not posted as to that, but I think four or five times as much.

Q. Don't you know, as a matter of general information, that there is a cotton-seed oil trust?—A. I have heard there is.

Q. That controls the shipments of cotton-seed oil?—A. It controls a portion of it.

Q. Does not cotton-seed oil come back as return loading in petroleum cars?—A. To a certain extent.

Q. Quite largely, certain portions, is it not?—A. I can not say whether it is quite largely or not, but there is a great deal of it.

Q. What is the rate of cotton-seed oil coming back?—A. I do not know.

Q. Is it put upon the same category as coal oil or turpentine?—A. It is made a rate to itself usually?

Q. Is it lower or higher than turpentine?—A. I really can not recall.

Q. It is considerably more than the rate for coal oil?—A. In most instances it is.

Q. Do you remember a tariff-sheet that went into effect January 23 last?—A. On what?

Q. A general tariff-sheet on freights from Louisville and Cincinnati, we will say, to Atlanta, Knoxville, Chattanooga, and Rome, Ga.?—A. I do not recall the tariff; I have no doubt it was issued.

Q. The question I want to ask you, after calling that to your recollection, is this: Whether on articles other than oil on that tariff the rates from Louisville and Cincinnati are not always the same to Atlanta, no matter whether it comes from Louisville or Cincinnati?—A. To certain points in that tariff, if it be the one including Atlanta, Rome, and so on, the rates from Cincinnati are the same as from Louisville to other points printed in that tariff—the rates from Cincinnati, Ohio.

Q. I am speaking now of the rates from Cincinnati compared with the rates from Louisville to Atlanta?—A. The rates are printed the same.

Q. Why is it, if the rates on other articles are the same, you have made the rate on oil from Cincinnati 56 cents, and from Louisville 39 $\frac{1}{10}$  cents?—A. Coal oil that is shipped through Cincinnati and through Louisville comes from Parkersburgh or Marietta, or Cleveland, or points in that territory, and the rates from those oil producing regions to Cincinnati are less than Louisville; and in adjusting the oil tariff we aimed to adjust it so that the rates should be the same from the oil producing regions, whether shipped through Louisville or Cincinnati. With other articles

embraced in that tariff to which you refer, it is not the case. The circumstances are different. A great many articles are shipped from Louisville and Cincinnati proper, and a great many articles come from points north of Louisville and Cincinnati, the rates on which are approximately the same, and hence on those articles we make the same rates.

Q. Upon what principle does the man whose oil reached you at Louisville and goes over your road, get his oil at  $39\frac{2}{10}$  cents, while the man who goes to Cincinnati pays 56 cents, while the fact is that on a great many articles the rates are identical from Louisville to Cincinnati; does not that give the man who shipped from Louisville a great advantage over the man who shipped from Cincinnati?—A. Let me make a statement. The answer I just made had reference to the oil rates as issued March 29, subsequent to the meeting in Louisville. The rates that you are speaking of I see are January 23. The rates on oil from Louisville to points south should be less than from Cincinnati. As to the rates on other articles the circumstances are different.

Q. Why should the rates be less for other articles; why should you give to oil a less rate from Louisville to Atlanta than from Cincinnati to Atlanta? You charge the same on other articles from Louisville to Atlanta that you do from Cincinnati to Atlanta?—A. If we charge the same rate on oil from Louisville as from Cincinnati, a lower rate would be made from Cincinnati than from Louisville, and the route through Louisville would carry no oil.

Q. Do you get any oil now at Louisville to be shipped to Atlanta? Whose oil do you get from Louisville to Atlanta?—A. We get, I suppose, all oil; oil from Cleveland and Pittsburgh. I am not acquainted with all the places. Oil from Marietta is shipped to Louisville, or it has been in the past, as well as to Cincinnati; so that you may say that all oil can come to Louisville as well as Cincinnati.

Q. It can?—A. Yes, sir; I think it can.

Q. If the rate is different from Louisville to Atlanta than it is from Cincinnati to Atlanta, would you permit a Marietta producer to ship his oil to Atlanta by Louisville?—A. Yes, sir.

Q. And get the benefit of that rate?—A. Certainly.

Q. Does that apply also to Knoxville, Chattanooga, and Rome, in case there should be a difference?—A. Yes, sir.

Q. How much more would it cost a shipper in Marietta to get his oil to Louisville than it would cost him to get it to Cincinnati?—A. I can not state positively, but my understanding is that the difference is about 4 cents a hundred pounds to Louisville than to Cincinnati.

Q. Only 4 cents?—A. That is my understanding.

Q. State whether or not Messrs. Chess, Carley & Co., or their successors, the Standard Oil Company, had not means of information through your office as to what rates other people were paying, and as to what shipments other people were making?—A. Not to my knowledge or with my consent.

Q. Did you not have communication with them directly upon that subject?—A. I believe there was a communication received from them.

Q. What was that; to what effect? Have you a copy of that letter?—A. No, sir; to what letter do you refer?

Q. The letter directed by them to you upon the subject of other people's shipments over your lines, the rate of such shipments, and what should be done with them.—A. I have understood that a letter was received from Chess, Carley & Co. in regard to the shipments of Mr. Rice.

Q. What was the effect of it?—A. The effect was calling attention to

the fact that a lower rate had been charged on oil shipped by another party than the rate charged on their shipments.

Q. And do you remember what remedy was sought to be applied?—

A. They asked us in effect to have the proper rate charged; to have this incorrect rate withdrawn. That is my understanding; I have never seen the letter.

Q. You have never seen it?—A. No, sir.

Q. I will show you a letter and see if this is not it (handing witness a letter).—A. This is what I have seen published.

Q. I ask you if that is not the original letter of Chess, Carley & Co.?—

A. I recognize it as the letter.

Q. Was not that letter received by you?—A. I understand it was received in the office.

Q. Is it not stamped with your office stamp?—A. Yes, sir.

Q. Indicating that it was received in the office?—A. Yes, sir.

Q. What date?—A. June 17, 1881.

Q. What is the date of the letter?—A. June 16, 1881.

Mr. GOWEN. I offer this letter in evidence, which is as follows:

CHESS, CARLEY & Co.,  
Louisville, June 16, 1881.  
[L. & N. stamp, June 17.]

J. M. CULP, Esq., G. F. A.:

DEAR SIR: Wilkerson & Co., Nashville, received car of oil Monday, 13th, 70 barrels, which we suspect slipped through on the usual fifth-class rate. In fact, we might say we know it did, paying only 41.50 freight from here, charges 57.40. Please turn another screw.

Yours, truly,

CHESS, CARLEY & Co.

The WITNESS. I desire to say, with regard to that letter, or rather with regard to the rate charged on the shipment referred to in that letter, that it was less than the proper rate. It was less than any rate that we had with Chess, Carley & Co., or I believe ever have had. It was a fifth-class rate. Our rate on oil from Louisville to Nashville was higher than fifth class, and I presume the desire of Chess, Carley & Co. was to have at least as high a rate as was charged on their shipments charged on this. Had that letter come to me—had I seen the letter—I would have simply understood it that it meant that we should require our agents to charge at least as high a rate as was charged on the shipments of Chess, Carley & Co. Mr. Broadus, who received this letter, as he informed me, tells me that is the interpretation that he put upon it.

Q. Is the commercial phrase for equalizing rates among railroad people "turn another screw"?—A. I can not say as to that. I do not think it is, and I can not tell why that was used. There was no understanding, agreement, arrangement, or anything else whereby Chess, Carley & Co. could order us to turn on another screw or require us to advance or charge anybody any rate whatever, higher or lower than their rate. The man who wrote this must evidently have been crazy. He afterwards died in the insane asylum.

Q. Who was he?—A. A. B. Hathaway.

Q. Was he a member of the firm?—A. No, sir; he was an employe.

Q. Do you say that at the date of that letter the rate on oil in barrels was higher than fifth class?—A. Yes, sir.

Q. Higher than fifth class?—A. Yes, sir.

Q. Do you not, by your circular of 1886, put oil on the sixth-class rate?—A. This antedated 1886.

Q. Did not the circular which I have shown you make oil in barrels sixth class?—A. That included some points on the Mississippi River.

Q. State whether or not that circular of 1886 did not put oil in barrels in the sixth class.—A. Yes, sir. But Nashville is not on this tariff; and as I explained to you, or attempted to explain, this morning, so little figure did the oil rate cut in this that my belief is that this sixth-class rate, even to this point, was not adopted. That is my impression.

Q. Have you got the tariff that was in force when that letter of Chess, Carley & Co. was written? Have you got it with you?—A. No, sir.

Q. You had a tariff here just now.—A. That is a tariff that was issued March 29.

Q. Will you send us the tariff sheet of your company that was in force at the time that letter of Chess, Carley & Co. was written?—A. I have no objection to doing so, but I will ask the counsel.

Q. Will you agree to do that?—A. Yes, sir.

Q. And send it to the chairman of this committee when you get home, as soon as you can do it?—Yes, sir.

LOUISVILLE AND NASHVILLE RAILROAD CO.,  
OFFICE GENERAL FREIGHT AGENT.

*Rates of transportation (classification herewith) taking effect January 19, 1881, and in force June 16, 1881.*

J. M. CULP,  
General Freight Agent.

[John M. Culp, General Freight Agent. H. F. Smith, Assistant General Freight Agent.]

LOUISVILLE & NASHVILLE RAILROAD COMPANY,  
OFFICE GENERAL FREIGHT AGENT,  
Louisville, Ky., May 4, 1881.

GEO. RICE, Esq.,  
Marietta, Ohio :

DEAR SIR: Coal oil, Fayetteville and Dechard, Tenn. Yours 2d. The rate Louisville and Nashville Depot to points named on coal oil in car-loads are: To Nashville, 90 cents per barrel; Nashville to Fayetteville, 40 cents per 100 pounds; Nashville to Dechard, 27 cents per 100 pounds.

Through rate made by adding the rates from Nashville to our tariff rates to Nashville.

Yours, truly,

J. M. CULP,  
General Freight Agent.

**TESTIMONY OF F. B. CARLEY.**

**F. B. CARLEY**, sworn and examined.

By **Mr. GOWEN**:

**Q.** Where do you reside?—**A.** Tuxedo Park, near New York.

**Q.** Were you a member of the firm of Chess, Carley & Co.?—**A.** Yes, sir.

**Q.** At what time?—**A.** Through its whole history.

**Q.** Over what years does that extend?—**A.** I do not remember exactly, but I think somewhere about 1869 or 1870 we formed that firm.

**Q.** When did you terminate it?—**A.** When we formed the Chess-Carley Company.

**Q.** When was that?—**A.** Four or five years ago. I was president of it until its dissolution.

**Q.** State whether or not it was dissolved when it sold its property to the Standard Oil Company.—**A.** Yes, sir.

**Q.** Are you connected with the Standard Oil Company?—**A.** No, sir.

**Q.** You occupy no position under it?—**A.** No, sir.

**Q.** Where did you reside during the time you were a member of the firm of Chess, Carley & Co. and the Chess-Carley Company?—**A.** Louisville, Ky.

**Q.** Had you charge of that business?—**A.** Yes, sir; I was sole and exclusive manager of the Chess, Carley & Co. and of the Chess-Carley Company.

**Q.** State what arrangement you had with the Louisville and Nashville road for freight on oil over that road.—**A.** I would like the committee, in answering that question, to let me fully state the entire history of my relations to the Southern railroads in that capacity, in order that they may see both sides of the question. Am I at liberty to put it that way?

The **CHAIRMAN**. You may go on.

The **WITNESS**. About fifteen years ago I conceived the idea that a large business that had never gone through Louisville, and could not go without some special movement of transportation or system of transportation, might be secured; and to that end I opened negotiations with Albert Fink and Milton H. Smith, the vice-president and general traffic manager of the Louisville and Nashville Railroad, stating to them that on account of the competition in transporting by schooners from New York, Philadelphia, and Baltimore to the Southern points, Charleston, Savannah, Brunswick, and Jacksonville, that none of the oil business, which you remember originates at the point you have named and was produced almost altogether in western Pennsylvania, could never come by rail and they could never get it without some system being established of return freights. On the other hand, the turpentine which I conceived the idea of using as a return freight was produced and is produced on the Atlantic coast, near Charleston, near Savannah, near Brunswick, and near Mobile. They concluded to send me South to look the matter up, and that was my first pass and one of the few that I ever rode on, one out of a few I ever used. I went down and made up my mind that we might have to lose money on the oil for two or three or four years, but that the question of leakage in the South and the question of leakage on the turpentine, and the extreme low cost of second-hand packages in Charleston and Savannah would furnish a margin that would enable us to supply Chicago and the Northwest with turpentine and still hold a rail route on oil to these points.

On agreement with them I had made a few tanks. Those tanks held from 3,300 and something to 3,600 gallons. Mr. Albert Fink had them weighed and they weighed about 7 to 12 per cent. more than 20,000 pounds; but it was a freight both ways that they could not get without some such system. They agreed to call it a straight average of 20,000 pounds per car, and the business commenced. We made money in a general way in that business, although sometimes for five years in succession we lost money steadily on the oil branch of that business in some of the Southern markets; but we succeeded in getting most of the turpentine business of the entire Northwest as the years went on. A large portion of turpentine is produced in the neighborhood of Mobile which had been going to New Orleans, and there was handled by commission merchants and shipped by river and at great loss of leakage.

I then said to the officers of the road named, "If we put these tanks into New Orleans and you will bring them back empty as far as Mobile, we can take that Mobile turpentine into the Northwest over the line of your road, comparatively none of which you are getting now." They said, "Go ahead." I went down and called a convention of the turpentine manufacturers, and before I left the room the second day had made a contract to buy the entire crop. We therefore had the exclusive handling except a very slight percentage against us of the return freight from Mobile north, and we made money on the turpentine most of the time.

Up to this time all the railroads in the South were 5-foot gauge, as I remember it, while in the North they were the standard gauge. Therefore, in all the oil freight problems north of the river Chess, Carley & Co., and the Chess-Carley Company had very little to do, and up to this time until the Illinois Central obtained control of the New Orleans and Jackson Railroad there was nothing special to change this general arrangement. When they bought the New Orleans and Jackson Railroad they then put on in favor of our competitors a rate from Cleveland via Chicago to New Orleans, which was much lower than the rate that we had been paying on our turpentine and on our oil. I believe I forgot to state that the rate fixed by all the Southern roads—when we undertook that we connected with the Louisville and Nashville, as I remember it—was a cent a ton a mile. Any way the rate was considered low in the South compared with rates charged by other roads in the South at that time, but was not low, probably, for a Northern road with a great deal of business. These Chicago shipments, therefore, went into very severe slaughterous competition with our policy of south-bound oil and return loads of turpentine, and I presume that competition on the part of the Illinois Central cost our concerns \$40,000 one way or another in losses. The principal reason that we were hurt by that competition was that it led into the South the larger tank cars, not only a lower rate being given than our rate, but a great deal larger quantity going at that rate.

Q. At the same fixed rate?—A. At the same fixed rate. To save ourselves from that competition I commenced running over that line. Soon the Cincinnati Southern began to get into the South at different points, and that road had a narrow gauge, and so from one step to another the capacity of the tank cars getting into the South was so modified that we, step by step, in making new cars, made them larger, still holding wherever we could the Southern roads to the rate of 20,000 pounds, which we could not always do. Very generally, and some roads always, weighed those cars—the Mobile and Ohio. I do not know that I could exactly name the roads, but we held for a long time, though,

that 20,000 pound rate on tanks after they had run up to 27,000 or 28,000 pounds. Now, here is a point I wish the committee to very thoroughly understand, because as I understand it you want to know the meaning of this relation between the Chess-Carley Company and the Southern railroads, what effect it had on other shippers and on the people of the South and on the merchants of the South. Now, I wish to say up to this point——

Q. At what time is this that you are speaking of?—A. I am not speaking in calendar time, but up to the first ten years of this business no shipper, no outside refiner was prejudiced to the amount of a single nickel, because there was no outside refiner that could have put oil at any sacrifice that he chose to make temporarily into Charleston, Savannah, and such points by rail unless he had brought back the turpentine and had developed a business of the same kind which would require him to establish tanks in northern cities and make various expenditures. But meanwhile all this time the low rate we obtained gave to the Southern people a cheaper oil than they otherwise could have had, because we drove out the shipments in the schooners from Baltimore and Washington, and we stopped almost the shipments by river down the Mississippi River by boat. I think that the Chess-Carley Company furnishing oil to the South gave the Southern people a lower price for oil than they could have had without this plan. Now, that did not always go to consumers entirely, but was generally divided between the consumer and the Southern jobber. Now, all the turpentine manufacturers in the South received a great deal more for that product because of our existence. That gave new markets, and we took the turpentine that would otherwise have gone for exports and pulled it through Louisville by this co-operative scheme into the Western markets, at better prices to the manufacturers than they would have received in the South for it.

Now, as I am proposing to tell everything I remember about this thing and be full about it, I will take up the subject of barreled oil a moment. Let me say first that I do not think the Chess-Carley Company, or the Chess, Carley and Company, and I mean both when hereafter I will speak of myself—I do not think we ever received rebates on tank oil, except in one instance, which I will relate later on. The policy was to make out a through billing, and the Southern roads conformed to it, and the advantage we had later was in the rate. Now in barreled oil I can remember of two instances, and in naval stores one, where I think we had what would seem at first thought a decided advantage of outsiders. We found when we took this oil to Charleston, Savannah, and Mobile that on account of the cheap packages we could barrel it there and send it back into the interior. Therefore it was not our interest to have the rate on oil in barrels put down from any point in the North. We never sought to have it put down. Whenever we found others were getting a lower rate than we, we would simply ask that all our rates on barreled oil be reduced, and the roads would answer that they could not afford that. We would say you are charging others less than you charge us. I remember of two cases, important because memorable, and because the markets were large, where I think—I know—we received rebates, the exact amounts I will not be able to tell you. Refineries situated as the one which has been mentioned here, Mr. Rice, and which were competitors of our interest, were located on the river generally, and at a certain season of the year, when the river was in good condition, they could get a very low rate. For instance, to Memphis I have known them to ship for 50 and 60 cents a barrel generally,

Now, the rate that it cost us to get our oils from the primary market to Memphis I doubt if it ever went under a dollar. I never knew of it.

Q. You mean barreled oil?—A. Yes, sir; I am speaking now of barreled oil. I conceived the idea that probably by undertaking with the Louisville and Nashville Railroad that they should have all the oil that was used at Memphis, that we could get a nominal advantage of their tariff. Last year, I said, Memphis used, we will say, 10,000 barrels of oil. Now if you will help us to increase the trade of Memphis up and down the river where you otherwise could not reach the trade, and will give the Memphis merchants an advantage of the tariff that stands all the year around, we will make an agreement with them to hold the business the whole year round on the line of the road, and when the water rate comes in and we are losing money on the shipments we will take what we make when the river is frozen up and rates are high on the river and we will equalize it, and we will keep the business the year round on the railroad, and they agreed to that. I called the Memphis merchants up to Louisville and we all made an agreement by which the Memphis merchants were to get this amount that the road would pay us. A part of the time we paid that amount direct to the merchants, and part of the time we fixed it in the price. But it was all understood by the merchants, and even when the river shipments came in and the price of oil went down at Memphis we would reduce our prices below the agreement and try to wipe out this river competition, and we pretty well succeeded in doing it. That grew into a rebate to Memphis. It was in the shape of rebate, because we claimed that unless the shipper sent his oil all the year round over the road he must not have the same rate. I never asked the Louisville and Nashville or any other railroad officers in my life to give us a rate conditioned on the agreement that, if any other shipper would come and do the same business in the same way, that he should not have the same rate. I know I have been asked just informally by railroad men once or twice as to what answer they should make. They said here is a man, Rice, for instance, writing us that you are getting a lower rate. I said if he comes here and makes his shipment all the year round on your road as against the river, you will do for him what you will do for anyone else. Now we had a similar arrangement as that at Nashville. As far as I remember those are the only circumstances in which we received what you call a rebate on barreled oil.

Now there is one case I want to tell, because I want the committee to feel convinced that I have told the whole thing about this business. I have retired from it and I do not want anybody to think that having spent the whole years of my life in it I have anything to conceal. At Mobile there was a great deal of turpentine and rosin produced on the Louisville and Nashville Railroad, only a little distance out of Mobile upon the line of the railroad. If it went into Mobile it would go over to New Orleans and go up the river, the shipment of rosin especially. Whereas if it were shipped on this point on the line of the road, it would come the whole-length of the Louisville and Nashville to Cincinnati or Louisville. I made an agreement with them at one time that we would so bid up the prices for rosin and turpentine at Mobile, that if they would fix it we would drive off the schooners by that price and the New Orleans shipments. That if we did it, as soon as we had done it they must not drop the rate to people whom we had driven off in that direction and give them the same advantage over the road, the same tariff rate. We agreed that if we did not succeed at it we would pay them the loss. I think one year we paid them—I do not remember the

amount—because we could not do it; it was impracticable. But generally, two or three years, as long as it run, we succeeded in keeping the schooners from getting that profit.

By the way, I wish to say that as soon as the other railroads got to working in the South, we immediately opened our business at Covington, practically Cincinnati, and at Cairo, so as to stand neutral between the different roads, and we undertook to continue, by combining all the roads in this co-operation with us, the same general business we had been conducting, and generally they conformed to the business because they thought and believed they could not get it without, although generally the Illinois Central did not do that. I would like to say about that letter—poor Hathaway, he is gone now. He was our stenographer in our office in Louisville; I never saw the letter in my life; I do not want to state the conclusions, but I want to state the fact in this way, which is the fact. We always paid cheerfully the rate on barreled oil, because it protected our tanks. We shipped a great deal of oil in barrels; I suppose that we shipped ten times as much as all other outside refineries together in barreled oil without reference to tanks, and I never—in two or three instances I think we did get lower rates because of some peculiar circumstances which arose from time to time between the clerks and the office, but in the spirit of the business between myself and the head offices of that road, it was never the policy for me to request a modification of the barreled rate. The initial road on general business, as you have suggested several times, makes the rate; but the Louisville and Nashville, even before I had commenced working with them, and in all of Milton H. Smith's connections with the road, his idea always was to make oil arbitrary and put an arbitrary rate on it. He charged first-class for a single barrel, thinking that it spoiled the car and made it unfit for other goods, and because it made considerable loss in its leakage. In early times the packages were not made so well, and leakage was great in hot southern countries. He said it was entitled to a higher rate. That helped our business in distributing to the Southern stations. It was our interest that it should remain higher than on oil in tanks, but when an initial road would take oil through at a rate lower than the regular rate it would put us to a disadvantage.

This much I know about this letter that Hathaway wrote. He would say to me, Mr. Carley, there is another car-load gone through to Wilkerson, or to whoever it might be. I said, I do not think it is right on the part of the road. Can not you get them to stop it? I mentioned it to them before. They said it was the fault of the clerk; that it was clerical. I used to complain to Hathaway, and, as he had been in the office and was very familiar with them, he personally writes this letter to ask them to tighten the machinery of their office up there, using this unfortunate expression which has been thrust in my face for several years. [Laughter.] Now, I am just as certain, without having the actual figures before me, that we were paying higher than this as any fact I have ever stated in my life. Otherwise there would be no meaning in the letter. Otherwise it would have been absurd to have asked them to tighten up the machinery of their loose office.

Q. That is not the expression?—A. I know the object was to so hold his clerks up to their duties that they would not let a car-load go through without changing the billing from this arbitrary rate. Now I think I have said all I have to say.

Q. You have given your explanation before you have answered the questions. Your business was largely in shipping tank oil to the South, was it not?—A. Yes, sir.

Q. Did anybody else at that time but you have tanks on that road?—A. Most of the time they would not, but quite often they would break out on us. For instance, a man by the name of Pettit got on some tanks at New Orleans.

Q. To what extent did you turn the screw on that occasion?—A. I dropped the price on him pretty lively. [Laughter.] I want to say, as far as competing is concerned, the Standard Oil Company never had a competitor who cut the price greater than I did to drive out anybody who got in the way.

Q. Did you not for a long period of years have a rate on the tank-cars of 20,000 pounds in the car, irrespective of the oil in the car?—A. Yes, sir.

Q. Down to what period of time did that exist?—A. To state the exact time would be difficult for me.

Q. Mr. Culp or Mr. Broaddus said it extended down to about the past year.—A. I think he was wrong. I think it was mostly obtained about the time I went out of business. I retired from the business eighteen or twenty months ago.

Q. You can only speak with reference to your own knowledge upon the subject?—A. Yes, sir.

Q. Your business was largely successful by reason of the fact that in shipping oil to Southern places in tank-cars you could take advantage of the low price of second-class barrels in those places?—A. Yes, sir; it was a very important interest.

Q. To barrel the oil there and then ship it local through the district in barrels?—A. Yes, sir.

Q. In consequence of that class of business which practically nobody but yourself at that time was engaged in or could engage in?—A. No; that is not practically right.

Q. But not over the Louisville and Nashville road?—A. No.

Q. It was to your interest to maintain as large a rate on oil as possible?—A. Yes, sir.

Q. And you were quite willing to pay on your own barrels the highest rate, because you had a margin on your own barreling business?—A. Yes, sir.

Q. Now, how much lower per barrel of oil transported did you get your transportation over the Louisville and Nashville road when you shipped in tank than other people did in barrels?—A. The general classification of oil was fifth class in barrels and sixth class in tanks. I think that is the classification. Now we have just as much advantage in that difference to those particular points I speak of, like Charleston and Savannah, as the 20,000-pound rate would figure out.

Q. In addition to the difference in classification?—A. Yes, sir; that is, to those points. But as far as competition with other refiners is concerned, that was distinctly to points where other refiners could not ship at all, nor could we.

Q. Why could you not?—A. Because we could not stand the rate. Oil can not go from Pittsburgh to Louisville and by rail to Charleston against the rate of 50 cents a barrel from Baltimore.

Q. But you shipped it from your district to Charleston over the Louisville and Nashville Railroad?—A. Yes; but then our margin was in the package that we found in Charleston cheap, and in the fact that we took a return load of turpentine on which we made some commercial margin, and it was by grouping the margins together. Sometimes we worked our oil business at a loss, but we could get an average profit out of it.

Q. And you made a successful business out of it?—A. The average. But I say no outside oil refinery could have possibly done that business.

Q. Do you mean to say that the firm of Chess, Carley & Co.—A. I mean to say no outside refinery could have put that oil down there as a freight without reference to other articles.

Q. If the railroad company had given to somebody else, a competitor of yours, exactly the same rate that they gave you on tank-cars, and billed it through at 20,000 pounds, irrespective of the weight, if those other men were of equal intelligence with yourself, they could have transacted the same kind of business?—A. If they had taken back the return load the weight would have worked out as very often it did. They would have suffered a loss on their oil if they did not take back the turpentine. Then we would have tried to make up on the turpentine what we lost on oil.

Q. They could have done that too?—A. Yes; it would have been a duel, that was all.

Q. Do you know of any reason, legal or moral, why the Louisville and Nashville Railroad should select Chess, Carley & Co. as the sole people in the United States?—A. No, sir; I think they did because we were at the front. We had our tanks loaded through at the front, and accomplished our work without waiting for anybody else. We are talking about a branch of the business that was originated by myself. This whole business—the transportation of oil in tanks, the running of cars in the streets, bringing back turpentine as a return load—put me ahead of all other shippers in this regard.

Q. Don't you know that your rate per barrel, when oil was sent in tanks, making allowance for the billing of 20,000 pounds to the tank, was one-third of the rate that barreled oil was charged for?—A. It was a class of business that no other refiner ever undertook to do. No shipper ever offered freight from Pittsburgh to Savannah to amount to anything.

Q. You did not ship all of your business into this competitive district?—A. I am speaking of that class of business now on the 20,000 pounds. It was put on simply for that kind of business.

Q. Did you not get a rate of 20,000 pounds on other business? Did not they carry for many years, or for a long time, all your tank oil at a billing of 20,000 pounds, no matter where it went to?—A. Now let me be clear. I could myself say we never did, and yet I can not say it entirely for this reason. It was all that same class of business. After some years we were furnishing enough empty tank-cars from oil used in Charleston and Savannah to bring back as much turpentine as we could sell. We paid them to take the empty cars down to the coast—so much per ton, \$10 or \$15, I think—and then it would come back as if we had sent it subject to that point. So that really the whole tank business, in its conception and as carried on, where the rate was wrong, as you might call it, was a class of business that an outside party, unless he did what we did, could not do this business.

Q. If an outside party had the same rates that you had, and were men of equal intelligence, they could have done what you did?—A. I don't think anybody would have failed to get those rates who would have asked Albert Fink or Milton H. Smith.

Q. Did anybody else get them?—A. Yes, sir; occasionally. The firm of William Washburn & Son shipped into Nashville, but not less than two or three years. They had just as good rates. It was a question of commercial competition. That man Gabriel, of Columbus, Ga., and C. B. Pettit, at New Orleans, had oil. In those cases it got down to commercial competition, but they did not have the turpentine as a return load, and of course we had the advantage. They could not buy

turpentine. As far as the Atlantic coast was concerned, we never controlled that.

Q. I am directing your mind to local lines, and to sea-ports in the United States reached by schooners. Did you not have special rates from the Louisville and Nashville on tank cars to those points over other competitors?—A. I think so. That is to say, I think during the last two or three or four years, when the other roads competed with the Louisville and Nashville very much, that in some instances they allowed us to go with tank oil where they did not expect to get the return load. I forgot to say that was a part of my original agreement and was kept up all the time with these Southern roads, that we would fill all the tanks back within a very slight percentage. It was a return contract and it only allowed us a small margin. I think it was 8 or 10 per cent. of empty tanks to come back. The last three or four years we run bulk cars to Chattanooga. I think the proper way to answer that question is to say that in some cases we did, but it was not the general policy of the business.

Q. During the last two or three years of your company in this business, could anybody else get tank cars over the Louisville and Nashville Railroad?—A. A tank costs about \$225. That is only the cost of the tank. I think if a man had come into that office and said "I have bought two or three tanks and want to put them on your car," I think they would have given him the right.

Q. Don't you know attempts were made to do that unsuccessfully among your competitors?—A. If it is not strictly improper to say so, I do not think an honest, proper attempt was made. I think it was made by the competing lines of the Louisville and Nashville. I don't think anybody intended to do a business with them, because they would do it through competing lines and would stand a better chance.

Q. You put tanks upon some of their cars?—A. Yes, sir.

Q. What arrangements did you make for that?—A. None at all. Simply that we would fill them South and bring them back with turpentine.

Q. They gave you their trucks?—A. Yes sir.

Q. You furnished the tanks?—A. Yes, sir.

Q. Did you get a margin for that?—A. No, sir.

Q. Were you not enabled by your arrangement with the railroad company, practically, if you chose, to wipe out and destroy all competition with you in your oil?—A. It would have very much less to do with it than you would think. I will tell you just how I compete. For instance, I would go to New Orleans and Memphis and get the jobbers, instead of competing on oil and making that their leading article, to make their fight on sugar, or lard, or anything they chose, and get them to stand neutral on oil, and I would get a chance to drive them off by so doing.

Q. Have you not frequently, as a shipper of oil, taken part in the competition with grocers and others in other business than oil in order to force them to buy oil?—A. Almost invariably; I did that always.

Q. Will you look at these circulars and letters and say whether they were from your establishment?—A. Anything that means that I would drop the price on my competitor and have it out with him is true, without reading the letters.

Q. Just examine those letters and see if they are not the originals [handing witness letters].—A. Yes, sir; I think I wrote that letter. I do not think I was justified in that position, although he was a very mean fellow. [Laughter.] Let me say now about this whole class of

merchants in the South, that 99.9 per cent. of all the first-class merchants in the South were in close sympathetic co-operation with us in our whole history. I doubt if that is an exaggeration. In other words, where there was any slip, it was some man who wanted to blackmail us and I would sometimes write those bluffing letters; but it was invariably somebody who asked us to do something not commercial is the reason I wrote them in that way. These letters were written by me.

By Mr. CROUSE:

Q. What is the date of those letters?—A. 1880. That man wanted us to pay him more than we paid the other jobbers, because he thought we had the market sustained and he could blackmail us into it. I bluffed him in language, and language was cheap. [Laughter.]

By Mr. GOWEN:

Q. You issued a circular you called a license to people to sell the oil, guarantying them a profit?—A. That was on trade-mark oil.

Q. Where was that oil manufactured?—A. Part of the time in Louisville, and afterwards made at Cleveland.

Q. Did you have a refining establishment at Louisville?—A. A small one.

Q. What was its capacity?—A. There is hardly a word to be applied to it. It was built originally to refine the small quantity of oil that was produced in Kentucky; there was a small amount.

Q. Am I to understand that your business in oils at the South at the period of which you are speaking, was the business of a merchant rather than of a manufacturer of oil?—A. Yes, sir.

Q. Where did you buy your supplies?—A. Ninety-five per cent. was furnished by the Standard Oil Company or some of its branches.

Q. Did you have a particular district of the United States in which you had the sole right to place your oils?—A. They used to say I wanted the whole territory.

Q. What territory had you?—A. I did manage for a while the business from Charleston, S. C., to Denver, including Texas, and Saint Louis, and then afterwards I had more than I could handle. I agreed with them to confine my operations from the Mississippi River to the Atlantic Ocean in the South.

Q. How far north?—A. Not north of Louisville.

Q. You had practically, so far as the Standard Oil Company were concerned in their arrangement with you, the exclusive control of that territory as the distributing medium?—A. Yes, sir.

Q. Did you sell as a merchant or as a factor?—A. As a merchant.

Q. You never sold on commission?—A. No, sir.

Q. Whatever rates you made with the railroad were entirely in your behalf?—A. Entirely so.

Q. Did they ever share in any reduction of rates or was that question determined by the price at which you paid them for their oil? When the price was established did that price depend in any manner upon the rate you were to get from the railroad?—A. No, sir.

Q. You fixed a price for that, and you became the merchant and owner of the oil?—A. Yes, sir.

Q. You were active and made a great many efforts to enlarge your business and drive other people out of competition. Was it not a point of your business character that you would drive out competition?—A. I was very fortunate in competing; but I want to say that it was not by the direction of the Standard Oil Company or at their request. It was

simply my way of doing business. I thought it was cheaper in the long run to make the price cheap and to be done with it, than to fritter away the time with a competitor in a little competition. I put the price down to the bone. (Laughter.)

Q. You put it down so as to kill him outright?—A. I did not look to him. I want to say that so far as the Southern merchant is concerned I never made a trade with him that did not bring him money.

Q. Now, tell this committee whether the man who has secured a certain rate over the railroad does not have an advantage which his competitor does not possess?—A. Yes, sir; decidedly.

Q. The fact that you were known as the favorites of the railroad company gave you a position in that community that no other person could attain?—A. It did in some localities; in others it did not.

Q. On your identical road?—A. Yes, sir.

Q. Now state whether you had not in your employ the State inspector of oils and gave him a salary?—A. Yes, sir.

Q. He was a public officer who inspected oil for everybody?—A. The way that arose was this: The amount of oil that was used in Kentucky was very limited, whereas the amount of oil that went through the South was generally twenty times as much. When I used the word "salary," I think it is hardly a proper term. I want to recall that. We did this—we agreed to pay him the regular fee for the oil that he inspected for us inside of the State, and then we allowed him a small sum, \$50 a month or less, for all the inspection of oil that went outside of the State, with which he had nothing to do.

Q. Was he required to inspect the oil that went outside of the State?—A. This arrangement was a compromise. He claimed he had a right and I claimed he had no right. I said, we have to inspect it any way and are paying a man to do it. If you will inspect it for us and keep the record, I will pay you a fair amount. I am not going to have all this oil inspected.

Q. Did he put his inspection mark or stamp upon the oil that went outside of the State?—A. Yes, sir.

Q. Did his inspection mark, which was put on in the State of Kentucky, relieve you from an inspection by the State of Tennessee or Georgia?—A. No; but very many of the States had no inspection laws. Some of them had.

Q. Are there not laws in nearly all the Southern States requiring a certain refining test?—A. Yes, sir; it has grown up within a few years. This was done before they had laws.

Q. Up to what time did you pay him?—A. I expect it has been five or six years.

Q. Did he furnish you his stamp so that you or your agent could put them on the barrels?—A. No, sir; he went up to the refinery and either himself or his deputy would brand these barrels and receive so much money per month. It was outside of his official duties.

Q. Have you any objection to telling us when you sold to the Standard Oil Company what sum of money you got?—A. I would rather not say. I will answer any question bearing on the business. I do not think that would be a pleasant thing to say.

Q. Did you receive Standard Oil Trust certificates?—A. No; I bought some of them. I never had any Standard Oil Trust certificates in my life, through my whole business. I always declined to buy them. I wanted to be independent. After I retired from the business I bought some of them. I thought they would go higher.

Mr. GOWEN. I will offer in evidence these letters, which are as follows:

[Chess, Carley & Co., producers and refiners of petroleum, dealers in naval stores, corner Fourth avenue and Main street.]

LOUISVILLE, KY., December 10, 1880.

GENTLEMEN: We regret to learn from our Mr. Fitch of the refusal on your part to make such arrangements as the market will permit, because it is with great reluctance that we undertake serious competition with any one. *And certainly this competition will not be confined to coal oil or any one article, and will not be limited to any one year.* We always stand ready to make reasonable arrangements with any one who chooses to appear in our line of business. And it will be unlike anything we have done heretofore if we permit any one to force us into an arrangement which is not reasonable. Any loss, however great, is better to us than a record of this kind. Hoping you may think best to prevent this great common loss to all concerned we remain, with respect,

Yours, truly,

CHESS, CARLEY & CO.

Messrs. WILKERSON & Co.,  
Nashville, Tenn.

LOUISVILLE, KY., December 14, 1880.

GENTLEMEN: We reply to your letter of the 13th merely to make clear one idea which you seemed to have overlooked in your reasoning. The only reason why you could make \$200 or any part of it a month is because we so hold the market that there is such a margin in it. *The expense and influence necessary for sustaining the market in this manner are altogether expended by us, and not by the representatives of outside oil.* If you continue to bring on the oil it will simply force us to let down our price, and no other course is left us but the one we have intimated. Another serious question is the great fact that if we allow any one to operate in this manner in any one of our localities it simply starts off others. And whatever trouble or expense it has given us in the past to prevent it, we have found it to be and still believe it to be the only policy to pursue. We have no ill-feeling toward any one in any line of business, but simply claim the right when one competes with us in our line of trade to return the competition in all departments of interest to our competitor. You may be very certain that you will make much more money, if that is what you care for, by co-operation with us.

Yours, truly,

CHESS, CARLEY & CO.

Messrs. A. C. WILKERSON & Co.,  
No. 57 South Market street, Nashville, Tenn.

NASHVILLE, TENN., December 17, 1880

To the jobbing trade:

*We regret to notice the disposition on the part of a few jobbing houses in coal oil to antagonize the different interests in this line by encouraging the efforts of street brokers to place oil on the market, as such encouragement will only result in the loss of margins to the entire jobbing trade. Street brokers are not legitimate dealers and only unsettle the market and get a profit which properly belongs to the trade.*

We are disposed to make this business, which comes by necessity to the jobbers, profitable to them by establishing a uniform price and system of rebates; this we can only do by the co-operation of all jobbers; otherwise we will be compelled to make one price to all, which prevents the jobber making a margin to which he is justly entitled for his risk and trouble.

We trust you will find our interests in this line identical and material.

Very respectfully,

CHESS, CARLEY & CO.

#### KINSLOW KEROSENE LICENSE.

License is hereby granted ———, of ———, to sell kinslow kerosene, conditioned upon the following agreement, viz: The said ——— is to maintain at all times a stipulated retail price (not less than 25 cents per gallon at the present time), to be regulated in future by Ches Car-

ley & Co., as the market changes demand; that no adulteration of this oil is to be permitted, or any other oil allowed to be sold under this brand; and that the said ——— will not buy or sell any other oil exceeding 130 degrees fire test while this license is in force. Chess, Carley & Co. guaranty a margin of 5 cents per gallon on this oil, and are to furnish suitable circulars and do such advertising as they deem advisable to make this oil favorably known. If at any time a discontinuance of this license be desired by either party, a written notice of thirty days is to be given, and in case of any violation of this agreement on the part of the said ——— Chess, Carley & Co. reserve the right to publicly revoke this license.

(Signed)

CHESS, CARLEY & Co.,  
Per OWEN STEWART.

(Signed)

Mr. CROUSE. In justice to the witness, who has been very frank, indeed, in telling us how he developed his business, those should go in just as he requested.

Mr. GOWEN. They will be put in.

Mr. BYNUM. This testimony goes altogether.

The WITNESS. I would like to have it, if agreeable, added there that the witness says it is not a business-like letter, because it was used when the parties tried to blackmail him.

### TESTIMONY OF HOWARD PAGE.

HOWARD PAGE, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Louisville, Ky.

Q. What is your business?—A. I am connected with the Standard Oil Company of Kentucky.

Q. How long have you been connected with it?—A. Since the Standard Oil Company was formed.

Q. How many years?—A. I have been connected with the Standard Oil Company, Chess Carley & Co., and the Chess-Carley Company ever since 1878.

Q. What department have you charge of?—A. Freight department and naval-stores department.

Q. How long have you had charge of the freight department?—A. I have been connected with it for about five years.

Q. Have you charge of the question of making rates or securing rates over railroads for the shipment of oil?—A. I have not charge of making the rates. I have charge of seeing about the rates on which we ship oil.

Q. You are the representative of your company in dealing with the railroad company?—A. Generally; yes, sir.

Q. Can you tell us what, up to the time of the passage of the interstate commerce bill, your rates on oil going south were over the Louisville and Nashville road per tank-car?—A. Different to different points.

Q. Can you give us a list of them?—A. I can not.

Q. You were asked to bring a list?—A. Yes, sir; that in connection with a great many other things.

Q. Did you bring that list?—A. No, sir.

Q. Why not?—A. I did not have any time to prepare such a statement, and besides the books and papers which you called for are not in

my charge at all. I am not an officer of the company and could not bring any of those papers.

Q. And were you not asked to bring a memorandum or statement of the different rates? You knew the rates you were paying to the other men?—A. Yes, sir; I know what they are now and what we paid in the past.

Q. Why did you not bring that?—A. To get that up for ten years, which you asked for, would take more than ten days.

Q. You were asked also to produce it within the last two or three years with reference to rebates and allowances.—A. I believe there was a call for it.

Q. Why did you not bring that?—A. Because, as I have said, I have no papers or books in my charge. I could not bring them.

Q. You knew what those rates were and you knew you were called here to testify upon that subject, were you not?—A. I knew I was called upon. I was subpoenaed.

Q. You knew from the nature of the notice given you upon what subjects you were to be examined?—A. Yes, sir.

Q. Have you made any efforts to familiarize yourself with those rates in order to testify here?—A. I think I can testify to some of the rates.

Q. Prior to the passage of the interstate commerce act can you tell us what the rates were?

The CHAIRMAN. State those you remember. It is not necessary to have a local rate.

Mr. GOWEN. Whatever rates you can give us.

The WITNESS. I do not believe I could say with certainty what the rates were prior to the interstate commerce act.

Q. What have they been within the last year?—A. Published rates?

Q. Yes. Have you received rebates of any kind?—A. No, sir.

Q. Or any allowance since the passage of the interstate commerce act?—A. No, sir.

Q. At what rate per tank-car is the car carried?—A. I think Mr. Carley forgot that in his testimony. The rates were on tank-cars without any regard to the weight or capacity.

Q. What has been that rate within the past year?—A. The rate from Louisville to Atlanta was \$61.80, for instance.

Q. Per tank-car?—A. Yes, sir.

Q. From Louisville to other points?—A. From Louisville to Mobile, \$60 per tank-car; Louisville to Nashville, I think, was \$30 or \$35 per tank-car; to Montgomery and Selma it was \$60 per tank-car.

Q. Have you any rate to Atlanta?—A. Sixty-one dollars and eighty cents; I just stated it.

Q. Can you give us any other rates?—A. Louisville to Montgomery, \$60 per tank-car; Louisville to Memphis, \$25 per tank-car; Louisville to Vicksburg, \$60, if I remember correctly. I think they were about the rates.

Q. State whether or not that was a uniform rate per tank-car, irrespective of the contents.—A. Entirely irrespective of the capacity in gallons or the weight. The rate was given per-tank car in oil just as it was given on livestock, so much per car-load; often as given on dry goods, so much per load, irrespective of what was loaded in it.

Q. The capacity of the tank-car varies from seventy-five to one hundred?—A. The capacity of some tanks varies that much; but the tanks we shipped in principally were tanks owned by the Standard Oil Company of Kentucky, on the Louisville and Nashville trucks. They average from 2,700 to 4,200 gallons.

Q. That was a very limited number of cars?—A. No, sir; it was by far the greatest majority that was shipped in the South.

Q. How many?—A. About fifty Louisville and Nashville and Cincinnati Southern. Those tanks were employed always whenever there was a sufficient number of them to do it.

Q. What amount of oil did you handle in a year; say last year?—A. I do not remember exactly.

Q. Can not you state it in round numbers?—A. We handled probably altogether between 200,000 and 300,000 barrels of oil.

Q. Did you not handle more than that?—A. I think not.

Q. That amount of traffic was not done over such a great extent of territory by those few cars?—A. Those shipments, or a great many of them, were made in barrels, and a great many by schooner, and the majority of our shipments of that 200,000 or 300,000 barrels was in barrels, not in tanks.

Q. What was your rate in barrels during last year?—A. To what point?

Q. From Louisville to the same points you have named?—A. From Louisville to Atlanta was  $39\frac{3}{8}$  cents per hundred pounds; Louisville to Nashville,  $18\frac{3}{4}$  cents per hundred pounds; Louisville to Memphis,  $12\frac{1}{2}$  cents per hundred pounds, about that; Louisville to Selma, Montgomery, and Birmingham, about 47 cents, and the majority of our shipments to all those points were in barrels.

Q. Did you receive any rebate on your barrel shipments?—A. None at all since the passage of the interstate commerce bill.

Q. Now state whether prior to it you received rebates?—A. Yes, sir; we received them as we sold the oil. You know that prior to the passage of the interstate commerce law it was a man's business to get as low rates as he could.

Q. And in getting those rates you did not look out for anybody else?—A. We got the best we could.

Q. What proportion of the published rate on barreled oil did you receive as rebates, do you suppose, prior to the passage of the interstate commerce act?—A. I can not say.

Q. Half?—A. I can not answer, because I do not remember, and therefore do not want to say something that I am not positive about.

Q. I will hand you a paper; do you know what that is [handing witness a paper]? Does it recall anything to you upon the subject of rates?—A. Yes, sir.

Q. What is it?—A. This was simply an arrangement which we had with Sanford, Chamberlain & Albers, at Knoxville, who were large merchants there to whom we sold oil. We made an arrangement with them by which we sold oil at a certain price to them delivered at Knoxville, and allowed them 10 cents a barrel rebate, or commission as it were.

Q. What rate did you pay on that oil from Louisville to Knoxville?—A. I do not remember.

Q. Does the price there in that circular indicate to you the rate you paid on the oil?—A. It was simply a private memorandum that I gave Mr. Sanford's sons; a freight of  $35\frac{0}{10}$  cents per hundred pounds, or \$84.72 a car-load. I judge that was it. I would like, if you please, Mr. Chairman, to mention a few matters, in connection with the testimony of some witnesses which I think relate very closely to the question. It will only take a few moments.

The CHAIRMAN. In reference to that matter, we have permitted all the witnesses here to make any supplemental statement of facts which

they desired to. But I desire to caution you that it should be a statement of facts. I do not desire you to understand that it leaves you open to say that you deny any statement, or anything of that sort, unless their statements are in relation to your personal transactions. That is not a statement of fact as the committee apprehend it.

The WITNESS. I will state the points and you can stop me if they are not proper.

Mr. CROUSE. The witness states if they are not proper statements you can stop him.

The CHAIRMAN. The witness is intelligent enough to know that what the committee desire are facts within his knowledge, and not conclusions which he has drawn from facts, which facts he does not have personal knowledge of.

The WITNESS. One very important point, and which I think is not out of the line, is this, that Chess, Carley & Co., the Chess-Carley Company, nor the Standard Oil Company, so far as I have known in ten years, never had any arrangement with any railroad by which that railroad was not entitled or had the perfect privilege to give any shipper any rate on oil that it thought necessary to do so. We never had any arrangement with any railroad which provided what that road should charge other people. All we have ever done was to attend to our own business and get the best rate we could, and the railroad at any time, if it saw proper, could give any rates they wished to other shippers.

By Mr. SMITH:

Q. That was in your section of country?—A. Yes, sir.

Q. You only have reference to that section?—A. Of course; that is all I know of. Mr. Gowen has evidently been under the impression that the American Cotton Seed Oil Company or the Cotton Seed Trust has a connection with the Standard Oil Trust. I can say that in the disposition of our tank-cars in the South, which we loaned to different cotton-seed oil shippers, we loaned those tanks to every cotton-seed oil shipper whether belonging to the American Cotton Oil Trust or any other trust, and I know of three different cotton-seed oil companies in the South to whom the Standard Oil Company have loaned their cars to facilitate their business, which are the Cotton Seed Trust, the Southern Cotton Oil Company, whose principal office is in Philadelphia—

By Mr. GOWEN:

Q. Is that Butcher's company?—A. Yes, sir. They have branches at Atlanta, Memphis, New Orleans, Augusta, and nearly all the large towns in the South where cotton seed oil is produced, and if there is any connection between the Cotton Seed Oil Company or the Cotton Seed Oil Trust and the Standard Oil Company it is not likely that the Standard Oil Company would give cars to its competitors.

Q. Now you are arguing the case. You were only to tell facts.—A. Now as to the ownership of tank cars, you mentioned that there were no tank-cars, hardly, owned by parties outside of the Standard Oil Company. In that book of evidence before the Interstate Commerce Commission it is shown there by responsible witnesses that there are over 2,200 tank-cars.

Q. That is argument too.—A. It is evidence; it is fact.

Q. It is not your evidence.—A. There are a number of tank-cars in the country given by H. R. Paine before the Interstate Commerce Commission.

Mr. CROUSE. Did the witness want to state in that connection the number that belonged to the Standard Oil Company?

The WITNESS. It was stated there that there were in the neighborhood of 3,000 tank-cars owned by the Standard Oil Company interest.

By Mr. GOWEN:

Q. The two principal ones who own tank-cars are the Union Tank Line and the Green Line.—A. They are the two largest individual owners. Outside of them the Standard have 2,200, owned by other persons.

Q. They are owned by the Green Line?—A. One thousand one hundred of them.

Q. Do you say there are 1,100 tank cars in the United States outside of what are owned by the Green Line that are controlled by the Standard Oil Company?—A. Yes, sir; it is the evidence.

Q. Where did you get it?—A. In that book, giving the names and the numbers.

Q. Did you derive your knowledge of that fact from that evidence?—A. Yes, sir; and from the tanks that I have seen shipped in the South. I have not seen 1,100 of them, but I have seen a great many tank cars.

Mr. GOWEN. We intend to offer that list in evidence.

By Mr. BYNUM:

Q. They use your tank cars to ship petroleum in South and ship cotton-seed oil back?—A. Cotton-seed oil or turpentine; but the tanks which we own and do not own the trucks we do not get any mileage on.

Q. You know as a fact that cotton-seed oil is shipped back in tanks that you ship petroleum in?—A. Yes, sir; because our agents deliver those tanks to the cotton-seed oil companies.

### TESTIMONY OF BENJAMIN F. BRUNDRED.

BENJAMIN F. BRUNDRED, sworn and examined:

By Mr. GOWEN:

Q. Where do you reside?—A. Oil City, Pa.

Q. What is your business?—A. Refining oil.

Q. What is the name of your firm or corporation?—A. Imperial Refining Company, Limited.

Q. How long have you been engaged in that business?—A. About eight years, I think.

Q. Is your company connected with the Standard Oil Trust?—A. Yes, sir.

Q. Since when?—A. That I can not answer.

Q. Don't you know when it was?—A. No, sir; I do not. I came with them after they became a part of the Standard Trust.

Q. Were you engaged in business by yourself before joining this concern as a refiner?—A. Yes, sir.

Q. What was the name of your refinery?—A. The Union Refining Company.

Q. Where was that?—A. Oil City.

Q. Is that in existence?—A. The company is still in existence.

Q. But not refining oil?—A. No, sir.

Q. Was that refinery connected with the Standard?—A. Do you mean when it was built?

Q. No; when you operated it?—A. No, sir; it was not.

Q. State whether or not you know anything of your own knowledge of rebates having been recovered by you as an individual refiner against

the Pennsylvania Railroad Company upon the claim or basis that they had allowed them to others?—A. Yes, sir; we made a collection of the claim.

Q. When?—A. I think it was in 1883.

Q. How much was it in money that you recovered, do you remember?—A. I forget the exact amount.

Q. As nearly as you can?—A. In the neighborhood of \$8,000.

Q. Over what period prior to 1883 did your claim for that rebate extend?—A. I think it was for the years 1881 and 1882.

Q. Do you remember the rate per barrel that you recovered?—A. Thirteen cents a barrel.

Q. Were you obliged to bring suit for the claim or was it paid without?—A. No; I understood it was paid to an independent concern of Pittsburgh, and it was on the strength of that information that I made up a claim and presented it.

Q. And its correctness was acknowledged and you received the money?—A. Yes, sir; it was afterwards settled.

Q. You are a son, are you not, of the Mr. Brundred who is managing the Green Line?—A. Yes, sir.

Q. State whether or not it belongs to the Pennsylvania Railroad Company.—A. No, sir; I do not know anything about it.

Q. Were you never in the service?—A. I used to be in its employ.

Q. Don't you know that it belongs to the Pennsylvania Railroad Company?—A. No, sir; I do not.

Q. Who receives the money arising from its operations?—A. I do not know. It has been a long time ago, for I left them in 1877.

Q. Don't you know that the Green Line is the same line that was run at one time by the Empire Transportation Company?—A. Yes, I think it was.

Q. What became of the cars of the Empire Transportation Company?—A. I do not know, sir.

Q. It has been testified here that the Green Line is owned by the Pennsylvania Railroad?—A. I don't know.

#### **WILLIAM W. HARKNESS—Recalled.**

By Mr. GOWEN.

Q. You were examined the other day and stated then that you had been an independent refiner in connection with your brother, and had sold out your refinery, I think, for \$130,000 or \$135,000?—A. Yes, sir.

Q. Now state whether that refinery continued under the same management after you had sold it out, as it did before.—A. Yes, sir; for several years.

Q. Was the business conducted in the name of your brother?—A. Yes, sir.

Q. Although the Standard Oil Company owned it?—A. Warden, Frew & Co.

Q. They belong to the Standard Oil Company?—A. Yes, sir.

Q. Was there any change in the business?—A. No, sir.

Q. Was it conducted by the same manager who was there when you were there?—A. Yes, sir.

Q. Was he your brother?—A. Yes, sir.

Q. Was there any new process applied to the refining of oil that had not been applied when you were there?—A. No, sir.

Q. Now state, say, for the immediate two years preceding your sale of this refinery what your profits had been per annum, as nearly as you can.—A. I do not recollect, but I know they were unsatisfactory.

Q. Were they \$5,000 or \$10,000 a year?—A. Possibly that.

Q. Don't you think it was more than that?—A. No, sir.

Q. Can you tell us how much that refinery made within a year or a year and a half after you sold it?—A. As far as my recollection goes, I think the price at which it finally sold was \$130,000, and I think the whole amount of that and probably \$40,000 or \$50,000 more was made in the following year. They paid us out of our own money.

Q. That is to say, within two years after you had sold them that refinery, under the same management, managed by the same people, they made \$175,000?—A. Yes, sir, about that; from \$150,000 to \$175,000.

Q. And for two years prior to that you think your profits would not have amounted to \$10,000?—A. I think they would not.

Q. Do you think they did amount to that?—A. I hardly think they did.

### TESTIMONY OF JOHN TEAGLE.

JOHN TEAGLE, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Cleveland, Ohio.

Q. What is your business?—A. Refiner of oil.

Q. What is the name of your firm?—A. Scofield, Shurmer & Teagle.

Q. How long have you been in that business?—A. Since 1873.

Q. What is the capacity of your refinery?—A. About 240,000 barrels a year.

Q. Now, if you have had any difficulties about railroad transportation, or know anything at all upon the subject of discrimination by railroads against you, and in favor of the Standard Oil Company, will you kindly tell us what you know, how you know it, and all about it?—A. We have had considerable discrimination against us in favor of the Standard Oil Company by the Lake Shore Railroad Company.

Q. State whether or not that resulted in litigation?—A. Yes, sir; it did.

Q. State whether you brought suit against them?—A. Yes, sir.

Q. Whether in that suit you discovered by testimony what these discriminations were?—A. Yes, sir; we did.

Q. Through whose testimony did you discover it?—A. Mostly from the general freight agent, Mr. Valient.

Q. Will you look at that paper [handing the witness a paper] and state what it is?—A. It is a memorandum of the difference between the rates charged us and those charged the Standard Oil Company, made up by ourselves, our firm.

Q. Is this made from the testimony adduced in your case?—A. Yes, sir.

Q. State whether or not this statement is correct, based upon that testimony?—A. Yes, sir.

Q. Now, will you kindly tell us where was the suit?—A. Cleveland.

Q. Where is that suit now? What has become of it?—A. We got judgment from them; they paid the judgment.

By Mr. CROUSE:

Q. It is settled?—A. Yes, sir.

Mr. GOWEN. I will offer this paper in evidence.  
The paper is as follows :

*Discrimination in rates in favor of the Standard Oil Company, and against Scofield, Shurmer & Teagle, by the Lake Shore and Michigan Southern Railway Company.*

Point.	From—	To—	Special to Standard Oil Co.		Tariff to Scofield, Shurmer & Teagle.	
			Barrel.	Tank.	Barrel.	Per tank.
			Cents.		Cents.

By Mr. GOWEN :

Q. If you know anything of any changes that were made in the classification of oil rates with reference to car loads and less than car-loads at the time of the passage of the interstate commerce act, will you please tell us ?—A. Yes, sir. Previous to the passage of the interstate commerce act less than car-load rates on less than car-loads were about 25 per cent. above car-load rates, and after the passage the rates on less than car-load lots were made third class, which makes nearly 100 per cent. difference.

Q. Now state whether or not that difference in the relative rates of car loads and less than car-loads was made on other materials than oil.—A. Not so far as we can find out.

Q. Where the difference is 100 per cent. it would be a discrimination of that amount as against the person who ships less than a car-load in comparison with one who ships a full car load ?—A. Yes, sir.

Q. Have you got any table that will show exactly what the difference between car loads and less than car loads was made on the Lake Shore Road on oil and all other materials or substances. Have you got it here ?—A. Yes, sir.

Q. Can you tell us where it came from ?—A. We have made a claim against the Lake Shore—made a complaint to the Interstate Commerce Commission against the Lake Shore—of this excessive charge on small shipments in less than car-load lots.

By Mr. CROUSE :

Q. On the ground that the rate was not a reasonable one ?—A. Yes, sir; and our counsel was here to-day to argue that, and in getting up

that case, our testimony and argument, we got this matter, and I use it in that way.

By Mr. GOWEN:

Q. State whether you took part in the preparation of that table, and know it to be correct?—A. Yes, sir.

Q. Will you let us have that table?—A. Certainly, sir [handing it to Mr. Gowen].

Q. On page 9 of that table is oil, is it not; showing what the oil rates were prior to the interstate commerce act, and what they were afterwards?—A. Yes, sir.

Q. That table on page 9 is confined exclusively to oil?—A. Yes, sir.

Q. State whether that table on page 10 is a comparison of the relative difference as compared with oil and that as compared with other material or articles.—A. Yes, sir; to one point.

Q. State whether or not you know these figures to be correct.—A. They are correct.

Q. Do you know whether to other places than this one that is on this table on page 9 the relative difference on oil and other material will be the same?—A. I think it is the same in the same classification to other places; only we just singled out Chicago, so that we could show easily the difference.

Q. State whether the classification has been made the same after the interstate commerce act to other places as well as to Chicago.—A. I understand that the classification is third class on all this stuff in less than car-load lots, whether oil or whether car axles or anything of that kind.

Q. The classification to all points mentioned on the ninth page is the same on less than car-load lots to other places as well as to Chicago; classifications generally cover everything, and the rates only go to places. Is not that so?—A. That is as I understand it.

Mr. GOWEN. I offer these tables in evidence.

The tables referred to are as follows:

*Rates on car loads and less than car loads of oil from Cleveland to points named before and after the passage of the interstate commerce act.*

To—	Prior to April 5, 1887.			Since April 5, 1887.		
	Car lots per barrel.	Less per barrel.	Per cent. latter of former.	Car lots per barrel.	Less per barrel.	Per cent. latter of former.
Adrian, Mich.....	\$0.45	\$0.60	1.33½	\$0.38	\$0.68	1.79
Albion, Mich.....	.55	.70	1.27	.42	.84	2.00
Buffalo.....	.50	.60	1.20	.34	.56	1.65
Chicago.....	.60	.75	1.25	.50	1.00	2.00
Detroit.....	.40	.50	1.25	.30	.64	2.13
Elkhart.....	.60	.75	1.25	.42	.88	2.10
Grand Rapids.....	.60	.75	1.25	.50	1.00	2.00
Kalamazoo.....	.60	.75	1.25	.46	.92	2.00
South Bend.....	.60	.75	1.25	.42	.92	2.23

*Comparison between less than car-load rates on oil and other material from Cleveland to Chicago since the passage of the interstate commerce act.*

Q. Have you had any other difficulty upon the subject of transportation of oil, or difficulty in getting oil; and if so, will you tell us what it is, how it has affected your business in the last few years; have you been able at all times to get a good supply of oil when you depended upon the railroads for it?—A. We had a shortage of cars occasionally.

Q. Did it interfere with your business?—A. Nothing very great that I know of—that I remember just at present.

Q. Have you any knowledge of any attempt to interfere with your business by the Standard Oil Company or any interest affiliated to them by spying into your business or getting hold of any of your men?—A. I think our business has had a pretty general supervision by the Standard Oil Company.

By Mr. SMITH:

Q. Did they try to bribe your book-keeper?—A. Yes, sir; the secretary of the Standard Oil Company did.

By Mr. GOWEN:

Q. What knowledge have you upon the subject and how did you derive it; tell us all you know about it?—A. The book-keeper himself said he was approached by a brother of Mr. Squires, then secretary of the Standard Oil Company, and asked if he did not wish to make some money, and our book-keeper replied, "In what way?" And after some talk he intimated that it would be by giving him some information. Well, he inclined to let him believe that he did want to make some money, and the next morning he came and told me about it, and I requested that he continue and find out all he could, and what information they wanted, and to act under our advice, which he did; and as I remember it he was to have had so much per year, but he was to have been paid a down payment.

Q. How much was the down payment?—A. I believe it was \$50, but he got \$25.

Q. Who paid him that?—Squires's brother paid him a part, \$15, and P. Squires paid him the other \$10.

Q. What service was he to render for that?—A. I can not remember; I have a memorandum.

By the CHAIRMAN:

Q. In a general way we want to know what he was to do?—A. There were so many things he was to do that I can not carry it in my head. One of the questions was, what was the result of last year's business.

Q. That was one of the questions that your book-keeper was required to answer?—A. Yes, sir. The other was a transcript of the daily shipments,

with net prices received from the same; what is the cost for manufacturing outside of the crude; the kind of gasoline and naphtha made, and the net prices received for the same; what do they do with tar and the percentages of the same; what per cent. of water white and what per cent of Michigan water white; how much oil exported last year. This information as fast as received to be mailed to Box 164, Cleveland post-office.

By Mr. CROUSE:

Q. How did that get into print?—A. After we got an affidavit of the book-keeper and everything I presented the matter to Mr. Squires, and got his acknowledgment of it. We then gave it, I think, to the New York Times reporter, and this is the copy as it was presented.

By the CHAIRMAN:

Q. What date have you got there?—A. I believe it was March 16, 1883 or 1884; I am not sure.

By Mr. GOWEN:

Q. How do you get your oil now?—A. We get it by the National Transit Pipe Line.

Q. What rate do you pay?—A. We pay them 25 cents a barrel.

Q. From where to where?—A. From points in the oil regions wherever it takes place.

Q. To Cleveland?—A. Yes, sir.

Q. In addition to the 25 cents per barrel on this main line and pipeage, do you have to pay local pipeage besides?—A. Yes; 20 cents.

Q. Then your oil costs you 45 cents to get it to Cleveland through local and main line pipeage?—A. Yes, sir.

Q. Do you know the distance of main line pipeage?—A. I do not know the distance.

Q. Have you had any difficulty as to the quality of oil furnished you by the National Transit Company?—A. Nothing beyond that we made one or two complaints, but nothing that was serious at all.

By the CHAIRMAN:

Q. Do they deliver this oil right at your refinery?—A. Yes, sir.

By Mr. GOWEN:

Q. From a pipeage system?—A. Yes, sir.

By the CHAIRMAN:

Q. You do not have to go to the cars; you draw it right out of the pipes?—A. Yes, sir.

By Mr. SMITH:

Q. Is the price of crude oil from the wells to your establishment the same in tanks as it is in pipes?—A. It is a little more; the present rate of crude oil in tank-cars.

By Mr. GOWEN:

Q. A little more in which, the pipe line?—A. In the cars.

Q. Than by pipe?—A. It depends upon the price.

By Mr. BYNUM:

Q. All the knowledge you have about this matter with your clerk is just what he told you about it?—A. No, sir; he made an affidavit of it, and I took the money myself back personally to Mr. Squires and charged him with it, and after his denying at first he then acknowledged it, and

I handed him back his money. . I gave the \$10 that he paid the book-keeper; he kept it, and I sent \$15 to his brother.

Q. He admitted the fact?—A. Yes, sir; he did.

Q. Did you have any contract, agreement, or understanding with the Standard Oil Company by which, previous to this time, you were to maintain any prices? Was there anything of the kind; any business arrangement between you and them?—A. At what time?

Q. At or previous to that time?

Mr. SMITH. Previous to the bribing time?

The WITNESS. No, sir.

Q. You had no agreement?—A. We had no existing agreement at that time.

Q. Had you one before that time?—A. We had an old contract years ago, in 1876; but that had been settled and done away with.

Q. There was no existing agreement at the time of this attempt to bribe your clerk?—A. No, sir.

Q. The only motive, then, would be to gain a knowledge of your business?—A. Yes, sir.

#### **WILLIAM W. HARKNESS.—Recalled.**

By Mr. BYNUM:

Q. In your testimony a few moments ago, while you were upon the stand, you stated that the receipts of the establishment you sold to the Standard Oil Company were only about \$10,000 when in your possession, but within a year or two afterwards it amounted to \$170,000. How did you obtain that information?—A. The business was conducted in the same way for several years after Warden, Frew & Co. bought us out.

Q. Did you remain in the employ of the company?—A. The business was carried on under the same name. We had part of the refinery. The same book-keeper that kept our books kept the company's books. My brother was one of the executive officers. The business was carried on so that he would not lose his identity.

Q. Did you have any supervision over the books yourself?—A. Only as proprietor.

Q. After you sold out did you have any supervision of them?—A. Yes, sir; the business was conducted in our office just as it had been before.

By Mr. GOWEN:

Q. Your name was used?—A. Yes, sir.

By Mr. BYNUM:

Q. The knowledge you gained was an actual knowledge of the business; not what some one told you of the profits?—A. Actual knowledge.

#### **C. B. MATTHEWS.—Recalled.**

By Mr. GOWEN:

Q. When you left the stand you said you would examine into the list of independent refineries that was furnished to the New York Senate committee by Mr. Rockefeller and give us some information about it; have you done so?—A. Yes, sir.

Q. What result? What do you have to say about the propriety of that list being an accurate list of independent refineries who are in com-

petition with the Standard Oil Company?—A. I have to say that quite a number of those named, some of them pretty large refineries, are not in competition with the Standard Oil Company in any direct and absolute sense; that they have contracts with the Standard, or the Standard owns stock in those companies; also that several of the companies mentioned there are companies that have been destroyed—that is, they are insolvent and unable to carry on their business—in receivers' hands and otherwise. Some that are mentioned as refineries are simply barreling stations that are not refineries now.

Q. Are there any on that list which are dismantled, whose works are dismantled or out of operation?—A. I do not know that they are entirely dismantled, any on this list.

Q. Is there any other statement you desire to make in connection with your testimony given the other day?—A. In regard to the Buffalo operation they have bought several refineries which have been entirely dismantled, and the Standard Oil Company has never built a refinery in Buffalo. What they have there they have *pirated*. They never built a new refinery there.

By the CHAIRMAN:

Q. You used the expression "pirated." Can you give us a word that will tell us what that means?—A. I meant seizing them without due process of law and destroying them by reason of their inability to lay pipes and to ship oil; crushing them out and obtaining their property in an unlawful manner, as I consider it.

Mr. SMITH. You mean in a round-about way.

The CHAIRMAN. You have not told me yet what I wanted to know. You say they seized this property. Is it property that they bought at a sheriff's sale, or is it property that they bought the stock of, or what is it you mean? I want to get the fact.—A. They prevented these parties from laying lines and from shipping oil, corrupted their employes. and such things.

Q. How many refineries are in operation in Buffalo?—A. In a general way there are three.

Q. And under what names are they operated?—A. The Atlas Oil Company, the Holmes and Adams, and the Genessee Oil Works, and my old company's works are there, but not in operation to amount to anything.

Q. Are they operated at all?—A. They have not refined any for some weeks; they just barrel a little.

Q. These other three refineries are running that you have named?—A. Yes, sir.

Q. They are actual refineries?—A. Yes, sir.

Q. Are they all three Standard Oil refineries?—A. No, sir.

Q. If one of them is, state it.—A. The Atlas is a Standard company. The Holmes and Adams are copartnerships and have had contracts with the Standard regarding the shipments and prices, and are enabled to secure Standard tanks to ship their goods in, and otherwise they seem to have affiliations which other independents do not have.

Q. There is one left, which is that?—A. The Genessee Oil Company.

Q. What is there about that?—A. I understand that to be independent, doing a moderate business.

By Mr. GOWEN:

Q. The Atlas Company is the one that Kalbfleisch used to own?—A. Yes, sir.

Q. That is the one that attempted to lay the Rock City Pipe Line?—  
A. Yes, sir.

Q. That is the one that was secured by the Standard Oil Company?—  
A. Yes, sir.

Q. Now, when you used the word "pirated," did you mean to say they made their business unprofitable to them, and bought out their refinery at a price lower than they could otherwise have done?—A. Yes, sir. I wish to say that a stockholder in the American Cotton Oil Trust, and who was also a stockholder in the Standard Oil Trust, told me that they had associate interests, and that he had sold a good deal of this cotton-seed oil trust stock, and they relied largely on enhancing the value of this cotton-seed oil trust stock by reason of superior advantages which they had in shipping, and he gave me a circular in which it was stated that——

By the CHAIRMAN:

Q. Have you the circular?—A. I have at home.

By Mr. GOWEN:

Q. Can you send it here?—A. I think I can. I had it a few week ago, and doubtless have it still.

Q. Do you know if that person was a stockholder in the Standard Oil Company?—A. He so testified.

Q. And also in the cotton-seed oil trust?—A. I can not say. He testified he was in the cotton-seed oil trust, but he told me he was trying to sell their stock.

Q. Now, have you had any experience or any difficulty in selling oil to railroad companies, and if you ever have been told that those railroad companies would buy only from the Standard people, will you tell us that?—A. I have sold to several railroads, and solicited railroad trade personally myself, considerably. I have been told by a number of agents and buyers of oils and supplies for the railroads that the quality and the price of the oil did not govern the purchases; that there were powers behind which dictated to them and made them pay much higher prices than they would have to pay if they went into the open market to get their supplies.

By Mr. SMITH:

Q. That was an answer to your applications for sales?—A. Yes, sir. I would like to say about the Producer's Protective Association that is organized in the oil regions, that I was a member of it, and I never met with them, however, but once. I found that men who were largely interested in the Standard were getting into it and assuming control for the purpose of shutting off production, which has resulted largely to the damage of the independent refineries, and, as I believe, the permanent injury of the producer. I withdrew from the association.

Q. Are you a producer interested in production?—A. I have been. I am not now.

(At this point the committee adjourned until 11 o'clock to-morrow morning.)

WASHINGTON, D. C., *May 3, 1888.*

The committee met at 11 a. m. Present: The chairman, and Messrs. Grimes, Bunnell, Crouse, Smith, and Buchanan.

AFTER EXECUTIVE SESSION.

The CHAIRMAN. Mr. Flagg, by direction of the committee I desire to state that the understanding of the committee is that Mr. Flagler, when upon the stand, agreed to furnish to it the list of the persons to whom the original 70,000,000 of Standard Oil Trust certificates were issued, not the amounts; that subsequently a question of similar import, but calling for the amounts, was put to another witness, an officer of the Standard Oil Trust, and that by the ruling of the committee so much of the question as referred to the amounts of the certificates issued was waived, but so much of the question as referred to the list of the shareholders of the original 70,000,000 of that stock—the original capitalization of the Standard Oil Trust—was not waived, and that the witnesses were informed that it would be insisted upon. We desire to know, sir, when that list will be furnished.

Mr. FLAGG. If I may be allowed, Mr. Chairman, to state my understanding of the ruling of the committee on that point, as announced by the chair, which I have consulted this morning, it was to the effect that in neither respect does the committee require that information to be furnished, either as to the amount or as to the list of names being made out. That is my understanding of the ruling of the chair, as announced after the executive session of the committee.

The CHAIRMAN. I have not the record before me, but I have consulted it and find that the witnesses were excused from giving the amount of the certificates, but were not excused as to the names of the persons to whom the certificates were issued.

Mr. FLAGG. Of course I can not say what the committee understands. I can only say what I think is the fair interpretation of the language used by the chairman. I have had no opportunity of communicating with Mr. Flagler on this subject, and I did not know until last evening that there was any doubt in the minds of the committee that he did not expect to furnish that statement. He never agreed to furnish it; and in every other instance, I think, it was very carefully seen to by the chairman of the committee or the counsel of the committee that it was understood explicitly what statements should be sent here, and memoranda were made and furnished the witnesses as to what was required, and they were expressly interrogated as to when and through whom they would send them for the benefit of the committee. I am quite sure that Mr. Flagler left here without understanding that he was required to furnish this statement, and I am also sure that there was no such understanding, at least so far as we are concerned. You asked if it could be furnished, and he said it could be very readily, but he never intimated that it would be furnished.

The CHAIRMAN. Then I understand you now—that there may be no further misunderstanding—to say that your client and the counsel for the Standard Oil Trust do not understand that the committee have required a list of the persons to whom these certificates were issued to be furnished, and that you will not furnish it, as the result of that understanding?

Mr. FLAGG. If the committee say they will require that of any of our witnesses, I must respectfully decline to furnish it on the grounds stated by Mr. Archbold—that it is dealing with the private affairs of the people for whom they stand as trustees, and that they have no right to disclose it.

The CHAIRMAN. Very well, sir; that closes that.

**JOHN TEAGLE—Recalled.**

By Mr. GOWEN:

Q. State whether or not your firm has a litigation pending with the Lake Shore and Michigan Southern Railway Company on the subject of an injunction.—A. Yes, sir.

Q. And that case is now pending in the Supreme Court of the United States?—A. Yes, sir.

Q. State whether or not that is a copy of the record in the case in the Supreme Court of the United States.—A. Yes, sir.

Mr. GOWEN. I propose to offer in evidence the findings of fact in the district court of Cuyahoga County, Ohio. The defendant in the case was the Lake Shore and Michigan Southern, plaintiff in error in the Supreme Court; and the plaintiffs in the case were Scofield, Shurmer & Teagle, who are now defendants in error in the Supreme Court.

Mr. BUCHANAN. Please give us the date of those findings of fact.

Mr. GOWEN. The case is docketed as of March term, 1884. There is no other date on it.

Mr. CROUSE. It must have been prior to that, then?

Mr. GOWEN. No, subsequent; it is docketed as of March term, 1884, in the district court below.

Mr. CROUSE. The things complained of were prior to that date, but the findings were subsequent?

Mr. GOWEN. Oh, yes; because the facts found go back to 1879.

(The findings of fact offered in evidence by Mr. Gowen are as follows:)

STATE OF OHIO, *Cuyahoga County, ss :*

In the district court. March term, 1884. *Scofield, Shurmer & Teagle vs. The Lake Shore and Michigan Southern Railway Company.* Appealed by defendant.

This cause came on to be heard upon the pleadings, exhibits, and testimony, and was argued by counsel; in consideration whereof the plaintiffs, having moved for a reservation to the Supreme Court, the judges are unanimously of the opinion that important and difficult questions exist in the case, making it proper that the same should be reserved to the Supreme Court for decision, which questions embrace the following propositions:

(1) Is this a case upon the face of the petition and under the laws of the State in which the court ought to interfere by injunction?

(2) Whether such remedy by injunction will apply as well to the case of shipments over the defendant's road alone as to cases of through shipments over such road and connecting roads?

(3) What are the duties and obligations of common carriers at common law as distinguished from the statutory provisions of this and other States and countries?

(4) Are the defendants at common law obliged to carry freight at the same price for all parties or members of the public without regard to quantity or circumstances connected with the transportation?

(5) May the defendant, as a common carrier and a corporation organized for that purpose, contract with a party controlling 90 per cent. or more of all the freight of a particular class at a given city or point, to carry the same for less than general tariff rates in consideration that it shall receive all the freight thus controlled by such party?

(6) May the defendant, as common carrier, in consideration of receiving all the freight of such party, that the quantity shall not be diminished, and that terminal facilities as to loading, unloading, and delivering the freight, shall be furnished different from regular or usual freight and with less expense and risk to the carrier, contract to carry such freight, with such convenience and benefits, for less than general tariff rates to the public?

(7) May the defendant, as common carrier, transport over its road large quantities of oil, amounting to many full car-loads per day, for a less price per car-load than it charges the public generally per barrel or for single car-loads or less, provided all persons are charged like prices for like quantities?

(8) May defendant, as common carrier, make any distinction in prices for carrying like freight on the ground of quantity and covenants to continue the same if thereby

it can make a greater profit than to charge the same prices for quantities small and great? Is defendant, under all circumstances, obliged to charge the same prices per ton or other quantity, for the same distance, to all persons tendering freight of the same class; or may it, in good faith, and without intention to injure other producers or patrons contract to carry for one party at a less price than general rates, if thereby it can secure a large and profitable business which would otherwise be diverted from it, in whole or part?

(8½) Should decree be rendered for plaintiffs; and if so, to what extent should it be enforced—only within the bounds of the State, or to all parts of the country within or without the State, to all points reached by defendant and connecting lines?

(9) Was section 3372 of the Revised Statutes intended to apply to cases like the present, and under it is there any authority for the injunction relief prayed for in this action?

(10) Whether upon such shipments so made by the defendant's cars by the barrel, either in car-load lots or in less amounts, the plaintiffs are, either by common law or by the Ohio statutes on the subjects, entitled to have their said products carried at the same rate of charge between like points of shipment as are allowed to said Standard Oil Company or other shippers to points on its line or branches of said road beyond?

(11) Whether the defendant, as a common carrier, may exact from the plaintiffs upon such shipments in barrels any amount greater than the amount charged to said Standard Company upon shipment of like amounts by such tank cars, so long as the plaintiffs offer to ship by their own tank cars on substantially like terms?

(12) Whether, if such defendant can be required to give to said plaintiffs equal rates of freight upon its shipments with those allowed said Standard Oil Company to points upon its line and branches, it can be required to give as low a rate to terminal points as the rate it receives for its proportion of the service to such points, on shipments to points beyond and on its connecting lines on a through rate fixed by it and such connecting line or lines for the through shipment?

(13) Whether the fact of the existence of such arrangement, and the fact of the Standard Oil Company being a shipper in amounts larger than the plaintiffs, is any justification for the making of such charges to the plaintiff in excess of such charges made to said Standard Oil Company? And in order that the same may be legally presented to said Supreme Court the district court do find the facts as follows:

(1) The court find the plaintiffs are, and since 1875 have been, partners, carrying on in a large way at Cleveland, Ohio, where their refinery is situated, the business of refining crude oil and selling the refined product mainly through the territory west and northwest of Cleveland, and extending throughout the Western and Northwestern States; this business being one in which they have invested a large amount of capital, and in which they have established a large and profitable trade throughout the territory which constitutes the natural market for the sale of such products manufactured at Cleveland, the cost of plaintiff's refining being about \$70,000, with a refining capacity of about 150,000 barrels per year.

(2) That the defendant is a consolidated railroad company, owning and operating a railroad extending from Buffalo, in the State of New York, to Chicago, in the State of Illinois, and passing through parts of the States of New York, Pennsylvania, Ohio, Indiana, Michigan, and Illinois, and also owning and operating branches from Toledo, in the State of Ohio, to Detroit, in the State of Michigan, and also from White Pigeon, in the State of Michigan, to Grand Rapids, in the State of Michigan.

(3) That said railroad, so far as the same is constructed and operated in the State of Ohio, extends from the easterly line of Ashtabula County to the westerly line of Williams County; that it is a corporation engaged as common carrier in the business of transporting persons and property for hire and reward over its said line of road and branches.

(4) That it crosses and connects with other lines of railroads at Toledo, Coldwater, and Chicago, over which it can and does forward passengers and freight to their destination and consignment points as requested and directed; that it holds itself out as ready to make and does make the rates to points reached by connecting roads that defendant, as such common carrier, has been accustomed to receive for transporting property over its line and branches to points beyond the termini of the same, delivering the same at such termini to connecting roads for carriage to the points of consignment.

(5) That the rates for such through freights are fixed by agreement between the different companies owning the lines over which such freights are carried, and not by the defendant alone, and are changed by like agreement from time to time.

(6) That what are termed local rates, being for property received and delivered at points on the line of defendant's road, are fixed exclusively by the defendant.

(7) That some of the towns and cities on the main line and branches on the defendant's road can only be reached by shippers from Cleveland over its said road and branches; and all of them as well as the towns on most of its connecting branches can be most directly reached by means of its line from Cleveland.

(8) That the defendant is sufficiently supplied with cars and engines and appliances for transportation necessary to enable it, in the ordinary course of its business, to receive and carry for the plaintiffs such products from Cleveland to such markets.

(9) That for a period of time, extending back beyond the time when plaintiffs commenced the manufacture of oil in the city of Cleveland, the defendant has published for the benefit of the public tariff rates for local and through freights, which have been frequently changed, and including rates for the carriage of oil in barrels.

(10) The plaintiffs commenced and established their present business in Cleveland in the spring or summer of 1875, and subsequently in July, 1876, became engaged in the same by arrangement with the Standard Oil Company to the partial extent of their own manufacturing establishment.

(10½) That during the time in the petition named the Standard Oil Company, the plaintiff's principal competitor in business, has also been and still is engaged in a like business with them, it having at Cleveland a large refinery from which it sells like products in the same markets; that the refineries of both are situate on the line of railroads other than that of the defendant, but having like connection with it; that each has switch tracks extending to their refineries from the main lines of its roads on which they are situate, by means of which shipments from them are made, the course of business in making shipments by defendant's road by the car-load (which is the manner in which nearly all the business is done) being for the defendant, on the request of either, to furnish its cars, which are switched from its connecting track by the road on which the refineries are situate to the refineries, then loaded by the shippers, and by said road drawn out and placed on the defendant's tracks for shipment by its road. By some traffic arrangement between the roads a switching charge per car for such service is charged by the local road against the defendant, which is by it at its discretion charged against the shippers with its general freight charge. Upon shipments in less than car-load lots delivery is made to the defendant's freight depot.

(11) That the Standard Oil Company was then, and ever since has been, engaged in the same business at Cleveland and elsewhere, and did then and ever since has manufactured and shipped more than ninety-one hundredths of all the illuminating oil and products of petroleum manufactured and shipped at and from the city of Cleveland.

(12) The court further find that prior to 1875 it was a question whether the Standard Oil Company would remain in Cleveland or remove its works to the oil-producing country, and such question depended mainly upon rates of transportation from Cleveland to market; that prior thereto said Standard Company did ship large quantities of its products by water to Chicago and other lake points and from thence distributed the same by rail to inland markets; that it then represented to defendant the probability of such removal; that water transportation was very low during the season of navigation; that unless some arrangement was made for rates at which it could ship the year round as an inducement it would ship by water and store for winter distribution; that it owned its tank cars and had tank stations and switches, or would have, at Chicago, Toledo, Detroit, and Grand Rapids, on and into which the cars and oil in bulk could be delivered and unloaded without expense and annoyance to defendant; that it had switches at Cleveland leading to its works at which to load cars, and would load and unload all cars; that the quantity of oil to be shipped by the company was very large, and amounted to 90 per cent. or more of all the oil manufactured or shipped from Cleveland, and that if satisfactory rates could be agreed upon it would ship over defendant's road all its oil products for territory and markets west and northwest of Cleveland, and agree that the quantity for each year should be equal to the amount shipped the preceding year; that upon the faith of these representations the defendant did enter into the contract and arrangement substantially as set forth in defendant's answer; that the rates were not fixed rates, but depended upon the general card tariff rates as charged from time to time, but substantially to be carried from time to time for about 10 cents per barrel less than tariff rates, and, in consideration of such reduced rates as to bulk oil, the Standard Company agreed to furnish its own cars and tanks, load them on switches at distributing points and unload them into distributing tanks, and was also to load and unload oil shipped in barrels, and without expense to defendant, and with, by reason thereof, less risk to defendant, which entered into the consideration, and was also to ship all its freight to points west and northwest of Cleveland, except small quantities, to lake ports not reached by rail, and to so manage the shipments, as to cars and times, as would be most favorable to defendant; that defendant then agreed to said terms; that said agreement so made in 1875 has remained in force ever since.

(13) That at a cost exceeding \$100,000 said Standard Company had and constructed the terminal facilities promised and herein found; that, in fact, the risk of danger from fire to defendant, the expense of handling in loading and unloading, and in the use of the standard tank cars is less (but how much the testimony does not show) than upon oil shipped without the use of such or similar terminal facilities; that said Standard Company commenced by shipping about 450,000 barrels a year over defendant's

road, which increased from year to year until, in 1882, the year before filing the petition in this action, the quantity so shipped on defendant's road amounted to 742,000 barrels, equal to 2,000 barrels or one full train-load per day.

(14) That said arrangement was not exclusive, but was at all times open to others shipping a like quantity and furnishing like service and facilities; that it was not made or continued with any intention on the part of the defendant to injure the plaintiffs in any manner; that plaintiffs knew of an arrangement between defendant and Standard Oil Company years before January 1, 1880, and on or about July 20, 1876, contracted with the Standard Company to give it the control of the shipments of plaintiffs' oil, and the plaintiffs the benefit, if any, of any arrangements then existing or that might thereafter exist with the Standard Oil Company upon shipment of oil, and which plaintiffs received until about January 1, 1880, when they ceased operating with the Standard Oil Company, and thereafter were charged and paid the regular tariff rates published by defendant and by it charged and collected from all the public except the Standard Oil Company under the arrangement aforesaid.

(15) That the testimony on behalf of the plaintiffs fails to show the quantity manufactured or shipped by them, and how much they could or would ship by defendant's road if the Standard Company were charged tariff rates does not appear in the testimony, although the testimony does show that plaintiffs shipped many car-loads, but the court find that the Standard Company have shipped and do ship over defendant's road more than 90 per cent. of all the oil manufactured at and shipped from Cleveland.

(16) The court further find that at the time of filing the petition, and at all times after November 29, 1882, the prices charged the Standard Company from Cleveland to Chicago was 50 cents per barrel on oil in barrels and \$40 for each tank car; that at the time of filing the petition, and from and after May 19, 1883, the tariff rate between the points aforesaid was 60 cents per barrel, while from November 20, 1882, to May 19, 1883, the tariff was 70 cents per barrel; that prior to the dates aforesaid the tariff rates and rates to the Standard frequently changed, and the difference was frequently greater than after said dates; that 61 barrels constitute a car-load and 80 barrels are estimated to the tank, but that some tanks hold 100 and some 120 barrels, and that at no time were tariff rates made or published for tank cars carried by defendant with refined oil except when furnished by said Standard Company.

(17) That after said May 19, 1883, about the same difference of 10 cents per barrel existed between tariff rates and the prices charged to the Standard Oil Company to the different points along the line and consignment points beyond the termini of defendant's road; that five barrels of oil make a ton, and that the prices charged the Standard after November, 1882, from Cleveland to Chicago amounted to .70 of 1 cent per ton per mile and tariff rates to .83 of 1 cent per ton per mile; that the contract of arrangement made with defendant has been largely profitable to defendant; that during the season of water navigation the Standard Company could have shipped to said distributing points on vessels by the lakes and river barreled oil for a less sum than the rates charged to it by defendant; that the rates charged to plaintiffs and the public were reasonable rates in themselves.

(18) That the defendant, from time to time, published and still does publish and hold forth to the public a certain printed tariff of rates of charge for the shipment and delivery of all classes of freight, including the products of the plaintiff's refinery, between Cleveland aforesaid and the various towns and cities upon its said lines, branches, and connecting lines, and has refused and still does refuse to ship such products for the plaintiffs to any of such points named in its tariff or schedule except for the prices therein named; and that such schedule fixes the prices for oil shipment at so much per barrel to the public, irrespective of their being shipped in barrels by ordinary freight cars or in bulk by means of tank cars.

(19) That the plaintiffs have, since December, 1879, frequently applied to the defendant both for reduced rates upon such tariff rates and for like rates with those made to such Standard Oil Company, both upon their general shipments by the ordinary freight cars of the defendant and also upon shipments to be by them made in bulk by means of tank cars owned by them, they proposing to load and unload the same at terminal points, and to assume all risks by fire and leakage; but that the defendant has and still does refuse to allow them by either course of shipment rates less than such tariff rates, the tariff charged and demanded upon such shipments in bulk being on the basis of eighty barrels allowed to be shipped by each tankcar.

(20) The defendant has received ever since the 1st day of December, 1879, and still does receive from said Standard Oil Company at Cleveland, and ship for it like products to those of the plaintiffs at rates much less than schedule rates, and receives and ships for said Standard Oil Company oil for shipment in bulk to such points by means of tank cars of said Standard Company at rates much less than said schedule rates and much less than the rates allowed to said company for the shipment of oil by barrels in ordinary freight cars, and that such reduced rates to said Standard Oil Company by means of such tank cars are allowed both by the making to it of a lower

rate upon its shipments by the defendant's cars in barrels, and also by means of its being allowed to ship by means of its said tank cars to their full capacity, running from 80 to 120 barrels each, and averaging over 100 barrels each, and the reduced rate being charged on a basis of 80 barrels per car. The defendant charged plaintiff the switching charge, and omitted to charge the same to the Standard Oil Company; that it was a further part of such understanding that should the defendant give to other shippers like rates said Standard Company would, as far as possible, withdraw from it its shipments, and for the purpose of effectually securing at least the greater part of said trade the defendant on the completion of the New York, Chicago and Saint Louis Railway, a competing line from Cleveland to the West, in the year 1883, entered in to a traffic arrangement with it, giving to it a portion of the shipments of said Standard Oil Company west, on a condition of its uniting with it in the carrying out of such understanding as to reduced rates to said Standard Company, which arrangements still exist.

(21) That upon the shipment made by the defendant for the said Standard Oil Company of such products the rates paid for shipment to points of delivery upon the defendant's connecting lines and beyond its line have been and are less for the ratable amount of carriage charged for the distance transported over its own line than said schedule rates or than the lower rates charged to said Standard Oil Company for shipments to the terminal points at which said shipments went from said road to its connecting line; how much less the defendant has refused to state.

(22) That the reduced rates charged to said Standard Oil Company upon its shipments are arrived at by charging upon such shipments full tariff rates, and afterward, in accordance with some pre-arranged method agreed on with said Standard Oil Company, refunding to it a portion of the freight so charged and collected, the amount refunded being known as a "drawback" or "rebate."

(23) That the evidence does not establish the fact whether or not all the various advantages claimed as secured to defendant by its contract with the Standard Oil Company are the equivalent for the discrimination made to it in freights.

### TESTIMONY OF VAN H. BUKEY.

VAN H. BUKEY, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Parkersburgh, W. Va.

Q. What is your business?—A. I am superintendent of the West Virginia Transportation Company, a West Virginia organization that follows the business of transporting oil by pipe line and tank car.

Q. How long has that company been in existence?—A. It was organized under several acts of the legislature of West Virginia in the years 1867, 1868, and 1869. That is, its original charter and amendment.

Q. How long have you been connected with it?—A. Just twenty years the 1st of this month.

Q. State whether or not your company at one time laid pipe in the Macksburgh region, to where and at what time?—A. In September, 1884, we laid a pipe line from several wells in the Macksburgh oil region, and continuing southerly toward Marietta, Ohio, to a point on navigable waters of the Muskingum River. The line was completed to that point on the way to Marietta. Between the extreme points I suppose it was about 7 or 8 miles long. The distance as it was intended to be completed would have been about 15 miles.

Q. State whether or not at that time there were other pipe lines in that region, to whom they belonged, and whether they came there before or after you did?—A. About the same time we laid our pipe lines the Ohio Transit Company, an Ohio corporation, laid a system of pipe lines leading to tankage along the Cleveland and Marietta Railroad within the Macksburg oil district.

Q. That is the organization that was managed at one time by Brun dred and Dale?—A. Yes, sir.

Q. State whether the Standard Oil Company under its own or other names laid any pipe in that region?—A. A pipe line was laid during the same season by, as I understood at the time, the National Transit Company. Mr. Daniel O'Day, who is known as the manager of the National Transit Company, was prominent in the direction of laying a similar line, but up to that time they concentrated the tankage.

Q. They located tankage to your supplies of oil?—A. Yes, sir.

Q. State which of these lines was open for business first?—A. I think the Ohio Transit Company; I might possibly be mistaken.

Q. As between you and the National Transit Company, or O'Day's line, which was first?—A. Ours.

Q. How long before they?—A. A matter of a short time.

Q. Was it a matter of months or weeks?—A. Only a matter of weeks, I think.

Q. State whether or not your pipe line was laid within the area that was claimed by the railroad company?—A. It was for some distance along the railroad company's line—something over a mile.

Q. Was it as much as 2 miles?—A. Scarcely 2 miles.

Q. State whether or not you had secured the right of way over that property to lay that pipe line from the owner in fee of the property?—A. We had secured the right of way on all the land on which we laid pipe line.

Q. State to what extent competition to get oil between your pipe line and O'Day's line was carried, and what means were resorted to, commercially or otherwise, to secure business by him as against you?—A. Soon after the completion of our lines to our tanks; and by the way our system of lines to several wells concentrated to our iron tankage was laid before we commenced to lay what we called our main lines of transportation. Soon after that—I can scarcely state whether it was before we began to actually receive oil or not—a premium above the quoted price of Pennsylvania oil in the Pennsylvania oil region was paid upon oil in the Macksburg fields.

Q. By whom?—A. By the National Transit Company. I call it that.

Q. Mr. O'Day's line?—A. Yes, sir.

Q. State to what amount the premium went?—A. Thirty cents a barrel.

Q. Now state whether commercially the oil of the Macksburg field was worth any more than the oil of the Pennsylvania fields.—A. I think not, and I judge it from the fact that afterwards and now the price is identical.

Q. When they were paying 30 cents what rate of premium, if any, did you have to pay?—A. We made contracts with certain producers by which we paid  $17\frac{1}{2}$  cents premium.

Q. And you were able to get some oil, were you?—A. Yes, sir; some considerable quantity of oil.

Q. And you were only paying  $17\frac{1}{2}$  cents as against their 30 cents?—A. Yes, sir.

Q. What was the charge for the collection and delivery of oil through your pipe line at that time, do you remember?—A. I do not exactly remember what we intended to charge to the terminus of our line. The fact is, we did not charge to the terminus of the line, because we did not transport any oil there.

Q. Did you make any charge at all to the river?—A. We had established a rate, and I think it was 25 cents to the river. I am not certain about that.

Q. What became of your pipe line. I mean, finally, what was done to it or with it?—A. During the time we were building the line from our tankage, where we concentrated oil, to the terminal point, we were receiving oil.

Q. In the tanks?—A. Yes, sir; ready for transportation. On Sunday, the 5th of October, 1884, I was not at Macksburg myself, but received a telegram from my representative, who was there, that the Cleveland and Marietta Railroad people had forcibly taken up our line wherever it was laid on what they claimed to be the right of way of the railroad, and also tore out that part of our main line which crossed at nearly right angles their tracks.

Q. Under their railroad?—A. Yes, sir; some 3 miles from the point of concentration, or rather from the Macksburg district.

Q. What entire length of pipe did they take out, do you suppose?—A. Between 1 and 2 miles.

Q. Did they tear up the line of the Standard Oil Company, or of Mr. O'Day?—A. Not that I know of.

Q. Or anybody else's line?—A. Not that I know of.

Q. What measures did you take for redress?—A. We applied to the court of common pleas of Washington County, Ohio, for an injunction. Whether it was mandatory to compel them to return it or to inhibit them from further interference with our line I do not remember.

Q. What month was that in?—A. In October, 1884, I think.

Q. What became of that suit?—A. Before a hearing was had upon it the suit, upon the application of the railroad company, was removed to the United States circuit or district court—I do not know which now—at Cincinnati. I was present with our attorney when we sought to get a short hearing upon that before Judge Sage of that court. He reserved his decision until, he stated, he could consult with Judge Baxter, the circuit judge. We were informed afterwards that the hearing upon which action of the court would be taken had been postponed until a regular term of the court afterwards, which would be in June of the following year.

Q. So that from October to June of the following year you had no pipe line and no redress?—A. No redress.

Q. What occurred in the meantime? If you had any negotiations with the Standard Oil Company and Mr. O'Day, and if they bought your pipe line, state so.—A. About February, 1885, we negotiated a sale of the whole plant to Mr. O'Day.

Q. Did you get cost for it?—A. The amount we got for it did not equal the inventory I made up.

Q. What became of the oil you had accumulated in your tanks and for which you had paid as high as 17½ cents and upwards premium?—A. We sold part of the oil to a local refinery, or transported it by rail from the Macksburgh oil region to Marietta. And that was the minority part that we had. The remainder of the oil we afterwards sold to the National Transit Company.

Q. Mr. O'Day?—A. Yes, sir.

Q. State whether or not, after Mr. O'Day had secured your pipe line, he secured about the same time the National Pipe Line also.—A. I can not state the exact time, but, according to my recollection now, it was a matter of perhaps a few weeks afterwards.

Q. Now state whether or not, after he had secured all the pipe lines, any premium over the price of Pennsylvania oil was paid upon Macksburgh oil.—A. The premium was discontinued immediately after the acquisition of all the lines by the National Transit Company.

Q. And you lost all the premiums you had paid on the oil which you had stored in tanks and had been unable to ship in consequence of your pipes being torn up?—A. Yes, sir; I think there might have been some rise in price, but my recollection is we sold the oil as it was in our tanks upon the basis of the Pennsylvania oil, with 10 cents added to us to cover the cost of transporting the oil from the wells.

Q. State whether or not, prior to the tearing up of your pipe, you had had a conference with O'Day or any talk with him about the relations which should exist between your companies?—A. I had a conference with Mr. O'Day on one occasion in regard to matters in Macksburg fields.

Q. Prior to the tearing up of your pipe?—A. Yes, sir.

Q. What relation did he then say should exist between you?—A. The conversation that we had did not extend to cover anything that might be negotiations that would lead to definite results. The conversation was general in its character, and an expression was made by Mr. O'Day that in Macksburg field, if the production increased, he would feel it incumbent upon himself, in carrying out the policy of his company, to take care of the oil, and a hope was expressed that our relations should be amicable, and also that in carrying out their policy that they desired to so arrange matters amicably as not to have competition and suggested that we might have a common interest.

Q. When you were negotiating with him for the sale of your line, after your pipe line had been torn up did he still agree to the idea of identity of interests, or did he want the exclusive control of the business?—A. I do not know that the question was very sharply presented in that direction. As we were not in a very good position, having no pipe line at the time, we were not very well prepared to make a proposition based upon any solid front or identity of interests, but all the negotiations had looked rather to a sale and the acquisition of our property entirely without any connection of any interests of ours with Mr. O'Day's company.

Q. I think I understood you to state that this raid on your pipe line took place on Sunday?—A. It took place on Sunday.

By Mr. CROUSE:

Q. Did you have any knowledge of who it was that instigated this raid on your pipe line?—A. No, sir; I have no knowledge except that it was done. By the way, your question might call out in reply that we had a letter, and I can not find it in our files now, but I presume it was filed with the papers in the case, and is with them yet in the court—we had a very short letter from the general superintendent of the Cleveland and Marietta Railroad, dated on that Sunday, the 5th, the substance of which was that "As you laid your lines upon our right of way without consultation with us, we have removed them without consultation with you."

By Mr. SMITH:

Q. This brings forth another question. Were the railroad people aware of the fact that you were laying a pipe line through their right of way?—A. The railroad people transported all our material to the point, and kindly placed their cars at other points than their regular stations, in order that we might unload our tubing to lay along the railroad track, and of course certainly they were aware of it.

**TESTIMONY OF B. F. MITCHELL**

**B. F. MITCHELL, sworn and examined.**

**By Mr. GOWEN:**

**Q. Where do you reside?—A. Louisville, Ky.**

**Q. What is your business?—A. General freight agent of the Newport News and Mississippi Valley Railroad Company.**

**Q. How long have you occupied that position?—A. Since its organization, January 31, 1886.**

**Q. What was that line known as before?—A. Chesapeake, Ohio and Southwestern.**

**Q. You were subpoenaed to produce certain statements, I believe?—A. Yes, sir.**

**Q. Do you produce any?—A. No, sir; I have been absent from home, and after the subpoena was served upon me I sent it to our vice-president for inspection, and owing to a death in the family I did not have a chance to see him. When I did see him he stated that he had arranged to have us represented by counsel, and I was notified by him, I think last Tuesday, about twenty minutes past 6, that it was necessary for me to be here Thursday morning; so I scarcely had time to catch the train.**

**Q. In your department you are charged with naming rates, are you not?—A. Yes, sir.**

**Q. Are you familiar with rates on oil over your line?—A. I presume I should be, but I do not try to keep all the rates in my mind.**

**Q. Can you state what the rates to the Standard Oil Company or Chess-Carley Company have been as compared with rates to other people?—A. Yes, sir.**

**Q. What are they?—A. We did not do any business with the Standard Oil people until some time after November, 1886.**

**Q. When I speak of the Standard Oil Company I include all companies affiliated with them, like the Waters-Pierce Company, the Standard Oil Company of Ohio and of Kentucky.—A. We have made lower rates for other people than the rates to the Standard Oil Company.**

**Q. On oil?—A. Yes, sir; we have made lower rates for Mr. Rice than we ever made for them.**

**Q. How long did that lower rate last?—A. I do not remember exactly.**

**Q. What were the rates at the time of the passage of the interstate commerce act for the Standard Oil Company, in tank-cars?—A. About what they are now.**

**Q. What are they?—A. I have a printed tariff, but I can not give you them from memory.**

**Q. Do you not know what they are?—A. We are charging \$55 a tank-car from Louisville to New Orleans.**

**Q. On illuminating oils?—A. We carried nothing but naphtha in the tank-cars.**

**Q. At what rate did you bill these cars?—A. So much per tank-car.**

**Q. Irrespective of quantity?—A. Yes, sir.**

**Q. So that the price per car was not arrived at by any system of calculation of charging per 100 pounds?—A. That price we made on tank-cars from Louisville to New Orleans was made on the basis of the through rate from Cincinnati and Cleveland. The rate from Cincinnati being \$60, we could not go above \$55 from Louisville and get any part of the business, and that is why we made the rate.**

Q. How did your rate per 100 pounds on tank-cars compare with your rate per 100 pounds on barreled oil prior to the passage of the interstate commerce act?—A. Our rate per barrel from Louisville to New Orleans was 75 cents.

Q. Per barrel?—A. Yes, sir; when we first made the rate on tank-cars we supposed they held about 80 barrels on an average, but during the investigation before the Interstate Commerce Commission we ascertained that they held a great deal more than that.

Q. Have you since changed your system of rates?—A. Yes, sir; we are charging now per 100 pounds on oil in tanks and barrels. In accordance with the interstate commerce decision we charged 75 cents per barrel on oil in barrels on the basis of six and a half pounds to the gallon.

Q. What is your rate on cotton-seed oil and turpentine north?—A. We are not in any turpentine district.

Q. Do you carry cotton-seed oil?—A. Yes, sir; from Memphis to Louisville and Saint Louis.

Q. Give us your rate from Memphis to any point north?—A. Our rate from Memphis to Chicago is 18 cents per 100 pounds, and 15 cents from Saint Louis and Louisville, actual weight.

Q. How does that rate per 100 pounds compare with your present rate per 100 pounds on naphtha or petroleum carried in tank cars?—A. We are charging a greater rate on cotton-seed oil than upon petroleum.

Q. Is the amount of tariff on your line greater southward or northward?—A. That varies according to the seasons.

Q. But the average of the year?—A. Well, I think it is greater northbound. That of course is taking into consideration the lumber and turpentine.

Q. Your whole column of traffic?—A. Yes, sir.

Q. Do you allow mileage on tank cars?—A. Yes, sir; three-fourths of a cent per mile.

Q. Did you at any time make any charge or attempt to make any charge against individual owners of tank cars for the cost of moving their empty cars back?—A. During what period?

Q. Since you have been on the line?—A. The tariff that we got out some time ago for coal oil in tank cars we issued with the understanding that if we hauled tank cars back empty we should charge 3 cents per mile unless we should have the privilege of loading them. There was no objection made to our loading the tank cars except by some of our friends. Mr. Rice was one of them, and the only one, I believe, who objected to our loading his tanks, and he had never had any tank cars. He notified us that he did not think we should charge mileage. We then found that our competitors did not, and we changed that. We are not charging mileage now.

Q. For how long a period did you keep up that charge?—A. We never actually did make any charge.

Q. But it was in your tariff?—A. Yes, sir.

Q. At what date did that go into effect?—A. I can not tell you exactly.

Q. Was it before or after the decision of the interstate commerce case?—A. It was since that decision. The tariffs have all been filed with the Commission.

Q. After the decision of the interstate commerce case, then, you did make up a tariff that proposed to charge 3 cents a mile for bringing back the cars empty?—A. That is if we were refused the privilege of

loading them; but nobody refused who had tank cars, and for that reason the tariff was not in effect.

Q. Will you look over those letters and say if you know them to be your original letters and copies and answers?—A. Yes, sir. I have seen some of them before. It may be well, however, to say that these letters are the result of personal conversation and information furnished by Mr. Rice to the one now on the witness stand.

Q. You recognize those as originals of that correspondence?—A. Yes, sir; I recognize some of them.

Q. Are there any of them not authentic?—A. I think it would be well to put Mr. Rice's letters with these to make the record complete and show what these letters were answers to.

Q. These are only your own letters?—A. Yes, sir.

Mr. GOWEN. I will agree to put Mr. Rice's in with them.

By the CHAIRMAN:

Q. You identify those letters?—A. Some of these were written by myself personally, and some by others in my office. I would like to explain that at the time those letters were written there was very little oil business going south by the Ohio River by our line. We occupied a very queer position there regarding oil shipped from Marietta and points near Cleveland and Pittsburgh, the oil-producing district, and in trying to get a portion of the business with the initial lines we found, after they promised to give us the business, it was by some hook or crook being routed around us, and getting away from us by other roads. For that reason these letters were written to Mr. Rice, asking him to consign it to us at Louisville so we might have our share of the business.

By Mr. GOWEN:

Q. You were one of the railroad officers who made and issued the circular of June or July, 1886, upon the subject of rates?—A. What circular?

Q. Making a reclassification of rates.—A. Where was the meeting held?

Q. I think at Louisville; Cincinnati or Louisville.—A. No, sir; I was not at any meeting in Louisville.

Q. Cincinnati?—A. In July, 1886? Not that I remember of.

Q. Wait a moment; I will get it for you.—A. (After examining circular handed to him by Mr. Gowen.) No, sir; I was not present.

Q. Your name is annexed to it.—A. Yes, sir; I know that. It was for this reason: Our line works in harmony with the lines west of Chicago. This meeting was held at Saint Louis May 7, 1886. I was not present, but I was asked if I would agree to the rates that were agreed upon at that meeting. I answered that if all the lines adopted the rates our line would. That is all I had to do with it.

Q. Your name is affixed by authority, is it not?—A. Yes, sir; but that circular had nothing to do with coal oil, because we had never had a shipment of coal oil. That did not affect coal-oil rates and had nothing to do with it.

Q. State whether in consequence of that meeting the rates on oil were based on Chicago rates.—A. I could not tell you that, because I was never in the oil business.

Q. But you have shipped oil over your roads?—A. No, sir.

Q. Was not this circular intended to apply to coal oil?—A. No, sir.

Q. But oil is put down in it as sixth class.—A. Very true; but we

never handled coal-oil. I told Mr. Rice that in person. Mr. Rice understood that I was not a party to that circular.

Q. But your name is on it.—A. That is very true. I told you how that came there.

Q. Were not the rates on your line advanced to junction points like Meridian from \$1 to as high as \$2.50 per barrel?—A. To Meridian, Miss.?

Q. Yes.—A. That might have been possible, but that meeting had nothing to do with it, but some meeting subsequent to it.

Q. I ask you as a fact now whether subsequent to that circular the rates to Meridian, Miss., were not advanced from \$1 to \$2.59?—A. I could not tell that without examining the records.

Q. Do you know as a fact that they advanced?—A. We have advanced and lowered them time and again. They are up to-day and down to-morrow.

Q. Did you make any change up to the recent decision of the Interstate Commerce Commission in your rates on tank oil?—A. We issued a printed tariff on tank oil, taking effect, I think, April, 1887. It was an open tariff to everybody. There was no change made in our tariff until after the decision of the Interstate Commission.

Q. Was any change made since you have taken charge of this road under its present name in the rates on tank oil or naphtha until you made them in consequence of the decision of the Interstate Commerce Commission?—A. You mean were there ever any advances or declines in rates? I do not know; I presume there were.

Q. Did you not say in your previous examination that you had a fixed rate?—A. From Louisville. I take it now you are asking about all over the country.

Q. Take any place.—A. The rate from Louisville was \$55 all the time.

Q. And there was no change in that?—A. Not from Louisville proper.

Q. And that oil remained at \$55 until you made the change consequent upon the decision of the Interstate Commerce Commission?—A. That is my recollection, but I have not had a chance to examine the records, and am not certain. There may have been some variations in it.

Q. Do you not know that the rates on barreled oil during some period were at least double if not more than double the rate on tank oil?—A. From what point?

Q. Any points in your territory.—A. There have been advances in oil from various places all over the country.

Q. Well, on your line have they not been advanced?—A. Well, if the initial line advanced, of course there would be an advance in our proportion of rates south of Louisville, if the railroads prorate it.

Q. Was there not an advance in the rate from Louisville to Jackson from \$1.50 to \$2.59?—A. I do not remember.

Q. Do you remember whether there was any advance?—A. Yes, sir; I guess there has been an advance, quite likely.

Q. Do you not know that there was?—A. I do not remember.

Q. You mean to say now on your oath that you have no recollection that there was an advance in the rate on barreled oil?—A. No; I won't say there was, nor that there was not, because I do not remember.

Q. Do you know that at the date of this circular Mr. Rice had a rate of \$1.59 from Marietta to Natchez?—A. That rate was made by Mr. Frazer of the Cincinnati, Washington and Baltimore road, not by me.

Q. You participated in it?—A. Yes, sir; I participated in any rate he made.

Q. Do you not know the fact that such a rate was made?—A. There has been a rate of \$1.10.

Q. And do you not know that has been doubled?—A. No, sir; I do not know.

Q. That is what you were subpoenaed here for?—A. I did not know I was coming; my vice-president stated we would be represented by counsel here.

Q. But you were subpoenaed to produce the rates on oil?—A. Yes, sir.

Q. Did you make any effort to refresh your recollection?—A. I did not have time.

Q. When were you first subpoenaed?—A. I think it was a week ago last Saturday.

Q. Within that time you could have found out?—A. I presume I could.

Q. And you made no effort to do it?—A. As I stated before, I sent the subpoena to the vice-president, and he informed me we would be represented by counsel here.

By Mr. BUCHANAN:

Q. You spoke about the order concerning mileage in case tanks are returned empty. I understood you to say that the rate really never was exacted, because you had no case of the kind actually occurring. Am I correct?—A. Yes, sir.

Q. Do all your tanks return loaded?—A. They are usually loaded with cotton-seed oil. If not loaded by our line we turn them over to other lines at New Orleans or Vicksburg to be loaded by some other road.

Q. Do you mean to say that tanks going south loaded with petroleum come back loaded with cotton-seed oil and turpentine? Do you mean either with cotton-seed oil or turpentine?—A. Yes, sir; either one or the other.

Q. In what condition is that cotton-seed oil, ready for use?—A. It is sometimes shipped to Chicago and Saint Louis or Cincinnati, to be refined. I am not positive about that.

Q. You say you make a higher rate on cotton-seed oil than on coal oil; what is your reason for that?—A. Cotton-seed oil is worth more than coal oil.

Q. Does it cost more to haul it?—A. No, sir; but the traffic will stand a greater rate than coal oil.

Q. Then you charge what the traffic will bear, is that correct?—A. We usually charge the best rate we can get; yes, sir.

Q. And do you want this committee to understand that the only reason you charged more for cotton-seed oil than for coal oil is that cotton-seed oil is more valuable and the traffic will bear a greater charge?—A. Well, the rates on cotton-seed oil have been about what they are now for a good many years and there has been no change in them, and no reason that I know of why there should be any change.

Q. The expense of the company in transporting cotton-seed oil is no greater than in transporting coal oil?—A. No, sir; it is no greater; it is handled in just about the same way.

Q. Can you in a few words tell this committee whether prior to the late decision of the Interstate Commerce Commission that the rate for transporting oil in tanks must be equal to the rate for transporting oil

in barrels, your road transported oil over its line for the Standard Oil Company at a lower rate than it gave to others engaged in the transportation of oil?—A. I did not say that; I said we made a rate of \$55 that was open to anybody.

Q. I was not asking what you had stated. I ask you to state in a few words what the fact is, whether in point of fact you gave any special rates to the Standard Oil Company which were not open to the general public?—A. We have made the Standard Oil Company some rates less than tariff as was the custom, but it was for a very short time. The rate of \$55 a tank car was open to everybody. I say the Standard Oil Company, but I am referring to Chess-Carley Company.

Mr. GOWEN. That is the same thing.

The WITNESS. I do not recognize it as the same thing, because the Chess-Carley Company is a Louisville institution.

Mr. BUCHANAN. It is not necessary to discuss that, because we can get that from other parties having more accurate information perhaps. So I do not ask you to state whether they were or were not the same.

By Mr. GOWEN:

Q. Were not the rates which you charged up to the decision I have spoken of of the Interstate Commerce Commission on barreled oil relatively higher than your rates on tank oil?—A. Yes, sir, they were; but when you take into consideration the rates we were making on barrels as compared with the rates on tanks with an average capacity of 80 barrels it was not a very great difference.

Q. You have partly anticipated my next question, which is this: What reasons existed for making a higher rate on barreled oil than on tank oil, if any?—A. There are reasons for making a higher rate, which we considered good ones at the time. In the first place, we handled a greater portion of the oil in barrels. We had to load and unload it. There was nothing of the kind with tank cars. We simply hitched on the car and took it to its destination and were relieved of it then. But large portions of the oil in barrels we have to load on our platforms. It has been quite a troublesome matter at Memphis because of the complaints made by the fire officials.

Q. Barrels of oil are not handled on your platform, are they?—A. Two-thirds of the shipments over our line have been handled by us on our platform at Memphis.

Q. At destination?—A. Yes, sir.

#### J. D. ARCHBOLD—Recalled.

By Mr. GOWEN:

Q. You know the signature of Mr. Rockefeller?—A. Yes, sir.

Q. And also the signatures of Mr. Flagler and Mr. Freeman?—A. Yes, sir.

Q. State whether these are their signatures, and whether that is a certificate of the Standard Oil Trust.—A. (After examining certificate.) I think it is; those are their signatures.

Q. Do you not know?—A. Yes, sir, I should so pronounce it.

Mr. GOWEN. I offer that certificate in evidence.

The CHAIRMAN. Mr. Archbold, you will kindly wait here until later in the day, please. You are not excused.

The certificate offered in evidence by Mr. Gowen is as follows :

SHARES \$100 EACH.

STANDARD OIL TRUST.

Number 3057.

Shares, 1.

This is to certify that L. B. Mallaby is entitled to one share in the equity to the property held by the trustees of the Standard Oil Trust, transferable only on the books of said trustees on surrender of this certificate. This certificate is issued upon condition that the holder or any transferee thereof shall be subject to all the provisions of the agreement creating said trust, and of the by-laws adopted in pursuance of said agreement, as fully as if he had signed the said trust agreement.

Witness the hands of the president, secretary, and treasurer of the board of trustees, this 20th day of June, A. D. 1887, at the city of New York.

J. D. ROCKEFELLER,  
*President.*

J. F. FREEMAN,  
*Treasurer.*

H. M. FLAGLER,  
*Secretary.*

For value received, I hereby sell and transfer to George Rice, of Marietta, Ohio, one share of the Standard Oil Trust standing in my name on the books of said trust.

And I hereby irrevocably appoint said George Rice attorney to make the necessary transfer upon the books of said trust, in accordance with the regulations thereof and upon the conditions expressed on the face of this certificate.

Dated June 20, 1887.

L. B. MALLABY.

In the presence of —  
F. H. SMITH.

### TESTIMONY OF JOSHUA MERRILL.

JOSHUA MERRILL, sworn and examined.

By Mr. GOWEN :

Q. Where do you reside ?—A. In Boston.

Q. What is your business ?—A. I am in the oil business, manufacturer of petroleum oils.

Q. A refiner ?—A. Yes, sir.

Q. How long have you been in that business ?—A. Since 1866. Before petroleum was discovered we manufactured coal oil by distilling the coal into crude oil and refining that into the refined product.

Q. Did you ever manufacture oil from the shales ?—A. Yes, sir ; we imported quite largely the dog-head shales of Scotland and manufactured from that quite extensively.

Q. Where is your refinery situated ?—A. In Boston.

Q. Is it still in operation ?—A. No, sir.

Q. What has become of it ?—A. We have recently dismantled it.

Q. Why ?—A. Because it was no longer profitable to pursue the business.

Q. Can you give us any reasons for that ?—A. One reason was that prices became so depreciated in the market that with our methods of manufacture the business was no longer profitable.

Q. What was your capacity ?—A. A hundred thousand barrels a year.

Q. Within what time did you find that the business had ceased to be profitable ?—A. I think for nearly three years last there was no profit in conducting the business ; and for the last year or two some considerable loss.

Q. Prior to the last three years how did you receive your crude oil?—

A. We had our own tank line and received it from the shipping stations, Olean, Buffalo, and Corey. We had works at Corey where we distilled petroleum and the residuum of petroleum we shipped to our Boston works to be refined. We had a tank line of 40 or 50 cars which we kept going back and forth.

Q. You did not make illuminating oils at Boston?—A. Yes, sir; we did.

Q. As well as at Corey?—A. Yes, sir; we carried the crude oil to Boston as well as to Corey.

Q. Within the last three years how have you been getting your supply?—A. In the same way practically, by tank.

Q. Do you ever get any supply by pipe line?—A. No, sir; we were not situated so that we could avail ourselves of pipe lines.

Q. Can you tell us what rates you paid for transportation on crude oil?—A. From Olean, which is one of the pumping stations the rates varied from \$1.50 to \$1.75. They varied from year to year and from month to month more or less.

Q. Can you give us any idea of the lowest rate within the last three years?—A. Yes, sir; 50 cents was about the average for the last three years.

Q. Then you have been getting a rate of about 50 cents a barrel for the last three years?—A. Yes, sir.

Q. And at a rate as low as that you found it impossible to make a profit?—A. I would like to explain that our methods of manufacture were somewhat different from ordinary manufacture. We made what we considered a better quality of oil, but at a larger expense; and the public, owing to the very low prices of oil made by the Standard Oil Company and other manufacturers, would not pay the price for our oil we had to get to make it profitable.

Q. At what rate of transportation do you think you could have afforded to have maintained your establishment in Boston?—A. We were unfortunately located. We had heavy terminal charges. We were located in South Boston, and it cost us about \$10 a car to get the oil to our works. The Boston and Albany Railroad delivered the oil at a certain specified rate at their depot and to get it from there to our works we had to use what was called the Marginal Railway and also the New York and New England Railroad, costing us about \$10 a car.

Q. Over what length of road?—A. Not over 2 or 2½ miles.

Q. How many barrels did your cars hold?—A. About 80 or 90.

Q. About 14 tons?—A. Somewhere in that vicinity. I know the charges were very high, and we were constantly complaining.

Q. You paid \$10 for moving 14 tons 2 miles?—A. That is about the whole story.

Q. That would be about 85 cents a ton a mile?—A. I have not figured that out in my mind but it is easily calculated. Eighty barrels of oil at 7 barrels to the ton would be between 11 and 12 tons.

Q. And that would be about 85 cents on the average per ton for 2 miles?—A. Yes, sir.

Q. That would be about 42½ cents per ton per mile?—Yes, sir; that is easy arithmetic.

Q. Do you know that it is a very unusual rate?—A. Yes, sir; and we tried over and over again to get a modification of it.

Q. What efforts did you make?—A. We made repeated efforts, personal solicitation to the railroad officers and to the railroad commissioners also, but it was the established rate on what was called the

Marginal freight road. That is a line which unites all the roads in Boston, and owned by the Old Colony road, and their rate was \$4 per car and their haul was not more than half a mile. Then the New York and New England carried it the rest of the way.

Q. Who was president of the New York and New England Railroad?—

A. I do not know.

Q. Do you not know that Mr. Bostwick is president of it?—A. Yes, sir.

Q. He is connected with the Standard Oil Trust is he not?—A. I believe he has been, so far as my knowledge goes.

Q. J. A. Bostwick, is it not?—A. Yes,

Q. Of New York?—A. Yes, sir.

Q. I never had the pleasure of meeting you; I was only told you knew these things. This committee desires to get all the information it can respecting railway discriminations between the Standard Oil Company and other people. If you know anything further on that subject we will be glad to hear it?—A. I have not any knowledge excepting in matters connected with our own business.

By the CHAIRMAN:

Q. What has become of your tank cars?—A. We sold them.

Q. To whom?—A. To the Standard Oil Company, as we had no longer any use for them, we made an application to them and asked if they would purchase the cars. They assented, and we agreed on a price.

Q. Was that the Standard Oil Trust or the National Transit Company, or what?—A. Standard Oil Company, I think. The check in payment, if my memory serves me was signed by the Acme Oil Company of New York.

Q. Do you know if they went into the line called the Union Tank Line?—A. I do not know what use was made of them.

Q. What was the capacity of your tanks?—A. I think about 80 barrels each.

By Mr. BUCHANAN:

Q. The rate you spoke of from Olean to Boston was the rate given on oil transported in your tanks?—A. Yes, sir.

Q. Now, with reference to this Marginal Railroad—I think you call it?—A. Yes, sir.

Q. Is that located through a thickly-settled part of Boston?—A. It runs directly through the streets of Boston. It runs through Federal street a large portion of the way.

Q. Running through the streets; did its right of way cost it anything?—A. I do not know.

Q. Has it been in operation a long time?—A. I think it had permission from the city government to lay the rails.

Q. And when laid it occupied the streets?—A. I think it had permission from the city government to lay the rails.

Q. But when laid it occupied the public streets?—A. Yes, sir.

Q. The whole distance?—A. Yes, sir; it united the whole railway system of Boston.

Q. Do you know whether the city receives any benefit from the grant of that franchise?—A. I do not know.

Q. Do you know whether other freight hauled over that road a corresponding distance is charged a corresponding price?—A. I have no doubt it is. I know of one concern that made a serious complaint of rates of freight, having built a storehouse that made it necessary for

them to use this road. They tried hard to get the rates reduced, but without success. It is practically a monopoly, and in connecting all these lines it charges correspondingly a very high price.

Q. You spoke of having made application to the railway commission of your State. Was that a formal application stating the difficulties under which you labored, the rates charged, and asking for the intervention of the commission in the premises?—A. Yes, sir; I think so.

Q. What disposition did the committee make of that complaint?—A. Well, we had no remedy at their hands, and I think, judging from that, it was agreed that the charge was not an exorbitant one.

By Mr. SMITH:

Q. Ten dollars a car for 2 miles?—A. Yes, sir.

By Mr. BUCHANAN:

Q. It would seem that a railway corporation occupying a public street could afford to haul freight at a lower rate than that, and that is the reason that I am asking you particularly whether your railroad commission ever had the matter of these excessive charges formally before it, or whether simply individual complaints made orally.—A. No; we wrote to the commissioners that we thought the charge was very high, and they ought to interfere to have it reduced. But it was not done, and I suppose for good and sufficient reasons. Perhaps the railroad people made it appear that the charge was all right; that the amount of freight which went over the road was small, and that they had to have a high rate on it.

Q. How is the fact as to the amount of freight?—A. I think it was only moderate. I think dressed beef and some exchange of freight between the different roads is the greater part of what goes over that road. But it is the only method of connecting the railroads in Boston.

Q. Are you prepared to say to this committee, because that is the point we are inquiring about particularly, that your failure to continue your business of refining was occasioned by causes other than your unfavorable location and the excessive charges over this road?—A. No, sir; what I meant to state was that that was one factor, our terminal charges, in making it unprofitable; and the other was our mode of manufacture. If I may explain, we finished all our oils by a double distillation, whereas the ordinary process of distilling is to distil the oils all at once. Of course that added to our expense. I made a special article that was wanted in the market, but not at the price at which we were obliged to sell it. When we attempted to make oil by the popular method there were serious complaints from the trade that their customers complained that it was not the oil known as the Downey oil, and we had to go back to our old methods. But when the prices fell so very much for ordinary oils we couldn't carry on our business and make a profit, or even expenses.

Q. Having habituated your customers to receive the best they declined to receive subsequent product not of the same high standing?—A. That is the point. They would have been very glad to have got our oils at the same prices as other oils, but they were not willing to pay the price.

Q. At the time you were shipping oil from Olean to Boston, were others shipping over the same line and refining in Boston?—A. Yes, sir.

Q. What mills?—A. One was the Pierce and Montalbert, and the other was Steven Jennings' Sons.

Q. Are they still in operation?—A. No, sir. Both of those firms made oil by the ordinary process and at much less cost, but neither of them used the Marginal freight road. They were at the terminus of the Boston and Albany.

Q. What is your knowledge, if any, as to the discriminations over the line to Boston on freight charges between shippers of oil?—A. I do not think there is any. I do not know that there is.

Q. As to the party?—A. I have no knowledge that there has been any discrimination.

By Mr. GOWEN :

Q. Did you receive a rate for car service for the use of your cars?—A. No, sir; we did not own the cars, simply the tanks on the cars. We used the flats of various railroads, the New York Central, the Boston and Albany, and quite a number of different roads. Each contributed their quota of cars, and we mounted the tanks on them.

Q. Have you been connected with any other mercantile business in Boston?—A. No, sir; I was thirty-two years in the oil business. It was the business of my life.

Q. Do you know what the drayage charges would be for 2 miles in Boston?—A. I think to our works about 10 cents a barrel.

Q. To what point?—A. To any of the railway depots.

By Mr. BUCHANAN :

Q. You say these tanks were upon platform cars?—A. Yes, sir.

Q. Describe them, please.—A. They were some 28 or 30 feet in length, I can not give the exact dimensions, 4 or 5 feet in diameter, perhaps, and were secured to the platform cars in the ordinary manner by strapping, bolting, etc.

Witness excused.

### TESTIMONY OF W. B. CROSBY.

W. B. CROSBY, sworn and examined.

By Mr. GOWEN :

Q. Where do you reside?—A. Atlanta, Ga.

Q. What is your occupation?—A. I am manager of the eastern division for the Standard Oil Company.

Q. Of Kentucky?—A. Yes, sir.

Q. Over what territory does your division extend?—A. From Knoxville to Key West, and from Wilmington to the Alabama line.

Q. Wilmington, N. C.?—A. Yes, sir.

Q. Do you barrel oil and distribute it at and from Atlanta?—A. Yes, sir.

Q. What kind of establishment have you there?—A. We have tankage, cooper shop, glueing and painting shops, etc.

Q. Do you make barrels there?—A. No, sir.

Q. You buy them?—A. We have made barrels, but very few.

Q. Do you buy second-hand barrels?—A. Yes.

Q. You receive your oil at Atlanta by tank cars?—A. A very large majority of it.

Q. And then barrel it and distribute it over your territory?—A. Yes, sir; over the territory tributary to Atlanta.

Q. Have you any other distributing point?—A. Yes, sir.

Q. Where?—A. Knoxville, Macon, Savannah, Augusta, Columbus, Charlotte, N. C., Wilmington, N. C., Columbia, S. C., and Charleston.

Q. From what point do you derive your supply of tank oil at Atlanta?—  
A. Usually from Cleveland, Ohio.

Q. By what route?—A. To Atlanta usually by the Western and Atlantic.

Q. What other lines in connection with the Western and Atlantic form the through route?—A. Some of it comes by the Queen and Crescent route to Chattanooga, and some by the Nashville, Chattanooga and Saint Louis. North of Cincinnati I have no knowledge.

Q. Is it billed through on a through bill of lading?—A. My impression is it is billed from Cincinnati; but of that I am not so sure.

Q. What are your rates from Cincinnati or from Cleveland, as you may know them to be, to Atlanta, on crude oil in tanks?—A. We ship very little crude oil.

Q. I meant refined oil.—A. I think 31 cents net from Cincinnati. Beyond that I have no knowledge.

Q. When did that rate begin to apply?—A. The 1st of April of this year.

Q. Prior to that what were they last year?—A. I do not believe I know. We had a rate of \$61.80 either from Louisville or Cincinnati; but of that I am not sure.

Q. Sixty-one dollars and eighty cents per car?—A. Yes, sir; but those were on smaller tank-cars than those we are now getting.

Q. But was not your rate, when it was fixed, invariable with reference to the different capacities of the cars prior to the decision of the Interstate Commerce Commission?—A. I think it was so much per car at a certain time. For the last two years our through freights have been prepaid, or at least a large majority of them, so that I have really very little knowledge of northern rates prior to the 1st of April.

Q. Did you have anything to do with the subject of arranging or negotiating on rates of inland oil to you?—A. No, sir.

Q. Can you tell me what your rates were on tank oil to Charleston prior to the interstate commerce act?—A. No, sir; we shipped at Charleston usually by water.

Q. Can you give the rates to Columbia?—A. No, sir; I can not.

Q. To Savannah?—A. I have not got the rate from the West to Savannah.

Q. On tank oil?—A. No, sir.

Q. Prior to this recent decision, I mean.—A. No, sir.

Q. Nor to Macon?—A. Yes, sir; but it was proportionate to Macon with the distance to Atlanta. It was slightly more, but just what it was I do not remember.

Q. You mean based on the same rate?—A. I think so.

Q. Can you tell us what was the rate on tank oil to Macon?—A. No, sir.

Q. To Knoxville?—A. No, sir; Knoxville was a new station established last January and everything was prepaid there.

Q. On the question of inland freights to you, who had charge of the rates on barreled oil to outward points?—A. The Georgia railroad commission.

Q. But who on your part negotiated and got the rates?—A. There was no negotiation; we simply accepted the tariff rates.

Q. Can you tell us what the rates on barreled oil outward from Savannah were prior to any change that may have been made by reason of the interstate commerce decision?—A. They were practically the same with the exception of a change of classification. Some two months ago oil in car loads was reduced to sixth class; prior to that it had been

fourth class. That was done by the rating committee of the Southern Railroad and Steam-boat Association. We have always paid full tariff rates.

Q. On barreled oil?—A. Or tank oil out of Atlanta.

Q. Any other places?—A. Or any other southern point; or any point I have knowledge of.

Q. What portion inland did you receive in tank-cars as compared with barrels?—A. At a great many stations we received everything in barrels. At those stations I have named we received some in barrels and some in tank cars. At all those coast points we are receiving at this moment in barrels.

Q. That is all shipping points?—A. Yes, sir.

Q. But to these points where you have facilities for re-barreling, what proportion comes in tanks and what proportion in barrels?—A. Well, I never figured that.

Q. Can you tell us roughly; was it half or three-quarters?—A. At Atlanta I presume we receive in bulk eight-tenths. At other stations we receive about as great a proportion to the contrary; that is, as great a proportion in barrels. In other words, we received eight-tenths at other stations in barrels.

Q. At any place where you had a barreling station?—A. Yes, sir.

Q. You did not change those barrels of oil from old barrels into new ones, did you?—A. No, sir; we sold in the same package.

Q. What would be the object of barreling works unless to receive oil in bulk and re-barrel it?—A. That would depend upon circumstances. For instance, at stations where we had barreling facilities the market may be clear of barrels. There may be none to purchase, in which case we would have to ship in barrels until there was a change.

Q. Can not you give me some idea of what your average proportion of rates in tanks was at the various points you have named—Knoxville, Macon, Savannah, Augusta, Columbus, Charlotte, N. C., Wilmington, N. C., Columbia, and Charleston?—A. I have a great many minor stations at which I receive nothing but barrels.

Q. Yes; I know that. That is not the question I asked you.—A. For what time?

Q. Taking through the year.—A. Well, I should think probably more than half, taking them all together, is received in bulk.

Q. That would be including the coast stations?—A. Yes, sir.

Q. Now, then, suppose you exclude the coast stations and confine yourself to the remaining ones, where you receive the supply inland by rail, would the proportion come up to three-fourths, do you suppose?—A. No, sir; because I have some stations where we ship entirely in barrels.

Q. Some of these re-barreling stations?—A. Yes, sir.

Q. Well, I just want the proportion; would it be five-eighths?—A. It would be simply a guess to estimate that, because I never thought to figure it. I should think it would be a fraction over a half.

Witness excused.

Mr. GOWEN. Mr. Stith telegraphs me that he is under a subpoena by a Federal court and can not attend without disobeying that. Mr. Warner is in New York and can be here to-morrow. I telegraphed him yesterday, but the answer I got was that he had left the office before the telegram was received. He will come here if the committee will be in session to-morrow.

Mr. BLAIR. I will make the same explanation about Mr. Warner as

about Mr. Stith. He has been in attendance upon a Federal court in New York and could not leave.

Mr. GOWEN. Yes; but he got out of court yesterday, and could easily have been here.

The CHAIRMAN. We will dispose of that later.

Mr. GOWEN. I will state to the committee that there are four witnesses here who have not treated the committee with much respect, and who, I am informed, have announced their determination not to come. One of them is R. M. Fraser, general freight agent of the Cincinnati, Washington and Baltimore Railroad; the other three are H. Collbran, general freight agent, John O. Cole, general manager, and C. C. Harvey, controller of the Queen and Crescent Lines.

Mr. BUCHANAN. I would suggest, Mr. Gowen, that you are not entirely accurate in saying "there are four witnesses here;" they are not here.

Mr. GOWEN. Of course.

Mr. SMITH. That is not strange at all. You did not expect that a member of a corporation would respect the will of the representatives of the people.

Mr. GOWEN. The counsel for this company called upon the chairman on Tuesday of last week and was referred to me. On that day I gave him a very condensed and reduced statement of what books and papers were wanted, which he was to telegraph to the officers of his company that night. I told him that if they were here on Tuesday it would answer. I have heard nothing since, except that that same counsel wrote a letter to Mr. Bacon, the chairman, making no reference to what had occurred between us, and stating that as he had not been able to see Mr. Bacon or myself the afternoon previous, he was unable to tell his witnesses whether they would or would not be needed.

The CHAIRMAN. The committee will now take a recess until half-past 2.

#### AFTER RECESS.

#### TESTIMONY OF GEORGE RICE.

GEORGE RICE, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Marietta, Ohio.

Q. What is your business?—A. I am in the oil business.

Q. What part of the oil business; are you a refiner?—A. I am a refiner and producer both.

Q. Where do you produce oil?—A. In the Macksburgh field.

Q. In Ohio?—A. Yes, sir.

Q. Where is your refinery?—A. In Marietta, Ohio.

Q. How long have you been in the refining business?—A. About twelve years. I have been a refiner twelve years and producer about twenty-three years altogether.

Q. What is the capacity of your refinery?—A. About 12,000 barrels of crude oil per month.

Q. State, with reference to the manner in which you manage your business, whether it is done by your own family or whether you have large expenses?—A. The executive part of the business is done altogether by my family. One daughter keeps the books, another daughter does nine-tenths of the correspondence, and my son-in-law is the general manager.

Q. And what do you look to?—A. Outside matters.

Q. Where do you find the principal market for your product?—A. In the Southern States.

Q. Over what section?—A. East of the Mississippi and some west of the Mississippi; taking in New Orleans and Texas.

Q. Prior to 1880 I understand you got your oil from the Pennsylvania district?—A. Yes, sir; we did up to about the first of January, 1884. I got a little from Macksburgh at the same time.

Q. State how you got that oil from the Pennsylvania field.—A. By barge down the Allegheny River and down the Ohio River.

Q. At what port on the Allegheny River did you transfer the oil?—A. At East Brady.

Q. How was that brought to the barges?—A. From the tanks of the National Transit Company and by pipe line to the barges.

Q. What did you pay for barging that oil down?—A. It cost me about 3 cents if I sent two barges and about 5 cents if I sent up one barge.

Q. A barrel?—A. Yes, sir.

Q. What became of that pipe line?—A. That was taken up by Mr. O'Day's orders, and I was forced to use the railroad from East Brady to Pittsburgh, costing 15 cents a barrel, and had to make terminal facilities at Pittsburgh to the barges.

Q. Do you know why that pipe line was taken up?—A. For no reason except to make me pay more charges.

Q. What was its length?—A. It was very short.

Q. What size?—A. About 3-inch.

Q. How much oil were you taking a year at that time through that pipe line?—A. I did not increase the refining capacity of my works until 1880, or about that time. I doubled the capacity in 1880, and have not increased it since.

Q. Do you remember about how many thousand barrels a year you took through that pipe line at the time they tore it up?—A. About 20,000 or 25,000 barrels of crude—something like that.

Q. When did you go to the Macksburgh field for your entire supply?—A. About the time it increased its production; in the fall of 1883 or the beginning of 1884.

Q. What per cent. of oil from the Macksburg field had you been receiving up to that time?—A. About 25 per cent.

Q. How did you receive it?—A. In tank-car—my own tank—I had one tank-car.

Q. At what rate?—A. At 17½ cents at one time before the advance was made.

Q. Was that rate raised on you?—A. Yes, sir; about January, 1884, it was raised to 30 cents and afterwards to 35 cents.

Q. Who were Brundred & Dale at that time?—A. W. J. Brundred was the general manager of the Green Line which transported tank-cars on the Pennsylvania Road. He and Dale made an arrangement with the Cleveland and Marietta Railroad by which they were to have oil carried at 15 cents a barrel, and all others were to pay 30 cents. I was charged 30 cents; but they did not do any business for me. I had to pay 30 cents, except that they allowed me 5 cents for oil transported in my own tank-car.

Q. Do you know as a fact that at the time their charge against you was 30 cents Brundred & Dale were only paying 15 cents?—A. I know that positively.

Q. How long did that last?—A. About a year. Then came in this other arrangement by which the Standard paid 10 cents and I was

charged 35 cents. They also got .25 cents per barrel on all my shipments. The matter went into court before Judge Baxter and these facts were developed.

Mr. GOWEN. I now offer in evidence in connection with this the report of this whole case reported in the Federal Reporter. That is the case of Handy against the Marietta Railroad, Federal Reporter, vol. 31, pages 689 to 693 inclusive.

Handy and another, trustees, v. Cleveland & M. R. Co. and others.

(Circuit court, S. D. Ohio, E. D. 1887.)

1. RAILROAD COMPANIES—RECEIVERS—DISCRIMINATION.

The receiver of an insolvent railroad company can not unjustly discriminate in the charges imposed upon rival shippers over his road in order to increase his revenues, and, if guilty of discrimination, may be removed by the court therefor.

2. SAME—REMOVAL.

The Standard Oil Company having threatened to store its oil until it could lay a line of pipes to Marietta unless the receiver of a railroad company should give it a special oil rate, the receiver agreed to carry its oil at 10 cents per barrel, to charge rival shippers 35 cents per barrel, and to pay 25 cents per barrel of the sum collected from rival shippers to the Standard Oil Company. Held to be such gross and wanton discrimination on the part of the receiver as to require his removal.

Hugh L. Cole, for complainants.

Swayne, Swayne & Hayes, for defendant.

BAXTER, J. This suit was commenced in the common pleas court of Washington County, Ohio, January 12, 1885, to foreclose a mortgage upon the road and other property of the defendant, the Cleveland and Marietta Railroad Company, in which Phineas Pease was appointed receiver and vested with the powers usually conferred in such cases. In March following it was removed to this court for such further action as the exigencies thereof might require. Everything progressed satisfactorily until October, 1885, when, upon complaint made of unjust discrimination by the receiver, an investigation was had resulting in the development of the following facts:

The Standard Oil Company owned or controlled certain pipe lines through and by means of which it collected and piped the oil procured by it in the vicinity of Macksburgh, a station on said road, to be carried thence by rail, either to Cleveland or Marietta. It thus controlled a large amount of freight, which the receiver was, very naturally, solicitous of securing. But the conditions proposed were so unusual and unjust and oppressive to rival shippers that the receiver, after reluctantly acquiescing in the company's demand, sought to fortify himself by the advice of an attorney, and to this end wrote the following communication:

CAMBRIDGE, OHIO, February 25, 1885.

EDWARD S. RAPPELLO, Esq.,

General Counsel for Receiver, 32 Nassau street, New York:

DEAR SIR: This will introduce Mr. J. E. Terry, assistant freight agent of this road, whom I send to New York to counsel with you in regard to verbal arrangements made with the Standard Oil Company for transporting the oil product along the line of our road to Marietta. Upon my taking possession of this road the question came up as to whether I would agree to carry the Standard Company's oil to Marietta for 10 cents per barrel, in lieu of their laying a pipe line and piping their oil. I, of course, assented to this, as the matter had been fully talked over with the Western and Lake Erie Railroad Company before my taking possession of the road, and I wanted all the revenue that could be had in this trade.

Mr. O'Day, manager of the Standard Oil Company, met the general freight agent of the W. & L. E. Railroad and our Mr. Terry at Toledo about February 12, and made an agreement (verbal) to carry their oil at 10 cents per barrel. But Mr. O'Day compelled Mr. Terry to make a 35-cent rate on all other oil going to Marietta, and that we should make the rebate of 25 cents per barrel on all oil shipped by other parties, and that the rebate should be paid over to them (the Standard Oil Company), thus giving us 10 cents per barrel for all oil shipped to Marietta, and the rebate of 25 cents per barrel going to the Standard Oil Company, making that company, say, \$25 per day clear money on Mr. George Rice's oil alone.

In order to save the oil trade along our line, and especially to save the Standard oil trade, which would amount to seven times as much as Mr. Rice's, Mr. Terry verbally

agreed to the arrangement, which, upon his report to me, I reluctantly acquiesced in, feeling that I could not afford to lose the shipment of 700 barrels of oil per day from the Standard Oil Company. But when Mr. Terry issued instructions that on and after February 23 the rate of oil would be 35 cents per barrel to Marietta, Mr. George Rice, who has a refinery in Marietta, very naturally called on me yesterday, and notified me that he would not submit to the advance, because the business would not justify it, and that the move was made by the Standard Oil Company to crush him out. (Too true.) Mr. Rice said: "I am willing to continue the 17½-cents rate which I have been paying from December to this date."

Now, the question naturally presents itself to my mind, if Mr. George Rice should see fit to prosecute the case on the ground of unjust discrimination, would the receiver be held, as the manager of this property, for violation of law? While I am determined to use all honorable means to secure traffic for the company, I am not willing to do an illegal act (if this can be called illegal), and lay this company liable for damages. Mr. Terry is able to explain all minor questions relative to this matter.

Hoping for your careful consideration of this matter and an early reply, I remain, sir, truly yours,

P. PEASE,  
*Receiver and General Manager.*

To the foregoing request, Mr. Rappelò "after," as he says in a letter returned with his opinion, "carefully considering the question," and "consulting with his partner, Mr. Cole, and representative bondholders," made the following reply:

32 NASSAU STREET, NEW YORK, March 2, 1885.

GENERAL PHINEAS PEASE,

*Receiver Cleveland and Marietta Railroad Company:*

DEAR SIR: My opinion is asked as to the legality of your making such an arrangement with the Standard Oil Company as set forth below.

The facts, as I understand them, are as follows: The Standard Oil Company proposes to ship, or control the shipping of, a large amount of oil over your road; say a quantity sufficient to yield to you \$3,000 freight per month. That company also owns the pipes through which oil is conveyed from the wells owned by individuals to your railroad, except those pipes leading from the wells of Mr. George Rice, which pipes are his own. The company has, or can acquire, facilities for storing all its oil until such time as it can lay pipes to Marietta, and thus deprive your company of the carriage of all its oil. The amount of oil shipped by Mr. Rice is comparatively small; say a quantity sufficient to yield \$300 per month for freight. The Standard Oil Company threatens to store, and afterwards pipe, all oil under its control, unless you make the following arrangement, viz: You shall make a uniform rate of 35 cents per barrel for all persons excepting the Standard Oil Company; you shall charge them 10 cents per barrel for oil, and also pay them 25 cents per barrel out of the 35 cents collected from other shippers.

"It may render the subject less difficult of consideration to determine, first, those acts which you can not with propriety do as receiver. You are by the decree vested with all the powers of receiver, according to the rules and practice of the court, are directed to continue the operations of the railroad, and can safely make disbursements from such moneys as come into your hands for such purposes only as the decree directs, viz, wages, interest, taxes, rents, freights, mileage on rolling-stock, traffic balances, and certain debts for supplies. In my opinion, this would not protect you in collecting freight from one shipper and paying it over to another. All moneys received, therefore, from any person for freight over your road must pass into your hands, and there remain, to be disbursed by proper authority. After an examination of your statutes, however, I find no prohibition against your allowing a discount or charging a rate less than a schedule rate to a shipper on account of the large amount shipped by him. As you are acting, therefore, in the interest of the company, and endeavoring to increase its legitimate earnings as much as possible, I find nothing in the statutes to prevent your making a discrimination, especially where the circumstances are such that a large shipper declines to give your road his freight unless you allow him to ship at less than schedule rates. Therefore there is no legal objection to the making an arrangement which, in practical effect, may be the same as that proposed, provided the objections pointed out above are obviated.

"You may, with propriety, allow the Standard Oil Company to charge 25 cents per barrel for all oil transported through their pipes to your road; and I understand from Mr. Terry that it is practicable to so arrange the details that the company can, in effect, collect this direct, without its passing through your hands. You may agree to carry all such oil of the Standard Oil Company, or of others, delivered to your road through their pipes, at 10 cents per barrel. You may also charge all other shippers 35 cents per barrel freight, even though they deliver oil to your road through their own pipes; and this, I gather from your letter, and from Mr. Terry, would include Mr. Rice.

"You are at liberty, also, to arrange for the payment of a freight by the Standard Oil Company calculated upon the following basis, viz: Such company to be charged an amount equal to 10 cents per barrel, less an amount equivalent to 25 cents per barrel upon all oil shipped by Rice, the agreement between you and the company thus being that the charge to be paid by them is a certain sum ascertained by such a calculation. If it is impracticable so to arrange the business that the Standard Oil Company shall, in effect, collect the 25 cents per barrel from those persons using the company's pipes from the wells to the railroad without its passing into your hands, you may properly, also, deduct from the price to be paid by the company an amount equal to 25 cents per barrel upon the oil shipped by such persons. Provided your accounts, bills, vouchers, etc., are consistent with the real arrangement actually made, you will incur no personal responsibility by carrying out such an arrangement as I suggest.

"It is possible that, by a proper application to the court, some person may prevent you, in future, from permitting any discrimination. Even if Mr. Rice should compel you, subsequently, to refund to him the excess charged over the Standard Oil Company, the result would not be a loss to your road, taking into consideration the receipts from the Standard Oil Company, if I understand correctly the figures. There is no theory, however, in my opinion, under the decisions of the courts relating to this subject, upon which, for the purpose, an action could be successfully maintained in this instance.

"Yours, truly,

"EDWARD S. RAPELLO."

From this correspondence it appears that the Standard Oil Company and George Rice were competitors in the business of refining oil; that each obtained supplies in the neighborhood of Macksburgh, a station of said railroad, from whence the same was carried to Marietta or Cleveland, and that for this service both were equally dependent on the railroad, then in the hands of the receiver. It further appears that the Standard Oil Company desired to "crush" Rice and his business, and that, under a threat of building a pipe for the conveyance of its oil and withdrawing its patronage from the receiver, O'Day, one of its agents, "compelled Terry," who was acting for and in behalf of the receiver, to carry its oil at 10 cents per barrel, and charge Rice 35 cents per barrel for a like service, and pay it 25 cents out of each 35 cents thus exacted from Rice, "making," in the judgment of the receiver, "\$25 per day clear money" for it "on Rice's oil alone." But it is due to the receiver to say that, notwithstanding his admitted "reluctant acquiescence" in the contract made by Terry on his behalf, and the indorsement thereof by Rapello, and the further conceded fact that he charged the Standard Oil Company 10 cents and Rice 35 cents per barrel as aforesaid, he denies that he ever paid to the Standard Oil Company any part of the money received from Rice. We will, therefore, for the present accept his affirmation touching this matter as true.

But why should Rice be required to pay 250 per cent. more for the carriage of his oil than was exacted from his competitor? The answer is that thereby the receiver could increase his earnings. This pretense is not true. But, suppose it was, would that fact justify, or even mitigate, the injustice done to Rice? May a receiver of a court, in the management of a railroad, thus discriminate between parties having equal claims upon him, because thereby he can accumulate money for the litigants? It has been repeatedly adjudged that he can not legally do so. Railroads are constructed for the common and equal benefit of all persons wishing to avail themselves of the facilities which they afford. While the legal title thereof is in the corporation of individuals owning them, and to that extent private property, they are, by the law and consent of the owners, dedicated to the public use. By its charter, and the general contemporaneous laws of the State, which constitute the contract between the public and the railroad company, the State, in consideration of the undertaking of the corporators to build, equip, keep in repair, and operate said road for the public accommodation, authorized it to demand reasonable compensation, from every one availing himself of its facilities, for the service rendered. But this franchise carried with it other and co-relative obligations. Among these is the obligation to carry for every person offering business, under like circumstances, at the same rate. All unjust discriminations are in violation of the sound public policy, and are forbidden by law. We have had frequent occasions to enunciate and enforce this doctrine in the past few years. If it were not so the managers of railways, in collusion with others in command of large capital, could control the business of the country, at least to the extent that the business was dependent on railroad transportation for its success, and make and unmake the fortunes of men at will.

The idea is justly abhorrent to all fair minds. No such dangerous power can be tolerated. Except in the modes of using them, every citizen has the same right to demand the service of railroads on equal terms that they have to the use of a public highway or the Government mails; and hence when, in the vicissitudes of business, a

railroad corporation becomes insolvent, and is seized by a court, and placed in the hands of a receiver, to be by him operated pending the litigation, and until the rights of the litigants can be judicially ascertained and declared, the court is as much bound to protect the public interests therein as it is to protect and enforce the rights of the mortgageors and mortgagees. But after the receiver has performed all obligations due the public, and to every member of it, that is to say, after carrying passengers and freight offered, for a reasonable compensation, not exceeding the maximum authorized by law, if such maximum rates shall have been prescribed, upon equal terms to all, he may make for the litigants as much money as the road, thus managed, is capable of earning. But all attempts to accumulate money for the benefit of the corporators or their creditors, by making one shipper pay tribute to his rival in business at the rate of \$25 per day, or any greater or less sum, thereby enriching one and impoverishing another, is a gross, illegal, and inexcusable abuse of a public trust, that calls for the severest reprehension.

The discrimination complained of in this case is so wanton and oppressive it could hardly have been accepted by an honest man, having due regard for the rights of others, or conceded by a just and competent receiver, who comprehended the nature and responsibility of his office; and a judge who would tolerate such a wrong, or retain a receiver capable of perpetrating it, ought to be impeached and degraded from his position. A good deal more might be said in condemnation of the unparalleled wrong complained of, but we forbear. The receiver will be removed. The matter will be referred to a master to ascertain and report the amount that has been as aforesaid unlawfully exacted by the receiver from Rice; which sum, when ascertained, will be repaid to him. The master will also inquire and report whether any part of the money collected by the receiver from Rice has been paid to the Standard Oil Company, and, if so, how much, to the end that, if any such payments have been made, suit may be instituted for its recovery.

Q. When you found this rate against you of 35 cents as against theirs of 10 cents, out of which, as I understand, they were paid 25 cents on your oil?—A. Yes, sir; that is an absolute fact.

Q. What efforts, then, did you make to release yourself and find another outlet for your oil?—A. After I found that I could not get a rate of less than 35 cents I built a pipe line from Macksburgh to Lowell, on the Muskingum River, and then barged it down.

Q. Was that your own pipe line?—A. Yes, sir.

Q. Pending construction of that pipe line what did you do with your oil?—A. While that line was building I built considerable wooden tankage and stored the oil, so as to get the advantage of the pipe line when it was built.

Q. Have you continued to receive oil from that time through your own pipe line?—A. Yes, sir.

Q. To this river through which you barged it to Marietta?—A. Yes, sir.

Q. Did you ship it in bulk in the barges?—A. Yes, sir.

Q. When the river is frozen over or too low how do you transport your oil?—A. By rail, and get the rate of 10 cents which the Standard used to get.

Q. You are now charged only 10 cents as against 35 cents which you used to pay?—A. Yes, sir.

Q. Do you remember a period in 1886 when the rates were changed to you on oil?—A. Very distinctly.

Q. State what your business was, in extent, etc., up to that time?—A. We were increasing our business very largely. Our rates were low enough so that we could compete in the general southern market.

Q. Look at this circular, which is already in evidence, and state what you know about it [handing witness circular of May 6th and 7th, 1886].—A. The first time I saw this circular was in Mr. Broadbush's office in Louisville. I went there to see about this advance, and wanted to know what it had been based on. He showed me a copy of this circular, and stated that this was the circular on which the rates were advanced. I looked it over and found the rates were based upon Chicago

rates. I could not understand why that should be and asked him. He stated that he could not see himself why these rates should be based upon Chicago rates. He permitted me to take a copy of it, which I did in writing, but only the main portions of it. Afterwards I got a printed copy from other sources. This was the circular which advanced the rates on July 15, 1886.

Q. When were you notified of the advance?—A. Only in this way: I had a notification on July 7 that there would be a change in the rate, but no notification that they would be advanced. I paid no attention to that notice at first, but finally I made up my mind that there was something wrong, and went to Cincinnati and had a talk with Mr. Frasier. I asked him what the rates were to be. He said there would be an advance. I asked him if he had a list of the rates so that I could see just what they were. He said, "No; I have not got the list made out, but I will give you some points."

Q. What time was that?—A. That was on July 13 that I called upon him. I then went over to Louisville and met Mr. Mitchell, who has the connecting line with the Ohio and Marietta and the Cincinnati, Washington and Baltimore, over which I had been sending all my business, and asked him for the rates, and after considerable talk he gave me a list of them. He was the first man that gave me a full list of the rates. I got a letter on August 23 from Mr. Frasier, in which he gave me rates showing an advance of 159 and 160 per cent. in some instances. Those largest advances were to junction points.

Q. The first time you got a full list of those advances, and a proper notification, was in August?—A. Yes, sir; from the initial line.

Q. That Mr. Frasier controlled?—A. Yes, sir; from Marietta to Cincinnati.

Q. If you have any knowledge of the fact that Mr. Frasier gave notice of the advanced rates first to your competitors tell us how you got that information?—A. In the quo warranto suits brought by the State of Ohio against two of these roads to forfeit their charters, it was developed there—I heard the testimony—that these rates were given out by Mr. Frasier to Mr. Cole, the vice-president of the Camden Consolidated Oil Company, on July 14, of these very rates, which were to take effect on July 15. I did not get notice of the rates until August 23. It was developed afterwards that they were not using these rates at all, but they had been giving my rates, which I did not get notice of until August 23.

Q. Was the Camden Company a competitor of yours?—A. Yes, sir; a very strong competitor.

Q. Did they transport oil by tank-cars?—A. Yes, sir; altogether by tank.

Q. Therefore, this company gave notice to your rivals what your rates were to be before you got that knowledge?—A. Yes, sir.

Q. Have you with you a copy of that letter?—A. I have copies of all the exhibits in the case.

Q. [Handing letters to witness] State whether these are exhibits filed in the quo warranto case in Ohio.—A. Yes, sir.

Q. L. A. Cole is vice president of the Camden Consolidated Oil Company?—A. Yes, sir.

Mr. GOWEN. I would like to offer in evidence the whole of these letters.

The CHAIRMAN. What is that letter?

The WITNESS. A letter from Mr. Fraser, of the Cleveland and Mari-

etta road, to L. A. Cole, dated July 14, 1886, giving him a list of the rate that was to take effect from July 15.

Mr. GOWEN. This other paper is your notification, dated August 23, of the change of the rates?—A. Yes, sir.

By the CHAIRMAN:

Q. Was that notification to you given to you in compliance with a request from you?—A. We had asked for rates several times.

Q. I ask you whether this was in direct compliance with your request?—A. We had been asking for rates all the time, and this is the first official list of rates we got.

Mr. GOWEN. I offer those papers in evidence. They are as follows:

G. B. E. 4.

CINCINNATI, OHIO, July 14, 1886.

L. A. COLE, Esq.,  
Parkersburgh, W. Va.:

DEAR SIR: I attach for your information list of rates on oil taking effect July 15. Parkersburgh, Marietta, and Harmer. The list will be added to from time to time as circumstances require, and I will endeavor to keep you informed of the changes or additions.

Yours, respectfully,

R. M. FRASER, G. F. A.

*Rates on petroleum oil products per barrel from Marietta, Harmer, and Parkersburgh, in car-loads of 60 barrels and over.*

CINCINNATI, O., July 14, 1886.

L. A. COLE, Esq.,  
Sec'y C. C. Oil Co., Parkersburgh, W. Va.:

DEAR SIR: I have not yet been able to arrange for rates, blind billing, etc., to all points that were considered at recent conference, but hope to have the list complete ere many days.

I give below list of points to which agent Parkersburgh has instructions to "blind bill" on and after July 15. The rates are the ones at which you must settle with the auditor.

To—	Tanks.	Barrels, car loads, 60 barrels.

Respectfully,

W. W. LUCAS, Agent.

Less terminal charges at Parkersburg to the Camden Consolidated Oil Company of ——— per car, that Fraser swore to in the quo warranto suit in July last.

By Mr. GOWEN :

Q. Now, Mr. Rice, state whether the Camden Consolidated Company was one of the Standard Oil companies ?—A. Certainly.

Q. Have you made a list of your rates as compared with the Standard Oil rates ?—A. I have.

Q. In tanks and barrels for the Standard Oil Company, and in barrels for you, over a certain period ?—A. Yes, sir.

Q. State whether this is that statement. [Handing statement to witness.]—A. Yes, sir.

Q. Is it a statement of the difference between the rates of the Standard Oil Company and your rates ?—A. Yes, sir ; giving their rates and my rates. The rates to the Standard Oil Company are taken off of these exhibits. Some of these rates to the Camden Consolidated Company were developed in the quo warranto suits in Ohio which I was interested in.

Mr. GOWEN. I offer the list in evidence. It is as follows :

Statement of freight rates on coal oil (car-loads) over Cincinnati, Washington and Baltimore Railroad for Standard Oil Trust and George Rice from Parkersburg, W. Va., and Marietta, Ohio (tariff rates being the same from both points), to the following points:

To—	Standard Oil Trust.		George Rice.			
	Per tank car.	Barrels.	Car-loads, 60 barrels and over, July 15, 1896.	Previous to July 15, 1896, rate per barrel.	Increase in rate per barrel.	Percentage of increase.
New Orleans, La.....	\$19.00 60.00	\$1.00	\$1.57	\$1.00	\$0.57	57
Mobile, Ala.....	19.00 60.00	1.00	1.57	1.00	.57	57

\* Car-load, 100 barrels.

By Mr. SMITH:

Q. That was in 1886, was it not?—A. Yes, sir; showing changes made at that time.

By Mr. GOWEN:

Q. Without going into the details of the range of percentage, were your rates greater than those of the Standard Oil Company?—A. My rates were advanced from 10 to 160 per cent., and the rates to the Standard Oil Company were not advanced at all.

Q. Your rates were advanced 10 to 160 per cent. to various points and there was no change in the rates to the Standard at all?—A. No, sir.

Q. Will you look at this statement and tell me what that list of rates is?—A. This is a tariff sheet issued by the Queen and Crescent route, issued December 1, 1867.

Q. And the statement connected with it?—A. That is the statement showing discrimination as between my rates and the Standard Oil rates, pound for pound.

Q. This comprises the rates on oil, pound for pound, and assuming the correctness of the weight of the barrels?—A. Yes, sir; certainly.

Q. Is that statement correct?—A. Certainly; it is correct.

Mr. GOWEN. I offer that in evidence also. The statement is as follows:

*Comparative statement showing Cincinnati, New Orleans and Texas Pacific Railway rates, pound for pound, charged George Rice and Standard Oil Trust, and the discrimination.*

[Tanks and barrels reduced to an equivalent.]

Cincinnati to—	Charged George Rice.		Charged Standard Oil Trust.		Discrimination in.	
	Per 100 pounds.	Per barrel of 400 pounds.	Per 100 pounds.	Barrel equivalent to 400 pounds.	Per barrel.	Percentage.

DECEMBER 1, 1887.

Capacity of tanks 103 barrels, as proven before Interstate Commerce Commission.

Q. Just roughly state what percentage of discriminations against you are shown by that statement.—A. The lowest discrimination shown here is 29 per cent., and running up to 212 per cent.

Q. Against you?—A. Yes, sir; against me. That is calculated pound for pound, and this was done December 1, 1887, while the Interstate Commerce Act was in force.

By the CHAIRMAN:

Q. Is the discrimination shown there irrespective of the question whether the oil was shipped in barrels or tanks?—A. Yes, sir; it is a comparison of barrels against tanks, pound for pound.

By Mr. GOWEN:

Q. Look at that statement [handing statement to witness] and state what it is.—A. This is a statement made up from the evidence that was developed before the Interstate Commerce Commission.

Q. In what case before the Commission?—A. In the several cases I had before it.

Q. Cases in which you were plaintiff against other roads?—A. Yes, sir. This is a comparison, by what was developed by the evidence there, based on pound for pound, instead of gallon for gallon. I was contending that they ought to carry a gallon of oil for me as cheaply as if it was in a tank, but the court did not concede that. They only decided that it should be carried the same, pound for pound.

Q. Do you know those figures to be correct?—A. Yes, sir; showing the discriminations made by the Louisville and Nashville Railroad, the Saint Louis, Iron Mountain and Southern Railroad, and the Newport News and Mississippi Valley Railroad. These figures are merely samples of the rates on those three roads.

Mr. GOWEN. I offer these three papers in evidence; one a comparative statement showing the Louisville and Nashville rates, one showing the Saint Louis, Iron Mountain and Southern rates, and one Newport News and Mississippi Valley rates. The statements are as follows:

*Comparative statement showing Louisville and Nashville Railway rates as charged Standard Oil Trust and George Rice, and the discrimination.*

[Tanks and barrels reduced to an equivalent, pound for pound.]

Louisville to—	Mills per gal- lon charged Standard Oil Trust.	Mills per gal- lon charged Geo. Rice.	Per cent. dis- crimination.
Nashville, Tenn.....	8.6	15	74
Chattanooga, Tenn.....	12.1	19.5	61
Memphis, Tenn.....	7	12	71
Atlanta, Ga.....	19.4	36.8	89

Montgomery, Ala.....	16.7	36.5	113
Mobile, Ala.....	17.7	24	35
Columbus, Ga.....	21.7	40.9	83
Augusta, Ga.....	19.9	35.1	76
Pensacola, Fla.....	16.6	24	44

FEBRUARY 1, 1888.

Capacity of tanks shipped to each place as proven before Interstate Commerce Commission.

*Comparative statement showing Louisville and Nashville Railway rates as charged Standard Oil Trust and George Rice, and the discrimination.*

[Tanks and barrels reduced to an equivalent, pound for pound.]

Cincinnati to—	Mills per gal- lon charged Standard Oil Trust.	Mills per gal- lon charged Geo. Rice.	Per cent. dis- crimination.
Birmingham, Ala.....	18.1	47.2	200

FEBRUARY 1, 1888.

Capacity of tanks as proven before Interstate Commerce Commission in shipments to Birmingham.

*Comparative statement showing Saint Louis, Iron Mountain and Southern Railway rates as charged Standard Oil Trust and George Rice, and the discrimination.*

[Tanks and barrels reduced to an equivalent, pound for pound.]

Saint Louis to—	Mills per gal- lon charged Standard Oil Trust.	Mills per gal- lon charged Geo. Rice.	Per cent. dis- crimination.
Houston, Texas.....	18.4	53.6	191
Galveston, Texas.....	18.4	53.6	191
Little Rock, Ark.....	12.3	18.2	48
Newport, Ark.....	12.3	18.2	48

FEBRUARY 1, 1888.

Capacity of tanks shipped to each place as given to Interstate Commerce Commission.

*Comparative statement showing Newport News and Mississippi Valley Company's rates as charged Standard Oil Trust and George Rice, and the discrimination.*

[Tanks and barrels reduced to an equivalent, pound for pound.]

Louisville to—	Mills per gal- lon charged Standard Oil Trust.	Mills per gal- lon charged Geo. Rice.	Per cent dis- crimination.
Memphis, Tenn.....	5.4	00	00%
New Orleans, La....	11.9	15	26
Vicksburg, Miss.....	18.1	15	14½

FEBRUARY 1, 1888.

Capacity of tanks shipped to each place as proven before the Interstate Commerce Commission.

Q. Please look at those two bills [handing bills to witness] and state what they are?—A. This one [indicating] is an expense bill over the Cincinnati, New Orleans and Texas Pacific, dated November 28, 1887.

Q. And the other?—A. Over the same line to Knoxville, Tenn.

Q. What do they show?—A. They show overcharges over and above the tariff rates.

Q. You mean to say that in those two instances they sent you a bill for more than their regular tariff rates?—A. Yes, sir.

Q. Now state what the regular tariff rate was?—A. Thirty-three cents per hundred.

Q. And what did they charge?—A. Forty-one and one-tenth.

Q. Now, in the other case?—A. Regular tariff 33 cents, and charged 42.65.

Q. State whether that money was refunded?—A. No, sir.

Q. Have you made any claim for it?—A. We have made claim, but it is very hard to get claims paid. There is always great delay, and in some cases we have been three or four years trying to get claims settled.

Q. Look at these four papers [handing papers to witness] and state what they are.—A. These are expense bills on the Louisville and Nashville.

Q. Give the dates; take the first one.—A. November 24, 1887, is the one I am looking at now. I think it is the first one.

Q. Does that show a charge made to you higher than tariff rates?—A. This shows a rate that I paid from Louisville to Huntsville, Ala., of 44.9 cents per 100 pounds, when the tariff rate was at one time 37 cents per 100 and at another time 35, but the highest was 37; and yet they charged me 44.9 cents.

Q. What was the regular tariff rate at that time?—A. In a letter to me, dated December 27, Mr. Culp states it at 37 cents. In January 25, 1888, he states it at 35 cents.

Q. Now take up the other paper?—A. This is an expense bill, dated December 4, 1887, shipment of 64 barrels from Marietta to Birmingham.

Q. What charge was made there?—A. Fifty-nine cents per 100 pounds.

Q. What was the tariff rate at that time?—A. The tariff sheet shows a rate of 30 cents per 100 pounds, Louisville to Birmingham, and to that was added 8 cents between Louisville and Cincinnati, making 38 cents.

Q. By what company?—A. Louisville and Nashville.

Q. On shipments made by you?—A. Certainly.

Q. Now take the third of those papers and describe it.—A. It is dated November 12, 1887, and shows a shipment of 64 barrels from Marietta to Chattanooga. I was charged 42.8 cents, as against 24.4 cents which I had been paying, and which I supposed was their tariff rate.

Q. Now take the last.—A. It is dated December 29, 1887.

Q. Describe it.—A. It shows a shipment of 70 barrels of oil to my agent J. M. Gaut, at Knoxville; in which the rate charged is 31.8 cents as against 24.4.

Q. Was 24.4 the tariff rate?—A. It was the rate I had been shipping on.

Q. They had been giving you such a rate?—A. Certainly.

By the CHAIRMAN:

Q. What is the rate at which that shipment is charged?—A. Thirty-one and eight-tenths cents; it figures out 31.8. But I had been shipping at 24.4, and they raised the rate afterwards to 40 cents.

Q. What do you know about the subject of billing Standard Oil Company tank cars at a fixed rate?—A. As was developed in the *quo warranto* proceeding in Ohio, oil in tank cars was billed at an estimated weight of 20,000 pounds per tank on the Cincinnati, Washington and Baltimore road, and on the Cincinnati Southern, that is, the Cincinnati, New Orleans and Texas Pacific, at 25,000 pounds. Cincinnati, Washington and Baltimore estimated the weight at 20,000 pounds per tank car, while the Cincinnati Southern estimated it 25,000.

Q. State, so that the committee will understand what you, mean by "blind billing"?—A. I mean it does not show any rate. The agents merely estimated the capacity of the tank cars at 20,000 pounds.

Q. That is, they would bill a tank through at 20,000 pounds, without putting any rate on it?—A. Yes, sir; no rate whatever.

Q. If they had a fixed rate per tank on the through route, and it was billed at 20,000 pounds, another line in the through route that might have a rate per hundred pounds would be deceived if they took that way-bill weight as the true weight, would they not?—A. Of course. It did not make any difference to the road where it started, but where it reached another road on which they charged per hundred pounds, of course it made a difference. I have here a circular showing the capacity of tank cars.

Q. What circular is that?—A. It is the tank car circular sent to me by two different lines.

Q. Railroad lines?—A. Yes, sir; we got this tariff sheet in two or three instances, and particularly, I know, from the Chicago, Burlington and Quincy.

Q. Do you call it a tariff sheet?—A. I do not mean a tariff sheet. It is a circular, dated June 1, 1887, giving the capacity of oil tank cars.

Q. How many tank cars are there of the Union Tank Line on that list? That is the Standard Oil Tank Line, is it not?—A. Yes, sir; the first number is 870, and the last number is 3,815. That would make about 3,000 cars belonging to the Union Tank Line.

Q. Now, of those nearly 3,000 cars on that circular how many of them weighed 20,000 pounds?—A. Only two of them are given here.

Q. And those are marked as weighing exactly 20,000 pounds?—A. Yes, sir.

Q. Round numbers?—A. Yes, sir.

Q. How much is the highest?—A. The highest is 40,670 pounds.

Q. And there are a great many running about 28,000, 32,000, and 38,000?—A. Oh, yes; several hundred of them run over 30,000.

Mr. GOWEN. I offer that circular in evidence. It is as follows:

[Joint tank-line circular No. 5, canceling joint tank-line circular No. 4, dated April 1, 1887, and supplement No. 1, dated May 1, 1887.]

Capacity of oil-tank cars.

Burlington, Cedar Rapids and Northern Rwy.	Chicago and Northwestern Rwy.	Minnesota and Northwestern R. R.
Central Iowa Rwy.	Chicago, Rock Island and Pacific Rwy.	Missouri Pacific Rwy.
Chicago and Alton R. R.	Chicago, Saint Paul, Minneapolis and Omaha Rwy.	Rock Island and Peoria Rwy.

By Mr. GOWEN:

Q. You have had a great deal of litigation, have you not, with these various railroads in the last year or two? You had several suits before the Interstate Commerce Commission, had you not?—A. Yes, sir.

Q. And you were instrumental in having some proceeding commenced before Judge Baxter in Ohio, were you not?—A. Certainly.

Q. And you furnished information for two quo warranto suits?—A. Yes, sir.

Q. State whether or not it has not been important for you to ascertain the exact rate you paid as compared with that paid by the Standard Oil Company when they shipped in tank cars.—A. It was important in order that I might be able to compete with them.

Q. To find out what they were paying?—A. Yes, sir.

Q. And when you found a bill of theirs showing that a tank was billed at 20,000 pounds, if your examination proved that that tank held 40,000 pounds it was simply proving that they got a rate at one-half what it purported to be?—A. Yes, sir.

Q. State whether all manifests do not give the number of cars.—A. Certainly.

Q. And is not that the only way that you can identify them?—A. Yes, sir; by the manifests and the names of the cars.

Q. And you must know the number of the car?—A. Certainly.

Q. State whether since this circular was issued they have changed the numbers of these cars.—A. It was so stated by Mr. Payne, of the Union Tank Line.

Q. That is, it was stated in the case of *George Rice vs. various railroad companies* before the Interstate Commerce Commission?—A. Yes, sir.

Mr. GOWEN. I offer in evidence a statement from the testimony of Mr. Payne on page 28 of this book, being proceedings in those cases before the Interstate Commerce Commission. The witness's testimony commences on page 25. The extract is as follows:

Q. Has there recently been any general change in the numbering of the cars?—A. Yes, sir; there has been quite a general renumbering, repainting, and overhauling.

Q. When did that change take place?—A. I think it was commenced some time in July; it may have been later.

Q. And what was the character of the change in the matter of re-numbering?—A. The cars were changed as to classification slightly, to get the cars of the same general class as near together as possible.

Q. Standing in what respect, as to capacity?—A. As to their strength, and age, and capacity.

Q. Before that new numbering was adopted, what was the highest number in your series?—A. I think about 3,000—very near that—a little higher.

Q. How was the method of numbering changed?—A. I do not understand your question.

Q. I am trying to ascertain what was done.

The CHAIRMAN. In what respect?

Mr. LOOMIS. How many cars has the Union Tank Line altogether?

The WITNESS. There are in the neighborhood of 3,000.

Q. And you say they are numbered from 800 up to something like 6,000?—A. That is the range of the numbers at the present time.

Q. How were they in that respect before the change?—A. Before the change in number?

Q. Yes.—A. They ran from about 800 up to about 3,000.

Q. What system have you now adopted of numbering? They are not numbered consecutively?—A. They will be numbered consecutively when the changes in the line are completed. They are not yet completed.

Q. At what number did you begin in making the new number?—A. I think we commenced at 4,000.

Q. To which system of numbering do these statements relate—to the new number or to the old?—A. Relate to the cars just as they were when they were shipped, the number under which they ship. It may have been as to the old number or the new number actually shipped, and the statement given.

By Mr. GOWEN:

Q. The result of that renumbering, then, has made it practically impossible now to identify any of these past shipments made before that time in order to ascertain the exact quantity a tank car contained?—A. Certainly; that would follow naturally.

Q. What effect did this change and increase of rate have upon your business?—A. Well, I made a statement of that.

Q. Will you look at this paper and refresh your recollection [handing paper to witness]?—A. In a period of five months?

Q. Take the year.—A. Well, I am merely stating it in a general way. In a period of five months it shut up 14 of my agencies out of 24, and reduced the towns from 73 to 34. That is making a comparison with the number of towns we had been selling to in 1886, and reduced the agencies 14 out of 24.

Q. In the previous year how many agents had you?—A. Twenty-four in all. My shipments over the Cincinnati, Washington and Baltimore Railroad, which is the principal initial point out of Marietta, making a comparison of a year previous to July 15, 1886, and a year subsequent to July 15, 1886, is as follows: I had shipped from July 16, 1885, to July 15, 1886, 405 cars, containing 30,523 barrels; and from July 16, 1886, to July 15, 1887, 93 cars, containing 6,522 barrels, making a decrease of 312 cars and 24,001 barrels, a falling off of 79 per cent.

Q. That was a loss of about four-fifths of your business in barrels?—A. Yes, sir.

Q. In one year?—A. Yes, sir; that is the statement.

Q. What efforts did you make to get rates from other companies?—A. After this advance was made there was no other avenue open to me but by the Baltimore and Ohio system to get into the South. It was quite a long route, but I thought I had better make the attempt to see if I could get rates from them. I came first to Washington to see Mr. Hass, who was general manager of the Piedmont Air Line. He was going to New York, and I went with him. He said incidentally that Mr. Harriot was to be there. We had a conference at the St. James Hotel in regard to rates to the South. The result of it was, we made no agreement then, but I got rates from this line by which I could put oil into the South at the same rates as I had been paying previous to July, 1886.

Q. Before going into that I wish to ask you about correspondence you had with other companies asking for rates, and the result. Will you look at that and see if it is a copy of such correspondence?—A. That is correspondence I had with the initial line, with Mr. Fraser and Mr. Smith, of the Cincinnati, Washington and Baltimore, in regard to rates.

Q. Are those letters written by you to them?—A. Yes, sir.

Q. How many of those letters did they answer?—A. To go back a little, that advance was made in July, 1886. Mr. Smith was not in Cincinnati at the time I went to see Mr. Fraser, on July 13. I then went to Louisville and saw Mr. Mitchell, and on July 14 he gave me a partial list of these advances. I went to Saint Louis and saw Mr. Duncan, and he gave me to understand that he was willing to continue the rates at the old figure. I then waited until Mr. Smith got back, and went to see him about the 1st of October, 1886, and talked to him about this extraordinary advance, and asked if I could not at least get the rate back to where it was before. He informed me that he did not know about the advance; that it was news to him. In the meantime I went to Louisville and saw Mr. Mitchell again. He was willing to continue the rates at the old figures if Mr. Smith was. I went to Saint Louis and

saw Mr. Duncan, of the Ohio and Mississippi, and he said he was willing to make any rates the Cincinnati, Washington and Baltimore would make.

Q. The Cincinnati, Washington and Baltimore was the initial line?—

A. Yes, sir. Then I wrote to Mr. Smith that these connecting lines were willing to make the same rates which were in force prior to July 15, 1886, when the advance was made, and as his line was the initial line, and the only obstacle in the way, I hoped he would see his way clear to do the same. He never answered that letter, nor several others which I wrote to him.

Q. Are those the letters?—A. Yes, sir.

Q. And is this type-written copy a correct copy of those letters?—

A. Yes, sir.

Mr. GOWEN. I offer copies of those letters in evidence. They are as follows:

MARIETTA, OHIO, September 28, 1886.

R. M. FRASER, G. F. A.,

*Cincinnati, Washington and Baltimore, Cincinnati, Ohio :*

I am desirous of building some tank cars to run over your line, provided I can get the same net rates now being paid by the Camden Consolidated Oil Company of Parkersburgh.

Please advise immediately.

Truly, yours,

GEO. RICK

No answer.

MARIETTA, OHIO, October 3, 1886.

ORLAND SMITH, Esq.,

*President Cincinnati, Washington and Baltimore Railroad, Cincinnati, Ohio :*

I left Cincinnati on Friday evening last for Louisville, after my conversation with you, in order to see B. F. Mitchell, G. F. A. C. O. & S. W. R. R., if he would be willing to take my oils at the old rates existing previous to the raise of July 15 last, and he said he would, and gave me permission to so state to you. I saw Mr. Duncan at Saint Louis on Thursday, and he stated to me that he always accepted whatever rates Mr. Fraser made. So there is left only one obstacle or impediment in my way now to a resumption of my traffic over your line at the old rates, and that is your consent.

I shipped 495 cars over your road from July 15, 1885, to July 15, 1886. This year, from July 15 to date, 22 cars, while for corresponding time last year I shipped 89 cars, a difference of 67 cars in two and a half months of summer shipments; or a loss, at the lowest calculation at \$20 per car, of \$1,340 revenue, which would have already been in the hands of the treasurer, as I prepaid my freights. Since the abrogation of the old rates I have put a large quantity of oil into Memphis by river at 50 cents per barrel. I am now filling an order of 200 barrels to go by through boat on Wednesday from here to New Orleans at \$1 per barrel. The Cleveland rate is \$1 per barrel in 60 barrel cars, while to several points like New Orleans, Mobile, Vicksburg, Meridian, etc., I ship 100-barrel lots. The ocean rate, New York to New Orleans, is 90 cents to \$1 per barrel by steamer, and by schooner 50 cents per barrel. The Standard Oil Company (Camden Consolidated Oil Company) get their oil carried much less by tank car over your road than I do, comparing their tank cars at 100 barrels as against cars that I ship 100 barrels in, and they have lots of tank cars that hold 120 barrels of 50 gallons each to my certain knowledge. Their tank cars are hauled back empty, while the box cars I ship in are loaded back. The division of rates I gave you is absolutely correct, and shows a fine state of affairs. Out of fifteen of the largest and most important towns that I ship my goods to there is not one in this whole list but that your road receives more than its local rate on all this through business, ranging from 31 cents per barrel, the lowest, up to 59 cents per barrel, the highest (the local rate being 30 cents), or an advance of 10 to 150 per cent. on me since July 15.

Stewart says there is money in carrying my oil at \$20 per car, and still you have not carried it for less on your through business even at the old rates, and six towns out of these fifteen named to you have received more than the local on its through business at the old prices. Your present rates are prohibitory, and I can't use them on account low price of oils. Your road, being the initial road, has the making of the rates and can easily conform all connecting lines with it, if the proper disposition is shown, "especially to certain oil shippers." I have given your road all my busi-

ness for the past two years, and it does not seem just and right that I should be so summarily treated. On this state of facts, I only ask that the old rates existing before July 15 last be set back where they were. I should not have appealed to you in this matter, but I could not get any satisfaction out of Mr. Fraser, and so went to you as the court of last resort, expecting you will right this matter as it justly deserves.

Yours,

GEO. RICE.

Never answered.

MARIETTA, OHIO, *October 11, 1886.*

ORLAND SMITH,  
*President C. W. and B. R. R., Cincinnati, Ohio :*

DEAR SIR : Please advise concerning oil rates, about which I saw you when in Cincinnati last, and oblige,

Yours, very truly,

GEO. RICE.

Never answered.

MARIETTA, OHIO, *October 20, 1886.*

ORLAND SMITH, Esq.,  
*President C., W. and B. R. R., Cincinnati, Ohio :*

I have just returned after an absence of two weeks, and find that you have not as yet answered the very important letter I wrote you on the 3d (seventeen days ago), concerning the late and extraordinary advance made by your road on me on my oil shipments, which has precluded me from entering several of the markets of our common country. On the 11th another letter was written you by my house, to which no reply has been received (after nine days' waiting). I now in person call upon you again, by this letter, to know if said letter of October 3 will meet with respectful attention at your hands.

It strikes me quite forcibly that this is not the treatment I should receive from you, after the large amount of business given your line, having shipped 495 car-loads in the past year.

Yours,

GEO. RICE.

Never answered.

MARIETTA, OHIO, *October 26, 1886.*

R. M. FRASER, Esq.,  
*General Freight Agent. C., W. and B., Cincinnati, Ohio :*

I am desirous of building some tank cars to carry refined oil in bulk, and wish to know when built that I can send them over your line at the same net rate as accorded other shippers.

You informed me that you took same regardless of weight or capacity. If any limit to this please state it, also if any change made by your road on return empty. Is your rates on oil from Marietta and Parkersburgh the same ?

An early answer will greatly oblige.

Yours,

GEO. RICE.

CINCINNATI, *October 29, 1886.*

GEORGE RICE, Esq., *Marietta, Ohio :*

DEAR SIR : Yours 26th referred to President Smith, who, I presume, will answer direct. If, however, he instructs me on the subject I will communicate with you immediately.

Yours, respectfully,

R. M. FRASER,  
G. F. A.

MARIETTA, OHIO, November 12, 1886.

R. M. FRASER, Esq.,

*General Freight Agent C., W. and B., Cincinnati, Ohio :*

I wrote you October 26 for certain information. You replied on the 29th, saying you had referred my letter to President Smith, who you presumed would answer me direct, or instruct you to do so, in which case you would answer me immediately.

I desire to call your attention to the fact that I have not as yet received an answer. Please advise.

GEO. RICE.

MARIETTA, OHIO, November 14, 1886.

ORLAND SMITH, Esq.,

*President C., W. and B., Cincinnati, Ohio :*

I have addressed you several letters, commencing with October 3 last, on the question of the advance in oil rates by your line and connections on July 15 last. In my letter to you of October 3 last I called your attention to the fact that the connecting lines had agreed to stand or resume the old rates which existed previous to July 15. I then stated that your line was the only obstacle or impediment in the way to the resumption of my oil traffic over your line, and desired that you would also see the justice of my request and grant a restoration of the old rates. These several letters you have treated with silent contempt, and don't propose to answer or right the injustice done me. I withdraw the very modest request asked for in my letter to you of October 3 last, and not only ask, but demand from you, equal rates in the carrying of my oils over your line of road as is accorded to the Standard Oil Company or any other shipper. I propose now to assert those rights, given me as a citizen of this State, to compel your line, as well as others, to give to me the rights that legally belong to me. I ask for nothing more, nor will I take anything less. My business has been materially damaged, and I have been forced out of several of my most prominent markets to which I sent my goods on account of the excessive and extraordinary advance made on me on July 15 last by several of the rail lines, of which your road is the most prominent feature. I have submitted patiently, long, and well to all the indignities heaped upon me by this great combination, the railroads and the Standard Oil Company, and I now propose to kick and back water, and see if the courts of this country will stand by me. If not, I will spit upon the flag that has waved over me in the past and take up my citizenship under the Union Jack, where one can be assured of full protection in his business relations with his fellow-man. This is a fight for existence, as against this great monopolistic power, and may justice and right prevail. I bid you adieu.

Yours,

GEO. RICE.

Never answered.

CINCINNATI, November 15, 1886.

GEO. RICE, Esq., *Marietta, Ohio :*

DEAR SIR: Yours of the 12th instant. I have not as yet received a reply from President Smith, and am therefore unable to answer your letter.

President Smith has been away from the city most of the time lately, which I presume is the reason for not having answered sooner.

Yours, truly,

R. M. FRAZER,  
G. F. A.

MARIETTA, OHIO, November 17, 1886.

R. M. FRASER,

*General Freight Agent C., W. and B., Cincinnati, Ohio :*

What is the reason I can't get answer to my letter of October 26, and which you said you turned over to President Smith? I also called your attention to this same matter on the 12th.

Yours,

GEO. RICE.

CINCINNATI, November 18, 1886.

GEO. RICE, Esq., Marietta, Ohio:

DEAR SIR: Your letter of the 17th. I answered your letter of the 12th on the 15th, as follows:

"Yours of the 12th instant. I have not as yet received a reply from President Smith, and am therefore unable to answer your letter. President Smith has been away from the city most of the time lately, which I presume is the reason for not having answered sooner."

Yours, truly,

R. M. FRASER,  
G. F. A.

Q. Look at these papers and see what they are.—A. They are letters from the Queen and Crescent route in reference to rates to the South.

Q. During what time?—A. 1885 and 1886.

Q. Are those letters written by you and answers received from them?—

A. Yes, sir.

Q. Did they answer all your letters?—A. They answered some of them.

Q. Are all those letters here?—A. Yes, sir.

Q. Wherever they answered they are here?—A. Yes, sir.

Q. Is that type-written copy a correct copy?—A. Yes, sir.

Mr. BUCHANAN. Has Mr. Rice compared it?

The WITNESS. I did not compare it personally, but the type-writer did, and said it was correct.

By Mr. GOWEN:

Q. Did you direct somebody to have it compared?—A. I told the type-writer to compare it.

Q. You directed somebody to do it?—A. Yes, sir.

Q. What is the name of the type-writer?—A. Her name is May Carroll; she said she made the comparison carefully. I did not do it myself.

Mr. GOWEN. I offer those letters in evidence. They are as follows:

## QUEEN AND CRESCENT ROUTE,

Cincinnati, September 7, 1885.

## Rates on coal oil.

GEO. RICE, Esq.,

Marietta, Ohio:

DEAR SIR: Replying to your favor of 20th ultimo, which I have carefully read and considered, I beg to advise you that rates named therein to apply from Marietta to various Southern points are entirely too low compared with our revenue on oil from other sources, and therefore can not be granted from Cincinnati, much less from Marietta.

I desire to aid you, if possible, in doing some business in the South, and to this end I will offer the following rates from Cincinnati:

	Per barrel.	Per tank car.
Lexington, Ky.....	\$0. 50	\$26. 00
Chattanooga, Tenn.....	. 96	42. 60
Atlanta, Ga.....	2. 24	62. 00
Birmingham, Ala.....	2. 00	.....
Jackson, Miss.....	2. 44	.....
Meridian, Miss.....	1. 64	.....
Vicksburg, Miss.....	1. 48	.....
Knoxville, Tenn.....	1. 60	.....
Huntsville, Tenn.....	1. 48	.....
Shreveport, La.....	3. 00	.....
Montgomery, Ala.....	2. 28	.....

Rates per barrel apply on car loads of not less than 60 barrels.

Tank cars to be furnished by shippers, and to be returned empty at 5 cents per mile.

Kindly advise me if these rates will be acceptable.

Very truly,

JOHN C. GAULT,  
General Manager.

CINCINNATI, January 2, 1886.

GEORGE RICE, Esq.,  
Marietta, Ohio:

DEAR SIR: With reference to yours of the 1st instant, I beg to say that myself and Mr. Bond are now discussing the matter of special rates on oil for the Chess-Carley from Cincinnati and Louisville with Mr. M. H. Smith. Very little progress has as yet been made, but when the matter has been concluded I will advise you. In the mean time you can work on the basis of 96 cents per barrel from Cincinnati to Chattanooga, and the rates quoted to you previous to December 1, 1885.

Yours truly,

J. C. GAULT,  
General Manager.

MARIETTA, OHIO, January 4, 1886.

JOHN MEAGHER, Esq.,  
Queen and Crescent, Cincinnati, Ohio:

Your dispatch at hand. I can not use the rates given me December 1, as prices of oils will not warrant it. Can't you give me a rate of 24.4 per hundred from Cincinnati to Knoxville, which is the rate given me by James A. Ogden, general freight agent, when in Knoxville recently? If so will ship in a car at once.

I will also ship a tank car to Chattanooga at 42.60, same rate given to Chess-Carley & Co. Please advise at once, as I will have to reject these orders if I am unable to get above rates.

Truly yours,

GEO. RICE.

QUEEN AND CRESCENT ROUTE,  
Cincinnati, January 6, 1886.

GEO. RICE, Esq.,  
Marietta, Ohio:

DEAR SIR: Yours of the 4th instant received. With reference to the Knoxville business I have to say that we can only consider absolute tariff rates as effective. If Mr. Ogden wishes to quote 24.4 cents per 100, I presume he intends to protect it.

As to business to other points I have to say that no definite arrangement has as yet been reached, and until that time we must decline to quote other than tariff rates.

Yours truly,

JNO. MEAGHER,  
Chief Clerk.

THE WESTERN UNION TELEGRAPH COMPANY,  
[Marietta, January 7, 1886.

J. C. GAULT,  
Cincinnati, Ohio:

Are rates named me personally December 17 good for present shipments?

GEO. RICE.

THE WESTERN UNION TELEGRAPH COMPANY,  
January 7, 1886.

GEO. RICE, Marietta, Ohio:

For the present nothing but tariff rates will apply to shipments to the South.

JOHN C. GAULT.

QUEEN AND CRESCENT ROUTE,  
Cincinnati, January 20, 1886.

GEORGE RICE, Esq.,  
Marietta, Ohio:

DEAR SIR: I am in receipt of your memorandum of 19th inst. inclosing your acceptance No. 62414 on First National Bank of Marietta for \$57.60 in proposed payment of freight charges on car of oil, Cincinnati to Chattanooga, and consigned to McBrayer, Price & Co.

In view of our recent and frequent refusals to forward oil at other than established rates I am certainly astonished at your communication.

As yet no rates have been established from Ohio River south on oil, but no doubt will be in a short time. I have therefore to make this proposition, we to forward this car at the established rate, collecting at destination the difference between the amount of your check and such rate, and when the rates on oil are finally established, allow you the benefit of the difference. Am holding car for your answer.

Yours truly,

JNO. MEAGHER, C. C.

MARIETTA, OHIO, March 7, 1886.

JAMES R. OGDEN, Esq.,  
Pool Commissioner, Louisville, Ky;

I have yours of February 13, in which you say the question of oil rates will be taken up next week, since which time no further word from you. I called at your office yesterday and found that you were out, so talked the matter over with your chief clerk, who understands the case fully. If you have not got the oil rates arranged now, why can't I ship now into Chattanooga, Knoxville, and Birmingham at as low net rate per hundred pounds in barrels as the Chess, Carley & Co. in tank, cars (that pro rata). If not, why not am I to have equal net rates per pound on shipments of oil over your pooled lines of which you are commissioner, as the Chess-Carley Company; if not, why not? Please answer and greatly oblige.

Yours,

GEO. RICE.

MARCH 8, 1886.

GEORGE RICE, Esq.,  
Marietta, Ohio:

DEAR SIR: (Coal oil rates.) Yours of the 7th inst. We are working on these rates and will have the figures out in a few days, but there is no reason why you should not have at any time the rates given to the Chess-Carley Company, but of course you will have to ship in tank cars to get the advantage of tank rates. The roads claim, and I think certainly have the right to select whether they prefer to carry oil in tanks or in barrels so long as the tank or the barrel rate is open to all parties.

Yours, truly,

JAMES R. OGDEN, Commissioner.

MARIETTA, OHIO, March 23, 1886.

JOHN C. GAULT, Esq.,  
General Manager C., N. O. and T. P. R. R., Cincinnati, Ohio:

Replying to your favor 22d, Meridian shipments, would say that early in April I shall use tank cars for Meridian business, and prefer to use the \$60 rate on tank cars to Meridian, Miss.

Please advise.

Yours,

GEORGE RICE.

CINCINNATI, OHIO, March 25, 1886.

GEORGE RICE, Esq., Marietta, Ohio:

DEAR SIR: I am in receipt of your favor of the 23d inst., in reply to mine of the 22d; also your letter of the 24th inst. I note you say that early in April you shall use tank cars for Meridian business, and prefer to use the \$60 rate, and have to say in reply that I am not informed of the existence of a \$60 rate from Cincinnati to Meridian on oil in tank cars. We have never carried oil from Cincinnati to Meridian in tank cars, and therefore do not know what rate other lines have charged.

I very much regret that the pressure of business on the General Freight Agents' Committee has prevented them so far in taking up the question of oil rates, and

until they do I see nothing else for you to do but to continue to wait patiently the time when the matter shall be adjusted in the proper form.

I note, also, you call attention to a letter from us in September, 1885. I have heretofore advised you that whatever rates quoted to you prior to the 1st of January, 1886, have been revoked.

It will now be left to the General Freight Agents' Committee to arrange for a full set of rates on oil to southern points.

Yours, truly,

JOHN C. GAULT, G. M.

---

QUEEN AND CRESCENT ROUTE.

VICKSBURG, MISS., March 26, 1886.

GEORGE RICE, Esq., Marietta, Ohio :

DEAR SIR : (Rates on oil to Texas.) Yours of the 19th inst. I am surprised to find that Dallas, Fort Worth, and Houston are not included in the list of points to which you advise me you have made shipments via Saint Louis. Do you not ship to these points also ? I can give you a special rate of 28 cents per 100 pounds in car-loads from Vicksburg to Houston. This rate is via Shreveport and the Houston, East and West Texas Railroad, which has been recently completed. In regard to the rates from Saint Louis by the Mississippi Pacific lines, I am advised by their general freight agent that under the present classification the rate on oil in car-load is 5 cents less than fourth class, which would make through rates Saint Louis to Sherman, Jefferson, Fort Worth, and Dallas, 72 cents per 100 pounds. Please advise me if this is what you pay. I trust you will give us all the Texas business which you can throw in our way.

The Waters-Pierce Company are trying to work on our people by offering them a large share of their Texas business, which is now going via the Missouri Pacific, to induce them to shut you out of Texas, which, it is hardly necessary to tell, I do not desire to see done. Please let me hear from you promptly.

Yours, truly,

I. HARDY, A. G. F. A.

---

MARIETTA, OHIO, May 17, 1886.

Mr. JOHN C. GAULT,

*General Manager C., N. O. and T. P. R. R., Cincinnati, Ohio :*

MY DEAR SIR: Mr. George Rice, of this place, has laid before me a body of correspondence between himself on the one hand and yourself and other officers of your road on the other hand touching the matter of rates on oils shipped over your lines to points in the South.

Although the correspondence has covered a period of about one year, no practical results seem to have been reached.

As I gather it, the point has been (on his part) to learn whether he could get the same rates as those accorded to other shippers—say, Chess, Carley & Co., Standard Oil Company, and the like. The answers which he has of late received from your people are to the effect that by shipping in tank cars he can get the same rates as others who ship in that way ; in other words, that "property carried under like conditions will be carried upon like terms," etc.

This would seem sound enough as a principle, but the application made in the discrimination between tank car and barrel shipments appears not to be based on that principle, for the difference between the two rates obviously has no relation to any actual difference in cost or convenience of transportation as between the two methods of shipment.

I write with the hope that, without further delay ; a better understanding and more satisfactory practical result may be attained, and that Mr. Rice may be enabled to get rates that will put his oils into southern markets as cheaply as the oils of other shippers get there, pound for pound, whether carried in tank cars or in barrels, with no other difference than those arising from actual difference in cost of carriage. I have advised Mr. Rice that he may expect such a result, as none can be better aware than the gentlemen connected with your management that such discriminations as have been heretofore made against Mr. Rice can not stand. I much prefer amicable adjustment to any resort to tribunals in which the true inwardness will be developed, and therefore ask that I may hear from you at your earliest convenience.

I am, sir, etc.,

W. B. LOOMIS,  
Counsel for George Rice.

CINCINNATI, OHIO, *May 24, 1886.*

W. B. LOOMIS, Esq.,  
*Marietta, Ohio :*

DEAR SIR: I beg to acknowledge the receipt of your favor of the 17th instant in the matter of rates on oil for Mr. Geo. Rice.

Am I to understand that your demand consists in obtaining from the railroad companies the same rate on oil in barrels as in tank cars? I note your reference to the "amicable adjustment, rather than resort to the tribunal, in which the true inwardness will be developed." I do not clearly understand what you mean by a reference to "the tribunal," as the difference established between the rates on oil in barrels and tanks is as old as the business and has been accepted since the introduction of tank cars.

Yours, truly,

JNO. C. GAULT,  
*General Manager.*

MARIETTA, OHIO, *May 26, 1886.*

Mr. JOHN C. GAULT,  
*General Manager, C. N. O. & T. P. R. R., Cincinnati, Ohio :*

MY DEAR SIR: Your esteemed favor of 24th instant is at hand. You ask whether I mean that oil should be handled in barrels at as low rates as in tank cars. I mean simply this, that no discrimination based on a difference in the method of carriage should be made beyond the actual difference in cost and convenience as between methods, and that discriminations of from 100 to 240 per cent. against barrel shippers can not rest upon any meritorious or defensible basis.

I therefore felt assured that whatever considerations might have furnished the motives of your subordinates in what has the appearance at least of a prostitution of your lines to the service of the Standard Oil Company for the destruction of other shippers, you would desire to at once correct such abuses if found to exist.

I have known that, as you say, a difference between barrel and tank car rates has been maintained for a long time. If that difference now made in favor of the cheapest and most convenient method and were only reasonable in extent there might be but little ground of complaint.

I shall await your reply, still hoping that you will make some terms whereby Mr. Rice can get his oils into Southern markets at less than ruinous rates.

I am, sir, very respectfully, yours,

W. B. LOOMIS,  
*Counsel*

CINCINNATI, *July 8, 1886.*

GEO. RICE, Esq.,  
*Marietta, Ohio :*

DEAR SIR: Replying to yours of the 6th instant I must say that I was not aware that you had asked for rates on oil in tank cars. I was under the impression that you only desired to ship oil in barrels, and the rates which I have given you on such oil have been as low as the lowest.

This whole question of rates is now in the hands of Commissioner Jas. R. Ogden, Louisville, and I most respectfully refer you to him.

Yours truly,

JNO. C. GAULT,  
*General Manager.*

MARIETTA, OHIO, *July 9, 1886*

JNO. C. GAULT, Esq.,  
*General Manager C., N. O. & T. P. R. R. Cincinnati, Ohio.*

Yours of July 8, before me. I am not at all surprised when you say, "I was not aware that you had asked for rates on oil in tank cars." None are so blind as those that won't see, and this carries with it its own significance. Under your suggestion I commenced a correspondence with James R. Ogden on February 9 last, just five months ago to-day, in regard to oil rates over your lines, and the same was closed with him on March 15 by his saying, "Hence, for the present at least, you will be compelled to get your quotations of rates from the initial roads." Since which time I have corresponded with you, and on March 26, June 18, June 21, June 29, and July 6, have asked you for rates on oil, and can't get them. In yours of yesterday you again refer me back to Ogden, and this, as I said before, carries with it its own significance. I have written Mr. Ogden, but don't expect to get the desired information any more than I would from you, but will keep on trying.

Yours,

GEO. RICE.

MARIETTA, OHIO, July 9, 1886.

JAMES R. OGDEN, Esq.,  
Pool Commissioner, Louisville, Ky.:

Inclosed please find copy of letter from John C. Gault, esq., general manager Queen and Crescent. On February 9 last (five months ago) I commenced a correspondence with you in regard to oil rates over your pooled system, of which the Queen and Crescent was one of the principals, and which I was a patron of. On February 11, I again wrote you at Louisville. On February 13 you replied as follows: "I am not yet fairly started and will not be able to take up the question of coal oil rates until next week. Whatever rates we may name will apply to all parties."

On March 7 I again wrote you, and on March 8 you answered as follows: "We are working on these rates, and will have the figures out in a few days."

On March 12 I wrote you again, and on March 15 you replied: "In regard to furnishing you with rates, understand that these rates have been already furnished you by Mr. John C. Gault, of Cincinnati Southern Road, and I return herewith his letter which you left when you called upon me (see Gault's letter, September 7, 1885)." And you close this letter as follows: "Hence, for the present at least, you will be compelled to get your quotations of rates from the initial roads."

Under your compulsion of March 15 (almost four months ago), I have been corresponding with Mr. Gault on this subject, and am as yet unable to get the oil rates desired, and by the enclosed copy of a letter from him I am once more thrown back upon your mercy "like a shuttlecock," and now appear again before you, to know the next phase this question of oil rates will take. Have you now the power to give these rates, and will you give them to me and also will they be as low a net rate as is given to any other shipper?

I await your answer.

Truly, yours,

GEO. RICE.

---

MARIETTA, OHIO, October 28, 1886.

H. COLLBRAN,  
General Freight Agent C., N. O. & T. P., Cincinnati, Ohio:

Please name me tank-car rates on oil to Chattanooga, Knoxville, and Atlanta, and, if handy, to Birmingham.

Truly, yours,

GEO. RICE.

---

CINCINNATI, OHIO, November 5, 1886.

GEORGE RICE, Marietta, Ohio:

DEAR SIR: (Rates on oil.) Your favor of the 28th ultimo. The rates on oil in tank cars from Cincinnati to Chattanooga and Knoxville, Tenn., is 33 cents; Atlanta, 46 cents; Birmingham, Ala., 47 cents per hundred.

Yours, truly,

H. COLLBRAN, G. F. A.

---

MARIETTA, OHIO, November 2, 1886.

JNO. C. GAULT, Esq.,  
General Manager, C., N. O. & T. P. R. R., Cincinnati, Ohio:

Yours 10th before me, with circular letter No. 10 inclosed. Do I understand that hereafter tank oil in bulk will go at actual weight or by tank car, as formerly, and will there be any charge on return empty tank cars? If so, how much?

Truly, yours,

GEO. RICE.

---

NOVEMBER 13, 1886.

Subject: Oil traffic for the South.

GEORGE RICE, Esq., Marietta Ohio:

DEAR SIR: Your favor of the 12th instant, in reply to mine of the 10th instant, I have referred to the general freight agent for answer all the points raised by you, and have advised him to communicate with you direct.

Yours, truly,

JNO. C. GAULT,  
General Manager.

CINCINNATI, OHIO, November 16, 1886.

GEORGE RICE, Esq.,  
Marietta, Ohio:

DEAR SIR: (Rates on coal oil.) Your letter of the 12th instant, addressed to our general manager, has been referred to me.

I beg to inform you that the general commissioner of the Southern Railway and Steamship Association has issued a circular giving the carrying capacity of every tank car now in service, and requires the lines in his association to way-bill accordingly.

The question as to what rate will be charged on return empty tank cars is to come up at the next meeting of the association, so that an attempt can be made to reach a general charge.

Yours, truly,

H. COLBRAN.

Q. (Handing paper to witness.) Please look at that paper and state what it is.—A. It is a list of prices made by the Standard Oil Company before my oils entered the places mentioned, and also the prices to which they were cut by the Standard Oil Company after entry of my oil. This list extends back probably a period of three to five years; and it give the prices of the oils at these various towns at the time I entered,—

Q. Into competition?—A. Yes, sir; and the prices that they went to afterwards. I can not give exactly the dates, but the list covers, as I said before, a period of from three to five years, and gives the prices in some thirty or forty towns.

Q. Is that list accurate?—A. Yes, sir; it was made up in my house.

Q. And under your direction?—A. Yes, sir; and I consider it accurate.

Q. What is that newspaper slip pasted on it?—A. Market reports published by the Petroleum Age, which is considered authority on prices of crude oil.

Mr. GOWEN. I offer that in evidence. It is as follows:

*Prices made by Standard Oil Company, before my oils entered the points below, and also prices to which they were cut by the Standard after entry of my oils.*

Names of towns.	Kinds and how delivered.	Prices.	
		Before entry.	After entry.
Paris, Tex .....	110° fire test, in barrels..... per gallon..	\$0. 15	\$0. 10
Do .....	175° fire test, in barrels..... do.....	. 20	. 13
Corpus Christi, Tex.....	110° fire test, (two 5-gallon cans in boxes) per case.	2. 30	1. 40

1880.....	1.24½	.70½	.53½	.94				

Q. Just state what is meant by that fraction  $\frac{2}{3}$  where it occurs in this paper?—A. That is where two 5-gallon cans are put in a box.

Q. Do you remember that in September or October of 1887 you had a rate from Cincinnati to Knoxville?—A. Certainly.

Q. That was raised?—A. I had a rate of 24.4 per hundred pounds to Knoxville, Tenn.

Q. Over what road?—A. Over the Louisville and Nashville road—24.4 into Knoxville, where I had an agency. That rate was raised in September or October to 40 cents. I started this agency in Knoxville about January or February, 1887. Oil was selling then at 15 or 16 cents a gallon. Afterwards it went down to 9½ cents.

Q. Who reduced the price?—A. The Standard Oil Company is the only other competing concern in Knoxville.

Q. Then I understand you to say that they reduced the price to the extent you have named about the time your own freight rates were raised?—A. That did not occur absolutely at that time, but from the time I went in there up to that time, and so on, it was reduced, as I said, from 15 or 16 cents a gallon to 9½ cents.

Q. And within the same time your freight rates were raised?—A. Yes, sir.

Q. How much did that reduction amount to per barrel?—A. About 64 cents.

Q. That is the railroad rate?—A. Yes, sir; and the other reduction would be about \$2.75 cents per barrel.

Q. That is, your railroad rate was raised to such an extent as to cost you 64 cents more than it previously did to get your oil to Knoxville?—A. Certainly.

Q. And the Standard reducing the price of oil from 15 cents to 9½ cents made a difference to you of \$2.75 per barrel more?—A. That is about it.

Q. Do you know anything about the inspection laws of the various States with reference to the rates of inspection of oil and the charges made? Take Georgia, for instance.—A. I know that in the States of Georgia and Kentucky I paid 100 per cent. more for inspecting oil than it cost the Standard Oil Company, my oil being in barrels.

Q. And theirs in tanks?—A. Yes, sir.

Q. What is the inspection charge in Georgia?—A. It is 50 cents per barrel in car-load lots by law.

Q. And what is the charge in tanks?—A. Twenty-five cents per barrel.

Mr. BUCHANAN. Will you please give that rate again.

The WITNESS. The rate of inspection in Georgia is 50 cents per barrel in barrels by the car load.

By Mr. BUCHANAN:

Q. To whom is that paid?—A. To the inspector as a fee.

Q. Is he appointed by the State?—A. They have a commissioner of agriculture, who has charge of all the oils in the State. I know upon investigating the subject personally—I was there in 1886—I found that these tank cars were inspected at about two-thirds of their capacity.

Q. Do you mean two-thirds of their actual capacity?—A. Yes, sir.

Q. You mean the charge of inspection was on that basis?—A. Yes, sir; upon about two-thirds of what the tank cars actually held.

Q. What does that inspector actually do?—A. All there is to do in inspecting a car of oil, is to merely pierce a gimlet hole in the barrel

and take out about enough oil to made up a pint, or at least not to exceed a quart; and he then inspects that sample.

By Mr. CROUSE:

Q. Does he take that out of each barrel?—A. Yes, sir; out of each barrel?

Q. But he misses some barrels, does he not?—A. Oh, I misunderstood you. He only inspects five or six barrels out of each car-load.

By Mr. BUCHANAN:

Q. Does he mix those samples from the different barrels together?—A. Yes, sir; that is it. He will take five or six samples out of a car and mix them together, which is a pretty fair way of inspecting.

Mr. BUCHANAN. Much fairer than the price I should say.

By the CHAIRMAN:

Q. How is the inspection on the tank oil made?—A. The inspector just takes one sample out of the tank.

Q. What evidence of that inspection is made. I suppose there is something put on the barrels to show that they are inspected?—A. The inspector puts on a stamp, at least I think that is the intention. So far as I have heard, however, they have the stamps of the inspector at headquarters, and put them on themselves.

Q. I am not talking about headquarters, but what is the regular method. After the inspector has made his inspection he puts a brand on the oil, does he not?—A. Not on the tanks.

Q. I am not talking about the tanks, but about barrels.—A. Of course.

Q. When the oil is in tanks, what is the method?—A. They get the oil and barrel it and send it out, and that is all. The inspector may go and put his brand on these barrels or he may allow them to take the brand and brand the barrels themselves.

By Mr. BUCHANAN:

Q. Let me understand a little more distinctly about inspecting these barrels. The inspector will go to cars of, say, from 50 or 60 barrels each and take a sample from five or six of those barrels, and charge 50 cents on each barrel inspected, or does he charge on the whole car-load?—A. He charges for all the barrels in the car.

Q. How long has this been going on?—A. For years and years.

Q. Please state how long.—A. Ever since I have been in the business, so far as I can recollect. They do not inspect every barrel.

Q. Then on a car-load of 64 barrels you would have to pay \$32?—A. Certainly, and the man does it in half an hour. It takes him about half an hour to collect samples, and another half-hour to inspect them. It takes him about an hour for both.

By Mr. GOWEN:

Q. Mr. Rice, you pay in Georgia 50 cents for inspection on every barrel you ship?—A. I do.

Q. Does not the tank car pay 25 cents per barrel on only two-thirds of its capacity?—A. Yes, sir.

Q. If you have 100 barrels in a car you pay \$50?—A. Yes, sir.

Q. If they have 100 barrels in a car they pay only 25 cents a barrel on 66 $\frac{2}{3}$  barrels?—A. Yes, sir; about that.

Mr. BUCHANAN. At how much a barrel?—A. Twenty-five cents they pay.

Q. So that a car-load of 100 barrels would cost you \$50 while they

would only have to pay \$16?—A. There would be about that proportion on 100 barrels.

Mr. BUCHANAN. That inequality arises out of the Georgia law?—A. Yes, sir; so far as that State is concerned. It is the only State in which that percentage occurs.

Mr. GOWEN. Section 9 of the Georgia law provides as follows:

As full compensation for their services, the inspectors of oil shall receive one-half of one cent per gallon for inspecting in quantities in bulk of over four hundred gallons; one cent per gallon if in quantities in bulk of not more than four hundred nor less than two hundred gallons; If inspected in quantities less than two hundred gallons, one and one-half cent per gallon; if inspected in barrels, he shall receive one cent per gallon for inspecting ten or more barrels, and fifty cents per barrel if less than ten barrels are inspected.

The WITNESS. If he inspects one barrel or 10 barrels it is all the same thing. That is only a blind. He only inspects 5 or 6 barrels out of a car-load.

Mr. GOWEN. But in this law there is no reference to inspecting tanks at two-thirds of their capacity.—A. That is only custom. I got that information from the Commissioner of Agriculture.

Q. Going from Georgia to Kentucky, what rate do you pay there per barrel?—A. Twenty cents per barrel in barrels, and 10 cents per barrel in tanks.

Q. In lots of less than 50 barrels what do they charge? Is there not a higher charge in Kentucky if less than 50 barrels are inspected at one time?—A. Yes, sir.

Mr. GOWEN. I will read section 8 of the Kentucky law. It is as follows:

As full compensation for his services the inspector shall receive for inspecting said oils in quantities in bulk of 4,000 gallons or more, 10 cents per barrel of 50 gallons. If inspected in barrels, the inspector shall receive 20 cents per barrel for inspecting in lots of 50 barrels or more, and 30 cents per barrel for inspecting in lots of less than 50 barrels at one time.

That is the law of Kentucky?—A. Yes, sir.

Q. Now, Mr. Rice, state whether, in consequence of this great discrimination against barrels and in favor of tanks, you endeavored to get tank-cars to put on these roads?—A. Yes, sir.

Q. State to what company you applied. Did you apply to the Alleghany Valley Railroad?—A. Yes, sir; I applied to the Alleghany Valley Railroad and to the Green Line for cars, but could never get them.

Q. What answer did they give?—A. That they had not them to spare.

Q. State whether you applied to any one connected with the Cincinnati, Washington and Baltimore road?—A. Yes, sir; I have written to most of the lines to know whether if I would build tank-cars they would carry my oil as cheaply as the oil of the Standard Oil Company.

Q. Did you make that application to your initial road, Cincinnati, Washington and Baltimore?—A. I did.

Q. To whom?—A. To R. M. Fraser.

Q. What did he do with your communication?—A. He wrote me that he had turned the letter over to the president of the company, and he never answered it.

Q. Did you apply to the Louisville and Nashville?—A. Certainly.

Q. What answer did you get?—A. They made no answer.

Q. Did you apply to the Newport News and Mississippi Valley Railroad?—A. Yes, sir.

Q. Did they answer?—A. No, sir.

Q. Now, the Interstate Commerce Commission decided that they should carry oil at the same rate per one hundred pounds in barrels as in tanks?—A. Certainly.

Q. Since that decision was announced is there a difference now in rate between barrels and tanks, to your knowledge, upon any of these lines?—

A. To a general extent there is not. That is, they are going on a basis of 315 pounds to the barrel instead of 325. The decision was  $6\frac{1}{2}$  pounds to the gallon, which is the regular rate adopted by the export trade in all the ports of the United States and foreign countries. Six and a half pounds is the established weight per gallon of oil, and the decision of the Commission was based upon that. But the Louisville and Nashville and other companies make an average of 6.3 pounds to the gallon, by including the refined oils, naphtha, and lubricating oils. Naphtha only weighs  $5\frac{3}{4}$  pounds to the gallon, but lubricating oils weigh  $7\frac{1}{2}$ , and they make a general average from all of them of 6.3. The Newport News and Mississippi Valley Company, however, have come down to square business, so far as weight is concerned, and base their rates on  $6\frac{1}{2}$  pounds to the gallon for refined oils.

Q. And the other lines?—A. They make an average.

Q. Which is under the weight?—A. Well, it is not in conformity with the decision. It is not basing it on the actual weight. Lubricating oil is heavier than any one of the other products. Naphtha is only a small proportion of the products of petroleum.

Q. Tell us what percentage of naphtha is taken from petroleum?—

A. In crude oil there is about 10 to 15 per cent.

Q. And of illuminating oil?—A. Seventy-five to 80 per cent.

Q. Did you make application to tank-car builders to know whether you could build cars or buy them?—A. Yes, sir; to the Milton Car Works and to the Harrisburg Car Works.

Q. Did you find any difficulty in getting cars from them due to a belief on their part that you would not be permitted to use the cars on the railroads on account of your opposition to the Standard Oil Company?—

A. Yes, sir; I got a letter from the Milton Car Works. I wanted to get tank-cars built on the same basis as the railroad, on a car trust, by paying 25 per cent. down and paying the balance in three to five years.

Q. That would involve capitalists furnishing money on car-trust certificates?—A. Yes, sir.

Q. Look at this letter and see if it is the letter from the Milton Car Works.—A. Yes, sir.

Q. This is the original letter?—A. Yes, sir.

Mr. GOWEN. I offer that letter in evidence. It is as follows:

S. W. Murray, manager; Charles W. Dickerman, secretary and treasurer. William R. Kramer, Richard C. Carter. Office of the Milton Car Works, Murray, Dougal & Co., Limited]

Dictated.

MILTON, PA., December 6, 1887.

GEORGE RICE, Esq.,  
Marietta, Ohio.

MY DEAR SIR: We have just wired you as follows: "Our financial friends decline to advance the money. We can not build them except for cash," which we confirm.

Our Mr. Dickerman returned this morning, and after using every exertion, failed to negotiate the deferred payments on your cars. Our financial friends state that they have declined to do this mainly on account of some supposed controversy which they claim you have had with the Standard Oil Company and various railroads in the West. They feared you could not use these cars to advantage if the railroads should be hostile to your interests.

We regret this very much, as we have been to considerable trouble and expense in making arrangements to build the cars, and are now seriously disappointed at the

refusal of the parties to take the deferred payments, as they had partially promised to do.

We should be very much pleased to build these cars for you if you can negotiate the notes with your friends and pay us the cash.

Please let us hear from you at your earliest convenience concerning your ability to raise the money.

Yours, very respectfully,

MURRAY, DOUGAL & Co., Limited.

Q. You subsequently, I believe, did get some cars from the Harrisburg Works.—A. I got ten cars.

Q. How late did you get those cars?—A. I only got them in January last.

Q. State whether or not, finding those through lines to the south closed against you, you endeavored to get rates by circuitous routes.—A. Certainly I did.

Q. I have requested you to put this in writing, because it involves comparison of rates and mileage. State whether these statements are statements prepared by you showing your efforts to get rates on long distances so as to circumvent the short line and get into their territory notwithstanding the discrimination?—A. Certainly, these are all statements that I had prepared so as to get at the exact facts as close as possible, and I have put them down in writing, and these are correct.

Q. And do those statements properly show all the letters involved in those applications?—A. Certainly.

Q. In one case, spoken of by Mr. Harriot the other day, and in another one by Mr. Hass, how long after the rate that was named to you by that circuitous route had been made use of by you was it before they forced you to stop shipping?—A. I started the first car on December 1, 1886, and on December 15 I got a dispatch from Mr. Harriot canceling the rate.

Q. What length of mileage was that circuitous route as against the direct mileage through the territory of these roads which had discriminated against you?—A. In some cases over double the distance. It was double the distance to Chattanooga for instance, and still I got these rates at equal figures as I had paid previous to July, 1886.

Q. You got rates on circuitous rates in some instances double the distances, that enabled you to get your oil in as cheaply as over the short line before the change of tariff?—A. That is true.

Mr. GOWEN. I offer this statement in evidence.

It is as follows:

I have been obliged to ship my oils by all manner of circuitous routes in order to avoid and get around the frequent advances made on me in freight rates, and when once around shut out again and again. After the notable rise in freight rates July 15, 1886, from 10 to 160 per cent. and none on the Standard Oil Company, there was only one more opening or avenue left me to get my oil products into Southern markets, and that was via Cincinnati, Washington, and Baltimore, 12 miles to Parkersburgh, and thence via Baltimore and Ohio east to Harper's Ferry, Strasburgh, and via Piedmont Air Line.

After several months' negotiations with the Baltimore and Ohio people at Baltimore I finally succeeded in getting rates much lower by this roundabout course and greater distance, as the following figures will show. On November 15, 1886, the Baltimore and Ohio road named me the same rates per 100 pounds on both barreled oil and that carried in bulk by tank-car. These rates are from Marietta to the following points:

To Charleston, S. C., 43 cents per 100 pounds, or \$1.72 per barrel, as against direct route via Cincinnati, Washington and Baltimore, and Cincinnati, New Orleans and Texas Pacific Railroad, of 30 cents per barrel by the former road and 58 cents per 100 pounds by the latter road, or \$2.62 per barrel as against \$1.72 per barrel, or 52 per cent. in favor of the Baltimore and Ohio route.

To Augusta, Ga., 43 cents per 100 pounds, or \$1.72 per barrel, Baltimore and Ohio, against 56 cents per 100 pounds Cincinnati, New Orleans and Texas Pacific, and 30

cents per barrel Cincinnati, Washington and Baltimore, or \$2.50 per barrel, or 48 per cent. in favor of Baltimore and Ohio route.

To Chattanooga, Tenn., 30 cents per 100 pounds, or \$1.20 per barrel, Baltimore and Ohio, as against 30 cents per barrel Cincinnati, Washington and Baltimore, and 96 cents per barrel Cincinnati, New Orleans and Texas Pacific, or \$1.26 per barrel, or 6 cents per barrel in favor of Baltimore and Ohio route. This was carried 1,186 miles as against 542 direct.

To Athens, Ga., 35½ cents per 100 pounds, or \$1.42 per barrel, Baltimore and Ohio, as against 56 cents per 100 pounds via Cincinnati, New Orleans and Texas Pacific, and 30 cents per barrel Cincinnati, Washington and Baltimore, or \$2.54 per barrel, or 30 per cent. in favor of Baltimore and Ohio route.

To Columbia, S. C., 45 cents per 100 pounds, or \$1.80 per barrel, Baltimore and Ohio, as against 56 cents per 100 pounds Cincinnati, New Orleans and Texas Pacific, and 30 cents per barrel Cincinnati, Washington and Baltimore, or \$2.54 per barrel, or 41 per cent. in favor of Baltimore and Ohio.

To Macon, Ga., 42 cents per 100 pounds, or \$1.68 per barrel Baltimore and Ohio, as against 56 cents per 100 pounds Cincinnati, New Orleans and Texas Pacific, and 30 cents per barrel Cincinnati, Washington and Baltimore, or \$2.54 per barrel, or 51 per cent. in favor of Baltimore and Ohio route.

To Montgomery, Ala., 39 cents per 100 pounds Baltimore and Ohio, or \$1.56 per barrel, as against 59 cents per 100 pounds via Cincinnati, New Orleans and Texas Pacific, and 30 cents per barrel Cincinnati, Washington and Baltimore, or \$2.66 per barrel, or 70 per cent in favor Baltimore and Ohio route.

To Birmingham, Ala., 30½ cents per 100 pounds or \$1.22 per barrel Baltimore and Ohio, as against 59 cents per 100 pounds via Cincinnati, New Orleans and Texas Pacific, and 30 cents per barrel Cincinnati, Washington and Baltimore, or \$2.26 per barrel, or 118 per cent. in favor Baltimore and Ohio route. I have an agency at this point. This was carried 1,213 miles as against 685 direct.

To Atlanta, Ga., 33½ cents per 100 pounds via Baltimore and Ohio, or \$1.34 per barrel, as against 56 cents per 100 pounds via Cincinnati, New Orleans and Texas Pacific, and 30 cents per barrel Cincinnati, Washington and Baltimore, or \$2.54 per barrel, or 90 per cent. in favor Baltimore and Ohio. I had an agency here at this time. This was carried 1,046 miles as against 682 direct.

To Anniston, Ala., 30½ cents per 100 pounds by Baltimore and Ohio, or \$1.22 per barrel, as against 59 cents per 100 pounds, and 30 cents per barrel Cincinnati, Washington and Baltimore, or \$2.66 per barrel, or 118 per cent, in favor Baltimore and Ohio route.

On December 1, 1886, I commenced to ship oils by Baltimore and Ohio route. On December 15 the rates were canceled per following telegram:

[Telegram.]

BALTIMORE, MD., December 15, 1886.

GEO. RICE (*Ohio Oil Works*):

See your letter 13th. I find that for the present we will have to withdraw rates on oil to Southern points, as the various lines in interest will not carry them out.

FRANK HARRIOT,  
G. F. A. (B. and O. R. R.).

[Telegram.]

MARIETTA, OHIO, December 16, 1886.

FRANK HARRIOT,  
Baltimore, Md.:

What particular lines refuse to carry out previous agreements? Also state present rate to Chattanooga.

GEO. RICE.

[Telegram.]

MARIETTA, OHIO, December 17, 1886.

SOL HAAS,  
Piedmont Air Line, Richmond, Va.:

Harriot withdraws rates because connecting lines refuse to carry them out. Why do you object?

GEO. RICE.

[Telegram.]

RICHMOND, VA., December 18, 1886.

GEO. RICE:

Have requested Mr. Harriot to continue the oil rate. Overcharge will be promptly refunded.

SOL HAAS,  
Traffic Manager Piedmont Air Line.

[Telegram.]

MARIETTA, OHIO December 20, 1886.

FRANK HARRIOT,  
G. F. A., B. and O. R. R., Baltimore, Md.:

Sol Haas telegraphs me the 18th that he had requested you to continue the oil rate. Do you now object to take my oil at rates given me November 15; if so, for what reason?

GEO. RICE.

[Telegram.]

BALTIMORE, MD., December 21, 1886.

GEO. RICE:

The reasons are, shortage of cars, the impossibility of getting cars returned from the South, the overcharges, and the low rates for our company. This is all against the traffic.

FRANK HARRIOT,  
G. F. A., B. and O. R. R.

[Telegram.]

MARIETTA, OHIO, December 20, 1886.

SOL HAAS,  
Traffic Manager, Piedmont Air Line, Richmond, Va.:

Harriot refuses to continue oil rate. This sudden abrogation of rates, after I had made arrangements in accordance therewith, and had commenced to ship, is simply outrageous. What have you to say?

GEO. RICE.

[Telegram.]

RICHMOND, VA., December 21, 1886.

GEO. RICE:

We do not control rates from Marietta to Parkersburgh, but we are willing to accept our proportion of the proposed rates from Marietta on oil, and so have notified the Baltimore and Ohio people.

SOL HAAS,  
Traffic Manager Piedmont Air Line.

Circuitous routes (other than by the Baltimore and Ohio) I was forced to take in order to get my oils into certain markets at a less rate in order to survive:

	Miles.
Marietta to Birmingham:	
Cincinnati Washington and Baltimore to Cincinnati .....	207
Cincinnati, New Orleans and Texas Pacific to Chattanooga .....	335
Alabama Great Southern .....	143

Q. What do you know about the knowledge possessed by your enemies in the trade, or your rivals the Standard Oil Company, of the fact of your shipments over the lines of these railroads?—A. Well, I know that in the exhibits which were put in in the quo warranto cases it was shown that R. M. Fraser, the general freight agent of the initial line, the Cincinnati, Washington, and Baltimore had notified Mr. L. A. Cole, president of the Camden Consolidated Oil Company, of Parkersburgh, W. Va., of all rates which were given me. If there were any changes made, they got notice immediately. I have exhibits here to show that.

Q. Were you here yesterday?—A. Yes, sir.

Q. When Mr. Carley was being examined?—A. Yes, sir.

Q. Do you remember the production of the letter written by Chess, Carley & Co. to Mr. Culp, referring to a shipment of oil made by you at the fifth-class rate, amounting to some \$41 and something, which the latter alleged had probably slipped through without observation or notice, and asking him to turn on another screw?—A. Yes, sir.

Q. What was the date of that letter?—A. June 16, 1881.

Q. State whether after the date of that letter your rates were raised on that road?—A. Yes, sir; my rates were raised over 50 per cent. within five days. Before that letter we had a rate of 15 cents per 100 pounds from Louisville to Nashville, and immediately afterwards it was raised to 90 cents per barrel.

Q. That is, a rate of 15 cents per 100 pounds, calculating 375 pounds to the barrel, would make 56½ cents per barrel, and that rate was raised from 56½ cents to 90 cents?—A. Yes, sir.

Q. Immediately after the date of that letter?—A. Yes, sir.

Q. Was it necessary to turn on more than one screw in that direction to put a stop to your business?—A. One was sufficient.

Q. Now, since the decision of the Interstate Commerce Commission, can you tell us by looking at these documents what the rates of the Missouri Pacific were?—A. Well, these are some tariff sheets that I received.

Q. From whom?—A. Missouri Pacific. This one, dated December 15, 1887, is in regard to rates, and the one dated March 15, 1888, is in regard to classification. I find in looking these over that in less than car-load lots they charged in wooden barrels \$1.20 per 100. This is under certain classes—in car-load lots the classification of iron barrels and wooden barrels is the same. That is, Class A; but in less than car-load lots the classification on oil in wooden barrels is \$1.20 as against \$1 in iron barrels.

Q. But on full car-load lots the rate is the same on wooden and iron barrels?—A. Yes, sir.

Q. When did they go into effect?—A. March 15, 1888.

Q. Now, therefore, that would be a discrimination against the small shipper in less than car-load lots, who is compelled to ship in wooden barrels?—A. Certainly.

Q. State whether or not the Standard Oil Company have places in the South or Southwest where they manufacture iron barrels.—A. I understand they are manufacturing iron barrels in a small way, and that this is only a recent occurrence. I do not know what they may do in that way hereafter.

Q. But state, as a fact known in business, that when a man buys a barrel of oil in iron barrels and uses it in a small store or shop, he can not have that barrel filled again?—A. Yes, sir.

Q. And have not the Standard Oil Company places where they fill those iron barrels?—A. Oh, yes.

Q. Is there not a considerable charge made for these iron barrels?—A. To the consumer or dealer?

Q. Yes.—A. I do not know that as a fact.

Q. In the interstate commerce decision in your case, that oil in barrels should be carried at the same rate as oil in tanks, do you know any reason, as a business man or shipper of oil, why they should make on less than car-load lots a greater rate on wooden barrels than on iron barrels?—A. Of course not; there is no reason for it.

Q. What is the rate on cotton-seed oil given in that tariff sheet?—A. It is 40 cents a hundred.

Q. That is in tank cars?—A. I suppose naturally it would be 40 cents a hundred no matter how it is carried, whether in tank cars or in barrels, just the same as the rate of 67 cents on coal oil.

Q. In that tariff the rate on coal oil carried in bulk is 67 cents per hundred pounds is it not?—A. Certainly.

Q. And the rate on cotton-seed oil is 40 cents?—Yes, sir; it is put under the lowest classification in this tariff sheet, and yet it is worth five times as much a coal oil.

By Mr. SMITH:

Q. I would like to know on what distance?—A. No distance; this is classification.

By Mr. GOWEN:

Q. But those rates of 40 cents and 67 cents respectively would apply to certain distances?—A. The distances vary, but those rates apply in the way of percentages of rates.

By Mr. CROUSE:

Q. But distance must have something to do with it, too?—A. Oh, yes in a general way.

By Mr. GOWEN:

Q. What is the classification on car-load lots of coal oil—what classification is that in?—A. That is in Class A.

Q. What classification is cotton-seed oil in?—A. Class E, lowest of all.

Q. Does it cost any more to haul a tank full of petroleum than to haul a tank full of cotton-seed oil?—A. I do not see how it could possibly. I am not a railroad man, but from general common sense I do not think it could.

Q. Do you not think you are entitled to have your coal oil carried at the same rate as cotton-seed oil?—A. Certainly.

Q. Has not cotton-seed oil three or four times the value of petroleum?—A. Yes, sir.

Q. State whether you have not had during the last couple of years with all these Southern and Western lines that you have spoken of a considerable difficulty in having your business conducted properly?—A. Yes, sir; very great difficulty indeed. It has required a very great deal of correspondence, which it seems to me ought to have been unnecessary.

Q. Just look at this and see what it is?—A. This shows that it took seventeen telegrams and six letters to move one car of oil from Marietta to Knoxville; and the reason was, that the Louisville and Nashville had given me within the last year a rate of 24.4 cents a ton per hundred pounds from Cincinnati to Knoxville; afterwards they raised it to 40 cents. When that car was shipped it was sent to Cincinnati, and the letter was written with the expectation that it would go through at the original rate. At that time the rate had been advanced, and Mr. Brant Arnold, the general agent of the road, demurred to its going through at the old rate as the rate had been advanced; that resulted in a great many telegrams and letters. Finally, we ordered the car shipped at Louisville rates to Louisville and from Louisville to Knoxville, which, added to the rate from Cincinnati, made 32 cents per hundred as against 40 cents. This delay occurred largely at Cincinnati, because I wanted to go back to the rate I had had before.

Q. State whether or not this correspondence was contemporaneous with your suit in the Interstate Commerce Commission?—A. It was subsequent to the filing of that suit.

Q. But not subsequent to the decision?—A. No, sir.

Q. While the suit was pending?—A. Yes, sir.

Q. Had you any reason to suppose that that was turning another

screw to affect you in your suit? Had you ever had such an amount of correspondence in moving one car before?—A. No, sir.

Q. If you had had no difficulty in getting the same freights as the Standard Oil Company, or the Chess-Carley Company, could you have run your refinery to its full capacity?—A. Certainly.

Q. Could you have increased your works?—A. Yes, sir; in a general way we could have increased them largely.

Q. Are not your expenses less than theirs?—A. Yes, sir.

Q. Since July, 1886, to what extent have you been able to run your refinery?—A. To a moderate extent; I am running it very moderately now. I have not been able to increase the business.

Q. Do you run it to one-half its capacity?—A. One-third to one-half generally. I think in one year we ran up to about 65,000 barrels of crude.

Q. Mr. Mitchell was examined this morning and identified certain letters from him to you. Do you remember of a correspondence between you?—A. Yes, sir.

Q. Will you look at those letters and say whether you can furnish the originals or copies of your letters to him?—A. Certainly.

Q. Within what time?—A. Right away; I may have them up in my room. If not, I will furnish them as soon as I can get them from Marietta.

Q. Will you please take those letters and supplement them by all the originals of the letters written to you?—A. Certainly, I will do that.

By the CHAIRMAN:

Q. To what period does this comparative statement showing the rates of the Saint Louis, Iron Mountain, and Southern Road as charged to you and to the Standard people apply?—A. Since the passage of the interstate-commerce act.

Q. There is nothing included in here before the passage of the interstate commerce act?—A. No, sir.

Mr. BLAIR. And prior to the decision in the recent case.

The WITNESS. Of course. It is since the passage of the interstate act, and of course that would be prior to the decision.

The CHAIRMAN. It applies to the period between the enactment of that law and the decision made by the Interstate Commerce Commission in your cases?—A. Yes, sir.

By Mr. SMITH:

Q. As I understand, this much-corresponded-about car-load of oil was shipped by you at the local rates to Knoxville?—A. We shipped it first to Cincinnati, then by local rate to Louisville, and then from Louisville to Knoxville.

Q. And it was cheaper that way by the local rates than by the through rates?—A. Yes, sir; local to Louisville. They did not have local rate to Marietta. The rate from Louisville to Knoxville was 24 cents. We ordered the car shipped from Cincinnati to Louisville, paying a local of 8 cents, which added to the 24 cents from Louisville to Knoxville made a rate of 32 cents as against 40 cents from Cincinnati through.

Q. What I am trying to get at is whether the local rates were less than the through rates?—A. Yes, sir.

Q. It is generally the reverse in other places?—A. That is just it exactly.

By Mr. BUCHANAN:

Q. This car you speak about that gave rise to so much correspondence was a car originally billed from what point to what point?—A.

From Marietta to Knoxville, Tenn. From Cincinnati the rate had been 24.4 cents to Knoxville, and then it was raised to 40 cents.

Q. And that car was billed at what time?—A. I do not know exactly, but the bill of lading would show the date, but this is merely the correspondence.

Q. Your letter purporting to inclose draft for freight is dated October 28, 1887?—A. That is about the time, then.

Q. Your rate previous to that date had been 24.4 per hundred pounds?—A. Certainly.

Q. And on October 26, or thereabouts, the rate was raised to 40 cents?—A. Yes, sir,

Q. And you sent a draft for \$64.05 to prepay the freight?—A. From Cincinnati to Knoxville; yes, sir.

Q. At the 24.4 rate?—A. Yes, sir.

Q. And were you not on the 29th informed that the rate had been raised to 40 cents and requesting you to send check for the difference?—A. I should judge so.

Q. Here is a telegram from Brent Arnold?—A. He is the agent at Cincinnati.

Q. (Reading:)

Have you not been advised that the .24 rate is cancelled? Please send me check at the rate of .40 per hundred pounds. Answer quick.

Did you send the check for the difference?—A. No, sir; I did not. I sent the car by the local rate to Louisville, and then by the 24.4 rate from Louisville to Knoxville.

Q. Did this correspondence largely arise from your not sending the check for the difference in the rates?—A. It did not altogether.

Q. In other words, you billed a car of oil at a certain rate and prepaid the freight at a certain rate by inclosing a check to the company, and did they not advise you that prior to that billing the rate had been increased, and that they could not forward it at the price or for the amount of money which you had forwarded, and required you to forward a check for the difference?—A. Yes, sir.

Q. Did you forward that check?—A. No, sir.

By Mr. GOWEN:

Q. What was the rate from Marietta to Cincinnati?—A. I think 32 cents.

Q. What was the rate from Cincinnati to Knoxville?—A. It had been 24.4 per hundred pounds.

Mr. CROUSE. And it was for that you sent the check?—A. Yes, sir.

By Mr. BUCHANAN:

Q. And did not Brent Arnold on November 29, send you a dispatch to the effect, as I have just read, that the rate had been raised to 40 cents?—A. Certainly he did.

Q. And you did not send a check for the difference?—A. I did not.

Q. Why did you not conform to the increased rate?—A. I thought I ought to have it at the same rate as before. I did not see why it should be advanced.

Q. But when you had been advised that that company had raised the rate did you suppose that you could remake their rate for them?—A. No, sir; I did not suppose that; but as they had made a rate of 24.4 I considered that that must have been a paying rate.

Q. And this correspondence arose from your attempt to get that car through at 24.4 instead of 40 cents?—A. Yes, sir; that was the whole contest, to get that car through at the same rate as I had paid before.

Q. Independent of any rate the company might have made in the meantime?—A. Certainly; independent of any changes they might have made.

Q. You spoke about a difference in rates in wooden and iron barrels in the Missouri Pacific schedule. I have examined those schedules and would like to know whether these iron barrels are of the same capacity as the wooden barrels?—A. I do not know. These iron barrels are a new thing in the oil trade.

Q. It has been testified before this committee that shipment in barrels was not favored by transportation companies, because there was always more or less leakage and they were compelled to carry them in coal oil-cars. Do you know whether that is so?—A. I should say that iron barrels were safer to carry oil in than wooden barrels, but I consider that any leakage which might occur from oil in wooden barrels was a very small excuse. It does not amount to anything in reality. I never heard anybody complain before these suits were brought that barrel rates should be higher because of leakage. I never had any correspondence about it, nor heard a word about it. It is merely an excuse; it don't amount to anything.

Q. I would like to know whether in point of fact such leakage does occur in transportation in wood and whether box cars are likely to be permeated by it so that other goods would be damaged?—A. It might in certain extreme instances happen that barrels of oil not put up in proper shape might leak in certain heated sections of the country; it might occur, but I mean to say in a general way it does not amount to anything. All my oil, I ship in barrels principally. We load the barrels ourselves and it is unloaded by the consignee.

Q. And you say that, having reference to the claim of the company that they would rather carry oil in tanks because in that way they are not put to the expense of unloading as they are when it is carried in barrels?—A. There is no difference. I have to load my barrels myself at the refinery, just the same as if it was in tanks; and wherever I have agencies and sell oil those agents have invariably unloaded their own cars. There is no question about it. There is no difference between tanks and barrels so far as loading and unloading is concerned.

Q. You produced a letter from Murray, Dougal & Co. They speak there about their financial friends. Have you any further information about what they mean by that except the letter itself?—A. No, sir.

Q. And they say they have had considerable trouble in endeavoring to negotiate your deferred payments for those cars. What do they mean by that?—A. I suppose they mean that the parties from whom they were to get the advances to build these cars did not want to risk their money in those deferred payments, because of some controversy I had had with the Standard Oil people, in consequence of which I might not be able to use the cars.

Q. "Our Mr. Dickerman," they say, "returned this morning, and after using every exertion failed to negotiate the deferred payment on your cars." Does that refer to deferred payment of yourself or of the company or who?—A. My proposition was that I would like to get some tank cars built and pay 20 or 25 per cent. down, and that they should carry the balance in payments running three or five years, the same as a car trust.

Q. Is it your understanding, then, from this letter, that they undertook to tell you that their Mr. Dickerman, after using every exertion, failed to negotiate those deferred payments?—A. Yes, sir; that is my under-

standing. They failed to negotiate with the parties who were to furnish the money.

Q. I understand this letter has been produced as an evidence of your difficulties in providing yourself with tank cars; and, inferentially, those difficulties arose from some influence exerted by the Standard Oil people or some of their friends. Unless it is offered in that light I fail to see its pertinency to the investigation. And now I would like to know whether it is offered in that light, or rather whether you have produced it in that light; and if so, whether there is anything in this statement of these parties that they could not go on building your cars because they could not negotiate these deferred payments?—A. I take it from that that they could not go on and build those cars, because they could not get the requisite amount needed to build them. So far as this letter being offered in evidence is concerned, Mr. Gowen can do as he pleases in regard to that. It is simply a letter I had from the Milton Car Works showing the difficulty I had in procuring tank cars.

Mr. BUCHANAN. But it is no earthly object to this committee to ascertain whether you had sufficient credit with financial people to build those cars, or whether that company had sufficient credit. The only object our investigation is to ascertain whether any impediment was put in your way by this trust or combination now being investigated?

The WITNESS. I can not say positively that the Standard Oil Trust was at the bottom of it. The letter shows for itself.

Mr. SMITH. The letter says: "Our financial friends state that they have declined to do this, mainly on account of some supposed controversy which they claim you have had with the Standard Oil Company." That is the reason they would not advance the money. They were afraid to do so because of that controversy, were they not?—A. I suppose so.

Mr. GOWEN. They give the reason of their fear in that letter.

Mr. BUCHANAN. But my point is as to the situation of the company itself; whether their refusal was because of the financial situation, however brought about; or whether it was the intervention of the Standard Oil Company?—A. I have to rely upon the letter to speak for itself.

Q. I simply wanted your understanding of the facts as they exist.—A. I take it in a general sense that they thought it would not be safe for them to advance this money on account of these controversies I have had with the Standard Oil Company.

Q. And in point of fact, at that time you had been involved also in controversies with different railroads, because they speak of the railroads in that letter?—A. Certainly.

Q. To what date does that first statement you produced here refer, being a comparative statement showing Louisville and Nashville rates charged to the Standard Oil Company and George Rice, pound for pound?—A. That is made up from the evidence taken in the Interstate Commerce Commission case.

Q. To what dates do these differences refer?—A. From April 5, 1887, to some time in November, 1887.

Q. And from that statement you gathered, that at those dates such differences existed in the charges made by these different companies to the Standard Oil Company, and to you from Louisville to the points named?—A. Certainly; there is no question about that. That is absolute testimony.

Mr. GOWEN. I understand with reference to the shipment of the one car spoken of that you were endeavoring to utilize two local rates?—A. Certainly.

Q. Which together would not have made as much as the through rate?—A. That is true.

Q. Did they raise either of those local rates, or attempt to apply the through rate?—A. They raised the rate from Cincinnati to Knoxville, which might have applied as a through rate.

Q. They raised the through rate?—A. Yes, sir.

By Mr. CROUSE:

Q. I think the questions have confused the witness a little in that regard. Was it not a fact that there was a rate from Cincinnati to Knoxville at 24 cents and a fraction?—A. Certainly.

Q. And that was the through rate and not the utilization of two local rates?—A. Certainly.

Q. And subsequently the rate was raised to 40 cents?—A. Certainly.

Q. And having enjoyed the former rate, you hoped to get a car through before the 40-cent rate took effect? A. Certainly.

Q. Failing to do that you utilized a local rate to Louisville at 8 cents, and from Louisville to Knoxville at 24 cents, thus getting the car through at a rate of 32 cents?—A. Yes, sir.

Q. One question more with reference to your attempt to get cars built. You did not seek on so small a scale to create a car trust, properly speaking, in the purchase of these cars?—A. No, sir; certainly not.

Q. But you, in a business way, sought to have them build a certain number of cars and receive their pay on the installment plan, which would be similar to a car trust; and this they would have been willing to do had they been able to find somebody to carry your notes. This, as I understand, they were unable to do, and their financial friends gave as a reason the controversies which you had had with the Standard Oil Company, on account of which you would not be able to use the cars?—A. Certainly.

By Mr. GOWEN:

Q. Was it not understood that your deferred payments should be secured upon the cars?—A. Yes, sir.

Q. And that the people who advanced the money should have the security of the cars?—A. Yes, sir.

Q. The same security as a car trust?—A. Yes, sir; the same security.

Q. You know of no other reason for the refusal than that given in the letter?—A. Certainly not.

Q. And that was that they feared, on account of certain controversies you had with the Standard Oil Company and various railroads in the West, you could not use the cars to advantage if the railroads should be hostile to your interests?—A. Yes, sir; certainly.

Q. If you had put these cars on the roads you would have been entitled to car service, would you not?—A. Yes, sir; I suppose so.

Q. And the income from cars depends mainly on the facility with which they can be used?—A. Yes, sir.

Q. And the income which can be derived from a car is an important element in considering whether a person shall advance money on it or not?—A. I suppose so.

Q. And if, through the hostility of railroads, you could not use your cars to advantage, there would be no income?—A. That is correct.

Q. How many of these cars did you thus seek to obtain?—A. In the first place 20, and finally I made arrangements by which I got 10 cars from the Harrisburg car works.

Q. I am speaking of this firm that sent you this letter; how many cars did you try to get from them?—A. Twenty.

Q. And what proportion of the payment was to be made in cash?—

A. Twenty or twenty-five per cent.

Q. And the deferred payments were to be extended over a series of years?—A. Yes, sir; three to five years.

By Mr. SMITH:

Q. And those cars would not have belonged to you until you had made the last payment?—A. No, sir; certainly not.

By Mr. BUCHANAN:

Q. At the time of the shipment of this car-load of oil that gave rise to all this correspondence, what was the local rate from Marietta to Cincinnati?—A. I think it was 32 cents at that time. I am very sure it was 32 cents just after the interstate commerce act was passed. It had formerly been 30 cents, and afterwards was raised to 36 cents.

By Mr. SMITH:

Q. Per barrel or hundred weight?—A. Per barrel, from Marietta to Cincinnati.

### JOHN D. ARCHBOLD—Recalled.

The CHAIRMAN. Mr. Archbold, I call your attention to testimony given by you when you were on the stand before, which I will read.

Q. Now, to go to another subject. I asked Mr. Flagler whether he would send us a list of the names and amounts, and the names of the persons and the amounts issued of trust certificates of the Standard Oil Trust.

The CHAIRMAN. Are you quite sure that was the request? I want to be right about it. My recollection is, you asked only for the names.

Mr. GOWEN. Did I?

The CHAIRMAN. Yes, sir.

Mr. GOWEN. I intended to ask for the amounts. (To the witness). Are you one of the trustees?

The WITNESS. Yes, sir.

Q. Were you from the beginning?—A. Yes, sir.

Q. Will you give us, or get for us, a list of the names, and amounts held by each, of the certificates of trust of the Standard Oil Trust?—A. I will not.

Q. You will not?—No, sir.

Q. Why?—A. Because I will not give it to you.

Q. Why?—A. Because I do not think you have any right to it.

Q. Will you give it to the committee?—A. I shall hear first from the committee as to whether they want it.

Q. And if they do want it?—A. It will be time enough to answer at the time they decide whether they do or not.

In that connection I desire to ask you, can you procure, if you will, a list of the names of the persons to whom the certificates of the Standard Oil Trust, aggregating \$70,000,000, the original capitalization, were issued?—A. I am not sure whether I can or not.

Q. Will you endeavor to procure and give to this committee such a list?—A. Well, I desire to say I have understood that that question had already been passed upon by the committee, and that I had been excused from the effort to procure that list.

Q. It is because that was a misunderstanding that I have recalled you, and I desire to clear away any misunderstanding about it. The committee did not understand that there was any waiving of the inquiry for the list of the names of the persons to whom the original issue of 70,000,000 of the certificates of the Standard Oil Trust was made; and as you are here I desire to know whether you will give us that list?—A. It is useless for me, perhaps, to repeat that I was advised by my counsel in attendance here, and find it confirmed apparently by the

ST.

FRIDAY, *May 4*, 1888.

Committee met at 11 o'clock a. m. Present: The chairman, Mr. McKinney; Mr. Bunnell, Mr. Crouse, Mr. Buchanan, Mr. Grimes, and Mr. Smith.

**GEORGE RICE—Recalled.**

By Mr. GOWEN:

Q. With reference to the letter written by Chess, Carley & Co. to Mr. Culp, that was offered in evidence the other day, I want to call your attention to the name of the firm of Wilkerson & Co., who were mentioned there as the consignees of the oil that went to Nashville; who were they?—A. My agents.

Q. State whether that shipment of oil was your oil.—A. Yes, sir.

Q. Was the rate at which it was shipped the regular rate?—A. Yes, sir.

Q. It was not lower than the regular rate, was it?—A. It was the regular rate.

Q. Have you the tariff sheets of the Missouri Pacific that were issued last April?—A. Yes, sir; the 1st of April.

Q. Turn to the tariff sheets that went into effect the 1st of April last year, and what is the number of that tariff sheet?—A. No. 47.

Q. When did it take effect?—A. April 1, 1887.

Q. Of the Missouri Pacific?—A. Yes, sir.

Q. Have you also got the tariff sheet that went into effect the same time on petroleum?—A. Yes, sir; No. 31, same date.

Q. No. 47 is the rate on cotton-seed oil?—A. Yes, sir; the official tariff—cotton-seed, cotton-seed oil, meal, and cake.

Q. Now the rates on cotton-seed oil on that official tariff are rates coming northward from various points to Saint Louis?—A. Yes, sir.

Q. Now the rates on petroleum on the other tariff are rates going south to the same points from Saint Louis?—A. Yes, sir.

Q. Have you made a statement or comparison which will place the petroleum rates between the same points southward opposite and in connection with the rates northward between the same points on cotton-seed oil?—A. I have made a statement and inadvertently left it in my room before I came up here; but I have a statement of it here, marked on these tariff sheets, which shows the same statement which I made out. I will have it here in a few minutes. I sent for it.

Q. Pick out some of those and give us the relative difference per 100 pounds.—A. The rates as shown by these tariff sheets which I hold in my hand are rates on coal oil from Saint Louis to Moark and Williams.

Q. How much to Moark?—A. Thirty-six cents a hundred on coal oil and 11 cents a hundred on cotton-seed oil. To Williams it is the same. To Corning it is 37 cents on coal oil and 11 cents on cotton-seed oil.

Q. Now, you will have here a statement such as that statement, separate and distinct from other matter?—A. Yes, sir. It is all made out. I accidentally forgot to bring it up with me. Here it is, just brought in.

*List of rates in freight tariffs Nos. 47 and 31, Missouri Pacific Railway Company, Saint Louis, Iron Mountain and Southern Division, taking effect April 1, 1887.*

\* From Saint Louis.

† To Saint Louis.

Q. Have you cotton-seed-oil rates on the Queen and Crescent line?—

A. I have sir.

Q. You say you have cotton-seed-oil rates on the Queen and Crescent line?—A. Yes, sir.

Q. Has that been since the decision of the Interstate Commerce Commission?—A. Just about the time of the decision March 3, 1888, is the date of letter.

Q. What letter is that, and how did you get your information as to cotton-seed rates?—A. This is a letter that I had written to the Queen

and Crescent system asking for rates on turpentine and cotton-seed oil from certain points in the South in order that I might get some to load my tank cars back.

Q. That is not a let'er which you wrote?—A. No, sir; it is a letter from the Queen and Crescent to myself, dated March 3, 1888.

Q. It is from that letter that you get your information?—A. Certainly.

Q. Now, where did you get your information as to the rates prevailing at the same time between the same places on petroleum?—A. From the tariff sheets.

Q. Now, if you will give us, so that the stenographer can put it down, from point to point the rates on cotton-seed oil, and then immediately following each one the rate on petroleum between the same points per hundred pounds?—A. The rate on cotton-seed oil from Savannah to Cincinnati is 29 cents a hundred; on coal oil it is 44 cents a hundred.

Q. Coal-oil goes in the opposite direction?—A. Yes, sir. The rate on cotton-seed oil from Tuscaloosa, Ala., to Cincinnati is 25 cents per hundred pounds, and on coal oil going down back over the same route between the same points from Cincinnati back to Tuscaloosa is 44 cents a hundred. Now the rate on turpentine from all points at local stations on the New Orleans and Northeastern road, which is a branch of the Queen and Crescent system, to Ludlow, Ky., and Cincinnati is \$90 a car, which is equal to  $24\frac{1}{2}$  cents per hundred pounds, and the rate on coal oil is 44 cents a hundred between the same points going in opposite directions. From Chattanooga, Tenn., to Cincinnati, Ohio, the rate on turpentine in tank cars is 12 cents per hundred pounds, and on coal oil going the other way over the same distance from the same point is 33 cents per hundred pounds.

Q. State whether you have any knowledge of the fact that when you had been driven out of any district by competition, either resulting from differential rates on the railroad or from the reduction of price on petroleum, whether the prices were advanced.—A. Yes, sir. In almost all cases where we sold oil delivered by the car-load outside of our agencies the price most invariably was cut down right sharp, below what we have sold for, to the parties residing at these various places; and, in the first place, when we made these sales we had to make them at a lower price than the market price at the time we sold it, in order to make the sale.

Q. The question is, after your competition was killed the rates were put back or advanced again when you were driven out of the district?—A. They put the rates right back again. The prices were restored back at once.

Q. State whether or not the Louisville and Nashville Railroad, or their general freight agent, at any time refused to give you rates from Louisville or Nashville to given points on coal oil.—A. Last fall, September or October—along there—they absolutely refused to give me rates from Louisville to Nashville and other southern points for two or three or four months. The idea of that was to force me to ship my freight via Cincinnati at a higher price. It cost me 40 cents a barrel more via Cincinnati to Nashville than if I had gone direct to Louisville and got my rate there, but they would not give me any rate.

Q. So that to get to Louisville your rate would have been higher than your rate to the other shipping points?—A. Yes, sir.

Q. State whether the Louisville and Nashville road at that time refused to give you rates on turpentine and cotton-seed oil as back-load

from Mobile.—A. During the last two or three months they absolutely refused.

Q. Did you call their attention to it?—A. Several times.

Q. Have you ever called their attention to the fact that in giving you rates they did not give you Mobile rates, and you demanded them?—A. Certainly.

Q. Did they give you the rates from Mobile?—A. No, sir.

Q. Is not Mobile a central point for freights shipped north?—A. Yes, sir; quite a central point.

Q. Was this refusal since the Interstate Commerce decision in your case?—A. Yes, sir; since that decision.

Q. What evidence have you, if any, or what can you tell this committee upon the subject of attempts to intimidate persons who dealt with you or acted as your agents, or persons who purchased supplies of oil from you throughout the Southwest?—A. I have got hundreds of letters in my room now, where they sent me letters.

Q. Who sent you letters?—A. These various customers of mine that I sold to, and my agents as well; principally they were my customers. They extend back, some of them, five or six years, the letters that I have collected and got on file, where these various customers have written to me. They would try to buy oils from me, and they were threatened and intimidated. For instance, take it in Texas. I have had an agent to go around and make up car-loads in five and ten barrels. The Standard agents would find out about it, and go around there, and by various means and insinuations threaten them not to buy this oil. I have had eight or ten telegrams come from one town countermanding the order before we shipped. That has been done in a number of cases.

Q. Do you know whether any system of intimidation has been carried to the extent of interfering with the prices of products, or dealing with other products than oil, as the penalty for dealing in your oil; for instance, in competition with merchants? Have you any knowledge on that subject?—A. Only by newspaper publications, in a general way. I have no personal knowledge.

Q. Have you a letter with you from Mr. Fraser upon the subject of rates upon other companies?—A. Yes, sir.

Q. Will you bring up those letters?—A. Yes, sir; I thought they would be a little cumbersome. I have underscored them where these expressions come in generally so that you can see them right quick.

Q. (Handing witness a letter.) State whether that is a letter to you from Mr. Fraser the general freight agent of the Cincinnati, Washington and Baltimore.—A. Yes, sir; that is the letter.

Mr. GOWEN. I offer this letter in evidence. The letter is as follows:

[R. N. Fraser, General Freight Agent.—All special rates unless sooner revoked expire with the year.]

CINCINNATI, WASHINGTON AND BALTIMORE RAILROAD COMPANY,  
GENERAL FREIGHT OFFICE,  
Cincinnati, July 8, 1884.

GEO. RICE, Esq.,  
Marietta, Ohio:

DEAR SIR: Your favor 4th. I have been hammering the life out of the Cincinnati Southern Railroad for the past month relative to rate on oil to Chattanooga, and every time I have seen them have been put off with the remark, *Will surely let you know in a day or two.* This is about all the satisfaction I have been able to obtain up to the present time, although I have written them an urgent letter again to-day requesting an immediate reply.

To speak plainly, Chess, Carley & Co. and Alex. McDonald & Co. are watching them like "hawks," and the Cincinnati Southern folks are very careful about committing them-

*selves, although I know from conversations we have had they want your business, and would gladly "close one eye" and say go ahead, if they could keep the Standard Company cool.*

Just what the result will be, and how long we must wait for an answer, are questions which can not be solved at present, but you may rest assured I will do all in my power to bring the matter to a head.

I quoted rate by wire to Agent Lucas, June 11, on oil to Earlington, Ky., of 41 cents per hundred pounds, from Cincinnati via Louisville and Nashville Railroad. Have no record of any papers from you on the subject.

Yours, truly,

R. M. FRASER,  
G. F. A.

Q. The decision of the Interstate Commerce Commission in your case required railroad companies to charge for the transportation of oil in barrels the same rate per hundred pounds as was charged in tanks, did it not, over the same distance?—A. Yes, sir.

Q. In the case of oil in barrels the weight of the barrel is also charged and paid for?—A. Yes, sir.

Q. Now what is the weight of a barrel of oil in barrels, excluding the barrel?—Three hundred and twenty-five pounds.

Q. That is also taken as the weight of a barrel of oil in a tank?—A. Yes, sir.

Q. What is the weight of the barrel?—A. The decision of the Commission is 75 pounds.

Q. So that the barrel and the oil together will weigh 400 pounds as against 325 pounds for the barrel of oil in the tank?—A. That is it exactly.

Q. And you have to pay on an equal number of gallons as that shipped in tanks and 75 pounds dead weight for every 325 pounds of car load?—A. Yes, sir.

Q. What percentage does that make?—A. Twenty-three and twenty-three one hundredths per cent. I would have to pay that per cent. more.

Q. At the same rate per hundred pounds you are paying per barrel of oil 23.23 per cent. more than those who ship in tanks?—A. Certainly.

Q. Now have you made a statement of what that would amount to per barrel at the various rates of 50 cents, \$1, \$2, \$3, \$4, and \$5?—A. Yes, sir; and you have the statement there.

Q. Just read it off in this way: Where the rate amounts to 50 cents per barrel for oil carried in tanks, what would it be for oil when carried in barrels?—A. Sixty-one and sixty-six hundredths cents per barrel.

Q. Where the rate would be \$1 in tanks, how much would it be for the same quantity of oil in barrel?—A. One dollar and twenty-three cents per barrel.

Q. And \$2?—A. Two dollars and forty-six cents.

Q. Three dollars?—A. Three dollars and sixty-nine cents.

Q. Four dollars?—A. Four dollars and ninety-two cents.

Q. Five dollars?—A. Six dollars and sixteen cents.

Q. What are the highest rates per barrel that you have been known to pay for the longest distance you shipped over?—A. We shipped a car a year or two ago, or two or three years ago, to Santa Fé, N. Mex. It is about the farthest, I think, we ever shipped.

Q. What rate per barrel?—A. I do not recollect what it was then, but I have a letter here showing the rates November 7, 1887, from the Atchison, Topeka and Santa Fé Railroad Company, in which the rate per hundred pounds between barrel and tank cars would make an advantage of \$1.13 a barrel to the Standard or anybody else shipping in tank cars as against oil in barrels.

Q. Even if the same rate per hundred was charged?—A. Even if the same rate per hundred was charged.

Q. State whether that difference alone, a difference that varies in certain places from 11 cents to over \$1 a barrel, would not exclude you in sharp competition from the business.—A. Certainly.

By the CHAIRMAN:

Q. Have you in mind so that you can give us the prices at which oil was sold at any points before you went into competition, during the time you were in competition, and after you were excluded or withdrew from it?—A. I think so. There is a general statement that is here, giving the prices at various places when I went in and what the prices were knocked down to.

By Mr. GOWEN:

Q. That statement only covers two points. It does not cover what the rates may have been advanced to after you went out of competition. The chairman asked you for the points at which it was before you went in, after you went in, during the time you were in, and you have only covered two points.

The CHAIRMAN. It does not cover the rises in price after you withdrew?

The WITNESS. No, sir; but in a general way I can state that these prices were restored immediately to the original.

Q. Would you be able to make up such a statement from data or actual facts in your possession?—A. I do not know, hardly, that I could make up such a statement as that. I only know that to be the case on general principles and general knowledge. It would be pretty hard to make up such a statement as that.

By the CHAIRMAN:

Q. You say, then, that you are unable to give the prices to which oil was put after you withdrew from competition?—A. I think that would be pretty hard to make up.

Q. I asked if there was any case about which you knew that matter, and, if so, you can give us the price. If there is not any, you can just say so.—A. I do not recollect of any that I can give.

By Mr. BUCHANAN:

Q. In speaking about the difference in rates between oil in tanks and oil in barrels you spoke of 75 pounds of dead weight, but that 75 pounds is also hauled by the transportation company, is it not?—A. Yes, sir.

Q. In the sale of oil by the barrel, do you obtain anything for the package?—A. That is included in the price.

Q. Will 325 pounds of oil in the barrel bring any more in the ordinary market than 325 pounds in bulk?—A. It brings more; the extra price of the package.

Q. That is precisely what I asked you, whether you obtained anything then for the package?—A. Certainly, we get pay for the package.

Q. What do you ordinarily get for the package?—A. It cost us about 2½ cents a gallon.

Q. My inquiry was what do you get, not what it costs you.—A. We got it on a basis of what the barrel cost us—2½ cents a gallon.

Q. You pay for the package when you buy your oil, and you get pay for your package when you sell your oil?—A. That is it.

Q. And at precisely the same figure in each instance. In other words, is there any profit to you on the package?—A. That is all included in together, the package and the oil.

Q. But in reckoning your prices for the oil and package at the point of delivery, do you include in that the price of the package?—A. Certainly we do.

Q. Now then, in including that do you include it at an enhanced price, a profit, or at the same price that it originally cost you?—A. If we sell the oil at a profit, the barrel goes in as a part of the profit.

Q. Have you any more definite answer to make than that?—A. I do not see how I could.

Q. In fixing a price for your oil you endeavor to obtain a profit on your package as well?—A. Certainly. That enters into the general cost, and we endeavor to get a profit on the package; it is all figured together.

Q. How many gallons are in one of these packages?—A. It averages 50 gallons.

Q. And the cost to you of those packages is about 2½ cents?—A. Yes, sir.

Q. Do you buy your barrels ready made or have them made yourself?—A. Buy them ready made.

Q. Since this last decision of the Interstate Commerce Commission of which you have spoken, requiring companies to carry oil at the same rates in the barrel that they do in bulk, would it be fair in your judgment to require the companies to transport the package weighing 75 pounds for nothing?—A. Yes, sir; I think the package ought to offset the cylinder, and in the transportation of all the refined oils from the Pennsylvania oil region to the sea board for the last few years that has been their rate. They have carried the oil, including the package, for the same money that they have for 50 gallons in bulk. Of course the decision was rendered by the Commission against Southern companies. They had had more or less cotton-seed oil and turpentine to bring back. I think that had its effect, because they had return loads to a certain extent.

Q. You think, then, that the transportation of the package weight of the cargo would about equal the use of the cylinder?—A. Yes, sir; where they have no return loads, and there is not 5 per cent. of tank cars in this country that is loaded back. I suppose this decision applies to the whole country. That is the way I take it.

Q. Was that point presented at the Interstate Commerce Commission?—A. Yes, sir.

Q. And overruled?—A. I contended that I ought to have a gallon of oil shipped in barrels as cheap as they ship theirs in tank cars.

Q. But they did not go as far as that?—A. No, sir; they based it on a hundred pounds.

Q. You spoke about orders being obtained for you by your agents at different points, and before you filled the orders they would be countermanded.—A. By wire.

Q. Have you any of the telegrams countermanding those orders?—A. Yes, sir; I can get you up several cases and present them here.

Q. I would like to have a few of those telegrams.—A. Yes, sir; but I can not get them here before probably next week.

Q. The first session of the Fiftieth Congress will continue beyond next week, and you can have an opportunity to present them.—A. I will have them for you.

Q. Is it the case in mercantile and commercial transactions, where competition is sharp, that sometimes orders are obtained and a competitor for business visits the buyer and offers the goods at cheaper

rates, and those orders are countermanded; is that so in other fields of commercial enterprise?—A. To a certain extent.

Q. To a considerable extent?—A. I presume it is.

Q. The practice of underbidding is not unknown to the commercial world?—A. No, sir; I do not think it is.

Q. Have you any definite facts in your knowledge which will enable the committee to determine whether the countermanding of these orders was the result of underbidding simply, or of intimidation?—A. I have lots of letters that will prove the fact, which I have in town here at my room. They are the best evidence.

Q. About being the best evidence on that point, I think the committee will form the deductions. I incline to agree with you that it is the best evidence. Since the decision of this Interstate Commerce Commission bears, as you claim, particularly upon you, although it has afforded you some relief, although not as much as you think it should, why do you not ship in tank cars?—A. That is what I have started in now. I bought ten tank cars within the last two or three months, and am commencing to use them; but several of the lines, after they had their meeting in Louisville, agreed that they would pay mileage both ways on tank cars, as well as on other foreign cars—box cars. They immediately thereafter, a short time, raised it to 3 cents, with the understanding that they would charge either three-quarters of a cent or 3 cents, if I or anybody else would not allow the roads the use of those cars to bring back cotton-seed oil or turpentine. Then they reduced it back within the last month to three-quarters of a cent.

Q. To be practical, is it not your belief, after your experience with the Interstate Commerce Commission, and seeing the scope and effect of its decision, that if you put upon these lines tank cars of your own you will be protected by that Commission against improper discrimination?—

A. I think the Commission will do everything in their power to do that, but I do not believe, notwithstanding that, I will get the same rates off the rail lines in this country. I have all confidence in the Commission, but I do not believe I will get the same rates as the Standard Oil Company.

Q. I am asking these questions with a view of ascertaining what defects, if possible, exist in the interstate commission act, and what seems necessary to be changed.—A. I do not think the Interstate Commerce Commission is radical enough to cure the evil. I think there are two important remedies that ought to be added.

By the CHAIRMAN:

Q. Suppose you state them?—A. The first one would be, that all these fines and penalties should apply to the shipper as well as to the carrier. The next is the fines and penalties should go to the informer instead of to the Government. If I myself spend all my time, and am put to great trouble in looking after these matters, I think I should be remunerated for it. I do not think the Government is entitled to anything of that kind. Those are two important amendments, which, I think, ought to be added.

#### TESTIMONY OF GEORGE R. SAFFORD.

GEORGE R. SAFFORD, sworn and examined.

By Mr. GOWEN.

Q. Where do you reside?—A. Parkersburgh, W. Va.

Q. What is your business?—A. Hotel keeper.

Q. Were you at one time connected with the Cincinnati, Washington and Baltimore line?—A. I was in the general freight office at Parkersburgh from 1874 to the 15th of last April.

Q. In what capacity?—A. All around the office, in one capacity and another. When I left the service of the company I had charge of the west-bound freights.

Q. Did that give you charge of the billing of oil from Parkersburg?—A. It did.

Q. Parkersburgh is the eastern terminus of the Cincinnati, Washington and Baltimore is it not?—A. Yes, sir.

Q. State whether you know, as a matter of fact derived from your knowledge of this business, that freights on oil from Parkersburgh and Marietta, going westward, were equal?—A. I do not know anything about that.

Q. You know the Camden Consolidated Oil Company?—A. Yes, sir.

Q. That is one of the oil concerns that is connected with the Standard Oil Company?—A. I don't know anything about that.

Q. Can you tell us what the lowest net rates from Parkersburgh to Cincinnati on tank cars were to the Camden Consolidated Company?—A. No, sir.

Q. Why can you not?—A. Simply because it was not my business, and I never inquired into anything I was not paid for. I would not now attempt to state what the rates were, because I was responsible for the naming of the rate claimed by the company, and consequently referred to papers in the office whenever naming a rate. I did not trust to my memory to name a rate. I signed bills of lading for which I was responsible, and consequently referred to each shipment for written or printed rates.

Q. Are you not able to give us from memory the rates paid by the Camden Consolidated Company for oil at Parkersburgh?—A. I do not think I could. I might be right and I might be wrong, we had so many different rates.

Q. To Cincinnati, for instance?—A. My recollection of the tank rate to Cincinnati was 32 cents per barrel.

Q. Were not the shipments made for so much per tank car, and not per barrel?—A. Not since April 1 of last year, when the interstate commerce act went into effect.

Q. Prior to that time the rates were made in tank cars, so much per tank car?—A. That is my recollection.

Q. Tell us what that rate was.—A. I think \$30 to Cincinnati, except the Ohio and Mississippi Railroad, which had a rate of \$24. That was the only difference.

Q. Don't you know that the net rate was \$19 to Cincinnati?—A. I don't know anything about the net rate.

Q. How was the net rate ascertained as distinguished from the tariff rates?—A. I can not say.

Q. Had you any knowledge of drawbacks or rebates being paid?—A. No, sir.

Q. Would they have come through your office?—A. No, sir; if there was anything of the kind it was settled through the general freight office, I suppose.

Q. Am I to understand the rate you have named is the lowest way-billing rate you know of?—A. Yes, sir; and the only rate I know of.

Q. Can you tell us anything about the rates of oil in barrels prior to the Interstate Commerce Commission?—A. I do not think I recollect it. You see my business was of a general character. Shipments of various

character passed through my hands, and so much so that I did not depend upon my memory for anything, either for classification or for rates. I referred right to the papers in the office.

Q. If a special rate different from the tariff sheets had been allowed to anyone, what notification would your office have had of that?—A. A copy of the notice was sent by those interested to the office billing the freight and the point receiving it, or the connecting point.

Q. And so long as the special rate remained in your office you would bill at that rate and not at the tariff rate?—A. Yes, sir.

Q. What notice would you get of the withdrawal of that rate?—A. Either a termination of the rate or a letter withdrawing it.

Q. Through whose department would a notice of allowance be made?—A. I think the general freight office.

Q. It did not come into your office?—A. No, sir.

Q. Now, state what you know of the bridge charge for passing cars at Parkersburgh, what rate per car?—A. There was a statement made up in the office showing bridge tolls on general freight and bridge tolls on oil, copies of which were furnished to the general freight agents of the Cincinnati, Washington and Baltimore, and Baltimore and Ohio.

Q. What was the rate of bridge toll on oil?—A. Now, there is an allowance of 4 cents a barrel in barrels and \$4 a tank in tanks, deducted from the gross price per barrel or tank before the prorate. Prior to the interstate commerce act there was no deduction made, so far as shown, in our office.

Q. Prior to the interstate commerce act the prorate went over the whole freight without this terminal being deducted?—A. Yes, sir.

Q. After the interstate commerce act a terminal charge of \$4 per tank car and 4 cents per barrel was deducted from the through rate before the prorate?—A. Not from the through rate, but from the total freight.

Q. Do you know the Continental Line?—A. I have handled that business for some time; yes, sir.

Q. What was that line?—A. It was, as I understand it, a system of billing over the Baltimore and Ohio, and Cincinnati, Washington and Baltimore, and Ohio and Mississippi roads and their connections and branches.

Q. Did the Continental Line own cars?—A. Not as a line; they did not. Each line which entered into it, I understand, put in so many cars.

Q. It was a freight line?—A. Yes, sir.

Q. Do you know whether the Continental Line had special rates?—A. I do not. Parkersburgh is not a Continental Line point.

Q. Did not the Camden Consolidated Oil Company ship from Parkersburgh by the Continental Line?—A. No, sir; they shipped by the Cincinnati, Washington and Baltimore, or Baltimore and Ohio.

Q. Do you know whether the Continental Line had any rates different from the public rates through your office?—A. No, sir. A little explanation is needed there, I expect. We merely took an abstract of Continental Line bills. We did not examine them as to their correctness in any particular at Parkersburgh.

Mr. GOWEN. I will offer in evidence the decision of the Interstate Commerce Commission in the case of Rice against the various railroads.

Mr. SMITH. The whole of that?

Mr. GOWEN. Yes, sir; that is, just the decision and the findings. The testimony is a great deal larger. I offer in evidence the pamphlet which Mr. Campbell identified on the stand. It is the history of the

organization, purposes, and transactions of the Producers' Union, the early history of the case showing the agreement with the railroad and the litigation. I also offer in evidence the contracts between the South Improvement Company and the New York Central and Hudson River Company; between the South Improvement Company and the Erie Railway Company.

The CHAIRMAN. Are they identical, so that we may not have to print them again?

Mr. GOWEN. They are identical; the same schedule of rates is named in each, and the one entered into with the Pennsylvania Railroad Company provides that it was made with the Pennsylvania Railroad not only on account of itself, but on behalf of these other roads, and their proportions are named in it, so that I suppose it is hardly worth while to burden the record with additional ones.

The CHAIRMAN. These contracts are admitted in evidence, but with the permission of the committee I will have the stenographer note that they are not to be extended upon the record on account of their being identical with the contracts with the Pennsylvania Railroad Company which have already been introduced in evidence.

Mr. GOWEN. They are all dated the same day, January 18, 1872. I desire to offer in evidence portions of the testimony of Thomas L. Kimball before the Pacific Railroad Commission, in volume 3 of the testimony taken by the United States Pacific Railway Commission, page 1040, from A to B; page 1132 A to 1133 B; page 1374, from A to B; page 1394, from A to B; page 1400 A to 1403 B; page 1408, from A to B; page 1413 A to 1414 B; page 1439 from A to B; page 1468, from A to B.

Extracts from the testimony of John O. Stubbs before the Pacific Railway Commission, from volume 6 of the testimony taken before the United States Pacific Railway Commission, from page 3288 A to page 3289 B; from page 3301 A to page 3302 B; page 3325, from A to B.

Extracts from the testimony of Richard Grey before the Pacific Railway Commission, volume 6 of testimony taken by the United States Pacific Railway Commission, page 3572, from A to B; page 3580, A to 8581 B.

In all these cases the letters "A" and "B," respectively, are placed at the beginning and ending on the margin of the extracts that are to be taken.

This testimony relates entirely to the question of rebates and allowances given to the Standard Oil Company and some other corporations that are in that country called the Consolidated Tank Line Company and the Continental Oil Company.

I was going to say to Mr. Buchanan and other gentlemen that where I offered the evidence of Mr. Campbell and Mr. Cassatt, although I only read extracts from the examination in-chief, in all cases I copied out the entire examination as well as the cross-examination and handed it all to the stenographer.

Before the Interstate Commerce Commission.—George Rice *vs.* The Louisville and Nashville Railroad Company. The same complainant *vs.* The St. Louis, Iron Mountain and Southern Railway Company. The same complainant *vs.* The Mobile and Ohio Railroad Company. The same complainant *vs.* The Cincinnati, New Orleans and Texas Pacific Railway Company. The same complainant *vs.* The Cincinnati, New Orleans and Texas Pacific Railway Company and the Alabama Great Southern Railway Company. The same complainant *vs.* The Mississippi and Tennessee Railroad Company. The same complainant *vs.* The Newport News and Mississippi Valley Company and the Louisville, New Orleans and Texas Railroad Company. The same complainant *vs.* The Newport News and Mississippi Valley Company and the Illinois Central Railroad Company. The same complainant *vs.* The Illinois Central Railroad Company.—Hearing for taking testimony November 21 to 28, 1887.—Hearing for argument January 16, 17, 18, 1888.

---

OPINION OF THE COMMISSION.

---

COOLEY, *Chairman*:

The questions at issue in these cases are to some extent identical and, where not the same, are so far similar that it was deemed practicable by the parties that they should all be tried together. They have accordingly been so tried, the evidence being, by consent, taken in the case first entitled, but received and applied in each of the others, so far as it was found to be applicable. The principal grievance complained of is that the defendant companies discriminate against the complainant in their charges for the transportation of petroleum oil; but the rates for the transportation of the oil in barrels, which is the method made use of by complainant, are also alleged to be excessive, and in some cases a violation of the fourth section of the act to regulate commerce is complained of. The petition in the case first entitled, after setting out the line of the defendant's road and the cities and other points reached thereby, proceeds to say:

"That one of the important duties of said Louisville and Nashville Railroad Company is the transportation of refined illuminating petroleum oil (mostly produced and manufactured in the States of Pennsylvania and Ohio) from Cincinnati, Ohio, and Louisville, Ky., to the aforementioned cities and other points on the said carrier's said lines of railroad in the said several States and other States into and through which said carrier's railroad lines pass.

"That such oil is an article of extensive commerce and of prime necessity to the people reached by said carrier's railroad lines, and that in the transportation of such oil by said carrier two prevailing methods are employed, one by means of box cars, carrying the oil in barrel packages, and the other by iron tank cars, generally holding 100 barrels and upward, built and used for that express purpose.

"And said complainant further says that he is engaged at Marietta, Ohio, and in that vicinity in the business of producing, manufacturing, and dealing in such petroleum oils, and shipping the same to various markets in the Southern and Western States of this country; that he has large capital invested in this business and extensive facilities therefor, and, but for the acts of said carrier hereinafter complained of, would produce and sell many thousands more barrels of such oil than now; that many of his principal markets for his said manufacture are in the territory reached and traversed by said carrier's system of railways; that it is absolutely essential to the continued existence and success of his said business that he should have rates and facilities both reasonable in themselves and equally as favorable as those accorded to his competitors for the transportation of said products to such markets, many of which can only be reached by said carrier's roads and none of which can be reached as conveniently or cheaply by any other means, if said complainant is accorded reasonable and just rates by said carrier.

"Complainant further states that the Standard Oil Company, a corporation organized and existing in and under the laws of the State of Kentucky, is a very extensive dealer

in and shipper of such petroleum oils, and is his chief and almost sole competitor for the sale thereof in the aforesaid markets."

"And said complainant further states that said carrier has been guilty of violation of the provisions of the act of Congress of the United States of America entitled 'An act to regulate commerce,' approved February 4, 1887, and which took effect April 5, 1887, in the following particulars, to wit:

"*First charge.*—By making charges for services to be rendered by said carrier in the transportation of such as aforesaid from Cincinnati, Ohio, and said Louisville, Ky., to points on the said carrier's said railroad lines in the said States other than Ohio and Kentucky which were in themselves unjust and unreasonably high.

"Under this charge the complainant makes the following specifications, each and all of which are rates per 100 pounds charged by said railroad company on May 9, 1887, and, as complainant is informed and believes and so alleges, ever since that day for services to be rendered by said company in the transportation in barrel packages in car-load shipments of such oils from said Louisville, Ky., to the respective destinations named, each and all of which destinations are points reached by the lines of railroad owned, leased, and operated by said railroad company, and each and all of which rates complainant alleges to be unreasonable and unjust.

- "1. Mobile, Ala., 30 cents.
- "2. New Orleans, La., 30 cents.
- "3. Montgomery, Ala., 45.7 cents.
- "4. Selma, Ala., 45.7 cents.
- "5. Birmingham, Ala., 45.7 cents.
- "6. Nashville, Tenn., 18½ cents.
- "7. Memphis, Tenn., 15 cents.
- "8. Clarksville, Tenn., 16.3 cents.

"9. All other points reached by said lines of railroad located in States other than Kentucky, the rates of which appear in the statement of rates required by said act of Congress, and on file with said commission, and each and all of which rates complainant alleges to be unreasonable and unjust. Complainant, under charge, also makes the following specifications, each and all of which are the rates per 100 pounds charged by said railroad company for the transportation of such oils in barrel packages, in car-load shipments from Cincinnati, Ohio, to the respective destinations named, each and all of which are points reached by the lines of the railroad owned, leased, and operated by defendants, and are in States other than the State of Ohio, which rates appear on the tariff sheets of defendant, furnished by it to complainant May 9, 1887, as showing its rates then in force, and which rates complainant is informed and believes and alleges have ever since been in force, each and all of which rates complainant alleges to be unreasonably high and unjust.

- "10. Nashville, Tenn., 25 cents.
- "11. Decatur, Ala., 50 cents.
- "12. Birmingham, Ala., 59 cents.
- "13. Calera, Ala., 59 cents.
- "14. Montgomery, Ala., 59 cents.
- "15. Selma, Ala., 59 cents.
- "16. Pensacola, Fla., 45 cents.
- "17. Mobile, Ala., 39 cents.
- "18. New Orleans, La., 39 cents.

"*Second charge.*—Complainant, for a second charge against defendant, alleges that defendant has ever since April 5, 1887, charged complainant for services to be rendered by the defendant in the transportation of such oils for complainant from said Cincinnati, Ohio, to points in States other than Ohio reached by the lines of railroad owned, operated, and leased by defendant, and from Louisville, Ky., to points in States other than Kentucky reached by said lines of railroad, a greater compensation than it charged said Standard Oil Company of Kentucky for like and contemporaneous services rendered and to be rendered by defendant for said company in the transportation of such oils for said company, said company being sometimes consignee thereof and sometimes consignor thereof, and sometimes both consignee and consignor thereof from said Cincinnati Ohio, to said points in States other than Ohio, and from said Louisville, Ky., to said points in States other than Kentucky, all of said transportation, both for complainant and said Standard Oil Company, being under substantially similar circumstances and conditions.

"Under the above charge complainant makes the following specifications:

- "1. The following is a statement of the rate per 100 pounds charged by defendant on May 9, 1887, and ever since, to claimant and to said Standard Oil Company of Kentucky, for the transportation of such oils from Louisville, Ky., to the respective destinations named.

Destination.	To George Rice.	To Standard Oil Company.
	Cents.	Cents.
Montgomery, Ala.....	45.7	30
Selma, Ala.....	45.7	30
Birmingham, Ala.....	45.7	30
Nashville, Tenn.....	18½	15
Memphis, Tenn.....	15	12½

“2. The following is a statement of the rate per 100 pounds charged by defendant on May 9, 1887, and ever since, to complainant and said Standard Oil Company of Kentucky, respectively, for the transportation of such oils from Cincinnati, Ohio, to the respective destinations named :

Destination.	To George Rice.	To Standard Oil Company.
	Cents.	Cents.
Decatur, Ala.....	50	46
Birmingham, Ala.....	59	47
Calera, Ala.....	59	47
Montgomery, Ala.....	59	47
Selma, Ala.....	59	47
Pensacola, Fla.....	45	40
Mobile, Ala.....	39	34
New Orleans, La.....	39	34

“3. Defendant has in all its charges to complainant for services rendered and to be rendered by it in the transportation of oils for him over its said lines of railroad charged him for the entire actual weight of such oils, while defendant has in many instances, too numerous to mention without unduly encumbering the record, since April 5, 1887, charged said Standard Oil Company for services rendered it or to be rendered by it for said Standard Oil Company in transportation of oils over its said lines of railroad for much less than the actual weight of such oils.

“4. The freight weight charged by defendant to complainant ever since April 5, 1887, for the transportation of such oils in barrel packages, car-load shipments, owner's risk, from Louisville, Ky., to Huntsville, Ala., is 37 cents per 100 pounds, including the weight of barrels, which is the rate for such transportation appearing in the tariff sheet of defendant in force ever since April 5, 1887, yet about May 1, 1887, a car-load of oil, containing 66 barrels oil, weighing, including barrels, 24,750 pounds, was delivered by said Standard Oil Company to defendant at Louisville, Ky., to be transported to Huntsville, Ala. Said oils were consigned to Halsey Brothers, at Huntsville, Ala., who were the agents at said place of said Standard Oil Company and competitors in business at said point with complainant. Said oils were transported from Louisville, Ky., to Huntsville, Ala., and the charge made by defendant for such transportation was \$68.07, or 27½ cents per 100 pounds.

“Third charge.—Complainant, for a third charge against defendant, says that the defendant in its rates charged by it for services rendered and to be rendered by it for the transportation of said oils for complainant and said Standard Oil Company from Cincinnati, Ohio, to points reached by defendant's said lines of railroad in States other than Kentucky has, since April 5, 1887, uniformly made and given undue and unreasonable preferences and advantages to said Standard Oil Company of Kentucky and to certain localities on its lines of railroad, and has subjected complainant and certain localities on its lines of railroad to undue and unreasonable prejudices and disadvantages.

“Under the above charge complainant makes the following specification :

“1. Complainant here repeats under this charge specification No. 1 under the second charge of his complaint, and alleges that the differences in the circumstances surrounding the shipments of said George Rice and said Standard Oil Company, and that any differences to defendant in the cost and expense and convenience of transportation of such oils

of said George Rice and said company, respectively, and any differences between the circumstances under which said George Rice and said company, respectively, ship their oils justifying any difference in rate, if there be any, are small and insignificant in comparison with the differences in the rates so charged them, respectively.

"Complainant here repeats under this charge specification No. 2 under the second charge of his complaint, and alleges that the differences in rates therein appearing are not measured by any differences in the circumstances surrounding the shipments of said George Rice and said Standard Oil Company, and that any differences to defendant in the cost and expense and convenience of transporting such oils for said Rice and said company, respectively, and any differences between the circumstances under which said Rice and said company, respectively, ship their oils justifying any difference in rate, if there be any, are small and insignificant in comparison with the differences in the rates charged them, respectively."

"Complainant is informed and believes and therefore states that—

"3. Defendant owns a number of tank cars, as hereinbefore described, and furnishes the same to the said Standard Oil Company for its use in transporting oil shipped by said company from Cincinnati, Ohio, to points reached by defendant's said lines of railroad in States other than Ohio and from Louisville, Ky., to points reached by defendant's said lines of railroad in States other than Kentucky, but refuses to furnish the same to said George Rice for his use in transporting oil from said Cincinnati, Ohio, and Louisville, Ky., to such points in States other than Ohio and Kentucky."

"4. Defendant in its freight rates for the transportation of such oils from Cincinnati, Ohio, to points reached by defendant's said lines of railroad in States other than Ohio and from Louisville, Ky., to points reached by defendant's said lines of railroad in States other than Kentucky almost uniformly since April 5, 1887, has charged a higher rate per 100 pounds for oil transported by it in barrel packages, in car-load shipments, owner's risk, than is charged per 100 pounds for such oils transported by it at the same time between the same points contained in tank cars, owner's risk, while at no time has there been any difference between the cost, expense, and convenience of transporting said oils by said two methods or any circumstances justifying a difference of rate between said two methods of transportation which even approximated the differences in defendant's freight rates for transportation by said two methods, any differences between the cost, expense, and convenience to defendant of transportation by said two methods, or any circumstances justifying a difference in rate between said two methods being slight and insignificant compared with the differences in rate between said two methods actually made by defendant. Complainant ships his oils over defendant's lines of railroad exclusively in barrel packages, while said Standard Oil Company ships its oil over defendant's lines of railroad almost exclusively in tank cars.

"Defendant's freight rates per 100 pounds for the transportation of such oils from Louisville, Ky., to the following destinations are the same whether the oil is carried in barrel packages or in tank cars: Mobile, Ala., New Orleans, La., Meridian, Miss., Jackson, Miss., Jackson, Tenn., Vicksburg, Miss. While defendant's freight rates per 100 pounds for the transportation of such oils from Louisville, Ky., to nearly all, if not all, the other points reached by defendant's lines of railroad in States other than Kentucky are much higher for oils carried in barrel packages than for oils carried in tank cars."

"6. Defendant's freight rates per 100 pounds for the transportation of such oils from Cincinnati, Ohio, to Nashville, Tenn., and Mobile, Ala., are the same whether the oil is carried in barrel packages or in tank cars, whilst the defendant's freight rates per 100 pounds for the transportation of such oils from Cincinnati, Ohio, to nearly all, if not all, the other points reached by defendant's lines of railroad in States other than Ohio are much higher when the oils are carried in barrel packages than when the oils are carried in tank cars."

"7. Defendant has, since April 5, 1887, charged for the transportation of oils from Cincinnati, Ohio, and from Louisville, Ky.; to Birmingham, Ala.; Calera, Ala.; Montgomery, Ala., and Selma, Ala., the same freight rates in all cases to each of said localities, although by defendant's line of road said Calera is 33 miles farther from said Cincinnati and said Louisville than said Birmingham, and said Montgomery is 63 miles farther from said Cincinnati and said Louisville than said Calera, and said Selma is 50 miles farther from said Cincinnati and said Louisville than said Montgomery; and oils transported by defendant from Cincinnati, Ohio, or Louisville, Ky., to said Selma are necessarily carried by it through said Birmingham, said Calera, and said Montgomery, and the distance from said Cincinnati to said Selma over defendant's line of road is 650 miles, and the distance from said Louisville to said Selma over defendant's line of road is 540 miles.

"Fourth charge.—Complainant for a fourth charge against defendant says that defendant has since April 5, 1887, charged and received for the transportation by it of such oils from Cincinnati, Ohio, and Louisville, Ky., to points reached by defendant's

said line of railroad in States other than Ohio and Kentucky a greater compensation in the aggregate for a shorter than for a longer distance over the same line in the same direction, the shorter being included within the longer distance, such oils being a like kind of property in all cases, and such transportation being under substantially the same circumstances and conditions."

"Under the above charge complainant makes the following specification: The rate charged by defendant for the transportation of such oils in barrel packages in car-load shipments from Cincinnati, Ohio, to and from Louisville, Ky., to destinations named below, with the distances of each destination from the place of shipment over defendant's said line of railroad are as follows:

Destination.	From Cincinnati, Ohio.		From Louisville, Ky.	
	Distance.	Rate per 100 pounds.	Distance.	Rate per 100 pounds.
	Miles.	Cents.	Miles.	Cents.
New Orleans, La .....	921	39	811	35
Birmingham, Ala .....	504	50	504	52
Mobile, Ala.....	780	32	780	35

"Said complainant further alleges that the aforesaid discriminations against him in rates and the aforesaid unreasonably high and unjust rates charged him have had, and, as he believes, were designed to have, the effect to give to the Standard Oil Company an almost complete monopoly of the traffic in such oils at the points reached by said defendant's lines of railroad, and to exclude said complainant's products from nearly all of said points, and that such discriminations and charges, as complainant is informed and believes and therefore states, have been made by said defendant at the dictation of said Standard Oil Company, and he states that by reason of the premises he has been largely injured in his business and has lost large profits that he otherwise would have realized; that his facilities in all other respects than for said transportation during all the time since April 5, 1887, have been ample for the transaction of a large and profitable business in the sale of said oils in said markets, and that but for the premises he would have prosecuted such business to the limits of his facilities with great profit to himself.

"Your said complainant therefore prays that your honorable commission will proceed to inquire into the matters hereinbefore complained of and ascertain and find the facts with respect to the alleged violation of the said act of Congress, and the extent to which said complainant has been injured and is entitled to reparation, and report the same with your conclusions and recommendations according to law; and further that your honorable commission will notify said defendant to cease and desist from such violations, and make such reparation and will take such further action as is lawful and proper in the premises."

The petition was duly verified, and was filed July 22, 1887.

The answer of defendant is also given in full, with the omission only of formal averments and such recitals as are not necessary to an understanding of the issues made. Defendant "admits that in the transportation of said oil to some, if not all, of aforesaid towns and cities two methods are employed—one by means of box-cars, carrying oil in barrel packages, the other by iron tank cars, generally holding, not one hundred, but sixty barrels or over that amount.

"Further answering, defendant says it does not know but believes that complainant Rice is engaged at Marietta, Ohio, or in that vicinity, in the business of producing, manufacturing, and dealing in petroleum oils, and in shipping the same to various markets in the Southern and Western States of this country, but whether he has large capital or what amount of capital he has invested in said business, or whether he has extensive facilities or what facilities he has therefor defendant does not know, nor can he speak, for his belief or otherwise, but it denies that but for the alleged acts of this defendant in complainant's said bill complained of he would produce or sell many thousand more or any more barrels of such oil than he now produces and sells. Defendant admits that many of complainant's principal markets for his said manufactures are in the territory reached and traversed by this defendant's system of railways; that it is absolutely essential to the continued existence and success of his said business that he should have rates and facilities both reasonable in themselves and equally as favorable under similar circumstances and conditions as those accorded to his competitors for the transportation of said products to such markets; and defendant admits that many of them can only be reached by defendant's road, but it denies that none of said markets can be as conven-

iently or cheaply reached by any other means if complainant is accorded reasonable and just rates by this defendant. Defendant admits that the Standard Oil Company is a corporation, incorporated and organized under the laws of Kentucky, and that it is a very extensive dealer in and shipper of such petroleum oil, and defendant believes that said Standard Oil Company is the chief competitor of complainant for the sale thereof in the aforesaid markets.

"For answer to the first charge made in complainant's bill and specifications thereunder defendant says:

"(1) It is not true, and it denies that it has been guilty of any violations of the provisions of the act of Congress of the United States entitled 'An act to regulate commerce,' approved February 4, 1887, either by making charges for services to be rendered by it as common carrier in the transportation of oil from Cincinnati, Ohio, or Louisville, Kentucky, to points on all railroad lines in States other than the States of Ohio or Kentucky, or in any other manner.

"(2) It admits that on May 9, 1887, and ever since that time, for services to be rendered by it in the transportation in barrel packages, in car-load shipments, of petroleum oil from Louisville aforesaid to Mobile, Ala.; New Orleans, La.; Montgomery, Ala.; Selma, Ala.; Birmingham, Ala.; Nashville, Tenn.; Memphis, Tenn., and Clarksville, Tenn., its charges were the respective prices set out in complainant's bill of complaint, and it also admits that each one of said towns is reached by its lines of road and the South and North Alabama Railroad, except Selma, Ala., which can not be reached thereby; but defendant says that it is not true and it denies that said rates or any of them are unreasonably high or unjust.

"(3) Defendant denies that the rate or rates to all other points or to any point reached by its lines of railroad, located in any State other than Kentucky, fixed by it in its schedule required by law to be and which has been filed with the honorable commission are or is unreasonable or unjust.

"(4) It admits that the following rates per 100 pounds for shipment of petroleum oil in barrel packages, car-load shipments, from Cincinnati, Ohio, to the following points in States other than Ohio are the rates which appear on its tariff sheets furnished by it to complainant on May 9, 1887, as the rates then in force, and they are rates which are now in force, to wit:

"Nashville, Tenn., 25 cents.

"Decatur, Ala., 50 cents.

"Birmingham, Ala., 59 cents.

"Calera, Ala., 59 cents.

"Montgomery, Ala., 59 cents.

"Selma, Ala., 59 cents.

"Pensacola, Fla., 45 cents.

"Mobile, Ala., 39 cents.

"New Orleans, La., 39 cents.

"Except that the rate furnished for shipment to Nashville, Tenn., was 28½ instead of 25 cents; that to Pensacola was 40 cents instead of 45 cents; that to New Orleans and that to Mobile was 34 cents each instead of 39 cents; and defendant admits that all of said points are reached by its lines of road, except Selma, and except all points between Decatur and Montgomery, Ala., which can not be thus reached; but defendant says it is not true, and it denies that said rates or any of them are unjust or unreasonably high.

"For answer to the second charge made in complainant's bill and the specifications thereunder, defendant—

"(1) Denies that it has at any time since April 5, 1887, charged complainant for services to be rendered by this defendant in the transportation of such oils to points in States other than Ohio reached by its lines of railroad, or from Louisville, Ky., to points in States other than Kentucky reached by said lines of railroad, a greater compensation than it charged said Standard Oil Company, of Kentucky, for like and contemporaneous services rendered or to be rendered by this defendant for said company in the transportation of such oils for said company from said Cincinnati, Ohio, or from Louisville, Ky., to said points or any of them in States other than Kentucky, and denies that the shipments referred to by complainant in his said bill were made for him and for said Standard Oil Company under substantially similar circumstances or conditions.

"(2) It admits that the rate per 100 pounds charged by it to complainant on May 9, 1887, and ever since for the transportation of such oil from Louisville, Ky., to the respective destinations named in complainant's bill is the rate given therein, to wit:

"To Montgomery, Ala., 45.7 cents; Selma, Ala., 45.7 cents; Birmingham, Ala., 45.7 cents; Nashville, Tenn., 18½ cents; Memphis, Tenn., 15 cents, and that on some oil shipped by it during that time for the Standard Oil Company defendant charged from Louisville to said respective points per 100 pounds the following rates, as stated in complainant's bill, to wit:

"To Montgomery, 30 cents; to Selma, 30 cents; to Birmingham, 30 cents; to Nashville, 15 cents, and to Memphis, 12½ cents.

"(3) It further admits that its rate to complainant on May 9, 1887, and ever since, for shipments of oil from Cincinnati, Ohio, to the following points, per 100 pounds, were the rates stated in complainant's bill, to wit:

"To Decatur, Ala., 50 cents; to Birmingham, Ala., 59 cents; Calera, Ala., 59 cents; Montgomery, Ala., 59 cents; Selma, Ala., 59 cents; to Pensacola, Fla., 45 cents; to Mobile, Ala., 39 cents, and to New Orleans, La., 39 cents, with the exception that the charge was and is from Cincinnati to Pensacola 40 cents, instead of 45 cents, and to Mobile and to New Orleans each 34 cents, instead of 39 cents; and the defendant further admits that during said time it was shipping some oil for the Standard Oil Company from Cincinnati to the aforesaid towns at the following rates per 100 pounds, to wit: To Decatur, 46 cents; to Birmingham, 47 cents; to Calera, 47 cents; to Montgomery, 47 cents; to Selma, 47 cents; to Pensacola, 40 cents; to Mobile 34 cents; to New Orleans, 34 cents, except that to Birmingham, since May 11, 1887, the rates have been a little less than 47 cents per 100 pounds. But defendant denies that in its said rates for shipment for the Standard Oil Company and for complainant from Cincinnati and from Louisville, respectively, to aforesaid respective towns or any of them, it discriminated in favor of the Standard Oil Company or against complainant, or that by said rates, shipped under the circumstances that said oils were respectively shipped, defendant charged complainant per 100 pounds a greater compensation than it charged said Standard Oil Company.

"Defendant says that all the rates for shipments for complainant made so as aforesaid from Cincinnati and from Louisville, respectively, to aforesaid respective towns were made for shipments in barrel packages and car-load shipments, and all of the rates for shipments for the Standard Oil Company so as aforesaid from Cincinnati and from Louisville, respectively, to said respective towns were made for shipments in tank-cars, cost of transportation or the shipment and risk of which is much less than the cost of transportation or shipment and the risk of a like quantity of oil in barrels; that the rate paid or to be paid as aforesaid by complainant for such shipments is the same rate per 100 pounds, neither greater nor less than was and is by defendant charged to and paid by the Standard Oil Company for shipments of oil in barrel packages, car-load shipments, at the same time and from and to the same points that said shipments for complainant were made; and defendant also states that at the same rates charged the Standard Oil Company for the shipments of its oil so as aforesaid in tank-cars from Cincinnati and from Louisville, respectively, to said several respective towns complainant could have shipped, as he well knew, his oil in like kind of tank-cars at any time on or after the 9th day of May, 1887, and the same rates as aforesaid were offered him and published in defendant's schedules of rates furnished the honorable Interstate Commission.

"(4) Defendant admits that in its shipment of oil in barrels for complainant it has charged or intended to charge him for the actual weight of such oils, and it has also charged or intended to charge in its shipments of oil in barrels for the Standard Oil Company for the actual weight of such oils, and it denies that it has in any shipment of oil in barrels made any difference in this respect between oil shipped for complainant and oil shipped for the Standard Oil Company.

"Defendant says that as to the shipment of oil in tanks for the Standard Oil Company and everybody else the same is not and never has been weighed, but the quantity contained in the tanks is estimated at a certain number of pounds; and it may be true that in some shipments for the Standard Oil Company that estimates were below the actual weight, but the same quantity of oil could have been shipped in the same manner at the same price by complainant.

"(5) Defendant denies that about May 1, 1887, it transported or contracted to transport a car-load containing 66 barrels of oil and weighing 24,750 pounds, or any other weight from Louisville, Ky., to Huntsville, Ala., for the Standard Oil Company for \$68.07, or 27½ cents per 100 pounds; at least, no record of such shipment can be found on defendant's books.

"For answer to the third charge made in complainant's bill and the specifications thereunder, defendant—

"(1) Denies that in its rates charged by it for services rendered or to be rendered by it for the transportation of said oils for complainant and the said Standard Oil Company from Cincinnati, Ohio, to points or any point reached by defendant's line of railroads in States other than Ohio and Kentucky it has, since April 5, 1887, uniformly or at all made or given undue or unreasonable preferences or advantages to said Standard Oil Company or to certain or any localities on its line of railroad, nor has it subjected complainant or certain or any localities on its lines of railroad to undue or unreasonable prejudices or disadvantages.

"(2) Defendant says, in reference to the difference in rates to complainant and Standard Oil Company, respectively, appearing in specifications No. 1 and No. 2, under the

second charge in complainant's bill of complaint, it denies that said differences are not measured, but avers that they are, by the differences in circumstances surrounding these shipments, respectively; and defendant denies that the difference to it in the cost of expense and convenience of transportation of such oils for complainant and the Standard Oil Company, respectively, or that the difference between the circumstances under which complainant and said company, respectively, ship their oils do not, but it avers that they do, justify the difference in rates made to said parties, respectively, and it denies that they are either small or insignificant in comparison with the differences in the rates so charged; and defendant says that said rates so made for the shipment of the oils for the Standard Oil Company were made for shipment of oil to be made in large and regular shipments in iron tank-cars, which tank-cars were to be furnished and the cars kept in repair by said Standard Oil Company free of expense to defendant, which oil was never on defendant's premises and there at its risk, and by which cars defendant was furnished with return loads, while the rates thus made to complainant were made in reference to the shipment of oil in barrel packages, in small quantities and irregular shipment, to be received and loaded by defendant at its expense, and held at its risk while on its premises, and the cars used for barrel shipments were thus greatly injured and rendered of less value to defendant for general purposes and were returned usually empty, so that, as this defendant believes and charges, the circumstances and conditions under which the shipments of oil for the Standard Oil Company were made were so dissimilar from the circumstances and conditions under which the oil for complainant was shipped as to justify and authorize the difference in rates to said Standard Oil Company and to complainant made so as aforesaid.

"(3) Defendant says it is not true, and denies that it owns or ever did own any tank-cars, or that it ever furnished to said Standard Oil Company such cars, or that it refused or ever refused to furnish such cars to complainant, or that he ever applied for such; but defendant says if complainant had applied for such cars he would have been refused, for the reason that defendant did not and does not own or have such cars.

"(4) Defendant admits that it has since April 5, 1887, in its freight rates charged a higher rate per 100 pounds for transportation of oil in barrels than for oil in tanks, except when the competition with water lines and railroads or competition between markets or products has forced a reduction in rates on oil in barrels to the same or nearly the same rates charged upon oil in tank-cars; but it is not true, and defendant denies that the difference between the cost, expense, and convenience of transportation of oil by the two methods has been out of proportion to the difference between the rates by the two methods, and denies that said difference in expense, cost, and convenience is slight or insignificant, but, on the contrary, defendant avers that they were so great as to justify, as it believes, the difference in rates charged.

"(5) Defendant admits that complainant ships in barrels all the oils he ships over this defendant's lines of railroad, but it is not true and it denies that the Standard Oil Company ships in tank-cars almost all the oil which it ships over defendant's lines of railroad. Defendant says that said Standard Oil Company since April 5, 1887, has shipped over its lines of railroad in barrel packages, car-load shipments, a much greater quantity of oil than complainant has, and at the same prices from and to the same points, and it has shipped over its lines of railroad during that period about twice as much oil in barrels as it has shipped in tank cars.

"(6) Defendant admits that the rate of transportation of oil from Louisville to the following destinations are the same whether the oil is carried in barrel packages or in tank cars, to wit: Mobile, Ala., Meridian, Miss., Jackson, Tenn., New Orleans, La., Jackson, Miss., Vicksburg, Miss., and that the rates are the same for shipments from Cincinnati to Nashville, Tenn., and Mobile, Ala., and such is true, not as a matter of choice of this defendant, but because the competition with water lines, directly and indirectly, at said points, or competition with railroad lines or between markets or products reduced the rates for shipment of oil to these points to the regular rates of shipment of oil in tank cars.

"(7) Defendant admits that since April 5, 1887, it has charged for the transportation of oils from Cincinnati and from Louisville to Birmingham, Ala., Calera, Ala., Montgomery, Ala., and Selma, Ala., the same freight rate in all cases to each of said points, and that the distance from Cincinnati and Louisville by its road is to Calera 33 miles greater than to Birmingham, and to Montgomery is 63 miles greater than to Calera and that oils transported over its lines of road from Cincinnati or Louisville to Montgomery are carried through Birmingham and Calera, but not through Selma, nor is Selma on defendant's lines of railroad; but said rates were not made nor are they controlled by this defendant. The same are fixed and regulated by the competition with water-ways and railroad lines over which defendant had and has no control, and are in and of themselves fair, just, and reasonable.

"For answer to the fourth charge made in complainant's bill and the specifications thereunder, defendant—

"(1) Denies that it has since April 5, 1887, charged or received for the transportation by it of such oils from Cincinnati or from Louisville, to points reached by its lines of railroad in States other than Ohio and Kentucky, a greater compensation in the aggregate for a shorter than a longer distance on the same line in the same direction, where the shorter was included within the longer distance, and whose transportation being under substantially the same or similar circumstances and conditions.

"(2) Defendant admits that the charges made by it for shipments of oil from Cincinnati and from Louisville to the various points set out in complainant's bill under this charge, and the distance to each of said points from Cincinnati and Louisville, respectively, is as given by complainant in its first and second specifications under the fourth charge in his bill, with the exception that the rate from Cincinnati to New Orleans should be 34 cents per 100 pounds and to Mobile the same, and the distance from Louisville to Mobile is 670 miles, and the rates should be from Louisville to New Orleans 30 cents per 100 pounds, to Birmingham 45 $\frac{7}{8}$ , and to Mobile 30 cents, but defendant says that said respective shipments to said several points were made under the very dissimilar circumstances and conditions as aforesaid, justifying and authorizing, as it believes, the different rates charged to the different places as aforesaid.

"(3) Defendant denies that any of the alleged discriminations against complainant, or the alleged unreasonably high and unjust charges against him set out in his bill of complaint, have had any effect or were designed to affect or to give to said Standard Oil Company a monopoly of the traffic in such oils at the points or any points reached by its lines of railroad, or to exclude complainant's products from nearly all or any of aforesaid points, and it denies that such alleged discriminations or charges, or both, have been made by defendant at the dictation of the Standard Oil Company, and it denies that by reason of such alleged discriminations or such alleged unjust and unreasonably high charges, or both, complainant has been injured in his business, or that thereby he has lost profits that he would otherwise have realized.

"Whether complainant in all other respects than for said transportation during all or any of the time since April 5, 1887, has had ample facilities or what facilities it has had for the transaction of a large or profitable business in the sale of said oils in said markets, or that but for said alleged unjust and unreasonable charges and alleged unjust discriminations complainant would have prosecuted such with profit to himself, defendant does not know and can not state from its belief or otherwise."

All the other petitions were filed simultaneously with the one above mentioned—that is to say, July 22, 1887.

The pleadings in the other cases it is deemed sufficient to present in brief synopsis.

The petition against the Saint Louis, Iron Mountain and Southern Railway charges that defendant violates the act to regulate commerce—

I. By making charges for services to be rendered in the transportation of petroleum oils from Saint Louis, Mo., to points on its line in the State of Arkansas which in themselves are unreasonably high.

II. By having, ever since April 5, 1887, charged complainant for services to be rendered by the defendant in the transportation of such oils for complainant from Saint Louis, Mo., to points in other States a greater compensation than it has charged the Waters-Pierce Oil Company of Missouri for like and contemporaneous services.

III. By having, since April 5, 1887, in its charges for the transportation of such oils, uniformly given undue and unreasonable preferences and advantages to said Waters-Pierce Oil Company of Missouri, and subjected complainant to undue and unreasonable prejudice and disadvantage.

The answer of this defendant meets the charges with full and specific denial.

In the case against the Mobile and Ohio Railroad Company the issue was so far narrowed by a stipulation of the parties hereinafter given as to render unnecessary any statement of the pleadings in this place.

In the case against the Cincinnati, New Orleans and Texas Pacific Railway Company the charges are that defendant has violated the provisions of the act to regulate commerce—

I. By making charges for services to be rendered in the transportation of petroleum oil from Cincinnati, Ohio, to points on its road in other States than Ohio which in themselves were unjust and unreasonably high.

II. By charging complainant for services to be rendered in the transportation of petroleum oil a greater compensation than it charged the Standard Oil Company of Kentucky for like and contemporaneous services.

III. By having in its rates charged for services rendered and to be rendered for the transportation of said oils for complainant and said Standard Oil Company of Kentucky, uniformly made and given undue and unreasonable preferences and advantages to said

Standard Oil Company, and subjected complainant to undue and unreasonable prejudice and disadvantage.

The answer meets the charges with a full and specific denial.

The petition against the Cincinnati, New Orleans and Texas Pacific Railway Company, joined with the Alabama Great Southern Railroad Company, charges a violation of the said act to regulate commerce—

I. By making charges for services to be rendered in the transportation of petroleum oil in themselves unjust and unreasonably high.

II. By having in the rates charged for services rendered and to be rendered in the transportation of petroleum oil for complainant and the Standard Oil Company of Kentucky, respectively, uniformly made and given undue and unreasonable preference and advantage to said Standard Oil Company, and subjected complainant to undue and unreasonable prejudice and disadvantage.

III. By having charged for the transportation of petroleum oil from Cincinnati to to points reached by defendants' roads a greater compensation in the aggregate for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer distance, and the transportation being under substantially the same circumstances and conditions.

Defendants meet the first and second charges by denial, and they also deny that since the expiration of the order of relief made on their behalf on the 19th of April, 1887, they have made the greater charge for the shorter haul of the same property in the same direction, the shorter being included in the greater distance.

The petition against the Mississippi and Tennessee Railroad Company charges violation of the act to regulate commerce by making charges for the transportation of petroleum oils from Memphis, Tenn., to Grenada, Miss., which are in themselves unreasonably high.

The answer justifies the charges.

The petition against the Newport News and Mississippi Valley Company and the Louisville, New Orleans and Texas Railway Company charges violation of the act to regulate commerce—

I. In making charges for services rendered and to be rendered by defendants in the transportation of petroleum oils from Louisville, Ky., to Vicksburg, New Orleans, and other points which in themselves are unjust and unreasonably high.

II. By having uniformly since April 5, 1887, made and given undue and unreasonable preference and advantage to the Standard Oil Company of Kentucky, and subjected complainant to undue and unreasonable preference and disadvantage.

The defendants answer separately with specific denial.

The petition against the Newport News and Mississippi Valley Company and the Illinois Central Railroad Company charges a violation of the act to regulate commerce—

I. By making charges for services rendered and to be rendered by defendants in the transportation of petroleum oil from Louisville, Ky., and points on their lines in other States which were in themselves unjust and unreasonably high.

II. By having in the rates charged by them for services rendered and to be rendered for complainant and for the Standard Oil Company of Kentucky, uniformly made and given undue and unreasonable preference and advantage to said Standard Oil Company, and subjected the complainant to undue and unreasonable prejudice and disadvantage.

The charges are fully met and denied by the answers.

The petition against the Illinois Central Railroad Company charges a violation of said act to regulate commerce—

I. By making charges for services to be rendered in the transportation of petroleum oils from Cairo, in the State of Illinois, to points on its line of railroad in other States which were in themselves unjust and unreasonably high.

II. By having, since July 9, 1887, charged and received for the transportation of petroleum oils from Cairo, Ill., to points reached by defendant's line of railroad in other States a greater compensation in the aggregate for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer distance, and the transportation being under substantially the same circumstances and conditions.

The answer denies the first charge, and denies that the greater charges made for shorter than for longer hauls over the same line in the same direction are made under substantially similar circumstances and conditions.

Such were the issues made in the several cases.

The testimony upon which the cases have been submitted was taken in the main on oral examination of witnesses at the public sessions of the commission, and the fullest opportunity was given for bringing out all the facts. The officers of the defendant companies connected with the freight departments of their roads, respectively, were examined, and the workings of the roads, so far as concerns this particular article of traffic,

were fully gone into, with the purpose on the part of the commission to ascertain, if possible, not only whether any of the defendants had been guilty of unlawful discrimination against the complainant in the particulars charged, but also whether the general course of the defendants in respect to the transportation of oil was relatively fair and just as between different shippers, and also as between the defendants and the general public.

The case of two of the defendants was, however, so different as to make them stand altogether apart from the main contest which was made by the others and to which the evidence was directed. It will, therefore, be most convenient to say, in respect to them in this place all that we think there is occasion to say at this time, and afterwards to dispose of the others together.

In the case of the Mobile and Ohio Railroad Company counsel for the respective parties have signed and filed the following paper:

"It is hereby understood and agreed by and between George Rice, complainant, and the Mobile and Ohio Railroad Company, defendant, in the above-entitled cause, that the complainant makes no objection to the rates of the defendant for transporting coal oil over its line of railroad, as specified and shown in the third paragraph of the answer of the defendant to the petition of the complainant, except that said specification of rates shows that the defendant charges less for the transportation of oil from Cairo, Ill., to Mobile, Ala., than it does to points between Mobile, Ala., and Cairo, Ill.

"It is further understood and agreed that the defendant admits that its rates for the transportation of oil over its lines from Cairo, Ill., to Mobile, Ala., are less than the rate for like transportation of oil from Cairo, Ill., to points between Cairo, Ill., and Mobile, Ala.

"It is further understood and agreed that the defendant claims that the rate for the transportation of coal oil to Mobile, Ala., is fixed by water competition in connection with the short-rail haul from New Orleans, La.

"It is further understood and agreed that the defendant claims that it is authorized to make the less charge for transporting oil in cases like Mobile, Ala., by the terms of the provisions of the fourth section of the interstate-commerce act."

The question which this paper undertakes to submit to our decision concerns other carriers and their customers quite as much as it does these parties, and a decision upon it would be far-reaching in its consequences. This fact of itself would be ample reason why we should proceed cautiously in any consideration we should give it and why we should require from a party raising it a very full presentation of such facts as would have legitimate bearing upon it.

A full presentation was not made on the hearing; the matter received very little attention, and the facts were very imperfectly brought out. We could not intelligently dispose of the question on the facts now in proof, and it would be unjust to parties not now before us to make any attempt to do so. Under the circumstances, therefore, we shall make no order in this case, leaving the parties to bring the subject to our attention hereafter as they may think they have occasion. This disposition of the case for the time-being decides nothing and concludes no one.

What is said on this subject is equally applicable to each of the other causes in which a violation of the long-and-short-haul rule of the fourth section of the act was charged. In none of the cases was special attention given to this feature of the controversy on the hearing, or any such examination of the facts gone into as would assist the Commission to safe judgments. Other charges were contested sharply and persistently, but this particular charge was scarcely noticed. Under such circumstances, if we were to pass judgment upon it, it would be necessary to institute further inquiries and make investigations on our own behalf; and this we think uncalled for in this controversy at this time. If a decision upon it is deemed important it may be assumed the parties, when it suits their convenience, will renew the subject and present the considerations which bear upon it more fully.

The other of the two cases mentioned is that of the Mississippi and Tennessee Railroad Company, in which the only matter put in issue was whether the rates charged upon barrel oil from Memphis, Tenn., to Grenada, Miss., are reasonable. The shipments made over defendant's road are very few, and have been mostly made by others than complainant. It does not appear that others are complaining. Upon the question of reasonableness the case is almost entirely without proof. Complainant relies upon the three facts that the rates are higher than generally prevail elsewhere, that they were formerly lower on this road, and that the defendant now carries the same commodity to points beyond Grenada at lower rates. The first two grounds of objection are not very conclusive. It is probable that defendant could not support a useful existence if it were compelled to measure its charges by those made by carriers whose lines command a heavier and more steady business. It is also not unlikely that this defendant at times has made rates it could not abide by permanently without bank-

ruptcy. Most of the railroad companies of the country at some time or other have done so.

The third ground presents the same question, which, in the case of the Mobile and Ohio Railroad Company, we declined to decide without some showing to enable us to see how the decision would affect the railroad business of the section. We are absolutely without any such showing in this case, and we think it entirely reasonable and proper, therefore, to decline to make any order.

We now proceed to dispose of the cases of the other defendants, and in doing so it is to be understood that when the term defendants is made use of it applies to those only whose cases are under consideration, and does not include the Mobile and Ohio and the Mississippi and Tennessee Railroad Companies or either of them.

From the evidence it appears—and we find the fact to be—that there are two general methods for the transportation of petroleum oil and its products by rail, the one being in barrels holding an average of 50 gallons, and the other being in large iron tanks which are permanently fixed upon flat cars so as to constitute a part of the cars themselves. Some oil is carried in cans also, but that method does not come in question in these cases. The tanks vary greatly in size, some holding not more than 3,000 gallons, or 60 barrels, while others hold twice that quantity. The refined oil, which is the kind that constitutes the subject of controversy in these cases, weighs 6½ pounds to the gallon; the barrels in which the oil is shipped weigh about 75 pounds each, and a barrel with its contents about 400 pounds. The tank-cars which are sent into the territory in which the defendants operate are all either owned by the shippers themselves or are procured by them from some other source than the railroad companies, the latter never having supplied themselves with rolling stock for the purposes of this traffic. The Louisville and Nashville Railroad Company and the Cincinnati, New Orleans and Texas Pacific Railway Company are severally owners of the trucks and bodies of a few tank-cars, but even of these the tanks are owned by the Standard Oil Company of Kentucky, so that they are not offered for use to shippers in general.

In the rate-sheets which are published by the defendant, rates are named for the transportation of oil in barrels and oil in tanks; the latter, however, not to all points, but in general only to the points at which preparations have been made by a shipper to receive and store the oil shipped by that method. In some cases rates are named to points where no such preparations are made, the reason for which, if there is any, has not been very clearly explained to us. Generally the rate when the transportation is in tanks is by the car, but where it is in barrels it is by the barrel, in car-load lots, or by the hundred pounds. None of the rate-sheets of the defendant which were put in evidence notified the shipper that the carrier was not prepared to furnish rolling-stock for transporting the oil in either mode—a reasonable inference from the rate-sheet not otherwise explained would be that it was. Thus the Newport News and Mississippi Valley Company, by tariff D 377, gives rates as follows: Louisville, Ky., to Memphis, Tenn., coal oil, car-load, in barrels, 45 cents; coal oil in tanks, per tank-car, \$25.

If, however, the owner of oil at Louisville should desire to send a consignment of oil in tanks to Memphis, and should apply to have cars furnished him for the purpose, he would be told at once that the company did not supply tank-cars to its customers; that if they desired to avail themselves of that method of transportation they must not only pay the rate prescribed, but they must also furnish the company with the cars. This is obviously a most important qualification of the rate itself; and if the shipper must furnish the car at his own expense, the actual cost to him of the transportation will very much exceed the published rate. This, however, does not seem to be generally expected; on the contrary, there seems to be a general, though not a universal understanding among railroad companies in the Southwest, including the defendants, that the party furnishing a tank-car shall be paid trackage for its use at the rate customary among railroad companies, namely, three-fourths of a cent a mile going and returning, with the privilege on the part of the railroad company of loading the car with return freight when any is offered or is procurable.

One difficulty with this understanding is that it does not appear in the rate sheets. The sixth section of the act to regulate commerce provides that "every common carrier subject to the provisions of this act shall print and keep for public inspection schedules showing the rates and fares and charges for the transportation of passengers and property which any such common carrier has established, and which are in force at the time upon its railroad, as defined by the first section of this act. The schedules printed as aforesaid by any such common carrier shall plainly state the places upon its railroad between which property and passengers will be carried, and shall contain the classification of freight in force upon such railroad, and shall also state separately the terminal charges, and any rules or regulations which in anywise change, affect, or determine any part of the aggregate of such aforesaid rates and fares and charges."

The purpose of this provision is very manifest and is well understood. It intends that every person desiring to avail himself of the facilities afforded by the railroads of

the country should be enabled to tell for himself, without being under the necessity of calling in the aid of any railroad agent or other person, what charges he must pay for the transportation of his person or his property, and also have in the published rate sheets an accurate test of the correctness of any exaction. The rate sheets introduced by the defendants in these cases can hardly be said to give information. They omit to give a rule, regulation, or understanding which has a very important bearing on the rates, and they wholly omit to notify the owner of oil that the carriers making them do not furnish him with cars for one of the methods of transportation which in terms they offer to him. The rate sheets, therefore, require to be supplemented by other information, and it is from this fact that some part of the controversy between these parties has arisen.

It was said on the argument that the railroad companies were under obligation to furnish tanks no more than they were to furnish barrels; that tanks and barrels were only different kinds of caskets for holding the property which was to be conveyed, and it was matter of course that the shipper should furnish them for himself. This might be quite true if the tank, like the barrel, was received from the consignor and taken for delivery to the consignee, as packages usually are; but it is not. It is, on the other hand, a part of the car itself, as much as are the sides to an ordinary box car; it is provided only to hold the oil for transportation, while the barrel holds it both before and after shipment, as an article of merchandise, and is bought and sold with it. The shipper in barrels, it is quite true, is expected to deliver his merchandise in that form of package, and the rate bill informs him what he must pay upon it. The party proposing to ship in tanks does not receive from the rate sheets equivalent information; and if outside the rate sheets he learns that he must furnish the tank cars, he is still unapprised upon what terms this is to be done, and must seek the information from the officers or agents of the carrier.

But when he seeks this information he learns immediately that the matter is or may be the subject of private negotiation, and perhaps of different terms in different cases. Thus the evils at which this provision of the statute was aimed make their appearance immediately. He is not informed by the rate sheets what he will be charged for the service to be rendered him, and when he seeks the information he finds the terms are to be the subject of bargain; but a bargain implies a difference in terms in different cases. We are not to be understood as finding or intimating an opinion that all of these defendants have made different terms in different cases. The evidence as to the most of them has no tendency to establish against them such a charge. We say only that as they have not by their rate sheets bound themselves to any particular terms, the precise terms must be fixed in some other way. If any one carrier has a definite and uniform practice on the subject it will not be chargeable with discrimination while the practice is followed; but uniformity of practice, while it shows correct motives, does not excuse a failure to give full information to the public in the rate sheets.

In the case of the Louisville and Nashville Railroad Company, however, it clearly appears that the private arrangements made for the use of cars have been different in the cases of different shippers, and that it has no definite rule on the subject. The general freight agent of that road, being on the stand, was asked:

"What do you charge for bringing these empty tank-cars back from the South? What would you charge Mr. Rice?"

Answer. "Not less than a cent and a half; we might charge 3 cents. If he wished to make arrangements with us now we should probably charge a cent and a half, or might charge him 3 cents. It would depend on the section of the country to which he wanted to ship."

A little further on he is asked by a member of the Commission:

"When these tank-cars go South do you take the risk of getting a load back, or do you perform your contract when you take the oil to the place of destination, leaving the car there? I want to know what your contract covers. You advertise to take the oil for so much. Does that mean simply delivering the oil at the place of destination, leaving the other party to get the car back?"

Answer. "Our rate on oil applies only to the shipment of that oil, but we are influenced in making that rate by the prospect of return loads."

"Q. If you get no return load is the expense of hauling the empty car back, if you choose to charge it, charged to the shipper?—A. If there were not generally return loads we would then insist upon getting pay for hauling the car back."

"Q. You charge so much for hauling oil from Louisville to Montgomery, and when you deliver it there that completes your contract and you leave the car there if you please?—A. Yes, sir."

"Q. And are not under obligation to bring the car back?—A. No, sir."

"Q. And then the bringing the car back is matter of contract between you and the shipper?—A. Yes; but if you will let me explain—a great portion of the return loads

for these cars is furnished by the shippers of coal oil. The shipments of cotton-seed oil are not furnished by the shippers of coal oil, but the cars that carry down the petroleum oil by arrangement with parties down there have the tanks sent back with return loads of cotton-seed oil. I know of one case in which a firm in Louisville receiving cotton-seed oil made an arrangement with the owners of forty-six cars to return them filled with cotton-seed oil."

"Q. Suppose a man comes to you to make a contract with you for transporting oil to Mobile or Montgomery, is your contract performed when you reach the destination, and may you leave the car there?—A. Yes, we have then performed our contract and may leave the car there."

"Q. And in respect to bringing that car back, it would be matter of arrangement or contract between you and him?—A. Yes, sir; a separate transaction."

"Q. As a matter of fact, whenever they can not get a return load you do haul them back free, do you not?—A. We have hauled a few free.

"Q. Have you not hauled all that did not contain a return load free?—A. We have hauled free all that did come back empty for some time.

"Q. And in every instance where there is no return load you haul back the empty car free?—A. Yes; but those are a small percentage."

There is also evidence that two at least of the other defendants are without a uniform practice on this subject, and the general freight agent of another is not able to say how it is with his company; but whether the other defendants do or do not observe uniformity in their dealings with this subject, it is plain that, in failing to give full information by publication, abundant opportunity for discrimination is left to agents, and it will be surprising if these are not sometimes availed of, when, perhaps, the agents suppose they are acting entirely within the scope of their general authority to make contracts.

We are now to see whether these defendants or any of them have been guilty of the unjust discrimination and of the making of excessive rates which are charged against them.

The unjust discrimination in the case of transportation east of the Mississippi is supposed to have had for its object the giving of an advantage to the Standard Oil Company of Kentucky, and that in the case of transportation west of the Mississippi to have been designed to favor the Waters-Pierce Oil Company, of Saint Louis. Both these companies are spoken of as Standard Oil Companies. It was testified before us that a controlling interest in each of them is held by the Standard Oil Trust. This evidence was given by one of the trustees of the trust, who also testified that the capital represented by the trust was about \$90,000,000. Another witness, who assumed to have some knowledge on the subject, estimated the actual cash value of this capital at one hundred and fifty millions. Whether the one estimate or the other is the correct one, this is an immense property to be under the control of eight trustees, as this appears to be. It represents a great number of prosperous establishments in different parts of the country, and it gives an immense power which is capable of being so employed as to put all competitors at a great and perhaps ruinous disadvantage. It is of the utmost importance, therefore, that the several railroad companies which are patronized by them should not only abstain from granting to those who wield this power any special and peculiar privileges, but should as far as possible avoid giving cause for suspicion that they are so doing.

It is but just to the defendants in these cases to say that no evidence was given tending to show that they had favored the Standard Oil Companies specially as distinguished from other companies, firms, or individuals who shipped their oil in tank-cars; for the discriminations which appeared on the hearing, and which were relied upon as establishing the charges made in the complaints, operated not in favor of the Standard Oil Companies alone, but of all shippers in tanks. The Standard Oil Companies, however, were shown to be much the largest shippers of oil in this mode, and therefore would be most largely benefited by discriminations against the shippers in barrels.

In making proof of discriminations charged, reliance was had in part on the great differences shown by the published rate-sheets between the charges made for the transportation in tanks and in barrels, the latter being almost invariably very much higher. This it was claimed was in itself illegal, not being justified by any difference in cost or by other facts or circumstances. The fact that a uniform charge was made for the transportation of tank-cars, regardless of capacity, was also relied upon as proof tending in the same direction.

In turning our attention to this question of discrimination we are at the outset confronted with a jurisdictional objection which is interposed on behalf of one of the defendants, and which, if valid on its behalf, is equally a protection to all the others, even though they do not themselves advance it in argument. The objection is one which goes to the lawful authority of the commission to make inquiry into the relative equality

and justice of the rates charged for the transportation of oil in barrels and oil in tanks, respectively. The point is so important that it is deemed proper to state in the exact words of counsel.

"This case," it is said, "involves the question whether the act to regulate commerce confers upon this commission jurisdiction to inquire into the relative reasonableness of rates which a common carrier may have adopted in good faith for transporting the same traffic in different modes.

"The question assumes that the carrier, in adopting the different modes of transportation and in fixing the different rates therefor, has not acted capriciously or maliciously, but in good faith, according to its best judgment, with a view to subserve what it regards its best interests.

"The question also assumes that the carrier offers the different modes of transportation, with their corresponding rates, equally and impartially to all shippers alike; that it is possible for the class of persons usually engaged in that particular traffic to conform to either of the modes of transportation, and that the highest rate charged for either mode of transportation is 'reasonable in and of itself.'

"By the expression 'reasonable in and of itself' is meant that the highest rate charged by the carrier is no more than a reasonable compensation for transporting the traffic in the mode for which that rate is charged, and that the only ground for claiming it to be unreasonable is that it is higher than another rate which is charged by the same carrier for transporting the same traffic at the same time between the same points, but by a different mode of transportation.

"It will be conceded that this commission was created by the act of Congress 'to regulate commerce;' that it has no jurisdiction except such as is conferred by that act, and that its jurisdiction, so far as this question is concerned, must be found in the first, second, or third sections of said act, or that the jurisdiction does not exist at all.

"The first section enacts that 'all charges made for any service \* \* \* shall be reasonable and just.'

"This section does no more than announce a well-settled rule of the common law; but as the United States, regarded as a Government distinct from the States, had no common law of its own, it required an act of Congress to adopt the common-law principle into the law of the Union regulating interstate commerce.

"But while the common law did require that all the charges of a common carrier should be 'reasonable,' it did not require that they should be equal, even where the service was the same, nor that they should be proportioned to the service where the service differed in different cases.

"At common law, if the rate charged A was reasonable in and of itself he could not complain, even though the carrier might render precisely the same service to B free of any charge whatever; and it was to remedy this defect of the common law that the English Parliament passed the act of 8 and 9 Vict., chapter 20, known as the railway clauses consolidation act of 1845.

"The word 'reasonable,' as used in the first section of the 'act to regulate commerce,' is used in the same sense in which it was used at common law, namely, reasonable 'in and of itself,' without regard to whether a low rate was or was not charged for the same or a similar service.

"I concede that the commission may, under the first section, determine whether the rate upon coal oil in barrels is reasonable or right 'in and of itself,' viz, whether it is a fair compensation for that particular mode of carrying coal oil.

"But I deny that the commission can, under the first section, lawfully declare the rate upon barrels to be unreasonable merely because a lower rate is charged upon tanks, even though the commission should find that the difference in rates is greater than the difference in the cost, etc., of the two modes of transportation.

"I admit that where different rates are charged, the commission may, under the second section of the act, determine whether the rates are charged for services which are 'like and contemporaneous,' and whether they are rendered under substantially similar circumstances and conditions, but I deny that the commission has any power under the first section to declare that a rate is not reasonable merely because it is higher than another rate charged by the same carrier for a different service, even though both services may be rendered under substantially similar circumstances and conditions.

"I also admit that where different rates are charged, the commission may, under the third section, determine whether such difference in rates 'makes or gives any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, or locality, or any particular description of traffic;' but I deny that the commission has any power, under the first section, to declare that a rate open to all persons is not reasonable merely because it gives an advantage to the person who accepts it over another person who voluntarily selects a different mode of transportation for which a higher rate is charged.

"A mere difference of rates may in many cases constitute a violation of sections 2 and 3, but it can never constitute a violation of section 1 of the act.

"It matters not how great the difference between two rates may be, it can never amount to a violation of section 1 if the higher rate is 'in and of itself reasonable and just'—i. e., only a fair compensation for the service for which that particular rate is charged.

"The fact that sections 2 and 3 of the act give to the commission ample powers in regard to difference in rates is strongly persuasive that section 1 was intended to be confined to the reasonableness of rates."

In support of these views cases are cited, and particularly *Nicholson v. Great Western Railroad Company*, 1 Nev. & Mac., 148, and *Great Western Railroad Company v. McCarthy*, 29 Amer. and Eng. R. R. Cas., 87.

The question thus presented is one of considerable importance, and it is forcibly and ingeniously argued in an elaborate brief. It is seen that it assumes at the outset "that the different modes of transportation with the corresponding rates are offered equally and impartially to all shippers alike; that it is possible for the class of persons usually engaged in that particular traffic to conform to either of the modes of transportation, and that the highest rate charged for either mode of transportation is reasonable in and of itself."

This assumption makes the resort to the one method of transportation rather than the other a matter purely of voluntary choice on the part of the shipper, and if the argument is correct in further assuming that the two methods are equally open to all who usually engage in the business, it may justly be urged with very great force that the party resorting to the one is by the choice itself precluded from raising any question of relative reasonableness by comparing the rates he chose with the lesser rates he might have chosen, but did not. It is conceded in the statement of the question that no two kinds of traffic are in question, but only one kind of traffic conducted in different ways. The merchandise in question is a single or identical article, and the purpose of the transportation is to deliver the commodity to consignees whose competition in the sale of it will be wholly unaffected by the method in which it has been brought to them. Whether it has come in barrels or in tanks is immaterial when the owner offers it in market; he can place no higher price upon it in the one case than the other. It is therefore obvious that if a heavier burden is laid upon one method of transportation than is imposed upon the other, it must, under ordinary circumstances, be impossible for those who adopt the first method to succeed in the competition when they meet the others in the same markets. Their interest, therefore, in the charges which are made to their competitors is obvious. Unreasonably low charges to their competitors would be as fatal to their success as unreasonably high charges to themselves.

The most important question that arises upon the assumptions made as the basis for this argument is, whether there are in fact two different modes of transportation which are offered, with their corresponding rates, equally and impartially to all shippers alike, and which it is possible for the class of persons usually engaged in the traffic freely to choose between. If no such offer is in fact made we have no occasion to follow the reasoning of the argument.

Unless we wholly misapprehend the real situation, when the rate sheets of these defendants are presented to the class of persons usually engaged in the traffic, the assumption that two different modes of transportation are offered to them equally and impartially is baseless. No one of these defendants offers two modes of transportation in the same sense in which it offers its facilities for transportation to shippers of other commodities. Each of them supplies rolling stock for one method only, and that one is shown to be the method on which, by their rate sheets, the heaviest burdens are imposed. No such choice is given to adopt the other mode as would be implied from the language used in stating the question; on the contrary, an applicant for that method of transportation would be told he must furnish his own rolling stock; and this means very much more than might seem to be indicated by this statement; it means, if he would make his business a success, that he shall supply himself with a very considerable number of cars, costing perhaps \$700 each, and that he shall also have stationary tanks at the points to which his shipments are to be made. The cost of the necessary terminal facilities which he must supply for himself we have no means from the evidence in these cases of comparing with the cost of making provision for the storage of barrels by one who adopts that method. It was testified that the terminal facilities of the Standard Oil Company of Kentucky at Selma, Ala., cost about \$2,000, and at New Orleans about \$20,000. The vice-president of the Waters-Pierce Oil Company estimates the average cost of putting up stationary tanks to accommodate tank shipments, including side tracks, etc., to be from \$1,000 to \$50,000, according to the requirements of the station, except at Saint Louis, where he estimates it at \$250,000. It is obvious, we think, from the facts stated, that instead of the defendants offering two methods of transportation

which are open to the acceptance of all, they offer only one which is so open. The other is offered on such terms that it can by possibility be accepted only by parties who can control a considerable capital, and who will supply for themselves an important part of the means of transportation, and also supply terminal facilities. The man of small means who adopts the method of transportation in barrels can not be said to do so of choice when the failure of the carrier to supply for the other the customary means of transportation compels him to do so.

It was said on the argument that this compulsion was not the fault of the carriers, since it resulted from the man's own circumstances; and it was very justly remarked that it is not the business of carriers to relieve against inequalities in the pecuniary condition of those who give them business. This is perfectly true. If one man can pay the extra charge which is made for being transported in a palace car, and chooses to do so, the fact constitutes no ground for complaint on the part of another man who, by reason of want of means to pay for the like accommodation, is compelled to ride in the common car. When the carrier provides accommodations for all and offers them impartially, he stands blameless as to those whose circumstances preclude acceptance; but that is not the case we have before us. The carriers do not provide accommodations for the two methods of transportation; they provide them for one method only, and in doing so they fall short of what, in respect to all other kinds of traffic, is practically the universal custom. It is from this fact that the oppression complained of in these cases springs. The carriers offer no choice to their customers; they fail to provide for the general use of all who may desire it the rolling stock for transporting, in the way which they say is most profitable to themselves, this very large traffic, but they give to the dealers who will perform this duty for them rates so favorable as to put those who adopt the only method the carriers provide at such disadvantage as to preclude successful competition.

It does not seem to us either just or plausible to say under such circumstances that the person whose oil is carried in barrels has voluntarily chosen that method, and has no concern with the charges imposed on his competitor who adopted the other. He is, on the contrary, vitally concerned with those charges, and if his own are not to be gauged in some degree by them, he may be ruined in his business without redress, even though the charges he pays, when considered by themselves, may seem not unreasonable.

But it is further seen that the whole argument on this branch of the case is rested by counsel on the proposition that the charges made on transportation of oil in barrels are reasonable in and of themselves; if they are found not to be, the jurisdictional difficulty which is suggested need not further occupy our attention.

It is to be regretted that we are not more clearly shown in the argument presented on this point how we may determine when rates are and when they are not in and of themselves reasonable. When a limitation of power depends upon facts there ought to be no question what facts are to be considered, since otherwise the limitation is likely to be the subject of continual dispute, and may possibly be exceeded, even when the intention is to observe it with due care, and especially when such a limitation depends upon a pecuniary charge being reasonable or the reverse, the tests of what is reasonable ought to be such as not only can be easily applied, but in themselves be open to no controversy.

Counsel has defined the expression "reasonable in and of itself" to mean "a reasonable compensation for transporting the traffic in the mode for which the rate is charged;" but the definition throws little or no light upon the question how this reasonable compensation is to be measured and determined.

It is sometimes contended, though not by the carriers themselves, that we may measure the reasonableness of charges by the cost of transportation. These defendants will not contend that that is a proper test, for their whole practice is against measuring their charges by the cost. It may cost no more to carry a box of silk weighing 100 pounds than a bale of refuse rags of like weight, but the charge will perhaps be several times as great, and the carrier justifies the discrimination by showing that equal rates on both would put transportation of the less valuable article out of the question. Like discriminations are made everywhere; property is classified with a purpose, among other things, to make the most valuable kinds pay most largely for the service performed. This is a wise if not a necessary policy, and as the railroads adopt it universally, they are fairly estopped from claiming that from cost alone it can be determined whether charges are in and of themselves reasonable.

A better test, it is sometimes said, may be found in the value of the service to the owner of the property carried. Some articles must be carried at low rates because the traffic will bear no higher, and therefore the low rates are all the service is worth. Other articles, though it may cost no more to carry them, may justly be charged much higher rates. The effect of transportation upon market value is taken into account by carriers in making rates, and it is insisted on their behalf that this is neither unreasonable nor unjust; but it is very obvious that if rates as to their reasonableness are to be measured by

the standard of what the service is worth to the owner of the property, it is impossible, when considering the value of the service in transporting a particular kind of property by one method, to leave out of view the charges imposed for transporting the like property by another method, which for any reason is limited to a part only of the carrier's customers. Whether the service to the owner in carrying by one method shall be worth much, or be of no value whatever, may depend altogether on the charges which are made to others for carrying by the other method.

But the proposition that we may determine absolutely what rates are in and of themselves reasonable on a consideration exclusively of the particular traffic by itself is antagonistic to the whole railroad practice of the country, and would not for a moment be accepted and acted upon by any committee of rate-makers. Rates are never made in that way; but instead thereof property is classified, and the whole field is surveyed with a view to the establishment of such charges as shall be relatively proper and just, as near as circumstances will admit of their being made so. There is not a railroad company in the country with a business of any considerable magnitude that could justify each of its rates by itself without taking its general traffic into account, or without its being allowed to show how excessive competition at one point or in one traffic has forced higher rates elsewhere than might otherwise be reasonable, or how, on the other hand, good returns from one traffic, which the traffic can bear without being oppressed, permit of very low rates to some other traffic which otherwise might be unprofitable. Thus the railroad practice appears to be to treat those rates as reasonable in and of themselves which, on a consideration of the whole field of operations, it is seen that the carrier can afford to accept, and which at the same time the owner of the property can afford to pay, because they are not in excess of what the service is worth to him; but in fixing upon rates it is especially important, if not absolutely necessary, to have something like uniformity in the rates upon articles which are of like kind and value and which supply the same demand, since otherwise those which are made to bear the heavier rates would be driven out of the market.

This being the method whereby reasonable rates are customarily determined, we have no occasion to discuss the soundness of the position taken by counsel that if a rate is reasonable in and of itself the Commission can not require it to be changed. We do not question the proposition of counsel that Congress has not conferred upon the Commission the authority to force a change of reasonable rates. By the act to regulate commerce the Federal Legislature intended to be just to the carriers as well as to do justice to the general public; and we agree that it has not authorized their rates to be changed against their will when in themselves the rates are just and reasonable. If, therefore, it shall be found that the charges made by these defendants for the transportation of oil in barrels are in themselves just and reasonable, no order will be made by this Commission for their alteration; but in determining their reasonableness we shall consider ourselves not only at liberty but absolutely required to keep in view the disparity which is shown to exist between them and the rates which the same companies charge upon the same article of merchandise when they receive and transport it in the cars furnished by shippers themselves. That disparity has an inevitable and very important bearing upon the question of reasonableness; *prima facie* it is unjust, because it is oppressive, and the defendants are fairly called upon to exhibit good reasons for it.

This view of the case also renders it unnecessary for us, in considering the evidence adduced in support of the complaints, to distinguish as between that which is offered to prove excessive rates on barrel shipments and that which is given to show unjust discrimination. Whatever evidence tends to show that the rates on barrel shipments are unreasonable because too greatly in excess of the charges made on tank shipments, will also in like degree tend to show that in making rates on barrel and tank shipments, respectively, the defendants were guilty of unjust discrimination. This is self-evident.

On the hearing the defendants entered upon a justification of their rates, and it was planted by them on several distinct grounds. These we may summarize as follows:

I. Those who have their property sent in tanks furnish the rolling stock for the purpose, and save the carriers the necessity and the expense of supplying it.

II. This method of transportation exposes the carrier to less risks of losses by fire and of damage to other property transported by it.

III. It is more profitable to the carrier, because the probability of a return load is greater, and also because the load of a car may be greater, and the carrier neither loads nor unloads the property nor furnishes storeroom for it.

Each of these grounds of justification deserves and must receive some attention at our hands.

I. The fact that the owner supplies the rolling stock when his oil is shipped in tanks in our opinion is entitled to little weight when rates are under consideration. It is properly the business of railroad companies to supply to their customers suitable vehicles of transportation (*Railroad Company vs. Pratt*, 22 Wall., 123, 133) and then to offer their

use to everybody impartially. If the varieties of traffic are such and their requirements of rolling stock so numerous and diversified that this becomes impracticable or burdensome, so that the aid of their customers becomes essential or convenient, the supply obtained by their assistance can not with any justice be utilized by the carrier in such manner as to establish discriminations which would otherwise be inadmissible. The carrier has no right to hire rolling stock and then allow it to be used exclusively by one class of persons on such terms as will drive out of business those who are compelled to use its own rolling stock in a competitive traffic. This, however, is precisely what takes place in this traffic if the rates for the transportation in barrels are considerably in excess of those which are charged for the transportation in tanks. The tank-cars which are furnished to the carrier by shippers, whether the use is paid for or not, ought properly to be held for the use of all; but if this is found impracticable, it is very certain and very obvious that proprietorship of the car for the use of which the carrier pays, as it generally does, can fairly entitle the owner to no special consideration in the making of rates. He has an advantage, arising from his ownership, in being able to control the use, but that circumstance can be no reason for extending to him exceptionable consideration which will make the advantage specially oppressive to competitors. It is, on the other hand, a very forcible reason why the carrier should see to it that its patrons who are forced to make use of such facilities as it provides for them shall not find its own want of proper rolling stock made a ground of discrimination against them. On this point the misapprehension of the situation is very apparent in some of the arguments which have been made for the defense. The complainant, it is said, asks the railroad companies to relieve him from the consequences of his own lack of capital to carry on his business to the best advantage. He can not choose the best method, because that method requires a large outlay in capital. His competitor in business can choose it, and it is for that reason that complainant is driven out of the market. He must blame his want of capital, it is said, and not the railroad companies for his failure.

A statement of the situation differing a little from this will more nearly present the actual facts. The railroad company not having supplied itself with the necessary rolling stock to enable one branch of its traffic to be carried on in the way most advantageous to those who engage in it, suffers parties who have the capital which will enable them to supply the defect to put cars of their own upon the road, for the use of which it pays, and at the same time gives to such parties the exclusive use of what they supply, and also such preferential rates on the merchandise carried for them as will put successful competition quite out of the question. It is not the lack of capital to carry on the business that then proves fatal, but it is the lack of capital, in addition to what is needed in the business, to supply rolling stock to the railroad company for his use. It would be the height of injustice for the carrier to make such a lack a ground for discrimination in rates, and then to say that the party suffering from it has no reason for complaint since the rates which are named are offered to all. The offer is exclusive in fact, whatever it may be in terms or in theory.

If a carrier of passengers were to make a uniform rate of 3 cents a mile to all who rode in the cars it provided, but, being deficient in rolling stock, were to allow owners of private cars to fill them with passengers at 2 cents a mile and be paid for the use of the cars in addition, we should not expect any one to attempt a defense of the discrimination based upon the ground that the rates were equally open to all, and that if one, by reason of lack of capital to supply himself with a private car, was unable to take the benefit of the most favorable rate, he should blame his fortune for it, not the common carrier. The wrong in such a case would be as plain as it would be gross; but such a discrimination in the carriage of persons would be far less injurious than a similar discrimination in the transportation of property: the one would involve a small sum of money only; the other might be destructive to a business. We hold, therefore, that the fact that one consignor furnishes a car for hire to the railroad company for the transportation of his oil is no ground whatever for a discrimination in rates in his favor as against another consignor who must ship in the cars the carrier supplies. It may be a reason for limiting to himself the use of the car he furnishes, but the discrimination can not justly or lawfully go any further.

II. The fact that transportation in barrels exposes the carrier to more risks than does transportation in tanks seems to be most relied upon to support the discrimination made in rates, and it was very strongly urged on the argument. The risks are: *first*, of accidental fires in consequence of leakage from barrels; and, *second*, of injury to other property arising from its being affected by petroleum odors. Considerable evidence was given to show that leakage from barrels was constant and in warm weather very great, and that trains and warehouses were specially exposed to accidental fires in consequence. On the other hand, there was evidence that the risks are greatest when the oil is transported in tanks; the greatest risk being from collisions, which might break up and empty the tanks and expose the whole vicinity, while barrels might for the most part or alto-

gether escape breakage. Persons entitled to speak as experts differed very widely in their testimony on this point, but Mr. Brundred, the manager of the tank line which is operated on the Pennsylvania roads, and who testified to having kept careful statistics covering a considerable period of time, showed by these that the risks from either mode of transportation were small, but were least when the transportation was in barrels. Possibly his experience may have been somewhat exceptional; but we are not satisfied from the evidence that there is any such greater risk from fires when the oil is conveyed in barrels as can justify a difference in rates. The risk from injury to other property is something, but not serious. Oil in barrels is transported in cars which when not used for that purpose are employed in the transportation of live stock, lumber, iron ore, or other articles not subject to injury from the odors, and when taken in car-load lots is loaded and unloaded by the shipper elsewhere than in the company's warehouses. With proper care, therefore, injury to other property ought very seldom to happen.

III. The greater probability of finding return loads for the tanks is much relied on. The return loads are either turpentine or cotton-seed oil. The turpentine region is reached by some of the roads, but not by all; but on those same roads are lumber, iron, and other heavy articles to be transported in the direction opposite to that in which the oil is taken, and which would constitute very suitable loading for the cars in which oil in barrels is carried southward. It is a very pregnant fact as bearing on relative rates in this region that Mr. Virgil Powers, the Commissioner of the Southern Railway and Steamship Association, and Mr. Charles A. Sindall, the secretary, both of whom have had long experience in those or similar capacities, agree in opinion that oil in barrels ought to be transported as cheaply as the same quantity in tanks. This opinion would not have been given without good reason; and without doubt the probability of return loads for the tanks was taken into account. In the Southwest cotton-seed oil mills may or may not be found at the points to which oil in tanks is taken. If they are not, the tank must return empty or it must be sent elsewhere for a load. But we do not learn from any evidence given before us that the railroad company has any right, under its implied contract for the transportation of the petroleum oil, to send the tank car to any other point for a load when it does not find one at the place of delivery. If there is any such right it must arise from some special contract or arrangement; and if any such exists the terms and particular privileges given are not disclosed in these cases; but when thus sent elsewhere it may or may not be the case that there is any considerable advantage in it, such as would be derived from taking up a load at the point of delivery of the petroleum oil and putting it down where the oil was received. The advantage in the latter case would be very great; in the former it might be trifling; but in all cases where cotton-seed oil is the return loading the advantage would seem to be reduced to a minimum by the very low charge which is made for the transportation of that commodity. This charge, for some reason not satisfactorily explained to the commission, is made astonishingly low when compared with the charge made upon petroleum, although the cotton-seed oil is much the more valuable article. It is very manifest from the evidence that the cotton-seed oil traffic in itself is not one of much profit to these defendants.

The capacity of some of the tank cars is such that a larger quantity of oil can be taken by them than in such cars as barrels are conveyed in. This, of course, is favorable to the carrier, and enables him to carry more cheaply in proportion to quantity; but a considerable proportion of the tanks are not of this great size, and the load they carry does not exceed the ordinary car-load in barrels. Moreover, it has been shown that heretofore the great size of some of the tanks has been ignored by some of these defendants altogether, and they have made no distinction in charge between carrying sixty barrels in a tank and carrying twice that quantity. They may, therefore, be gainers instead of losers by the establishment of a rule which measures their compensation for the service rendered by the tonnage carried, whether it be in the one mode or in the other.

We are entirely satisfied that this ought to be the rule. Barrel shipments in car-load lots, loaded by the consignor and to be unloaded by the consignee elsewhere than in the carrier's warehouse, if subjected to higher rates, would be charged more than is either just or reasonable. We also think, and so find, that the great difference in rates shown in these cases to have been generally made as between barrel and tank shipments amounted to unjust discrimination as against the former. The rule should be to consider the tank a part of the car itself, and for the load carried in it the charge ought to be the same by the 100 pounds as is made on the transportation of barrels of oil in car-load lots in other cars. Even then the shipper in barrels is at some disadvantage, for he must pay freight on barrels as well as on oil; but this as between him and the carrier is not unjust.

We find, then, on a careful review of the testimony in this case and after full reflection, that no sufficient reason is shown to justify the defendants making a distinction in their charges as between the parties employing the two different modes of carriage. We hold that when transportation is in car-load lots the same charge by the 100 pounds

should be made upon all consignments from and to the same points. Particular routes might be named on which it would be just to allow the oil to be carried in tanks at a lower rate; but on other routes the transportation in barrels might be most likely to insure return loads. There neither is nor can be any rule on that subject, and the attempt to consider each road of a system and each several feeder by itself, and to discriminate for each according to the probabilities of return loads, would be far more perplexing than useful, and would breed many vexatious controversies. The roads constituting the Southern Railway and Steamship Association submitted the subject to three arbitrators in 1886, and the arbitrators, by an award made October 27, 1886, decided as follows:

"The board decides and awards that, taking effect November 1, 1886, coal-oil in barrels, in car-load quantities, be put in sixth class released, the same as coal-oil in tank-cars."

By this award both methods of transportation were to be put in respect to rates on the same footing for the whole system, the arbitrators apparently deeming it impracticable to make any difference from a consideration of the probabilities of return loads. We assent to this view, because we think the attempt to take these probabilities into account would not be likely to have beneficial results.

This ruling concerns a traffic in which one method of transportation has no other or different effect upon the value of the article carried than has the other. The oil when delivered is of no higher value because of having been conveyed in barrels, and the owner has in no respect been supplied with superior accommodations or facilities which can be made the basis for an additional charge against him. The additional charge heretofore made has necessarily been grounded on something besides additional benefit to the party subjected to it.

This ruling does not preclude such allowance for the use of tank-cars as is customary, provided it be reasonable; but on the contrary it assumes that such allowance will be made. But it should be made on some system, by some rule of uniformity, and the authority to make it must not, carelessly or otherwise, be made a means of discrimination.

It is now to be considered how far these parties severally are to be deemed guilty of unlawful discrimination in what they have done during the period covered by the complaints.

Upon this subject we have to say at the outset that in our opinion the mere fact that they have hitherto made a difference in rates as between the shipments in barrels and the shipments in tanks ought not of itself to be considered proof of unjust discrimination. There is room for great differences in opinion as to the relative rates which can justly and properly be charged, and a considerable difference might honestly be made in framing a rate sheet. There should be further proof than this mere difference to make out the unlawful discrimination as regards consignments made prior to the time of promulgating this opinion.

In the case of the Louisville and Nashville Railroad Company this additional proof is furnished in several ways.

One of the proofs is to be found in the making of the rate by the tank-car regardless of weight or quantity. When one tank holds twice as much as another there can be no valid excuse for this; it necessarily makes the rates excessively low to the shipper in large tanks and specially oppressive to the shipper in barrels, when the largest tanks are made use of; but the wrong was emphasized in the case of this company by the public being led to suppose that when the contents of the car exceeded a certain quantity or weight an extra charge was made, when in fact this was never done. But proofs of intentional disregard of the rights of the complainant, or of such want of regard for them as is equivalent, are made very evident in the correspondence between himself and the agents of the company.

The general freight agent of the company testified that its freight rates on oil in tanks up to April 5, 1887, were made regardless of quantity; that they were then changed to rates by the hundred pounds; but on the 11th of May following the company again went back to tank-car rates irrespective of quantity. Fixing the rate of tank-cars by the hundred pounds does not seem, however, to have meant much, for there were some shipments within this period by the Standard Oil Company regardless of actual weight, and the witness testified that a tank would have been received as holding 20,000 pounds, though this was greatly below the average quantity carried in one. He testified further that the Southern Railway and Steamship classification as printed and as given out by his company has this note: "Coal oil or its products in tank-cars must always be charged at actual weight;" but, though a member of that association, his company made only the tank-car rate, regardless of weight. That rate was printed on a type-writer and posted in its offices. The association has inspectors to report any underweighing, and if a tank was billed at 20,000 pounds and on weighing they found it to be more they should

report the fact, the witness said, but the report, so far as we can discover, would perform no valuable function whatever. The posting of a rate in the company's office was supposed by the witness to show sufficiently that the company did not accept the rule of the association as to actual weights. In this he was in error. The public would have a right to understand that his rate sheet and the note in the classification were to be construed together, and effect given to both thus construed.

The correspondence between this witness and the complainant will best show the discrimination so far as it seems to have been personal.

May 16, 1887, the witness, in response to inquiries by the complainant, says the company has no tank-cars and can not furnish them. "Regarding charge for returning empty tank-cars, we first wish to know to what points shipments of oil in tank-cars would be made. Generally, however, I may say the rate returning will be one and a half cents a mile." "The rates on coal oil, car-load, from Louisville to Huntsville, Ala., are, in barrels, 37 cents per 100 pounds." This statement of the Huntsville rate was conceded to have been an error. The witness says the rate was 29½ cents, but was mistakenly given by a subordinate who wrote and signed the letter in his name.

May 18 complainant replied, complaining that the rates actually made by defendant had the effect of discrimination as between tank-cars and barrel shipments to the extent of over 50 per cent. in favor of the former, to the great injury of his business in favor of the Standard Oil Company, and adding:

"Please state why it is that the rates by barrel and bulk are made the same to some points and 50 per cent. difference to others, and how can you thus discriminate against me? Can't you give a lower rate than 37 cents per 100 pounds in barrels, Louisville to Huntsville, Ala., and are you not letting other shippers ship their oil at a less rate?"

"What I desire to know is if you are willing to pro-rate on an equitable basis with the C., W. and B. on my oil shipments from this point. Please answer promptly and oblige."

May 21 the witness answers:

"The rate to Huntsville and to other points which we have quoted are as low as we are at present prepared to name."

Here the witness adopts and in effect repeats what he says was a mistake in his subordinate, after his attention had been specifically called to the figures. Complainant was thus notified that the rate to him would be 37 cents, though others were charged 29½ cents only. In fact, there seems to have been shipments by the Standard Oil Company of Kentucky at 27½ cents, but this charge was possibly an inadvertence. The answer proceeds to justify the difference in rates as between tank and barrel shipments, and then goes on to say:

"I do not see that it is any of your business whether we pro-rate with the C., H. and D. or C., W. and E. roads or not. You can doubtless obtain through rates from them, and the matter of division of revenue between those companies and our roads is a matter that concerns only our respective lines and not you."

Here was a third mistake. It was undoubtedly the business of the complainant to ascertain if he could whether this company would pro-rate on an equitable basis with any other road over which he desired to ship his oil, and in that way obtain through rates. Nothing in the case shows that through rates were then in existence, unless it be the statement in this letter that through rates could doubtless be obtained of the other roads; but if there were such rates there was nothing out of the way in complainant endeavoring to procure a modification, and his inquiry on the subject was not wanting in either civility or propriety.

Further the letter proceeded to say:

"In conclusion, let me repeat that the rates furnished you are just as low as furnished anybody else; that whatever rates may be furnished by the L. and N. road apply to all shippers, and that all communications from you asking for rates of freight or appertaining directly to your shipments over our line will meet with respectful consideration and attention; but I have neither the desire nor the time to give attention to your letters asking for the reasons governing the policy of the Louisville and Nashville Railroad Company, criticising its rates, or suggesting basis for dividing rates between its connections and its own line, and I shall not reply to any such communications in the future."

This lacks accuracy, for the Huntsville rate was still 37 cents to complainant and 29½ cents to other persons, and it overlooks altogether the fact that "the policy" of the company, so far as it affected his shipments, was complainant's concern as well as the concern of the company, and he was entirely within the bounds of what pertained to his business as well as of right in endeavoring to bring about a change.

May 17, in answer to an inquiry from the office of the witness, complainant was given a rate of \$1.30 on oil in car-load lots, Cincinnati to Nashville. This is also conceded to be an error and an excess over the rate then charged to others; but the error was not corrected, as it should have been, in the subsequent correspondence.

August 29 complainant wrote the witness as follows: "Please name rate on coal-oil in barrels and tank-cars, Louisville to Nashville, and advise what rate per tank-car you allow; also rate to Columbia, Tenn., car-load, and what classification do you now use?" On the next day he wrote again: "Please name rate on tank-cars, Louisville to Montgomery, Ala.," etc.

September 2, instead of answering these letters, the witness writes to ascertain by what line or lines the shipments would be forwarded from Marietta; a fact which could have no bearing on the inquiry made of him. His company was supposed to have regular and stated rates on its own lines, and he was asked to give them. He should have given them with the same promptness when the oil was to be delivered to him over another road that would be expected from him when the traffic originated at Louisville.

On the hearing the witness was asked whether he had not refused to give complainant rates on barrels to Knoxville and Nashville, and he replied:

"No, sir; not that I know of. I will add that I know of no reason why we should refuse him rates to Knoxville and Nashville, and I would say that we have not."

It nevertheless appeared that the witness, on being pressed by complainant to give rates on defendant's line, referred him to Mr. Fraser, of the Cincinnati, Washington and Baltimore road, for through rates. He was told in reply that Mr. Fraser refused to give rates, but he still continued to refer complainant back to him. The witness was asked by a member of the commission—

"What objection could you have, no matter over what roads the oil came to Louisville, to name rates from Louisville to Nashville?"

"Answer. Nothing, except that I thought he ought to get rates from the lines he dealt with. They had our rates."

The question in substance was repeated for further answer.

"Answer. Well, if Mr. Rice was prepared to or had delivered his oil directly, there would have been no objection. We would, of course, have been willing to name him tariff rates, but he was away from our line and we preferred to let him get the rates through our connections. We felt that if we furnished him a rate and that rate was advanced and we did not give him any special notice of the change, and he went along doing business, basing his price on the rate that had formerly been quoted him, that he would hold us for the overcharge."

"Q. Was that the reason, so that you might be in position to advance the rates without notice?—A. Without special notice to him; that was the main reason. There was another reason that also influenced me in not giving him rates. I found that Mr. Rice had been asking the Cincinnati office for part of the rates and our office for part of the rates; and while the rates in our office and in the Cincinnati office are supposed to be the same, still if he got the rates partly from my office and partly from the Cincinnati office we would not know to what points they had quoted him rates, and the Cincinnati office would not know to what points we had quoted him rates."

"Q. What was the objection to his being quoted rates from any other office if they were the same?—A. If he got the rates from our office and he had to be notified by special letter in case of an advance in those rates, I would not know if the Cincinnati office had quoted him any rates, and would not be able to notify him of the advance in the rates quoted by the Cincinnati office. If he had to be notified by the Cincinnati office of an advance in rates they would not know that we had quoted him any rates. I was clearly of the opinion and still think that the proper place for him to get his rates was from the line that took his business in the first instance. With the number of people writing constantly for rates, the giving special notice to shippers of changes is very liable to be overlooked."

It will be noted that this testimony comes from the officer who would be expected under the law to have the rates on his own lines printed and posted in the offices of the company, and open to public examination. If the rates were thus printed and posted much of the correspondence would seem to have been needless, and the inference is very strong that the law, in its spirit at least, was not observed. The injurious consequences resulting therefrom were not relieved by answers to complainant's letters. He was not given the rates because, as we are told, the officer supposed if that were done and the rates afterwards changed he would be under obligation to give him personal notice of the change. This hardly seems a plausible excuse. The law imposed upon defendant's officers no obligation to give special notice to shippers in case of lawful change of rates, and the giving out of the tariff sheets or the quoting of rates could no more create such an obligation than could the posting of the sheets at the company's stations, as the law required.

The witness was further asked whether he did not persist in his refusal to quote rates after he had been notified that Fraser declined to name them. He replied: "That is likely, but I do not think I am to be blamed for Mr. Fraser's action." This is quite true; he should not be blamed for Mr. Fraser's action. It was his own illegal refusal

to act that he was blamable for. Mr. Fraser was not compellable to name rates over any road but his own unless he joined in making them; but this witness's obligation to give the rates on his own road was plain and unquestionable.

The two following letters will close the quotations from the correspondence:

From complainant to the witness, of date September 19, 1887: "Your two letters of the 13th and one each of the 14th and 17th at hand. I have stated to you that Fraser, of the C., W. and B., the initial road, refuses to give me through rates by your road, and still, when I so repeat this to you several times, you persistently ignore what I say and constantly refer me back again to him. This is now played out, and I now again ask you point blank, Do you still refuse to give me the oil rates from Louisville as asked for in my several previous letters? A further refusal to give me these rates or to furnish them immediately I shall consider an absolute denial to give them. Your rates from Louisville are lower, as stated by me, and same denied by you, as an instance will quote. Brent Arnold, your agent at Cincinnati, quotes \$1.30 per barrel, Cincinnati to Nashville; Marietta to Cincinnati, 32 cents per barrel, or \$1.62 total. The rate from here (Marietta) to Louisville is 50 cents per barrel, and Brent Arnold quotes 18½ cents per 100 pounds, Louisville to Nashville, this route via Louisville, thus saving me over 40 cents per barrel, provided you would so condescend to give me a rate from Louisville. This is a fine state of affairs. On September 8 I asked you to forward me a copy of each of your tariff or rate sheets issued since April 1, and to put me on your exchange list, so that I would be notified promptly of any change in oil rates. This request you ignore and do not answer. By this means you would legally avoid all legal liability for any discriminations that could possibly arise, and where one is constantly asking for rates to ship on this should be done and save so much correspondence; but you doubtless think otherwise. I take it for granted, unless I hear to the contrary, that you refuse to give me oil rates from Louisville. You do not answer my question in my letter of the 10th. I am desirous, and will build immediately twenty tank cars to carry bulk oil over your system if you will guaranty or assure me that you will carry said oil in said tank cars at as low a net rate as accorded any other shipper."

To this the answer, of date September 27, was: "Your favor of the 19th instant was received during my absence, which has prevented an earlier acknowledgment of the receipt of it. I have nothing to add to my letters of September 13, 14, and 17 upon this subject."

Complainant did not succeed in obtaining rates. The denial of his right was plain and stands unexcused. Counsel for this defendant did not attempt on the argument either to show cause for it or explain it away. What reasons there may have been for it we do not know, but find that they were not just or legal reasons. We further find that defendant was guilty of unjust discrimination against complainant, as charged, and that the discrimination was in favor of the Standard Oil Company of Kentucky and all other parties sending oil by tank cars. We further find that to the extent that rates on barrel shipments were erroneously given and persisted in, as in the case of rates to Huntsville and Nashville, defendant was guilty of unjust discrimination against complainant in favor of other parties sending their oil in barrels.

The case of the Saint Louis, Iron Mountain and Southern Railway Company is confused somewhat in the record, as it was in the correspondence, by the fact that that road was operated for the period in question by the Missouri Pacific Railway Company. Some extracts from the correspondence are here given.

April 28, 1887, complainant writes the commercial agent of these roads at Saint Louis:

"Please give me the terms on which tank cars, empty, are returned, as I see by your classification it is by special contract; also, do you make bulk oil by weight per barrel when shipped in tank cars? If so, state the weight and how many gallons in bulk you figure on to the barrel. Can I ship one or more tank cars at same rate, or does the Water-Pierce Oil Company or the Standard Oil Company have any preference as to number of cars shipped?"

May 2 he writes the assistant general freight agent:

"Do you take tank cars at 20,000 pounds regardless of weight, as your special rate (No. 54 A) is ambiguous on this point? At what weight per barrel in barrels and in bulk do you carry coal oil; also what special rate do you charge on return of empty tank cars when not furnished (or furnished by shipper)? Please name barrel and tank-car rates (car-loads), Palestine, Tex.; Santa Fé, N. Mex.; Leavenworth and Atchison, Kans., and Kansas City, Mo."

May 5 the commercial agent replies:

"Changes adopted at recent meeting of Texas Traffic Association at Houston made coal oil in barrels or cases, class A, in car-load lots and in tank cars, minimum weight 25,000 pounds, 50 cents per 100 pounds, Saint Louis to Houston, Galveston, Jacksonville, Texas, and intermediate stations."

The points here named are on defendant's road.

May 9 the assistant general freight agent writes:

"The weight of a tank car contemplated under our special 50 A is 20,000 pounds. Shipments of oil in barrels to points governed by western classification are taken at estimated weight of 400 pounds per barrel; to points governed by joint Texas classification at actual weight.

"With reference to rate on return empty tank cars I beg to advise that from Missouri River points—i. e., Kansas City, Leavenworth, and Saint Joseph—we return them free when the same have been hauled over our line. The same rule applies on tank cars from Texas, with the understanding that no mileage is to be paid or allowed by the railroad companies."

"The rate on coal oil in tank cars, East Saint Louis to Santa Fé, is \$1.65 per 100 pounds actual weight; to Leavenworth, Atchison, and Kansas City, 25 cents per 100 pounds actual weight. The rate on coal oil tank cars, East Saint Louis to Palestine, is 50 cents per 100 pounds, minimum weight 25,000 pounds."

This last rate is corrected to 45 cents by letter dated the next day. These letters of May 5th and May 9th are both written under the heading of Missouri Pacific Railway Company.

May 10 the commercial agent writes:

"In looking over our correspondence we note the concluding portion of your letter, which asks if Waters-Pierce Oil Company have any preference as to number of cars shipped. We answer, No, sir; you are exactly on the same level as any other oil shipper over our line. We carry all shipments at actual weight and make the usual mileage charge on return of empty tanks."

This last statement was not warranted by the facts; defendant made an allowance to the owner of the car of three-fourths of a cent per mile for the use of the car.

May 11 complainant writes the assistant general freight agent:

"Do I understand that tank cars of bulk oil are taken at 20,000 pounds each? Also that 200 cases (or 60 barrels) are taken also at 20,000 pounds (per special rate No. 52 A)?"

May 16 complainant writes the commercial agent:

"Do you charge extra for return of empty tank cars; if so, how much?"

The special rate, 52 A, above referred to, was put in evidence. It purports to be issued by the Missouri Pacific Railway Company and gives rates "on illuminating and lubricating oils in car-loads of 300 cases or 60 barrels, or per tank car of 20,000 pounds, from Saint Louis, Mo., to Venitia, Ind. T., \$65; McAlister and Muscogee, Ind. T., \$100." These points are not on defendant's road.

Also special rate 53 A, issued by the Missouri Pacific Railway Company, and taking effect at the same time, as follows: "Coal-oil, car-loads, from Saint Louis and Carondelet, Mo., to Newport, Ark., \$50 per car of 55 barrels, or per tank car; Little Rock, Ark., \$50 per car of 55 barrels, or per tank car; Texarkana, Ark., 45 cents per 100 pounds." The rates per tank car by this last would apparently be irrespective of actual weight.

May 19 the assistant general freight agent writes complainant:

"Replying to your communication of the 11th, I beg to advise that the rates mentioned in our special No. 52 on illuminating and lubricating oils are per tank car of 20,000 pounds; that the excess over the number of cases or barrels mentioned loaded in box cars, or the excess over 20,000 pounds contained in a tank will be taken at a proportionate rate per 100 pounds. In this connection I beg to advise you that our rate on oil in tank cars to McAlister and Muscogee is 50 cents per 100 pounds. In other words, we do not exceed to McAlister or Muscogee the rate which is made to Denison, 50 cents per 100 pounds when in tank cars."

May 21 complainant writes the assistant general freight agent:

"Do you actually in each and every instance weigh tank cars of oil as shipped out, as well as the empty tank cars on their return, and charge full net weight thereon as thus shown, or do you estimate them, or how do you do this? Please answer promptly and to the point, and oblige."

May 25 an answer to other portions of this letter ignores the above query altogether.

Several other letters passed between the parties relating specially to the discrimination made by the published tariffs between the shipments in barrels and cans and by tank cars.

September 8 complainant writes the assistant general freight agent:

"Please inform me if you are still taking tank-car oil at an estimated weight per car, or do you actually weigh each and every car, or do you take the estimate given you by the consignor? Will you give me the same net rates and weight by tank car to Austin, Dallas, Palestine, Houston, and Galveston that you now give the Waters-Pierce Oil Company, or as low net rates as is given any shipper over your various lines, and please name me those rates to above points?"

This was answered as follows:

"The charge on oil loaded on tank cars is on a basis of actual weight, minimum

weight 25,000, at the established rates, which are open to any shipper. This also answers your letter of the 8th to Mr. O'Connor."

The minimum car rate is stated in the evidence to have been raised on defendant's road to 25,000 pounds in July.

September 23 complainant writes the Assistant general freight agent:

"You refer to my two letters of the 8th, but fail to answer the most important part of those letters, which I repeat once more, in order that you may clear up the obscurity of your vision. I am desirous and will build twenty tank cars to carry bulk oil over your system of roads, provided you will assure or guaranty to me the same net rates that you allow the Waters-Pierce Oil Company or as low a net rate in tank cars as is accorded to any other shipper to such general points as Austin, Dallas, Palestine, Houston, Galveston, and other points reached by your vast system."

September 27 reply was made: "The rates charged by this company are open and alike to all shippers."

September 30 the complainant writes the Assistant general freight agent:

"Please inform me of the largest size or the largest capacity of tank cars you will carry over your lines and the largest capacity now used, and have you any particular requirements how they shall be built in order to conform to your general rules? Will you state to me more definitely and assure or guaranty me, in case I build tank cars, that you will give me as low net rates per car or per 100 pounds that you will give to the most favored shipper that ships in that manner over your lines, regardless of the quantity shipped? This assurance and guaranty I desire before I put my money into it, that I shall be treated exactly alike and have as low net rates in all other respects (regardless of commissions, etc.) that is accorded any other shipper, large or small. I am now in correspondence with tank-car builders on this subject, and desire an early answer."

October 4 this was answered:

"We have no regulations governing the weight carried in tank cars different from the customary rules between Western roads as to the weight carried in ordinary cars, nor do we require these cars to be constructed on any special plans or dimensions. You are probably as familiar as our people with the kind of tanks customarily used. As to your request for further guaranty that you will be treated alike in the matter of rates, we can only refer to our previous letters on this subject and to the laws under which our company operates as a common carrier."

It can not be denied, we think, that complainant, from this correspondence, must have had some difficulty in determining for himself what he would be charged on shipments in tank cars. The statements are different, as they relate to different points on the roads in charge of the parties making them, and the limitation of 20,000 and 25,000 and the reference to actual weight are so presented as to be confusing, to say the least. On May 5 complainant is given a rate to Texarkana by the tank car, 25,000 minimum weight, but the actual rate appears by special sheet 53 A to have been 45 cents per 100 pounds irrespective of quantity, and the evidence, we think, strongly tends to show that the shipments to Texarkana were actually made up to July 11, regardless of quantity.

Whether the weight carried was ascertained by actually weighing the cars loaded and empty complainant was not told, though obviously it was important that he should know. His persistent queries elicited no response. The evidence tends to show, however, that, with the exception of a few shipments made early in the year, the actual weight was paid on; but certainly complainant was not to be blamed for being pressing and persistent in his inquiries when the published rate sheets were so far wanting in clearness and certainty. Had all the facts been known to him precisely as they are brought out by the evidence, it is not unlikely that this complaint would have been limited to the discrimination between the barrel and tank rates as shown by the published tariffs. We do not find evidence in the case that the officers of the road have made use of any devices to give further differences than those which the rate sheets show, and the tanks which were taken at uniform rates did not differ widely in size, as was the case on other roads.

It is apparent from the correspondence that, as regards the tank cars furnished and the return of them by the company after the oil had been delivered, this company was and perhaps still is without any definite rule. It is impossible to doubt from the correspondence that the officers would have felt at liberty to make a charge to complainant for returning his cars if he had shipped over their lines. It is not claimed, as we understand it, that the Waters-Pierce Company was so charged at the time the letters on that subject were written.

On the whole, we find that neither the published tariffs nor the correspondence gave to the complainant the information he was fairly entitled to; that the effect was to repel his attempts to engage in shipping in tank cars in competition with the Waters-Pierce Oil Company, if, in fact, his purpose was in good faith to enter into the competition.

On behalf of the Cincinnati, New Orleans and Texas Pacific, and the Alabama Great Southern Railroad Companies, a legal argument has been filed, the purpose of which is

to demonstrate that the transportation of oil in barrels is so far a different traffic from the transportation of the same articles in tanks, by reason of the different circumstances and conditions; that the charges made upon the one can not be the proper measure of the charges to be made upon the other. In support of the general position thus taken quotations are made from *Great Western R. Co. vs. Sutton*, 4 Eng. & Ir. Ap., 239; *Lotspeich vs. Central Railroad of Georgia*, 73 Ala., 306; *Chicago etc., R. R. Co. vs. People*, 67 Ill., 24; *Girardot vs. Midland R. Co.*, 4 Railw. and Can. Traf. Co's, 291; *Nicholson vs. Great Western R. Co.*, 5 C. B. (N. S.), 636; and, as to reasonableness of charges, *Denby Main Colliery Co. vs. Manchester, etc., R. Co.*, 11 App. Cas., 97; *Smith vs. Pittsburgh, etc., R. R. Co.*, 23 Ohio St., 10, and *Evans vs. Oregon R. and T. Co.*, 1 Interstate Commerce Reports, 336, are relied on. These are instructive cases.

On this general subject we have already said all that we think necessary at this time. The traffic, in whichever method conducted, is one traffic; the two methods are different; but the chief difference is found in the fact that for the one the defendants furnish the rolling-stock and for the other they do not; but this difference can not, on any grounds of equity or justice, entitle them to discriminate in their charges as against the method which is conducted according to the usual mode and by accepting the facilities they offer. The conditions are such that justice can not be done to those who send their merchandise according to the customary mode, except by protecting them against the relatively lower rates which are given to those who adopt the other mode.

On the question of discrimination against the complainant the correspondence with the general freight agent of these roads will be instructive.

April 9, and again on the 12th, complainant wrote the general manager of the first-named road for rates. On the 16th the general freight agent replied as follows: "The present rate on oil in barrels, car-loads, and also in tanks from Cincinnati to New Orleans is 34 cents; Birmingham, 47 cents; Meridian, 58 cents; Vicksburg, 54 cents; Knoxville, 24.4 cents; Chattanooga, 24.4 cents; Atlanta, 46 cents; Montgomery, 47 cents; Jackson, Miss., 61 cents; Mobile, 34 cents; Selma, 47 cents; Shreveport, 74 cents per cwt."

April 18 complainant again wrote: "Rates from Cincinnati received. The Standard are selling oil in Birmingham, Ala., at prices which indicate a lower rate than you quote. I therefore desire to know if your rates from Ludlow or any other points on your line are lower than rates named me from Cincinnati. Please advise and oblige."

This does not seem to have been answered, and the inquiry was renewed and elicited a response on the 28th, as follows:

"Rates on coal oil. I beg leave to inform you that the rate on coal oil in barrels, car-load lots, Cincinnati to Birmingham, is 47 cents per 100 pounds.

"We have renewed rates to all points south of the Ohio and east of the Mississippi River, as published March 31. This basis will continue in existence until the Interstate Commission have definitely determined the question of the long and short haul clause. You are, of course, aware that the Southern Railway and Steamship classification makes coal oil, car-loads, sixth class."

The noticeable thing about this letter is that it refers to the classification of the Southern Railway and Steamship Association with an evident purpose to have complainant understand that this company recognized and accepted it. The proof shows that such was not the fact. Defendant, though it accepted it in part, and circulated it with its rate sheets, repudiated it so far as concerned this traffic and some others, and its rates were materially different from what they should have been had that classification governed them. The repudiation of it, however, was only notified to the public by the making of special-rate sheets which were not in conformity to it; obviously a very imperfect mode of giving the information.

May 28 complainant writes:

"Please state if oil in tank cars and barrels is under same classification, and also what rate per barrel you ask on barreled oil, also in bulk, per tank car, and how many gallons you allow to a barrel in bulk per tank car."

May 4 the general freight agent replies:

"As stated in my last communication, the classification of coal oil in barrels, in car-load lots, is sixth class. I regret that I am not yet in position to quote through rates on coal oil in tank cars to all points reached by connecting lines, not having yet received the necessary information from them.

"I am not able to answer your inquiry as to how many gallons will be allowed to the barrel, but beg to assure you that every consignment will be way-billed upon an actual weight basis."

Here is repeated the erroneous information about the classification.

May 4 complainant writes:

"Do you take tank cars of oil at actual weight—that is to say, do you weigh each and every car? At what rate per barrel do you now take barreled oil; also bulk oil per

barrel, and how many gallons of bulk oil do you allow to a barrel; also what charges for return of empty tank cars? In my letter of April 18, I asked you if you were now giving any lower rates to other parties from shipping points outside of Cincinnati on coal oil to the various points and places named to me per your letter of April 18. To this question you have not as yet answered. I would be much obliged if you would answer promptly."

This was not answered promptly, and on May 7 complainant writes complaining of the neglect, and also of discrimination between shipments in barrels and in tanks supposed to have been agreed upon at a meeting in Chicago.

May 9 the general freight agent replies:

"Rates on coal oil. Referring to your two favors of the 4th and 7th instant I regret that my frequent and enforced absence from Cincinnati have at times prevented as prompt replies being given to your communications as I would have wished.

"I beg to inform you that this company was not represented at any meeting held in Chicago on March 11, and also that upon all shipments of coal oil in barrels we propose charging upon an actual weight basis.

"As you are aware, the classification of the Southern Railway and Steamship Association makes the rate on coal oil in barrels, car-load lots, sixth class. You are also aware that by special authority of the National Railway Commissioners the lines of the Southern Railway and Steamship Association have renewed their former rates, and I take pleasure in forwarding to you by this mail a copy of our latest tariff from Cincinnati.

"I think it hardly necessary for me to say that above rates will be charged to all shippers alike."

Here the mistake about the classification is again repeated. The reference to the National Railway Commissioners—by which this Commission was intended—was misleading, to say the least. The Commission never investigated coal-oil rates, or gave "special authority" for their renewal; it never sanctioned any difference in the rates as between tank car and barrel shipments, and had never up to the date of this letter had its attention called to them in any way. What it did was to relieve the carriers represented in the association temporarily from the strict rule of the fourth section of the act to regulate commerce, with a restriction that in the meantime the disparities existing under their tariffs should not be increased.

May 11 complainant writes, and what he says regarding the classification of the Southern Railroad and Steamship Association is altogether natural under the circumstances:

"Yes; I am aware that the classification of the Southern Railroad and Steamship Association makes rate on coal oil in barrels sixth class (same as tank cars), but what does such issuance of a rate amount to when not lived up to by you and other lines? Mr. Gault wrote me and called my attention particularly to a printed circular issued by Virgil Powers, commissioner, dated November 1, 1886, in which barreled and tank-car oil is both made sixth class. Your tariff sheet No. 11, dated November, 1886, just received, makes barreled oil fifth class and tank-car oil sixth class. How do you reconcile this? But this difference is trivial compared to other more gross outrages practiced by your lines and others in carrying tank-car oil by the lump (regardless of weight) at about one-fourth of that charged on barreled oil, pound for pound.

"You say that upon all shipments of coal oil in barrels we propose charging upon an actual weight basis. Does this apply to tank-car shipments of bulk oil; and, if so, do you actually and without a question weigh each and every tank car of oil that goes over your line, and charge full weight thereon?

"Please name me rates on oil in tank cars and barrels to Lexington, Chattanooga, Atlanta, Birmingham, Jackson, Miss.; Meridian and Vicksburg, Miss.; Knoxville and Huntsville, Tenn.; Shreveport, La., and Montgomery, Ala. I trust and hope that you will give me these rates promptly.

"Please state if any charge for return of empty tank-cars. Can you not prorate with the C., W. & B. so as to give me through rates from here to above points?"

The reply May 14 is as follows:

"In my letter of the 28th ultimo, which you refer to, I advise you that we had renewed rates to all points south of the Ohio and east of the Mississippi River, the same as were in effect on March 31. I have already sent you copy of our tariff No. 11, which indicates rates now in effect and which have been in effect from the time we received from the National Commissioners the exemption from the fourth clause of the interstate commerce law. I note your request to be furnished with rates to Lexington, Chattanooga, Atlanta, Birmingham, Jackson, Meridian, Vicksburg, Knoxville, Huntsville, Shreveport, and Montgomery, and will endeavor to obtain the necessary information from connecting lines, and advise you further as early as possible.

"I regret that we can not prorate with the C., W. and B. road, and our rates will consequently apply from Cincinnati."

The inquiry as to a charge for the return of the tank cars, it will be seen, is not responded to.

May 16 complainant writes to get rates, and adds:

"Please inform me why you can not prorate with the C., W. and B. on the through rate on the oil from here. You certainly must prorate with her on other business from other points, or from east and west."

The answer, May 20, was that "all shipments of coal oil pay our rates from Cincinnati, and we are not prorating on this traffic from any point whatever."

Some other letters near this time are omitted as not being important to this controversy.

May 28 the general freight agent writes:

"Referring to recent correspondence and quoting rates to the points named in your letter of the 11th instant, I beg to inform you that the following rates on coal oil are obtainable from Cincinnati to points named:

	In car tanks.	Car-loads per one hundred pounds in barrels.
		Cents.
Lexington.....	\$26.00	18
Chattanooga.....	50.00	33
Atlanta.....	61.80	46
Birmingham.....	60.00	47
Meridian.....	60.00	45
Vicksburg.....	60.00	34
Knoxville.....	50.00	33
Huntsville.....	*.87	.....
Shreveport.....	\$118.00	64
Montgomery.....	112.00	47

\* Per 100 pounds.

As bearing upon this table a list of shipments was given, some of the figures in which require notice. The rate—barrel rate—to Lexington was soon reduced to 10 cents per 100 pounds, the tank rate remaining the same. The average shipment in tank cars to that point seems to have been of 31,223 pounds weight, which would make the rate on tank-car shipments about 8.32 per 100 pounds, and the barrel rate about 20 per cent. higher. The only shipper to this point in either mode was the Standard Oil Company of Kentucky. In contrast to these the shipments from Cincinnati to Chattanooga were in tank cars varying from 25,000 to 43,815 pounds. The barrel rate was 33 cents per 100 pounds. The tank rate was \$50 per car. At 33 cents per 100 pounds the rate on the oil carried in the smallest car would have been \$82.50; on that carried in the largest it would have been \$144.50. On an average of the two it would have been \$113.54. The average makes the rate on barrel shipments 125 per cent. in excess of the rate on tank shipments, instead of 20 per cent. excess, as at Lexington.

A similar vast discrepancy was shown in the rates from Cincinnati to Meridian. The tank rate was \$60, which, if the tanks averaged 24,000, would make the rate per hundred pounds 25 cents; or, if they averaged 30,000, 20 cents. But while this charge remained the rate on barrel shipments was raised to 56 cents per 100 pounds, probably not less than 175 per cent. excess over the tank-car rate.

May 30 complainant sent the following letters:

"Please name rate on oil, tank cars and barrels, car lots, to Mobile and New Orleans."

Also:

"Yours 28th, inclosing rates, finally to hand after several applications. These rates are prohibitory on my shipments, as you know full well, and the device or method of the tank-car shipment in bulk is purposely used against me (who ships entirely in barrels) in order that I can not compete with the Standard Oil Company in the sale of my products.

"By these rates thus given me to nine prominent points in the South you discriminate against my shipments not less than 67 per cent. and as high as 213 per cent., while to one—Huntsville, Ala.—you make the rate the same per 100 pounds for both barreled oil and that in tank cars. I will here show you how I arrive at this comparison:

"All the bulk oil carried in tank cars from the Pennsylvania oil regions to the seaboard pays the same amount for 50 gallons in bulks as for 50 gallons (including the barrel), or the empty barrel is carried extra to compensate for the return of the empty tank car, and can not bring back freight as against a box car that can. I maintain and assert that the tank cars of the Standard Oil Company hold at least 100 barrels of 50 gallons (or 5,000 gallons each) on an average, while some of them hold over 6,500 gallons (or

130 barrels), but for a fair and equitable basis I will call it 100 barrels, and herewith give you the results and the amount of discrimination you dare to impose on me in the face and eyes of the interstate act:

From Cincinnati to—	Per car, tanks.	Per barrel.	Per 100 pounds in barrels of 400 pounds.	Per barrel.	Discrimination.
			Cents.		Per cent.
Lexington, Ky.....	\$28.00	\$0.28	18	\$0.52	100
Chattanooga, Tenn.....	50.00	.50	33	1.32	164
Atlanta, Ga.....	61.80	.62	46	1.84	196
Birmingham, Ala.....	60.00	.60	47	1.88	212
Meridian, Miss.....	60.00	.60	45	1.80	190
Knoxville, Tenn.....	50.00	.50	33	1.32	164
Shreveport, La.....	118.00	1.68	94	2.56	117
Montgomery, Ala.....	112.00	1.12	47	1.88	67
Vicksburg, Miss.....	60.00	.60	34	1.36	126
Huntsville, Ala.....	(*)	.....	(*)	.....	.....

\*Thirty-seven cents per 100 pounds for both.

"Do you really think that under the interstate act you can boldly go on and thus discriminate against my shipments to the ruination of my business, which you doubtless are willing to hazard in the interest of the Standard Oil Company so long as they foot the bills or compensate you for all damages that may accrue for such gross violations of the law?"

"I desire to call your attention to section 10 of the interstate act as a further warning from one who wants to ship his oil products over your line, and to give you notice that for every tank-car load of oil, as well as for every smaller lot, L. C. L., that you have carried since the interstate act has taken effect, and all such from this time forth that discriminates or has discriminated against my shipments, I shall hold your road and all the officers concerned therein to a strict accountability for each and every offense. I emphatically protest against such gross discrimination and call upon you to desist as an extra warning. If at any time you conclude to change your tactics upon this subject please inform me."

June 2 came the reply:

"Your two letters of the 30th ultimo to hand. The rates on coal oil from Cincinnati to New Orleans are at present as follows: Tank cars, \$60 per car; barrels, 34 cents per 100 pounds.

"It will be necessary for me to communicate with my connections before I can quote rates to Mobile. I will, however, do this as early as possible. As regards the rate to Huntsville, I would explain that the M. and C. Co. refuse to make any reduction to the local stations; therefore, I could not give you a lower rate on coal oil in tank cars than is made on barrels. We very much prefer to handle this traffic in tank cars, and I should be glad if you could conveniently arrange to forward your oil in this manner. I completely fail to find any discrimination in this, as the rates are open to you and to all other shippers, and I shall be glad, indeed, if you can use them.

It is scarcely necessary to follow this correspondence further. From this time on it consists largely on the part of complainant of complaints he makes of discriminations as against barrel rates. We think and we find that complainant was unjustly discriminated against by the Cincinnati, New Orleans and Texas Pacific Railway Company during the whole period covered by the petition filed against it, and was also unjustly discriminated against by the same railway company in connection with the Alabama Great Southern Railroad for the like period. We find that the tank rates, which were made uniform, regardless of quantity, were in themselves an unjust discrimination. The general freight agent notifies complainant that they were made on an estimate of seventy barrels capacity. A statement put in evidence by the Standard Oil Company of Kentucky, which was the principal shipper in tank cars, showed the average capacity of tanks made use of in their shipments to be over a hundred barrels. This increased enormously the difference between rates in barrel and tank shipments, which we have already found would have been excessive had the capacity of the tank cars been no more than it was assumed to be.

We also find that there was unjust discrimination as against complainant and in favor of the Standard Oil Company of Kentucky, in this, that from April 5th to April 21st defendant was nominally making a uniform rate on oil in barrels and in tank cars by

the hundred pounds, but it shows without dispute that the Standard Oil Company of Kentucky was during that time sending oil in tank cars over defendant's road apparently at tank-car rates. If the rates were computed by the hundred pounds it was not only on an assumed basis, but on one that fell far short of actual weight. In point of fact, there was no shipment whatever in tank cars by weight.

It is noticeable also that it was not until May 28 that complainant was enabled to obtain tank-car rates to Lexington, Chattanooga, Atlanta, and other towns named in his letter of that date, yet the Standard Oil Company had all the while been shipping to those points over this road, and, of course, had rates given it.

It is further to be noted that complainant was not, on his request for it, given the information whether, if he supplied himself with tank cars and sent his oil by that mode, he would be charged for the return of the empty cars. He should have been given the very important information that trackage was paid by defendant instead of a charge exacted.

The general freight agent failed on the hearing to explain why he several times made reference in his letters to the classification of the Southern Railway and Steam-ship Association. The circumstances fairly called for such an explanation. It is an important fact, which this officer should have perceived, that without this classification sheet a shipper would be unable to ascertain what the rates over his road were without coming to him for them, and yet his company accepted the classification only in part, and claimed not to be responsible for it further. He seems to ignore the fact that, except in connection with the classification, the publication of his rates is not in compliance with the law.

It is quite possible that this officer, and also the corresponding officer of one or more of the other defendants, did not believe complainant was in good faith endeavoring to obtain tank rates for his own use. We do not ourselves know that he was; but that was no excuse for keeping from him or from anybody else a knowledge of such facts as would affect the rates. The general public had a right to know what the rates were, and any one who was contemplating even the possibility of making use of them had special right to ask for them. Complainant had a legal right to know whether, when the charge was to be made by the 100 pounds, it would be on an actual weighing or on an estimate.

He had an equal right to be informed that instead of being charged for the return of the empty car he would be paid for its use.

The published rate-sheets, so far as they related to rates on the lines of these defendants, ought to have given the information on both these points, and if they were blind or ambiguous it should have been supplied on request.

The Newport News and Mississippi Valley Company and the Louisville, New Orleans and Texas Railroad Company we find to have been guilty of discrimination against complainant in taking tank cars irrespective of capacity, on an assumption that the average capacity was eighty-five barrels, and charging therefor a rate which, as compared with the rate on barrel shipments, would have been relatively too low had the capacity been as was assumed, and which was relatively very much too low in view of the actual capacity.

On the hearing it was insisted on behalf of the first-named of these two defendants that the assumption on which its rate was estimated was made in good faith, and upon information given by an agent of the Standard Oil Company of Kentucky, which was believed to be correct, but which proved not to be so. The agent who gave the information was before the Commission and admitted giving it, but insisted it was given after the shipments in question were made, and that, as he understood the question put to him, it related to another line of cars, and not to the line in use on defendant's road. It is, perhaps, not very important now whether defendant's officer was or was not in fact misled. The mischief, so far as concerned the business of complainant, was done by giving tank-car rates instead of rates by the weight or quantity; and this wrong, which was one of policy on the part of this defendant, was made more prominent and perhaps damaging by a misstatement in the correspondence.

Complainant had expressed a purpose to obtain tank cars for his own business, and was desirous to know whether he was to be charged by the car irrespective of the capacity. This, we have seen, was the practice on the road of this defendant; but in reply he was told that the tank car was estimated at 20,000 pounds, and if the weight was more the excess would be charged for. To make sure on this point he wrote the general freight agent, and the reply, June 1, 1887, was, "A tank car is supposed to weigh 20,000 pounds; if it weighs more, then we will charge for it." In point of fact the assumption was that the weight was very much greater; 85 barrels at 325 pounds each would be 27,640 pounds, and defendant did not make any additional charge when the weight reached 35,000 pounds, as it sometimes did. If this statement was made in good faith it is difficult to account for it, and it is not accounted for. If it was the result of mere carelessness it was not the less misleading to complainant. The necessary tendency was to discourage him from entering into competition in this mode of ship-

ment if he had a purpose to do so, as he professed to have. Had he provided himself with cars for tank shipments and been charged as he was told he would be, the discrimination against him would have put success in the traffic out of question.

It appears that this company had no rule or settled practice as to paying trackage for the use of tank cars, and considered itself at liberty to deal with that subject by special contract. The facts were brought out by questions put by members of the Commission, as follows:

"Q. Do you pay car service on the tank cars?—A. On some cars only. We have an arrangement by which we do not pay.

"Q. On which do you not pay?—A. We have an arrangement with M. K. Fairbanks & Co. I do not think we pay anything on those cars, but we haul them empty free.

"Q. Well, on the other cars, do you pay car-service the same way?—A. We are compelled to pay the same as our competitors, or we could not get the cars to handle that business. It is three-fourths of a cent a mile.

"Q. What do you mean by 'that so far as this company is concerned, we do not pay mileage in either direction or haul any empty cars free?'—A. That letter was written in April. At that time the matter was being discussed between the lines that refused to pay mileage on any cars, and because they spoke of its being abrogated by all lines.

"Q. Then your statement there that you do not pay mileage was based on the belief that the conference resulted in their refusing to pay?—A. Yes, sir; refusing to pay mileage on all empty cars; but I told Mr. Rice in person that we would allow him the same as anybody else.

"Q. Is your tank-car mileage the same as it is on any other cars?—A. Yes, sir; three-fourths of a cent.

"Q. That is the regular mileage paid on cars?—A. Yes, sir.

"Q. Can you specify the shippers to whom you pay mileage and those you do not?—A. That is an account not kept in my office; but I know that with some we have an arrangement not to pay mileage.

"Q. You have no uniform rule on that subject?—A. That depends on the kind of agreement made on the business.

"Q. As far as you know, M. K. Fairbanks & Co. is the only concern to which you do not pay mileage; is that it?—A. I can not say that.

"Q. You have stated that it is the only concern you know of?—A. No, sir; I am not prepared to say it is. I do not know it to be so, because I think possibly others are not paid mileage by us.

"Q. How is it with reference to the Union Tank Line cars?—A. I think it very possible, but we do not keep that account in my office."

Here it is obvious are or may be present all the mischiefs that attend the giving of special rates and rebates. The railroad manager who supposes this is to be admissible has not fully grasped the significance of those features of the act to regulate commerce which were enacted to establish uniformity, equality, and publicity.

It is proper to say on behalf of these two defendants that after the filing of the complaint their rates were revised and made much more reasonable and just. It is also proper to give them the benefit of the protest made by the general agent of the first-named company against being supposed to have intentionally carried the very large tanks with knowledge of the actual capacity. If the officer was misled, as he claims to have been, the blame should fall upon the party deceiving him. We can not say in this case that there was anything more than an honest misapprehension, and are inclined to think that such was the fact; but one of the difficulties attending cases of this nature is, that while the law imposes severe penalties on the carrier and its agents for acts on their part designed or calculated to create discrimination as between shippers, it imposes none on shippers themselves who by artifice, misrepresentation, false billing, or other deception of the carrier secure advantages to themselves which it would be illegal and punishable for the carrier voluntarily to grant. If, therefore, the agent of the Standard Oil Company had purposely misled the defendant's officer in the matter referred to, and thereby obtained an unfair advantage, the complainant would be without redress, unless on the ground of negligence defendant could be held responsible for acting upon the false information.

The Illinois Central Railroad Company we find to have discriminated unjustly against claimant by making some of the barrel rates excessively high as compared to those on tank-car shipments; and also by shipping at car rates, irrespective of quantity, while leading complainant to understand that if the capacity exceeded a specified minimum the excess would be charged for.

From the evidence it appears that during the period in controversy tank-car shipments were made over the road of defendant to New Orleans only. To points to which no tank-car shipments were made this defendant did what was also done by the Louisville

and Nashville Railroad Company in some cases—made the same rates by the 100 pounds, whether shipments were made in tanks or barrels. If these equal rates were offered to the public in good faith, defendant ought to be compelled to give the like uniform rates to points to which tanks were sent; and if they were not offered in good faith, the defendant ought to be held estopped by its own rate-sheets from disputing the justice of this uniform rule.

But in this case we find, as we have so often found in others, that parties applying for tank-car rates are misled into supposing they are graded by quantity, when in fact they are uniform by the tank car.

May 3, 1887, the general freight agent of defendant wrote complainant as follows:

"Yours without date. I replied to your previous letter promptly, stating that the rate on oil from Cairo (according to the tariff sent you) when in full car-loads would take fourth class, released, whether in tanks or barrels, which will give the information desired."

May 4 he wrote again:

"Yours of the 30th ultimo. Our rates on oil in car-loads, released, 20,000 pounds and over, Cairo to Jackson, Miss., 50 barrels and over, \$1.65 per barrel; in tank cars, 24,000 pounds and over, 47 cents per 100 pounds; Cairo to New Orleans, in barrels or tank, car-loads, 24,000 pounds and over, 24 cents per 100 pounds.

"We have no rates at present in effect from Cleveland, but would refer you to H. Coope, Ga., O. & W. Railroad, Cincinnati, Ohio, for rates from that point to New Orleans and Jackson, Miss., via Odin."

What is noticeable in these letters is that the rate given is the same on shipments in the two modes, and that a minimum car-load rate is mentioned. The agent explains in oral testimony before the Commission that the rates here specified were old rates temporarily restored, and that there was a complete revision of rates afterwards.

May 31 the agent writes complainant:

"Rates on oil.—I have your much appreciated favor of the 26th instant. We charge for actual weights on oil, whether in tanks or barrels, and, as previously advised, our rates are to all shippers alike.

"Tanks which are hauled one way loaded are at present returned without extra charge in the same manner as other foreign cars are handled.

"The Mississippi Valley joint classification makes coal oil in car-loads, whether in wood or in tanks, fourth class, which rates we charge to points taking Mississippi Valley joint classification."

The agent says of this letter in his oral evidence:

"That refers to oil to local stations. It does not refer to New Orleans, as Mr. Rice has been repeatedly advised what the rate was there."

To put this in plain English it is this: Defendant proposed to charge for actual weight on oil in tanks to the points only to which no shipments in tanks were made. The offer of equal rates to the shippers in barrels was therefore illusory.

September 30 complainant wrote the general freight agent—

"I desire and propose to build twenty tank cars immediately to run over your lines, provided you will assure or guaranty me as low net rates as you accord to any other shipper, regardless of quantity shipped; also that you will carry oil for me in tank cars from any point or station on your line to points on and beyond your lines at the same proportionate (or division of a through rate) that you receive or get out of the most favored shipper.

"Please state how large capacity of tank cars you would allow to run over your road and how large tank cars have been used on your road; please answer promptly."

The answer, November 2, is as follows:

"Rate on oil from Cairo.—Upon returning to my office, after an absence of several weeks out on the line, I find your favor of September 30 and October 13.

"Coal oil or its products in barrels is now third class; if released, sixth class; actual weight to be charged for each case, but not less than 24,000 pounds per car load. I trust this heavy reduction in our local rates will enable you to do a large business over our line. As regards our guarantying you as low net rates as other shippers are charged, I have repeatedly assured you that our rates are the same to all shippers, and I do not know that I can do any more than already stated in this matter.

"I believe the largest tank cars we have hauled over our line contained about 40,000 pounds and as low as 20,000 pounds.

"I trust these new rates will enable you to ship over our line not only to the strictly local stations, but to Jackson, Tenn., Holly Springs, Grenada, and Jackson, Miss., as well, at all of which points there is a good trade.

"We would also like to handle business for you to Aberdeen, West Point, and Starkville, Miss., which points we can reach via Durant and C. A. and N. Railroad."

This answer was as polite as it was misleading. The party writing desires us to understand that it had no reference to shipments to New Orleans, though nothing in it

or in the letter to which it was an answer would restrict it in any such way; and how this officer could reconcile it to his duty to his own company or to the public to allow shipments of 40,000-pound tanks to New Orleans at the rates charged on tanks of 20,000 pounds he fails entirely to explain, as he does also to explain or excuse his discrimination in this regard between the shipments to New Orleans and those complainant might make to other points to which the other shippers over defendant's line were not sending tank cars.

Here, again, the question of paying for the use of the tank cars comes in question. It has been seen that on May 31 the general freight agent wrote: "Tanks which are hauled one way loaded are at present returned without extra charge, *in the same manner as other foreign cars are handled.*" What is meant by this we do not know. All the evidence adduced before us tends to show the rule to be that foreign cars are not merely returned without charge, but that their use is paid for.

This officer being on the stand, the following proceedings took place:

"Q. What mileage do you pay for the use of tank cars?—A. I have nothing to do with mileage.

"Q. Have you no knowledge as to the amount of mileage paid?—A. If there is any paid it is three-fourths of a cent, the same as other cars. We make no discrimination in that matter.

"Q. You treat one car the same as you do the other?—A. That is my understanding."

If the general freight agent of the defendant did not know what the rule was on this important subject it may be safely assumed that the defendant made no publication which gave the information to the general public. So long as that was the case a protest that the defendant makes no discrimination is not very assuring. The public was entitled to information given in an authoritative way as a part of the rate sheet itself, and should not have been left to suppose or imagine that it was or might be the subject of private arrangement.

Nothing in these cases more distinctly challenges attention than the fact that several of the defendants, while giving tank rates regardless of the quantity carried, informed complainant, when interrogated by him on the subject, that if the quantity exceeded a certain specified weight a charge would be made for the excess. The published rate sheets ought to have given clear and reliable information on the subject, and it was only because they were silent or ambiguous that the inquiries became necessary. The remarkable thing about the matter is that so many of these defendants should make the same mistake; a mistake, too, that it was antecedently so improbable any of them would make. The Louisville and Nashville, the Cincinnati, New Orleans and Texas Pacific, the Newport News and Mississippi Valley, and the Illinois Central Companies are all found giving out the same erroneous information, and no one of them can tell how or why it happened to be done, much less how so many could contemporaneously, in dealing with the same subject, fall into so strange an error. It is to be noted, too, that it is not a subordinate agent or servant who makes the mistake in any instance, but it is the man at the head of the traffic department, and whose knowledge on the subject any inquirer would have a right to assume must be accurate. In no case is the error excused, and if it be conceded that there was no purpose to mislead, the case is not relieved of unpleasant features, for gross negligence, when it is damaging, may be equally culpable with wrongs of intent.

In our review of these cases two facts have been constantly pressing upon attention as constituting cogent, if not conclusive, proof that the several defendants operating lines east of the Mississippi were not endeavoring by their tariff sheets to adjust their rates on grounds of relative justice as between themselves and their patrons, and also between the two classes of patrons, and that the considerations which they say in their answers and testimony entitled them to make the higher charge on barrel shipments were not controlling in the fixing of rates.

One of these facts is that they made tank-car rates regardless of quantity. It can not be said that this was done in ignorance of the great differences which existed. It clearly appears that it was generally known that the differences were very great. If it had not been known it should have been. The evidence shows that the weight and capacity of the tank cars of the Standard Oil Company of Kentucky were not stenciled upon them, as was the case with the like cars of some other lines, but the difference in size must have been very obvious to the eye, and defendants, it is to be presumed, had the means at any of their important stations to weigh or gauge them.

The other fact is that the discriminations were made on no principle, and could not possibly have been measured from a consideration of the circumstances which defendants say entitled them to impose the heavier charges on the traffic carried on in barrels. Sometimes the rates were made the same, and when that was the case no reason has been assigned therefor which would embrace all the cases and distinguish them from other

cases in which the discriminations were very great; but when discriminations were made the excess in charge upon barrel shipments varied from 20 per cent. to 200 or more. Neither greater risks, greater expense, competition by water transportation, or any other fact or circumstance brought forward in defense, or all combined, can account for these differences. The conclusion is irresistible that the rate sheets were not considerably made with a view to relative justice.

We have thus, with as much brevity as was practicable, in view of the great bulk of evidence, reviewed these cases and expressed our conclusions. It remains only to direct what orders shall be entered in the cases, respectively.

In the case against the Louisville and Nashville Railroad Company order will be entered that the defendant do forthwith cease and henceforward abstain from the unjust discrimination found to exist in its charges for the transportation of petroleum oils as between shipments in barrels and in tanks, and from making any higher charges by the 100 pounds for the transportation of the oils in barrels, including the barrels, than it makes or shall make contemporaneously for the transportation of the like weight of the oils in tanks.

It will be further ordered in the same case that the said defendant do forthwith cease and hereafter abstain from making uniform rates for the transportation of petroleum oils by the tank car instead of by weight or quantity when the capacity of the tank cars in use on the lines of road is not uniform or nearly so; the necessary effect of such uniform rates by the tank being to establish unjust discriminations and to give to shippers of oils in tanks undue and unreasonable preference and advantage.

In the case against the Saint Louis, Iron Mountain and Southern Railway Company order will be entered that the defendant do forthwith cease and henceforward abstain from the unjust discrimination found to exist in its charges for the transportation of petroleum oils as between shipments in barrels and in tanks, and from making any higher charges by the 100 pounds for the transportation of the oils in barrels, including the barrels, than it makes or shall make contemporaneously for the transportation of the like weight of the oils in tanks.

In the case against the Cincinnati, New Orleans and Texas Pacific Railway Company order will be entered in the same terms as the order above directed to be entered against the Louisville and Nashville Railroad Company.

In the case against the Cincinnati, New Orleans and Texas Pacific Railway Company and the Alabama Great Southern Railroad Company order will be entered in the same terms as the order above directed to be entered against the Louisville and Nashville Railroad Company.

In the case against the Newport News and Mississippi Valley Company and the Louisville, New Orleans and Texas Railroad Company order will be entered in the same terms as the order above directed to be entered against the Louisville and Nashville Railroad Company.

In the case against the Newport News and Mississippi Valley Company and the Illinois Central Railroad Company order will be entered in the same terms as the order above directed to be entered against the Louisville and Nashville Railroad Company.

In the case against the Illinois Central Railroad Company order will be entered in the same terms as the order above directed to be entered against the Louisville and Nashville Railroad Company.

In the case in which the Illinois Central Railroad Company is sole defendant, it is unnecessary to enter any order at this time. In so far as discriminations have arisen from rates on tank shipments they will be corrected by this company if the order made against it in the case last above mentioned is observed. As to the further controversy which this case presents, what is said in the cases against the Mobile and Ohio and the Mississippi and Tennessee Railroad Companies is directly in point.

In each of the cases in which an order is to be made, as above stated, a report and finding of facts and conclusions is entered herewith and is to be considered a part hereof.

*A history of the organization, purposes, and transactions of the General Council of the Petroleum Producers' Unions, and of the suits and prosecutions instituted by it, from 1878 to 1880.*

Prepared by a committee appointed by the General Council, February 19, 1880, in pursuance of the following resolution: "Resolved, That a committee of three be appointed by the chair, to prepare an abridged history of the organization, purposes, and transactions of the General Council of the Petroleum Producers' Union, and a history of the several suits and prosecutions instituted by it from August, 1878, to February, 1880, and that the same be printed in pamphlet form for the use of the council."

[Published by order of the General Council of Petroleum Producers' Unions at its regular meeting at Titusville, August 10, 1880, to which the committee reported the following pages.]

In order that a connected narrative of the absorption of the petroleum traffic by the Standard Oil Company may be given, the resolution of the Producers' Council of February 19, 1880, complied with, and a full understanding of the various proceedings instituted arrived at, it is necessary to look back to the 9th day of April, 1872. On that day the South Improvement Company and corporations controlling the trunk lines of railway combined with it formally surrendered to a mass-meeting of producers held in Oil City. On that day, after a vigorous campaign of less than three months, the united oil producers of western Pennsylvania had compelled the abandonment by the South Improvement Company and the great railroad corporations of the contracts under which they had intended to plunder the producer and consumer of petroleum, the repeal of the charter under which the combination purposed legalizing its acts, and had formally executed, with enthusiasm and trusting confidence, a written agreement with the various railroad companies, solemnly attested with corporate seals and official signatures, guaranteeing to refiners and producers equal and open rates of freights. The Producers' Union declared their work accomplished, threw down the sword, spear, and shield, hung up their armor of defense, and rested from their heroic and successful labors amid praises and congratulations.

Not so, however, the conspirators with whom they had been contending. Defeated, frightened, and humiliated, they retired sullenly to their cities of refuge, from whence they had sallied forth with too much self-confidence, and, determined to profit by experience, proceeded to concoct new schemes for the absorption of the traffic in petroleum. Indeed, it can not be supposed, in the light of subsequent acts, that they for a moment abandoned their original intention. The cup they had seen dashed from their lips when they were about to quench their greed with millions of unlawful gains still presented itself to their thirsty imaginations. Confident of a plan based upon the corrupt acquisition of millions without the investment of a dollar, and sure that in the weakness of human nature they would find the necessary tools to enable consummation to follow design, they waited with calmness until the storm that had temporarily wrecked their schemes should subside, and men should again begin their lawful avocations in the security of promises made only that they might be broken.

The producers had made war against the combination between the South Improvement Company and the railroad corporations because by agreements in writing signed by the Pennsylvania Railroad Company, the Erie Railway Company, the Atlantic and Great Western Railroad Company, and the New York Central and Hudson River Railroad Company and the South Improvement Company, it had been expressly declared to be the design to prevent competition in refining and transporting by a system of secret rebates and drawbacks, and thereby to build up the South Improvement Company, and because the inevitable result would be to control the price of the crude product at the wells and substitute one buyer for many competitive purchasers. Further than this it was the intention to absorb the producing interests as well as the refining, and to place in the hands of one great corporation, with charter privileges almost unlimited, the absolute control over the first crude export of the nation, annually yielding to the public in 1872 many millions of dollars. This statement is warranted by the terms of the South Improvement contracts and by the testimony given by William G. Warden and others before the Congressional Committee on Commerce in 1872. No political economist, no statesman would risk his reputation by denying that such a monopoly was as dangerous to the principles of our Government as to the prosperity of its commercial interests and the private rights of individuals and communities.

The men who originated the South Improvement Company were, so far as known, William Frew, Charles Lockhart, and William G. Warden, composing the firm of Lockhart, Frew & Co.; John D. Rockefeller, William Rockefeller, Henry M. Flagler, O. H. Payne, stockholders and directors of the Standard Oil Company, of Cleveland, Ohio; Jabez A. Bostwick, Peter H. Watson, then president of the Erie Railway Company, and Waring Bros., refiners. These persons, with few exceptions, not educated in any cor-

rect school of business, and some of them accustomed to the crooked and equivocal methods of railroad management and mismanagement, committed the error of openly avowing their purposes, and had not sufficient moral perception to know that they were embarking in a criminal conspiracy against the laws of commerce, the principles of republican government, and the prosperity of their fellow-citizens. It is evident that this was one of the lessons learned by the defeat of 1872, and being better advised, their course thenceforward was cautious, secret, and tortuous, and their approach to the object of their ambition stealthy and studied.

Armed with the knowledge of experience, and advised by legal talent, while the unguarded producer and refiner, wreathed with the laurels of recent successful combat, slept in fancied security, the South Improvement Company, with a new suit of clothes and no name, stole into the oil regions and began its second campaign.

It is said that the ink was scarcely dry upon the paper upon which was written the contracts of 1872 before propositions were made to violate them in favor of certain parties. Certain it is as early as 1873 complaints began to be heard that a secret rebate was being given by transporting companies to certain refiners, and the business of others was being injured by inability to secure as cheap transportation for oil manufactured at Titusville, Oil City, and Franklin as for that at other places, and particularly Cleveland, Ohio.

The years 1873 and 1874 saw the formation of the "Central Association" of Refiners, of which John D. Rockefeller was president and Charles Pratt, treasurer. While this was designed to consolidate the refining interest, and while it received a rebate from the railroad companies, yet its members did not all prosper. If money was made, it was not apparently divided with impartiality; for, while Rockefeller and those intimately connected with him seemed to prosper, other oil region refiners found themselves growing poorer and poorer.

In October, 1874, the general freight agent of the New York Central and Hudson River Railroad Company issued a circular by which it was apparent that a combination had been formed to absorb all competing lines of pipe in the oil region, and place the transportation of petroleum from the wells under its domination.

From 1874 to 1875 the refiners were approached with offers to purchase their works. With few exceptions they were losing money, and, as they believed, solely through the operation of the rebate system. They could not secure equal rates of freight with others. There was evident discrimination in favor of Cleveland, from 200 to 300 miles farther from the sea-board by rail than the oil region refineries. The Standard Oil Company of Cleveland, Ohio, did not seem to be losing money. Organized in January, 1870, with a capital of \$1,000,000, its capital was increased in February, 1872, \$1,500,000, and March 13, 1875, \$1,000,000 more, making an aggregate of \$3,500,000.

From the summer of 1874 to the summer of 1875 nearly all the refineries of the oil region and of Pittsburgh passed, by sale or lease, into the hands of the Ohio corporation.

From 1875 to 1877 it became evident that the Standard Oil Company had become interested in the ownership and management of the pipe lines from the wells, and that it had taken into partnership either the railroad companies themselves, or else such controlling officers of those companies as could be approached, and from the nature of their duties and positions were useful.

Early in the year 1877 the Standard Oil Company, the United Pipe Lines, controlling local transportation throughout the region, except that of the Union Line, and all the trunk lines of railroad except the Pennsylvania, struck their final blow by inaugurating a war upon the latter railroad, the object of which was to bring it into the combination and force the sale by it to the Standard of the Union Pipe Line and all the oil-carrying equipment of the Empire Line, together with those refineries that had been built in its interest, or were supplied by the transportation lines of the Pennsylvania Railroad and the Union Pipe Line. Enormous rebates were allowed by both the United Pipe Lines and the railroads in the combination, and the Standard party were enabled to deliver petroleum at the sea-board almost free from transportation charges, and put it upon the market in New York at about the same price it was worth at the wells. The Pennsylvania Railroad and its feeding pipe lines and sustaining refineries succumbed to this pressure, and the whole passed, on the 17th day of October, 1877, into the ownership and control of the Standard combination, of which the Pennsylvania Railroad then became itself a member.

In the mean time the Standard party had materially strengthened themselves, by taking into their outer circle such prominent producers and refiners in the oil region as they believed would be useful to them in the event of another contest like that which had broken them in 1872. Many were paid high salaries for nominal services; others were contracted with in such way that they received portions of the profits; some of these contracts were shamefully violated by the Standard. But in all cases they managed to retire the capable business men who had been engaged in refining from that occupation for a term of years, and bind them by pecuniary and penal obligations to silence, inactivity, or co-operation.

The petroleum producers began to see that their enemy had surprised them, and that the South Improvement Company, with its giant combinations, its secret rebates, its purpose of monopoly, was an existing fact, firmly established in the producing region, in the centers of trade, and in mysterious and inaccessible recesses of the railroad rings.

A movement was at once inaugurated to stay the further progress of the combination, and producers' unions were formed in nearly every city, borough, village, and producing district of the oil region.

By the constitutions of the unions, all persons engaged, directly or indirectly, in the production of petroleum were entitled to membership upon taking an obligation of secrecy as to the business transactions of the association, which obligation, however, was soon afterward removed. Each local union was entitled to five representative delegates to the General Council of the Petroleum Producers' Unions. Subsequently the basis of representation was fixed at two delegates for the first twenty-five members and one delegate for each additional twenty members of any local union. From twenty-five hundred to three thousand persons were enrolled as members of the unions.

The objects of the unions were declared to be "the collection and dissemination of valuable information respecting the production, storing or tanking, shipping, refining, and consumption of petroleum; the securing the most advantageous facilities for transportation; the protection of the producing interests against unfriendly legislation and unjust exactions; the correction of all abuses and pernicious practices detrimental to the producing business, and the improvement of the trade generally."

The first meeting of the General Council of the Petroleum Producers' Unions was held in the Universalist Church in the city of Titusville, on the 21st day of November, 1877, and remained in session day and evening during three days, one hundred and seventy-two delegates being present. Its organization was completed by the election of Benjamin B. Campbell as president, A. C. Hawkins and A. J. Wilcox as vice-presidents, Henry Byrom as secretary, George Boulton as treasurer, and W. H. Huffman as sergeant-at-arms. To carry out the purposes of the council and the unions as declared in their constitutions, standing committees were chosen upon the following subjects: Finance, reports and statistics, transportation, pipe lines, patents, refining, legislation, national legislation. To these were afterwards added a committee upon legal remedies. The second Tuesday of each month was fixed as the day for regular meetings of the general council, and the city of Titusville as the place.

The scope of the narrative will not admit of an extended account of the transactions of the general council. It will be sufficient to say that that body, composed of the ablest and most intelligent citizens of northwestern Pennsylvania, selected from among the body of the people throughout the counties of Allegheny, Armstrong, Butler, Clarion, Venango, Crawford, Warren, and McKean, from November, 1877, for many months, gave to the business of the unions their time, attention, and best thought, and their recommendations and work may be briefly summarized. One of the earliest acts of the council was to advocate the adoption of some system by which overproduction of petroleum could be prevented. Efforts were made to stop the drilling of new wells and to induce individuals to provide storage for their product in order that they might not be subjected to the making of forced sales. Had it not been for the unprecedented development of the McKean County field, and the introduction into the producing business of a large number of operators who had not before been producers, it is possible something might have been accomplished in this direction. But the producers continued to crowd each other with new wells and to rely solely upon the United Pipe Lines to furnish storage and local transportation. The result was that the eager driller of wells found his product at the mercy of his purchaser and was speedily subjected to low prices and loss of oil.

At the date of the first meeting of the general council the entire storage and transportation facilities, local, and to the seaboard, had passed into the hands of the Standard Oil Company and its confederates. Immediate measures were taken looking to the establishment of some independent transportation line. The Seaboard Pipe-Line, then projected, was encouraged, and a plan formed by which producers should become part owners thereof, with a voice in its management, under the direction of the council. The Equitable Petroleum Company was formed exclusively of producers of petroleum in the McKean County field, and this enterprise was also encouraged by the general council. This company was intended to give an independent outlet by local pipe transportation to the McKean and Buffalo Railroad and thence to Buffalo, and by way of the Erie Canal to New York. In July, 1878, this line began to carry oil, and to a limited extent afforded relief. It was not allowed to operate in peace. The hand of the combination was laid upon it at every movement, and railroad companies violated their contracts, took up their side tracks, refused connections, and generally did the bidding of their masters, occasioning delay and loss.

When the proposed plan for the producers to become interested in the Seaboard Line had been abandoned and the Tide-Water Pipe Line Company inaugurated its enterprise,

it was considered advisable to encourage this also, as it promised to be an independent transportation and storage line, and to be in no way under the control of the Standard combination.

In the mean time the committee on legislation was not idle. It procured to be prepared and introduced in Congress the first and original bill, since known as the "inter-state-commerce," or "anti-discrimination" act, and successively advocated by Mr. Watson, of Pennsylvania, and Mr. Reagan, of Texas. A similar bill was introduced in the Pennsylvania legislature, in which body it passed the senate, but met sudden death in the lower house, in which it was said few were able to understand it. No one has been found to dispute this want of intellectual capacity, nor that natural obtuseness was materially assisted by the influences prevailing in that body.

A more stringent law regulating the business of companies engaged in the transportation and storage of petroleum, and designed to prevent the issuing of fraudulent certificates or accepted orders for oil not in fact representing the actual commodity, was allowed to pass the Pennsylvania legislature, but only because it contained a clause repealing the former law, and thereby relieving pipe-line officials who had transgressed it from the penalties of fine and imprisonment. The proposed free-pipe bill likewise failed to become a law. The design of this was to enable all persons and companies complying with the law to procure charters under which the right to condemn a right of way in the manner prescribed by railroad law could be exercised, and the continuity of a line rendered possible across those points where hostile ownership of land or of railroad rights of way had heretofore prevented the laying of pipes, and greatly increased the expense of transportation.

May 15, 1878, a committee of the council summed up their report in reference to these matters by this condemnation of the legislature of Pennsylvania:

"How well we have succeeded at Harrisburg you all know. It would be in vain for your committee to describe the efforts of the council in this direction. It has been simply a history of failure and disgrace. If it has taught us anything it is that our present law-makers, as a body, are ignorant, corrupt, and unprincipled; that the majority of them are, directly or indirectly, under the influence and control of the very monopolies against whose acts we have been seeking relief. \* \* \* There has been invented by the Standard Oil Company no argument or assertion, however false or ridiculous, which has not found a man in the Pennsylvania legislature mean enough to become its champion."

It is not likely that the venal statesmen referred to were much impressed by the opinion expressed of them. But when we remember that the men who came to this deliberate conclusion represented in business a product worth millions to the country, in population a quarter of million citizens of Pennsylvania, and in sentiment several millions of people, language fails in attempting to properly characterize the sordid rogues who are willing to prostitute themselves and their official positions to the injury of their fellow-citizens, merely that they might, for a time, be recognized as the supporters of corrupt power.

Before the legislature of the next year, 1879-1880, and before the next Congress, the fate of the legislation proposed by the oil producers was the same. They were petitioners without listeners, and beggars not only without benefaction but whose prayers were treated with contempt. Congressmen had not yet been educated to the point where they could comprehend the necessity of a law regulating interstate commerce, and the Pennsylvania legislature—the law-making power—failed to give relief in that State.

In May, 1878, the committee on legal remedies reported that it advised the council to consult lawyers, with a view of enforcing whatever existing laws there might be, prohibiting conspiracies in restraint of trade and discrimination in freight rates by common carriers, and soon afterward the committee was authorized by the council to take the preliminary steps. It will be observed that, so far, neither the local unions nor the council had brought any practical relief to the oil-producing interest; and, beyond the benefits of organization and education of the public as to the evils complained of, and the principles by which they might be remedied, nothing had been accomplished.

Before entering upon a narrative of the institution of the several legal proceedings it may be well to give a condensed account of the condition of the oil trade during the period from November 1, 1877, to September, 1878, the former being the date at which the Standard Oil Company absorbed the Pennsylvania Railroad and its pipe lines and refineries, the only remaining outlet not before swallowed up, and the latter the time at which legal proceedings were determined upon and begun.

So far from being in the least diverted from their objects by the organization of the producers, the Standard combination continued their oppressions with renewed vigor, and seemed determined to show, by the rapidity and force of its blows, that there would be no repetition of the South Improvement surrender, and no concessions would be made except at the end of successful warfare, resulting in the victory of the producers.

During the months of October and November, 1877, the United Pipe Lines gave a rebate upon pipe-line freights to the Standard party, Warden, Frew & Co., J. A. Bostwick, and others of 17½ cents per barrel on a local pipeage rate of 30 cents. In December, 1877, it was announced that the United Pipe Lines could not take care of the oil produced, and great difficulty was experienced in getting oil carried from the wells. Asserting that, by reason of its inability to move and store petroleum, it was necessary that all oil taken by it should be immediately shipped from the lines by rail, the United Pipe Lines began to require the well-owner to contract that the oil he desired to be transported should be sold for "immediate shipment," and would pay for such oil, when so contracted, a price from 2½ to 25 cents below the price of its paper representative, daily sold in the Oil Exchange. The making of this contract for immediate shipment was a condition precedent to relief of the producers' well tanks by the pipe line.

Even when these contracts were made no immediate relief was had, the line refusing to pay for the oil until all had been taken by it, and refusing to take what it had contracted to buy for days and weeks, and frequently leaving a few barrels of the purchase in the producer's tank while they removed the greater quantity. In this way the Standard combination got from the producer his oil at a price below its market value, and refused to pay him even this. This system was continued in the McKean County district upon the plea of great overproduction in that field, but was practiced likewise in the river district, where the protection was constantly decreasing and tankage and pipe transportation ample. The Standard Oil Company and its confederates were almost the only buyers. They owned 80 per cent. of the refining capacity of the United States. In the pipe-line offices at different points their buyers were placed behind railed counters, and applicants to have oil shipped by pipe line, standing in long lines and crowds in front of the openings, were referred to the place where the immediate shipment buyer stood.

Very many producers had foreseen the necessity of providing iron tanks in which to store their product, and a very large amount of private storage was connected with the United Pipe Lines. The owners of tanks had signed contracts with the United Lines by which they gave to it the exclusive use and control thereof for a period of ninety days from the dates of their agreements, and ninety days' notice being necessary by either party to terminate the contract. The only consideration agreed to be paid by the Pipe Line Company was "that it would carry in its system of pipes and tanks an amount of crude petroleum not exceeding the capacity of the tank," and deliver the same to the railroads on payment of shrinkage and fire-loss charges and freight transportation rate.

The tanker would from time to time procure accepted orders or certificates for certain quantities of his oil and sell them, generally, of course, to the Standard buyers. The United Pipe Lines took the position that under their contracts when a producer or tanker had once had his tank filled to its capacity their obligations ended, and though, as a matter of fact, the tanker had sold all of his petroleum, and delivered the paper representative of it to the purchaser, yet this did not relieve his tank, but it was theoretically still full. The pipe line, therefore, refused to take from the wells the oil of those who had iron tankage, allowed it to run to waste, or compelled the tanker to sell under the "immediate shipment" system. It availed nothing, therefore, for the producer to invest capital in iron tanks to hold his oil.

While the condition of producers in the oil region was thus rendered as bad as possible by the local control of storage and transportation by the Standard combination, its allies and victims, the railroad corporations, exercised all their power in aid of the conspiracy. There were oil cars and transportation facilities sufficient to move from the region to the sea-board and refining points, daily, not less than 60,000 barrels of crude petroleum. The Standard Pipe Line Company, in its statements, did not at any time claim that the production at this time reached that amount. Yet the railroad officials in response to demands for cars in which to ship petroleum alleged that they had none, and could not supply them. At the same time that absolute refusals were made to supply the cars, it was ascertained that large numbers, at one time, in July, 1878, over 200, were standing empty upon side tracks, and had been left there two weeks at a time. It was also discovered that the Standard party were allowed to leave cars standing full upon side tracks at points of consignment, without demurrage charge or objection. These things were done under cover of what the railroads called an "allotment," and in this way: The Standard shippers owned a large number of private cars running upon the various railroads, subject first to their own requirements, but when not in use, to be furnished, of course, by the railroads to shippers. These cars, ample to do the business of the Standard without drawing upon those of the railroads, were kept upon side tracks, and "requisitions" were then made upon the railroad companies for their cars, which were "allotted" to the Standard, partly upon the basis of its being the largest shipper. In other words, as the Standard in its position at this time was prob-

bly shipping 80 or 90 per cent. of the crude petroleum of the region, they might be given 80 or 90 per cent. of the cars of the railroad companies, and 20 or 10 per cent. only would go to all other shippers, while the private cars of the Standard were idle or covered by a general standing requisition. Even the small number which were admitted to be subject to the demand of the shipper outside the combination were furnished with such delays and such irregularity that dealers were subjected to constant annoyance and damage. The effect of this system was to prevent the transportation and delivery of petroleum to refineries outside of the Standard combination, of which there still remained a few, and many of these were compelled frequently to stand idle for want of the crude product, of which it was said there was too much produced, and to carry which pipe lines and railroads had the most ample facilities. Of course, when oil was carried for those outside the combination they paid a freight rate from 50 cents to 75 cents per barrel greater than that charged to the Standard shippers.

During all this time the price of crude petroleum declined steadily, and during the greatest shipments it reached its lowest figure.

But the railway and pipe-line companies did not stop with these oppressions. Whenever an effort was made to reach a trunk line of railroad by means of a shorter line, or by operating or building a pipe line, the projectors were met with threats of disconnection from their tanks; that side tracks would be taken up, loading racks removed, coal and oil traffic diverted, connections refused, and cars denied. These threats were actually carried out against the Equitable Petroleum Company Pipe Line, the Emlenton Pipe Line, and the Foxburg Pipe Line—all small local lines, endeavoring to relieve small districts within their reach. The managers of the Pennsylvania Railroad Company, at that time, the latest acquisition of the Standard combination, like all new converts, became the most zealous in its efforts, and for a time surpassed in injustice and wrong even the long-purchased Erie, Atlantic, and Vanderbilt roads.

In the mean time propositions had been made by the Standard party to the producers, based upon the theory of combination between them, the producers to agree to sell all their oil to the combination, and the latter agreeing to pay therefor a price based upon the relative price of refined. This looked superficially pleasing; but when it was ascertained that this would involve the surrender of the principle that such monopolies were contrary to law and policy, and that in the only two known instances where producers had been induced to enter into similar contracts they had been violated by the Standard party whenever they were likely to be profitable to the producer, the council declined to confer with John D. Rockefeller upon the subject. A number of gentlemen, however, of their own accord visited New York to hear what was to be said, and were there treated to a vast quantity of plausible talk, but they were unable to perceive anything like fair business in it, and returned home.

On the 9th day of July, 1878, a committee of five members on legal remedies was appointed by the executive committee, the former committee of three being discharged.

On the 10th day of July, 1878, a special committee of twenty-five, selected from members of the local unions, was chosen, and directed to go to Harrisburg, secure an interview with Governor Hartranft and the attorney-general, George Lear, esq., lay before them the grievance of the oil producers, and procure, if possible, the enforcement by the Commonwealth of such legal remedies as existed against the railroad and pipe line companies, and if the existing laws were found to be inadequate, to ask that an extra session of the legislature be called for the purpose of passing such acts as might be requisite, as were required by the constitution of 1873.

Eight members of the committee called upon Governor Hartranft and had an interview with him in the presence of Attorney-General Lear. The latter expressed the opinion that the existing laws of the Commonwealth, if enforced by the institution of proper proceedings, were sufficient to give relief for the evils complained of. Governor Hartranft desired the complaint to be reduced to writing, and a memorial was prepared, signed by fourteen members of the committee, representing each of the oil-producing counties and also Allegheny County. It was sworn to by these gentlemen, and was formally presented to the governor on the 15th day of August, 1878, at the executive chamber, Harrisburg.

After full discussion and consultation, the attorney-general and his deputy, Mr. Lyman D. Gilbert, determined to begin proceedings (1) against the United Pipe Lines by writ of *quo warranto* in the county of Venango; (2) by separate bills in equity against the Pennsylvania Railroad Company, the Atlantic and Great Western Railroad Company, the Lake Shore and Michigan Southern Railway Company, and the Dunkirk, Allegheny Valley and Pittsburgh Railroad Company, respectively.

These bills were to pray for injunctions restraining the railroad companies from combining with others to create and perpetuate a monopoly of the oil business; from granting unreasonable rebates to the Standard Oil Company and its confederates; from refusing cars to shippers, and from breaking connections with other roads; from buying and

selling petroleum in connection with the Standard combination; from refusing transportation; from making discriminations in favor of one shipper as against another; from granting greater facilities to one than to another; and from exceeding their corporate powers as charged in the bills.

By the *quo warranto* proceeding it was designed to take from the United Lines its charter for violations of its duty as a common carrier and unjust and oppressive discriminations.

At the request of the attorney-general, and his statement that he could not personally give his attention to the suits, the producers' committee named associate counsel to be charged with the active management of the cases, and those selected were Messrs. George Shiras and Mark W. Acheson, of Pittsburgh, George A. Jenks, of Brookville, and Roger Sherman, of Titusville. Mr. E. Copee Mitchell, of Philadelphia, also subsequently appeared in the cases.

During the days that these proceedings were being determined upon, and the necessary preparations being made, great popular excitement arose and grew in the oil region, by reason of the continued oppressions of the producers by the monopoly. Mass meetings were held, processions paraded the streets of Bradford, crowds assembled in front of the Standard and Pipe Line offices, where producers were waiting to sell their "immediate shipment" oil. At one time there were serious apprehensions of riot. Oil in great quantities was running to waste. The people were getting daily more impatient. The general council assembled in Bradford on the 20th of August and remained in session three days. In order to quiet the agitation and procure definite information as to the probable action of the governor the following telegram was sent by the vice-president to one of the counsel of the unions, on the 23d day of August, 1878:

"The Standard refuses to buy and the United Line to carry a barrel of oil. Tanks are running over. The people feel outraged and the situation is critical."

To which the following answer was sent:

"I have assurances from the highest authority that the Commonwealth of Pennsylvania will move for the relief of the producers of Bradford on Monday next, and the United Line Company will either perform its duties or cease to exist. Let the people stand firm."

The course of the governor was heartily applauded, and the meeting, after pledging its members to stand by the movement inaugurated, adjourned, and quiet was restored.

On the 26th day of August, 1878, Deputy Attorney-General Gilbert appeared in the court of common pleas of Venango County and filed a suggestion of the Commonwealth, at the relation of the attorney-general, and the court, Hon. Charles E. Taylor, president judge, awarded a writ of *quo warranto*, returnable on the 11th day of September. In obedience to a rule to answer, the defendants demurred to the suggestion. October 1, 1878, and October 28, the demurrer was argued. The opinion of the court, overruling the demurrer and requiring the defendants to answer in twenty days, was delivered November 11, and the answer of the defendants, in which all allegations of fact contained in the suggestion were denied, was filed December 1, 1878. This cause was therefore in position to be tried by jury upon the issues of fact presented by the suggestion and the answer. Prior to the filing of the answer, however, other and more important proceedings had been commenced, and constant labor in speeding these prevented further action for a time in the cause begun by *quo warranto* against the United Pipe Lines.

The immediate effect of this proceeding against the United Pipe Lines was the abandonment, on the 4th day of September, nine days after the writ issued, of the immediate-shipment swindle in the counties of Venango, Armstrong, Clarion, and Butler, a general order directing its cessation being issued and published by order of the executive committee of the United Lines.

On the 6th day of September, 1878, it was determined to invoke the assistance of the secretary of internal affairs, William McCandless, who is directed by the act of assembly of May 11, 1874, "to exercise a watchful supervision over the railroad, banking, mining, manufacturing, and other business corporations of the State, and to see that they confine themselves strictly within their corporate limits," and in case any citizens shall charge, under oath, any corporation with transcending its corporate functions or infringing upon the rights of individuals, he shall carefully investigate such charges and report to the attorney-general, who shall, thereupon, by appropriate legal remedy, redress any grievance by proceeding in the courts.

A deputy secretary was charged with the investigation, and began his hearing in Titusville on the 19th day of September, continuing the same from time to time, and at Pittsburgh and Harrisburg until the 8th day of October, 1878. Much testimony was taken and the existence of a combination, of a secret rebate system in connection with the Standard Oil Company, the refusals to furnish cars and to transport petroleum, and the illegal acts of the United Pipe Lines were all clearly proved. In this proceeding the

corporations for the first time developed the line of policy they intended to pursue—deliberate and defiant contempt of the law and its process. Though subpoenas were regularly issued and served upon many persons connected with the railroad freight departments and with the active management of the Standard Oil Company and the United Pipe Lines, yet not one of them obeyed the process, and some of them absolutely refused by direct communication to the secretary. He, having no power under the law to compel attendance, could not obtain their testimony, and the proceedings, in other matters, were greatly delayed by reason of want of definite knowledge of the details of the conspiracy.

On the 14th day of October, 1878, the secretary of internal affairs (William McCandless), who had not attended a hearing or examined a witness, and six days after the conclusion of the testimony, covering ninety-two closely-printed pages, startled those who did not know him, including the oil producers, by causing to be given to the press, by telegraph, what he called a "report," in which he came to the conclusion that "No case had been presented to him beyond the ordinary province of individual redress." This "report" was not received at Harrisburg until several days after it had been telegraphed over the country. Opinions differ as to whether Mr. Secretary McCandless was afflicted with the same kind of obtuseness that shadowed the Pennsylvania legislature when the anti-discrimination bill was before it, or as to whether there was a consideration paid for this performance of the secretary. Its object soon became apparent, for, on the 7th of October, 1878, the bills in equity determined upon by the attorney-general, praying for injunctions against the Pennsylvania, Atlantic and Great Western, Lake Shore and Michigan Southern, and Dunkirk, Allegheny Valley and Pittsburgh Railroad Companies, and against the United Pipe Lines, had been presented to the supreme court at Pittsburgh, and held under advisement by the court as to whether jurisdiction should be taken by it, or whether the plaintiff should be referred to the inferior tribunals in different counties—the courts of common pleas. The hasty telegraphic report of Secretary McCandless was intended, therefore, to affect the decision of this question.

It is well, however, to mark the fact that the performance of Mr. Secretary McCandless was a failure, and was received with derision and the contempt which it merited, and he was promptly hung in effigy at Parker and Bradford, with appropriate inscriptions.

From the 7th of October to the 17th the supreme court deliberated upon the question of assuming jurisdiction of the cases. It was considered that to refer them to local courts, with jurisdiction only in certain counties, and these widely separated, would be a defeat at the beginning. Throughout the oil region confidence in the probable action of the court began to be shaken. So far, no man had doubted its absolute independence, integrity, and devotion to the law. But rumors began to be circulated that the result was doubtful. Telegrams were sent making inquiries. To one of these, addressed to one of the counsel in the case, the following reply was sent: "Do not fear the supreme court, non-action would be denial of justice, which can not be imputed to its members."

On the 17th of October Chief Justice Agnew handed down an order allowing the bills to be filed, and announcing that the motions for preliminary injunctions would be heard at such time as might be agreed upon or fixed, early in November. On the 14th of November it was considered advisable to withdraw the motions for preliminary injunctions and proceed for relief on final hearing, the defendants agreeing to file answers immediately and have the causes referred to a master and examiner, who could proceed at once to take testimony. Consequently the answers, which, of course, denied all material allegations of the bill, were filed, and on the 26th of November J. Bowman Sweitzer, esq., was appointed master in all the cases, five in number, now placed at issue.

While these legal proceedings were being instituted a political campaign had been in progress, and a general State election was to take place on the 5th of November. The experience the producers had had with the legislature induced them to take steps to influence the election of men, irrespective of party, who were free from the control of corporations, whose ears would be inclined to hear and minds open to argument. They corresponded with members of the legislature and candidates throughout the State and addressed a letter to each of the candidates for governor—Henry M. Hoyt, Republican, Andrew H. Dill, Democratic, and Samuel R. Mason, National.

The following is the letter, with the reply of each of the three candidates, given in full, in order that subsequent events may be better understood:

TITUSVILLE, October 23, 1878.

Hon. HENRY M. HOYT:

SIR: During the past few months the Association of Producers of Petroleum, long oppressed in their immediate business and kindred industries by the persistent disregard of law by certain great corporations exercising their powers within the State of Pennsylvania, and daily subjected to incalculable loss by a powerful and corrupt com-

bination of these corporations and individuals, have appealed to the executive, legislative, and judiciary branches of the government for relief and protection.

The questions which they raise for the consideration of the authorities and the people, affect not only themselves but the whole public; not only the particular calling in which they are engaged but nearly all kinds of business in the Commonwealth and the nation.

The legislature has not responded to the demands made that the provisions of the constitution shall be speedily enforced by appropriate legislation.

The present executive has caused proceedings to be instituted in the courts looking to relief if it can be had by process of law, and these are still pending, while others may be begun.

In view of the grave duties which will devolve upon you should you be chosen to the high office to which you aspire, in behalf of the Petroleum Producers' Association I ask from you a definite expression of your views upon the following subjects:

First. Will you, if elected, recommend to the legislature the passage of laws to carry into effect the third and twelfth sections of the sixteenth and the third, seventh, and twelfth sections of the seventeenth articles of the constitution of Pennsylvania?

Second. If such laws should be passed as referred to in the preceding question will you, as governor, approve them, if constitutional?

Third. Will you, as governor, recommend and approve such other remedial legislation as may be required to cure the evils set forth in a memorial to Governor Hartranft of August 15, 1878?

Fourth. In the selection of the law officer of the State, will you, if elected, secure the services of one who will prosecute with vigor all proceedings already commenced or that may be instituted, having in view the subjection of corporations to the laws of the land?

Very respectfully,

A. N. PERRIN,  
*Chairman Committee.*

#### MR. HOYT'S REPLY.

A. N. PERRIN, Esq.,  
*Titusville, Pa.:*

SIR: Your communication of this date, addressed to me by you as chairman of a committee of the Petroleum Producers' Association, is received here. You ask for a definite expression of my views upon the third and twelfth sections of article sixteen and the third, seventh, and twelfth sections of article seventeen of the constitution of Pennsylvania.

These provisions of the constitution were intended to compel the railroads and canal companies of the State to the performance of their duties as common carriers with fairness and equality, without discrimination, to all persons doing business over their lines. This policy is just and right.

If called to a position requiring official action I would recommend and approve any legislation necessary and appropriate to carry into effect the sections of the Constitution referred to.

It would be my duty, if elected, to see that no citizen or class of citizens even were subjected to hardship or injustice in their business by illegal acts of corporations or others where relief lay within executive control. Any proper measures or legislation which would effectually remedy the grievances set forth in the memorial addressed to Governor Hartranft would receive my recommendation and approval.

It would be my duty, if elected, to select only such officers as would enforce obedience to the constitution and laws, both by corporations and individuals, without fear or favor, and all such officers would be held by me to strict accountability for the full and prompt discharge of all their official duties.

Very respectfully, yours,

HENRY M. HOYT.

LEWISBURGH, October 21, 1878.

A. N. PERRIN, Esq.,  
*Chairman Committee P. P. Union:*

DEAR SIR: I am just now in receipt of your communication of October 15, 1878. In answer to your first question, viz, "Will you, if elected, recommend to the legislature the passage of laws to carry into effect the third and twelfth sections of the sixteenth, and the third, seventh, and twelfth sections of the seventeenth articles of the constitution of Pennsylvania?" I reply that, if elected, I will recommend the passage of laws for the purpose of carrying into effect those provisions of the constitution. I have been

and I am now earnestly in sympathy with all of the reforms inaugurated by the new constitution and will so use my official power, if elected, as to carry them into practical execution.

To your second question, viz, "If such laws should be passed as referred to in the preceding question, will you, as governor, approve them, if constitutional?" I answer, I will.

To your third question, viz, "Will you, as governor, recommend and approve such other remedial legislation as may be required to cure the evils set forth in a memorial to Governor Hartranft of August 15, 1878?" I answer: I will exercise whatever official power I may have to control and remedy the evils under which the oil producers suffer.

To your fourth question, viz, "In the selection of the law officer of the State will you, if elected, secure the services of one who will prosecute with vigor all proceedings already commenced or that may be instituted, having in view the subjection of corporations to the law of the land?" I answer: The selection of an Attorney-General, in the event of my election, must be controlled entirely by the qualifications of the gentleman to fitly fill his place in all respects. I will choose no man for so important a place who will not perform his whole duty in carrying into effect the remedial provisions of the new constitution or use every lawful means to remedy the evils under which the oil producers suffer, or compel subjection by all persons, whether natural or artificial, to the laws of the land.

I answer your questions as I do, not from any desire to express my sympathy with your cause for the purpose of the pending canvass, but to emphasize my record made in the senate upon this subject prior to any thought on my part that I would be a candidate for the office of governor of Pennsylvania.

Very respectfully,

A. H. DILL.

---

MONONGAHELA HOUSE,  
PITTSBURGH, PA., October 28, 1878.

A. N. PERRIN, Esq.,  
*Chairman Committee P. P. Union:*

MY DEAR SIR: Your favor of the 23d, which was forwarded from Mercer to Easton reached me at this place to-day.

My views on the question of monopolies, discrimination bills, and special legislation have been so often expressed, not only to individuals, but in public addresses, that I can not be easily misunderstood by those who have known and heard me for years past.

I have for a long time felt the necessity of amendments to the constitution of this State to enable the people, through their representatives, to guard against such enactments as above referred to; was one of the conferees who put in nomination the ticket from my district, and watched with great interest and solicitude the proceedings of that body. When the new constitution was framed and submitted to the people of this Commonwealth for their approval I examined it with care and came to the conclusion that, with wise legislation to enforce its provisions, it would meet all the requirements of the people, and voted for its adoption. I can say, therefore, not only of the third and twelfth sections of article 16, and the third, seventh, and twelfth sections of article 17, but of the entire instrument, that I approve of the same, and if elected the governor of this State would recommend to the legislature the immediate passage of such laws as would carry out and enforce said constitution both in its letter and spirit. As I have not now before me and do not call to mind the memorial to Governor Hartranft of August 15, 1878, and referred to in your communication, I can not, without a copy of the same, answer the third interrogatory in your letter. In the event of my election to that high office I would use my utmost endeavors to make my administration a success, and would select as the attorney-general of this Commonwealth the ablest man my judgment would dictate—a man of known integrity and ability, who would see that the laws were faithfully executed.

Very respectfully,

S. R. MASON.

Judge Agnew was the nominee of the National or Greenback party, though in reality he was an independent candidate, called by popular voice to a position he was eminently fit to occupy. The oil region gave a large vote to Judge Agnew, and J. Simpson Africa, for secretary of internal affairs, and the Republican ticket, except as to these candidates, received a large majority. The people were evidently satisfied with the manner in which Governor Hartranft had discharged his duty in a difficult crisis, and were convinced that Governor Hoyt's pledges would be fulfilled. The judgment of nearly all familiar with the subject is that Governor Hartranft was sincere in his efforts to give the oil-producing interest the benefit of legal remedies and necessary legislation. By his course he certainly incurred the enmity and abuse of those persons known to be identified with the corrupt element of Pennsylvania politics and prominent in the corporation ranks. Nevertheless, it was developed that the governor felt it to be necessary before proceeding to lay before the Pennsylvania Railroad officials the memorial of the oil producers, and the result was the immediate bringing to bear of all the political influences wielded by that corporation, but without success.

The several suits in equity being at issue, the master appointed the 10th day of December, 1878, at the Girard House, Philadelphia, for the purpose of proceeding with the testimony on the part of the Commonwealth. Subpoenas had been served upon several subordinate officials of the Pennsylvania Railroad Company (in whose case it was proposed first to proceed), and some of the associate counsel of the Commonwealth were present, ready to proceed. None of the witnesses appeared, and an adjournment was had to the next day. A note was then received from the Hon. John Scott, counsel for the Pennsylvania Railroad Company, saying that he had learned that there was probability that the complainant would not be ready even to-morrow. This was a surprise to complainant's counsel. He supposed he was ready as soon as the defendants' employes, duly subpoenaed as witnesses, obeyed the process of the law. But in a short time the mystery began to unravel itself, and the following telegram was received by the master from Attorney-General Lear, dated December 10, 1878:

"The Commonwealth desires a postponement of the case against the railroad until Mr. Gilbert or myself can be present. Have stated reasons to Mr. Shiras."

About the same time the following was received by Mr. Shiras, from Attorney-General Lear:

"Gilbert is in Maryland. I am engaged in the trial of cases, and will be all this week, and can not leave. The Commonwealth must retain control of the oil and railroad case, especially as it will go over to the next administration. For this reason I desire to consult with you as to the order of evidence before you proceed, and wish a postponement for that purpose. Please request the master to continue the case until we mutually arrange a time. The Commonwealth must be fair to both parties."

To which the following reply was sent:

"To what time do you desire postponement? And when and where shall we meet?"

"Please answer immediately."

And the attorney-general answered as follows:

"Can not make arrangements as to time until I get to Harrisburg next week, and ascertain my engagements. The place is not important to me."

This ended the proceedings for that time.

On the 28th of December, 1878, one of the counsel for the producers had, by previous appointment, an interview with the attorney-general, to consult as to the course of proceeding in the future. The instructions given to the associate counsel were, that proceedings would not be authorized by the attorney-general by which the Pennsylvania Railroad Company's officials or employes should be first called as witnesses, but the producers would be first required to make out a grievance by legal evidence, without the testimony of the railroad officials, and when this had been done, then they could be called as witnesses. There seemed to be a desire to postpone action until the administration of Governor Hoyt had come in, he and the whole Republican ticket having been elected, to go into office early in January.

After this interview, the master appointed the 7th day of January, 1879, at Titusville, to proceed with the testimony on part of the plaintiff, and the counsel of the Commonwealth and of the defendants appeared at Titusville, the place of hearing.

In the course of an hour it was clearly developed that these cases were not to be allowed to proceed as other actions in courts, but were to be subjected to a practice the like of which had never been seen before, and it is to be hoped will never be witnessed again. In the first place, the counsel for the Pennsylvania Railroad Company permitted it to be known that Attorney-General Lear had been conferred with by some one in the interests of that company, and that certain instructions had been given by him to them as to the conduct of the suit. The nature of this proceeding will be best understood by giving the telegraphic correspondence before the case was allowed to proceed. Mr. John D. Archbold, President of the Acme Oil Company, refiner, and one of the branch com-

panies of the Standard combination, was called as a witness, and thereupon it was alleged that the Commonwealth had no right to examine him. Thereupon, after discussion, the following telegram was sent by the master to the attorney-general:

Hon. GEORGE LEAR,  
*Attorney-General, Harrisburg, Pa.:*

John D. Archbold, president Acme Oil Company, and J. J. Vandergrift, president of United Pipe Line and director of Standard Oil Company, duly subpoenaed, decline to appear, alleging that you have agreed that they shall not be called until after other witnesses have been called to prove grievances. Is this so? Answer.

J. B. SWEITZER, *Master.*

---

HARRISBURG, *January 7, 1879.*

J. B. SWEITZER:

There was no agreement what witnesses should be called, but that proof should first be made of grievances by the complaining parties as a ground upon which to base an inquiry into the private affairs of the defendant corporations.

GEORGE LEAR.

---

HARRISBURG, *January 7, 1879.*

C. B. GUTHRIE, *Private Counsel for Archbold:*

The understanding between Mr. Sherman and me was, that the first evidence taken should be to prove that the parties complaining had suffered wrongs which the law ought to redress, before examining the contracts and private affairs of the defendant corporations. This, I trust, will be carried out in good faith; but nothing was agreed as to the witnesses to prove the grievances. Overt acts were first to be established. This can and should be done by witnesses who have seen or suffered from the acts. To Mr. Campbell I said there was no objection to calling the officers of the Atlantic and Great Western road, a foreign corporation. I desire to deal courteously with our own, but the Commonwealth ought to first call their witnesses who know actual transgressions, and not intentions.

GEORGE LEAR.

The following was also received:

HARRISBURG, PA., *January 7, 1879 (received 3.57 p. m.).*

E. G. PATTERSON:

The attorney-general says that he has no agreement or understanding with any one, except Messrs. Shiras, Sherman, and Campbell.

J. F. HARTRANFT.

The witnesses, John D. Archbold and Jacob J. Vandergrift, president of the United Pipe Lines and a director of the Standard Oil Company, refused to answer any material questions put to them, under instructions from the counsel of the Pennsylvania Railroad Company. The master had no power to commit for contempt, and so decided, and all that could be done was to have the questions and refusal to answer certified to the court for its action.

It came, therefore, to be understood that the Commonwealth must make out its case as best it could, without calling any person connected with the railroads or the Standard combination. When it is remembered that the manner of doing the business, the amount of rebates given, and the persons to whom they were paid, as well as the circumstances attending the transaction and the contracts under which the system was originated, were entirely within the knowledge of the officers and agents of the combination, and had been studiously concealed, the difficulty of establishing by legal evidence the allegations in the bill will be readily perceived.

The case was nevertheless proceeded with as far as it was possible, and many of the most material charges of the bill sustained. While the testimony was in progress, it was fortunately ascertained that the Pennsylvania Railroad Company had shipped petroleum over a portion of the Reading Railroad, and that monthly statements were rendered to the latter, showing the amounts of rebates and system of allowance. A subpoena was promptly served on Daniel Jones, assistant controller of the Reading Company, and he appeared before the master and produced statements in connection with his testimony, which, for the first time, admitted light upon the extent of the robbery.

March 5, 1879, while the master was hearing the case of the Pennsylvania Railroad Company in Philadelphia, the defendant made application for postponement on account of the absence of one of its counsel, which, as there were two present, was refused by the master. On the same day, however, a telegram was received from Governor Hoyt adjourning the case.

A committee, including the president of the council, immediately went to Harrisburg, called upon Governor Hoyt, and the case was allowed to proceed. The testimony of A. J. Cassatt, third vice-president of the Pennsylvania Railroad Company, was taken; the contract, in the form of letters, between the defendant company and the Standard Oil Company was produced, together with vouchers, showing payments of rebates under it of large sums, and, among others, of over \$68,000 to the American Transfer Company, which had been pulled from its hole and ascertained to be the middle absorber between the railroads and the Standard combination.

And so, on the 3d day of May, 1879, the Commonwealth closed its case against the Pennsylvania Railroad Company, reserving only the right to recall at some convenient time A. J. Cassatt and Jefferson Justice for brief examination as to some matters omitted.

On the 11th of July the counsel of the plaintiff and respondent filed with the master an agreement that the time of taking testimony by the defendants should be extended to September 10, 1879, and should then be closed within ten days. Had this agreement been carried out, the cause could have been heard by the court at the ensuing fall term probably, and at January term without doubt.

But, having procured another extension until September 17, the defendant then applied for further time, and gave such reasons as to the sickness of principal counsel that the master granted a continuance; and, on account of the coming on of the term of the supreme court, of which he was prothonotary, it was of necessity, if given at all, until after that term. The time was therefore fixed for December 10, 1879, for the defendant to proceed and close the testimony.

On the 10th of December, 1879, John H. Hampton, esq., one of the counsel for the defendant, appeared before the master and stated that he had received a dispatch from Governor Hoyt stating, in substance, that the governor had directed Attorney-General Palmer to notify George Shiras, jr., esq., attorney for the Commonwealth in the five equity discrimination cases, that the defendants in those cases would not be required to take or close their evidence until the Commonwealth had closed its evidence in all those cases, and, such being the fact, he (Mr. Hampton) would be ready to proceed with the testimony on the part of the Pennsylvania Railroad Company in No. 311, October and November term, 1878, when the order of the governor, as above stated, had been complied with.

In other words, Governor Hoyt had ordered the attorney-general to stop proceedings against the Pennsylvania Railroad Company, the case of the Commonwealth being closed, until the testimony in the other four cases had likewise been closed by the Commonwealth.

To those unacquainted with the circumstances, the full effect of this order would not be at first plain. That this may be fully understood, it is necessary to consider, as briefly as possible, the other pending cases, and relate the efforts that were made to bring them to a close. These cases were (1) a bill in equity against the United Pipe Line; (2) a like bill against the Lake Shore and Michigan Southern Railway Company; also (3) against the Dunkirk, Allegheny Valley and Pittsburgh Railway Company, and (4) against the Atlantic and Great Western Railroad Company.

Of these, the Lake Shore Company had its offices, books, papers, accounts, and officers, outside the State of Pennsylvania. The Dunkirk, Allegheny Valley and Pittsburgh, though chartered by the State of Pennsylvania, was owned and controlled by the New York Central, its stock being held by the Vanderbilts. It was a feeding line to that and the Lake Shore. Its officials and accounts were at Dunkirk, in the State of New York, and in the offices of the New York Central and Hudson River Railroad Company. The Atlantic and Great Western was in the hands of John H. Devereux, receiver (*de facto*), who lived in Cleveland. This company held its charter from the States of New York, Pennsylvania, and Ohio, and while it kept a principal office in Pennsylvania, yet the

information most desired could be obtained only from Devereux and his immediate employes at Cleveland. The receiver had been joined in the bill filed, and had demurred upon the ground that the supreme court of Pennsylvania had no jurisdiction over him, and he was accountable only to the court which appointed him, which turned out to be one of the county courts of Philadelphia. His appointment dated back to 1874, and the company answered that it had done nothing, the management of its affairs being in the hands of the receiver, Devereux. This case developed what seem to be a defect in the law, for, while the receiver, as was claimed, could operate several hundred miles of railroad, with all its equipment, and exercise all the powers of the corporation, including eminent domain, yet in the discharge of the public duties thereof, such as those of a common carrier, he was amenable to no jurisdiction save that of a county court of Philadelphia County, through which, or within three hundred miles of which, the railroad did not pass. According to this theory of the defendant, the Commonwealth of Pennsylvania and her highest court were practically powerless.

The United Pipe Lines was a Pennsylvania corporation, and its officials and employes could be reached. But, under the order of Governor Hoyt, failure of the Commonwealth to close its testimony in any one case, and thereby put itself on record that the cause had been made out, was sufficient to forever suspend proceedings in that of the Pennsylvania railroad.

It was simply an impossibility to make out a case against all of these defendants unless they would appear before the master and give evidence. All of these circumstances were freely made known to Governor Hoyt early in the year 1879, and all the reasons were given him why the Pennsylvania Railroad case was pressed. It was particularly impressed upon him and the attorney-general, that the witnesses in this case were within reach of process, and the others, except in the Pipe Line case, were not. It may be said that this difficulty could have been met by withdrawing the suits against all the companies except the Pennsylvania Railroad and the United Pipe Lines; but it had been particularly insisted at the beginning that the Pennsylvania Company should not be attacked alone, but that all offending should be placed upon equal footing.

This continued to be insisted upon throughout the proceedings, as will appear more fully hereafter.

Impossible as it seemed to be to comply with Governor Hoyt's order, yet an effort was made, and, in fact, proceedings had already been to some extent pressed, and why not further pressed will appear.

A day having been fixed by the master for a hearing in the Atlantic and Great Western Railroad case, the treasurer, auditor, and some clerks were subpoenaed, and certain statements were called for. On the day of hearing the witnesses appeared, but all declined to answer every material question put to them. Application was made to the supreme court to compel these witnesses to answer, which was refused in June, 1879, on the ground (as was understood) that the demurrer of Devereux, receiver, was still undisposed of. An effort was made to proceed with the cases against the Lake Shore and its feeder, the Dunkirk, Allegheny Valley and Pittsburgh, but no arrangement could be made by which the companies would agree to furnish any facilities for obtaining evidence. The policy of evasion of process, disregard of subpoenas, and suppression of evidence had become fully developed, and was apparently being carried out with concert of action and singleness of purpose by all the confederates and their allies charged with the conspiracy.

It having become impracticable to carry on the proceedings against the railway corporations, it was determined to proceed against the United Pipe Lines and bring that case to a close.

On the 7th of January, 1879, Jacob J. Vandergrift, president of the United Pipe Lines and a director of the Standard Oil Company, was called as a witness in the case against the former company, and refused to answer any material question put to him.

On the 4th of April a further hearing was had and continued from day to day. John R. Campbell, treasurer of the United Lines, was put upon the witness-stand and examined. He refused to answer questions relative to the ownership of stock in the United Company and many other questions. These were certified by the master before the Hon. John Trunkey, one of the associate justices of the supreme court, who, after argument on the 16th and 17th of April, directed the witness to answer the most material. Thereupon the master appointed the 29th of April to proceed with the cause.

On the evening of the 28th of April one of the counsel for the United Lines went before the Hon. J. P. Sterrett, one of the associate justices of the supreme court, at Pittsburgh, and procured an order from him adjourning the hearing before the master one week on account, as alleged, of the other engagements of counsel. As there was an argument fixed in the Atlantic and Great Western case at Harrisburg, requiring the attention of counsel, it was considered best to have the next hearing for the 14th of May, and it was so fixed.

On the 9th of May, 1879, one of the associate counsel for the Commonwealth had an interview with Governor Hoyt and Attorney-General Palmer, at Harrisburg, relative to the situation of the oil suits, in which the fullest discussion was had and all details entered into. As it will be necessary to refer to this interview again, it is mentioned here only as to its bearing upon the suit which was then being pressed against the United Pipe Lines. Attorney-General Palmer said that within any reasonable bounds the counsel present and his colleagues had *carte blanche* to do as they chose in the conduct of this and the other cases.

On the evening of the 13th of May, 1879, a telegram was received from Attorney-General Palmer, saying, in substance, that bitter complaint was made that the suits of the Commonwealth in equity would be used to obtain testimony that would prejudice the defendants under indictment, and that he (the attorney-general) was inclined to defer the taking of testimony until after the August term of court in Clarion County; that so much should be accorded to fair play, and the action of counsel in so doing would be justified as matter of professional conduct. Being fully informed of the repeated refusals to answer, evasions of process, and schemes for delay, long before there was any indictment against any one, the following reply was sent:

"The complaint made is totally groundless and without sincerity. The only two persons whose testimony is wanted and who are indicted, it is believed, absented themselves from the State purposely to avoid testifying. I will, however, follow your instructions, if now repeated, though believing the excuse of these men to be a false pretense. Please answer."

To this the attorney-general replied on the morning of the 14th of May, 1879:

"If any of the indicted persons are present, agree with them to appear immediately after August sessions, on condition that their examination be deferred to that time. I think it best under the circumstances."

Accordingly the further hearing of the case of the United Pipe Lines went over until after the fourth Monday of August, 1879, the time referred to.

It thus became evident that the defendants or some persons in their interest were in communication with the Commonwealth's representative at Harrisburg for the purpose of delaying the suits upon any possible pretext. During the whole of this time several persons for whom subpoenas were issued, or whom it was supposed would be called upon to testify, remained persistently beyond the boundaries of Pennsylvania, and some even had sudden business in Europe and foreign lands. The American Transfer Company, which had been ascertained to be the intermediate sponge to absorb the rebate robberies, had had for some time a general office in Oil City. Who its officers and stockholders were no one knew, except that Jabez A. Bostwick, of New York, claimed to be president, Daniel O'Day, manager, and W. T. Branch, clerk in charge of its office. W. T. Branch left suddenly, and the office was closed. Daniel O'Day, though in active management of his department, found the line of the Erie Railway, at Olean, in the State of New York, a most convenient base of operations, and that it was unnecessary for him to cross the line into McKean County, Pa., except on Sundays.

It will thus be seen that for one reason or another the hands of the associate counsel engaged in the conduct of these cases were tied, and the full effect of the order of Governor Hoyt of December 10, 1879, stopping further proceedings in the Pennsylvania Railroad case, is made manifest. All the equity proceedings were stopped by a power which the general council of the producers of petroleum were unable to resist.

Before entering upon the consideration of the final proceeding it will be well to refer to certain negotiations, originating in May, 1879, though they are neither the transactions of the council, nor directly connected with the conduct of the suits instituted.

At the time referred to it had come to be rumored that the railroad companies would not be averse, under certain conditions, to throw off the Standard yoke, and were desirous of affecting an adjustment of the oil freight difficulties. These rumors soon assumed such shape that they amounted to assurances, and came apparently from such sources as to demand the attention of the producers' representatives. Negotiations were therefore opened with as much directness as possible, and assurances were given that if all the railroad companies could be put upon equal footing, and all could be either compelled or caused voluntarily to agree to abandon the rebates on oil freights and preferences as the Standard combination, it would be satisfactory to all. To this end, after consultation, it was determined to ask the interposition of Governor Hoyt and the attorney-general in the bringing of additional bills of equity against all the companies carrying petroleum from the oil regions, in order that all might be enjoined from giving rebates or discriminating in favor of one shipper or one locality as against another.

At the interview of counsel with Governor Hoyt and Attorney-General Palmer, on the 9th of May, 1879, before referred to, this subject was fully discussed. The governor said if this was the disposition of the railroad companies it was the most favorable indication he had seen, and he would hope from it the only practicable and effective solution

of the difficulty. The governor also said that there were great difficulties, and questions of policy necessarily entered into the affair, and the average Pennsylvanian would not be willing that the Pennsylvania Railroad Company should be enjoined from allowing rebates, while the New York railroads were in a position to seize the traffic by continuing the system. The force of this was admitted, and the opinion expressed that all the trunk lines should be placed in the same position, and that in the condition of developments of territory and location of pipe lines at that time it was doubtful whether the enjoining of the Pennsylvania alone would give relief to the oil country or be of public benefit. The relations and functions of the American Transfer Company in connection with the combination were explained, and it was asked that proceedings be commenced against the company (probably by *quo warranto*), and also against the Erie Railway Company and the Baltimore and Ohio Company, while the United Pipe Line case was to be vigorously pressed, in order that the railroads might not lose their oil traffic by its power to divert it from one railroad to another. The plan was deemed practicable and just, and the attorney-general requested the counsel to prepare and send to him a letter embodying his views and giving him full information as to the geographical position of the pipe lines and the railroads, in reference to the oil producing region.

Accordingly, a letter was prepared and sent to the attorney-general, with a map showing location of all the pipe lines and shipping points. Additional bills in equity were also prepared and sent to the attorney-general, so that they could be presented to the supreme court, then sitting in Harrisburg. No reply whatever was made by the attorney-general to the letter, and no acknowledgment of the receipts of the bills. The deputy attorney-general, in reply to a telegram asking about them, telegraphed that the attorney-general was not at home. The supreme court concluded its term soon after, and in this discourteous and contemptuous manner was terminated this effort of the producers' counsel to carry out the views of the governor and his attorney-general, and bring the difficulties of the producers to an end.

The suits already pending, and those which it was intended should be brought, were for the purpose of obtaining decrees of a court restraining the carrying companies from oppressive discriminations in freight rates and facilities for transportation. These decrees could be enforced, and if obtained and enforced would have had all the effect as to the petroleum traffic of a law regulating commerce between the States.

During the spring and summer of 1879 the condition of the oil trade grew worse. Production increased, prices declined, and the Standard combination put forth all its power to make worse that which was bad enough. The immediate shipment swindle was in full operation. Tankers were denied storage and transportation. An attempt was made to enforce the prepayment of pipage of 20 cents per barrel on all oil as soon as certificates were issued for it by the pipe line.

About the 1st of June the Tide-Water Pipe Company completed its line and began to transport and store oil. This line extended from the McKean County field to Williamsport, about 100 miles, and there connected with the Reading Railroad to the sea-board, making a continuous independent outlet.

To crush this opposition, and, as expressed by Rockefeller, "to handle the producers without gloves," a new combination was entered into about the 1st of June, at Niagara Falls, between all the railroad companies engaged in conveying petroleum and the Standard party. The latter took high ground, and claimed that they had demonstrated their ability to control the business; that they had the power; that the producers were impoverished, divided, and irresolute; that the suits pending would amount to nothing; that the Tide-Water Line was financially weak, and that if the railroads would accede to the demands of the Standard they would in thirty days crush all opposition. Their plan was simple. It was that the United Pipe Lines should reduce local pipeage charges to 5 cents per barrel, and the railroads, through rates from the wells, to about 30 cents, and by doing business for nothing, starve out the Tide-Water Line, and those refineries which obtained their crude stock from it. All but one company, the Baltimore and Ohio, acceded to the demand, and the new combination went into operation. The thirty days not sufficing to accomplish the desired object, the time was extended from period to period to November, 1879, during which time these great railroad companies lent themselves to the demands of their master at ruinous loss for the mere purpose of building up the power of the Standard combination. One by one, however, they became sick, and at last there remained willing to be plundered only the Erie Railway.

While these things were happening occasional spasms of resistance seized the producers, and meetings were held, some of them in front of the United and Standard offices in Bradford. Some were tumultuous; others quiet. Obnoxious persons were hung in effigy, and processions of masked men marched the streets, and groaned and hooted in front of Standard newspaper offices and the business places of the combination. Some secret societies were said to have been organized, having, however, no connection with

the producers' unions or council, and in the morning the streets and sidewalks were frequently found placarded with cabalistic signs and letters, and occasionally printed proclamations and warnings. Most of the leading newspapers of the region had been either absolutely purchased by the Standard party or paid to keep silence. Others occasionally broke forth in violent articles advising the use of force. But this was promptly rebuked by the president of the council over his own signature.

A glance at the effect in other States of the producers' movement necessarily forms a part of the history of the time.

In the State of New York the New York Chamber of Commerce procured a legislative investigation, which began in the winter of 1879 and continued until the fall. Its result was three volumes of remarkable testimony upon the subject of railroad discrimination and railroad policy and management; a definite understanding of the claims of those corporations, and of the issues the people made up against them; a report condemning their acts, and recommendation for additional legislation for their control.

In the State of Ohio a similar investigation was ordered by the legislature, at the instance of refiners and transporters of petroleum in that State, whose business had been ruined by the Standard combination. This the Standard easily smothered. It resulted in nothing, and was as ridiculous a farce as that of the secretary of internal affairs in Pennsylvania in 1878.

It was evident, however, that the disclosures made by the testimony elicited in the producers' suits had aroused and astonished thinking men throughout the country, and the independent press everywhere attacked the methods of the conspirators, and unsparingly condemned them.

The numerous interferences with the producers' suits and delays in their prosecution had gradually undermined their confidence in them as remedies for their ends. They saw that the monopoly was in no way terrified, but that during the pendency of the legal proceedings it had doubled its exactions and grown bolder. It was considered by some as a sign that the combination felt themselves to be masters of the situation, and the producers saw before them interminable litigation and barren results. Public confidence began to be undermined in the State administration, and it came to be believed by many that for months the prosecution of the cases had received no aid, and whenever the authorities had interfered all the effect was to delay them. The attorney-general of Governor Hartranft's administration had announced that no money could be applied to payment of witnesses, stenographers, and the master, in the equity suits, or for serving subpoenas. Whatever funds were to be provided for their purposes must be raised by private subscription, and in the impoverished condition of the country this was found to be a matter of daily increasing difficulty. Appeals were made and various measures proposed to furnish means. The legal counsel, who were giving their time to the cases, said they would be content to wait without fees if the necessary means were furnished to pay the actual and necessary expenses of procuring testimony. This difficulty existed from early in the winter of 1878 and 1879, and increased during the whole of the last year.

We have now considered the general situation of the trade, the effect that the producers' movement had had away from the locality of northwestern Pennsylvania, the attitude of the State authorities towards the producers and their interests, the manner in which all the several cases had been delayed and interfered with, their conduct up to the point where they were stopped, and the feeling in the country among the producing class. With the institution of the prosecution for the crime of conspiracy against the individuals prominently connected with the Standard monopoly, the manner in which it came to an end, and the conclusion of the terms by which all legal proceedings were dropped, and the spirit with which the contracts entered into were accepted, this narrative will be concluded.

It had long been the opinion of the legal counsel acting for the producers that the combination that had been entered into, the manner in which it had been consummated, and the unlawful acts by which individuals were oppressed constituted a criminal conspiracy indictable at common law, and perhaps coming within the prohibition of the statutes of Pennsylvania. In coming to the conclusion that these men should be indicted, however, great professional caution was exercised, and the utmost care exercised that this step should not be taken until the evidence fully justified it and was such as to reasonably insure conviction. How far the criminal combination reached, and who were actually guilty members of it, and what had been its full purposes, was not known in detail until the taking of the testimony of A. J. Cassatt and other railroad employes in February and March, 1879. This step seemed after that to be imperatively demanded, and, accordingly, on the 22d day of April, 1879, a full consultation was had between several members of the committee on legal remedies and all the immediate counsel of the producers.

All were agreed that the evidence was sufficient to warrant the institution of the prosecution. A difference of opinion arose upon the question whether the railroad officials should be included or not. In view of the attitude of the railroads at this particular time, and of the fact that they professed the greatest desire to get rid of Standard domination, and were loudly asserting that they had been victimized and compelled at times to carry oil freights at less than cost, all of the council and all but one of the committee were of opinion that the stronger case could be made out against the Standard party alone, and that it was best to omit from the proposed indictment the names of such men as A. J. Cassatt and Thomas A. Scott. They might be guilty and might not. But as to the others there was little doubt. The dissenting member of the committee formally withdrew, and thenceforth took no part in any proceedings, and his place upon the committee on legal remedies was filled with another. Immediately upon the conclusion being reached an information was prepared and warrants issued. The County of Clarion had been selected within which to begin the prosecution, for the reason that it was found, after careful investigation, that more overt acts of the alleged conspirators had been committed in that county than in any other one of all those in which the alleged conspiracy had been carried on.

On the 20th day of April, 1870, the grand jury of the County of Clarion found an indictment against John D. Rockefeller, William Rockefeller, Jabez A. Bostwick, Daniel O'Day, William G. Warden, Charles Lockhart, Henry M. Flagler, Jacob J. Vandergrift, and George W. Girty. Girty was the cashier of the Standard Oil Company. There were eight counts in the indictment, and charged, in brief, a conspiracy for the purpose of securing a monopoly of the business of buying and selling crude petroleum, and to prevent others than themselves from buying and selling and making a legitimate profit thereby; a combination to oppress and injure those engaged in producing petroleum; a conspiracy to prevent others than themselves from engaging in the business of refining petroleum, and to secure a monopoly of that business for themselves; a combination to injure the carrying trade of the Allegheny Valley and Pennsylvania Railroad Companies by preventing them from receiving the natural petroleum traffic; to divert the traffic naturally belonging to Pennsylvania carriers to those of other States by unlawful means, and to extort from railroad companies unreasonable rebates and commissions, and by fraudulent means and devices to control the market prices of crude and refined petroleum and acquire unlawful gains thereby.

The origin of the conspiracy was supposed to be meetings of nearly all the persons named in Philadelphia in the summer and fall of 1877, followed by continued overt acts by all in several counties of the Commonwealth, and particularly in the County of Clarion, in which all the several branches of the petroleum business had been carried on.

John D. Rockefeller, William Rockefeller, Jabez A. Bostwick, Charles Pratt, and George W. Girty were non-residents of the State of Pennsylvania, and though all of them except, probably, Girty had been at times in the State, engaged in furthering the objects of the combination, yet it was believed that they would not voluntarily appear and give bail or stand trial. Daniel O'Day had business out of the State, but afterwards appeared in court and gave bail for his appearance. Warden, Lockhart, and Vandergrift, citizens of Pennsylvania also gave bail.

The cases went over necessarily to the August sessions, 1879.

In the first part of June, 1879, formal application was made to Governor Hoyt, of Pennsylvania, to issue a requisition upon the governor of New York for the extradition of the two Rockefellers, Flagler, Bostwick, O'Day, Pratt, and Girty. The governor received notice that counsel desired to be heard in opposition to the application, and on the 27th day of June, 1879, a full argument was made before the governor, the attorney-general, and Matthew S. Quay, secretary of state.

The Commonwealth alleged that the requisition should issue for the reasons that the defendants were indictable in any county in the State where they had committed, by themselves or agents, overt acts in furtherance of the conspiracy charged, even if that conspiracy had been concocted in another State or in a foreign country. And that if they had come into the State for the purpose of doing any acts in aid of the criminal confederation, or putting in motion the machinery to be operated under their direction in furtherance of the conspiracy, and they had then left the State, they were "fugitives from justice" within the meaning of the Constitution and laws of the United States. The defendants contended that it must appear to the governor that (1) they were in the State of Pennsylvania when the crime was committed, and (2) that they fled from the State to avoid a prosecution.

This construction of the law would prevent the extradition of a citizen and resident of Ohio, never having been in Pennsylvania, who, standing in that State should shoot and kill across the line, between the States, a citizen of the Commonwealth of Pennsylvania, sitting at his fireside in the latter State. The governor concluded to hold the matter under advisement. The attorney-general was not well. No decision was made,

On the 29th of July Mr. B. B. Campbell, president of the council, telegraphed to Governor Hoyt asking an immediate decision. To this the deputy attorney-general replied that Palmer was sick. To this Mr. Campbell answered that he should resort to the press as a means of communication with the governor, by an open letter. To this the deputy attorney-general replied: "No answer can be now given to you because no decision will be rendered until the examination now commenced is ended." That this was a refusal to decide the matter of the requisition either way was plain. What was meant by saying that "no decision would be rendered until the examination now commenced is ended" was an enigma. The only "examination commenced" that the prosecutors of the legal proceedings knew of, was that of witnesses in the civil cases, and this as we have seen had been at that time stopped, except in the Pennsylvania Railroad case, and that was promptly blocked when the usual artifices for delay had been exhausted. Whatever was meant it is certain that Governor Hoyt never granted the requisition asked for, and never made public any decision he had arrived at relative to it, nor gave any reasons why he had or had not granted it. The application for extradition of indicted criminals was allowed to die without any diagnosis of the fatal disease, but we hope not without a *post mortem* examination that will reveal the secret malady to be guarded against when a wealthy and powerful malefactor, in league with powerful corporations, is sought to be brought to justice.

At the August sessions of the court of Clarion County the defendants applied for a continuance, and it was apparent to the court and the prosecutors that if the conspiracy case was tried at any regular term, it would be necessary to postpone all other business. It was therefore decided to appoint a special court for the trial of this case alone, and the defendants who had appeared, having at the suggestion of the court entered the plea of "not guilty," the 28th day of October, 1879, was fixed for the trial, and the prosecutors began immediate preparations. On the 16th of September the defendants applied to the court for a bill of particulars as to evidence to be offered in support of each count of the indictment. The court granted the application.

About the 1st of October, 1879, the defendants professed to be willing to make a satisfactory proposition of settlement with the producers represented by the general council, and were apparently so desirous of an arrangement that they were asked to submit a proposition covering the abandonment of the causes of complaint. This it was agreed should be done, but they contended that from the magnitude of the questions involved, and the time necessary to be spent in their consideration, it would be impossible to give them necessary attention and at the same time go on with the preparation of their defense for the coming trial on the 28th of October. Moved mainly by the difficulty of raising funds (of which there were none) to meet the expenses of the trial, as well as by some belief in the sincerity of the defendants' professions, it was agreed between counsel that, subject to the approval of the court and district attorney of Clarion County, the cause be continued from the 28th of October to the third Monday of December (the 15th), and not later than sixty days from October 28, 1879, all recognizances to be renewed, and all subpoenas to be considered returnable at that time. Upon presentation of this paper the court continued the cause and fixed December 15, 1879, for the trial.

No definite propositions were made, and practically nothing was done by the defendants towards carrying out their proposed arrangement until about November 29, 1879, when a meeting of an authorized committee with the Standard party was requested in New York City. This meeting was promptly declined, for the reason that there had been so great delay in making any propositions, and the defendants were informed that any further propositions must be made through their counsel. Active preparations for the trial accordingly progressed on the part of the Commonwealth. On the part of the defendants, however, no great anxiety appeared, and one of them said with confidence that the case would never be tried.

On the 13th day of November a very full bill of particulars had been served on the defendants' counsel, in which it was attempted to give, so far as possible, all the details of evidence going to show their guilt of the offenses charged in the indictment. Thereupon the defendants applied to the court for a continuance until a further bill of particulars was filed, alleging that they were, if possible, more in doubt as to what they had done than before. The court held the bill of particulars amply sufficient. On the 23d day of December, 1879, the defendants presented a petition to the Hon. E. M. Paxson, one of the justices of the supreme court, praying for a writ of certiorari directed to the court of quarter sessions of Clarion County, requiring that court to forthwith return the record and all the papers and proceedings in the conspiracy case, and that upon the return of the writ of certiorari the supreme court would proceed in accordance with law to the ultimate trial, decision, and determination of the case.

Thereupon Judge Paxson filed the following order:

"Under the late constitution the power to allow this writ was clear. As this is the first case that has arisen under the new constitution, and the court in banc has not

yet passed upon its powers under it, I will at present allow only a rule to show cause. This will give a speedy hearing in this court, and at most delay proceedings in the court below but a few weeks, should said rule be discharged.

"A rule is accordingly granted to show cause why a writ of certiorari should not issue, as prayed for, returnable before the supreme court in banc, on Monday, the 5th day of January next, at 11 a. m., in the city of Philadelphia."

The petition upon which this order was granted charged local prejudice against the defendants in the county of Clarion, and that a fair trial could not then be had. It also charged partiality on the part of the president judge and associate judges; alleged that there were secret societies composed of "chapters and lodges" throughout the oil region, the members of which were hostile to them, and these members were about 3,000 in number. It also recited the fact of the pendency of civil proceedings, and that the complainants had not yet closed their testimony therein.

The petition was presented without any notice to the district attorney or the prosecutor or any of the associate counsel. The order was at once served on the district attorney and the president judge of the quarter sessions of Clarion County.

To this petition an answer was immediately prepared, and an argument, in which the positions taken were:

1. That although, under the constitution of 1838, the supreme court had the right to remove such causes from the lower courts for trial before the former, yet that jurisdiction had been exercised with great reluctance, and in every instance with expressions of disapprobation and dissent, and that whenever the court had so removed criminal cases, the result was generally the escape of the indicted party, not only from punishment, but from trial.

2. That by the third section of article 5 of the constitution of 1874, which superseded that of 1838, all original jurisdiction in such cases had been expressly taken away and appellate jurisdiction alone given to the court, and by section 23 of article 5 provision was made for removal of criminal causes to the supreme court for review, only after conviction and sentence. Furthermore, by section 21 of article 5 the court of nisi prius was abolished, and it was declared that no court of original jurisdiction, to be presided over by any one or more of the judges of the supreme court, should be established.

3. That to remove the record and proceedings by writ of certiorari would be to end the case without trial, because the court below could not then proceed and the supreme court could not, for there was nothing to review and nothing to do but to try, and from this the supreme court was prevented, because by the express terms of the constitution it no longer had the original jurisdiction, without which it could not order a jury or proceed in the manner prescribed by common or statute law to conviction and sentence.

The defendants argued that the writ of certiorari was not an original writ, and hence the issuing of it was not the exercise of original jurisdiction, but throughout the able presentation of the cause no attempt was made to show to the supreme court that it could try the defendants for the crime whereof they were indicted, either in banc or by one of its judges.

On the day fixed for trial in Clarion County, December 15, 1879, the Commonwealth was ready with her witnesses and proposed to proceed. The counsel for the defendants presented Judge Paxson's order of December 11, and asked leave to file it among the papers of the case, and sat down. The Commonwealth counsel read the petition, and argued that inasmuch as the order did not stay proceedings the case should go on. But Judge Jenks decided that whatever might be the legal effect of the order intended or expressed, courtesy required that he should continue the cause, and he ordered it for trial on the third Monday of January, 1880, and directed the defendants and witnesses to enter into recognizance for their appearance at that time. As soon as this was done one of the defendants' counsel read the affidavit of himself and an associate, in which they complained that at the August sessions previous the court had compelled the defendants to plead against their protest, and in the absence of the defendants and without opportunity for consultation. This gave rise to a most unpleasant scene, and the president judge, speaking from the bench, took direct issue with the counsel for the defendant upon the facts they presented. His cross-examination of them was vigorous and pointed, and left the impression that the judge was right and the counsel wrong. Upon this affidavit leave was asked by the defendants to withdraw their plea of not guilty. The object of this was to enable a motion to be made to quash the indictment and thus still further delay trial. The court refused to allow the plea to be withdrawn.

Immediately thereafter a heated newspaper controversy arose, in which the counsel attacked Judge Jenks with bitterness, and brought prominently forward the issue of veracity.

No one who knew the facts ever doubted the entire fairness, integrity, and impartiality of Judge Jenks. Nor did any one doubt that the proceedings before him and the news-

paper war upon him were parts of a desperate and unprincipled warfare, the object of which was to create such a state of feeling as would give the defendants some ground upon which to stand. During those proceedings the Standard newspaper organs teemed with violent diatribes against the prosecutors and arguments in favor of the position of the indicted criminals.

The Bradford Era, the Oil City Derrick, the Titusville Herald, in the oil region, and the Philadelphia Daily Times, a well-known organ of the Pennsylvania ring, the Philadelphia Evening Telegram, Railway World, and others contained articles relating to the proceedings pending, showing bias in favor of the defendants, and evidently intended to produce an effect upon the court and the public.

A pamphlet was printed containing alleged fac-simile extracts from newspapers, showing violent feeling against the Standard. One of these was found, on the day of the argument before the supreme court (January 5, 1880) in the hands of a reporter of legal cases for one of the legal journals. It was printed with close resemblance to the paper books handed up to the court, but no copy was served upon the counsel for the Commonwealth before the argument.

On the 5th day of January, 1880, the counsel for the Commonwealth appeared before the court, and asked that it hear the argument upon the rule to show cause. The defendants' counsel served a printed argument upon the Commonwealth's counsel on the morning. The former were also furnished with a copy of the answer and argument of the Commonwealth.

Thereupon the defendants promptly made application to the court for a continuance, on the ground that they had only that morning been served with a paper book.

The court was composed of six judges, the newly-appointed Justice Green not having as yet taken his seat. The motion to continue was affirmative, and a majority of the six was necessary to enable it to succeed. The court apparently divided equally, three being in favor of continuance, and three in favor of hearing the case. The motion to continue therefore failed, and the argument proceeded, and the court reserved its decision.

On the following Thursday (the 8th of January, 1880) the court filed an order that the rule be re-argued, before a full bench (seven judges), and that until it is finally disposed of proceedings in the court below be stayed. The conclusion from this order would be that the judges had again divided in opinion upon the question of the constitutional right of the court to remove the cause for trial from the quarter sessions of Clarion County.

Thus practically terminated the last legal proceeding conducted by the general council of the producers of petroleum.

A requisition had been denied for some of the principal offenders, a disgraceful attack had been made upon the court that was to try their case, widely-circulated newspapers had been induced to advocate their cause when a proceeding was pending before the highest court of the State; and an order had been made staying proceedings in the cause until argument could be had before a full bench, and the judge necessary to so constitute the court was reported sick, and the time he could take his seat was unknown.

On the 24th of December, 1879, the United Pipe Lines saw fit as matter of policy to exhibit a sign of repentance, and issued an order in which they announced the abandonment of the immediate-shipment swindle throughout the region, and that it would receive oil without requiring its "immediate removal," and would issue acceptance for all oil received.

It remains only to consider the negotiations which terminated in the contracts between the Standard combination, the Pennsylvania Railroad Company, and Benjamin B. Campbell, as president of the council, and the dismissal by agreement of all the several legal proceedings. Before entering upon them, and during their progress, the fullest consultation was had with many prominent producers, as well as with members of the legal committee.

A few days after the continuance of the conspiracy case at Clarion, December 15, 1879, one of the legal advisers of the defendants telegraphed for a meeting with one of the counsel of the producers, and speaking, as he said, by authority, proposed a general settlement of all controversies upon the basis of an abandonment of all those methods of doing business by the Standard by which the producers claimed to be injured in their business.

Several days were occupied in negotiations and correspondence, but nothing definite was arrived at. Finally it was agreed that the two should meet at the Fifth Avenue Hotel, in New York City, on the 7th day of January, 1880, at which time a written proposition should be authoritatively made upon the basis of the conversations had, and by which the Standard party should agree to abandon the perpetration of the wrongs complained of. Accordingly the meeting was had, and a written proposition submitted, which was in terms all that could have been asked, except that the Standard claimed the right to take whatever rebate "the railway companies were at liberty to give to other shippers."

This part of the proposition was objected to. Upon the producers' side it was claimed that a mere contract in writing, with no provision for enforcing it, was of no value, and that there should be decrees entered in the cases pending, and in such others as might be necessary to bring.

The consideration of this question led to disagreement. Whether or not the Standard would have yielded this point we do not know, but we believe they were strengthened in their determination not to do so by the order of the supreme court of January 8, 1880, pending the negotiations.

After this it was considered impracticable to secure this advantage, and, though still further effort was made at a subsequent meeting in Philadelphia, the contract was executed in the form hereafter given.

Contemporaneously with these negotiations the Pennsylvania Railroad Company agreed to enter into contract, given hereafter, and to procure a similar agreement from the other oil-carrying railroad companies. This last it failed to do.

At the termination of the negotiations as to the form of the agreements it was considered advisable to require the Standard combination to pay the expense of the litigation to which they had subjected the producers, and after some time it was agreed that the sum of \$40,000 should be paid, to be applied as follows:

1. To the payment of costs remaining unpaid, for which the general council or its committees or members might be liable upon any of the legal proceedings pending.
2. To the re-imbursement to any individuals of sums contributed by them to the fund of the legal committee for expenses of conducting the several suits and prosecutions.
3. To the payment of the fees of counsel.
4. The surplus, if any, to be returned to the Standard Oil Company.

The contracts were then signed, and the necessary formalities taken to dismiss all of the suits in equity, the *quo warranto* proceeding, and the conspiracy prosecution, all of which things were finally done on the 14th and 16th days of February, 1880, and on the 19th day of February the application for a requisition was withdrawn by the following letter:

TITUSVILLE, February 19, 1880.

*To his Excellency Henry M. Hoyt, Governor of the Commonwealth of Pennsylvania:*

SIR: As prosecutor in the case of the Commonwealth vs. J. D. Rockefeller, No. 25, April sessions of Clarion County, I consent to the withdrawal of the requisition asked of you for extradition of J. D. Rockefeller *et al.*, the same having been in your hands undecided since July last, and a *nolle prosequi* having been entered by leave of court of Clarion County in the case, and I will request William L. Hindman, esq., the prosecuting attorney, to forward a formal withdrawal.

Your obedient servant,

B. B. CAMPRELL.

A meeting of the general council was had, pursuant to previous call of the president, at Titusville, on the 19th day of February, 1880, and for the first time in many months there was a large attendance.

The president reported to the council the withdrawal of the suits, the reasons therefor, and the terms he had been able to exact as the conditions of his action. There was full discussion and explanation of the contracts, which were read, and are given herewith in full:

#### CONTRACT WITH STANDARD COMBINATION.

Articles of agreement made the 29th day of January, 1880, by and between the Standard Oil Company, a corporation of the State of Ohio; the Standard Oil Company of Pittsburgh, a corporation of the State of Pennsylvania; the Imperial Refining Company (limited) of Oil City, Pa.; the Acme Oil Company of New York and Pennsylvania; the Atlantic Refining Company of Philadelphia; the American Transfer Company; the United Pipe Lines, a corporation of Pennsylvania; the Devoe Manufacturing Company of New York; the Eclipse Lubricating Oil Company (limited) of Franklin, Pa.; John D. Rockefeller, William Rockefeller, Henry M. Flagler, William G. Warden, Charles Lockhart, William Frew, Charles Pratt, Henry H. Rogers, Jabez A. Bostwick, Jacob J. Vandergrift, O. H. Payne, John D. Archbold, respectively, buyers, refiners, and carriers of petroleum, parties of the first part, each, however, contracting severally for himself, themselves or itself, and not one for the others, and Benjamin B. Campbell, for himself and as president of the general council of Petroleum Producers' Union, and for the members thereof as shall signify their assent hereto by signing this agreement within sixty days from the date thereof, the parties of the second part, each contracting severally and in the manner aforesaid, witnesseth:

Whereas the several parties above named have been and are now engaged in some one or all of the branches of business connected with the petroleum trade, in buying, selling, shipping, storing, refining, transporting, and producing petroleum, and controversies have arisen between the said parties of the first and second part hereinbefore named, out of which have grown certain suits hereinafter named, and it is desirable to amicably adjust said controversies and settle said suits and proceeding; therefore it is hereby agreed between the said parties of the first and second parts:

I. That the said parties of the first part shall and will make no opposition to an entire abrogation of the system of rebates, drawbacks, and secret rates of freight in the transportation of petroleum on the railroads.

II. That said parties of the first part further agree that the railroad companies may make known to the other shippers of petroleum on their several roads all the rates of freight, and that said parties of the first part or any of them will not receive any rebate or drawback, that the railroad companies are not at liberty to give to other shippers of petroleum.

III. The said parties of the first part further agree that so far as the said pipe lines are concerned there shall be no discrimination used or permitted by the said pipe line companies between or against their patrons; that the rates of pipeage and storage shall be reasonable, uniform, and equal to all parties, and shall not be advanced except on thirty days' notice; that to the extent of their influence the United Pipe Lines and the other companies parties hereto do agree that there shall be no difference in the price of crude oil between one district and another, excepting such as may be based upon a difference in quality, to be determined by tests; that the said pipe lines will make every reasonable offer to receive, transport, store, and deliver all oil tendered them, and will receive, transport, store, and deliver all oil so tendered so long as the production does not exceed an average of 65,000 barrels per day during fifteen (15) consecutive days, unforeseen emergencies and unavoidable accidents excepted; and if the production shall exceed the amount stated, and also the storage capacity of the pipe lines, the parties of the first part, buyers of oil, agree that they will not purchase any so-called immediate shipment oil at a lower price than the price of certificate oil, provided that the owners of immediate shipment oil in the oil region do not sell to any other party or parties at a lower price.

IV. And all the parties of the first part further agree that until the production of oil reaches the daily maximum of 65,000 barrels as aforesaid, certificates or other vouchers will be given for all oil taken into the custody of the pipe lines, and the transfer of such certificates or other vouchers in the usual manner shall be considered as a delivery of the oil mentioned therein as between the pipe line and the seller, subject to the provisions of such certificate or other vouchers.

In consideration of the agreement herein before set forth, and of the execution thereof by the first parties, the said second parties do hereby agree as follows:

That the governor and the attorney-general of the Commonwealth of Pennsylvania shall be requested by them, within ten days of the execution hereof, to enter a motion to dismiss the bill filed by the Commonwealth of Pennsylvania against the United Pipe Lines and others at No. 309, October and November term, 1878, in the supreme court of Pennsylvania, and the proceeding by *quo warranto* No. 12, November term, 1878, in Venango County, and will do all that may be lawfully done to have the same dismissed of record. That upon written motion and agreement the supreme court of Pennsylvania may make of record, by consent of both parties, an order discharging the rule to show cause in the case of the Commonwealth *vs.* Rockefeller *et al.*, granted by the Hon. E. M. Paxson on the 11th day of December, 1879, and made returnable January 5, 1880, and annulling the order staying proceedings made by the supreme court on the 8th day of January, 1880.

It is further agreed that this agreement shall, upon execution thereof by the parties, be a full release and satisfaction between the parties of all causes of action of any and every kind whatsoever arising out of the past transactions involved in the said several suits, controversies, or prosecutions, or incident thereto, so far as the parties hereto or any of them are in any manner interested or have any cause or rights of action for or against each other. And it is hereby further agreed that the court of quarter sessions of Clarion County be, and they are hereby, respectfully requested to give their consent to the entering of a *nolle prosequi* in the case of the Commonwealth of Pennsylvania *vs.* John D. Rockefeller *et al.*, of April sessions, 1879, No. 25, in which the defendants named in said case are charged with conspiracy, and the district attorney of said county is hereby requested, on receiving the consent of the said court, to enter in said case a *nolle prosequi*, and the same to be entered of record in said court, with the intent that the same be a judgment of said court disposing of and ending all proceedings under indictment herein before referred to forever.

In witness whereof the aforesaid parties to these presents have hereunto set their hands and seals, the said corporations having caused their seals to be affixed this 5th day of February, A. D. 1880.

Witness:

JOHN V. KEEF.

Witness as to signature of B. B. Campbell—

W. BAKEWELL.

This agreement made on the 27th day of April, A. D. 1880, between B. B. Campbell and the Pennsylvania Railroad Company.

Whereas it having been alleged by persons engaged in the production and shipping of petroleum and the products of petroleum that discrimination had been practised in the rates of freight and in the distribution of cars by the Pennsylvania Railroad Company in such manner as to be injurious to the business of such producers, and bills in equity having been filed in the name of the Commonwealth in the western district of the supreme court of the State of Pennsylvania for the purpose of restricting such discrimination ;

And whereas in pursuance of an agreement signed on the 12th of February, 1880, by the said B. B. Campbell, representing the oil producers, at whose instance such bills were filed, and Thomas A. Scott, as president of the Pennsylvania Railroad Company, the said bills were withdrawn ;

And whereas in said agreement the Pennsylvania Railroad Company agreed, upon the withdrawal of said bills, that it would enter into written contracts with the said B. B. Campbell, representing said producers, and all such producers as should within sixty days after the date of said agreement signify their assent to said agreement by signature to the same or duplicate thereof, which contracts should stipulate as therein mentioned and as hereinafter provided ;

Whereas the several parties above named have been and are now engaged in some one or all of the branches of business connected with the petroleum trade, in buying, selling, shipping, storing, refining, transporting, and producing petroleum, and controversies have arisen between the said parties of the first and second part hereinbefore named, out of which have grown certain suits hereinafter named, and it is desirable to amicably adjust said controversies and settle said suits and proceeding; therefore it is hereby agreed between the said parties of the first and second parts:

I. That the said parties of the first part shall and will make no opposition to an entire abrogation of the system of rebates, drawbacks, and secret rates of freight in the transportation of petroleum on the railroads.

II. That said parties of the first part further agree that the railroad companies may make known to the other shippers of petroleum on their several roads all the rates of freight, and that said parties of the first part or any of them will not receive any rebate or drawback, that the railroad companies are not at liberty to give to other shippers of petroleum.

III. The said parties of the first part further agree that so far as the said pipe lines are concerned there shall be no discrimination used or permitted by the said pipe line companies between or against their patrons: that the rates of pipeage and storage shall be reasonable, uniform, and equal to all parties, and shall not be advanced except on thirty days' notice; that to the extent of their influence the United Pipe Lines and the other companies parties hereto do agree that there shall be no difference in the price of crude oil between one district and another, excepting such as may be based upon a difference in quality, to be determined by tests; that the said pipe lines will make every reasonable offer to receive, transport, store, and deliver all oil tendered them, and will receive, transport, store, and deliver all oil so tendered so long as the production does not exceed an average of 65,000 barrels per day during fifteen (15) consecutive days, unforeseen emergencies and unavoidable accidents excepted; and if the production shall exceed the amount stated, and also the storage capacity of the pipe lines, the parties of the first part, buyers of oil, agree that they will not purchase any so-called immediate shipment oil at a lower price than the price of certificate oil, provided that the owners of immediate shipment oil in the oil region do not sell to any other party or parties at a lower price.

IV. And all the parties of the first part further agree that until the production of oil reaches the daily maximum of 65,000 barrels as aforesaid, certificates or other vouchers will be given for all oil taken into the custody of the pipe lines, and the transfer of such certificates or other vouchers in the usual manner shall be considered as a delivery of the oil mentioned therein as between the pipe line and the seller, subject to the provisions of such certificate or other vouchers.

In consideration of the agreement herein before set forth, and of the execution thereof by the first parties, the said second parties do hereby agree as follows:

That the governor and the attorney-general of the Commonwealth of Pennsylvania shall be requested by them, within ten days of the execution hereof, to enter a motion to dismiss the bill filed by the Commonwealth of Pennsylvania against the United Pipe Lines and others at No. 309, October and November term, 1878, in the supreme court of Pennsylvania, and the proceeding by *quo warranto* No. 12, November term, 1878, in Venango County, and will do all that may be lawfully done to have the same dismissed of record. That upon written motion and agreement the supreme court of Pennsylvania may make of record, by consent of both parties, an order discharging the rule to show cause in the case of the Commonwealth *vs.* Rockefeller *et al.*, granted by the Hon. E. M. Paxson on the 11th day of December, 1879, and made returnable January 5, 1880, and annulling the order staying proceedings made by the supreme court on the 8th day of January, 1880.

It is further agreed that this agreement shall, upon execution thereof by the parties, be a full release and satisfaction between the parties of all causes of action of any and every kind whatsoever arising out of the past transactions involved in the said several suits, controversies, or prosecutions, or incident thereto, so far as the parties hereto or any of them are in any manner interested or have any cause or rights of action for or against each other. And it is hereby further agreed that the court of quarter sessions of Clarion County be, and they are hereby, respectfully requested to give their consent to the entering of a *nolle prosequi* in the case of the Commonwealth of Pennsylvania *vs.* John D. Rockefeller *et al.*, of April sessions, 1879, No. 25, in which the defendants named in said case are charged with conspiracy, and the district attorney of said county is hereby requested, on receiving the consent of the said court, to enter in said case a *nolle prosequi*, and the same to be entered of record in said court, with the intent that the same be a judgment of said court disposing of and ending all proceedings under indictment herein before referred to forever.

In witness whereof the aforesaid parties to these presents have hereunto set their hands and seals, the said corporations having caused their seals to be affixed this 5th day of February. A. D. 1880.

Witness:

JOHN V. KEEF.

Witness as to signature of B. B. Campbell—

W. BAKEWELL.

This agreement made on the 27th day of April, A. D. 1880, between B. B. Campbell and the Pennsylvania Railroad Company.

Whereas it having been alleged by persons engaged in the production and shipping of petroleum and the products of petroleum that discrimination had been practised in the rates of freight and in the distribution of cars by the Pennsylvania Railroad Company in such manner as to be injurious to the business of such producers, and bills in equity having been filed in the name of the Commonwealth in the western district of the supreme court of the State of Pennsylvania for the purpose of restricting such discrimination ;

And whereas in pursuance of an agreement signed on the 12th of February, 1880, by the said B. B. Campbell, representing the oil producers, at whose instance such bills were filed, and Thomas A. Scott, as president of the Pennsylvania Railroad Company, the said bills were withdrawn ;

And whereas in said agreement the Pennsylvania Railroad Company agreed, upon the withdrawal of said bills, that it would enter into written contracts with the said B. B. Campbell, representing said producers, and all such producers as should within sixty days after the date of said agreement signify their assent to said agreement by signature to the same or duplicate thereof, which contracts should stipulate as therein mentioned and as hereinafter provided ;

And whereas on the 25th of February, 1880, the board of directors of the Pennsylvania Railroad Company approved the action of the president in signing said agreement, and authorized the president or one of the vice-presidents to execute such further and formal agreements as might be deemed necessary to carry out the terms of said agreement:

Now, therefore, this agreement witnesseth that, in consideration of the premises and other good and valuable considerations to them thereunto moving it is covenanted and agreed between the parties hereto as follows, to wit:

First. That the Pennsylvania Railroad Company shall and will make known to all shippers of petroleum and its products all the rates of freight intended to be charged to all shippers upon such petroleum and its products.

Second. That the said Pennsylvania Railroad Company shall not and will not pay or allow any shipper of petroleum or its products any rebate, drawhack, or commission upon the shipments of such petroleum or products different from or greater than that which shall be paid to any other person shipping or offering to ship like quantity; and that any discrimination that may be made in favor of shippers of the large quantities shall be reasonable, and shall upon demand made be communicated to all persons shipping or who are now or may be hereafter engaged in the business and desire to ship petroleum and its products.

Third. That the said Pennsylvania Railroad Company further agrees that, upon its own road and upon any other road or roads upon which it shall furnish cars and engage in the business of a common carrier of petroleum and its products, it will not practise any discrimination in the distribution of its cars, but will make fair apportionment in such distribution among all applicants for cars having actually in their custody and ready for shipment at the time of their application the petroleum or products for the shipment of which they ask facilities.

In witness whereof the individuals parties hereto have hereunto set their hands and seals and the said Pennsylvania Railroad Company has caused its corporate seal to be hereunto affixed, duly attested, the day and year first above written.

[SEAL.]

THE PENNSYLVANIA RAILROAD COMPANY,  
By THOMAS A. SCOTT,  
*President.*  
B. B. CAMPRELL.

Attest:

JOHN C. SIMS,  
*Assistant Secretary.*

And thereupon a committee was appointed to prepare a resolution expressive of the opinion of the council as to the agreements, and the committee in due time reported the following:

"*Resolved*, That the general council of the Petroleum Producers' Unions approves the action of the president in withdrawing the suits against the Standard Combination and the Pennsylvania Railroad Company as wise and judicious and compelled under the existing conditions of the litigations. While we do not approve of the reservations in the contracts presented of the right to make any discriminations in the rates of freight, we tender to our president our thanks for the energy, fidelity, and ability with which he has conducted the several legal proceedings."

This was adopted with one dissenting vote. A committee was also appointed to report by resolution a statement of the reasons which led to the withdrawal of the suits, and that committee reported as follows:

"The committee report that it is impossible in the limited time given them to make a statement of all the facts relative to the conduct of the several suits and the reasons which led to their withdrawal, but recommend that these be considered hereafter. They therefore report the following resolution:

"*Resolved*, That the several suits and prosecutions instituted by the legal committee of the general council have failed to secure to us an adjudication by the courts of the correctness of our positions, and that this result is due to the failure of the State administration of Pennsylvania to fulfill its promises of support, to the dangerous influence of corporations with the legislative, executive, and judicial departments of the government, and to the delays brought about by direct interposition of the State authorities, by which the patience and means of the oil producers were exhausted and their efforts rendered nugatory.

"We declare that by the inefficiency and weakness of the secretary of internal affairs in the year 1878, by the interposition on more than one occasion of the attorney-general in 1879, by which the taking of testimony was prevented, by the failure of the present governor for many months either to grant or deny the requisition for criminals indicted for crime within the Commonwealth of Pennsylvania, fugitives to other States, and by the

interference of some of the judges of the supreme court, by an extraordinary and, according to the best legal judgment of the land, unlawful proceeding, by which the trial of an indictment for misdemeanor pending in a local court was delayed and prevented, the alarming and most dangerous influence of powerful corporations has been demonstrated. While we accept the inevitable result forced upon us by these influences, we aver that the contest is not over and our objects not attained; but we will continue to advocate and maintain the subordination of all corporations to the laws, the Constitution, and the will of the people, however and whenever expressed; that the system of freight discrimination by common carriers is absolutely wrong in principle and tends to the fostering of dangerous monopolies, and that it is the duty of the Government, by legislative and executive action, to protect the people from their growing and dangerous power."

And this was adopted with five dissenting voices. A committee was then, upon resolution, appointed to prepare a history of the organization, purposes, and transactions of the general council and a history of the several suits and prosecutions, and this committee reported these pages to a regular meeting of the council, held at Titusville August 10, 1880, by which it was adopted and ordered to be printed.

Immediately after the adjournment of the general council the treasurer of the fund raised for legal expenses began the task of ascertaining subscribers and repaying the amounts donated. Much difficulty was found in doing this for the reason that many were unable at once to give the amount they had paid and many had requested their names to be withheld, while some money had been received from anonymous sources. Up to the present time all the costs and counsel fees have been paid, and nearly all the subscribers to what was known as the legal fund and those not yet paid will be as soon as ascertained. The refunding of the surplus, if any, to the Standard Oil Company, of course, will await the final distribution of the money to the subscribers.

An analysis of the contracts obtained from the Standard Oil Company and its confederates shows the following concessions, which will be observed to cover all the main causes of complaint made by the producers in their memorial of August 15, 1878, and in the charges of the bills in equity:

1. The abandonment of the immediate-shipment swindle.
2. The receiving, storing, transportation, and delivery of crude petroleum from the wells were assured.
3. Uniform, reasonable, and equal rates of pipe transportation were guaranteed.
4. There should no longer be any discrimination in favor of or against individuals, patrons of the pipe lines.
5. The owner of oil in the United Pipe Lines was entitled to receive certificates for it on demand.
6. Discrimination against different districts of the petroleum field was abandoned.
7. There was a positive agreement to take care of 65,000 barrels of crude production each day.
8. The system of secret rates of freight and secret rebates was abandoned.
9. The sale and delivery of a certificate or pipe-line voucher for oil was to be deemed a sale and delivery of the oil itself, thus relieving tanks owned by private persons to the extent of such sale and delivery.

The contract with the Pennsylvania Railroad Company provided—

1. That it would make known to all shippers all rates of freight charged upon petroleum. This was an abolition of secret rates.
2. If any lower rates of freight were allowed one shipper as against another on demand that rate was to be made known.
3. There should no longer be any discrimination in the allotment and distribution of cars to shippers of petroleum.
4. Any rebate allowed to a large shipper was to be reasonable.

As against these advantages the contracts provided that the Standard combination had the right to receive any rebate the railroad companies had a right to grant under the agreements, and the railroad company reserved the right to grant a reasonable rebate to shippers of large quantities as against those who were able to transport only small amounts.

This last point, the railroads had always claimed, and now claim, had been held in their favor by the courts, and it is probable that when the power was exercised in good faith and within reasonable bounds their right to so discriminate would be declared.

In the matter of the petroleum traffic, however, the railroad companies could not shield themselves behind this, because the Standard Oil Company was not the largest shipper until they had made it so by a long-continued system of discrimination and favoritism that had driven out competition and built up that monopoly.

If, in the summer of 1878, individual producers could have secured such contracts as these, they would have been gladly accepted, and the benefits accruing from their enforce-

ment would have been great. Yet but very few signed these agreements or expressed any desire to examine or discuss them with a view of availing themselves of any beneficial provisions there might be in them.

What, then, it may be asked, has been accomplished by the organization of the Producers' Union and their general council, the days and weeks spent in deliberation and consultation, the litigation in the courts?

The answer can not be given fully now, but the future will give one of absolute verity. The wrongs complained of were the result of the growth of a system that should have no place in this land of republican institutions. Whatever tends to build up the power of the few, to increase their gains without corresponding labor, to render of no avail the struggles of energy, mind, and capital, to force from any calling the man competent to pursue it, by the mere exercise of power against which there is no remedy, save that of physical force and revolution, will, if permitted by the administration, undermine the foundations of free government, and bring destruction to the rights, liberties, and privileges of the people.

Not least among the results of the petroleum producers' movement is the demonstration that we live under a form of government and under laws that render a Standard Oil Company possible; that in the struggle for wealth, and blinded by the outward signs of national growth and prosperity, great corporations have been permitted to go uncontrolled and unchecked demanding and receiving special privileges and autocratic powers not accompanied by the necessary machinery to prevent their abuse, to regulate and keep within the bounds of constitutional letter or spirit these monstrous creatures of the law. Nor should it be forgotten that they have gone so far as to fill our legislative and executive departments with men paid to do their bidding, and who dare not disobey their masters.

By the agitation of this subject, and the exposure of methods by which a small band of obscure men may grow so great as to overshadow a continent, and even the seas and beyond them; may dictate the price of the light shed by nature's bountiful product on the humble home of honest industry; the kind of labor by which thousands hope to earn their bread; the wages they shall receive for it, and the time they shall work, the public mind has been brought to think upon the means of remedy, and to believe that such combinations of corporate capital must be controlled by stringent and easily-administered law, else they will rule the State, elections will be farces, and government representative of the people will be at an end. But it is not alone the promulgation of these abstract theories, and the education of the people in the immediate dangers pending, that the oil producers have accomplished. They have extorted from the lips of the wrong-doers an implied confession of the unlawfulness of their acts, and promises of future good behavior, and have brought them to the belief that it will not be well for them to get again into the clutches of the law from which they escaped, not without difficulty and humiliation.

More than this, the great railway carriers of the country have been themselves converted to the belief that the rebate system is as bad for them as for the public, and are beginning to learn that the true prosperity of their corporations lies not in building up by favoritism gigantic monopolies of trade and produce, or of one locality at the expense of some other, but by encouraging individual capital and enterprise along their lines of traffic. While these pages are being written the Pennsylvania Railroad Company has thrown out the banner of free-trade, equal rates, and no discriminations along the vast arteries and veins of commerce it controls, and henceforth will devote its energies to the regaining at least a part of the petroleum-carrying traffic wrested from it by the delusive snares of the Standard Oil Company.

Unless the signs of the times fail to be prophetic, in the near future the United States will exercise its constitutional right to regulate commerce between the States, and in the States themselves such laws will be enacted, and such men be elected to enforce them, as will bring the great corporations to obedience to the principles of justice and true public policy.

---

[Vol. III.—Extracts from Thos. L. Kimball's testimony before Pacific Railway Commission.]

OMAHA, NEBR., *Tuesday, June 21, 1887.*

THOMAS L. KIMBALL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. How long have you been connected with the Union Pacific Company?—A. Since the early part of 1871.

Q. What was your position?—A. General passenger and ticket agent at that time.

Q. How long did you remain general passenger and ticket agent?—A. Until 1880.

Q. What position did you then fill?—A. Assistant general manager.

Q. How long were you assistant general manager?—A. Until the autumn of 1884; then I was appointed to my present position.

Q. That is, general manager?—A. General traffic manager.

## DUTIES OF GENERAL PASSENGER AND TICKET AGENT.

Q. What were your duties as general passenger agent in 1871?—A. I had charge of the making of all the rates that were in use upon the Union Pacific lines for the carriage of passengers and baggage, and also of all the agencies that were employed to procure business in the passenger department—the traveling agencies, the advertising agencies, etc.

## THE STANDARD OIL COMPANY.

Q. Has the Standard Oil Company ever made any shipments over the Union Pacific Railway?—A. Yes, sir; a great many.

Q. When did they commence to ship?—A. I presume about the time the Standard Oil Company commenced.

Q. Well, when did it commence?—A. I could not tell you. I know this about the Standard Oil Company, that it has been a very large patron of the Union Pacific; we have made a good deal of money out of their business. We have paid them a good deal in rebates.

## REBATES ALLOWED IT.

Q. What rebates did you allow the Standard Oil Company?—A. At different times different rates, according to the bids that other roads made for their business.

Q. When did you commence to allow the Standard Oil Company rebates on their business?—A. You will have to allow me to look that up; I could not tell you now.

Q. Was it during your official term as assistant general manager?—A. I will have that put in the answer, if you will allow me.

## RATE OF REBATE.

Q. What was the rate allowed to the Standard Oil Company?—A. All sorts of rates, according to the point of delivery and the liveliness of competition at that point; 5 per cent., 10 per cent., 15 per cent., and up to 30 per cent.

Q. Prior to 1884 what was the rate that you allowed to the Standard Oil Company on oil sent to the dealers at San Francisco?—A. I could not tell you from recollection.

Q. Have you any memorandum that will show?—A. I think I could find it in the records.

The CHAIRMAN. Will you please produce the records and also the subsequent rate—the rate allowed since the 1st of January, 1884, to April, 1887, to San Francisco?

The WITNESS. I will.

## RATES TO OTHER OIL COMPANIES.

Q. What rate did you allow to shippers other than the Standard Oil Company?—A. The Continental Oil Company and the Consolidated Tank Line Company, I think, are on our books for rebates. Perhaps I ought to remark right here that the Standard Oil Company ships about 95 per cent. of the total oil distributed in this country. Prior to the payment of rebates to the Standard Oil Company that oil pretty much all went by ocean to the Pacific coast; and after we had agreed to pay them a rebate they transferred the business largely to the overland routes.

Q. How were the payments of rebate made to the Standard Oil Company?—A. By voucher, I think.

## PREFERENCE TO STANDARD OIL COMPANY.

Q. Did the Standard Oil Company have a preference over all other shippers in oil?—A. There have been times when the Standard Oil Company had a preference.

Q. Was that preference very great as compared with the rates to the other oil shippers?—A. Yes; it was pretty large.

## EMBARRASSING EFFECT ON SMALLER DEALERS.

Q. What was the effect of that on the smaller dealer or smaller shipper in oil?—A. I should think it would be embarrassing to the small shipper.

Q. Only embarrassing?—A. We found it very embarrassing when the Standard Oil Company took its business away from us on the 1st of April. They have got about

200,000 cases of oil on the ocean, and they will ship 600,000 before the year is out in the same way.

REBATE TO STANDARD OIL COMPANY.

Q. What is the next item?—A. Page 2, "Standard Oil Company, San Francisco, \$96.11." This refers to a car-load of oil shipped from Kansas City to Weiser, Idaho, 23,600 pounds; \$640.75. A rebate of 15 per cent. was given on this shipment as part of an understanding by which we secured the competitive business controlled by that company.

Q. What was the rate?—A. The rebate was 15 per cent. off the rate. The total rate on that shipment was \$640.75.

Q. Was that 15 per cent. off the open published rate?—A. Yes.

THE CONTINENTAL OIL COMPANY.

Q. What other oil companies, in competition with the Standard Oil Company, had such a rebate?—A. The Continental Oil Company.

Q. That was the Standard Oil Company, was it not?—A. That depends on the date. There is nothing to show the date of this shipment, but the Continental Oil Company was a competitor of the Standard Oil Company until December, 1885, I think, when the Continental Oil Company was absorbed by the Standard. I have date somewhere.

The CHAIRMAN. That is near enough. What other company?

The WITNESS. No other that I think of.

STANDARD OIL COMPANY.

Page 17, "Standard Oil Company, Denver, \$203.19, oil." This is made up by a rebate of 26 cents per 100 pounds on 94,260 pounds of oil, from Council Bluffs to Laramie, Wyo., tariff \$1.31 being reduced to \$1.05. This rebate was given for the purpose of securing competitive traffic of the Standard Oil Company for our line. Difference is accounted for by an undercharge on original billing, amounting to \$51.82.

COMMENCEMENT OF REBATES TO STANDARD OIL COMPANY.

The CHAIRMAN. Well, you can add that, if you ascertain it to be so. Another question was, "When did the company commence allowing rebates to the Standard Oil Company?" There ought to be no trouble about that.

The WITNESS. So far as I have been able to ascertain the dates the payments were made to the Continental Oil Company from 1874 to 1884. The Standard Oil dates I can not give you at present, but about that time in 1884 there was a consolidation, as I understand it, between the Continental Oil Company and the Standard.

Q. How long had the Standard been shipping over the road prior to that date?—A. I should judge about the same period. They were in competition, and we were paying rebates to both of them.

RATE ALLOWED STANDARD OIL COMPANY PRIOR TO 1884.

Q. Another call was, "What was the rate allowed the Standard Oil Company prior to 1884?"—A. That I can not give you now.

Q. What has been the rate allowed from January 1, 1884, to April 1, 1887, to San Francisco?—A. I can not give that, because it was a fluctuating rate.

Q. Can you give me an average rate?—A. No.

The CHAIRMAN. You led me into this subject under the idea that you would let me have those.

The WITNESS. Well, you must excuse me, because I have been working night and day.

The CHAIRMAN. If you can not give the information you must say so.

The WITNESS. But I propose to give you the information as soon as possible. In a general way I may say that the rates went down to 30 cents and were as high as \$1 per 100 pounds from Chicago.

Q. Is that from January 1, 1884, to April 5, 1887?—A. Yes, sir.

Q. What was the rate allowed the Standard Oil Company prior to 1884?—A. There might have been a hundred different rates during that period. If the Pacific Mail Steamship Company made a bid on the shipment of oil from New York to San Francisco, and we made a bid, it might drop our rate 5 cents a hundred or considerably more.

Q. Can you give any fixed rate up to that time?

The WITNESS. The open published tariff?

The CHAIRMAN. No; the net rate. Can you give the fluctuations of the rate?

The WITNESS. I can not give you that from memory.

The CHAIRMAN. I called for that eight days ago.

The WITNESS. We have got to go back over several years of record in order to get the rate.

The CHAIRMAN. Let us understand whether you intend to give the Commission the rates or not. Let us have yes or no on that subject.

The WITNESS. I intend to give the Commission the rate.

The CHAIRMAN. Do you think you can get it?

The WITNESS. I think I can.

Q. What was the rate of rebate given to the Standard Oil Company prior to January 1, 1884, and what was the rate from January 1, 1884, to April 1, 1887, from Omaha or Council Bluffs through to San Francisco?—A. It is in the hands of a clerk to make up from the record.

#### ALLOWANCE FOR RETURN OF CARS TO OTHER SHIPPERS.

The CHAIRMAN. Another of the questions already asked was, "What allowance was made by the Union Pacific Railway Company for the return of cars for other shippers than the Standard Oil Company?"

Mr. POPPLETON. There was a "car-service statement" put in here that I supposed answered that.

The CHAIRMAN. Does that cover other shippers?

The WITNESS. Yes.

The CHAIRMAN. All of them?

The WITNESS. The same rule for the return of cars applies in all cases.

Q. Now let us understand. Do you mean to say that other shippers had the same rate for the return of cars that the Standard Oil Company had?—A. That is what our record shows, except some rebate that has been paid in the last year, as I remember; those I am having looked up. They were charges refunded.

Q. Were they refunded to the Standard Oil Company?—A. I think so.

Q. Who else were they refunded to?—A. It was either the Standard or the Continental, I don't know which; but I can find out.

The CHAIRMAN. Now I understand you are to produce, then, the allowance made by the Union Pacific for the return of cars for other shippers than the Standard Oil Company?

The WITNESS. If any, yes.

#### RULE FOR RETURN OF CARS UNIFORM.

Mr. POPPLETON. Has not that been answered?

The WITNESS. I think it has gone in already.

Mr. POPPLETON. In what statement has it gone in?

The WITNESS. I have stated that our rule for the return of loaded or empty oil-cars was the same with respect to all companies.

Mr. POPPLETON. Was it applied to all companies alike?

The WITNESS. It was applied to all companies with the exception of some cases in the last twelve months, where, my recollection is, the charge was refunded to the company—the Standard Oil or the Continental.

#### THE CONSOLIDATED TANK COMPANY.

By the CHAIRMAN:

Q. What about the Consolidated Tank Company?—A. It would be in the name of the Continental or Consolidated.

Q. There are amounts stated in your books as for both companies, the Continental and the Standard. How is that?

The WITNESS. The tank line and the Standard Oil Company always mean the same thing, as I understand it. The Continental was a rival company.

The CHAIRMAN. They do not appear in your accounts as the same. Does your statement contain the amounts paid to the Tank Line Company?

The WITNESS. That is as I understand it.

The CHAIRMAN. Then, in addition to the Standard Oil Company and the Continental Company, for those years there should be added, as I understand it, the Tank Line Company.

The WITNESS. The tank line was the name of a style of cars.

*Statement of charges refunded annually to the Standard Oil Company, account of empty oil-tanks returned.*

Year.	Refund.
1880.....	\$131.00
1883.....	54.00
1884.....	80.20
1885.....	520.55
1886.....	51.75
Total .....	858.00

*Statement of charges refunded on empty oil-tanks returned, account Continental Oil Company, during the following years :*

Date.	Amount.
1884.....	\$320.55
1885.....	151.65
1886.....	902.30
Total .....	1,480.50

The WITNESS. In reply to your question as to the rates charged on oil in tank cars for the Continental and Standard Oil Companies, I would say that those rates were as follows :

- 1878. One dollar and twenty-five cents per hundred from Cleveland to San Francisco.
  - 1879. One dollar and twenty cents from Cleveland; \$1.10 from Pittsburgh. In cases, 90 cents per hundred from Cleveland; 95 cents per hundred from Pittsburgh.
  - 1880. Same as 1879.
  - 1881. Seven and three-fourth cents per gallon\* from New York; 7½ from Pittsburgh; 7 from Cleveland; 6.3 from Chicago.
  - 1882. Same as 1881.
  - 1883. Same.
  - 1884. Same.
  - 1885. Eight and one-fourth cents from Cleveland, Pittsburgh, and Buffalo; 7½ from Chicago.
  - 1886. Same as 1885 up to October 26; rates have been fluctuating since that time.
- The above special rates were given for the purpose of securing the greater portion of the shipment of oil by the Standard and Continental Oil Companies, consigned to the Pacific coast, as against the water routes, and for considerations that no other persons or firms were able to comply with.

STATEMENTS PRODUCED IN RESPONSE TO CALLS.

Q. Have you any other calls?—A. I have here statements as follows:

First. A statement showing rebates and overcharges paid annually to the Consolidated Tank Line Company from 1882 down to June 22, 1887, inclusive; and also gross earnings on the business on which the rebate was paid.

I have a like statement as to the Continental Company from 1881 to 1887.

I have a similar statement for the Standard Oil Company from 1880 to 1887.

I have a like statement of charges refunded annually to the Standard Oil Company, account of empty oil-tanks returned, from 1880 to 1886.

I have also a statement of charges refunded on empty oil-tanks, return account of the Continental Oil Company, from 1884 to 1886.

NO RETURNS OF TANK CARS.

The WITNESS. One of your calls was in regard to what amount was allowed, if any, for return of tank cars for any other company than the Standard Oil Company. As to that, I say that the car accountant reports that he finds no record of any other tank cars during that period.

On my memorandum I have an entry as to the coal and stone business. The following is a brief statement of the operations of the coal business for 1886:

\* Seven and one-half pounds to gallon.

[Vol. VI. Extracts from testimony of John C. Stubbs before Pacific Railway Commission.]

PALACE HOTEL, SAN FRANCISCO, CAL.,  
Friday, August 12, 1887.

JOHN C. STUBBS, being duly sworn and examined testified as follows:

By the CHAIRMAN:

Q. What is your occupation?—A. I am general traffic manager of the Southern Pacific Company.

#### POSITIONS OCCUPIED BY WITNESS.

Q. How long have you been connected with the Southern Pacific Company in that position?—A. I think about three or four years as a general traffic manager. I do not remember the exact date of my appointment.

Q. What position did you hold prior to that time?—A. Just previous to that time I was freight traffic manager; previous to that I was general freight agent.

Q. Will you give us the year as you go along?—A. I can not do it.

Q. At what period were you freight manager?—A. I took service with the Central Pacific Railroad Company as chief clerk in the general freight agent's office on October 1, 1870. In the latter part of 1871 I was appointed assistant general freight agent. About two years later I was made general freight agent. About 1882, I think, I was made freight traffic manager, which was merely a change of title, and I think that in the fall of 1884 I was appointed general traffic manager.

Q. Of the Southern Pacific Company?—A. At that time it was the Central Pacific, and after the Southern Pacific came into control I continued in the same relation to that company.

#### GENERAL SUPERVISION OF TRAFFIC ON CONSOLIDATED ROADS.

Q. Under the consolidation have you charge, as an officer of the Southern Pacific Company, of all the business that comes under the control of the general manager of the Central Pacific?—A. The business of the Central Pacific, that is, the traffic of the Central Pacific, is immediately under my supervision, and has been, you may say, continuously, with the exception of a passenger department, and that only since 1884. The freight business has been under my control since 1871.

#### ARRANGEMENTS WITH THE STANDARD OIL COMPANY.

Q. What arrangements have you made with respect to overcharges by way of error, or overcharges by way of arrangement, with the Standard Oil Company on their shipments?—A. We have no arrangements at present with the Standard Oil Company.

Q. What arrangements had you prior to April 1, 1885, at any time, with the Standard Oil Company or the Continental Oil Company, which was afterwards merged into the Standard Oil Company?—A. I desire, after I answer this question, to explain the reasons for what was done in connection with the Standard Oil Company. I believe from the time that the Standard Oil Company took charge, or acquired the oil business on this coast, it had lower rates than the general tariff provided, or than other shippers paid on coal oil. I think that it was the subject of written agreement. The reason for that was, that previous to the Standard Oil Company coming into business here the oil was almost wholly transported via Cape Horn. It was chiefly controlled by Alvinza Hayward, who employed a man by the name of Blake as his agent. The tonnage was very large, and not only went itself via Cape Horn but was an inducement to the laying on of ships which would offer to take other freight, having a partial load of oil. We endeavored to secure the transportation of that oil by rail. I had frequent interviews with Mr. Blake on this subject in the early seventies, and I believe that I once offered him a rate of 80 cents per 100 pounds if he would agree to ship by rail from New York, but he would not do it.

Afterwards the Standard Oil Company came over here, and I think that they bought out Hayward's business. We approached the Standard Oil Company, looking to the transfer of that business from the Cape Horn route to our line. We gained some advantage from the change in the control of the business by reason of the fact that the Standard Oil Company wanted to supply this coast from Cleveland, which brought the point of production several hundred miles nearer San Francisco than when shipments came from New York, but at the same time took it several hundred miles away from the Atlantic coast and from the vessels there.

## CONTRACT MADE.

We made a contract with the Standard Oil Company to bring all of its oil by rail. I think the first rate we made was somewhere in the neighborhood of \$200 a car-load from Cleveland to San Francisco.

Q. What was the date of the agreement?—A. I would not be sure about that, but I think some time in 1876.

Q. Have you a copy of it?—A. Yes, sir.

Q. Will you produce a copy of the Standard Oil Company's contract?—A. Yes, sir; that arrangement has been continuous, or was continuous up to the date of the dissolution of the transcontinental association, which was an association of all the overland railroad lines, and it was a contract in which all the lines between Cleveland and San Francisco were concerned. The written instrument, while made between the Pacific roads or their representatives and the Standard Oil Company was really between all of the railroads between San Francisco and Cleveland. The lower rates were participated in by all the lines between these points. I think that the original contract was made in New York by the Union Pacific Railroad.

## CONDITIONS REGARDING TANK CARS.

Q. Was there any condition in the agreement with reference to the deduction of \$200 or whatever rate was allowed for the return of empty cars?—A. I think not; I do not remember anything of the kind.

Q. Did you make any contract subsequently with the Standard Oil Company with reference to the return of empty tank cars?—A. I do not think so.

Q. Was there any condition with reference to sending them back without charge?—A. I do not remember it. I think that few, if any, boiler tank cars were ever used by the Standard Oil Company. It was certainly understood at the time that the contract was made that they would not use boiler tank cars. That was one of the great obstacles in the way of competing with the Cape Horn route. In the mean time some one had patented a box tank car, putting tanks in the end of the car, so that while it was able to carry a full load of oil, it was available for the use of ordinary freight returning. My recollection is that while it was not specifically stated in the contract, it was the understanding that that class of cars must be used by the Standard Oil Company in order that we might return them loaded, if we could get loads for them. If we could not get loads for them, we would have to return them empty. In returning them we always load them, and instead of charging for their return, we would naturally pay mileage as we do on all foreign cars. We would treat them as though they were the cars of a connecting line.

## STANDARD OIL COMPANY'S SHIPMENTS.

Q. Did the Standard Oil Company have many empty packages pass over your line?—A. I think they have shipped boxes. They would ship the oil in bulk, and then ship the empty boxes and cans to be filled, but I can not be sure about that. It may be possible that it related to refund charges on empty tank cars. They may have sent out here some few empty tank cars.

Q. Would that be part of the agreement made with them in 1876 that you referred to this morning?—A. As I explained this morning, or if I did not ought to have explained, that I do not think there was any such consideration in the contract that we should return them free. If we did return them free, it was under some subsequent agreement or some understanding reached for some reason or other. We did everything that we could to encourage the Standard Oil Company in getting their business here, because it was a case of "ground hog." We must either have their business or we would not have any oil business.

## DEFERRED TO THE JUDGMENT OF UNION PACIFIC.

Q. If the Union Pacific had entered into an agreement for the return of empties free, and that was a part of their agreement, it is likely that all through arrangements would be extended to the Central Pacific, is it not?—A. As a rule we have always deferred to the judgment of the Union Pacific upon western-bound freight rates and west-bound through business, and, unquestionably, if any of the chief officers of the Union Pacific had made a contract of that kind with the Standard Oil Company we would have shared in it, just as the lines east of Council Bluffs would be likely to do. It was a matter of joint interest to us all, and we endeavored to confine the business to our line by all necessary concessions.

Q. The explanation that you have given with reference to the entries that appear from time to time on the books that have been shown to you would apply to the

eighty-six payments in the nature of rebates, amounting to over \$12,000 during fifteen months—twelve months of 1884 and three months of 1885. Would that be the explanation of these entries?—A. Generally to the Standard Oil Company. It is altogether a matter of contract with them.

[Vol. VI. Extracts from testimony of Richard Gray before Pacific Railway Commission.]

SAN FRANCISCO, August 24, 1887.

RICHARD GRAY, having been duly sworn by L. S. B. Sawyer, commissioner of the United States circuit court, testified as follows:

Examined by Mr. COHEN:

Q. How long have you been connected with the Central Pacific Railroad Company or its system of roads?—A. Since March, 1874.

Q. In what capacity?—A. Part of the time as assistant general freight agent, and since May, 1882, as general freight agent.

“REBATE” A MISNOMER.

Q. Explain in what cases rebates were made in favor of any corporation, person, or persons, and whether same were made to others similarly situated or doing like business?—A. In my answer to the previous query it will be seen that the sums refunded by the Union and Central Pacific and connecting lines were not “rebates” as that word is generally understood, but strictly speaking, overcharges which were caused through error or by design for the reasons given, and which were paid on proper showing being made or certain conditions complied with. They were not in any sense railroad revenue or earnings, and therefore the term “rebate” as applied to them is a misnomer.

As before stated, contract rates were general and were accorded to all persons similarly situated or doing like business.

#### STANDARD OIL COMPANY'S CONTRACT.

The contract with the Standard Oil Company, about which a great deal has been said, and the circumstances attending the making of which have already been very fully explained by General Traffic Manager Stubbs, may be thought to be an exception to the foregoing, but it can be shown that the oil business, as conducted on this coast previous to the inauguration of the contract system, was a monopoly; that it had always been such; that this monopoly enjoyed from the water carriers, and still enjoys from the clipper lines, lower rates than can be secured by other shippers; and that in accepting the business in competition with Cape Horn at the rates dictated by the Standard Oil Company, plus a reasonable allowance for interest, insurance, etc., the rail lines in no wise discriminated against smaller shippers, but reduced the margin of difference in favor of the larger corporations as against smaller shippers which had heretofore existed and which now exists.

#### TESTIMONY OF C. M. ADAMS.

C. M. ADAMS sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Saint Louis, Mo.

Q. What is your business?—A. I am secretary of the Waters-Pierce Oil Company.

Q. That is one of the companies affiliated to the Standard Oil Company, is it not?—A. Yes, sir.

Q. Do you know where Mr. H. K. Pierce is?—A. No, sir; I do not.

Q. He was subpoenaed to be here?—A. The understanding was that he was coming, but our people were away, several of them, and he found it very difficult to get away. He said he would, if it were possible for him to do so, as soon as he could be relieved a little there in the office, and I expected to find him at the train when I took the train.

Q. When did you leave Saint Louis ?—A. I left night before last.

Q. Was Mr. Pierce there then ?—A. He was at the office, yes, sir.

Q. Have you any other reason than that why he did not obey that subpoena ?—A. No, sir ; I have not. He fully intended to come, and I suppose will be here yet.

Q. What is the business of the Waters-Pierce Oil Company ?—A. It is receiving and selling oil of various kinds in a general way.

Q. Does it refine oil ?—A. No, sir.

Q. It does not deal in crude oil, does it ?—A. Excuse me ; I said we did not refine. We do at the present time.

Q. Where ?—A. In Mexico.

Q. Where do you get the crude oil that is refined in Mexico ?—A. We get that from the Standard Oil Company.

Q. From the Pennsylvania wells ?—A. It is shipped to us from Cleveland, part of it.

Q. Shipped as crude ?—A. Yes, sir ; I can not tell you where it comes from.

Q. By what system of transportation is it shipped to Cleveland ?—A. Tank cars.

Q. Over what length does that oil from Cleveland to Mexico extend ?—A. I can not tell ; I do not know the distance.

Q. What part of Mexico ?—A. The City of Mexico. I say the City of Mexico, but I believe it is just outside of the city limits, but practically in the vicinity.

Q. Do you know what the net rate is on that shipment ?—A. No, sir ; I do not.

Q. Have you anything to do with it ?—A. No, sir ; I did not have anything to do with the freight rates.

Q. Now, leaving out that one venture or business in refining crude oil, your business, then, is that simply of a merchant in oils ?—A. Principally that ; yes, sir.

Q. You buy oils and sell them ?—A. Yes, sir.

Q. Do you sell any oil on commission for other people ?—A. No, sir.

Q. You invariably buy and sell again ?—A. Yes, sir.

Q. Have you barreling stations where oil is barreled and distributed ?—A. Yes, sir.

Q. At how many places have you that ?—A. I can not give the number ; we have a good many ; I can not state the number of them.

Q. Where are some of them ?—A. East Saint Louis, Springfield, Mo.; Little Rock, Ark., Dallas, Tex., Galveston and Houston.

Q. Over what territory do you sell oil ?—A. We sell oil in Missouri, not the whole of Missouri but a portion of it, and in Texas, Arkansas, and in Mexico.

Q. Is the district in which you sell oil limited by any particular boundary east or west, or is it defined simply by these States that you have named, and Mexico ?—A. We sell some in Louisiana. I did not mention that ; in the western part of Louisiana.

Q. Is your territory bounded on the east by the Mississippi ?—A. We do not solicit trade the other side.

Q. You mean on the east side ?—A. Yes, sir.

Q. You do not solicit trade on the east side ?—A. No, sir.

Q. How far west from the Mississippi River outside of that country do you go ; just to the western borders of Arkansas, Missouri, and Texas ?—A. We go to the western border of Texas.

Q. Do you cover the States or Territories lying immediately west of Missouri, or do you not sell in them ?—A. We do not.

Q. Now state whether or not you receive your supplies of refined oil principally in tank cars.—A. We do.

Q. From what point?—A. It is shipped from various points, Cleveland, Parkersburgh, Oil City, Pa.

Q. From whom do you receive in Cleveland?—A. From the Standard Oil Company.

Q. From whom in Parkersburgh?—A. The Camden Consolidated Oil Company.

Q. From whom in Oil City?—A. The Imperial Refining Company.

Q. What is the extent of your business per annum in barrels over your whole territory?—A. I can not say.

Q. Roughly, as nearly as you can.—A. I do not think I can approximate the figures.

Q. You are the secretary of the company?—A. Yes, sir.

Q. Do you not make up an annual report of your business, or an annual statement of your trade?—A. I do not; no, sir.

Q. Are not bills for the purchase of oils passing through your department?—A. Yes, sir; the invoices do.

Q. Can you tell us how many barrels of oil you purchase a year? I do not want it exactly. Is it 500,000 barrels?—A. Do I understand you to say the number of barrels?

Q. Yes. I do not care whether it comes in barrels or tanks, but just wish to get at the quantity of it.—A. A great deal of our business is in bulk and case oil. I do not understand you. Do you mean that which is handled exclusively in barrels?

Q. I mean the total amount of your business, and I am only using the word "barrel" as a quantity. How much oil do you handle a year, whether in tanks, barrels, or cases?

Mr. CROUSE. Measured in barrels.

Mr. GOWEN. Yes, sir.

The WITNESS. I can not answer that with any degree of certainty.

Q. To the best of your recollection or knowledge?—A. It would be mere guess work. I would say 150,000 barrels.

Q. Now, can you give us your present railroad rates on tank oil from Cleveland to Saint Louis?—A. The rate is to East Saint Louis. There is no rate to Saint Louis.

Q. What is the rate to East Saint Louis?—A. Forty-seven cents a barrel.

Q. That is in tanks?—A. Yes, sir.

Q. Is that rate made on the way-bill at a rate per barrel, or is it at a rate per tank?—A. Rate per barrel.

Q. How many barrels are calculated to a tank?—A. They vary according to the capacity.

Q. Do the way-bills also vary according to the capacity?—A. Yes, sir.

Q. When did that rate go into effect?—A. It went into effect the 5th of April.

Q. Of what year?—A. 1887.

Q. Has there been any change since?—A. No, sir; not that I know of.

Q. Do you get any rebate or allowance off of that rate?—A. No, sir.

Q. What to East Saint Louis has been your rate in barrels from Cleveland?—A. Sixty-two cents a barrel.

Q. Did you get any rebate off of that?—A. No, sir.

Q. Did that rate take effect in April, 1887, as the other?—A. Yes, sir.

Q. Has that been changed since?—A. I do not think it has. I discovered no change in our bills.

Q. You get no rebate off of that?—A. No, sir.

Q. Can you give us the rate from Parkersburgh to East Saint Louis in tanks?—A. My recollection is that it is the same.

Q. Is it the same in barrels?—A. I do not know that we have ever shipped any barrels there.

Q. From Oil City to East Saint Louis what is the rate in tanks?—A. I can not say, because we get very little from there. I am not familiar with it.

Q. Was there not a change made in your rates about March or April of this year in any way that you know of?—A. Not that I am aware of.

Q. Now, as compared with this rate of 47 cents a barrel in tanks from Cleveland to East Saint Louis which went into effect in April, 1887, what was the rate before that, the net rate?—A. I do not recollect what that was.

Q. It was considerably less, was it not?—A. I can not say now.

Q. Don't you know whether it was less or more?—A. No, sir; I do not.

Q. Do you know how the railway companies arrive at the difference of rate between 47 cents in tanks and 62 cents in barrels between Cleveland and East Saint Louis?—A. No, sir.

Q. That rate you say is still in force?—A. It was a very short time ago. The last expense bills I saw were at that rate.

Q. Have you never received barreled oil from Parkersburgh?—A. I think we have, but I can not recall any instance now.

Q. I mean since the passage of the interstate commerce act, can you give us any rate you had on barreled oil from Parkersburgh?—A. No, sir; I can not.

Q. Do you know as a fact in connection with your business, and in dealing with railroads, that the rates from Parkersburgh, Marietta, Pittsburgh and Cleveland are generally identical over the railway system of the South and West?—A. No, sir; I did not know that they were.

Q. You know that your rates are the same in tanks from Cleveland as from Parkersburgh?—A. I think they are.

Mr. GOWEN. I have no more testimony. The witnesses who have not responded are Mr. H. Clay Pierce, of the Waters-Pierce Company; Mr. Stith, assistant general freight agent, and C. G. Warner, general auditor of the Missouri Pacific Railway; H. Colbrun, the general freight agent, John C. Gault, general manager, and C. O. Harvey, the controller of the Queen & Crescent lines; R. M. Fraser, general freight agent of the Cincinnati, Washington and Baltimore; William R. Logan, and W. G. Warden, but there seems to be some doubt as to whether the latter was subpoenaed.

Mr. FLAGG. I have understood that Mr. Warden was in Mexico some time ago.

Mr. GOWEN. The subpoena is not returned, and we were told that he was at St. Augustine, Fla.

Mr. FLAGG. Well, somewhere South. I know he was absent some weeks ago, but did not know exactly where he was.

Mr. GOWEN. The testimony that would come from those witnesses is of a cumulative character, and I do not think it would be necessary to prolong the investigation by reason of their absence.

The CHAIRMAN. That being the situation, the committee will go into executive session.

Mr. SMITH. How about this gentleman, Mr. Rice, with his letters?

The CHAIRMAN. He is coming back.

(At this point the committee went into executive session, at the expiration of which the doors were re-opened and the investigation resumed.)

**GEORGE RICE—Recalled.**

By Mr. BUCHANAN:

Q. You have produced a number of letters here in response to my suggestion. From one dated December 14, 1880, written by A. C. Wilkerson & Co. to yourself, I read:

C. C. & Co. are threatening to ruin us in business if we don't stop selling oil, etc.

Who are C. C. & Co.?—A. Chess, Carley & Co., of Louisville.

Q. And from another letter from the same parties, dated December 27, 1880, I read:

We are reliably informed that they expect to shut off your supply of crude—rather are working to control all the crude in order to shut out outside refiners.

That refers to Carley. Is he of the same firm?—A. Yes, sir.

Q. And from another letter from the same parties, dated January 18, 1881, I read:

The idea of selling out ourselves and friends does not exactly suit us, and we don't think we are for sale.

What does that refer to?—A. I suppose it is referring to this Wilkerson & Co. I suppose they had been trying to buy them out.

Q. I am asking for your explanation of that sentence, if you have the facts by which to explain it?—A. I have nothing to explain except what the letter shows for itself. That is all.

Q. From a letter from the same parties, Nashville, Tenn., dated February 18, 1881, I read:

Railroad troubling us very much about moving oil; don't want us to keep a single barrel in depot; corporation don't want over 5 barrels at any one place inside city limits.

What railroad does that refer to?—A. Where is the letter dated?

Q. Nashville.—A. Louisville and Nashville Railroad. All oil went over the Louisville and Nashville road. That is the only line in there.

Q. Have you any more information about the action of the corporation than is here given? Did they trouble you at all about the shipments of oil?—A. In a general way. Laws had been passed by municipalities in several sections of the country by which they limited the amount of oil to be kept in stock in wholesale stores.

Q. That was done by municipal action?—A. Yes, sir; in a great many cases.

Q. From a letter from J. W. Stillwell, Hannibal, Mo., dated March 13, 1880, I read:

In regard to your oil, it would be no use to try to handle your oil here, unless you would support me in the event of a cut from Loomis & Snively, who represent the Standard Oil Company, of Cleveland, Ohio.

Where was that firm situated, and what was the fact as to their dealing in oil with the Standard Oil Company?—A. They were agents at Hannibal, Mo., at that time of the Standard Oil Company, of Cleveland.

Q. From a letter from T. K. Appler, Hannibal, Mo., dated November 15, 1880, I read:

The coal oil trade here is in a bad fix. Loomis & Snively and the coal oil inspector have been indicted by the grand jury for fraudulent inspection and gauging of coal oil; seven indictments against each of them. They gave bond for January term of court next, 1881.

Do you know the result of the trial of those indictments?—A. I can not say positively.

Q. Have you any knowledge as to the fraudulent gauging of oil?—  
A. No, sir; except what is contained in that letter.

Q. Or whether it was your oil or others' oil that was fraudulently gauged?—A. No, sir.

By Mr. SMITH:

Q. Did you ship any oil there?—A. Yes, sir.

By Mr. BUCHANAN:

Q. From a letter from Kennard Bros. & Co., Omaha, Nebr., dated October 28, 1882, I read:

We would be pleased to give you part or all our trade if you are in position to make prompt shipment, and are willing to back us at any time occasion may demand. We are the only opposition the tank line has here. We have been threatened with annihilation; but as yet, no signs of war appear.

What does that phrase, if you "are willing to back us at any time occasion may demand" refer to?—A. In regard to protecting them against a fall in the prices.

Q. A protection in what way?

Mr. CROUSE. A guarantee.

Q. A protection in what way?—A. Protection to furnish them oil at all times; if they left the Standard and came over to me to buy oil that I would stand by them. I tell all inquirers that I shall sell oil down at cost, although I have to be the judge of that myself. A great many times I have that inquiry, and they tell me they will leave the Standard if I will furnish them all the time. That is impossible, for the Standard put oil down so low that I could not do it.

Q. From a letter from John C. Neal, Atlanta, Ga., dated August, 1880, I read:

I had another case tried and the jury found them guilty and judge fined them \$500. Makes in all \$1,500; they take them to the Supreme Court.

What cases are referred to?—A. The same cases he had against the Standard in Atlanta.

By Mr. GOWEN:

Q. What were they for?—A. The indictments were for selling under-test oil; that is the principal thing.

Q. Had you not better explain that the laws of most of the States fix a certain fire-test, below which it is criminal to sell oil?—A. Yes, sir; most all the States of the Union have. Some of the Southern States I do not think had a fire-test law until the last three or four years, but I believe now there is hardly a State in the Union that has not a fire-test law.

Q. State whether the object of inspection is not to see that the oil is up to that standard.—A. Certainly. The object of the inspection law is to make the oil come up to the standard test.

By Mr. BUCHANAN:

Q. From another letter from Wilkerson & Co., Nashville, Tenn., November 12, 1880, I read:

He said plainly that at any sacrifice they would keep you out.

Referring to the Standard Oil Company previously named. Have you experienced any difficulty in Nashville, Tenn.?—A. I have had an agency there for the last seven or eight years, and it was shut up last year. It was among the oldest agencies of all my agencies, and it was shut out entirely last year on account of the discriminations. I can not get in there.

By Mr. GOWEN:

Q. You mean you were excluded from doing business in Nashville?—

A. Yes, sir; within the last year, where I have had an agency for the last eight or ten years.

By Mr. BUCHANAN:

Q. From a letter from W. O. Peeples, Chattanooga, Tenn., dated January 7, 1881, I read:

"Chess, Carley & Co., on hearing that we had another car of oil on the road, stampeded and cut the price of oil that they had been selling at 21 cents to 17 cents."

Do you know of any other instances of that character?—A. At that point?

Q. At that point.—A. We have frequently had instances of that kind. I can not state any one particular instance. I have had an agency there quite awhile, but that is shut up and shut out. That has been done within the last six months.

Q. From a letter from Bittman, Taylor & Co., Leavenworth, Kans., January 12, 1881, I read:

We are now compelled to call on you for the protection you offered us on oil. The Tank Company's representative was here yesterday and offered a decline of one-half cent on oil. This will hurt us to the extent of that amount on all we have in transit unless you see fit to take care of us.

Did you take care of them?—A. We did to a certain extent, until it got down to cost, and then we quit.

By the CHAIRMAN:

Q. What was that cost?—A. I don't know what it was then, but I mean in a general way. That is our rule of staying in. We staid just as long as we could, sometimes below cost, but not a great while if we could help ourselves.

By Mr. BUCHANAN:

Q. From a letter from Bates & Blatz, Louisville, Ky., dated January 21, 1881, I read:

But we are unable to say as yet what we can do in regard to coal oil, as we are threatened in case we don't stop buying from any but the Standard Oil Company.

Have you any more information than what this letter gives you as to who threatened them?—A. No, sir.

Q. Did you have any further intimations from that firm of any interference with them?—A. I can not say, unless it is there. I can not say positively. I had to rely wholly upon those letters there.

Q. From Memphis, Tenn., is a letter dated January 24, 1881, signed Haas Bros. & Co., in which they say:

The oil business of this city is being controlled by a combination of the dealers, who "fight" any competition which may arise. It will therefore be unprofitable to have any oil on hand here, as they will cut prices below actual cost in order to control the business.

Did you ship oil to that point at that time, or about that time?—A. I think so. I judge so from that letter.

Q. From a letter from Searcy & Schuster, Louisville, Ky., dated February 4, 1881, I read:

Chess, Carley & Co. reduced oil here 2 cents per gallon, and we would like for you to put the oil that we ordered from a little less, so that we will not lose anything on it, because we could have sold it out at a profit if you had shipped immediately.

Did you have any more complaints from that point of that character?—A. I can not say.

Q. From Atlanta, Ga., is a letter of A. Haas & Bro., dated February 5, 1881, saying:

Yes, we are afraid of Chess, Carley & Co., but only to the extent that they will sell for less money than you will allow us to sell.

Do you know of any persistent course by Chess, Carley & Co. in selling at less rates than you were able to sell after payments of your price?—A. I know that was the general disposition.

Q. I am asking as to the actual competition at that point by reason of these lower rates. Was it continuous, and did it result detrimentally to your business, or did it have no effect upon it?—A. It resulted very disastrous. I think Haas & Bro. were agents for me, and I think it was only about a year that we had to wind it up. We lost money and had to quit; I had to quit.

Q. They further say:

We are meeting but one difficulty; when we approach large buyers we get this answer: "We can't afford to buy from you; we don't like Chess, C. & Co., but when they find you are getting the trade they will smash prices and Rice will drop you." Whenever we can assure the trade that we will stay in the market you may count on your getting a big part of the trade.

The Chess, Carley & Co. referred to there, are they the Chess, Carley & Co. you spoke of awhile ago as selling Standard oil?—A. Yes, sir; their headquarters are in the South there. Their territory covers east of the Mississippi and south of the Ohio.

Q. From a letter of H. M. Garlicks, Saint Joseph, Mo., dated March 3, 1881, I read:

The tank lines sent a man here—a special man—some days since; hence the cause of oil from January 28 shipment being sold so low. He went to three of the houses and got them to agree not to deal with me longer, as they only made 25 cents a barrel buying of me, and that he (the tank) would make jobbing rate to country at 17½ per 150 and 13½ per 112, and give them \$1.50 per barrel off from that, which would be 3 cents a gallon off, being 10½ and 14½ net to them.

Was this gentlemen writing this letter dealing with you?—A. Yes, sir; he was my agent, and had to stop and give it up. I had to close up the agency.

Q. How soon after the date of this letter, March 3, 1881?—A. I can not say now; but we had to wind up and close up. I could not send any more oil to him.

Q. He further says in the same letter:

On the strength of my not having any oil to-day I am told they have popped the price up 3½ cents, which is very agreeable to us if they will only hold it so.

Do you remember whether you sold to him after that date or not?—A. I do not know whether I did or not. We were sending him oil all the time, right along. He was acting as agent for me. It was closed up afterward; I don't know how soon.

Q. Were you selling as low as the price he gives here as having been offered by the tank-line people?—A. We generally followed their prices until it got too low. I don't know how low it went; but we had to close up.

By Mr. CROUSE:

Q. He was your agent?—A. Yes, sir.

Q. He was not a buyer and seller?—A. No, sir.

By Mr. BUCHANAN :

Q. Was he selling for you on commission ?—A. Yes, sir. We generally paid 50 cents a barrel.

Q. From a letter from James Brewster & Co., Council Bluffs, Iowa, dated April 16, 1881, I read :

The Standard Company is getting mad ; they say every one that handles any other oil will have to sell at less than cost.

Were they your agents ?—A. They were not.

Q. They were customers of yours ?—A. Yes, sir.

Q. Did you retain your trade at that point ?—A. No, sir ; we had to get out of there. I have scarcely any trade in the West.

Q. From a letter from J. Stadeker & Son, Canton, Miss., dated September 14, 1881, I read :

The Standard Oil Company has monopolized the oil trade of this town, and has gouged the people to such an extent that we wish to break it down and introduce some other oils.

Did you succeed in introducing your oil there ?—A. Temporarily.

Q. Why only temporarily ?—A. We could not get the freights to compete.

Q. From a letter from D. H. Scott, New Orleans, dated November 5, 1881, I read :

In reply I beg leave to say that at present I can not accept of your proposition to deliver me oil at this time, from the fact that Carley has been down here for some time, and has by his engineering, and in consequence of the city ordinances, cut me out of storage. As matters now stand I would not be able to handle a single barrel of oil.

Did you succeed in introducing your oil there ?—A. Yes, sir ; I have an agency there now, but it is not doing much.

Q. What is that ordinance matter of which he speaks ?—A. Some ordinance passed there ; I can not tell just what it was.

Q. Your agent has to comply with it, does he not ?—A. Certainly.

Q. As all others would ?—A. Certainly.

Q. From a letter from Whittemore & Gordon, Little Rock, Ark., dated December 1, 1881, I read :

We wired you on yesterday that if you had not shipped the oil not to do so, as W. P. O. had cut prices against me again.

Who is W. P. O. ?—A. An agent of the Waters-Pierce Oil Company, of Saint Louis, at that point.

Q. From a letter from P. T. Norwood & Co., Jefferson, Tex., dated December 31, 1881, I read :

It will take us about a week to make the engagements and get the parties to sign a written engagement, as the Standard Oil Company will reduce their prices as soon as they hear of the engagement. We will not have any trouble to make sales as soon as we get your prices. Most of our people are anxious to get clear of the Standard Oil Company here.

Did you succeed in introducing your oil at that point ?—A. Yes, sir ; we sold more or less ; but got frequently driven out.

Q. In the same manner you have detailed in other places ?—A. Certainly.

Q. Do you know the Parsons Oil Company, of Saint Louis ?—A. Yes, sir ; very well.

Q. Are they affiliated to the Standard Oil Company ?—A. No, sir ; entirely independent and outside ; but afterwards sold out.

**Q.** They write you, under date of January 3, 1882, as follows :

C. P. Gregory was the agent at Cairo, Ill., for Chess, C. & Co. ; the first tank car of oil he received he had it inspected and it stood 90 degrees. He at once telegraphed C. C. & Co., what it stood, and asked what he could do with it. They wired him to put in barrels, brand it 130, ship it to Tennessee and no remarks, and hereafter you need not have it tested at Cairo.

Do you know anything about that circumstance except what is here detailed ?—A. No, sir.

**Q.** He says "Hereafter you need not have it tested at Cairo;" does he refer to their oil or yours ?—A. To their oil.

**Q.** From a letter from J. H. Talbot & Co., Pine Bluff, Ark., dated January 11, 1882, I read :

While the merchants here would like to buy from some other than the Standard, they can not afford to take the risks of loss. We have just had an example of 100 barrels opposition oil which were brought here, which had the effect of bringing the Waters-Pierce Oil Company's oil down from 18 cents to 13, less than cost of opposition oil, with a refusal on their part to sell to any one that bought from other than their company.

Have you any observations as to that statement ?—A. No; I have nothing to suggest in regard to it.

**Q.** Did you retain your trade at that point ?—A. No, sir.

**Q.** Did you ever have anything of a trade at that point ?—A. Just a moderate trade.

**Q.** From another letter from Hot Springs, Ark., dated January 16, 1882, signed by L. Stone, I read :

Since my last letter our merchants have concluded not to buy oil from Standard. I have been able to hold my own so far, but I expect to have a coal-oil war here very soon. Their agent has made threats to some of our merchants that they must or shall buy oil from them and no one else, or, if otherwise, they would come here and ruin them by fair means if they could, by underhand ways if necessary.

State whether those threats, if so made, were ever carried out to your knowledge ?—A. I put some oil in there and could not stay there but a short time. I am not personally informed on the subject, but I believe it is all true.

**Q.** From another letter from Talbot & Co., Pine Bluff, Ark., dated May 26, 1882, I read. Referring to Waters, Pierce & Co., it says :

Their agent was here several times again yesterday and called on us. He wishes to make a contract with us and four or five other large dealers, and failing to do so in short time, he threatens opening a retail house here, put oil down from 5 and 10 cents retail.

Do you know whether that threat was carried out ?—A. I do not know positively whether it was or not. I can not state now from memory. I can state here generally that the Standard put up a wholesale grocery house at Columbus, Miss., in order to drive merchants to buy their oil.

**Q.** From a letter from Lemuel Stone, Henderson, Tex., dated June 28, 1882, I read :

I am just in receipt of your postal concerning oil. We have been handling Waters-Pierce Oil Company's oil, paying at depot here \$2.65 per case 10 gallons. Growing tired of the extreme high prices, ordered car from Cleveland Schofield Electric Light, etc., at 20 cents per case less. This riled our friend, Waters-Pierce Oil Company, who now will sell no man who engaged in the car enterprise, and have three parties only in our town where they sell, and give it to them at \$1.75 per case, and forcing us to pay \$2.25 or get oil elsewhere. We want some company to furnish us oil. Four-fifths of the town are unable to get it.

Can you, from present recollection, state whether the price, \$2.65 per case of 10 gallons, was at that time a high price for oil ?—A. Yes, sir; a very high price.

By Mr. SMITH :

Q. Do you put up oil in tin cans ?—A. Yes, sir ; two 5's in a box.

By Mr. BUCHANAN :

From a letter from Schmitt & Co., Milwaukee, Wis., dated August 12, 1882, I read :

Will you deliver and protect us on price against Standard Oil Company, etc. ?

Did you undertake so to do ?—A. I think we did ; I can not recollect positively, it is so far back.

Q. Do you know whether there was any measure resorted to to interfere with your competition at that point ?—A. No, sir ; I can not state there was.

By Mr. SMITH :

Q. Have you any agent in Milwaukee ?—A. No, sir ; we never did have. We used to sell oil direct. We used to sell more or less, but never had an agent there.

By Mr. BUCHANAN :

Q. From a letter from Gavin & Co., Memphis, Tenn., dated October 18, 1882, I read :

The Standard Oil Company has been monopolizing the oil trade of this region for some time, Memphis particularly. One day oil is up to 20 cents and over, and when any person attempts to import here, other than the vassals of the Standard Oil Company, it is put down to 7 cents per gallon. Can we make any permanent arrangements with you by which we can baffle such monopoly and not lose much ? Can you furnish the oil in car loads—tank lots ?

Did you experience any difficulty of that kind there ? Did the Standard Oil Company reduce the rates while you were in competition ?—A. Yes, sir ; I experienced a great deal of trouble in Memphis. I had an agency there, but it was bought out.

Q. Have you any knowledge other than this letter gives us of the immediate rise of oil in Memphis upon the ceasing of competition ?—A. I can say, that in a general way that is generally the case, that wherever a competition ceases oil goes back up again. Where there is no competition the prices are high all over the country, and particularly in Texas is that the case.

Q. From a letter from J. H. Garside, Atchison, Kans., dated November 15, 1882, I read :

The Standard being real jealous of their Atchison trade have had their emissaries in town unusually thick for the past two or three days ; are more scared than hurt. They made some wonderful overtures to me.

Was he dealing in oil for you ?—A. Yes, sir ; he was agent for me. We had to close up and get out. It was unprofitable. I could not make any money.

Q. From a letter from A. J. Lyndon, Newman, Ga., dated November 20, 1882, I read :

It seems, however, that Chess, C. & Co. have the oil dealers of this State so completely cooped in that they can not move. In the first place all kerosene oil must be tested in this State, and in most of the small towns the commissioner of agriculture, whose business it is to appoint inspectors, refuses to appoint an inspector. Hence, the retail dealers are compelled to order their oil from Chess & Co. in Atlanta, or buy of their agents in smaller towns, where they keep oil deposited. When this thieving law was passed I wrote to the commissioner of agriculture asking for an inspector for our town. He replied, saying that if it became necessary he would appoint one, dodging in this way the application.

Did you have any trouble with your shipments of oil to Newman, Ga. ?—A. I suppose so, but I can not recollect now distinctly in regard to it.

The trouble was general, I might say. The commissioner of agriculture of the State of Georgia only appoints a few. There is one general inspector, and he has his assistants. They only inspect oil at general receiving points, where the Standard have stationary tanks. That is about the general way. If a man wants oil inspected outside they send a man out if necessary. But it is generally done at these few central stations and the oil goes.

Q. From a letter from J. F. Blackburn, Hutchinson, Kans., dated December 28, 1882, I read :

The tank line has dropped  $2\frac{1}{2}$  cents per gallon since this car arrived at Kansas City.

Did you ship oil to that point at that time ?—A. Yes, sir.

Q. And this letter refers to your oil ?—A. Yes, sir.

Q. Passing over a large number of letters which have been produced, and which all seem to be of the same general tenor, I come down now to some more recent letters, the first being from Cain & Kiernan, Natchez, Miss., dated August 11, 1887, in which they say :

No more oil wanted at present. The war has begun. We sold our C. O. and delivered at 10 cents.

What does C. O. mean ?—A. I think it is coal oil.

Q. The letter further states :

Standard has put their price at  $9\frac{1}{4}$  less 50 cents rebate. We will hold off until they advance prices again.

Do you still ship oil to Natchez, Miss. ?—A. No, sir ; we are not shipping there now. I had an agency there and had to get out.

Q. The agent had to get out ?—A. No, sir ; I had to get out ; had to close up the agency.

Q. Why ?—A. The prices were cut so we could not get any money. The freights would not allow me to go in there and sell in competition with the Standard at the prices made.

Q. From a letter from G. A. Dole, Minneapolis, Minn., dated 10, 22, 1887, I read :

We have been and are engaged in a stiff contest with the Standard Oil Company, who are here as the Standard Oil Company, Vacuum Oil Company, Globo Oil Company, and Chester Oil Company. We are about ending an investigation of the Minnesota oil inspection law. Have defeated the inspector in two actions in the district court and expect to finally settle him in the supreme court next Friday. We find the inspector and his deputies are aiding the agents of the Standard Oil Company in decrying our goods and injuring our trade whenever they can.

Do you know of any further information analogous to that except what is shown by that letter ?—A. No, sir.

Q. From a letter from Sherman, Tex., dated September 20, 1887, signed by Patty & Joiner, I read :

Messrs. Eubank & Co. have handed us your letter to them of 17th instant in regard to placing some oil in this market. To do this would mean a fight with the W. P. Oil Co.

Q. Does that refer to the Waters-Pierce Company of which you have spoken ?—A. Yes, sir.

Q. Did you succeed in selling oil to those parties ?—A. I do not know whether we did or not ; I can not say.

Q. From a letter from J. M. Gaut, Knoxville, Tenn., dated 4, 29, 1887, I read :

It seems that the Standard Oil Company is not only working State legislation against us, but are monkeying with the railroad companies.

What railroad companies run into Knoxville, Tenn.?—A. The East Tennessee, Virginia and Georgia is the only road. The other connecting lines connect up to within 40 or 50 miles.

Q. Is Gaut still your agent there?—A. Until recently. We have given that up. Knoxville is the place where they put the price up 64 cents and cut the price so that we could not do business there recently.

Q. From a letter from J. M. Johnson, jr., Tampa, Fla., dated January 13, 1887, I read:

You will have to make low prices as the Standard Oil Company will fight me in oil, if I order of you.

Did you establish an agency there?—A. No, sir.

Q. Did you establish any trade there?—A. No, sir.

Q. What was the reason?—A. They were afraid to buy.

Q. I think you have testified that those letters show generally that at points where you competed with these companies affiliated to the Standard Oil Company they reduced the price of their oil to a figure less than the cost in some instances to yourself?—A. Yes, sir.

Q. And in many to a point less than it would afford you any profit?—A. Yes, sir.

Q. What generally has been their course after your competition had ceased?—A. The prices were generally advanced after competition ceased.

Q. And your business correspondence carried on through a number of years, and your general foresight from your business, enable you to say that was the general course?—A. Yes, sir; there is no question about that. Wherever we sold oil in any town throughout the United States the price was generally reduced as soon as the oil arrived there, and as soon as it is got out of the way the price is put back. People are generally afraid to take hold and buy it.

Q. Here is a letter in connection with that from Mr. Leigh, of Paducah, Ky., dated May 19, 1887, in which he says:

As soon as the Standard representative learned of the arrival of my oil he communicated with his company and to-day a representative higher in authority put in an appearance, and in company with the Paducah representative visited the trade with the information that "oil had declined," and reduced prices 1 cent per gallon, viz: 130<sup>c</sup> 9<sup>1</sup>/<sub>4</sub> cents, etc.

The WITNESS. I have an agency at Paducah.

Q. Was this man Leigh your agent there?—A. Yes, sir.

Q. Did you continue that agency?—A. We are shipping there more or less all the time now. We ship by river. Whenever we can get oil in there by river we ship it in. If we can not get water we do not get in, and keep out temporarily. That is the way we have to work it.

Q. From a letter from F. T. Mastin, Huntsville, Ala., dated November 30, 1887, I read:

The Standard Oil Company ordered their car after I did mine, and it got here nearly a week ahead of mine. This looks "fishy" on part of L. and N. R. R.

Was the oil referred to by him purchased by you?—A. He is my agent there, and has been for several years. I never sold any oil direct. He is my regular agent.

Q. Under date of February 4, 1887, J. H. Bolton & Co., of Jacksonville, Tex., write, saying:

We learn it is possible that your oil is side-tracked on the line, that Waters-Pierco might get in their work.

Did you have any trouble with the detention of oil in transit to that point?—A. I do not know exactly in that case. We have had a great deal of trouble, and with cars that went to San Saba, Tex., we had a great deal of trouble. San Saba was off in the country some 25 or 30 miles, and we had to haul oil by wagon. It was sent to Saint Louis on the regular rate and then subject to Missouri Pacific billing to the nearest point to San Saba. Instead of that they stopped off at a station outside of it that was further off. This man to whom the car was to be delivered did not know it, and they did not notify him of it, and in the mean time the prices were lowered so that he lost money on it.

Q. From a letter from B. A. Neale & Sons, Mayfield, Ky., dated January 21, 1887, I read:

Having obtained your name and business from George O. Duncan, of our city, I write to say that the Chess Charley, or now Standard Oil Company, has for a long time been selling us oil at 11, 16, and 18 cents per gallon, but to-day they are planting an agency in our town, and propose to raise oil to 13, 18, and 20 cents. While possibly you can not afford to fight them here, still I dislike to submit to the unreasonable and arbitrary commands, etc.

Did you send them oil?—A. I do not know positively.

Q. Can you tell whether those prices quoted, which he raised to 13, 18, and 20 cents, were high or low figures?—A. I consider them high figures.

Q. From a letter on the letter-head of the Acme Oil Company, agents Ohio Oil Works, and signed "Gresham," I read:

An ex-employé of C. C. Co. informed me a few days since that the present inspection law on coal oil was framed in the office of C. C. Co.

What company does he refer to?—A. The Chess-Charley Company.

Q. Where was Gresham, your agent?—At Atlanta, at one time; but has not been for a year or two.

Q. Where is Aberdeen?—A. Mississippi.

Q. Here is one more letter from F. T. Mastin, of Huntsville, Ala., dated September 16, 1887, in which he says:

Later I saw Halsey Brothers and made them the proposition to allow them same rebate as Standard. They say, after considering the matter; they are afraid to antagonize the Standard.

Was Mr. Mastin your agent at that time?—A. Yes, sir.

Q. What rebate does he refer to? A discount on the oil or a rebate on the price?—A. A discount on the oil. I might say here that it was developed in our Interstate Commerce Commission cases that the Standard shipped all the oil to Huntsville in tank cars. It was developed in the testimony that the Standard was getting theirs shipped in there for 27½, and they were charging me 37.

Mr. GOWEN. I will offer in evidence the record of the testimony in the case of Rice v. the Louisville and Nashville Railroad Company and others, with the understanding that it shall be used only and not printed, and is not to be extended upon the record.

The CHAIRMAN. At this point the committee will adjourn subject to the call of the chair.

WASHINGTON, D. C., *May 25, 1888.*

The committee met at 2 o'clock p. m. Present: The chairman, Messrs. Breckinridge, Wilson, McKinney, Grimes, Crouse, and Smith.

**GEORGE RICE—(Recalled).**

By the CHAIRMAN:

Q. Mr. Rice, when you were on the stand before, you were interrogated as to some correspondence between yourself and B. F. Mitchell, general freight agent of the Chesapeake, Ohio and Southwestern Railroad Company.—A. It was formerly that and changed to Newport News and Mississippi Valley—same thing.

Q. Since known as the Newport News and Mississippi Valley?—A. Western Division.

Q. Newport News and Mississippi Valley Company, Western Division?—A. Yes, sir.

Q. Does this bundle of papers which I hold in my hand contain the correspondence, or correct copies of that correspondence, to which you referred?—A. Yes, sir.

Q. Both sides of it; that is, to you and from you?—A. Yes, sir.

(Correspondence above alluded to offered in evidence, and is as follows:)

CHESAPEAKE, OHIO AND SOUTHWESTERN RAILROAD COMPANY,  
*Louisville, Ky., March 2, 1885.*

DEAR SIR: I have instructed that your oil for New Orleans be sent via Memphis. Send me an order routing your oil via L., N. O. and T. R. R. for New Orleans. This is necessary, as Mr. Morey is endeavoring to force an advance in your rate as it is interfering with his shipments from Cleveland. Consider the information given you confidential.

Yours, truly,

B. F. MITCHELL,  
*G. F. and P. A.*

GEO. RICE, Esq., *Marietta, Ohio.*

MARIETTA, OHIO, *March 14, 1885.*

DEAR SIR: Your favor 2d, regarding rating New Orleans oil, at hand. Would say in confidence that on account of Mr. Ong's warehouse being on Illinois Central Railway, that I would prefer it to go in over his line, as Mr. O. writes that they would not switch for him, claiming they are too busy, etc., when once a car did go via Louisville, New Orleans and Texas, and he is also under obligations for warehouse room; but if these objections can be overcome would prefer to give you all the mileage possible. Please do not render public letters sent you from Morey & Culp, as I have answered neither of them, and only sent them to show you that they were favoring Carley and also perfectly willing and anxious to cut you out. Please hold confidential and return.

Yours, truly,

GEO. RICE.

B. F. MITCHELL, Esq.,  
*G. F. A., C., O. and S. W. R. R.*

LOUISVILLE, KY., *March 20, 1885.*

DEAR SIR: Have yours of the 14th. D. B. Morey, general freight agent Illinois Central Railroad, has for some time past been endeavoring to have the rates advanced from Marietta to New Orleans. Recently the Cleveland, Columbus, Cincinnati and Indianapolis, Louisville and Nashville, and Cincinnati Southern have joined the procession, and to enable you to reach the New Orleans market I thought it desirable to transfer your shipments to the Louisville, New Orleans and Texas road. You must make no explanation to the parties in New Orleans who receive the oil.

However, if you desire it to go by the Illinois Central we shall send it that way. The rate from Cleveland is \$2 per barrel, and as shipments are going by the Illinois Central road Morey thinks that the rate from Pittsburgh is entirely too low.

Will return you letters that you so kindly sent me. You need not be afraid of my making use of them as against your interest.

Yours truly,

B. F. MITCHELL,  
General Freight Agent.

GEORGE RICE, Esq., *Marietta, Ohio.*

MARIETTA, OHIO, March 21, 1885.

DEAR SIR: Your favor 20th at hand regarding New Orleans shipments. Explanation is perfectly satisfactory. I shall say nothing to New Orleans parties. You may rest assured Carley is determined to drive me out of New Orleans, and the best way he thought was to get the rate advanced. Failing this, I look for him to attempt to buy up my customers. Should he succeed I shall then make an agency at that point, and will endeavor to have a fair share of the trade.

If I need it will you have any room for me to build a warehouse, or have you any you can rent me on one of your switches convenient to the city? Please look this matter up as soon as possible, as I want to make New Orleans a depot for Southern Texas trade, and want to be located conveniently to ship without drayage at New Orleans on the sunset route. How do you make your transfers to the Texas roads at New Orleans now, conveniently?

Yours truly,

G. RICE.

B. F. MITCHELL, Esq.,  
G. F. A., C., O. and S. W. R. R., *Louisville, Ky.*

LOUISVILLE, KY., March 30 1885.

DEAR SIR: Have yours of the 21st, and have written the Louisville, New Orleans and Texas Railroad, asking if they could furnish you place for warehouse purposes on the Louisville, New Orleans and Texas Railroad at New Orleans. I fully agree with you that Chess-Carley are endeavoring to force you out of the market. The Illinois Central Railroad recently have become very restive regarding rates that are being made from Marietta, or I have telegrams from Chicago, New Orleans, Cleveland, and other places that unless the rate is advanced they will reduce from Cleveland. This information, however, I desire to have you consider confidential. I hope to see you before a great while, as I intend to visit your city before going to Cleveland to make some investigation.

B. F. MITCHELL,  
General Freight Agent.

GEORGE RICE, Esq., *Marietta, Ohio.*

[Anti-Standard—Anti-Monopoly.—George Rice, proprietor.]

OHIO OIL WORKS,  
*Marietta, Ohio, July 24, 1885.*

DEAR SIR: Mr. Rice has just returned and learned for the first time the facts about New Orleans rate. Mr. Morey informed him that you wired him about the 14th saying it was proposed to make the rate \$2 to New Orleans and \$1.50 to Memphis. Then when he got to Cincinnati Mr. Fraser told him that "his connections" raised the rates was cause of his advising us of the advance, and when asked which one, said he telegraphed Morey, who replied that it was Mitchell.

Mr. Fraser told Mr. Rice he would hold the rate open to August 1, and so advised his agent here, notwithstanding he had already received your order to hold the rates in force.

We have our warehouse ready, and first car goes forward to-morrow. The Louisville, New Orleans and Texas told Mr. Rice they would stand the transfer charges to my warehouse on Illinois Central Railway; send the cars this route, and let Mr. Morey go. Looks as though he and Mr. Fraser were working against me.

Yours, truly,

G. C. BUTTS.

B. F. MITCHELL, Esq.,  
G. F. A., C. O. and S. W. R. R. *Louisville, Ky*

MARIETTA, OHIO, *July 25, 1885.*

DEAR SIR: Mr. Fraser wired Mr. Morey, who showed the dispatch to Mr. Rice, in substance, as follows: "The old rate was \$1 to New Orleans and 75 cents to Memphis. Our connecting lines notify us of an advance to \$2 to New Orleans and \$1.50 to Memphis."

Now what do you think of Mr. Fraser's giving our special away.

Yours truly,

G. RICE  
BUTTS.

B. F. MITCHELL, Esq.,  
*Louisville, Ky.*

---

LOUISVILLE, KY., *July 29, 1885.*

DEAR SIR: Have yours of the 24th stating that Mr. Rice has just learned the facts for the first time about the New Orleans rate. It is true Mr. Fraser and others did receive a telegram from me about the oil rates. However, the subject did not originate with me. My telegram to Mr. Fraser will for the present put a stop to the advance. Have written Mr. Fraser fully on this subject, and told him before any decided action was taken I would investigate the subject thoroughly and see what other parties intended to do.

As to your order, we will send your freight to New Orleans by the Louisville, New Orleans and Texas Railroad until further notice.

Yours truly,

B. F. MITCHELL,  
G. F. A.

G. C. BUTTS, Esq.,  
*Marietta, Ohio.*

---

LOUISVILLE, KY., *July 30, 1885.*

DEAR SIR: Have yours of the 25th. Do not know that it is necessary to put myself upon a cross-examination to answer questions asked by Fraser, Morey, and others. It is true that I did telegraph Fraser and Morey, but the advance was not made by me and I do not see any probability that it will be made at present. It is well sometimes to act upon suggestions made by others to ascertain just exactly how the ground lies, and I think it has been proven conclusively that Morey and other interested parties have endeavored to get advances that would absolutely force the entire traffic into their hands, but up to the present time have not succeeded.

Yours truly,

B. F. MITCHELL,  
G. F. A.

GEORGE RICE, Esq.,  
*Marietta, Ohio.*

---

MARIETTA, OHIO, *October 12, 1885.*

DEAR SIR: Please name best rate on 65 barrel lots, Marietta to Arkansas City. I have a customer there who thinks he can now handle in that quantity, but 100 barrels, I fear, would be too much at a time, however, advise a rate on both quantities. I have been repairing stills and am much behind on orders. Hope to send you a good freight business, now I am again started. The agent of the Cincinnati, Washington and Baltimore here notified me that Fraser had ordered half my New Orleans shipments to be forwarded via Cairo and Illinois Central Railway. I promptly told him they were all to go via Louisville and Fulton, if Mr. Mitchell so desired, but Louisville at all events. Mr. Morey is asking for the business for all his junction points and threatening great things if I don't give him it, but as I don't use his line don't see what he can do.

Yours truly,

G. RICE.

Please trace and hurry forward shipment October 8, C. W. Hooper, Selma, Ala. Parties entirely out of oil. B. L. has been sent you.

B. F. MITCHELL, Esq.,  
G. F. A. C. O. & S. W. R'y, Louisville, Ky.

LOUISVILLE, *October 14, 1885.*

DEAR SIR: Shipments of oil from Marietta. Have your favor 12th instant. Send your shipments forward from Marietta via Cincinnati, Washington and Baltimore and Chesapeake, Ohio and Southwestern from Louisville. We want your business and propose to take care of it, and do not want you to let others bulldoze you into sending via other routes. When you leave us you will find you are hemmed in by roads from which you can receive no favors.

Would be glad to tell you some propositions made to me, but just at present can not. "A word to the wise is sufficient." You know if they could induce us to change our route against you they would force you to retire from the market.

Mr. Fraser has no right to forward your shipments via any particular route, and can not refuse to let your traffic go as you desire.

Yours truly,

B. F. MITCHELL,  
G. F. and P. A.

GEORGE RICE, Esq.,  
Marietta, Ohio.

LOUISVILLE, KY., *July 10, 1886.*

DEAR SIR: Have your favor inclosing copy of notice from Mr. Lucas regarding rates on coal oil to expire July 15. The recent action of the lines north of the river has forced the abrogation of all prorating arrangements south. I am not yet prepared, however, to say what rates will be, but will send you copy as soon as agreed upon.

Yours truly,

B. F. MITCHELL,  
G. F. and P. A.

GEORGE RICE, Esq.,  
Marietta, Ohio.

Q. You were also interrogated when you were upon the stand the last time as to certain telegrams received by you countermanding orders for oil which had been given you?—A. Yes, sir.

Q. In consequence of competition with the Standard Oil Company?—A. Yes, sir.

Q. Have you any such telegrams?—A. Yes, sir [handing telegrams to the chairman].

Q. These are copies of the telegrams received by you?—A. Yes, sir.

Q. In each instance to which these telegrams refer had you made sales of oil upon orders to the persons who signed these telegrams?—A. Yes, sir.

Q. Did you, at or after the receipt of the telegrams, learn why the orders were countermanded?—A. In a general way; I received information by letters afterwards. These telegrams came countermanding them.

Q. And did you ascertain afterwards why the countermand came?—A. In a general way. We got the news by letter that the Standard agents had been around and had threatened the trade that if they bought oil of me they would not sell them any more. We would get the information in a general way.

Q. Did you receive that in some of the instances referred to in these telegrams?—A. I think we did. I can not say positively. I am sure we did. It was generally the case that letters would follow after these telegrams and give the reason more explicitly.

(Telegrams referred to offered in evidence, and are as follows:)

[Telegram.]

GAINESVILLE, TEX., *March 17, 1884.*

GEO. RICE:

We hereby countermand our orders for oil March 14. Do not ship.

GEORGE RICE:

Cancel our orders given your Kirkpatrick 15th. We insist.

BLAKOWSKI &amp; Co.

Q. You were also asked whether, in any instance that you know of, the price of oil was put back at any point from which you were driven out by the competition of the Standard Oil Company directly after you were driven out?—A. Yes, sir; I was asked that question.

Q. Do these letters which you now produce, or some of them, contain statements of that sort?—A. Yes, sir; there are several letters there.

Q. I call your attention to a letter written at Saint Joseph, Mo., March 3, 1881, by H. M. Garlich, in which this statement appears:

On the strength of my not having any oil to-day I am told they have popped the price up 3½ cents, which is very agreeable to us.

Who is referred to by the word "they"?—A. The agents of the Standard Oil Company.

Q. I call your attention to a letter written by W. W. Roberts, Tyler, Tex., April 27, 1881, containing this expression:

The Pierce Oil Company do their best to keep other oil out, and when they find other men offering to sell they will cut below them until he is out of their way, and then put the price up again.

Was that letter received about the time it bears date?—A. Yes, sir.

Q. And it refers to the Pierce Oil Company, which was one of the Standard Oil Company?—A. The Waters-Pierce Oil Company, of Saint Louis, a branch of the Standard.

Q. I call your attention to a letter written by W. C. Preston, Decatur, Ala., January 20, 1883:

The Standard Oil Company have advanced their prices so much of late that I am satisfied that I can sell your oil without any trouble.

Had you prior to that time furnished any oil to Decatur, Ala.?—A. I think we had.

Q. And had retired from the business?—A. That is my impression now. I judge so from that letter. I think so. It has been a good while back.

Q. I have a letter here from Mr. E. Evershed, written at Creston, Iowa, dated February 22, 1883, in which this expression occurs:

Some time since Wallace Hemly Bros. bought a car of you or some one else, and as soon as they got it here Mr. Hamilton, who is agent for the Standard Company here,

put the price down so there was no money in it for any one, and as soon as it was sold put it back to old price again.

Was that a statement referring to such a transaction?—A. That is correct.

Q. Was that your oil that had been sent there?—A. That is my impression.

By Mr. SMITH:

Q. You would not have got that letter if it had not been?—A. No, sir; I do not think I would. I can not state positively in every instance of my own absolute knowledge, but in a general way those are all letters received from correspondents we sent oils to, and some cases probably we did not furnish oil.

Q. But those letters are all addressed to you?—A. Yes, sir; all addressed to me in the way of general correspondence in our business—just came of their own free will, these expressions.

By the CHAIRMAN:

Q. I call your attention to a letter from Kimbrough & Eastland, dated Meridian, Miss., October 31, 1885:

Your agent, Mr. A. J. Peck, is now handling Chess-Carley Company oil, has signed a contract with them for twelve months, so we are informed by Chess-Carley Company's agent. Immediately after the contract was signed by him oil which had been selling all the summer at 10 cents went to 12 and then to 13, and it now sells at 13.

Had Peck been your agent?—A. He had been before that.

Q. That is what I want to know.—A. Yes, sir.

Q. The Chess-Carley Company is one of the Standard Oil Trust Company?—A. Yes, sir.

Q. And prior to this time, October 31, 1885, you had sold oil at Meridian, Miss.?—A. Certainly.

Q. So that this rise was after you had been driven out of the market?—A. Yes, sir; that is a fact.

Q. I call your attention to a letter from R. B. Templeman, Navasota, Tex., dated December 13, 1886:

The Waters-Pierce Oil Company sold as long as your oil lasted at \$1.50 a case (10 gallons). Now they have gone up to \$1.75, and will not sell unless you sign an obligation to buy from them and them only.

Had you prior to that time been selling oil in that market?—A. Yes, sir.

Q. And that place?—A. Yes, sir.

Q. And this rise in price followed your being driven out of the market?—A. Certainly it did.

Q. Here is a letter from S. C. Regan & Co., Vicksburg, Miss., dated March 3, 1887?—A. They were my agents and have been for several years.

Q. In this letter they write:

The Standard has only advanced their price to 10½ within the last eight or ten days. While we had oil here they sold for 9 cents.

Have you been driven out of that market?—A. We have not been driven out; we have staid there, but have not made any money; we are just keeping the agency open, but are not making any money.

By Mr. CROUSE:

Q. What is the regular retail price at that place?—A. At Vicksburg?

Q. Yes.—A. Why it varies. It runs anywhere from 9 to 12 cents per gallon.

Q. Ten and one-half cents does not sound like a big price.—A. It is not; 10½ is a low price.

The WITNESS. I also produce two recent letters relating to this subject [handing them to the chairman].

The CHAIRMAN. I will read these letters in evidence.

MARIETTA, OHIO, 5, 8, 1888.

DEAR SIR: Please advise by return mail prices to which oils were advanced after my oils were off your market, and greatly oblige.

Yours, respectfully,

GEO. RICE.

CULLERS & HENRY,  
Sherman, Tex.

SHERMAN, TEX., May 11, 1888.

DEAR SIR: In reference to your inquiries concerning advances in price by W. P. Oil Company immediately on your oil going off this market, will say the advance was 5 cents a gallon.

Very respectfully, yours,

CULLERS & HENRY.

GEO. RICE, Esq.,  
Marietta, Ohio.

The committee then adjourned subject to the call of the chairman.

OFFICE OF THE EXECUTIVE COMMITTEE,  
Bradford, Pa., May 8, 1888.

To the members of the P. P. A.:

GENTLEMEN: Two months ago we sent you a circular letter congratulating you upon the continued success of our united efforts to reduce the stocks of oil above ground. Recent events have seemed to conspire to test to the utmost the stability of our membership, yet in no place have they faltered, and to-day we stand stronger than ever before. It is with unusual pride and satisfaction that we make note of these facts. In our last letter we reviewed the general statistical situation, and set forth the claim that "we should obtain \$1.50 per barrel for our product to make our business one of reasonable profit." Those who seek, by drilling wells or speculative manipulation, to continue this period of depression in prices until our property is drained and our wells are but junk, endeavor to discredit the above assertion. Therefore we deem it our duty to state facts which any producer or speculator can readily examine and know the truth whereof we assert.

Table No. 1 shows the cost of producing oil in the White Sand fields for the years 1883 to 1887 inclusive to be about \$1.29½ per barrel.

To become more fully informed as to the results heretofore obtained by drilling for oil in the prolific White Sand fields of the past, and the prices necessarily obtainable to continue the business, we recall statistically the former most important and productive periods in the industry.

The operations from 1870 to 1874 (date of discovery of the Bradford field) inclusive resulted in the completion of 7,020 wells and a total production of 33,078,000 barrels, a yearly average of 7,615,600 barrels, and an average of 5,424 barrels from each well drilled, or a gross income of \$16,556.76 from each well.

The average price of oil for the above five years was \$3.05½ per barrel.

It will be seen that the result in oil obtained then was about the same as now, the average output between the two periods being then 5,424 barrels per well and now 5,554 barrels per well.

During the following three years, viz, 1875, 1876, and 1877 (being also the first three years of Bradford's development), there were completed in the White Sand fields 8,066 wells, an average of 2,689 wells per year, resulting in an average yearly production of 9,616,047 barrels. The average price obtained was \$2.06½.

Thus it will be seen that during eight years' experience in White Sand fields, with an average price of \$2.68 per barrel as an inducement, the drilling of over 15,000 wells resulted in an average production of about eight and one-quarter millions per year; considerably less than one-third of our present requirements.

There were 2,191 less wells drilled in these fields in 1878 than in 1877, by reason of the fact during 1878 the price of oil only averaged \$1.50 per barrel for the first five months and was much less for the balance of the year. This practically suspended drilling.

What stronger corroborative evidence is needed to prove that oil can not even now be produced at an average price less than shown to be the cost in the Table No. 1, notwithstanding the fact that we can drill cheaper than in the former period.

During the years 1875 to 1885 the Bradford and Alleghany fields produced 138,869,000 barrels of oil at a reasonable profit.

The average price for the above eleven years was \$1.23 $\frac{1}{2}$  per barrel.

It is unnecessary to comment here upon the productiveness of these fields and the later effect that the stocks accumulated in them had on the market.

During the past thirteen years they have produced enough oil to supply, at rate of the present demand, the trade for nearly six years (five eighth-tenths years); and the White Sand fields have produced a supply equivalent to nearly four years.

While it is true that considerable money was made in these dark sand fields during earlier periods and higher prices, they are now rapidly being exhausted, and losing money on present prices by reason of the shrinkage of valuation caused by draining them of their oil.

Much of the former profits have been spent in seeking to be lucky owners of large wells in the deceptive White Sand fields.

To call to mind how necessary it is to avoid the wasting of the little oil left in these dark sand fields we give you Table No. 2, showing the cost of production in them for the year 1887, allowing for shrinkage in valuation, to be \$1.11 $\frac{7}{10}$ .

The consumption for 1887 was about 27,451,000 barrels.

The White Sand productions for past five years have been 46,945,000 barrels (an average of 9,389,000 barrels per year), or a supply equivalent to one and seven-tenths years' consumption on above basis.

The total production of Bradford and Allegany fields this year will be an equivalent of not to exceed three months' consumption.

It will be seen that even should we have prices which would warrant our producing as much oil as ever was produced in the White Sands in any one year, yet we would be drawing on our stocks over 600,000 barrels per month on an average for the first year, and more thereafter as Bradford should further decline.

In the summer of 1881 our stocks were the same as now.

That year we produced 28,886,000 barrels of oil, and the consumption was about 19,865,000.

The average price of certificates for 1881 was over 10 cents higher than for 1887, notwithstanding a reduction of 6,150,394 barrels in the stocks during the latter year.

Our production is 40 per cent. less than average daily consumption.

As nearly 60 per cent. of this product is exported, the sale of crude oil at present prices is but robbing this country of its material wealth to furnish the world an illuminant at a great sacrifice to ourselves as producers.

The history of the past seems to have been forgotten, except so much of it as refers to stocks accumulated in Bradford at a time when our consumption was very much lighter than now.

We stated on the 19th of November last and on March 6 that the cost of producing oil from the fields of our present supply was not less than \$1.17 $\frac{1}{2}$  per barrel, exclusive of the cost of the land and leases drilled. We have given much thought to the subject of cost of leases, and below give the result; your own knowledge and experience will enable you to judge as to our conservatism.

**TABLE NO. 1.—Cost of producing oil in all White Sand fields for the years 1883 to 1887 inclusive.**

The principal drilling during these years was done in the Cherry Grove, Cooper, Balltown, Wardwell, Thorn Creek, Kane, Tarkill, Cogley, Red Valley, Washington, Shannopin, and Pontius fields.

Number of wells drilled.....	8,452
Number of above productive.....	6,888
Number of above dry.....	1,564
Cost of drilling and completing and putting to pumping 6,888 producing wells, including bonus paid for leases upon which to drill, viz, *\$5,300 each.....	\$36,506,400
Cost of drilling 1,564 dry holes, including estimate cost of bonuses and refusals for leases, less value of machinery, etc., moved away, at *\$3,200 each.....	5,004,800

\* By reason of the large amount of money expended for leases for miles around every development, it is difficult to estimate the average sum for land expenditure chargeable to each well. Our figures, we believe, are considerably less than actual cost. More than three-eighths of the new production of the past five years has come from Washington County and Thorn Creek, and in these fields, taken together, the cost of wells alone average more than the \$5,300 named; but we think it prudent to be conservative in our figures.

Total production during that period was 46,945,000 barrels. The expense of pumping and producing this oil after wells were completed, including torpedoing, etc., at 30 cents per barrel, was .....		14,083,500
Six per cent. interest on money invested.....		3,120,000
Total outlay during period.....		58,714,700
The above operations increased the production of these fields on basis of the output for October, 1887, 12,000 barrels daily, valued at \$450 per barrel, and to be deducted from cost .....		5,400,000
		Barrels.
Total oil produced during this period .....		46,945,000
Less one-eighth royalty to land owner.....		5,868,125
Net to producer.....		41,076,875
Costing .....		\$53,314,700

An average cost of \$1.294 per barrel.

TABLE NO. 2.—Cost of producing oil from the Bradford and Allegheny fields for the year 1887.

Cost of drilling and completing 190 wells, including bonus paid for leases, at \$3,350 each.....		\$637,500
Cost of pumping and keeping wells in order, torpedoing, etc., at 30 cents per barrel.....		2,680,400
Interest at 6 per cent. on investment.....		883,800
The net expenditure during the year in producing 8,968,000 barrels of oil and drilling wells to assist in sustaining production.....		4,248,700
Add to this the shrinkage in valuation in above fields by reason of drainage of territory and decline in production (we base the shrinkage from the average of October, 1886, to the average of October, 1887, the last month previous to the shut-in movement), viz:		
		Barrels.
Daily production for October, 1886.....		21,471
Daily production for October, 1887.....		22,428
Shrinkage in production.....		9,043
At \$500 per barrel.....		\$4,521,500
The shrinkage in valuation added to the net outlay makes the net cost of production .....		8,770,200
		Barrels.
Amount of oil produced was.....		8,968,000
Less one-eighth royalty to land owner.....		1,121,000
Net to producer.....		7,847,000
The income from which, at 66 cents, the average price for the year, was..		\$5,179,020
Net loss to producer.....		3,571,180
Average cost per barrel to producer, \$1.1176.		

Further comments on the above tables are entirely unnecessary.

We should use our united influence to better the condition of the business in and out of the field. In this way we will have confidence ourselves and secure the confidence of others.

THE EXECUTIVE COMMITTEE.

P. S.—The Fergus farm wells and others on the adjoining leases are now being used as a scarecrow. It may be well here to refresh our memories by giving the result of wells completed last year on the adjoining (McKeown's Martin) farm, viz:

		Barrels daily.
The average for July last of the five Martin farm wells was.....		3,032
August 19 these wells gauged.....		2,294 bbls.
And two new wells in sand gauged.....		1,097 " total.....
September 9 the above 7 wells and one new one gauged only.....		1,257
Last week the production of these eight wells and three others finished since on the same farm was but.....		338

Notwithstanding this production, a few weeks since the floor trade was thrown into a state of fear and excitement upon the report of "a large increase" of production resulting from a torpedo being used in the Martin (McKeown) No. 5.

The Fergus well is not nearly as good a producer as Martin 5 was, and the result on her of the incoming of other wells but foreshadows the future of this present annex to the pool. It is entirely unworthy of the attention it is receiving.

THE EXECUTIVE COMMITTEE.

## CORRESPONDENCE BETWEEN EDGAR HILL AND OTHERS RELATING TO OIL RATES.

[See page 458.]

LOUISVILLE, KY., April 30, 1884.

EDGAR HILL, Esq.,  
A. G. F. A., C. C. C. & I. Ry., Cleveland, Ohio :

DEAR SIR: What is the lowest rate you can make on oil in car-loads from Cleveland, Ohio, to Memphis? Shipments will amount to four or five cars a week.

Let me know the lowest rate you are willing to make and guaranty until December 31, 1884. Please consider this matter confidential, and advise me at once. You can handle shipments flat; or by rebate, just as you please.

Yours, truly,

B. F. MITCHELL.

CLEVELAND, OHIO, May 2, 1884.

B. F. MITCHELL, Esq.,  
G. F. A., Louisville, Ky. :

DEAR SIR: Replying to yours of the 30th ultimo, just at hand, we will make rate on oil in car-loads, Cleveland, Ohio, to Memphis, \$2 per barrel. This is the very lowest rate we have made for any one, and I think should be satisfactory.

Yours, truly,

EDGAR HILL, A. G. F. A.

LOUISVILLE, KY., August 23, 1884.

EDGAR HILL, Cleveland, Ohio :

Give the net rate you are making on coal oil to Little Rock. It will be strictly confidential.

B. F. MITCHELL.

CLEVELAND, OHIO, August 23, 1884.

B. F. MITCHELL, Louisville, Ky. :

We have no rate to Little Rock on oil. Rates subject to regular tariff from Memphis, Cairo, or Saint Louis.

EDGAR HILL.

D. H. Ans. to 220 C.

NEW ORLEANS, LA., May 2, 1885.

EDGAR HILL, G. F. A., Cleveland :

Quote rate coal oil, car-loads and less, Cleveland to Starksville, Miss.; also to Cairo for points on our line. Understand rate Marietta to Cairo 60 cents barrel.

D. B. MOREY.

CLEVELAND, OHIO, May 2, 1885.

D. B. MOREY, New Orleans, La. :

Coal oil Cleveland to Cairo, Ill., when for points beyond, L. C. L., \$1.30 per barrel, C. L., \$1.10 per barrel.

E. HILL.

D. H. Ans. to C. 50.

CLEVELAND, OHIO, May 5, 1885.

D. D. MOREY, New Orleans, La. :

If advised, will make refined oil, car-lots, Cleveland to Cairo, 98 cents per barrel, when for Starksville. Hope this will do.

E. HILL.

D. H. Ans. to 104 C.

LOUISVILLE, KY., July 13, 1885.

EDGAR HILL, G. F. A., Cleveland, Ohio :

Will you advance the rate on coal oil from Cleveland to New Orleans, taking effect at once, to \$2? This is same rate that will be made from Marietta to Pittsburgh.

B. F. MITCHELL.

CLEVELAND, OHIO, *July 13, 1885.*B. F. MITCHELL, *Louisville, Ky.:*

Your telegram received. Will investigate and advise you further relative to New Orleans oil.

EDGAR HILL.

CLEVELAND, OHIO, *July 14, 1885.*B. F. MITCHELL, *Louisville, Ky.:*

We are willing to advance the rate on oil to New Orleans just as soon as we are satisfied that the advance will be maintained from Pittsburgh and Marietta. Give me a little time, please.

EDGAR HILL.

NEW ORLEANS, LA., *July 17, 1885.*EDGAR HILL, *G. F. A., Cleveland, O.:*

What are present coal oil rates, tanks and barrels, to New Orleans, Memphis, and Louisville?

D. B. MOREY.

NEW ORLEANS, LA., *July 20, 1885.*EDGAR HILL, *G. F. A., Cleveland, O.:*

Please answer my dispatch 17th, asking present coal-oil rate Cleveland to New Orleans, Cairo, and Louisville. Will you route via Mattoon for Orleans?

D. B. MOREY.

JULY 20, 1885.

D. B. MOREY, *New Orleans, La.:*

Coal oil Cleveland to New Orleans, in barrels, \$1 per barrel; in tanks, \$85 per tank. Memphis, in barrels and tanks, \$2 per barrel. Louisville, in barrels and tanks, 95 cents per barrel.

EDGAR HILL.

D. H. Ans. to C. 57.

JULY 16, 1885.

R. M. FRASER, *Cincinnati, O.;* C. L. COLE, *Pittsburgh, Pa.:*

We are asked to advance rate on coal oil from Cleveland to New Orleans, taking effect at once, to \$2 per barrel. Provided this is done, have we any assurance that the same rate will be made from Marietta and Pittsburgh?

D. H. 216.

EDGAR HILL.

CINCINNATI, OHIO, *July 17, 1885.*

EDGAR HILL, Esq.,

*A. G. F. A., C. C. C. & I. Ry., Cleveland, Ohio:*

DEAR SIR: Your telegram of the 16th, in which you say you have been asked to advance rate on oil Cleveland to New Orleans to \$2 per barrel.

I have also been asked to make rate from Marietta to New Orleans \$2, and Memphis \$1.50, and am equally interested with yourself in knowing if same proportionate rates will be made from Cleveland, Pittsburgh, and other points with which we compete, and I can only say that we have no objection to the advance, provided proportionate rates are made from and to other points.

I have already written General Freight Agent Mitchell on the subject, and await his reply. If you can give me any information on the subject I shall be glad to hear from you.

Yours, truly,

R. M. FRASER, *G. F. A.*

JULY 18, 1885.

R. M. FRASER, Esq.,

*G. F. A., Cincinnati, Ohio:*

DEAR SIR: Your letter of July 17. Mr. Mitchell was the party asking us to advance rates. I have the following from C. L. Cole, Pittsburgh, dated July 16: "Present net rate on oil C. L. Pittsburgh to New Orleans \$2 per barrel, and that rate will be maintained so far as we are concerned. We do not control rates from Marietta. Please confer with Mr. Fraser about rates from that point." Provided a \$2 rate can

be maintained from Marietta and Pittsburgh we are willing to take the matter up with initial lines leading from here, with a view of having same raised from this point.

You are no doubt aware that our rate has been \$1 per barrel for sometime past. When this reduction was made we asked you to advance same, without success. We are willing, however, to make another attempt, and trust you can see your way clear to join us.

Yours, truly,

EDGAR HILL, G. F. A.

[No. 7362.]

CINCINNATI, July 23, 1885.

EDGAR HILL, Esq.,

A. G. F. A., Cleveland, Ohio:

DEAR SIR: Yours 18th received. I am willing to join you in maintaining any reasonable rate that can be agreed on that will afford protection to refineries on C., W. & B. as against other localities.

I am informed that very little if any effort has been made to put Pittsburgh oil into the Southern market. Oil from Cleveland, Baltimore, and New York is the strongest competitor. I am told rate by steamer New York to New Orleans is 25 cents per 100 pounds or less than \$1 per barrel, this being a fact, how can we maintain a higher rate from this section.

I am not in favor of any hasty action in this matter, but want all the money we can get out of the traffic. In agreeing on rate per barrel the tank rate Cleveland to New Orleans, \$85 per car, must not be overlooked, as the tanks now in use carry 100 barrels or more; rates on them must be provided for at the same time.

After informing yourself about rates from New York, etc., I shall be glad to hear from you again.

Respectfully,

R. M. FRASER, G. F. A.

CINCINNATI, OHIO, August 10, 1885.

EDGAR HILL, Esq.,

G. F. A., C. C. C. & I. R. R., Cleveland, Ohio:

DEAR SIR: As arranged we will commence at once to way-bill through from Parkersburgh to Cleveland via Athens, C. H. V. & T. and C. C. C. & I. R. R.'s oil in tank cars shipped by Camden Consolidated Oil Co. to be "blind billed;" regular form of W. C. & B. way-bill will be used without rate or revenue being shown, but a notation will be made thereon as follows: "Prepaid, C. W. & B. audit office settlement." Press copy of each way-bill will be sent to Mr. B. F. Whitman, freight and ticket accountant, Cleveland. Rate and divisions will be as follows:

Parkersburgh bridge.....	\$4.00
C. W. & B.....	5.44
C. H. V. & T.....	5.52
C. C. C. & I.....	10.04
Through.....	25.00

This rate is to be kept strictly private. Please confer with freight and ticket accountant on the subject, so he can make necessary arrangements about settlement with C. F. Low, Andr. C. W. & B. R. R., Cincinnati, also instruct your agents to forward way-bills and cars without delay.

Yours, truly,

R. M. FRASER, G. F. A.

NEW ORLEANS, October 22, 1885.

A. S. WHITE,

A. G. F. A., Cleveland, Ohio:

Advise present rate coal-oil tanks and barrels Cleveland to New Orleans, Cairo, and Louisville, also advise if any arrangement regard agreed rates from Marietta.

D. B. MOREY,

October 22, 1885.

D. B. MOREY,  
New Orleans, La.:

Coal oil, car-loads, Cleveland to New Orleans, \$2 per barrel, and to Louisville 95 cents per barrel. We are at present in correspondence with Marietta roads and expect to arrive at an understanding soon.

A. S. WHITE.

NEW ORLEANS, LA., October 26, 1885.

A. S. WHITE,  
A. G. F. A., Cleveland, Ohio:

Coal oil still \$1 per barrel Marietta to New Orleans; Memphis 75 cents. Consignees from Cleveland complaining bitterly this discrimination. What is rate to Cincinnati?

D. B. MOREY.

CLEVELAND, OHIO, October 27, 1885.

D. B. MOREY,  
G. F. A., New Orleans, La.:

DEAR SIR: Your telegram 26th to A. S. White. We are now negotiating with Marietta roads trying to get them to advance their coal-oil rate in line with ours. Our rate to Cincinnati is 50 cents per barrel in C. L. of 50 barrels and over.

EDGAR HILL, G. F. A.

CLEVELAND, OHIO, November 31, 1885.

D. B. MOREY,  
New Orleans, La.:

DEAR SIR: We are working on the oil rate from Marietta now. As soon as we can answer you definitely we will do so.

E. HILL.

CLEVELAND, OHIO, November 11, 1885.

B. F. MITCHELL, Esq.,  
G. F. A., Louisville, Ky.:

DEAR SIR: What is the trouble relative to rates on coal oil from Marietta? It would seem that every one is prepared to advance the rates except your interests.

It would seem that there is a contract in existence via the C. W. & B. and O. & M. and your route that will have to expire before any advance is made.

Mr. Fraser telegraphs me under date of November 3, in reply to my telegram of October 27, as follows: "I do not deem it advisable to change our rates at present." Please look into the matter and advise me what the trouble is. We would like to get the rates back to line, if possible.

Yours, truly,

EDGAR HILL,  
General Freight Agent.

LOUISVILLE, KY., November 18, 1885.

EDGAR HILL, Esq.,  
G. F. A., Cleveland, Ohio:

DEAR SIR: Answering your favor 11th instant, I am very much surprised to learn that every one else is willing to advance rate on oil from Marietta and other points and ourselves the only ones that object. Now, to get on the inside, and to know just exactly what is being done, and why, would ask who made request for advance and why request was made, and why it did not come through the proper channel when it was made.

You never found me unwilling to make revenue for the company I represent; but, on the contrary, have found me unwilling to join in any combination that would force the company I represent from the market.

When reductions were made from Cleveland I notified you in person that it was not necessary, and asked if you would not give us a share of the traffic from Cleveland via Louisville and the C. O. & S. W.

I do not think it is your intention to join in trying to force from us what little business we are getting, and I am sorry I can not come to see you, instead of writing this letter, but hope to see you in a short time.

Yours, truly,

B. F. MITCHELL, *G. F. & P. A.*

CLEVELAND, OHIO, *December 1, 1885.*

B. F. MITCHELL,

*G. F. A., Louisville, Ky. :*

DEAR SIR: Your letter of November 18 relative to coal-oil shipments. If you think you are the only line not willing to advance rates you are mistaken. The initial line, C., W. & B., claim they will not advance at present.

Now what I propose to do is, to put our rates back where they were, making net rate here to New Orleans \$1 per barrel. The tank rate is \$85 per tank, provided you will haul the stuff at these rates, and it meets the approval of the balance of the parties in the line.

We would like to route some of our own shipments via your road. The arrangement was made by the undersigned for the reason that we thought the rate too low. I do not understand what you mean when you ask why it did not come through the proper channel when it was made. I hope I will have the pleasure of seeing you at an early day.

Yours, truly,

EDGAR HILL,

LOUISVILLE, *December 23, 1885.*

EDGAR HILL,

*G. F. A., Cleveland, Ohio :*

DEAR SIR: Please let me know what rate you will make on oil shipments from Atlas Oil Company, Cleveland to Memphis. Make rate and we will prorate it with you.

Yours, truly,

B. F. MITCHELL, *G. F. & P. A.*

CLEVELAND, OHIO, *December 27, 1885.*

B. F. MITCHELL,

*G. F. A., Louisville, Ky. :*

Replying to yours of the 23d relative to shipment of oil from Cleveland to Memphis, Tenn., account Atlas Oil Company. Present rates are: C. L., \$2; L. C. L., \$2.50 per barrel.

Hoping same will be satisfactory.

E. HILL, *G. F. A.*

CLEVELAND, OHIO, *March 22, 1886.*

R. M. FRASER,

*Cincinnati, Ohio :*

Please advise correct rate on carbon oil in car-loads, per barrel, Marietta to Memphis, Tenn., and Evansville, Ind.

A. S. WHITE.

CINCINNATI, OHIO, *March 23, 1886.*

A. S. WHITE,

*A. G. F. A., Cleveland :*

Oil C. L. 60 barrels or over, Marietta, Ohio, to Memphis, Tenn., \$1.05 per barrel; to Evansville, Ind., 60 cents per barrel.

R. M. FRASER.

CINCINNATI, OHIO, *April 2, 1886.*

R. M. FRASER,

*Cincinnati, Ohio :*

Rates carbon oil, C. L., Marietta, to Vicksburg, Miss.

A. S. WHITE.

D. H. N. 727.

CINCINNATI, OHIO, *April 3, 1886.*

A. S. WHITE,

*A. G. F. A., Cleveland :*

Carbon oil, C. L., Marietta, Ohio, to Vicksburg, Miss., \$1.30 per barrel.

R. M. FRASER.

LOUISVILLE, KY., *April 26, 1886.*

EDGAR HILL, Esq.,

*G. F. A, Cleveland, Ohio :*

DEAR SIR: Please note attached telegraphic correspondence with James Means, and I ask that you agree with lines from Cleveland as to what the rate will be, and wire James Means, telling him that you have seen this correspondence and agree with him that an advance be made from Pittsburgh. Then notify Mr. Fraser of the agreement and ask him to advance from Marietta, advising me of your action, returning correspondence, and I will assist by asking Mr. Fraser to maintain the rate, as I know we are all anxious to get more revenue out of this particular class of traffic.

Yours, truly,

B. F. MITCHELL, *G. F. & P. A.*

APRIL 22, 1886.

JAMES MEANS,

*Pittsburgh, Pa. :*

If rate is advanced on oil, C. L., Marietta to Memphis to \$1.75, and Mobile, New Orleans, and Vicksburg to \$2 per barrel, will you agree to advance from Pittsburgh and maintain it?

B. F. MITCHELL.

250.

PITTSBURGH, PA., *April 23, 1886.*

B. F. MITCHELL :

We would like to have the rate on oil from Pittsburgh to Memphis, New Orleans, and Vicksburg, but do not see how it can be done unless relative advance can be made from Cleveland as well as from Marietta. If it can be done we will agree to maintain any rate agreed upon.

JAMES MEANS.

APRIL 22, 1886.

FRANK KINGSBURY,

*Columbus, Ohio :*

Have wired James Means, proposing rate from Pittsburgh be advances to Mobile, Vicksburg, and New Orleans to \$2 per barrel, and to Memphis \$1.75, on oil C. L. We agreed to advance rate from Marietta to same figures and maintain them. Will you do so?

B. F. MITCHELL.

\$250.

COLUMBUS, OHIO, *April 23, 1886.*

B. F. MITCHELL,

*Louisville :*

Mr. Means's reply to you, copy of which I have, expresses my views fully.

F. H. KINGSBURY.

APRIL 23, 1886.

JAS. MEANS,

*Pittsburgh, Pa. :*

Rate from Cleveland and Marietta to Memphis will be \$1.75, and, to Mobile, New Orleans, and Vicksburg \$2. Will you agree to the same figures from Pittsburgh? Edgar Hill assures me that we will see rate maintained.

B. F. MITCHELL.

PITTSBURGH, April 23, 1886.

B. F. MITCHELL:

Would like to have the rates on oil from Pittsburgh to Memphis, New Orleans, and Vicksburg, but don't see how it can be done unless relative advance can be made from Cleveland as well as Marietta. If this can be done we will agree to maintain any rate agreed upon.

JAMES MEANS.

APRIL 23, 1886.

F. H. KINGSBURY,  
Columbus, Ohio:

Have wired Mr. Means as follows: Rate Cleveland and Marietta will be same. Edgar Hill agrees to see rate maintained. Ans. to D. H.

B. F. MITCHELL.

APRIL 24, 1886.

JAS. MEANS,  
Pittsburgh, Pa.:

Let me know what rates will be satisfactory to you from Cleveland, Pittsburgh, and Marietta. There will be no trouble in getting them maintained. Have made two propositions, neither of which is satisfactory. Now I ask that you name basis you desire.

B. F. MITCHELL,  
J. M. & I. R. R.

APRIL 26, 1886.

B. F. M.:

We will be satisfied and make same rate on oil from Pittsburgh as will be made from Cleveland. I have no voice in the matter of making the rate from Cleveland, but will agree that other lines maintain whatever they may be and advise of the same

JAS. MEANS.

(Telephone by J. M. &amp; I.)

CLEVELAND, OHIO, April 29, 1886.

B. F. MITCHELL, Esq.,  
G. F. A., Louisville, Ky.:

On shipments of oil made by the S. O. Co. from here to New Orleans, La., via J. M. & I. and your road. The Standard wish to bill at the net rate. Have you any objection to the arrangement being made, and settlements being made through our respective auditors' departments, freight to be prepaid here of course?

Yours, truly,

E. HILL, G. F. A.

LOUISVILLE, KY., May 17, 1886

EDGAR HILL, Esq.,  
G. F. A., Cleveland, Ohio:

DEAR SIR: Your favor of the 29th ultimo. I am perfectly willing that you should bill oil net rate. It is necessary, however, that you let me know date billing put in effect, Cleveland to New Orleans, that all interested parties may be advised, particularly our auditor, and it will be necessary to send him legible impressions of through way-bills. Let me know if this meets with your approval and what day you desire to put the same in effect, and I will give necessary instructions.

Yours, truly,

B. F. MITCHELL,  
G. F. & P. A.

MAY 3, 1886.

B. F. MITCHELL,  
Louisville, Ky.:

At meeting here it was agreed taking effect May 30, the rate on oil Cleveland to Memphis would be \$1.75; to Mobile, New Orleans, and Vicksburg, \$2; provided

the rates advance from Pittsburgh and Marietta. I have advised Mr. Kingsbury and requested him to correspond with Mr. Means; also notified Mr. Fraser to advance the rate from Marietta.

EDGAR HILL.

MAY 3, 1886.

R. M. FRASER,  
Cincinnati, Ohio :

At meeting held to-day it was agreed, taking effect May 10, the rate on oil Cleveland to Memphis would be \$1.75; to Mobile, New Orleans, and Vicksburg, \$2; provided the rates advance from Marietta and Pittsburgh. Have we your assurance that the rate will be advanced from Marietta in accordance therewith?

EDGAR HILL.

MAY 3, 1886.

F. H. KINGSBURY,  
Columbus, Ohio :

At meeting held to-day it was agreed, taking effect May 10, the rate on oil from Cleveland to Memphis would be \$1.75; to Mobile, New Orleans, and Vicksburg, \$2; provided the rates advance from Pittsburgh and Marietta. Have we your assurance that the rates will be advanced from Pittsburgh in accordance therewith?

EDGAR HILL.

CLEVELAND, OHIO, June 7, 1886.

B. F. MITCHELL,  
Louisville, Ky. :

Party here has one car oil for Memphis, contract on old basis of \$1 per barrel. Will you protect? Car to go at once.

A. S. WHITE,  
A. G. F. A.

LOUISVILLE, KY., June 8, 1886.

A. S. WHITE,  
A. G. F. A., Cleveland :

Yes, we will protect the contract on oil you have made to Memphis.

B. F. MITCHELL.

NEW ORLEANS, June 17, 1886.

EDGAR HILL,  
Cleveland :

What is present coal-oil rate, Cleveland to New Orleans, barrels and tanks, and is new rate to all parties the same?

D. B. MOREY.

CLEVELAND, OHIO, June 19, '86.

D. B. MOREY,  
New Orleans, La. :

The present rate on coal-oil, Cleveland to New Orleans, is \$85 per tank, and \$1 per barrel net, good to all parties.

EDGAR HILL.

NEW ORLEANS, June 19, 1886.

EDGAR HILL,  
G. F. A., Cleveland, Ohio :

DEAR SIR: I find an occasional tank of oil from Cleveland for the Insurance Oil Tank Company, Chess, Carley & Co., reaching here via Louisville, C. O. & S. W. and L. N. O. & T. roads. As this oil has to be switched into our yards for unloading into the tanks of that company, why can not it all be sent via Mattoon? The representative of the consignees here state that they do not understand why it should come the other way.

On the 15th instant there arrived tank 3303 by the route indicated above, which we had to switch for them, which makes an extra expense unless the other route is

rebating on agreed rates. I shall be glad to hear from you regarding this, as I feel certain it is your desire to route all business via Mattoon, and I can not understand why it should be sent the other way.

Respectfully,

D. B. MOREY.

NEW ORLEANS, July 21, 1886.

Mr. EDGAR HILL,  
G. F. A., Cleveland, Ohio:

DEAR SIR: I have been in correspondence with Messrs. Scofield, Shurmer & Teagle, Cleveland, regarding shipments of oil to Texas points this way, and have referred them to you for the best basis that can be named. I trust you will see that they are put on the best basis possible. We have already advised you of the best that can be done with the lines west of here.

Will you please figure with the above-named firm and see if that basis can be used, and if not, what is in the way? Or if any basis is being used via St. Louis, and what is necessary to be done this way to meet that competition?

The above named firm have again commenced shipping over your line and ours via Mattoon, as I have assured them that we propose keeping them on a fair working basis with other shippers, which I believe is your policy as our own.

Respectfully,

D. B. MOREY, G. F. A.

CLEVELAND, OHIO, July 30, 1886.

Mr. D. B. MOREY,  
G. F. A., New Orleans, La:

DEAR SIR: Your letter of Jan'y 21st was duly received. This firm has been interviewed and we have quoted them rates to several points in Texas via New Orleans. Think we will be able to work considerable oil that way, as long as the present rate, \$1 per barrel, Cleveland to New Orleans, remains in effect.

I am advised that the oil in Texas will not begin to move until next month.

Yours truly,

EDGAR HILL, G. F. A.

NEW ORLEANS, July 20, 1886.

EDGAR HILL:

Three cars, hundred and eight barrels oil for Septoline Oil Company, New Orleans, from Cleveland July 10, charged about one twenty-six per barrel. Why not send correction charging net rate, or will you refund shippers. Answer.

D. B. MOREY.

NEW ORLEANS, July 22.

EDGAR HILL,  
G. F. A., Cleveland, Ohio:

Please answer my telegrams, 20th and 21st, regard hundred and eight barrels oil account Septoline Oil Company, New Orleans, from Cleveland, July 10th.

D. B. MOREY.

NEW ORLEANS, July 24, 1886.

EDGAR HILL,  
Cleveland:

Please answer my telegrams regard one eighty barrels oil consigned to Septoline Oil Company here, from Cleveland July 10th. Important.

D. B. MOREY.

CLEVELAND, OHIO, July 24, 1886.

D. B. MOREY,  
New Orleans:

Answering your message, even date, regarding three cars oil, Septoline Oil Company. Have instructed our agent to correct billing to \$1 per barrel. Oversight in not answering your message.

E. HILL.

CLEVELAND, OHIO, *August 6, 1886.*

D. B. MOREY, Esq.,  
G. F. A., *New Orleans, La :*

DEAR SIR: Herewith I return letter of Chess-Carley Company, dated July 30, and in reply to your letter of August 2d, would state that there is no particular advantage that we know of via the Louisville route against the Mattoon. As expressed to you before, we would prefer to route the business via Mattoon, as there is more revenue to us, but we have to respect the shippers' request to route some of their business via Louisville and the C. O. & S. W.

Yours truly,

EDGAR HILL, G. F. A.

So far as we are concerned, the rate is the same.

CLEVELAND, OHIO, *August 21, 1886.*

D. B. MOREY, Esq.,  
G. F. A., *Ill. Cent. Ry., New Orleans, La. :*

DEAR SIR: I return herewith your telegram of the 19th instant, relative to rates on oil from Cleveland to New Orleans, and would respectfully call your attention to the correspondence attached. The present rate of \$1 per barrel in C. L., and as Mr. Campbell states there is but one objection—that is his shipment of August 11, way-bill 092, for which he has issued correction on basis of the \$1 rate.

Yours, truly,

A. S. WHITE, A. G. F. A.

NEW ORLEANS, LA., *August 24, 1886.*

E. HILL,  
*Cleveland :*

Advise lowest rate coal oil, car loads, Cleveland to Vicksburg.

D. B. MOREY.

CLEVELAND, OHIO, *August 24, 1886.*

D. B. MOREY,  
*New Orleans, La :*

On coal-oil, C. L., Cleveland to Vicksburg, we have done no better than tariff rates, \$2 per barrel, but if you can find out that Marietta is cutting this rate we will join you in meeting it. We are unable to find out that they are. Answer.

EDGAR HILL.

NEW ORLEANS, LA., *September 21, 1886.*

EDGAR HILL,  
*Cleveland :*

Is the tank-oil reaching Vicksburg from Cleveland, and what through rate? Also advise through rate barrel-oil to Jackson, Miss., C. L.

ED. HILL,  
*Cleveland :*

Please answer my telegrams relative to oil rates.

D. B. MOREY.

CLEVELAND, OHIO, *September 25, 1886.*

D. B. MOREY,  
*New Orleans, La.:*

Oil, Cleveland to Vicksburg, \$170 per tank of 85 barrels. Cleveland to Jackson, Miss., \$1.10 per barrel to Cairo. Cleveland to Louisville, \$80.75 per tank of 85 barrels.  
E. HILL.

NEW ORLEANS, *September 25, 1886.*

ED. HILL,  
*G. F. A., Cleveland, Ohio:*

Please state coal oil rate Cleveland to Jackson, Miss., and to Cairo, when for our line. Your telegram this date badly bulled. Do not tanks now coming forward hold about 6,000 gallons, or 120 barrels, for rate named?

D. B. MOREY.

CLEVELAND, OHIO, *September 27, 1886.*

D. B. MOREY,  
*New Orleans, La.:*

We have no through rate on oil to Jackson, Miss. Our rate to Cairo is \$1.10 per barrel. The usual capacity of cars is 85 barrels. We make rate on that basis, subject to proportion account excess.

EDGAR HILL.

NEW ORLEANS, *September 29, 1886.*

EDGAR HILL,  
*G. F. A., Cleveland, Ohio.:*

I understand coal oil rate, car-load, Marietta to Cairo, when for our line 60 cents per barrel. We can not control business basis, one ten from Cleveland. Answer.

D. B. MOREY.

SEPTEMBER 30, 1886.

D. B. MOREY,  
*New Orleans, La.:*

Advise who wants to ship oil from Cleveland, and I will secure it for our respective lines. Who is getting oil from Marietta? Advise as to this; I think we can shut it off.

EDGAR HILL.

NEW ORLEANS, *October 2, 1886.*

EDGAR HILL,  
*Cleveland:*

Consolidated warehouse company, Nunoz & Sims, desire ordering from Cleveland if at equal rates with other parties. Geo. Rice shipping from Marietta. Answer.

D. B. MOREY.

CLEVELAND, OHIO, *November 3, 1886.*

D. B. MOREY, Esq.,  
*G. F. A., New Orleans, La.:*

DEAR SIR: I enclose herewith paid freight bills, dated New Orleans, October 24, for cars C. C. C. & I. Ry., 2602, and 2581, I. C. manifests No.'s 3144 and 3143. Two car-loads oil consigned to the Consolidated Warehouse Company, New Orleans, La., shipped by Excelsior Refining Company, Cleveland, Ohio, October 15th.

We have been holding to a minimum of 60 barrels per car, but in this case shippers claim not to have understood our requirements in that direction, and as cars in question would hold but 56 or 52 barrels respectively, I have to request that you correct charges to basis of actual number of barrels, at \$1 each, sending correction to our agent at Mattoon, Ill. This is the only way I can dispose of the matter, and as other lines out of Cleveland place their minimum at 50 barrels to the car, I do not consider that I am asking anything out of the way in this. Please advise at your earliest convenience, that I may notify shippers, who are a little anxious about it.

Yours, truly,

A. S. WHITE,  
A. G. F. A.

NEW ORLEANS, November.

EDGAR HILL,  
G. F. A., Cleveland :

Please name rate on oil in 10-barrel lots, Cleveland, Ohio, to Jackson, Miss., with divisions; and also to Cairo.

D. B. MOREY.

NOVEMBER 18, 1886.

D. B. MOREY,  
New Orleans :

Our rate on oil in 10-barrel lots, Cleveland to Cairo, is \$1.30 per barrel. On what basis can we make rate to Jackson, Miss. We have no rate.

EDGAR HILL.

D. H. Ans. to C. 247.

LOUISVILLE, KY., November 20, 1886.

EDGAR HILL, Esq.,  
G. F. A., C. C. C. & I. Ry., Cleveland, Ohio :

DEAR SIR: Answering your favor of the 15th instant, is it your intention to refuse to pay mileage on tank-cars for Standard Oil Company to all points? I ask for this information that we may take the same position.

Yours, truly,

B. F. MITCHELL, G. F. A.

NOVEMBER 23, 1886.

Mr. B. F. MITCHELL,  
G. F. A., Louisville, Ky. :

DEAR SIR: Your favor of November 20th. It is not our intention to refuse to pay mileage upon the tank-cars of the Standard Oil Company to all points.

The ground we take is that we will not pay any mileage on tanks on a rate of \$100 per tank. If we could get the rate up to anywhere near paying basis, would be willing to pay the mileage cheerfully.

Yours, truly,

EDGAR HILL, G. F. A.

NEW ORLEANS, LA., November 29, 1886.

EDGAR HILL,  
G. F. A., Cleveland :

Is there any change \$1-rate, oil, Cleveland to New Orleans? Answer.

D. B. MOREY.

CLEVELAND, OHIO, November 29, 1886.

D. B. MOREY,  
New Orleans, La. :

DEAR SIR: Present rate on oil in barrels, Cleveland to New Orleans, La., \$1.57 per barrel.

EDGAR HILL.

Ans. to D. H. 54 C.—11+29.

LOUISVILLE, KY., November 24, 1886.

EDGAR HILL, Esq.,  
G. F. A., Cleveland, Ohio :

DEAR SIR: You have recently advised me of an advance in rate on tank oil from Cleveland to New Orleans from \$85 to \$100 per car. Let me know why this advance was made, and possibly you are not aware of the fact your competitors are making a less rate; and in addition to the advance you have made will force the shipments another route, viz, Baltimore or New York. Think it would be well for you to arrange with shippers for restoration of old rates on uncompetitive business for the season around.

Also please advise me if you intend to refuse to pay mileage upon the Standard Oil Company's cars in future.

Yours, truly,

B. F. MITCHELL,  
G. F. A.

CLEVELAND, OHIO, *December 9, 1886.*

B. F. MITCHELL,  
G. F. A., *Louisville, Ky.:*

DEAR SIR: Your favor of the 24th was duly received. We advanced the rate on tank oil Cleveland to New Orleans to \$100 per tank, because we thought \$85 per tank too low. We also think that at rate of \$100 per tank we should not pay any mileage on tanks. This does not apply to all their shipments. On some shipments we get much better rates and can afford to allow mileage on loaded tanks.

EDGAR HILL,  
G. F. A.

NEW ORLEANS, *January 25, 1887.*

EDGAR HILL,  
G. F. A., *Cleveland:*

What is present rate oil in tanks and barrels Cleveland to New Orleans?

D. B. MOREY.

CLEVELAND, OHIO, *January 25, 1887.*

D. B. MOREY,  
*New Orleans, La.:*

Oil in tanks, minimum 85 barrels. In barrels, minimum 60 barrels per car, \$1.57 per barrel Cleveland to New Orleans. Present rate.

EDGAR HILL.

D. H. ans. to D. H. 108 C. even date.

NEW ORLEANS, *January 25, 1887.*

EDGAR HILL: Your message to-day. Scofiel, Shurmer & Teagle advise N. Y. P. & O. shipping oil to New Orleans \$1 barrel. Tucker advises other lines using this rate in your telegram to-day. How is it? Answer.

D. B. MOREY.

JANUARY 26, 1887,

D. B. MOREY,  
*New Orleans, La.:*

N. Y. P. & O. assure me that they have no rate of \$1 per barrel, and I believe they are honest. They did have such a rate prior to yesterday. We will not touch a barrel for less than \$1.57, regardless of what the other roads are doing.

EDGAR HILL.

Ans. to D. H. C. 206.

NEW ORLEANS, LA., *January 28, 1887.*

EDGAR HILL, G. F. A.:

Have Penna. Co. also assured you of their maintaining oil rates, and what is agreement on rates from Marietta? You understand barrel rate named throws business into hands of tank shippers exclusively. Can you furnish tanks for other dealers and rates? Why can not Mattoon route secure share of business to this point? Answer.

D. B. MOREY.

MARCH 31, 1887.

R. M. FRASER,  
*Cincinnati, Ohio:*

It is thought best, under the working of the new law, to discontinue blind way billing on and after April 5, and instructions will be issued accordingly. Do you agree with us?

EDGAR HILL.

CLEVELAND, OHIO, *April 26, 1887.*

R. M. FRASER,  
G. F. A., Cincinnati, Ohio :

DEAR SIR : The last time I had the pleasure of meeting you in Cincinnati you spoke of my being likely to be summoned in the case of State of Ohio vs. The C.W. & B. Ry.

I have at last got it, and am commanded to appear before Channing & Richards, referee, on Monday, the 30th of August, at the Weddell House.

If you can consistently do so, please advise me what I am to expect at this meeting, so that I can be prepared.

Yours, truly,

EDGAR HILL,  
G. F. A.

---

APRIL 25, 1887.

B. F. MITCHELL,  
Louisville, Ky. :

Name bottom rate on carbon oil in car-loads in tank cars, Louisville to Vicksburg, Miss., Memphis, Tenn., and New Orleans.

A. S. WHITE,  
A. G. F. A.

---

LOUISVILLE, KY, *April 25, 1887.*

A. S. WHITE,  
A. G. F. A., Cleveland :

Tank cars Louisville, Ky., to New Orleans and Vicksburg \$55 per tank ; 20,000 pounds to Memphis, \$25.

B. F. MITCHELL.

---

CLEVELAND, OHIO, *April 26, 1887.*

B. F. MITCHELL,  
Louisville, Ky. :

We also want rate on carbon and lubricating oil in barrels, car-loads, Louisville to Nashville, Vicksburg, and Memphis, Tenn.

A. S. WHITE.

---

LOUISVILLE, KY, *April 27, 1887.*

A. S. WHITE,  
A. G. F. A., Cleveland :

Oil, car-loads, to Vicksburg, 75 cents per barrel ; to Memphis, 45 cents per barrel ; can't name rate to Nashville. Would be glad if we could.

B. F. MITCHELL.

---

CLEVELAND, OHIO, *April 30, 1887.*

D. B. MOREY,  
New Orleans, La. :

Although we temporarily have agreed to accept business from your line destined to Cleveland and points west thereof on rates to be furnished by you at old divisions, we do not feel at liberty to name you rate via your line to Cairo or New Orleans until we have some relief from the long and short haul clause. Our rate to Cincinnati on oil in barrels, minimum 60 barrels per car, is 42 cents. In tanks, 31½ cents per barrel.

EDGAR HILL.

---

CINCINNATI, OHIO, *May 11, 1887.*

E. HILL :

What rate have you made on oil in barrels and tanks to Cairo, Ill. ?

R. M. FRASER.

---

MAY 12, 1887.

R. M. FRASER,  
Cincinnati, Ohio :

Our rate on oil, Cleveland to Cairo, is, in barrels, C. L., 62 cents per barrel, and in tanks, 47 cents per barrel.

E. HILL.

LOUISVILLE, KY., May 17, 1887.

EDGAR HILL, Esq.,  
G. F. A., C. C. C. & I. Ry., Cleveland, Ohio :

DEAR SIR: Please send me rates on coal oil, car-loads, from Cleveland to Louisville, Memphis, New Orleans, and oblige,  
Yours, truly,

B. F. MITCHELL.

CLEVELAND, OHIO, June 1, 1887.

B. F. MITCHELL,  
Louisville :

Our rate, Cleveland to Louisville, on coal oil, in car-loads, is 54 cents per barrel. We have no through rates yet to Memphis and New Orleans.

EDGAR HILL.

D. H. 603.

CLEVELAND, July 26, 1887.

B. F. MITCHELL,  
Louisville :

We have had, since the 13th instant, a rate on oil in tanks 90 cents, and in barrels, C. L., \$1.20 per barrel, Cleveland to New Orleans via Ill. Cent. R. R. This tariff expires on night of August 4.

A. B. HOUGH.

Ans. to D. H. 64 C.—7—26.

LOUISVILLE, KY., July 23, 1887.

EDGAR HILL, Esq.,  
G. F. A., Cleveland, Ohio :

DEAR SIR: Special oil tariff No. 1 to the Southwest. Please refer to your circular letter of July 16, and let me know what rates you will make on coal oil to points named, or send me the rates you will make to Cincinnati, Jeffersonville, Louisville, Cairo, and Evansville.

B. B. MITCHELL,  
G. F. A.

CLEVELAND, July 25, 1887.

B. F. MITCHELL, Esq.,  
G. F. A. Louisville, Ky.:

DEAR SIR: Referring to your favor of 23d instant, present rates on oil from Cleveland to the points you mention are as follows, viz. :

To—	In barrels.	In tanks.
	<i>Per barrel.</i>	<i>Per barrel.</i>
Cincinnati, Ohio .....	\$0.85	\$0.26
Jeffersonville, Ind .....	.52	.38
Louisville, Ky .....	.52	.38
Cairo, Ill. ....	.75	.60
Evansville, Ind. ....	.62	.47

In car loads only, subject to the following minimums, viz :

In barrels, 60 barrels per car. In tanks, capacity of tank.

Yours, truly,

EDGAR HILL,  
G. F. A.

LOUISVILLE, July 26, 1887.

A. B. HOUGH,  
Cleveland, Ohio:

Understand you are making rate on oil in tank-cars to New Orleans 90 cents per barrel, and car loads \$1.20 per barrel via Louisville. See my letter 23d.

B. F. MITCHELL.

CLEVELAND, *July 26, 1887.*B. F. MITCHELL,  
*Louisville, Ky.:*

We have had since 13th inst. a rate on oil in tanks 90 cents, and in barrels \$1.20 per barrel, C. L., Cleveland to New Orleans, La., via Illinois Central R. R.  
This tariff expires on night of August 4th.

A. B. HOUGH.

LOUISVILLE, *July 27, 1887.*A. B. HOUGH,  
*Cleveland, Ohio:*

Are rates you name in effect since 13th good via Louisville? If not, why? Don't you think we should have been advised?

B. F. MITCHELL.

LOUISVILLE, *August 4, 1887.*EDGAR HILL, Esq.,  
*G. F. A., Cleveland, Ohio:*

DEAR SIR: Your favor July 25, naming rates from Cleveland to Louisville and points upon the Ohio River.

I notice you have issued tariff, naming rate on oil in tank cars 90 cents per barrel, and oil in car-loads \$1.20 per barrel, from Cleveland to New Orleans, La.

Please see my telegram to A. B. Hough, asking if these rates (July 13) are via Louisville, and if not, why?

It does look to me we should make the same rates via Louisville and our line as made via other routes, as I do not think we have thrown any obstacle in the way of granting you protection.

Yours truly,

B. F. MITCHELL, G. F. A.

CLEVELAND, *August 8, 1887.*B. F. MITCHELL, Esq.,  
*G. F. A., Louisville, Ky.:*

DEAR SIR: Replying to your letter of the 4th instant, regarding rate on oil, Cleveland to New Orleans, La., say that we did have a through rate in effect as shown, but it was withdrawn on August 4, 1887, and at the present time we are not prorating to New Orleans via any line, but in making through rates we will add the rates from Cincinnati or Louisville, whichever is the most favorable for through rates. In that way I hope considerable business will go forward via your line, as we certainly are in favor of a good share of the business going your way.

Yours truly,

EDGAR HILL, G. F. A.

CINCINNATI, OHIO, *August 17, 1887.*EDGAR HILL, Esq.,  
*G. F. A., Cleveland, Ohio:*

DEAR SIR: Will you please inform me at the earliest possible date the rates on petroleum oil in tanks, cars, and in barrels, C. L., from Cleveland to Cincinnati, Columbus, Dayton, Indianapolis, Peoria, East Saint Louis, and Cairo in effect during the years 1883 to 1886, inclusive? I will not trouble you to name the rates in effect during the entire period named, but would like the rates in effect at any given date in each year mentioned.

Yours respectfully,

R. M. FRASER, G. F. A.

CINCINNATI, OHIO, *August, 1887.*EDGAR HILL,  
*Cleveland, Ohio:*

Please answer my letter 17th, about oil rates.

R. M. FRASER, G. F. A.

CLEVELAND, *August 25, 1887.*R. M. FRASER,  
*Cincinnati, Ohio:*

am having a statement of oil rates prepared and will advise you from them.

EDGAR HILL, G. F. A.

CLEVELAND, OHIO, August 26, 1887.

Mr. R. M. FRASER,  
G. F. A., Cincinnati, Ohio:

DEAR SIR: In reply to your favor August 17, I regret my inability to have answered sooner. The rates on oil in car-loads, in barrels or tanks, per barrel were as follows:

From Cleveland to—	Date of shipment.	In barrels or tanks.
		Per barrel.
Columbus .....	April 17, 1882, to April 1, 1887 .....	\$0.40
Dayton .....	April 17, 1882, to June 15, 1883 .....	.55
Do .....	June 15, 1883, to June 1, 1886 .....	.50
Do .....	June 1, 1886, to April 1, 1887 .....	.60
Cincinnati .....	April 17, 1882, to June 15, 1883 .....	.55
Do .....	June 15, 1883, to June 1, 1886 .....	.50
Do .....	June 1, 1886, to April 1, 1887 .....	.40
Indianapolis .....	April 17, 1882, to June 15, 1883 .....	.65
Do .....	June 15, 1883, to June 1, 1886 .....	.60
Do .....	June 1, 1886, to April 1, 1887 .....	.50
East Saint Louis .....	April 17, 1882, to June 15, 1883 .....	1.15
Do .....	June 15, 1883, to June 1, 1886 .....	1.00
Do .....	June 1, 1886, to April 1, 1887 .....	.80
Cairo, Ill. ....	April 17, 1882, to June 15, 1883 .....	1.40
Do .....	June 15, 1883, to June 1, 1886 .....	1.30
Do .....	June 1, 1886, to June 1, 1886 .....	1.10
Do .....	June 1, 1886, to April 1, 1887 .....	1.00

We publish no rates to Peoria.  
Yours truly,

EDGAR HILL, G. F. A.

CINCINNATI, OHIO, October 3, 1887.

E. HILL,  
G. F. A., Cleveland, Ohio:

See your telegram to me May 12, naming rates on oil to Cairo. Have not been advised of any change. Have asked you for Cleveland oil tariff, but it has not been furnished.

R. M. FRASER, G. F. A.

CLEVELAND, October 3, 1887.

R. M. FRASER,  
Cincinnati, Ohio:

Your message of date. On May 12 our rate on oil from Cleveland to Cairo was 62-47. Our printed tariff issued June 15 advanced rate to 75-60, which has been in effect ever since.

Will send you copy of the tariff to-day, under personal cover, and hope you will gauge your rates accordingly.

E. HILL, G. F. A.

CLEVELAND, OHIO, October 3, 1887.

R. M. FRASER,  
G. F. A., Cincinnati, Ohio:

DEAR SIR: Agreeable to my telegram of date, I hand you herewith copy of our special oil tariff, in effect June 15, showing the following rates from Cleveland to Cairo, Ill., viz: In barrels, C. L., 75 cents per barrel; in tanks, 60 cents per barrel. Please acknowledge receipt.

Yours truly,

E. HILL, G. F. A.

LOUISVILLE, KY., December 15, 1887.

EDGAR HILL,  
Cleveland, Ohio:

At what weight per gallon do you charge for oil in tank cars; what weight per gallon for naphtha in tank cars? What weight per barrel on oil and naphtha in barrels, car-loads.

B. F. MITCHELL.  
J. M. CULP.

CLEVELAND, December 16, 1887.

B. F. MITCHELL, J. M. CULP,  
*Louisville, Ky. :*

Your message 15th. We do not make our oil rates based on weights per gallon. Our rates are so much per barrel. The estimated weights per barrel are, in wood, 400 and in tank cars 315 pounds per barrel.

EDGAR HILL, G. F. A.

## COAL OIL AND LUBRICATING OIL, CLEVELAND TO NEW ORLEANS, LA.

LOUISVILLE, KY., *April 20, 1888.*EDGAR HILL,  
*G. F. A., Cleveland, Ohio:*

DEAR SIR: Please be kind enough to refer to your specials of April 5th, 13th, and 16th on coal oil from Cleveland to New Orleans, La.

I notice specials 5 and 10 do not allow a rebate of 10 cents per barrel formerly paid, but special 13th shows this 10 cents deducted as Cleveland transfer.

Was glad to see the interstate bill had done away with this pernicious practice, and I would ask if this 10 cents per barrel is paid to the shippers, and if all shippers receive the same, and is it generally known this amount is allowed? Has not this 10 cents per barrel been allowed by request of Standard Oil Company as a compensation for facilities?

There are a great many questions being asked about this matter at present, and I am particularly anxious to know, so we may feel safe in answering, knowing our answers are correct.

Yours, truly,

B. F. MITCHELL, *G. F. A.*CLEVELAND, OHIO, *April 25, 1888.*B. F. MITCHELL, Esq.,  
*G. F. A., Louisville, Ky.:*

DEAR SIR: Referring to your favor of 20th instant, relative to the deduction from through rate, before prorating, of 10 cents per barrel on shipments of oil from Cleveland to cover expense of maintaining oil shed.

You certainly have a wrong impression in thinking that this amount goes to shippers as rebate or allowance. Such is not the case. They have no interest in it whatever, and as above stated, it is simply applied for the maintenance of an oil shed, which we are obliged by a city ordinance to furnish as a protection against fire. It is possible that we may arrange within a few days to do away with this expense or rather shoulder it ourselves.

Yours, truly,

EDGAR HILL, *G. F. A.*

CINCINNATI, WASHINGTON AND BALTIMORE RAILROAD COMPANY,  
OFFICE OF THE GENERAL FREIGHT AGENT,  
Cincinnati, August 5, 1885.

GEORGE RICE, Esq.,  
Marietta, Ohio :

DEAR SIR: Yours 25th found on my return from the East Monday, 3d. The first information that I had of dissatisfaction regarding the rate on oil was a message from G. F. A. Mitchell, July 3, which read as follows:

"Referring to rates on oil from Marietta, we want them advanced upon basis of \$2 per barrel from Cleveland and Marietta to New Orleans and \$1.50 to Memphis."

On the 16th I received a message from Edgar Hill, Cleveland, as follows:

"We are asked to advance rate on oil from Cleveland to New Orleans, taking effect at once, to \$2 per barrel. Provided this is done, have we any assurance that the same will be made from Marietta and Pittsburgh?"

The above answer your question as to who suggested an advance be made.

On receipt of these telegrams I immediately notified Agent Lucas, so as to protect ourselves, as well as shippers, and then took up the subject with the other parties interested.

The result is that no advance will be made at present, and the condition of affairs remains same as before, Agent Lucas having been notified on the 29th that, until further notice, to continue present rates on oil to Memphis and New Orleans.

These rates as well as all others are subject to change when circumstances require, it being our desire and intention at all times to protect our shippers to the best of our ability.

If the above information is of any value to you, you are welcome to it.

Yours, truly,

R. M. FRASER, G. F. A.

WASHINGTON, D. C., July 20, 1888.

The committee met at 11 o'clock a. m. Present, the chairman, Mr. Smith, Mr. Hopkins, Mr. Crouse, Mr. Bunnell, Mr. Breckinridge, Mr. Wilson, Mr. Grimes, and Mr. McKinney.

### HENRY M. FLAGLER—Recalled.

By Mr. GOWEN:

Q. Mr. Flagler, you are now a witness on your own behalf. You can go on and state what you desire to state. I shall not attempt to lead you by asking questions.

Mr. CHOATE. May we suggest to him the lines upon which we think his statements would be important?

The CHAIRMAN. I do not think the committee desire to have the intervention of counsel here with regard to any of the subjects about which it is investigating, other than the counsel of the committee, Mr. Gowen. Of course gentlemen will understand that as being respectful to them and not being a suggestion of our unwillingness to see them here or to be aided by them.

Mr. SMITH. Will the chairman read off the first article there?

The CHAIRMAN. I think the orderly conduct of the investigation will best be preserved by an examination.

Mr. GOWEN. I will put any questions which you gentlemen want to have put.

Mr. CHOATE. I do not think the committee ought to allow the witness to be subject to examination without being defended by the committee or by us, unless he makes the statement in detail.

Mr. GOWEN. I suggest that Mr. Flagler go on and tell his story without any questions from me. If I have any cross-examination I will do it afterwards.

Mr. CHOATE. We have certain propositions of fact which we think he can prove. If you will let him be examined by some member of the committee or by the chairman you can then take any statement from him. We think that will be pertinent to this examination. We do not want to intrude, but we want the witness examined so that the facts may come out.

By the CHAIRMAN:

Q. Mr. Flagler, were you one of the stockholders and one of the officers of the Standard Oil Company of Cleveland?—A. Yes, sir.

Q. What time did your connection with that concern begin?—A. With its creation.

Q. What was that date; it has escaped my memory?—A. I think in the winter of 1870.

Q. And up to what time did it continue?—A. It continues now.

Q. You are still an officer of that company?—A. I beg your pardon. I understood you to say what time it continued. No, sir; I am not.

Q. Are you familiar with the business of that company and the manner in which it is done?—A. I am.

Q. And have you been since 1870?—A. Until within the last two years, perhaps—the time that I left the company.

Q. Now, prior to October 1874, what was the business of the Standard Oil Company at Cleveland; what did it buy and what did it sell?—A. It bought crude petroleum, refined it and sold it; sold refined oil and the products derived from it.

Q. From what field did it get its crude petroleum?—A. Pennsylvania.

Q. How, by what lines of transportation?—A. By railroad.

Q. Can you state what railroad?—A. I may not be absolutely certain if you confine me to years, but it is my impression that we received our crude petroleum by way of what was then known as the Atlantic and Great Western, and the Lake Shore and Michigan Southern. Those were the only two roads running into Cleveland from the oil regions of Pennsylvania, and we did business by both roads.

Q. Where was your refined product marketed?—A. New York, Philadelphia, and Cleveland.

Q. How was it transported from Cleveland from your refinery to these markets?—A. When I say Cleveland, that includes sales made at Cleveland—that includes sales made at Cleveland for all local distributive points in the West, South, etc. The distribution of the oil west was by railroad; some of it by lake. To the sea-board it went by rail, some of it; some of it by lake to Buffalo, and by canal from Buffalo to New York.

Q. What railroads did you ship your refined oil over going eastward?—A. By the Atlantic and Great Western, that was then the connection of the Erie road; by the Lake Shore and Michigan Southern, which was the western connection of the New York Central; and by the Cleveland and Pittsburgh, which was the connection of the Pennsylvania Railroad.

Q. Up to October, 1874, can you state the aggregate of your shipments over the Pennsylvania Railroad?—A. We never shipped by the Pennsylvania Railroad. Rather, the first shipments made by the Pennsylvania Railroad, were in the year 1873, and those amounted to 21,037 barrels.

Q. Were all the shipments over the Pennsylvania road made by the Standard Oil Company of Cleveland up to October, 1874?—A. Yes, sir; and I think up to the early period of 1875; up to the time, whatever the date was, when we made a contract with the Empire Transportation

Company, which was at that time the transportation line operating over the Pennsylvania Railroad. I think that was in 1875.

Q. Now up to this date which you furnish me here, October 15, 1874, had the Standard Oil Company of Cleveland any business arrangements, combinations, with any other refinery?—A. No, sir.

Q. In the nature of a partnership, or in the nature of any such combination as has grown into the Standard Oil Trust?—A. No, sir.

Q. It was then a competitor with all other refineries in New York?—A. It had several of its own refineries. It was a competitor with probably twenty other refineries in Cleveland, and perhaps fifty others scattered in other parts of the country.

Q. You say it had several refineries. Were they all standing in the name of the Standard Oil Company of Cleveland, and all in Cleveland?—A. Yes, sir.

Q. So that simply means there were several buildings in which you were carrying on the business of a refiner?—A. We had several detached refineries in Cleveland, all owned by the Standard Oil Company.

By Mr. GOWEN:

Q. When did the Standard Company of Ohio first enter into an alliance with other refineries?—A. If you mean by an alliance, Mr. Gowen, I should say never.

Q. I am only endeavoring to aid your friends in getting at what they want. Here, I notice, they propose to prove by you—I will give it in this way that on account of the disastrous condition of the refining business, the Standard, on October 15, 1874, entered into an alliance with a number of Pittsburg refineries?—A. That is more correctly stated by saying that the Standard Oil Company purchased the refineries owned by the parties in Pittsburgh.

Q. Who were they?—A. Lockhart, Frew & Co., I think was the company. Wait a moment. It was the Standard Oil Company of Pittsburgh, it being a corporation, and Warden, Frew & Co., of Philadelphia, and, I should say, Charles Pratt & Co., of New York.

Q. Any others?—A. That is all.

Q. All those gentlemen, Warden, Frew & Co., and the Standard Oil Company of Pittsburgh, the Charles Pratt & Co., of New York, are now associated with you as parties interested in the present oil trust?—A. They are stockholders. The property formerly owned by them was at that time purchased by the Standard Oil Company.

Q. When you speak of purchasing their interest, you do not exclude them from their interest? They united with you and remained as your associates in the business?—A. If it was not from the fact that ours was a corporation, we might call it a copartnership.

Q. They becoming interested in yours, and you in theirs?—A. Yes, sir.

Q. And you simply used your name to represent the joint ownership, as it was a corporation?—A. Yes, sir.

Q. Now, up to the time at which you acquired the interests in those three concerns that you have named, and when you were doing business as the original, simple Standard Oil Company of Ohio, in Cleveland, these other concerns were also doing business in Pennsylvania in their own names, entirely independent of you?—A. Charles Pratt & Co. were not. They were doing business in New York. Warden, Frew & Co. were—

Q. And Lockhart, Frew & Co.?—A. Yes, sir; in Pennsylvania.

Q. Lockhart, Frew & Co., in Pittsburgh, and Warden, Frew & Co.,

in Philadelphia, both of whom are now associated with you and owners of an interest in the Standard Trust Company, were at that time, and before you had any connection with them, doing business over the Pennsylvania Railroad and its branches, were they not?—A. Oh, yes; they must have been. I knew nothing about it. I assume they did, because I know of no other way, they could ship their goods except by the Pennsylvania road.

Q. With their transactions over the Pennsylvania Railroad and their transportation, either of crude or refined, over the lines of that company, you had nothing to do?—A. Absolutely nothing; no knowledge of it.

Q. Nor had you anything to do with that business until the time you secured it by this arrangement of which you speak?—A. I think I have testified that the Standard Oil Company of Cleveland shipped in the year 1873 some thirty-one thousand barrels of oil; but that was prior to the union of which I have spoken, occurring in 1874.

Q. That was the Standard Oil Company of Ohio. I am asking if you had any knowledge or participation in the business conducted over the Pennsylvania Railroad by these other refineries prior to the time you acquired an interest in it?—A. We had no knowledge of our participation in it.

Q. How many years did Lockhart, Frew & Co., or Warden, Frew & Co., do business in Pennsylvania before the period when you merged with them or acquired their interest?—A. I am unable to answer that question.

Q. Several years, was it not?—A. I suppose so. My connection with Rockefeller in the oil business, which was first a partnership, began in 1877; and my recollection, in a general way, is that Warden and Lockhart were in the oil business at the time that I went into the business with Rockefeller, before the creation of the Standard Oil Company.

Q. Were they not in business on their own account contemporaneous with your entering in it, or even before?—A. That is what I say; my general remembrance is that they were. I recall them as of my earlier acquaintances in the business.

Q. I find here as the third item on this memorandum of the matter to be proved by you, which your friends have presented, that the first contract made with these rival refineries for shipment over the Pennsylvania Railroad was July, 1875. This contract was made by or through the Empire Transportation Company, a rival in business. Have you anything to say on this subject?—A. Only this, that we made an agreement with the Empire Transportation Company for shipments over the Pennsylvania Railroad on behalf of the Pennsylvania interests, which were then owned by the Standard Oil Company, simply because there was no alternative. It was the only vehicle by which these Pittsburgh refineries and the Philadelphia refineries carried their crude oil over the Pennsylvania Railroad. There was no other medium by which business could be done over the Pennsylvania Railroad except through the Empire Transportation Company, a subsidiary company of the Pennsylvania Railroad Company. The Empire Transportation Company was not only the owner of pipe lines in the oil regions, and tank-cars on the Pennsylvania Railroad, but also of refineries at Philadelphia and New York, and to that extent were our competitors. We, having no interest whatever in transportation, naturally felt jealous of the Empire Transportation Company, and drew the attention of the northern lines. By that I mean the New York Central and the Erie railroads. With the peculiar position of the oil business on the Pennsylvania Railroad, their attention was called to this very soon after the Empire Transportation

Company began the business of refining. The position taken by the two northern trunk lines in their intercourse with the Pennsylvania Railroad, as was admitted by Mr. Cassatt in his testimony, and stated to me by the representatives of the two northern roads, Mr. Vanderbilt and Mr. Jewett, was that it was unfair to them that the Pennsylvania Railroad did not divest itself of the manufacturing business; and the outcome of that was the sale by the Empire Transportation Company, in 1877, I think, of its refining plant and pipe lines to the Standard Oil Company interest, and its cars to the Pennsylvania Railroad. Since that time, to the best of my knowledge and belief, the Pennsylvania Railroad has had no interest, directly or indirectly, in the manufacture of petroleum, or in its merchandising, and has stood precisely upon the same plane that the New York Central and Erie and the Baltimore and Ohio did.

Q. The sale has already been testified to by Mr. Potts. Here I find, as the fourth item in this memorandum, that under this contract the Standard received no preferences, but believed it was constantly discriminated against. Do you desire to say anything upon that subject?—A. Yes. As I say, we were unable to obtain rates through the Empire Transportation Company over the Pennsylvania Railroad for the Pittsburgh or Philadelphia refineries as low as were given by competing roads, and from the fact that the business during those years was so very close as to leave scarcely any margin of profit under the most advantageous circumstances, and we finding ourselves undersold in the markets by competitors whom we knew had not the same facilities in the way of mechanical appliances for doing the business, there was but one conclusion to be reached, and that was that the Empire Transportation Company favored certain other shippers, I would say favored its own refineries to our injury. That, of course, was the main point which brought about the issue in 1877.

Q. Finding that, you brought about this purchase of the refineries of the Empire Line and the purchase of the cars by the Pennsylvania Railroad?—A. I should say that our business from Cleveland and other points being very much larger, or rather being probably a very large percentage of the whole oil business, the Pennsylvania road was naturally desirous of our shipping other oils by its lines than those needed by the Philadelphia refinery and the Pittsburgh refinery. We were unwilling to do that so long as the transportation lines over the Pennsylvania Railroad were our competitors as manufacturers, and said that openly and a number of times that we were unwilling to ship by them and did confine our shipments to other routes than the Pennsylvania Railroad. It was the desire on the part of the Pennsylvania Railroad to have a portion of our other business that induced them to bring about this negotiation with the Empire Transportation Company, and we yielded to their most urgent persuasions. We did not want the property, but they insisted upon it that we should buy it. We did yield to their persuasion and purchased that portion of the Empire Transportation Company's property, meaning the local pipe lines in the oil regions. We had stated in earlier discussions with representatives of the Pennsylvania Railroad we were willing to buy the refineries owned by the Empire Transportation Company, but as we were not interested in transportation at all, we wanted them to pay for the pipe lines and own them themselves; but we finally yielded that point.

Q. You advanced some considerable money, did you not, to enable the Pennsylvania Company to purchase the tank cars? You took car trusts?—A. We took car trusts issued on those cars.

Q. Practically you put the capital in?—A. We put the capital in. We paid them for the refineries, paid them for the pipe lines, and we purchased for cash—there were two car trusts created, one for the tank cars, and one for the merchandise cars—and we paid cash for the car trusts that were based upon the oil cars.

Q. Those were redeemed from time to time?—A. Yes, sir; there was a car trust made, and we simply furnished the money, and those were redeemed according to the contract with the company.

Q. Do you remember what interest they bore?—A. Six per cent., I think.

Q. They were redeemed every year by them; their proportion?—A. I do not remember.

Q. They have all been redeemed?—A. Yes, sir; all have been redeemed. I suppose they are now owned by the Pennsylvania Railroad Company.

Q. The next item I have in this memorandum is that in March, 1877, the Standard Oil Company ceased to do business over the Pennsylvania Railroad and did not resume business until October, 1877. Have you anything to say upon that subject?—A. That is the period of time I speak of. We shipped no oil over the Pennsylvania road because of the belief entertained by us that the Empire Transportation Company was discriminating against us in the matter of shipments, and we did no business whatever with the Pennsylvania road until after the first of October, 1877.

Q. State whether or not at that time the oil which the Pennsylvania Railroad carried in its crude form to New York did not leave the Pennsylvania Railroad proper at Harrisburg and go to New York by the Reading road and the Central New Jersey, over what was then known as the Allentown line?—A. I only know that by hearing Mr. Cassatt say so. I do not know what route it came over to New York, but my general remembrance is that the Reading and its eastern connection was the connection of the Pennsylvania road. In other words, that they got only a portion of the haul of that oil.

Q. Do you know whether at that time the Reading road had connection with what was then known as the New York and Erie road?—A. May I ask was that connection at Waverly?

Q. Yes; that was one of them through the Lehigh Valley.—A. I do not remember. I never was through that country; that is the reason I do not know.

Q. Have you any knowledge of this fact: that while you were excluded from the Pennsylvania Railroad by this discrimination in favor of the Empire Line and its affiliated refineries—A. Its own refineries?

Q. Its own refineries?—A. Yes; and while oil which the Pennsylvania Railroad or the Empire Line carried to New York passed over the Reading Railroad from Allentown to New York, that at that time your company applied to the Reading Railroad Company; they agreed to carry your oil over that line as cheap as they carried for the Pennsylvania, and your oil did then come into the Reading system by means of the Lehigh Valley and the New York and Lake Erie, and you therefore by that method were enabled to get into New York as cheaply as the Pennsylvania Railroad was carrying the oil of the Empire Line?—A. I do not know of that. I do not know why we should have sought that. I recall now, since you speak of it, that we wanted to make shipments of oil to Philadelphia, and my remembrance is that that oil went by way of the New York Central road to some point where it touched the Le-

high Valley; that the New York Central undertook to carry the oil for us to Philadelphia, but I never met any person I remember connected with the Reading Railroad on that matter of refined shipments to Philadelphia.

Q. At that time, between March, 1877, and October, 1877, were not your Philadelphia transporting interests under the charge principally of Mr. Warden?—A. Oh, yes; I have no doubt they were.

Q. You never lived in Philadelphia?—A. No, sir.

Q. Nor had you an office there?—A. No.

Q. You had no general charge of the negotiation for rates?—A. Nothing to do with it.

Q. Is Mr. Warden here now?—A. He is in the North somewhere.

Q. He is not in Washington?—A. No, sir.

Q. Now, the sixth item upon this list is that the agreement of October 17, 1877, stipulated for a 10 per cent. commission, but it is believed that others got equal if not better rates. This agreement was abandoned in 1879, and since the Standard has received no preferences. Do you desire to state anything upon that subject?—A. I would like the privilege of explaining about that 10 per cent. commission. The railroad companies, as perhaps Mr. Gowen will remember, he at that time having been head of the Reading Railroad, tried and did agree among themselves for divisions of the oil business. I know that they agreed among themselves that a certain percentage of it the New York Central should take; a certain other percentage the Erie should take; a certain other percentage the Pennsylvania Railroad should take, and a certain other percentage the Baltimore and Ohio should take. We were only anxious that uniform rates should be maintained by these roads. All these roads, and each one of the roads, found it impossible to secure the divisions of the business as they had agreed upon. Notwithstanding, we co-operated with them, for we were heartily in favor of its being done and were only seeking for a uniformity of rates by the different roads. But as any gentleman connected with railroad interests well knows that there always is that desire to get more than belongs to the line. That desire kept cropping out in the practical shape of cutting under rates for the sake of getting a little more, each road feeling that it was not getting enough to insure it its percentage. The Standard Oil Company at that time owned a very large percentage of the entire oil traffic. It was possible for it to do a service for the roads that the roads were unable to do for themselves. That service, however, involved a good many hardships.

The practical working of it was this, that at the end of each month after the arrangement had been made, each of these railroad companies, they first having agreed how they would divide among themselves and not seek to go beyond that certain percentage—at the end of each month each railroad company sent to us a statement of the number of barrels of oil they had transported during the month. It was incumbent upon us during the succeeding month to ship over the road or roads which had received less than its percentage an amount during that following month sufficient to bring up the deficit of the previous month. Undertaking to do that meant, as I well knew at the time, a responsibility imposed upon us, and an obligation to run refineries at certain localities which perhaps at the time it was unprofitable for us to run. It meant a steady continuance of a large volume of business at periods of time when it might not be profitable to run them; and if the gentlemen of the committee will bear with me just a moment you will see the difficulties. It was not only the three trunk lines—the New York Central,

terminating at Buffalo, the Pennsylvania, terminating at Pittsburgh, and the Baltimore and Ohio, I don't know where—but there came in their western connections. I remember well the New York Central had two; the Lake Shore was its connection west of Buffalo to Cleveland, and the Dunkirk and Alleghany Valley was its western division to the oil region. It was not an easy matter, for we had not only to regard the percentage delivered at the sea-board, but we had to try to keep the Lake Shore satisfied with its proportion, the New York Central's proportion, and the Dunkirk and Alleghany Valley's proportion. As I say, it was no light task, and realizing that, I said to these gentlemen, "we will undertake to do this business for you, to secure to each one of you the percentage which we may have agreed upon, upon condition that we are paid for that service a sum which shall be equal to 10 per cent. of the rate you receive for doing the business." There were, however, to be added to what I have already stated as an inducement for the railroad companies to pay that commission, other agreements, one of which was that we assumed the risk of loss by fire in transportation. That may seem to be to the gentlemen of the committee a cheap thing to do, but Mr. Gowen understands, as well as I do, that a railroad company can not divest itself of the obligations by the common law imposed upon it as a common carrier without a special agreement to that effect. We took that risk, and did not collect from the railroad companies, any of them, any losses sustained by fire in transit. We furnished terminal facilities at the sea-board free of charge to the railroad companies, and for all this service the Pennsylvania Railroad agreed to pay us a commission of 10 per cent. We carried out our part of the contract faithfully, and secured to the roads such a division of the traffic as kept them in a state of accord and peace, so far as quantity was concerned, and yet the Pennsylvania Railroad paid to other shippers than ourselves a rebate or a drawback, or whatever you choose to call it, on their shipments which were exactly equal to the 10 per cent. they agreed to pay us. So that in that respect we were not favored at all.

Q. You have spoken of the percentages that existed between the four trunk lines. Can you tell us from memory now what they were?—A. No, I can not; I do not recall them. I remember that in the early history of the business, in the early 70's, the Pennsylvania having the only lines to Philadelphia had a much larger percentage than it did after the New York Central and the Erie perfected its arrangement by which they could reach Philadelphia, and after that date the Pennsylvania's percentage was smaller than in former years; but what this percentage was I have no recollection.

Q. If I give you the amounts can you remember them? Do you not know that originally when the first distribution was made of crude oil, the Pennsylvania Railroad got 47 per cent., the New York and Lake Erie and the New York Central each 21 per cent., and the Baltimore and Ohio 11 per cent.?—A. To New York?

Q. Yes sir?—A. Well, my remembrance is entirely gone as to that. But I think you are right.

Q. Was it not subsequently changed to 45 per cent. for the Pennsylvania, to 22 for the New York and Lake Erie and the New York Central, and the Baltimore and Ohio remained the same at 11?—A. My memory on that point is equally at fault with the previous suggestion or question; but if you assert it I will admit it.

Q. That is for you to say. I am not to decide.—A. I do not remember. The reason is this—as the representative of the Standard Oil interest, in all my interviews with the gentlemen representing the trans-

portation interests I always said the division is none of our business. If you agree among yourselves that one road shall have 90 per cent. that is all there is about it. We have no interest how you divide this business, and don't care how you divide it, if you only maintain rates.

Q. Was not this distribution according to a percentage, or this pooling confined only to crude oil?—A. Oh, no; it extended to and covered the refined. There was a period of time when the New York Central carried hardly any crude, and did carry only refined oil.

Q. Was there a separate percentage for refined different from that of crude, or did this one fixed scale of percentages apply to oil irrespective as to whether it was crude or refined?—A. The refined oil, as I remember it, was on a basis of one and three-tenths of crude. In other words, 130 barrels of refined in making up the aggregate counted 100 barrels of crude. But the aggregate of refined was added to the shipments of crude, as I stated, three-tenths, it might have been a third, and the total shipments were obtained in that way, and from that the percentages were figured.

Q. The percentage was based upon both?—A. Yes, sir.

Q. Then were you not mistaken in saying that 130 barrels of refined answered to 100 of crude? Wasn't it *vice versa*?—A. Yes, sir; I didn't mean to say that. In other words, 130 of crude answered the same as 100 of refined.

Q. Now you have said that other shippers got this 10 per cent. commission. Have you any knowledge of it and can you of your own knowledge say who got it besides those who were connected with you?—A. Yes, sir; I can.

Q. Who?—A. I would like to be excused from saying who.

Q. Now that destroys the force of your testimony. I think we are entitled to that?—A. You asked me if I could say whether any other shipper got it, and I say I can.

Q. Now, I want to know who it was?—A. I have no objection to telling you. Malcolm Lloyd.

Q. Have you any knowledge of any other shipper getting it?—A. No, sir.

Q. Malcolm Lloyd was located at Philadelphia?—A. Yes, sir.

Q. Now, the latter part of this clause six of the memorandum furnished by your friends is, that this agreement was abandoned in 1879, and since the Standard has received no preference. Have you anything to say upon that subject?—A. Nothing particular, except to assert that as a fact.

Q. Now, that abandonment in 1879 was the result of that litigation about which so much testimony has been given here, was it not? The litigation in which Mr. Cassatt was examined as a witness. The litigation commenced by the State of Pennsylvania against the railroad companies and against—A. I don't remember what year it was in, and I don't know whether the one thing was a result of the other or not. I don't now remember why that contract was abandoned.

Q. The abandonment of that contract was brought about by a written agreement, was it not, which all you gentlemen signed and which has been offered in evidence?—A. If you will let me look at that book. I have never looked at it.

Q. I want to get that in your testimony.—A. Yes, sir.

Q. Since then the Standard has received no preference?—A. None whatever.

Q. What do you mean by that?—A. I mean to say that every barrel of crude or refined oil we have shipped over the Pennsylvania Railroad

we have paid as much freight on per barrel or per hundred pounds as any other shipper, and I believe in some cases more.

Q. Immediately after 1879, when this contract had been made by which you bound yourselves to consent to be treated alike with other shippers upon the railroads, you commenced the construction of pipe lines, did you not?—A. The abandonment of the contract, if I may repeat your words, in which we consented to be treated like other shippers.

Q. Just answer the question?—A. I would like to have you and the committee to understand that the commission paid by the Pennsylvania Railroad to us was not a rebate on shipments in any sense of the word, but it was for a service rendered wholly outside of our shipments and as shippers; and on our merchandise business during that period of time from October, 1877, to the time that the contract was abandoned we paid precisely the same rates that anybody else did, according to my best knowledge and belief. The commission of 10 per cent. which followed—I think the rate was \$1.50 or \$1.40, from 14 cents down—was given for the work which I have detailed somewhat at length. But as shippers I object to admitting that we at any time ever got any favors on the Pennsylvania Railroad in any form.

Q. You do not deny the statement made under oath by Mr. Cassatt? Did he not testify truly to the actual rates paid?—A. I have never read his testimony.

Q. He testified that there was a rebate of 22½ cents, or a tariff, to the American Transfer Company on all oil that passed over the Pennsylvania Railroad. That was a fact, was it not?—A. Yes, sir.

Q. That had nothing to do with the 10 per cent.?—A. No, sir; I thought you were speaking of these shipments to the sea-board.

Q. And Mr. Cassatt testified and offered in evidence the correspondence, which showed that his company agreed to the payment of that 22½ cents to the American Transfer Company on every barrel of crude oil passing over their line in consequence of the fact that the writer of the first letter on behalf of the American Transfer Company had asserted that the New York Central and the New York and Lake Erie roads paid the same amount. You know that to be a fact, do you not?—A. May I explain that now.

Q. You are entitled to make any explanation you wish?—A. The American Transfer Company was built originally for, really, the New York Central road. The New York Central had no means of getting south of Titusville with its cars. The American Transfer Company's lines were built really in the interest of the New York Central road. In those days the pipe lines purchased the oil and oftentimes sold it at just what they paid for it, and sometimes less. They got more when they could. The New York Central, as I said, paid the American Transfer Company a price, which I presume was the figures named in Mr. Cassatt's testimony, for collecting oil in the lower country and delivering it to the Dunkirk and Alleghany Valley, which is the New York Central's connection. As that pipe line increased its business the Erie road did the same thing. Later the Pennsylvania Railroad wanted the service of that pipe line in collecting oil. Mr. O'Day did what I suppose any manager would do. He said to Mr. Cassatt, if you do the same thing for me that the other roads are doing, I have no objection to making the same arrangement with you. The payment made by the Pennsylvania, the Erie, and the New York Central roads constituted the gross income of the American Transfer Company, out of which it paid its expenses of doing its business and its losses, if

it made any, in the purchase and sale of oil. It acted as a factor for those northern roads, and, as I said, was originally built in order that oils might be reached by the New York Central.

Q. But in addition to the sum of 22½ cents, or whatever it may have been, which these trunk lines paid to the American Transfer Company, that company as a transporter of oil through its own pipe got this pipage charge besides?—A. I never so understood it. As I remember the facts in the case, while there was a nominal pipage—there might have been; I do not say there was; I do not remember—

Q. You do not say there was?—A. I do not remember. But while there might have been a nominal pipage, that nominal pipage might have been absorbed in the crude oil. In other words, it threw away its nominal pipage and relied—

Q. I am speaking now solely of the relations of the American Transfer Company to the railroads. The former received 22½ cents on every barrel of oil passing over the Pennsylvania road and the other roads. But the American Transfer Company was a transporter of oil itself, and to the extent it transported oil through its pipes it made charge for that service also?—A. That is a point where I say I want to correct you. While it may have made a nominal charge, about which my memory fails me, I say it threw away that nominal charge by paying to the owner or the producer of the oil the value of the oil at the wells plus what that pipage might have been, and that twenty odd cents paid by the Pennsylvania constituted its gross revenue.

Q. Are you sure of that?—A. I am as certain of it as I am of many other things that have passed out of my recollection.

Q. What was the capital of the American Transfer Company?—A. One hundred thousand dollars.

Q. Was it not, as Mr. Bostwick testified, \$100,000?—A. I just said it was about \$100,000 or \$200,000; but that don't signify anything about the amount of money actually employed.

Q. Didn't the American Transfer Company own simply a small amount of local pipage, 30 or 40 miles?—A. Oh, no; it owned a great deal more than that.

Q. Up to the year 1878, did it?—A. I am not certain about the year. Its business increased gradually.

Q. I am speaking now of the time to which your testimony has been directed.—A. I have never been in the oil regions but once in my life; but as this matter has become ancient history I can only judge, in a way, that this American Transfer Company was a competitor of the Union Pipe Line. It is my recollection that when the Union Pipe Line was purchased by us, in 1877, they had several hundred miles of pipe line—the Union—and I assume, and very properly, that the American Transfer Company was not any behind it in quantity of line owned by it.

Q. Upon that subject I suppose Mr. Bostwick is more familiar than you?—A. It is quite likely Mr. Archbold would know.

Q. Mr. Bostwick was examined by me on that subject. If his statement should differ from yours on that subject would you not suppose that he had more knowledge on the subject than you? Did he not at one time practically own the American Transfer Company?—A. If he stated 30 or 40 miles only, Mr. Gowen, I think I can explain it readily. Its main line from down the river up north might have been 30 or 40 miles, without taking into account its branches out in the country in different ways. I can see how Mr. Bostwick might make that mistake. I never read his testimony. If he said only 30 or 40 miles, that would

have been the natural inference of a man who spoke of the main carrying line from the initial point of shipment by rail.

Q. You among others signed that agreement of 1879 which was negotiated or brought about, among other things, by the influence of Mr. Campbell, who represented the producers at that time, did you not? The agreement which the railroad companies and the gentlemen connected with the Standard Oil Company signed, by which they bound themselves that thereafter there should be no discrimination in the transportation of oils upon the railroads, do you remember that you signed that?—A. No, sir. Will you let me look at the agreement? I do not recall it at all.

Q. It has been offered in evidence in this case?—A. If I could glance at it I could tell in a moment.

Q. You say since that agreement of 1879, the Standard received no preferences. Now, at what time did the Standard Oil Company, or the gentlemen connected with it, commence to lay their first line to tide-water, their first pipe line?—A. I can not tell what year it was in.

Q. Was it not open for business in 1880?—A. I think very likely; yes.

Q. Was it before 1880?—A. As I say, I have no recollection.

Q. Since the opening of your pipe lines to tide-water a large proportion of your business goes to the pipe, does it not, of crude oil?—A. For the last three or four years it does.

Q. For the last six or seven years, does it not? This is 1888?—A. Yes; six years, probably; five or six years.

Q. You give the Pennsylvania Railroad now 26 per cent. of the business, and 74 per cent. of it you take by the pipe line; that is the agreement, is it not? That has been testified to by one of you gentlemen here?—A. I presume those figures are correct. I do not recollect them.

Q. Now you charge an initial collecting charge for local pipage of 20 cents a barrel, do you not?—A. Yes, sir.

Q. And you charge upon the main line of pipe 45 cents a barrel to New York and 40 cents to Philadelphia, do you not?—A. Yes, sir; and Baltimore. I want to correct the 20 cents initial charge; that is on a portion of the line only.

Q. That is for local pipage?—A. Yes, sir; you are right; local pipage.

Q. Then the cost of transporting oil to anybody, the charge, rather, for transporting oil over that pipe line is 65 cents to New York and 60 cents to Philadelphia, including the deliveries?—A. From the wells?

Q. From the wells?—A. Yes, sir.

Q. The charge over the Pennsylvania Railroad for the railroad transportation, including your local pipage charge, is just the same?—A. Yes, sir.

Q. Exactly?—A. Yes, sir.

Q. Now you own the pipe line?—A. Yes, sir.

Q. What does it cost you to do business on that pipe line?—A. I am not able to answer the question. I have never looked into it, and do not know anything about it.

Q. Does it cost 10 cents a barrel?—A. I can not answer the question at all.

Q. You certainly know a good deal about that. Have you not testified here that in the Lima coal-fields, where the rate for transporting crude oil by railroad was 18 cents a barrel, you are about laying, or have laid, a pipe line to Chicago, so that the railroad transportation can be

reduced; so that it could be done cheaper?—A. I admit that; then what?

Q. How far is it from the Lima wells to Chicago?—A. About half the distance that it is from the Pennsylvania field, and over a dead level, and one pump throws the oil the entire distance. On the New York lines to the oil regions, and the Baltimore line, oil is thrown about every 25 miles, picked up, and thrown over again.

Q. Surely not?—A. Yes, sir; we have the statement here; about 25 miles. I believe you will find as many pumping stations from the oil region to New York as there are miles divided by 30, and I think as many as divided by 25. If you do not know that, you are mistaken.

Q. Then you have not taken advantage of the topography of the country. When you get to within 150 miles of New York, over an elevation 15 feet above tide, you certainly want no pump to pump that oil down hill?—A. I am not a practical oil man. Perhaps our practical men will know more about it than I do; I simply know that the difference in transportation of oil to the sea-board over the Alleghany Mountains, and the transportation of it from the Ohio fields, known as the Lima district, to Chicago, are two very different things. Another thing I should say is that the line being laid to Chicago is an 8-inch line, and the quantity of oil that is likely to go through it will probably not exceed five or six thousand barrels a day, and that quantity of oil can be transported through the walls of a large pipe with infinitely less friction than 25,000 barrels through a 6-inch pipe, the 8-inch pipe being more than twice as large as the 6-inch.

Q. I will ask you again whether the cost of moving oil from the wells to New York in your pipe exceeds 10 cents a barrel?—A. I can not answer the question, for I do not know. I have never seen any figures bearing upon it at all.

Q. Though I suppose it is very evident that if you owned the pipe and maintained a charge of 65 cents, when it only cost you 10, and when all other people who go by the railroad have to pay the 65 cents, including your local charge, that you have an advantage over everybody else by reason of the ownership over that pipe?—A. You speak of the 20-cent charge, and add it to the 40-cent charge, and treat it as if all the oil that went through the local pipe was subjected to the 65-cent charge. You know that a great deal of the oil don't go through the trunk line pipe, do you not?

Q. I am speaking of the oil that goes by railroad to New York, to be refined in competition with your oil?—A. You refer to the 65 cents as being a source of revenue on the investment, do you not?

Q. No. I am speaking of it as a charge against the business of the man who has to pay it. A rival of yours in New York, who owns no oil and no pipes, and owns no railroad, has to pay 65 cents a barrel to get a barrel of crude oil from the oil wells in Pennsylvania to the refinery in New York.—A. Our refinery has to pay just the same price.

Q. You pay it to a pipe line of which you are the owner?—A. Suppose we owned the railroad? Wouldn't we have a right to make some money for our stockholders out of the railroad?

Q. Certainly.—A. What are we drifting to?

Q. I am not speaking of that; I want to get at the fact.—A. I say they are not our competitors, because whatever may be the earnings of that pipe line, it goes to that pipe-line interest, and we have no monopoly on pipe lines. If it is such a profitable business as seems to be made out here, why don't other people go into the business?

Mr. SMITH. You are tickling yourselves now.

The WITNESS. We have done that with our own money.

Q. You have made a contract with the Pennsylvania Road under which they maintain the same charge upon their railroad that you maintain upon your pipe, do they not?—A. Yes.

Q. And that is 45 cents to New York?—A. Forty-five cents to New York and 40 cents to Philadelphia. The 20 cents has nothing to do with the trunk-line charge.

Q. You get that 20 cents on your local pipe line alone?—A. Yes, sir; but don't we do anything for it?

Q. Yes.—A. A man goes and strikes a well out in the woods in a cherry grove, 8 or 10 miles out. You take the history of that, and you will see that the cost to take care of that well in the cherry grove is more than the revenue.

Q. What I want to get at is this, whether you are not very safe in agreeing now to pay the same rates on the railroad that everybody else pays, when that rate is so high that by carrying it at the same rate upon your pipe line you can make four or five times or six times the amount of its cost?—A. We were always willing to pay the same rate by railroad when the railroads carried the same kind of oil that was produced, as our competitors were; and we never sought to get any discrimination, notwithstanding this newspaper talk and flurry. We did as everybody else did; when it was go-as-you-please, we sought to get the lowest rates we could. It made no difference what somebody else got, we tried to get the lowest rate we could, and sometimes that was higher than somebody else was paying.

Q. Mr. Cassatt testified to the exact rate you paid up to 1879, from which, according to his testimony, you were getting a preferential rate?—A. In what way?

Q. By a commission thrown off and by this rebate?—A. A commission thrown off for services rendered that no other gentleman in this room would have rendered for the price.

Q. I want to get the facts from you, and we will discuss it afterwards.—A. I don't object to stating any fact, only I say it is not a fair treatment of the case to call it a preferential rate. If I give a dollar for a dollar's worth of flour, that is not a preferential rate. I say it is not a fair construction of words to call a commission paid for valuable services rendered preferential rates, and you know it is not.

Q. Oh yes, I do. I don't agree with you. I think it is a preferential rate.

Mr. SMITH. I would like to know what those services are.

Mr. GOWEN. He has explained them to have been——

The WITNESS. I will tell you. It meant running refineries in localities at losses of thousands of dollars every month. We had to produce the oil at that point to give the railroad its oil. It meant running the refineries for weeks and months at periods of time when we did not get back a new dollar for an old one, because the markets were against us. If we had done as others did, to market the refined and make a profit out of it, we would have been in a different condition. Now, I say, comprehending the full import of what is involved in the language, the losses we sustained in order to equalize this business month by month brought losses upon us of hundreds of thousands of dollars. Now, when that is all set to one side, and this commission of 10 per cent. given for a specific service rendered is called a preferential rate, I say it is not a fair way of treating the question.

By Mr. SMITH:

Q. Were you compelled to go to work and produce so much oil, crude or refined, to ship it over the roads?—A. If somebody else had by virtue of other shipments given some one road a larger percentage of the business than it was entitled to, our obligation to the road to make up any deficit or any shortage was that we should give them from our own shipments sufficient to make up the deficit. It was only out of our own shipments that we undertook to do this thing.

Q. Suppose you were in arrearages with the Baltimore and Ohio. Could you not have gone to work that coming month and shipped only so much oil as would equalize the Baltimore and Ohio with what was short the month prior and then ship no more? Were you compelled to ship a certain amount per month?—A. We were never in arrearages with the Baltimore and Ohio.

Q. Or any other road?—A. The roads got in arrearages sometimes by unexpected shipments on the part of other shippers. Say that business was equal to 50 per cent. done by outside manufacturers and 50 per cent. by us. We had no means of knowing, say in August, what those men were going to ship. The market might be such that they would ship very much more than in the month of July. The most of them were compelled by virtue of their location to ship it over the Pennsylvania road. We were going along making a division of the oil as would give to the Pennsylvania road what we supposed would equalize it. We didn't know what the facts were until the end of that month. When that time came it was found that through this spurting up the Pennsylvania road had gotten 200 or 300 barrels more than its percentage. We were then compelled during the following month to manufacture and ship by the Erie, the New York Central, or both of them, a much larger percentage than we wanted to ship that month, because it was incumbent upon us to do it.

Q. Were you obliged to do that when other refineries were in the same business?—A. Yes, sir.

Q. It seems a very queer business transaction that business men should go to work to do things that others were doing?—A. It may seem queer to you, but it was a fact. Now here we will say were one hundred refineries which shipped over the same line of road to the railroad. They agree that they will take out of those one hundred refineries, one 9,000, another 11,000, and another 26,000, and so on. We undertake, out of our own shipments, to make that division of the business, and if the business ran below in some one month it was our obligation in the following month as near as possible to correct that, and give to the road that had failed to receive the previous month its amount an excess during the following month which would make up for the next month an average percentage.

Q. That was all done to make an equalization of rates in the different lines?—A. Now let me explain why we were interested in having those rates maintained. We all know that when a railroad company does not get what it wants in any traffic they immediately get to cutting rates to increase their shipments. We did not want the rates cut. We were interested in uniform rates to every road and to every shipper, and when we knew what we were to pay as manufacturers we felt satisfied that we could continue our business with a great measure of certainty as to loss and profit.

By Mr. GOWEN:

Q. I think I asked you when you were on the stand before about this subject of rates. I will ask you on this point whether you remember

the lowest rate ever charged on crude oil by any of the trunk lines to tide-water at the time there was a struggle between your company and the association and the Tide-water Pipe Line. How low did these rates fall?—A. There was not a struggle between our company and the Tide-water Pipe Line at all. The struggle was wholly between the railroads.

Q. I am only speaking of that as to the time.—A. I hope you will allow me, in justice to my company, to state what the facts were.

Q. You can state what you please after you answer my question.—

A. I can not remember how low they were.

Q. How low do you remember? Didn't it get to 15 cents at one time?—A. Possibly. I should have said 20 or 25 cents. Possibly it was as low as that.

Q. Now you can make your statement.—A. I want to say this: The Tide-water Pipe Line was the first line built to the sea-board, and it had a connection with the Reading Railroad, by which the railroad and the line jointly undertook to do business. We had several discussions pipe of the future with the representatives of the Tide-water Pipe Line, and would have had no difficulty whatever in making satisfactory arrangements with them, which would have removed all unnecessary competition, but the New York Central, the Erie road, and the Pennsylvania Central said to us: "Gentlemen, we don't want you to make any alliance of any formal nature with the Tide-water Pipe Line." They added: "We will protect you in the matter of rates as against any competition furnished by the Reading and Tide-water Pipe Line." I replied to that: "I have never seen a contest begun of this kind but what there was an end to it. Now, we can make a satisfactory arrangement with the Tide-water Pipe Line and avoid all this contest. It is not necessary for you to throw away any money. We are not seekers after low rates. We have done our business by you, and are willing to continue, but only upon one single, solitary condition—we would prefer not to have this contest; it is better that the Tide-water and Reading Railroad should be recognized." The reply was, "We never will recognize them as carriers of oil."

Q. That was the reply of these three trunk lines?—A. Yes, sir; I said, "Gentlemen, the other thing is of a great deal more importance than the rates. The rates are short-lived affairs." Now, I will make this explanation in justice to ourselves, in reply to the remark you made of our contest with the Tide-water Pipe Line. We had no contest. It was simply a contest of the transportation lines, and we, like fools, allowed ourselves, instead of making arrangements with the Tide-water Line, to say to the trunk lines, "Very well, then, we will stick to you and leave you to fight out this battle." They fought it for a year or two, and you know how it ended.

Q. Three or four years, was it not?—A. I thought it was two years.

Q. Then I understand you to say that all that struggle, and the low rate that the trunk line charged at the time the competition with the Tide-water and Reading came into existence, was brought about by the trunk lines themselves?—A. It was a struggle on the part of the trunk lines to hold the entire oil business, and they avowed it to me, not once, but many times, that it was their firm intention never to recognize the Tide-water to the sea-board.

Q. And during that struggle they actually carried it at 15 cents a barrel?—A. I should have said 20 or 25 cents. I knew it was a ridiculously low rate.

Q. That was for a barrel over a distance of about 500 miles?—A. I don't know.

Q. Seven barrels to a ton would be \$1.05 for transporting it 500 miles, which would be a little over 2 mills per ton a mile, would it not?—A. I don't know.

Q. I would like to get that on the minutes.—A. You can get at that.

Q. I want you to do it; I am not a witness.—A. I can not figure how much per ton per mile it would come to.

Q. Two mills a ton a mile for 500 miles would be \$1 a ton?—A. I am not able to demonstrate that proposition.

Q. You have some arithmetical knowledge?—A. I can not answer that question.

Q. Now, the seventh article upon this memorandum is Mr. Emery's list of squeezed-out refineries. Do you desire to say anything upon that subject?—A. I don't know anything about it.

Q. The eighth item is, from 1871 to 1875 refineries made no money and many failed, giving the reasons. Do you desire to say anything upon that subject?—A. I can only say in a general way that that was a period of time when the competition of the business was very severe, when the methods were very imperfect, when the business was largely overdone, and when I believe almost all our competitors were speculating a confounded sight more than manufacturers, and the natural result followed, which was a disaster to pretty much everybody.

Q. Now, under the head of reasons under the eighth head is, first, freights were excessive; it cost \$1.80 to get a barrel of oil to the seaboard. Now it costs 45 cents. Have you anything to say upon that subject?—A. I don't know the year specified in that paper. I know the rates specified at one time were \$1.50, and I think higher than that. I know the rates at one time to Cleveland were \$1.50 on crude oil, but only for a few weeks.

Q. The second reason is as to grade and decline in prices, etc. In 1872, \$3.96; in 1873, \$1.73; in 1874, \$1.18. Refined was, in 1871, 24; in 1872, 23; in 1873, 20; in 1874, 12 $\frac{28}{100}$ . Do you desire to say anything upon that subject?—A. No; I do not think I do.

Mr. DODD. Let Mr. Flagler refer to the table already in evidence which shows those facts.

Mr. GOWEN. It is already in evidence.

The WITNESS. I know simply this: That commencing with my connection with the oil business in 1867, the quality of all refined oils has been greatly improved, and the price to the consumer steadily decreased.

By Mr. SMITH. What caused the improvement?—A. The enterprise and the experience that follow any well-conducted business for a long period of years.

Q. Was there not something in chemical inventions in the treatment of oil?—A. I suppose there were a great many improvements in mechanical appliances, and in distilling and refining oil. If a man ran a wool mill for twenty-five years he would, at the end of that twenty-five years, know a great deal more about it than when he commenced.

Q. I want to get some knowledge on the point of refining oil, is the reason I ask you this question. Has not the chemists' work in the refining of oil and the treatment of the residuum of oil, etc., had a great deal to do with producing this effect—of cheapening the manufacture and cheapening oil?—A. I do not think that the results are to be attributed to the knowledge of the chemist as much as they are to the knowledge and experience of the practical men who are doing this thing. My knowledge in a general way is, that our laboratories, as a rule, are behind our practical men.

Q. Is it not a chemical science to take the crude material and refine it?—A. Perhaps I do not understand what is involved in the expression "chemical results."

Q. I mean chemically refining, or the treatment of any fluid or other matter. Even ores cover a large field, and certainly the treatment of oil from its crude to its refined state is a chemical process. You may call it a refining process, but you have to treat it some way to produce that effect. The running of high wines through shavings with a current of air passing up through it turns it into vinegar. That is a chemical process.—A. I should call that a mechanical process, but I am not much of a scholar.

Q. Neither am I, but I know that much. I would like to ask one question which the testimony brought out, which Mr. Flagler spoke about early in his statement. He said that the Pennsylvania Railroad divested itself of some manufacturing business. I should like to know what manufacturing business the railroad company was engaged in.

Mr. GOWEN. It was the Empire Transportation Company.

Mr. SMITH. Was the railroad company interested in manufacturing, or in refining oils or producing oils?

Mr. GOWEN. The Empire Transportation Company, which was the organization that owned the cars running on the Pennsylvania Railroad, was the company engaged in refining oil. They had several refineries.

The WITNESS. The Empire Transportation Company bore to the Pennsylvania Railroad the same relation that an express company would. If you and I have anything to express we need not apply to the railroad officers. We have to go the express company. Therefore, every shipper of oil over the Pennsylvania road had to settle and get the rates from the Empire Transportation Company, and that company was, as I have said, not only transporters, as if they had owned the road themselves, but they were also owners of a refinery in New York and one in Philadelphia, and it was that fact that created jealousy on our part and on the part of the other railroads.

Q. The reason I asked this question was to discover if that railroad company was not in the manufacturing business; it don't make any difference what, so long as it interfered with the business that you were engaged in.—A. It was, with this explanation, that the Empire Transportation Company was the only medium through which a barrel of oil could be shipped over the Pennsylvania Railroad.

Q. And that was closely connected with the Pennsylvania road.—A. I say it was the only medium. It bore the same relation to the oil business and the railroad that an express business does to a railroad with which it has a contract, and the Empire Transportation Company was a refiner of oil. I remember once the position taken by Mr. Vanderbilt about that in a conference with some of the representatives of the Pennsylvania road. He said that if they were going into the manufacture of oil they might as well go into the manufacture of flour, and hides, and everything, and so own the freight that was transported over the road. He objected to the Pennsylvania Railroad, through the medium of the Empire Transportation Company, being interested in the manufacture of oil.

Q. Were any of the officers of the Empire Transportation Company also officers of the railroad company?—A. I am unable to answer the question, but I presume not.

By Mr. BRECKINRIDGE :

Q. You allude to the competition of our manufacturers of coal oil in the markets of Europe and Asia and against the competition of Russian markets. I will be glad if you will state to the committee something about the nature of that competition, the kind of oil they produce, the degree and perfection to which it may be advanced in the business; in other words, the strength of the competition, what we have to fear from that quarter, and so on.—A. They have, in the first place, a crude oil over there which would seem almost inexhaustible in quantity, and the influence brought to bear by quite a celebrated firm of Swedes, the Nobel Bros., who have gone into the business very extensively and own very large refineries, pipe lines, tank steamers and cars on the Russian railroads, together with the fact that the Rothschilds have, within the past two years, become possessed of a very large interest in the Russian fields, have developed on their part an ability to manufacture an excellent quality of oil. In respect of quality it is the peer of the best we can make. American oil was driven out of Russia—the consumption of Russia, some years ago—five, six, or seven years ago. They have already practically taken away from us a large portion of the Mediterranean trade, or a great deal of it, that is, near to Constantinople. They have sent into England during the years 1887 and 1888 a very considerable quantity of refined oil in competition with our American oil. They are sending this oil now into the East, China and Japan, and are becoming very formidable competitors with America in supplying the world's wants.

Q. Where are their best wells located?—A. At Baku.

Q. I thought it was in the southeastern part of Russia?—A. It is. I have never looked on the map.

Mr. GOWEN. It is south of the Caucasian Range.

Q. Their principal wells are in the vicinity of Baku?—A. Yes, sir.

Q. You spoke of their having pipe-lines?—A. It is over here [indicating on map].

Q. Are Baku and the Black Sea connected by pipe lines?—A. They may be, but I think the principal pipe lines of Baku are on the shore.

Q. Baku is the seat of their refining industry?—A. Yes, sir; it is on the Black Sea, and the sea-port.

Q. Do they refine much oil at Batoum?—A. I do not think any oil is refined at Batoum.

Q. They refine oil principally at Baku, and ship it by rail for the western European markets at Batoum, and it is then distributed through the Mediterranean?—A. Yes, sir.

Q. How do they put up their oil for consumption; in barrels or packages?—A. I think it is carried largely over the railroad in tank cars and shipped, quite a considerable portion of it, by tank steamers, although there were shipments that were wholly by barrels in the beginning. Now they are running it by tank cars over the Caucasus, and I guess almost entirely by tank steamers to ports in Europe. Liverpool receives a good deal of it, and there is a sea-port town by the name of Fiume; I think it is in Hungary.

Q. Have we any formidable competitions either present or prospective except this in Russia?—A. No, sir; petroleum is found all over the world. Russia is the most formidable competitor.

Q. Which is the one that is cited.—A. Yes, sir.

Q. In what condition or form do you ship to the European markets?—A. Very largely in barrels, but the business of shipping in bulk is increasing now all the while. Some of these steamers that have been run-

ning in this Russian trade are now coming to America. Occasionally we get one here.

Q. You mean tank steamers?—A. Yes, sir.

Q. Can a tank steamer handle anything except coal oil?—A. They may be able to bring back ores, or something of that kind if they have them to bring; but I imagine they don't do that.

Q. They are so constructed that they can use the same space for other things than oil?—A. I do not think they could get them into the tanks. Tank steamers don't carry anything but oil. I think the most they could have in these tanks would be man-hole entrances.

Q. I have heard it stated that tin cans were very largely used in the coal-oil trade in supplying the European markets.—A. They are.

Q. Do you think that will continue to be the case?—A. In certain sections of the country, according to the climate. Oil that goes across the equator I think must necessarily be taken in tin. They can not be transported in wood at all. I should think the carrying of oil by water to the East Indies in bulk and then put into tin cans there would be accompanied with a great deal of risk. I know the Russians are packing in tin cans to these countries, and we and everybody who send to those countries pack in tins. They can not be transported in wood.

Q. You get a drawback on the tin, do you not?—A. We get a drawback of 90 per cent., provided everything we use is imported, solder and everything. To do that we have to use Canadian lumber for the boxes, imported nails to nail them with, and imported solder and imported tin. If we do that we get 90 per cent. of the duty paid, but it is all upon the foreign importations, and everything that enters into the tin and case must be of foreign material.

By the CHAIRMAN:

Q. I understand you do not get a rebate when the can is of foreign tin and the case is domestic wood?—A. Or if the nail is an American nail, we do not.

Q. The whole package has to be foreign?—A. Everything has to be foreign to get the duty paid.

Mr. ARCHBOLD. That has been changed.

The WITNESS. I am speaking of the law as it is. I am speaking now of the whole thing, the can and package. Mr. Rogers told me a few days ago that they had to use a foreign nail in nailing the cases. The can is necessarily accompanied with the wooden case, but you get a drawback then on the can alone.

By Mr. BRECKINRIDGE:

Q. What is the freight on bulk oil from New York to Liverpool, say, per gallon.

Mr. ARCHBOLD. About 2s. 6d. for a barrel of 50 gallons; 62 cents a barrel of 50 gallons.

Mr. BRECKINRIDGE. Do you know what the freight is from Batoum to Liverpool.

Mr. ARCHBOLD. Something less.

Mr. BRECKINRIDGE. From Batoum?

Mr. ARCHBOLD. From Batoum.

Mr. BRECKINRIDGE. Do you know how much less?

Mr. ARCHBOLD. I think about 2s. now from Batoum.

Mr. SMITH. Is that by water.

Mr. ARCHBOLD. Yes.

Mr. BRECKINRIDGE. You don't know what the rate is from Baku, do you?

Mr. ARCHBOLD. By railroad from Baku?

Mr. BRECKINRIDGE. Yes, sir.

Mr. ARCHBOLD. The rate now, I think, is 65 or 70 cents a barrel.

Mr. BRECKINRIDGE. Mr. Flagler, do you consider that reliable evidence?

Mr. FLAGLER. Yes, sir.

By Mr. GOWEN:

Q. You don't mean the rate from Baku to Liverpool?—A. No, sir; from Batoun. The distance is about 600 miles from the Caspian Sea.

By Mr. BRECKINRIDGE:

Q. What are the comparative wages paid at Baku and this country?—

A. I have no knowledge on that subject at all. I should imagine, however, about the same, from the fact—

Q. Do you know the rates of wages paid in similar lines of work at Baku and in this country?—A. I was going to say, it would not vary very much, because these men engaged in those Russian refineries have necessarily been imported, many of them, from America, and have gone to the various points on the continent.

Q. You allude now to the skilled labor?—A. Yes, sir. Where you are using, for instance, pipe lines, it is all skilled labor. It requires an engineer to run those pumps. In a refinery it is pretty much skilled labor; all the goods are handled in bulk, so that especially where goods are shipped in bulk there is little of that coarse labor. Of course, such men who fire their boilers are not skilled, but the introduction of that change from barrel to bulk shipments would necessarily do away with quite a percentage of what we would call unskilled labor.

Q. So, if they employed even unskilled labor they would get it more cheaply, but it would not be as efficient as the skilled labor using the mechanical processes?—A. For the work that unskilled labor would be adapted to, I presume that it would be just as well as the unskilled labor. In other words, that a competent, intelligent man, who was an engineer, probably would not do more out in the hot, broiling sun than one of these fellows who gets but 3 or 4 copeks a day.

Q. The impression I gather from what you say is, that the refining of coal oil and the handling of coal oil has advanced to a point that in large measure dispenses with unskilled labor, it being done now principally by machinery.—A. I could answer that by saying that the developments in the manufacture of petroleum are such that it has increased the percentage of skilled labor.

Q. That is the point.—A. To that extent it has decreased the percentage of unskilled labor.

Q. And you do not consider that it would be profitable for the European competitor to adhere to the old methods of refining petroleum such as might be used with unskilled labor?—A. I have no doubt but what their methods are quite up to, or nearly up to, ours.

Q. That is not the question. You have just stated that they have adopted our methods; but there formerly existed cruder methods, did there not?—A. I can not say about that. I think so far as the business of distilling and refining, while the methods have improved somewhat, it is simply an improvement upon the same methods.

Q. I refer more particularly to the method of handling?—A. The difference in change from the barrel shipment to the bulk shipment must necessarily have done away with a great deal of unskilled labor. Now will you kindly repeat your question.

Q. The point that I was coming to in another form is just this, that the dispensing with that cheap and unskilled labor and the handling of the product in the present way with the skilled and expensive labor is the cheaper way of handling the product, is it not?—A. I have no doubt it is.

Q. You see no reason why it should not be cheaper, do you?—A. No; it is simply the adoption of mechanical appliances which take the place of the old unskilled labor.

Q. It is very frequently denied, which is the reason I ask the question in order to get a business man's impression about it. You would be perhaps surprised to hear it denied, not by business men, but by some people.

Mr. CHOATE. Have you stated anything about the amount of Russian oil.

Mr. BRECKINRIDGE. I did not ask him that question. I believe Mr. Flagler covered that point, however, by stating it was very extensive.

The WITNESS. Yes, sir; amounting to, I should say, more than a million of barrels in 1887, perhaps nearly two millions.

Q. Is the Russian field considered a rich field?—A. It has a rich yield; enormous. One of the wells produces 35,000 or 40,000 barrels a day, just one well.

Q. You do not expect to see Russian oil run out; that is the idea?—A. No; I do not think it will.

By Mr. HOPKINS:

Q. When you ship oil from New York you are obliged to ship your oil by tramp steamer as you call it; you can not ship it by the regular lines?—A. It goes by tramp steamers. There is no oil shipped by regular passenger lines.

Q. Have you any objection to stating whether you gentlemen of the so-called Standard Oil Trust have placed a great amount of money in the building of tank-cars and facilities for handling your oil, by which you have cheapened your price to the public?—A. We have spent a great amount of money.

Q. You keep a large number of chemists in your employ, do you not?—A. Yes, sir.

Q. And you have reduced the price of oil by the amount of money you have placed into the building of tank cars and your facilities for transportation, and your facilities for handling the oil, and by your laboratories, etc. Do you think by those means you have cheapened the price of oil to the consumers?—A. Yes, sir; a good deal.

Q. Have you a table with you showing the prices to which it has been reduced within the last ten years?

Mr. GOWEN. That has been introduced in evidence.

The WITNESS. In the matter of tank cars, Mr. Hopkins, there are in use in the United States 6,132, and of that number we own 3,833.

Q. What is the average cost of these cars?—A. These latter years I should say \$700 a car was a fair price. We paid last winter for some we bought a little more than that; but \$700 would be a fair price. There are 6,132 tank cars known to the manager of our line. Of that number 3,833 are owned by us, leaving 2,299 owned by the various outside refineries.

Q. Have you any objection to stating—I do not wish to pry into your business—what amount of money you gentlemen expended in your terminal facilities by which you reduced the price of oil?—A. I have never thought of it myself; millions of dollars—a good many millions.

Q. I mean by your storage tanks, etc., by which you are enabled to handle this oil in large quantities?—A. A good many millions of dollars.

Q. What was the cause of the trouble in 1875 in which so many of the refineries failed?—A. I think the great number of failures occurred two or three years earlier than that, along about 1872 and 1873, prior to 1875. It was in my judgment due to the fact that some of us went into the business with insufficient capital, without experience, and some of us paid more attention to speculating on crude oil or the price of refined than we did to manufacturing, and some of us had too much competition; and where all those elements were at work there must necessarily be violent fluctuations in prices, and the man who was caught on the wrong side of the market lost. I confess I do not know just what was the cause. I had all I could do to attend to all of my business.

Q. I suppose you gentlemen formed this so-called trust for the purpose of protecting yourselves in order to make the business profitable?—A. Yes, sir.

The CHAIRMAN. Mr. Rockafeller is not here.

Mr. CHOATE. Mr. Archbold is here in his place.

The CHAIRMAN. I want to abbreviate this examination.

Mr. DODD. I do not care to have him go over the last subject, but Mr. Flagler could not answer in relation to the dismantled refineries, and I would like Mr. Archbold to give the dates.

#### JOHN D. ARCHBOLD—Recalled.

By Mr. GOWEN:

Q. Mr. Archbold, your friends desire you to give the dates at which the various refineries on this list you have in your hands, and which has been offered in evidence, went out of business.

NOTE.—At the beginning of Mr. Archbold's examination he was shown a copy of the list introduced in evidence in the testimony of Mr. Emery, a witness examined in this investigation.

A. My recollection is, that the works named here as having gone out of business were of a very small and primitive character, mostly built in the very early histories of the oil business, and found themselves unable to compete as the methods of the business were improved upon, and as the character of the construction for the doing of the business was improved upon, and that they retired from the business at a period from 1867 to 1875.

By the CHAIRMAN:

Q. Is that as specific as you can give these dates?—A. It is. Many of them appearing there antedate my connection with the business, which began in 1867.

Q. In regard to the dates, can you tell us when the competition from the Russian oil fields was first encountered by your combination here?—

A. We perhaps felt the Russian competition outside of the Russian territory in a marked degree, say five or six years ago, for the first time. Prior to that they had, however, supplanted us in their own territory in Russia.

Q. But you met it first in the general European market, beginning five or six years ago?—A. Yes, sir; and it has increased steadily since that time.

Q. Can you state how much it was the first year; how much the

product of the Russian oil wells was that came into competition in the general European markets, say, five or six years ago outside of Russia?—A. I should think it did not aggregate over 100,000 barrels of oil.

Q. How much last year?—A. About 1,500,000 barrels of refined oil. It is the output outside of the Russian oil. We are excluded from Russia not only by their own product, but by a tariff.

By Mr. GOWEN:

Q. By a local law?—A. Yes, sir.

By the CHAIRMAN:

Q. There is a tariff law or local law which prevents your competing in the territory of the Russian Empire with their own products?—A. Yes, sir; about 7 cents a gallon.

(Mr. Choate handed to the chairman a question in writing which he desired to be asked of the witness.)

The CHAIRMAN. Mr. Choate, it was the judgment of the committee in examining the formal letter sent here that inquiries of the character suggested by the one you have now submitted should not be made, and from that conclusion, of course, there can be no deviation at this time.

Mr. CHOATE. Will the committee put it on record, that we asked to have that question put?

The CHAIRMAN. I will have it put on the record, and also that the committee decided not to make the inquiry.

The following is the question requested by Mr. Choate to be put to the witness, and, acting under the instructions and conclusions reached by the committee, the chairman declined to put it:

Q. Mr. Archbold, will you explain in your own way how the operations of the combination that resulted in the Standard Oil Trust have affected the production of oil, the price of refined oil, and the extension of the market for oil?

By the CHAIRMAN:

Q. Do you know anything of the amount of the raw or crude oil that is produced in Russia, or the limit of that quantity?—A. There has been no limit to it; thus far it has been unlimited, and that from a very small area of territory. The consular reports are very full on the subject, and have special reference to the development of the Russian industry.

Q. What is the character of the oil as compared with the oil produced in America?—A. The crude oil is very much heavier, and has much more earthy matter.

Q. That is, it is like the oil used in this country for other than illuminating purposes?—A. It has not the peculiar feature that the Lima field has.

Q. Is it more like the heavy oil of the Pennsylvania region and Virginia region?—A. Yes, sir; it yields a product of 30 per cent. of very acceptable illuminating oil. A recent consular letter estimates the output from Russia this year as being probably two and a half millions of barrels.

By Mr. SMITH:

Q. It is a better quality than the Lima oil fields?—A. Yes, sir; it yields a better refined oil than has yet been produced from the Lima fields—Lima crude.

By the CHAIRMAN:

Q. How is the oil from the Russian field taken to the general European markets?—A. It is refined at the point of production, and there trans-

ported over the Caucasus Railroad to Batoum, from which it is exported by way of the Black Sea. There is some also sent out in the other direction, by the Volga, distributed in the north.

Q. And the rail transportation of oil in the European markets is from the sea-ports inland, mainly?—A. Yes, sir.

Q. In that respect you have the same facilities?—A. Yes, sir. The Russian industry has recently centralized largely in very strong hands, with increased strength in the markets.

Mr. SMITH. Are there not some Americans engaged in it?

Mr. ARCHBOLD. No, sir; the Rothschilds have taken hold of it and are investing largely in it.

By Mr. GOWEN:

Q. The Russian oil field has been known very much longer than the American oil fields?—A. I think so.

Q. Hundreds of years, thousands. State whether you know of any negotiations on the part of your Standard Oil Trust—any of the gentlemen associated with it—for the acquisition of the Russian fields or any of them?—A. No, sir; we have never had any serious negotiations.

Q. "Serious." Have you had any?—A. No, sir; we have never had any.

Q. Do you say not?—A. I say not.

Mr. CHOATE. We have witnesses here to-day on the special point of Mr. Emery's transactions.

### TESTIMONY OF W. J. ALEXANDER.

W. J. ALEXANDER, sworn and examined.

By Mr. GOWEN:

Q. (Exhibiting to witness a statement in writing.) You make that statement as your testimony?—A. Yes, sir.

Q. It is correct, is it?—A. Yes, sir.

Mr. GOWEN. I have no objection to having it introduced in evidence.

The following is the statement:

I am the general superintendent United Pipe Lines Division, National Transit Company, and have charge of oil from time it leaves wells until it is received at the refineries. The quality of oil produced in different portions of the oil region varies in quality and in value. The ordinary oil of commerce represented by pipe-line certificates is oil produced principally in the Bradford district, including the Allegheny oil district of New York. This is called general stock oil. There is about 20,000,000 barrels of it in stock. This stock is the accumulation of ten years. A better class of oil is produced in other districts. It is kept separate from general stock oil, and commands a higher price. It is known as premium oil, and is not delivered through the main trunk line, and never has been, with a single exception hereinafter mentioned. The lines deliver about 34,000 barrels of general stock oil per day, and are now receiving into the general stock from the wells about 11,000 barrels per day. The fresh oil is not kept separate, but goes into the general stock. It would be impossible to deliver to any producer the same oil he puts into the line or oil of exactly the same quality.

The merchantable oil of commerce is the mixture of all oils received, more or less affected by the time it is held in stock and free from sediment and Bs. This sediment and Bs. accumulates at the bottom of the tanks. A swing-pipe is kept in the tank so arranged as to prevent sediment and Bs. from passing from the tank. Records are kept of the inches of sediment and the location of the swing-pipe, and tests are made every hour of oil passing through the pipes for delivery. In this way it is impossible for unmerchantable oil to pass through the line. At delivery points for the railroad the oil is received into receiving tanks. There are three of these tanks at Milton. Some unmerchantable oil accumulates from standing in the bottom of these tanks, but an in-

specification is made once in every month, and a record is kept of the inches of sediment and the location of the swing-pipe. No oil passed into the line to Milton except merchantable oil, and all oil received at Milton was of the same quality as that which passed through to other refineries.

Q. Mr. Dodd desires you to give testimony on the subject of the methods by which oil is transported through the lines for the purpose of showing, as he says, the impossibility of giving different qualities of oil to the refineries. State anything on that subject you desire to.—

A. The producer puts up wooden tanks. (To Mr. Gowen.) Tell me first what you want.

Q. Just describe the operation of delivering oil.

The CHAIRMAN. Just state the method of doing business in this pipe.

Mr. CHOATE. Bearing on the question whether it is practicable to deliver different kinds of oil to consumers.

The WITNESS. We connect the tanks at the wells, which are generally of wood, and from that the oil goes through a system of pipes into our tanks to stations in the interior, and from that we pump them into tanks at terminal points, or initial stations of the trunk line. The oil that goes through the pipe is mixed generally.

By the CHAIRMAN:

Q. Do you mean generally or usually, or is it all mixed together?—A. It is usually mixed.

Q. Then there are times when you keep the product of one well separate from another well.—A. No; we keep certain kinds of oil separate.

Q. Explain how that is done.—A. We have what is known as the Bradford field, the upper district, Bradford oil, and Alleghany oil, the latter of which is produced in New York State. Those two oils we keep entirely separate. We also receive and have a line for the premium oil, which is produced in the lower country or middle field.

By Mr. GOWEN:

Q. This premium oil is a better oil than the Alleghany or Bradford oil?—A. Yes, sir.

Q. It commands a higher price?—A. Yes, sir.

Q. Not put into the same tanks?—A. No, sir.

Q. Goes through the same line of pipe to?—A. We have put some of it through one of our trunk lines.

Q. When you put the premium oil into the trunk line that premium oil moves on in its regular position and can be delivered as good oil at the terminus of the line.—A. Yes, sir; after the oil previously in the pipe has been pushed forward.

Q. Explain when that was done, and how it was done.—A. The only time we put through the premium oil separate through our pipe, the sea-board line was commenced July 11, 1887, and ended December 31, 1887, but before receiving this oil we had prepared at our initial stations at Colgrove a series of tanks. That is, we had to clean out the Bradford, or what is known as the general stock oil. We then commenced pumping this oil east, and displaced the oil in the pipe and the oil in tanks along the trunk lines until it reached its destination at Philadelphia and Baltimore, and I might say Milton. By doing this we lost—or I might say next, that of our general stock oil—fully 10,000 barrels when we first pumped the premium oil into the line, and upon cleaning up premium oil on the last of December we lost about the same amount, an aggregate of about 20,000 barrels of the premium oil we pumped during the time above specified. It mixed with the Bradford oil. That is, it lost its identity.

Q. How many pumping stations are there between Colgrove and Milton?—A. Four.

Q. How many tanks at each pumping station?—A. Two tanks.

Q. What do they hold, 30,000 barrels apiece?—A. About 35,000.

Q. What is the distance from Colgrove to Milton along the line of the pipe?—A. I think about 85 miles.

Q. Isn't it more than that?—A. It would be about 107 miles. I only counted three stations, instead of four.

Q. How far is it from Milton to New York along your pipe—your New York branch—how far is it?—A. The line from Milton don't run to New York.

Q. Well, to Philadelphia; how far is it from Milton along the line of the pipe?—A. About 160 miles.

Q. How many pumping stations in that?—A. There are three pumping stations.

Q. How many storage tanks are there at Milton?—A. Three.

Q. Thirty-five thousand barrels apiece?—A. Yes, sir.

Q. After a tank has been in use for some time in the oil region it accumulates in the bottom of it a large amount of residuum, does it not?—A. A certain amount of what we call sediment.

Q. That sometimes gets to be 4 or 5 feet deep, does it not?—A. No, sir.

Q. How deep?—A. Probably not to exceed 3 or 4 inches. That is of the worthless oil, understand. It settles out in the bottom.

Q. I don't mean the absolutely worthless. That which is 3 or 4 feet at the bottom is less valuable than the other?—A. Yes, sir.

Q. Have you an arrangement when you pump the oil out of the tank by which the pipe through which you pump does not reach down into the bottom of that?—A. Yes, sir.

Q. So as only to take out the good oil?—A. Yes, sir.

Q. After a time you have to get rid of the accumulation of that bad oil in the tank. What do you do with it?—A. We put it in tanks, especially that which is 4 or 5 feet. We pump out the good oil and clean out these other tanks whenever necessary.

Q. Those are tanks on a lower level; you let it run into them?—A. Pump it in.

Q. Then what do you do with it?—A. Let it stand.

Q. Do you put some of it into and mix it with the better oil and get it off to market eventually?—A. We let it stand, and the temperature during the warm weather will settle it. It is really the good oil that settles.

Q. After that has settled you draw off the upper part of that and send it on in the pipe?—A. Where it is heated by the natural temperature.

Q. At Milton, these tanks that received the oil accumulate a deposit also?—A. Yes, sir.

Q. How many years has that pumping station at Milton been in operation?—A. My recollection is about seven years. I think about seven years.

Q. And is that accumulation of residuum or Bs. in the bottom of the tank at Milton treated in the same way as the other?—A. No, sir.

Q. What do you do with that?—A. We never disturb the bottom of the tank.

Q. You never take it out in Milton?—A. No, sir.

Q. That has never been taken out in seven years? There must be a great deal, then, in the Milton tanks?—A. About 5,000 barrels. Allow me to say of that 5,000 barrels there is 85 per cent. of good oil.

Q. If it could be treated properly under proper temperature?—A. Yes, sir.

Q. If it was taken as it is now would it be commercially good?—A. No, sir.

Q. If one kind of oil is put into the pipe and run off, and a few hours afterwards another kind of oil is put into the pipe, each class of oil retains its relative position towards the other and moves without mixing?—A. Not in so short a space of time.

Q. Suppose you were running out of one tank for several hours one kind of oil, and immediately you run another kind of oil for several hours, those two different kinds of oil would maintain their relative position towards each other in the tank no matter in what position they were.

Mr. CROUSE. You mean in the pipe?

Mr. GOWEN. Yes, sir; I mean in the pipe.

The WITNESS. Running the oil as you mention the oil would mix.

Q. It would not mix in the pipe?—A. We could not keep it separate, running a few hours of one kind and a few hours of another kind.

Q. If you ran for a few hours you would get a great many thousand gallons in the pipe?—A. We could not distinguish it at the point receiving the oil, the small amount.

Q. Perhaps in not so small amounts, but the oil that was behind in the process of moving up would not mix up with the oil in front?—A. It would to a large extent.

Q. Why?—A. As I said before, during the time in pumping this premium oil and its displacement by the stock oil we lost the identity of about 20,000 barrels of premium oil. That is due to mixture in the pipe and in the tank.

Q. In both?—A. Yes, sir.

### TESTIMONY OF W. H. JONES.

W. H. JONES, sworn and examined.

By Mr. GOWEN:

Q. (Showing witness a paper.) Have you looked at that, Mr. Jones?—A. Yes, sir.

By the CHAIRMAN:

Q. Is it correct?—A. Yes, sir.

Was in the employ of the National Transit Company at Milton during all the time that oil was shipped to Emery from May 18, 1885, to November 7, 1887. Attended to the delivery of the oil. All oil received there was merchantable crude petroleum of good quality, the same as that which passed through the line to other refineries, and was received in three tanks numbered 1649, 1650, and 1794. Inspections of the tanks were made every month and reports made to the New York office. Record was kept of every delivery. There was no difference in the quality of the oil in these different tanks. The oil was being constantly shipped to different refineries. During the period referred to the sediment referred to in No. 1650 varied from 33 to 45 inches. The swing-pipe was located 72 inches from the bottom and was never changed. No. 1649, sediment from 26½ to 48 inches. Swing-pipe 120. No. 1794, sediment 12 inches. Swing-pipe 48.

By Mr. GOWEN:

Q. What is that paper [showing witness another paper]?—A. A statement showing the dates, number of cars, amount of each car, the amount of each shipment in the tank it was loaded from, and the amount of merchantable oil in the bottom of that tank, and the height of the pipe in the bottom of the tank.

Q. Of oil shipped to Logan and Emery?—A. Yes, sir.

Q. Did you make that?—A. It is made up from our reports.

Q. Who made it?—A. It was made in the New York office. I compared it with the original of my reports.

Q. Is it a copy of the original, and is it accurate?—A. It is a copy of several reports; yes, sir.

Q. From what original paper was that constructed?—A. It is from reports telegraphed into the office each time that there was any shipment made.

Q. When you make a shipment of oil you telegraph to the main office the amount of the shipment, where it comes from, and the name of the consignee?—A. Yes, sir.

Q. And those, you say, are made up from those original telegraph reports?—A. Yes, sir.

Q. You report by telegraph?—A. Yes, sir. Some are reported by mail.

Q. Do you keep a record in your office of all shipments made?—A. Yes, sir.

Q. Daily?—A. Yes, sir.

Q. To whom and where from?—A. Yes, sir.

Q. Does that record show from which particular tank each shipment was made?—A. Yes, sir; always.

Q. Now, do you ever load cars at Milton direct from the pipe, without the oil having first gone into a tank?—A. No, sir; always from the tank.

Q. Have you not a loading rack at Milton?—A. Yes, sir; and we have no connection from the line to the loading rack, the main line. It must go into the tank first.

Q. When was your attention first called to the fact of complaint having been made already testified to by Mr. Emery that you had sent him bad oil?—A. His testimony before the committee?

Q. Yes, sir.—A. I do not think I ever saw his testimony until yesterday.

Q. When was that made up?—A. I don't know when it was made up. I never saw that until yesterday; that is, this paper.

Q. How long have you been at Milton?—A. Over six years.

Q. How long has that pumping station been open?—A. About seven years.

Q. The oil which the Pennsylvania Railroad Company carries in tank cars to tide-water is taken from Milton now, is it not?—A. That is the place where they get all their oil?—A. No, sir; I think not.

Q. Where else do they get it?—A. I don't know; I see other oil running, but I don't know where.

Q. Crude oil?—A. I don't know what it contains.

Q. Don't you load a large amount of crude oil on the cars of the Pennsylvania road at Milton?—A. Yes, sir.

Q. How much in a day, do you know?—A. As high as one hundred and twenty-one cars in one day.

Q. Is not there a schedule for an oil train leaving there daily?—A. No, sir.

Q. Does not an oil train leave there daily at a fixed time?—A. No, sir; the oil is taken away from there by a switching engine. The trains are made up at Sunbury.

Q. Do you know how many miles it is along the railroad from Milton to Philadelphia by the Pennsylvania line?—A. No, sir; I do not.

Q. It is 12 miles to Sunbury, is it not?—A. I think 14 miles.

Q. Twelve miles to Northumberland?—A. Yes, sir.

Q. Fifty-four to Harrisburg and 106 to Philadelphia?—A. I am not acquainted with the distances.

*Statement of oil loaded at Milton, Pa., for Logan, Emery & Weaver. Number of tank loaded from, amount of inches of unmerchantable oil in tank, and height of swing-pipe over bottom of tank.*

Date.		No. 1. Logan, Emery & Weaver.		No. 2. Other parties.		No. 3. Tank loaded from—	No. 4. BS and water on bottom.	No. 5. Location of swing- pipe from bottom.

## TESTIMONY OF HENRY L. DAVIS.

HENRY L. DAVIS, sworn and examined.

By Mr. GOWEN:

Q. Where do you live?—A. Philadelphia.

Q. What is your business?—A. Refiner.

Q. Of oil?—A. Of oil.

Q. With what firm are you connected?—A. The Atlantic Refining Company.

Q. It used to be Warden, Frew & Co.?—A. Yes, sir.

Q. It is one of the Standard Oil Trust?—A. It is one of the Standard Oil Trust.

Q. How long have you been engaged in that business?—A. Since 1873.

Q. Located in Philadelphia?—A. Located in Philadelphia.

Q. Were you a partner of the firm of Warden, Frew & Co. before the Standard Oil Company united with them?—A. No, sir.

Q. It was after that that you became interested?—A. Yes, sir; it was after that I became interested in refining personally.

Q. Mr. Dodd desires you to give all the information you have about the allegation or charge of Mr. Emery that bad or unmerchantable oil was furnished to his refinery. Now you are at liberty to say whatever you please upon that subject?—A. I can only say that there was a formal complaint made to me once that the oil was not satisfactory.

Q. By whom?—A. By Mr. Logan and Mr. Emery personally. I think in December, 1885.

Q. What else?—A. They claimed that the oil was a lower gravity than oil that was received from wells in the region, particularly from Mr. Emery's wells, and they thought there was Bs. in it. During a conversation with them I learned that the oil was run in the same gravity practically as that we were getting at Philadelphia. I am not sure, but I think 42 gravity.

Q. Did they say it was 42 gravity?—A. Yes, sir. I can not say they said 42, but they gave me the gravity at that time. It was running the same as ours.

Q. Was that good oil?—A. It was better than any we have had since, except premium oil.

Q. What percentage of refined oil do you get out of the oil at your refinery?—A. Seventy-five and 76, according to the grades of oil we make. It runs from 75 to 77 per cent. Of course it varies, according to the gravity of the crude.

Q. Don't you sometimes run it up to 80?—A. You might possibly, if you had a small percentage of benzine, low gravity, and did not make a large percentage of high-test oil.

Q. Where is Mr. Warden?—A. At home in Philadelphia.

Q. Mr. Dodd desires me to ask you whether premiums were ever paid on Bradford oils and on oils of other districts that were not mixed with the Bradford oils. What do you know on that subject, or desire to say?—A. I know of no premium paid on Bradford oils. There is a premium paid on lower district oil, Washington County oil, and we have received such at Philadelphia.

Q. What is that premium?—A. Eight cents a barrel.

Q. How do you receive that premium oil in Philadelphia, through the pipe?—A. Last summer we did through the pipe; now, by cars.

Q. Sent in tanks?—A. Yes, sir; by tank cars.

Q. Another question which Mr. Dodd desires you to answer is, What is the gravity of fresh Bradford crude oil?—A. I should think it would run about 41 or 42 gravity at the present.

Q. Does it ever average over 42?—A. It used to, but I don't think it would now.

Q. How high did it get?—A. We had it up as high as 45, my recollection is, at one time.

Q. The yield of refined oil from Bradford crude does not average over 76 per cent?—A. No; it does not, I think.

Q. When was it you used to get Bradford oil up as high as 45?—A. When the Bradford oil was first discovered; when the field was new.

Q. You have had nothing of that kind in the last few years?—A. No, sir; perhaps I am too high on that.

Q. There is not a difference of 20 cents per barrel in value between fresh and old Bradford crude?—A. It depends upon what you want to make out of it.

Q. How was it within the last three or four years?—A. Practically the same.

Q. Is there not a difference of 20 cents in the market value of crude oil of different qualities when the amount of refined oil that can be made out of it will vary it 10 per cent.?—A. There would not be now. Benzine is worth as much as refined oil.

Q. Would you think an oil of 42 gravity is worth the same as oil of 45 in the present state of the market for oil and benzine?—A. If you refer to the quality of the oil.

Q. I am speaking now of its market value to the refiner?—A. Practically the 42 ought to bring him as much money as the 45 of Bradford oil. That does not apply to Washington oil. There is a larger percentage of water white oil.

Q. Do all persons receiving oil by pipe line know that they must get the oil as it exists in the tanks, the larger part of it being old oil. Do you desire to say anything upon that subject?—A. When we have made any request for oil we have been met by that statement that it was impossible to give us anything else than the variety that the tanks of the Transit Company hold; that no small amount of premium or any other quality of oil than what we were getting could be passed through the pipe.

Q. When Logan, Emery & Weaver desired to use the better class of oils did they order it shipped by rail from the proper districts, paying the usual premium for it, and did not expect to receive it by pipe line?—A. They did. They came to me to know if we would ship them premium oil under the arrangement with the Transit Company; but they expected me to bring it by cars. I told them they were at liberty to bring it by cars themselves; that is just what we would have to do. They did so.

Q. Have you anything to do now with the refinery of Emery, Logan & Weaver that was bought out?—A. Yes, sir; the Logan, Emery & Weaver Refinery now belongs to our refinery company.

Q. How long have you been running it?—A. We have not been running it.

Q. It has been idle ever since you bought it?—A. We have not been running our own refinery since we bought it.

Q. You have not run that at all?—A. No, sir.

Q. Have you never run it since you bought it?—A. No, sir. We have never run our own refinery fully since we bought that.

The CHAIRMAN. Now there is some other testimony which you have suggested here, which you offer in the nature of records which will be marked.

Mr. DODD. It is the indictment, etc., in that Buffalo case.

The CHAIRMAN. That is admitted for the reason that upon the examination of Mr. Matthews here before the committee he agreed to furnish us with this copy of the record, and as he has not done so I will put it in the case to complete his testimony.

Mr. DODD. I also have a copy of the affidavit of the jurors in that case.

The CHAIRMAN. This portion we will have to dispose of in executive session. I understood that this affidavit was an affidavit forming a part of the record.

Court of Oyer and Terminer, Erie County. The people *against* Hiram B. Everest and Charles M. Everest. Bill of exceptions.

At a term of the Erie Court of Sessions, in February, 1886, an indictment was found by the grand jury for said county against these defendants, together with Henry H. Rogers, John D. Archbold, and Ambrose McGregor, as follows:

Court of Sessions of the County of Erie. The people of the State of New York *against* Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor.

The grand jury of the county of Erie, by this indictment, accuses Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor of the crime of conspiracy, committed as follows:

That heretofore, prior to the finding of this indictment, and on the 3d day of June, 1881, Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor, and certain other persons, corporations, and firms in confederation with and controlled by them, to the grand jury unknown, which said individuals, persons, firms, and corporations then controlled and had for many years controlled the business of producing, manufacturing, refining, and buying and selling petroleum and lubricating oils, and had a monopoly thereof, said petroleum and its products and lubricating oils then being, and having long been, in great demand throughout the United States and other countries, for the purpose of lubricating machinery, and for light and for other purposes, and being articles of trade and commerce, and said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and the said unknown persons, corporations, and firms, so owned and controlled by them, having for many years controlled, and then controlling the market of petroleum, and of refining and lubricating oils, and making and receiving theretofore, and then, large profits and sums of money therefrom, wrongfully and unlawfully intending and devising to prevent all other persons, firms, and corporations from producing, manufacturing, refining, or selling petroleum or any kind of lubricating oils made in whole or in any part therefrom, and to prevent competition in said business with themselves and corporations owned and controlled by them, and to control all petroleum and lubricating oils, and their production, manufacture, or sale as articles of trade and commerce, and to build up and maintain and continue a monopoly of said business whereby they might extort from all persons engaged in said business or using petroleum or any of its products twice and thrice its actual value, and thereby obtain and continue to receive, as they had long done, large sums of money and valuable considerations to the great injury of commerce and trade, and especially to destroy the Buffalo Lubricating Oil Company, Limited, a corporation duly organized and existing under the laws of the State of New York, and its business and property acquired or to be acquired to that end, and the property of all its shareholders and stockholders, because said individuals, firms, and corporations then and there well knew they would otherwise be unable longer to maintain said monopoly and obtain such unjust gains, they, the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor, and certain corporations and firms, and certain other persons to the grand jury unknown, then and there at the city of Rochester, in the county of Monroe and State of New York, on the 3d day of June, 1881, did wrongfully conspire with each other to obtain, maintain, and continue a monopoly of the business of producing, refining, manufacturing, buying, and selling petroleum or any burning or lubricating oils or substances made in whole or in part therefrom throughout the United States and other countries, as articles of trade and commerce, and in particular in the

county of Erie aforesaid, and to prevent any firm, corporation, or person not in league with or controlled by them from engaging in said business anywhere in the United States, and in particular in the county of Erie aforesaid, where said business could be carried on with profit by all persons, firms, or corporations; and to prevent Charles B. Matthews, J. Scott Wilson, Hiram Benedict, and other persons to the grand jury unknown, from organizing and conducting the Buffalo Lubricating Oil Company, Limited, as a domestic corporation, which said last-mentioned persons did, nevertheless, organize in Erie County aforesaid for the purpose of conducting said business therein, and to destroy the Buffalo Lubricating Oil Company, Limited, a domestic corporation so duly organized and existing at the city of Buffalo, county of Erie, and State of New York, on the said 3d day of June, 1881, which was then engaged in completing works in the said city of Buffalo, and thereby prevent it from carrying on its business of producing, manufacturing, refining, and selling petroleum and its products, and all kinds of lubricating oils at Buffalo, in Erie County aforesaid, and throughout the United States and all other countries; and to destroy the machinery, buildings, products, and property of the said Buffalo Lubricating Oil Company, Limited, which were then of great value, and then situate and being in the city of Buffalo aforesaid; and to destroy the credit of the Buffalo Lubricating Oil Company, Limited, and to destroy the stock, shares, interests, rights, and property of Charles B. Matthews, J. Scott Wilson, Hiram Benedict, and other parties to the grand jury unknown, then stockholders, officers, or parties interested in the said Buffalo Lubricating Oil Company, Limited, and all the property and rights of property of any stockholder or other person in the said Buffalo Lubricating Oil Company, Limited; and to destroy the property, rights, and franchises of the said Buffalo Lubricating Oil Company, Limited, and of the said Charles B. Matthews, J. Scott Wilson, Hiram Benedict, and other persons to the grand jury unknown, interested with them in said Buffalo Lubricating Oil Company, Limited, to the end that they might prevent competition to themselves in said business of producing, manufacturing, refining, and selling petroleum and all kinds of lubricating oils, and especially to the end that they might prevent any other person, corporation or firm from competing with the Standard Oil Company, a corporation organized and existing in the State of Ohio, and the Acme Oil Company, a corporation then organized and existing in the State of New York, and the Vacuum Oil Company, a corporation then organized and existing in the State of New York, which said last three corporations were owned, managed, officered by and controlled, and had been for many years prior to the said 3d day of June, 1881, by the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and the said firms and corporations so controlled by them as aforesaid, and also that they might thereby absolutely control throughout the United States and the entire world the said business of producing, manufacturing, refining, and selling petroleum and all kinds of lubricating oils, and to prevent the said Buffalo Lubricating Oil Company, Limited, and the said Charles B. Matthews, J. Scott Wilson, Hiram B. Benedict, and all other persons interested with them, or who might be interested with them, from prosecuting, carrying on, continuing in, or engaging in said business of producing, manufacturing, refining, or selling petroleum or any kind of lubricating oil, as said Buffalo Lubricating Oil Company, Limited, and Charles B. Matthews, J. Scott Wilson, and Hiram Benedict, and other persons interested with them, or who might be interested with them, then and thereafter might lawfully do; and to prevent said last-mentioned corporation and persons from realizing any profits in said last-mentioned business; and to destroy the rights, liberties, and franchises of said last-mentioned corporation, which it might thereafter acquire; and to destroy the rights, privileges, franchises, and property of all shareholders of said last-mentioned corporation which they might thereafter acquire in or by virtue of said business of said last-mentioned corporation; and to wrongfully and unlawfully entice from the employ of said Buffalo Lubricating Oil Company, Limited, its skilled workmen, and in particular one Albert A. Miller, who was then known by them to be in the employ of the Buffalo Lubricating Oil Company, Limited, and without whose aid, assistance, and supervision the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor, and their confederates, to the grand jury unknown, then and there well knew the said Buffalo Lubricating Oil Company, Limited, could not complete its works or produce, manufacture, refine, or sell petroleum or any kind of lubricating oil, successfully; and to prevent the Buffalo Lubricating Oil Company, Limited, from completing its works, which they, the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor, then and there, on the 3d day of June, 1881, well knew were incomplete; and to bribe and hire Albert A. Miller and other skilled workmen then in the employ of the Buffalo Lubricating Oil Company, Limited, to so construct its works that said works would not answer the purposes for which they were intended, and would be defective, and could not be successfully operated, but would blow up and explode and

destroy themselves while in operation; and to hire the said Albert A. Miller and other workmen then in the employ of the Buffalo Lubricating Oil Company, Limited, to so operate its works that the crude petroleum which it should undertake to refine and convert into lubricating oil would be converted into coke and tar and other substances of little value instead of lubricating and refined oils of great value; and to hire said Albert A. Miller and other workmen of the Buffalo Lubricating Oil Company, Limited, who might be in its employ, to build unnecessarily hot fires in its furnaces and thereby convert the oils contained in its stills into worthless, inflammable, and explosive gases, which would explode and seriously impair the machinery and works of said last-mentioned corporation and destroy the same; and to institute and to maintain suits at law and in equity in the courts of the United States and in the courts of the State of New York, which said conspirators then and there knew to be unfounded in merit; and to falsely represent and state to all purchasers of and dealers in petroleum, refined and lubricating oils, by means of agents and employes, that the Buffalo Lubricating Oil Company, Limited, had no right to manufacture or put upon the market the kind of lubricating oils that it should thereafter manufacture, in the form in which they were to be put on the market, or the manner in which they were to be manufactured, and to so represent and claim by means of said suits so to be instituted and maintained, and to hire witnesses to falsely testify that the Buffalo Lubricating Oil Company, Limited, was infringing some patent or trade-mark in manufacturing lubricating oils and putting them on the market, in said suits; and to wrongfully obtain through Albert A. Miller, or any of its other employes, the business secrets of said corporation, the Buffalo Lubricating Oil Company, Limited, for the purpose of using them in planning and wrongfully compassing its injury and destruction, and to commit acts injurious to public morals and to trade and commerce by all the means in their power or which they could devise, and in particular by the means and in the manner hereinbefore set forth, whereby petroleum, refined or lubricating oils, articles of commerce and trade of great value, and in great demand throughout the United States and other countries, should be retained within their control, and that they should be enabled to extort from all purchasers twice and thrice their actual value, and to maintain a monopoly thereof, and unlawfully prevent all corporations, firms and persons not in confederation with them and controlled by them from producing, manufacturing, refining or selling petroleum or any kind of lubricating oil made in whole or in part therefrom, or realizing any profit thereon; all the matters and things hereinbefore set forth being parts and matters and provisions of one agreement and conspiracy and for one end and purpose as hereinbefore set forth, as made and entered into by the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor, and other persons and certain corporations and firms to the grand jury unknown, at Rochester, county of Monroe and State of New York, on the 3d day of June, 1881.

The grand jury aforesaid do further present that the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry R. Rogers, and Ambrose McGregor, and other persons and firms to the grand jury unknown, did wrongfully and unlawfully commit the following overt acts as a part of the said conspiracy and pursuant thereto and in furtherance thereof, to effect and attain the objects and purposes of said conspiracy at the city of Buffalo, county of Erie and State of New York, prior to the finding of this indictment, to wit: That upon the 15th day of June, 1881, at Buffalo aforesaid, the said Hiram B. Everest, Charles M. Everest, Henry H. Rogers, John D. Archbold, and Ambrose McGregor, and the said persons, firms and corporations to the grand jury unknown, did wrongfully entice Albert A. Miller from the employ of the Buffalo Lubricating Oil Company, Limited, and did wrongfully and unlawfully induce him to enter their employ, and the nominal employ of the said Vacuum Oil Company, and did wrongfully pay said Albert A. Miller large sums of money therefor, and did wrongfully agree to pay him other large sums of money therefor; and did wrongfully induce the said Albert A. Miller upon or about the 15th day of June, 1881, at Buffalo aforesaid, to build and cause to be built in the furnaces, stills, works, and apparatus of the Buffalo Lubricating Oil Company, Limited, such body corporate, unnecessarily hot fires; and said Albert A. Miller did, under and in pursuance of the instructions of the said conspirators, wrongfully build, upon the date and at the place last aforesaid, in the works, furnaces, stills, and apparatus of the Buffalo Lubricating Oil Company, Limited, such body corporate, unnecessarily hot fires, and did close the safety valves and other means of exit provided for dangerous gases generated by crude petroleum in such stills or apparatus when subjected to unnecessarily hot fires, and thereby said crude petroleum was resolved into dangerous, explosive, and inflammable gases and substances, and the life and limb of persons employed in the works of the Buffalo Lubricating Oil Company, Limited, then and there being greatly endangered, and said crude petroleum was destroyed together with the lubricating and illuminating oils contained therein, and said apparatus, works, and property of the Buffalo Lubricating Oil Company, Limited, were endangered and

were greatly injured, impaired, and damaged; and said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and persons, firms, and corporations to the grand jury unknown, did wrongfully and unlawfully hire said Albert A. Miller to wrongfully obtain from the Buffalo Lubricating Oil Company, Limited, its business secrets, and he did wrongfully deliver said secrets to them, and they did pay said Albert A. Miller large sums of money for doing said unlawful acts pursuant to said conspiracy, and did promise and furnish him immunity from the results thereof.

And the grand jury do further present that the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor, and other persons and corporations to the grand jury unknown, did commit, at Buffalo aforesaid, other overt acts pursuant to said conspiracy, as a part thereof and in furtherance thereof, to effect and attain the objects and purposes of said conspiracy, as aforesaid, to wit: That on or about September 1, 1881, they did wrongfully institute and seek to maintain an action in the supreme court, Monroe County, against J. Scott Wilson, an employé of the Buffalo Lubricating Oil Company, Limited, such body corporate, said action being in the name of the Vacuum Oil Company, by serving the process in said action upon said J. Scott Wilson in the county of Erie and city of Buffalo, on the day last aforesaid, and it being wrongfully pretended by said action that said J. Scott Wilson had unlawfully left the employ of the Vacuum Oil Company and broken a contract with it whereby it had been damaged; that said action was unfounded in merit, as said conspirators well knew, and was instituted for the purpose of destroying the Buffalo Lubricating Oil Company, Limited, and its business, and that of its stockholders, and of depriving the Buffalo Lubricating Oil Company, Limited, such body corporate, of the services of said J. Scott Wilson, by causing said Wilson, from fear induced by said suit, to leave its employ, and said Wilson did thereafter wrongfully leave the employ of said Buffalo Lubricating Oil Company, Limited, such body corporate, by reason of the bringing of such unfounded suit against him, and thereupon said conspirators withdrew said action and paid all the expenses connected therewith; that by reason of the said last-named acts the said Buffalo Lubricating Oil Company, Limited, was greatly injured in its business, property, and means of doing business.

And the grand jury aforesaid do further present that the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor and other persons, firms, and corporations to the grand jury unknown, at Buffalo aforesaid, on or about the 15th day of September, 1881, did commit another overt act pursuant to said conspiracy and in furtherance thereof, and to effect and attain the objects and purposes of said conspiracy as aforesaid, to wit: that they did wrongfully institute and seek to maintain a certain action, which they knew to be unfounded in merit, in the circuit court of the United States for the northern district of New York, in the name of Hiram B. Everest, as plaintiff, against the Buffalo Lubricating Oil Company, Limited, such body corporate, as defendant, and did then and there, at the said city of Buffalo, in said county, cause certain papers in said action to be served on said defendant; that said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates, to the grand jury unknown, caused the said action to be brought to trial, and wrongfully sought to maintain the same by pretending therein that the Buffalo Lubricating Oil Company, Limited, such body corporate, had infringed upon a certain patent covering the use of a certain fire-test, and to more effectually falsely maintain said action said conspirators did wrongfully induce and hire certain witnesses to falsely swear and state upon the trial that certain events had transpired, and that the Buffalo Lubricating Oil Company, Limited, had done certain acts in connection with said fire-test, which event said conspirators well knew had not transpired, and which acts said conspirators well knew the Buffalo Lubricating Oil Company, Limited, had not done, and thereby greatly injured said last-mentioned corporation in its property and business, and said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates, to the grand jury unknown, did wrongfully publish to the world, and especially in the county of Erie and city of Buffalo did publish and cause to be published, the fact that said action had been brought, to the great injury of said Buffalo Lubricating Oil Company, Limited, and its credit.

And the grand jury aforesaid do further present that the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor, and other persons, firms, and corporations to the grand jury unknown, did wrongfully, and in pursuance of said conspiracy, and as part thereof, commit the following overt acts at Buffalo aforesaid, to effect and attain the objects and purposes as aforesaid, to wit: That said conspirators did wrongfully institute and seek to maintain a certain action in the circuit court of the United States of the northern district of New York, in the name of the Vacuum Oil Company, as plaintiff, against the Buffalo Lubricating Oil Company, Limited, as defendant, which action they well knew was unfounded in merit, and did cause process and papers in said action and suit to be served upon the Buffalo Lubricat-

ing Oil Company, Limited, the defendant therein, in the city of Buffalo and county of Erie aforesaid, on the 21st day of February, 1882, in which action said conspirators did wrongfully and falsely pretend and seek to maintain that said Buffalo Lubricating Oil Company, Limited, had infringed upon patents owned by the Vacuum Oil Company, which covered all processes by which the said Buffalo Lubricating Oil Company, Limited, was manufacturing lubricating oils; and did falsely circulate reports and make statements to purchasers of lubricating oils and to customers and patrons of the Buffalo Lubricating Oil Company, Limited, in the State of Massachusetts, at Boston, Worcester, and elsewhere, to the effect last aforesaid, and did induce and hire witnesses to falsely testify in said action that certain matters were facts which were not facts, as they well knew, but said court did find said action unfounded in merit and did dismiss the same for want of merit; that by reason of said last-mentioned acts the said Buffalo Lubricating Oil Company, Limited, was greatly and wrongfully injured in its business and credit.

And the grand jury aforesaid do further present that the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and other persons, firms, and bodies corporate to the grand jury unknown, at Buffalo aforesaid, in said county, prior to the finding of this indictment, and on the 25th day of April, 1882, did wrongfully and unlawfully commit another overt act pursuant to and as a part of said conspiracy and in furtherance thereof, to effect and attain the objects and purposes of said conspiracy as aforesaid, to wit: That the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates to the grand jury unknown, did then and there wrongfully institute and seek to wrongfully and unlawfully maintain an action in the circuit court of the United States for the northern district of New York in the name of the said Vacuum Oil Company, a body corporate, as plaintiff, against the Buffalo Lubricating Oil Company, Limited, such body corporate, defendant, and did cause process and papers in said action and suit, which they well knew to be unfounded in merit, to be served upon the defendant therein, the Buffalo Lubricating Oil Company, Limited, in the city of Buffalo and county of Erie aforesaid; that said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates, to the grand jury unknown, did falsely pretend in and by said action that said last corporation had infringed upon certain patents belonging to the Vacuum Oil Company in using certain apparatus in the manufacture of oil which was covered by then existing patents of the Vacuum Oil Company, although said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates well knew the said claim, pretense, and action to be unfounded in merit, and said court did dismiss said action for want of merit therein, although said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates, who sought wrongfully to maintain said action by inducing and hiring witnesses to falsely testify to certain matters as facts which they knew were not facts, and notwithstanding they knew such witnesses were testifying falsely in so doing; that by reason of said last-named acts the said Buffalo Lubricating Oil Company, Limited, was greatly and wrongfully injured in its business and credit.

And the grand jury aforesaid do further present that the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and other persons, firms, and bodies corporate in confederation with them, to the grand jury unknown, at Buffalo, in the said county of Erie, prior to the finding of this indictment and upon the 3d day of August, 1885, and again upon the 18th day of January, 1886, did wrongfully and unlawfully commit another act pursuant to and as a part of said conspiracy, in furtherance thereof, and to effect and attain the objects and purposes of said conspiracy as aforesaid, to wit: That said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates to the grand jury unknown did then and there wrongfully and unlawfully induce one Lane Borrell, then and there being in the employ of the said Buffalo Lubricating Oil Company, Limited, on each of the dates last aforesaid, in the county of Erie and city of Buffalo, surreptitiously, unlawfully, and wrongfully obtain from the Buffalo Lubricating Oil Company, Limited, its business secrets and valuable information, and did pay him large sums of money to deliver such business secrets and valuable information to them upon each of the dates last aforesaid, as he did do, and did wrongfully induce him to remain in the employ of the said Buffalo Lubricating Oil Company, Limited, at Buffalo, in said county of Erie, continuously from the first of the dates last aforesaid to the last of the dates last aforesaid, and to continuously deliver to them the business secrets and knowledge of the said Buffalo Lubricating Oil Company, Limited, so wrongfully obtained by him, as he did do, and did wrongfully pay him large sums of money therefor; and they, the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, Ambrose McGregor, and their confederates did use said business secrets and such valuable knowledge of the business and customers of the Buffalo Lubricating Oil Company, Limited, wrongfully and unlawfully for the purpose of maintaining their said

monopoly in said business of producing, manufacturing, refining, buying, and selling petroleum and its products and lubricating oils made in whole or in part from petroleum, and for the purpose of destroying competition in trade and injuring said Buffalo Lubricating Oil Company, Limited, and its stockholders in every possible manner, by wrongfully preventing persons from buying its products of the Buffalo Lubricating Oil Company, Limited, who otherwise would have done so, to the great injury of the trade and commerce of the people of the United States and city of Buffalo and county of Erie in particular, and as aforesaid.

And because of the conspiracy hereinbefore set forth, and the other acts committed thereunder for the purpose of effecting and attaining its objects contrary to the statute in such case made and provided, and derogatory to the dignity of the people of the State of New York and the laws of said State, the grand jury for the county of Erie do upon their oaths, by this indictment, solemnly accuse the said Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor of the crime of conspiracy.

EDWARD W. HATCH,  
*District Attorney of the County of Erie.*

The said indictment was thereupon, on motion of the district attorney, removed from the said court of sessions to this court.

Thereafter all of the said defendants demurred to the said indictment, as follows:

Court of Oyer and Terminer, County of Erie. The People of the State of New York against Hiram B. Everest, Charles M. Everest, John D. Archbold, and Ambrose McGregor.

And now come John D. Archbold, Henry H. Rogers, and Ambrose McGregor, three of the defendants in the above-entitled action, and hereby withdraw their former plea of not guilty, heretofore entered in said action, and they demur to the indictment heretofore found against them in the court of sessions of the county of Erie, and filed with the county clerk of Erie County, February 1, 1886, and they state the following grounds of demurrer:

First. That the indictment does not conform substantially to the requirements of sections 275 and 276 of the Code of Criminal Procedure, in this: That said indictment does not contain a plain and concise statement of the act constituting the crime without unnecessary repetition.

Second. That more than one crime is charged in the indictment within the meaning of sections 278 and 279 of the Code of Criminal Procedure, to wit: conspiracy, arson, attempt at arson, and subornation of perjury.

Third. That more than one crime is charged in the indictment within the meaning of section 278 of the Code of Criminal Procedure, to wit: conspiracy, arson, attempt at arson, and subornation of perjury.

Fourth. That more than one crime is charged in the indictment within the meaning of section 279 of the Code of Criminal Procedure, to wit: conspiracy, arson, attempt at arson, and subornation of perjury.

Fifth. That the same crime is charged in the indictment to have been committed in a different manner and by different means within the meaning of section 279 of the Code of Criminal Procedure, and for that reason the crime should be charged in separate counts.

Sixth. That more than one crime is charged in the indictment within the meaning of section 279 of the Code of Criminal Procedure; that the acts complained of constitute different crimes, and such crimes should be charged in separate counts.

Seventh. That the indictment contains matter which, if true, would constitute a legal bar to the prosecution, in this: That whereas the indictment is for a misdemeanor, it nevertheless charges a felony, namely, subornation of perjury; and another felony, namely, arson and attempt at arson.

Eighth. That the facts stated in the indictment do not constitute a crime.

CHARLES W. GOODYEAR,  
*Attorney for Defendants,*  
*John D. Archbold, Henry H. Rogers, and Ambrose McGregor,*  
*No. 248 Main street, Buffalo, N. Y.*

Court of Oyer and Terminer—county of Erie. The People of the State of New York against Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor.

And now come Hiram B. Everest and Charles M. Everest, two of the defendants in the above-entitled action, and hereby withdraw their former plea of not guilty hereto-

fore entered in said action, and they demur to the indictment heretofore found against them in the court of sessions of the county of Erie, and filed with the county clerk of Erie County, February 1, 1886, and they state the following grounds of demurrer:

First. That the indictment does not conform substantially to the requirements of sections 275 and 276 of the Code of Criminal Procedure, in this, that said indictment does not contain a plain and concise statement of the act constituting the crime, without unnecessary repetition.

Second. That more than one crime is charged in the indictment, within the meaning of sections 278 and 279 of the Code of Criminal Procedure, to wit, conspiracy, arson, attempt at arson, and subornation of perjury.

Third. That more than one crime is charged in the indictment, within the meaning of section 278 of the Code of Criminal Procedure, to wit, conspiracy, arson, attempt at arson, and subornation of perjury.

Fourth. That more than one crime is charged in the indictment, within the meaning of section 279 of the Code of Criminal Procedure, to wit, conspiracy, arson, attempt at arson, and subornation of perjury.

Fifth. That the same crime is charged in the indictment to have been committed in a different manner and by different means, within the meaning of section 279 of the Code of Criminal Procedure, and for that reason the crime should be charged in separate counts.

Sixth. That more than one crime is charged in the indictment within the meaning of section 279 of the Code of Criminal Procedure; that the acts complained of constitute different crimes, and such crimes should be charged in separate counts.

Seventh. That the indictment contains matter, which, if true, would constitute a legal bar to the prosecution, in this, that whereas the indictment is for a misdemeanor, it nevertheless charges a felony, namely, subornation of perjury; and another felony, namely, arson and attempt at arson.

Eighth. That the facts stated in the indictment do not constitute a crime.

T. G. OUTERBRIDGE,

*Attorney for Defendants Hiram B. Everest and Charles M. Everest,  
105 Powers' Block, Rochester, N. Y.*

THEODORE BACON, *of Counsel.*

The said demurrers having been argued before Mr. Justice Childs, the same were overruled; and thereupon the said defendants, and each of them, pleaded not guilty to the said indictment. Thereafter the said defendants moved, upon due notice to the district attorney, and upon affidavits, whereof the following are copies, to the effect specified in the following notice of motion:

Court of Oyer and Terminer of the county of Erie. The People of the State of New York *against* Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose M. McGregor.

STATE OF NEW YORK,  
*County of Monroe, ss:*

CHARLES M. EVEREST, being duly sworn, says:

I am one of the defendants named in the above-entitled action; the indictment therein was found against me and the above-named defendants, jointly, in the court of sessions of the county of Erie, on the — day of February, 1886, and was subsequently removed into this court on motion of the district attorney; demurrers were interposed on behalf of the defendants; said demurrers were overruled, and the defendants pleaded over, and on the 6th day of December, 1886, pleas of not guilty were entered for them; I have fully and fairly stated the case in this action to Theodore Bacon, esq., my counsel in this action, who resides in Rochester, in said county of Monroe, and I have a good and substantial defense on the merits to the action, as I am advised by my said counsel, and verily believe to be true.

In the month of March, 1885, an action brought by the Buffalo Lubricating Oil Company, Limited, of Buffalo, against said Hiram B. Everest and myself, was brought to trial at a circuit term of the supreme court, held in and for the county of Erie; said action was brought for an alleged conspiracy to ruin and bankrupt the plaintiff; the said conspiracy consisting, it was alleged, in attempting to prevent the plaintiff from carrying on its business; in falsely representing that the plaintiff's oils were of an inferior quality, and that it could not lawfully make them; in attempting to prevent the plaintiff from obtaining crude oil for manufacturing purposes at reasonable prices; in enticing from the plaintiff's employment its skilled workmen; in bringing malicious civil suits without probable cause; and in threatening plaintiff's customers with law suits in the

event of their continuing to purchase from the plaintiff. It was also alleged that the defendants in said action conspired to destroy the plaintiff as a competitor of the Vacuum Oil Company, of said Rochester, and of the Standard Oil Company. The complaint also set forth the relations between the defendants in said action and the said Vacuum Oil Company, and further alleged that three-fourths of the stock of the said Vacuum Oil Company had been transferred to the Standard Oil Company, or to their trustees. It contained the further allegation that the defendants in said action, said Hiram B. Everest and myself, were hired to look after the alleged joint interests of the Vacuum and Standard Oil Companies.

Soon after the trial of said action, to wit, about March 16, 1885, the said Buffalo Lubricating Oil Company, Limited, brought a second civil action, for substantially the same cause, against said Hiram B. Everest and myself, including as additional defendants John D. Archbold and Henry H. Rogers, defendants herein, and also the Vacuum Oil Company, the Standard Oil Company of New York, and the Acme Oil Company of New York.

Said civil actions cover substantially the same ground as the indictment herein, and the principal witnesses that testified for the plaintiff on the trial of the first civil action, testified before the grand jury, and upon their testimony, as I am informed and believe, the indictment herein was found; among said witnesses was one Albert A. Miller, upon whom, apparently, the plaintiff most relied in the first civil action.

The indictment herein charges, among other things, that the defendants at Buffalo, on or about the 15th day of June, 1881, induced said Miller to build unnecessarily hot fires in the furnaces of the said Buffalo company's works; that Miller did so, and closed the safety-valves, whereupon the crude petroleum and the lubricating and illuminating oils were destroyed, and the apparatus and works of said company greatly injured and damaged.

I further say that I was present at the taking of the deposition of said Albert A. Miller, on the part of the plaintiff, in said first civil action, to wit: That of the Buffalo Lubricating Oil Company, Limited, against Hiram B. Everest and myself. According to my best recollection said deposition was taken on or about the 23d day of July, 1884, before W. H. Slocum, stenographer and notary public, in the city of Buffalo. In said deposition said Miller testified to having several conversations with me in reference to the Buffalo company; and he distinctly testified that nothing that I asked him to do would create an explosion. I further say that according to my best recollection said Miller did not in said deposition say one word tending to show that my father, said Hiram B. Everest, at any time asked him, the said Miller, to interfere in any way with the apparatus or works of the said Buffalo company.

On or about the 15th day of March, 1886, the depositions of said Miller and of one Walter Groves, in said second civil action, were taken before trial on the part of the plaintiff, in Buffalo, before a referee. I was present during the taking of said depositions. On his direct examination in his last-mentioned deposition said Miller testified that he told the fireman to draw the fire, because he, Miller, saw that if he kept on firing an explosion might take place. He further said that what he intended to do was to "give them a little scare." "I did not," he said, "really intend to blow up anything."

The indictment charges the defendants with subornation of perjury in two patent suits therein set forth, one begun the 21st day of February, 1882, and the other on the 25th day of April, 1882. In the first of said patent suits there were called only two witnesses, to wit, said Walter Groves, by whom the infringement of the patent by the Buffalo company was proved, and Rufus F. Osgood, of Rochester, N. Y., a patent expert, who was called and examined only as an expert upon the scientific questions involved. In the second of said patent cases there were called as witnesses said Groves and said Osgood, Joseph Roe, of said Rochester, and Marshall Bannister, of the same place. Said Roe and Bannister were called to prove simply that said Miller, while yet in the employment of the Vacuum Oil Company, and just prior to his going to Buffalo to organize said Buffalo company, used the Vacuum Oil Company's patterns for castings to be used in Buffalo. They were examined and testified on no other subject. In his deposition in said first action for conspiracy said Miller was asked this question: "Mr. Miller, when you were getting up your fittings for this business here, did you use the patterns of the Vacuum Oil Company to get your castings from?" He answered: "I believe there were some of the company's patterns used." Said Groves and said Osgood testified as in the former of the above-mentioned patent suits; that is to say, said Groves testified to facts showing infringement by the Buffalo company, and said Osgood testified only as an expert, expressing his opinion upon the scientific questions involved.

I further say that in his said deposition in said second action for conspiracy said Walter Groves distinctly testified that what he testified to in said patent cases was the truth. He further testified that he was not asked by any one in said patent cases to testify to anything that was not true.

On account of the foregoing, I ask to be furnished, within a reasonable time before the trial of the indictment herein, with a copy of the minutes of the evidence given before the grand jury, upon which they found the indictment herein. I ask for said minutes for two reasons: First, in order that I may the better prepare for the trial of said indictment; and, second, that I may be able, if said Miller's testimony before said grand jury shall be found to conflict with his depositions, or either of them, above-mentioned, to bring the matter before the grand jury of the county of Erie.

I further say that an inspection of the indictment discloses apparently that the defendants are charged with separate and distinct conspiracies; and, further, some of the charges are so indefinite and uncertain, and appear, in so many cases, to be repeated unnecessarily, that I am unable to ascertain with certainty with what I am charged. It is charged, among other things, that the defendants conspired on the 3d day of June, 1881, to prevent certain persons from organizing the Buffalo company. In another portion of the indictment, it appears that company was, on that very day, "organized and existing." It is charged that the defendants conspired to destroy the said company. This is substantially repeated in another portion of the indictment; and again, elsewhere in said indictment, it is said that the defendants conspired to destroy the credit of the Buffalo company, and to destroy the stock, etc., of Matthews and others. This, so far as I am able to ascertain, is either twice repeated, or else separate and distinct conspiracies are charged. Again, it is charged that the defendants conspired to destroy the rights, liberties, franchises, and property of said company, and to destroy the rights, privileges, etc., of its shareholders. It is further charged that the defendants conspired to monopolize the oil business throughout the United States and other countries, and this charge is twice repeated in said indictment, so far as I am able to ascertain; but if not repeated, then distinct and separate conspiracies are charged; and, further, it is charged that the defendants conspired to prevent Matthews and others from organizing and conducting the said company, and this is substantially repeated; and further, the defendants are charged with subornation of perjury, and are not apprised of time, place, person, or subject-matter. On account of the foregoing I can not safely proceed to the trial of the indictment herein, as I am also advised by my counsel, and verily believe, until I am furnished with a bill of particulars.

CHARLES M. EVEREST.

Subscribed and sworn to before me this 16th day of December, 1886.

A. L. MABBETT,  
*Notary Public.*

Court of Oyer and Terminer of the county of Erie. The people of the State of New York *vs.* Hiram V. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose McGregor.

COUNTY OF ERIE,  
*City of Buffalo, ss:*

CHARLES B. MATTHEWS, being duly sworn, says:

I am president of the Buffalo Lubricating Oil Company, Limited, and reside in the city of Buffalo. I had charge and have charge of the litigations pending in the Supreme Court wherein the Buffalo Lubricating Oil Company, Limited, is plaintiff, and Charles M. Everest and others are defendants, being the same actions referred to in the affidavit of Charles M. Everest. On the trial of the first action brought against Charles M. Everest, Hiram B. Everest alone, I was present and heard the testimony given. I also heard Hiram B. Everest, Albert A. Miller, and Martin S. Keily examined and their testimony read upon the trial. The action brought against the two Everests and Archbold, Rogers, and the Standard Oil Company and Acme Oil Company has not been brought to trial, because the Standard and the Acme Oil Company demurred to the complaint. These demurrers have been overruled by the special term and the general term, and those companies are now appealing to the court of appeals. In my judgment the only object in interposing the demurrers and taking the appeals is delay, as the demurrers are plainly hopeless, as I am advised by counsel and verily believe, and as the courts have uniformly decided.

On the trial of the action brought against the Everests alone for conspiracy referred to the affidavit of Charles M. Everest, Charles M. Everest was present, but did not testify or seek to exonerate himself or prove his innocence, although he heard the testimony given. The testimony taken upon the trial was reported by a stenographer and was printed out and filed in the county clerk's office of this county. Mr. Outerbridge, the attorney for the Everests, who is the son-in-law of the one and the brother-in-law of the other of the Everests, made a proposed case on which to move a new trial from this testimony, and the motion was made before Justice Barker for a new trial upon the

ground that the award of \$20,000 damages was excessive, and Justice Barker finally granted a new trial upon this ground. After the trial of this action, wherein the conspiracy to destroy the Buffalo Lubricating Oil Company, Limited, was so clearly shown, I obtained a hearing before the grand jury of this county, and the result was these defendants were indicted for the conspiracy shown to exist upon that trial. They succeeded in getting the first indictment set aside upon some technicality by Justice Daniels, who ordered the case re-presented to the grand jury, and I accordingly appeared before the next grand jury for that purpose, and the result was the present indictment, found nearly a year ago.

I do not to-day know all the parties to the conspiracy, nor can I tell where the names of all the parties to the conspiracy can be learned, except that I believe and am convinced from the evidence given on the trial that any one of these defendants can give the names of every party to the conspiracy, whether a corporation or individual. The defendants' attorneys in the case, and upon the examination before trial in this action, cross-examined Mr. Miller fully as to his statements concerning the directions given to him and the work he did towards destroying the works of the Buffalo Lubricating Oil Company, and learn personally the place and date whenever they care to know it, or he could give it, as will appear from his testimony; also, concerning the sums of money he received, which was corroborated by the sworn statement of the proper officer of the Vacuum Oil Company in the entries of their own books, giving date and the amount of money paid to Miller, and by the testimony of Hiram B. Everest and Miller's wife. The defendants Everest themselves, examined by a reputable lawyer of Rochester, Mr. Truesdale, with reference to some of these transactions, and it conclusively appeared from his testimony and that of other witnesses whose evidence was given upon the first trial that Mr. Miller had not stated the case as strong against the defendants as the evidence would warrant.

Upon taking of the deposition of Miller and Groves in the last action there were present Mr. Dodd, of New York, representing Mr. Archbold, Rogers; Mr. Goodyear, of this city, representing the Standard and Acme Oil Companies; Mr. Outerbridge and Mr. Bacon, of Rochester, representing the Everests and the Vacuum Oil Company; Mr. Selden, of Rochester, representing the same interests, and the Hon. Daniel N. Lockwood, of this city, as counsel for all the defendants. These various attorneys, or as many of them as desired to, cross-examined Mr. Miller as long as they desired to concerning all these matters subsequent to the quashing of the first indictment, when they had had their attention called to the fact and had examined both indictments.

I am informed that the defendants in this case have since their indictment in Erie County sought to procure indictments against Albert A. Miller in Monroe County, N. Y., and failed in the attempt.

Whatever the defendants may now say regarding the character or veracity of A. A. Miller, he was for many years the confidential friend and associate of the Everests and spoken of in the highest terms by them. The evidence of H. B. Everest and also of A. A. Miller in conspiracy-case trial before Justice Barker shows that after engaging in this conspiracy that H. B. Everest and A. A. Miller dined and traveled and roomed together, and at Young's hotel in Boston they were registered by H. B. Everest as "H. B. Everest and friend."

CHARLES B. MATTHEWS

Sworn to before me this 4th of January, 1887.

WILLIAM MACOMBER,  
Notary Public, Erie County.

Court of Oyer and Terminer of the County of Erie. The People of the State of New York vs. Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry H. Rogers, and Ambrose M. McGregor.

SIR: Take notice that upon the affidavit of Charles M. Everest, a copy of which is herewith served upon you, and upon the indictment herein, I shall move at \_\_\_\_\_ to be held in the city of Buffalo, on the \_\_\_\_\_ day of \_\_\_\_\_, 18\_\_\_\_, at the opening of the court, or as soon thereafter as counsel can be heard, for an order directing the district attorney of Erie County to furnish the said defendant, Charles M. Everest, with a copy of the minutes of the testimony taken before the grand jury upon which the indictment herein was found.

Further, you will take notice that I shall move at the same time that the said defendant, Charles M. Everest, be furnished by the said district attorney with a bill of particulars specifying as follows, to wit:

First. To whom the words "certain other persons, corporations, and firms in confederation with and controlled by them, to the grand jury unknown," at the beginning of the second paragraph of the indictment, refer, and to whom those word or words substantially the same used in various other parts of the indictment refer.

Second. The names and residences of the persons referred to in the following passage of the indictment, on the second page thereof: "And other persons to the grand jury unknown, from organizing and conducting the Buffalo Lubricating Oil Company, Limited, as a domestic corporation, which said last-mentioned persons did nevertheless organize," etc.

Third. The names and residences of the persons referred to in the following passage of the indictment, beginning at about the top of the fourth page thereof: "And other parties to the grand jury unknown, then stockholders, officers, or parties interested in the said Buffalo Lubricating Oil Company, Limited."

Fourth. The names and residences of the persons referred to in the following portion of the indictment, near the top of the fourth page of the same: "And other persons to the grand jury unknown, interested with them in said Buffalo Lubricating Oil Company, Limited."

Fifth. The names and residences of the persons referred to in the following part of the indictment, near the bottom of page 5 thereof, "and to wrongfully and unlawfully entice from the employ of said Buffalo Lubricating Oil Company, Limited, its skilled workmen."

Sixth. The names and residences of the persons referred to in the following part of the indictment, near the top of page 6 thereof, "and to bribe and hire Albert A. Miller and other skilled workmen then in the employ of the Buffalo Lubricating Oil Company, Limited, to so construct its works that said works would not answer the purposes for which they were intended."

Seventh. The names and residences of the persons referred to in the following part of the indictment, immediately below the part referred to in number 6, "to hire the said Albert A. Miller and other workmen then in the employ of the Buffalo Lubricating Oil Company, Limited, to so operate its works that the crude petroleum which it should undertake to refine and convert into lubricating oil would be converted into coke," etc.

Eighth. The names and residences of the persons referred to in that part of the indictment next following the part last above mentioned, reading as follows: "And to hire said Albert A. Miller and other workmen of the Buffalo Lubricating Oil Company, Limited."

Ninth. The names and residences of the persons referred to in the following part of the indictment, near the top of page 7 thereof, "and to wrongfully obtain through Albert A. Miller or any of its other employes the business secrets of said corporation, the Buffalo Lubricating Oil Company, Limited, for the purpose of using them in planning and wrongfully compassing its injury and destruction."

Tenth. The names and residences of the persons referred to in the following part of the indictment, near the top of page 8 thereof, "McGregor and other persons and firms to the grand jury unknown, did wrongfully and unlawfully commit the following overt acts as a part of the said conspiracy and pursuant thereto and in furtherance thereof, to effect and attain the objects and purposes of said conspiracy," etc.

Eleventh. The sum of money and the amount thereof mentioned in the following part of the indictment, near the end of page 8 thereof, "did wrongfully pay said Albert A. Miller large sums of money therefor, and did wrongfully agree to pay him other large sums of money therefor."

Twelfth. What were the secrets referred to in the following part of the indictment, about the middle of page 9 thereof, "did wrongfully and unlawfully hire said Albert A. Miller to wrongfully obtain from the Buffalo Lubricating Oil Company, Limited, its business secrets, and he did wrongfully deliver said secrets to them, and they did pay said Albert A. Miller large sums of money for doing said unlawful acts;" also specifying how large were the sums of money referred to in said passage.

Thirteenth. The names and residences of the persons referred to in the following part of the indictment, near the end of page 11 thereof, "did wrongfully induce and hire certain witnesses to falsely swear;" specifying also what said witnesses swore to; before whom; when and where; and in which of the suits named in the indictment.

Fourteenth. The events referred to in that part of the indictment immediately following the part last above referred to, as follows: "That certain events had transpired, and that the Buffalo Lubricating Oil Company, Limited, had done certain acts in connection with said fire test;" and also specifying the acts referred in the passage above.

Fifteenth. Fully and in detail what reports, statements, purchasers, customers, and patrons are referred to; what place the word "elsewhere" refers to; to whom the word "witnesses" refers, and what are the certain matters mentioned, in the following part of the indictment, at the bottom of page 12 thereof, "and did falsely circulate reports and make statements to purchasers of lubricating oils and to customers and patrons of the Buffalo Lubricating Oil Company, Limited, in the State of Massachusetts, at Boston, Worcester, and elsewhere, to the effect last aforesaid, and did induce and hire witnesses to falsely testify in said action that certain matters were facts which were not facts;" specifying also what the witnesses swore to; where, when, and before whom.

Sixteenth. The names and residences of the persons and the matters and facts referred to in the following part of the indictment, about the middle of page 14 thereof, "who sought wrongfully to maintain said actions by inducing and hiring witnesses to falsely testify to certain matters as facts which they knew were not facts."

Seventeenth. The business secrets and the sums of money referred to in the following part of the indictment, near the top of page 15 thereof, "its business secrets and valuable information and did pay him large sums of money to deliver such business secrets and valuable information to them," etc.

Eighteenth. The business secrets and the sums of money referred to immediately below that part of the indictment last above referred to.

Nineteenth. The valuable knowledge referred to in that part of the indictment immediately following the part last above referred to.

Twentieth. The names and residences of the persons referred to in the following part of the indictment at the bottom of page 15 thereof, "wrongfully preventing persons from buying its products of the Buffalo Lubricating Oil Company, Limited, who otherwise would have done so, to the great injury," etc.

Twenty-first. The other acts referred to in the last paragraph of the indictment, said to have been "committed thereunder for the purpose of effecting and attaining its objects contrary to the statute," etc.

Twenty-second. And further, referring to the charges of subornation of perjury made in the indictment, I shall move at the same time for a bill of particulars specifying the names of the witnesses, where they testified, when they testified, and what they testified to.

Dated the        day of        , 18 .

T. G. OUTERIDGE,  
*Att'y for Charles M. Everest,*  
105 Powers' Block, Rochester, N. Y.

*To the District Attorney of Erie County:*

The said motion coming on to be heard before Mr. Justice Childs, was in all things denied. Thereafter, at a court of oyer and terminer, held at Buffalo, in and for the county of Erie, before Mr. Justice Haight, on the 2d day of May, 1887, the said indictment came on for trial.

Whereupon, and before the calling of a jury, the defendants, upon permission of the court for that purpose duly obtained, withdrew their former plea of not guilty and moved to set aside the said indictment upon the same grounds specified in the demurrers aforesaid, and also upon the ground of the vagueness and indefiniteness of the said indictment. The said motion was denied, and the defendants duly excepted.

The defendants thereupon moved for a bill of the particulars charged in the said indictment upon the same grounds and in the same particulars indicated in the notice of motion aforesaid. The said motion was denied and the defendants duly excepted.

Thereupon the defendants again pleaded not guilty to the said indictment.

Thereupon, a jury having been empaneled and sworn, the following proceedings were then and there had, to wit:

A map of the premises of the Buffalo Lubricating Oil Company, Limited, made February, 1885, was put in evidence, being first verified as correct, and was marked Exhibit A.

ALBERT A. MILLER testified on behalf of the people as follows:

I am forty-five years old; was married in 1865, and have a wife and daughter; I was born in Ohio, and at four or five years of age came to Clarkson, in Monroe County, with my father, and lived with him on a farm for three years; my parents then moved to Rochester, and I with them, and I used to assist my father in driving teams; then I worked at shoe-making, and in 1861 I enlisted in the Army, in the Thirteenth New York Regiment; I served then for three months and was discharged at the expiration of a subsequent term of years; I then re-enlisted in the Eighteenth New York Battery, and served a little less than one year, when we were discharged at the end of the war. When I came back from the war I kept a restaurant; that was the first business I went into.

I know Hiram B. Everest and Charles M. Everest, defendants. I have been introduced to the defendant John D. Archbold, I believe, and to the defendant Mr. Rogers, I believe. I went into the employ of the Everests at Rochester, and first worked at carpenter business connected with their oil manufactory in Rochester, and Vacuum Oil Company for a period; then I quit them and they hired me again; then I done the firing and running stills, and everything pertaining to that business; I got so I could run the stills; I had charge of the stills; I learned how to make the oil; they made it by what

they called the vacuum process; it made lubricating and illuminating oil from petroleum, kerosene, and various grades of lubricating oils.

Q. Tell the jury the process of its manufacture; how it is done.—A. The crude oil is put into their still; by their process it was put in what you call a vacuum still, and a tank-puller to create a vacuum; the method of evaporating was by superheated steam in the coil of pipes that passes through the still; this caused the vapors to rise, and evaporated it; the vapors went through cold water pipes and were there condensed into naphtha, gasoline, kerosene, and paraffine; they run it to a given gravity or fire test, and the product in the still was what they termed lubricating oil; the residuum, after they got off these gases, was used to manufacture lubricating oil; they made various grades from this oil; what remained in the still was thicker than kerosene, and heavy.

Q. After it was cooled, would it run by pouring?—A. Yes, sir, some of it; that is, at certain temperatures. It took me a year or so before I understood the process of making these oils; I finally understood it, and also the method of constructing the stills.

Q. Who else there at the Rochester company knew how to make oil?

(To this question the defendants objected as immaterial and irrelevant; the objection was overruled, and the defendants excepted.)

The witness answers: There was my brother, Truman Miller, and a man by the name of Patterson, and one named Gable.

I know Charles B. Matthews; I made his acquaintance in 1878 or 1880, I think, along there sometime, at Rochester; I believe I was introduced to him the first time by Mr. H. B. Everest; I would not be positive; I can't say whether at the works or at the office; I saw him around there, and understood he was in the employ of the Vacuum Company. I knew J. Scott Wilson; the first time, I think, perhaps, it might have been along about 1870 or 1877; he was not then in the employ of the Rochester company. The business of the Vacuum Company at Rochester was managed by H. B. Everest, his brother Horace Everest, at one time, and C. M. Everest; there was a change in its management, I think, in 1875, along there; I can not remember the year. I had a talk with H. B. Everest at their works about the change in the business.

Q. What did he say to you?

(The evidence of any declaration of H. B. Everest was objected to as against all the other defendants, and it was admitted solely as against said H. B. Everest.)

A. I told him I understood that the Standard Oil Company had purchased the Vacuum Oil Company; he asked me where I got my information; I told him from what I thought was a reliable source; he asked me who it was, and I think I told him from the man that I understood had made out the papers, Mr. Edwards, a gentleman by the name of Edwards; he told me it would not make any difference with me; I told him that if it was going to make any difference with my position I would like to know it; he says it would not; I says, "I suppose it will, then, go on just the same with me as it has heretofore;" he says, "Certain."

The Rochester works had, if I remember right, three vacuum stills, I believe, one of 45 or 55 barrels, one of 175 barrels, I think, and one 200 barrel, I think; I can not be positive as to the capacity; I think that was about it at this time; I believe the 200-barrel still took about twenty or twenty-four hours to charge the still and get it out again, or to recharge; the other one, I think, it took sixteen or twenty, I am not positive; the 45-barrel still depended on what product they wished to get; the average per day would be about one batch; if they wished to make a light grade of lubricating oil, it takes perhaps four hours; if they manufacture a heavy grade, it would take twenty-four hours; I left the Rochester company in 1881.

Q. In the year 1880 do you know what the extent of their manufacture was there of oil, about; the whole business, as near as you can approximate it? A. The total capacity, I guess, would be, perhaps—

(The defendants objected to the evidence as immaterial, and as a mere guess; the court overruled the objection, and the defendants excepted.)

The WITNESS: About a thousand barrels; I think their capacity for manufacturing oil about a thousand barrels a day at this time.

Q. That is, the crude petroleum that you would use? A. If they were to manufacture crude petroleum entirely—make it into kerosene, taking a hundred barrels of crude petroleum, I think I could come up nigh to the proportionate result of the manufacture in the vacuum process; there would be about 20 per cent. of naphtha (that depends on what kind of crude, but taking the kind of crude that we were getting there usually), from 15 to 20 per cent.; about 55 per cent., as nigh as I can remember, of that crude of kerosene; I can not say positive as to the amount; the residuum would depend on the product which they were running for; they made products from 25 or 26 gravity, I believe, 27, 28, 29, 30, 32; taking the specific gravity of 30, there would be remaining in the residuum, I think, about 18 per cent., from 18 to 25, I don't remember; this residuum is not afterwards treated or purified; it is

compounded, sometimes, with other oils; they use the naphtha for various purposes; for burning purposes, gasoline stoves, manufacture of gas, manufacture of varnish, kerosene for illuminating purposes; the remainder, the lubricating oil, was used through the country for lubricating, cylinder oils; used on railroads, used for general lubricating purposes for heavy machinery; we used it for our own machinery there; in 1880 I know that the Rochester company furnished some railroads, Western railroads; I don't know as I knew where they disposed of their illuminating oil.

In 1880, I was living in Rochester with my family; I think I saw John D. Archbold at the Vacuum Oil Works, in Rochester, about 1875; it might have been before that, or a little after; I can not say as to the year; was living near the Vacuum Oil Works, in their house, on the west side of the river; there was a time I was there that H. B. Everest was not around the works; I understood that he was in Colorado; it seems to me two or three years before I left; I think he had been west and came back before he told me that the Standard Oil Company had bought him out.

When I first worked for the Vacuum Company I got \$2 a day, at carpenter work; that was increased from time to time; when I commenced running the stills, getting so that I could run them, we worked by the hour; they paid me, I believe, 25 cents an hour; at the end of the year it would net me at that time from \$800 to \$1,000; at the time I left I was working by the hour, I believe that would net me, for my entire salary about \$1,400 a year—from \$1,200 to \$1,400; part of that in the rent of a house that they gave me; I had no written contract of employment, there was no arrangement, as I understood it, that I was to stay any particular length of time; I understood Mr. Everest that I could stay as long as I wanted to; there was no contract that I should stay one year, or two, or five years.

I think the first talk that I ever had about leaving the Vacuum Oil Company was in 1881, might have been in 1880; I came to Buffalo, I think, in March, 1881; my first talk in regard to coming to Buffalo was with J. Scott Wilson, a man who had been in the employ of the Vacuum Company as salesman, I believe; I talked also with Charles B. Matthews, this gentleman here; he at that time was connected some way with the Rochester Company, as I understood; Matthews, Wilson, and I finally made up our minds to come to Buffalo for the manufacture of illuminating and lubricating oils; I had a talk with C. M. Everest about coming here; H. B. was at that time in Colorado, I believe; the first conversation with C. M. was in his down-town office in the Rochester Savings Bank building.

(Upon the defendants' objection, the court ruled that the declarations of Charles M. Everest were received only as against him, and that where the declaration of any defendant was received in evidence, it was received against such defendant alone.)

The witness proceeded: I went into the office to tell him that I was going to Buffalo with these parties; I think it was in March, it might have been in February; it was some time before I went; I told him that I had come in to notify him that I was going to leave the company and go to Buffalo with some parties that were going to build a works; he says, "That is news to me; I am sorry for that;" he asked with whom I was going; I told him I was going with Mr. Wilson and Mr. Matthews; he said he was sorry to hear any such news as that; I don't remember what was said, and Mr. Matthews came in; he spoke to Mr. Everest and told him that he was going to leave; Mr. Everest says, "I am sorry to hear of any such thing as that; I have got a violent headache this morning, and I guess that is going to be a remedy for it;" something like that; "Gentlemen," he says, "I respect you;" he asked us what the name of the company was going to be, I believe; I told him the Buffalo Lubricating Oil Company; he says, "As gentlemen, I respect you, but as to the Buffalo Lubricating Oil Company I shall do all in my power to injure them and ruin them—I would not say the word was "ruin," but "do all in my power against them;" I don't remember the exact words; Matthews was present at the time; I think I said, or Mr. Matthews, that we didn't expect any favors from them.

Q. What else, if anything?—A. There was considerable talk there, but I do not remember exactly; I think he said he would like me to see his father; I do not know whether I went out first, or Mr. Matthews; during that conversation Mr. Everest asked me, I believe, how we expected to get oil, and I think Mr. Matthews or myself told him that we expected to get it from the Atlas Oil Refining Company; I think he said, "That all may be," or something, I do not remember the exact words, but he said, "You will wake up some morning and find there won't be any Atlas Refining Company," I can not say the exact words; I do not think he said at that time what was going to become of it; I think he used that expression, or words similar to that; I do not exactly remember the words.

Q. You may state whether or not, in that conversation, C. M. said anything about having ways of making money that you knew nothing about?—A. If I remember right, I think he said that the Standard Oil Company had various ways of making money that

we did not know anything about; that is in substance what occurred there during Mr. Matthews's presence. I think I talked with C. M. directly after Mr. Matthews went out; I think he told me not to be too fast in this matter; he says, "I would like to have you promise me that you won't go with these parties till we hear from father;" he says, "I will write father, and I will explain the matter to him, and I would like to have you wait till you hear from father before you leave us;" if I remember right, at that time Mr. Matthews and Wilson had been to Buffalo; I think I went with them myself; I would not be positive as to that; if I remember right, I went out and looked at some land that they had spoken about buying; also went to see some parties whom they were negotiating with for it, Ottos I believe; I think this was before the conversation; I did not see him write the letter to his father; he said, "I will write to father; I would like to have you wait before you go any further with this till we hear from him;" I says, "I have entered in with these men, and have made arrangements to go in with them, and I do not see how I can wait;" I think this was directly after Mr. Matthews went out; it may have been after, I am not positive as to that; he said, "I will write to father, and I would like to have you come in and see me and hear what he has to say;" I told him I would; I think that is all that occurred at that time, I do not remember; I hadn't quit work at that time, I believe; I did quit that day; I do not think I worked for them any more after that conversation. Mr. Everest at this time—I forgot that—asked me who was a good man and capable of taking charge of the refinery, who I thought would be the man to put there; if I remember right, I says, "My brother, or Mr. Patterson is a good man;" I thought they were capable of doing it; I don't think I had any settlement till later on, perhaps six or eight or ten days later; I think I saw C. M. Everest in the course of a week or so at the works; I lived right adjoining the works; I was there, near my house, and went into the works and he was there; he asked me how I was getting along; I told him first rate; I don't remember anything else at that time; I think he said he had not heard from his father, I would not be positive that he did or did not.

I saw him again, perhaps two weeks after, perhaps a month, I can not say; he sent word for me to come there; I went to the office and he read the letter to me.

Prior to the conversation with C. M. Everest about writing to his father, I believe that papers had been executed between Mr. Matthews, Wilson, and myself in regard to the Buffalo business; I had several conversations with Charles, between the one that I have spoken about, and the return of H. B. There was one in regard to this letter which H. B. wrote to him, the letter from his father which he produced and read, the sum and substance of which was it went on to state the advantages and disadvantages of being in the oil business; as I understood it, Mr. Everest was trying to illustrate to me that there was no money in the oil business, it all seemed to bear on that one point, that going into oil business with an institution of that kind I would not make any money, and there was not any money in oil at that time outside; he read a letter showing me the prices, I think, that they got, and what it cost; I would not be positive as to that; it was on that one point, that there was no money in oil by going into the manufacturing of it; C. M. read the letter to me; I would not be positive but he handed me the letter to be looked at; I can't say; I did not take it away with me, and have never seen it since; I believe it was left there with C. M. Everest; then C. M. went on to explain his theory of what we could do and what we could not do; he said he thought it was the best thing I could do under the circumstances to stay with them; he says to me, "Now, see here, we have always used you well, and we want you to stay with us, and we do not want you to go out with these men;" I am not positive that it was this time or previous to this time that he said to me, "Don't you think, Miller, that it would be better for you to leave those men and have \$20,000 deposited to your wife's credit, than to go with these parties?" I said, "Mr. Everest, I don't think it would; I went out with these men in good faith, and we had made considerable many purchases, and we have got stills ordered and different things ordered, and I don't think it would pay me to go out with these parties—to go back on them; I went out with them in good faith and I propose to stay." Then he goes on and tells me that it will be only a matter of a few days with the Buffalo institution at the furthest; they would crush them out, "and the result of it is you will lose what little you have got." I told him I could not see it that way; that they had prospered and made money and I thought there was a chance for others to do the same; there was considerable further, but I can't remember it all; I told him that we had made some purchases and that I proposed to stay there; I think I told him that we had contracted for our stills and boiler and different machinery, pumping, pipes; I don't particularly recollect anything further at that time.

The next that occurred between myself and any of the Everests, I saw C. M. at his office or his house; this was in the month of June, perhaps two months after the conversation I have just related; I think it was before H. B. had come back; he told me he thought the best thing I could do would be to come back to their company with them.

I had then been at Buffalo perhaps three or four times; in the meantime we had bought stills—contracted for the stills—boiler, pumps, and pipes, and fittings of all kinds; Mr. Matthews and I made most of those contracts; we bought mostly at Erie, some things in Titusville, Buffalo, and Tidionte; this conversation was, he says, “You better come back with us;” he says, “You better leave that company and come back with us;” he says, “They won’t last no time;” he says, “The best thing you can do is to come back with us;” I had told him previous to this time that there was a sort of a contract with Mr. Matthews, Wilson, and myself, and that I could not very well get out of it; I told him that I had entered into a contract with Mr. Matthews and Wilson; that they were going to form a stock company; he wanted to know what interest I was going to have, and I told him I was going to have a good salary—I don’t know as I told him how much; I don’t think I knew what I was going to get at that time—and ten or twenty thousand dollars’ worth of stock; I can’t think of any more of that conversation at present. Oh, in this conversation I think he mentioned that his father was going to return in a short time and he would like to have me see him; I don’t remember now as I had any further conversation with Charley between that time and the return of H. B.; I may have had.

I think it was in the last of May that I learned of the return of H. B. Everest; if I remember right, it was by a letter from my daughter, who was in Rochester, to her mother; shortly after that I saw H. B. Everest at Rochester, by request of C. M., who had said that his father would like to see me when he got home; I received no other communication up to that time; I went to Rochester and found H. B. at his son’s house on West avenue; I don’t think I saw C. M. before I went to the house; it was in the evening; I saw H. B. and C. M. Everest there; I rang the bell and went in; I think that C. M. came to the door, I would not be positive, and asked me to come in; he told me to sit down and wait a few moments and his father would be out; and I did so, and Mr. Everest came out and we shook hands, and he says, “I think you have made a grand mistake by going out with these fellows, and the best thing you can do is to come back with us;” I told him I did not know whether it was or not; he says, “I think it is;” I can’t remember all that was said there, but he went on to tell me that the company would not last long, and that of course they would do their—use their best endeavors to not have it succeed, or words to that effect; I can’t exactly remember the exact words; he says, “You come back with us and you will be all right; leave the company;” I says, “They would be in pretty bad shape to leave now; they have got everything going, and there is not anybody there that can go on and do it, as I know of, construct the works, and it would leave them in pretty bad fix;” he says, “That is just exactly what I want to do;” we talked considerable, had quite a long talk, and I told him that I had to go home that night, and he wanted to know what I wanted to go home for; I was living in Buffalo; he asked how we were getting along with the works in Buffalo, how far along we had got; I told him how far we had got, that we had got the stills on the ground and had constructed them, and built the buildings and building fences, putting up tanks, just as we were doing; he says, “It is only a matter of a few days with that company;” and he says, “The result will be, if you stay with them, you will lose all you have got in it;” he says, “If you return with us, everything will be all right; if you come back and work with us everything will be all right, and we will make everything all satisfactory to you; I told him that we had entered into—that we had then, I believe, formed a stock company, and that I was one of the officers in the company, and, of course, if I left it, why I would be held responsible; they would hold me responsible; “Well,” he says, “we will look out for that;” I think I told him at that time that I was engaged for a year, hired for a year at a salary, and told him the salary I was getting, that I was getting \$1,200; now, I may be mistaken about this time; I had a number of conversations with Everest; it is hard for me to distinguish; I can’t remember whether this is the time I told him about the salary, I can’t remember as to that; I don’t think that Charles was there present during this conversation; I am satisfied that he was not; I think at that conversation he said that they were going to commence suits against them, and that they would sue them, not only sue them, but serve an injunction on them, stop their work, and I being the only man that had any money, that J. Scott Wilson did not have any money, and that Matthews, if he did have any, would take care of it, so that if there was any damages to pay that I would have to pay the whole of it; he says, “The result of it is that when these suits commence, if you are in it you will be responsible, and you have got a little money, and you will lose it all;” I can’t state the exact amount of property I had at that time; I had then one piece of property in Rochester with six lots in it, another with three lots, and a couple of houses and lots—that is, one of them belonging to my wife; I had two houses and lots, one of them was hers and one was mine; I had quite a little amount in bonds and mortgages; I think the property without the bonds and mortgages would have been worth at that time \$4,000; I can’t say exactly what the mortgages were worth, seventeen or eighteen hundred dollars, I think; I should judge about \$6,000 altogether, or perhaps a little more; I believe H. B. and C. M. Everest had reason to know that I had some property there; I

told him, H. B. Everest; at the time I bought some property C. M. Everest signed a couple of notes for me, indorsed them.

At this first conversation after H. B. returned I don't think I was at Everest's house over an hour and a half; I returned to Buffalo that night, to my home, 766 Elk street, I believe, out towards the works.

Q. Anything stated at this conversation about your coming back?—A. Yes, sir.

Q. What was it?—A. He advised me to come back, and he says, "I think you had better come."

Q. I mean about your coming down to see him again?—A. Oh, yes, sir.

At this conversation I think I told him that I would go home and have a talk with my wife about what to do, and kind of see how I can fix it to come back; I think he asked me, "What do you mean by fixing it?" I says, "If I come back I will have to get my property out of my hands;" and he says—I can not say whether it was at this time, the first time, that this conversation took place, or the second time. I can not swear positively as to that—and I think he told me that I had better go and see Mr. Truesdale. I think that was the first conversation, but I can not be positive as to it. The way he came to mention Truesdale was, he asked me who was my lawyer when this subject was brought up about the property, and I told him Mr. Truesdale.

Q. Was Mr. Truesdale your lawyer?—A. Yes, sir.

Q. Had you employed him?—A. Yes, sir—that is, he done all the business that I ever had to do.

I came back to Buffalo and consulted with my wife. Mr. Everest says, "You come down again, and in the mean time I will see what can be done about it, and you see, too." I told him I would come. I came again within ten or fifteen days after this first, I should judge, if I remember right. I think I went to the house and saw C. M.; if I remember right, I do not think Mr. H. B. Everest was there; I asked C. M. where his father was, if I remember right about it; I don't remember whether this is—I think he said he was away somewhere, and would be home—I think it was at the office I saw C. M., I can not say positively as to that; that his father was away somewhere, and would be home that evening; I can not say whether this was—I saw H. B. Everest before I went back; I think it was at his house; he says, "Have you seen Truesdale?" I says, "No, sir." "Well," he says, "we better go and see him." I says, "When will you go?" He says, "We will go to-morrow." I think C. M. said that perhaps we better go over there to-night. I won't be positive as to this this time. I think that C. M. and I went over there that night; if it was not that night, it was before that, to Truesdale's house. Mr. Truesdale was not at home. Mr. H. B. Everest said we would go and see Truesdale at his office. I went to see Truesdale, I think it was the second time I saw Mr. Everest; I think that Mr. H. B. Everest went with me; I won't be positive that he went. I saw both Everests at Truesdale's office; I think I introduced them to Mr. Truesdale. H. B. Everest spoke up and said that we had come—to Mr. Truesdale—and says, "We have come to see what disposition can be made of Al.'s property;" that is the name he called me by. I think Mr. Truesdale asked me what I meant by it, and I told him I thought some of coming back to the Vacuum Oil Company, and he wanted to know why. I told him the reason, what they had told me, that they were going to bust that company up, and if I did not come back with them what property and money I had would be taken away from me; and Mr. Everest spoke up and asked Mr. Truesdale if there was not some way he could dispose of his property. Mr. Truesdale said that he did not see any way that it could be done unless it was a bona fide sale. Mr. Everest said they could dispose of the mortgages, and he either told me there or before that that he could take the money and invest it so that it would pay me 10 per cent. on the investment, and they could not get hold of it; I think Mr. Truesdale, or myself, I am not positive which, asked the question, what means I could take to get out of the company. H. B. says, "There is a good many ways he could get out;" either Mr. Truesdale or myself asked him how. "Well," he says, "he can cut up something, or do something to injure them; something of that kind" to get out; H. B. said this; Mr. Truesdale spoke up and said, "You must be very careful what you do, or you will lay yourself criminally liable; Mr. Everest says to me, "There is ways that you can get out;" I says to him, "You wouldn't want me to do anything, would you, to lay myself liable?" I think Mr. Truesdale spoke up and says, "You must be very careful or you will end in State's prison"—that is, I; there was a considerable conversation, I can not just exactly remember; I have told all I recollect at present; Mr. Truesdale asked me if I had a contract with the Buffalo parties; I told him I had; "Well," says he, "the best thing you can do is to stay there, then," or something of that kind, I can not say that those are his exact words; H. B. Everest says, "If he comes back with us, why we will look after him;" I think Mr. Truesdale said that these men would be after me for leaving them; I think I told him the terms of the contract.

Q. Was there anything said there; if so, what, by H. B., that they would have to catch you first, to find you first?

The WITNESS. Mr. Everest said, "They will have to catch Miller before they can do anything to him; we will take care of him."

Q. Tell the whole about that.—A. Well, I don't remember anything further about it.

Q. How did it grow up that H. B. said, "They will have to find Miller first?"—A. Oh, he wanted me to leave them; I asked Truesdale what would be the consequences; he said I would lay myself liable to these parties by leaving them; and then Mr. Everest made the remark that they would have to catch him before they could do anything.

Q. Can you tell us, as near as you can recollect, what H. B. Everest said to Truesdale about something might happen to these works?—A. I cannot remember anything further at present; I believe my wife was there the first time; I think I went twice with H. B. Everest; the second time I went to see about the same matter, how I could dispose of my property; I asked Mr. Truesdale how I could manage to get rid of it so that I could save it; he told me that I would have to sell the mortgages and sell the property; I think C. M. was there this time; Mr. C. M. Everest said I had better give Mr. Truesdale the power of attorney to dispose of this property, and I done so; Mr. C. M. Everest gave my wife a list of real-estate dealers, and told her she had better go and see them, see if they could not dispose of it for her, get it into money; at this second interview, I believe it was H. B. Everest or C. M.—I can not be positive which it was at this conversation; I think it was H. B.—says to Truesdale, "If you want to communicate with Miller you can do so through C. M.;" I think I executed papers there at Truesdale's office; I can not say whether my wife did, too.

[Witness is shown a paper.]

This was executed there in Truesdale's office; I know George H. Humphrey, that took the acknowledgment; I believe Mr. Humphrey was in the office at the time; I can not say positively. This paper, as I recollect, was executed on the second occasion; this paper was executed by me and my wife.

[Witness is shown another paper, dated June 27, 1881.]

This was executed by me at Rochester; I think it was drawn up by Mr. Truesdale.

Both papers were offered and received in evidence as Exhibits "B" and "C."

#### EXHIBIT B.

Know all men by these presents, that we, Albert A. Miller and Mary Miller, his wife, of the city of Buffalo, N. Y., have made, constituted, and appointed, and by these presents do make, constitute, and appoint George Truesdale, of Rochester, N. Y., our true and lawful attorney for us, and in our names, place, and stead, to enter into and take possession of all such lands, tenements, hereditaments, and real estate whatever in the city of Rochester and State of New York, to or in which we are, or either of us is or may be in any way entitled or interested, and to grant, bargain, and sell the same or any part or parcel thereof for such sum or price and on such terms as to him shall seem meet, and for us, and each of us, and in each of our names, to make, execute, acknowledge, and deliver good and sufficient deeds and conveyances thereof, either with or without covenants and warranty; also to sell, assign, and convey all bonds and mortgages belonging to us or either of us, and to execute proper assignments thereof in writing in our and each of our names, giving and granting unto our said attorney full power and authority to do and perform all and every act and thing whatsoever requisite and necessary to be done in and about the premises, as fully to all intents and purposes as we might or could do if personally present, with full power of substitution and revocation, hereby ratifying and confirming all that our said attorney or his substitute shall lawfully do or cause to be done by virtue thereof.

In witness whereof we have hereunto set our hands and seals the 23d day of June, 1881.

Sealed and delivered in presence of

ALBERT A. MILLER. [L. S.]  
MARY MILLER. [L. S.]

UNITED STATES OF AMERICA,

*State of New York, County of Monroe, ss:*

Be it known, that on the 23d day of June, 1881, before me personally appeared Albert A. Miller and Mary Miller, his wife, above named, who are to me known to be the persons described in and who executed the above letter of attorney, and severally acknowledged the same to be their free act and deed.

In testimony whereof I have hereunto subscribed my name the day and year last above written.

GEO. H. HUMPHREY,  
*Notary Public.*

(Indorsed): Power of attorney, A. A. Miller and wife to George Truesdale.

MONROE COUNTY, ss:

Recorded June 24, 1881, at 12 m., in liber 344 of deeds, at page 152 and exd.

E. A. FROST,  
*Clerk.*

---

EXHIBIT C.

Know all men by these presents, that I, Albert A. Miller, of the city of Buffalo, N. Y., have made, constituted, and appointed, and by these presents do make, constitute, and appoint George Truesdale, of the city of Rochester, N. Y., my true and lawful attorney, and for me, and in my name, place, and stead, to bargain, sell, convey, and assign any and all bonds and mortgages which I now own and hold, and all bonds and mortgages which may be hereafter owned and held by me, for the purchase price of or upon lands in said city of Rochester, and to demand, sue for, collect, and receive payment of all sums of money due or to become due upon any and all of such bonds and mortgages, and to make and execute, under seal or otherwise, all assignments, discharges, and receipts in writing necessary or proper for those purposes, giving and granting unto my said attorney full power and authority to do and perform all and every act and thing whatsoever requisite and necessary to be done in and about the premises, as fully and to all intents and purposes as I might or could do if personally present, with full power of substitution and revocation, hereby ratifying and confirming all that my said attorney or his substitute shall lawfully do or cause to be done by virtue thereof.

In witness whereof I have hereunto set my hand and seal the 27th day of June, 1881.

Sealed and delivered.

ALBERT A. MILLER. [L. S.]

In presence of

Words "or upon" interlined in above, before execution, by me.

ALBERT A. MILLER.

---

UNITED STATES OF AMERICA,

STATE OF NEW YORK,

*County of Monroe, City of Rochester, ss:*

Be it known that on the 27th day of June, 1881, before me, personally appeared Albert A. Miller, above named, who is to me known to be the person described in and who executed the above letter of attorney, and who acknowledged the same to be his free act and deed.

In testimony whereof I have hereunto subscribed my name the day and year last above written.

JOHN A. BERNHARD,  
*Commissioner of Deeds.*

(Indorsed:) Power of attorney. Albert A. Miller to George Truesdale.

MONROE COUNTY:

Recorded on the 29th day of June, 1881, in liber 6 of miscellaneous records, at page 354 and ex.

E. A. FROST,  
*Clerk.*

I think that meeting in Truesdale's office is the last time I saw H. B. Everest till I saw him on the cars at Rochester. I think I saw him four or five times in Rochester before going away from the Buffalo company. I think it was twice I saw him at C. M.'s house, once at Truesdale's office, and saw him on the cars. I might have seen him different times, but those are the only times I recollect of. I saw him at Rochester in a sleeping-car, which he was taking for New York, about the 28th of June, I think. I would not say it was the 28th; I can not say as to the date. He says, "I am going to New York," and he says, "If you hear from me, will you come to New York?"

I says, "I do not know." "Well," he says, "I am going to New York, and I expect to telegraph to Charley, and he will telegraph to you; and if he does, will you come to New York?" I think I told him I would. He says, "Mr. Matthews has done wrong," and he says, "There is a time coming when he will get his pay for it." I don't remember anything more at that time.

By the COURT: Was there any other conversation that you have not spoken of, and in which you had a talk with either of these Everests?

A. Yes, sir; it was on or about the 23d of June, or before that, I can not say as to the date. C. M. Everest and me had a talk about the Buffalo works, at his office, I think, the 23d of June, or before that. He says, "You go back to Buffalo and construct the pipes so that they can not make a good oil, and then," he says, "I think if you would give them a little scare, you might scare them a little, they not knowing anything about the business, and you know how to do it."

Q. (By the DISTRICT ATTORNEY:) Won't you repeat those words?—A. "You could go back to Buffalo, and construct the pipes and stills so that they can not make good oil, and if you would give them a little scare, I think you can scare them," or words to that effect. I can not exactly remember word for word; I can not remember anything further said at that time. I told him, as I told his father before, that I did not propose to do anything to make myself criminally liable; I told H. B. Everest so in Truesdale's office. I had a talk with H. B. Everest at the house before going to Truesdale's office; I do not think there was anything said at his house about the pipes. There was one thing that was said, that comes to my mind now, I think that was said there; he says, this was the second time, I think, that I saw Mr. Everest, or the first time; I think this was at the house, I would not be positive whether it was the first or second, he said, "Miller, if you had let me or let us know that you were going out with that company, we would have fixed things with you so that everything would have been satisfactory to you, and we would have let you go on and do just as you have done; we would have got those fellows into a boat, and got them into the middle of the stream, and we would have just tipped the boat over and drowned them two, and you would have been all right." There was nothing said about the pipes with H. B., only what was said at Truesdale's office, that I remember. Along the last of June, C. M. Everest said to me, at his office, at Rochester, "We will fix it before you leave to have a man go up there with you." He says, "Who will be a good man?" I told him I did not know who would be a good man. I says, "There is a number of men that would perhaps be good men." I mentioned over some names. "Well," he says, "we had better take Bristow," or Bristol, I do not know which. He says, "You are going back to-night, and I will fix it with Bristow so that you can accidentally meet on the train; you need not let him know, or he probably won't let you know, that he is going up to see those works, how they are constructed, and you show him how they are constructed and all there is to it, the methods of making the oil." He says, "You leave it to me, and you will meet at the depot, and then you will go together." I think that was about all that was said; for us to see the stills, and the way the stills were constructed, and the method of making oil, find out what we had done, how much we had got constructed, and how we manufactured the oil, and process, and what method, and how we applied the system, and the way the works were constructed in general. I took the train, or I was in the depot, I would not be certain which, where I first saw Bristow. I shook hands with him, and asked him where he was going, and he said he was going off for a few days' vacation. There was not anything more said about it, and he got on the cars. I asked him how business was at the works; he came to Buffalo with me, and went through the Buffalo works; I made tests of oil in his presence; I could not say how long he was here, as I went away the next day; we went out to the works in the morning, I think it was about 8 o'clock; I think he staid until noon, I wouldn't be positive as to that; went out in the afternoon, perhaps was around there, may be, six hours, or longer.

After I had this conversation with C. M. that I last related the Buffalo works had one still completed and had been run previous to this. We made a run of oil.

Q. Describe that to the jury—describe the first run. What transpired—not on the occasion when Bristow was there, but the first run they made?

(To this the defendants objected as immaterial and irrelevant.)

By the COURT. When was this first run of oil made?—A. Along in June; the middle of June somewhere. I do not remember the date.

(The objection already made to the question unanswered was renewed by the defendants. It was overruled, and the defendants excepted.)

A. I think there was 175 barrels put in the still; I am not positive as to the amount—well, 200. The still was fired up as they usually are for making oil, and when it was finished there was such a heat that was under it that the safety-valve blew up; that is, it blew out of the safety-valve—the vapors—and the batch, as we call it, was spoiled.

Q. How?—A. Burned, or charred, as they called it. The kerosene was run in; the distillate, as we called it, was all run together—naphtha, kerosene, and paraffine. The

residuum which was left in the still was a sort of tarry substance; it was no good for lubricating oil—not so considered. I say the batch was spoiled.

Q. Had the safety-valve been tied down in any way—weighted?—A. No, sir; it was not tied down or weighted down; the fires that were built under the still were pretty heavy fires.

Q. Did you notice what the effect was? The still was walled in?—A. I do not remember as to that.

Q. Where were you about this time? After the fire where did you go?—A. I was in the Atlas refinery, or the Solar, I do not know which works. The Solar was right adjoining these works; I could not say how many feet I was from this still; probably 200 to 500, or perhaps more; I do not remember particularly. I can not remember the name of the man who was firing there; I am familiar with it. Mr. Matthews did not, to my knowledge, know anything about my going from Buffalo to Rochester at these times.

Q. Before this first run of oil you may state whether or not you had had this conversation with C. M. Everest about coming back to Buffalo and giving them a scare.—A. Well, it was before; the conversation that we had about the scare was before there was any oil run; I am a little mixed on the dates, because I can't remember; there was so much of it that I can't remember. After this I received a telegram, and after receiving it went to New York. I met H. B. Everest at the Union Square Hotel; I believe that is the name. I think it was about 12 o'clock that I got to the hotel. I went in and shook hands with Mr. Everest, and I think he asked me if I had been to dinner. He says: "I was up to the depot; the train was late, and I came back to the hotel. Says he, "You better have some dinner." I don't remember whether I had any or not. I think he had a lunch, and don't know but I did. He says, "What do you say to going down to Boston?" I says, "I don't want to go to Boston." "Oh," he says, "you better go down with me. Go down on to-night's boat and have a good time." He says, "It is a nice trip; go down and stay awhile," and I think I said I wanted to go back; come there to hear what arrangement he would make. "Well," he says, "you come down to Boston and we will fix things all right when we get there. This was after he had lunch. In the mean time there was a gentleman came in to see him, if I remember right, and he introduced me to him. I think the gentleman's name was Rogers. There is one man I see here that looks like him. I think his name was Rogers; that is the name he introduced him to me,

Defendants' counsel, pointing to the defendant, Rogers: Is that the man?

A. Yes, sir; that looks like the gentleman; he looks like the man, but not as that man did then; that man seemed to have a lighter moustache; after the introduction I think this gentleman bade us good day, and I think he says: "I will see you again if you do not go to Boston," or words to that effect; I don't exactly remember the exact words; I couldn't say whether this was addressed to me or to Everest; I think he said, "Gentlemen, I will see you again if you do not go to Boston;" after this gentleman went away Mr. Everest says to me, "The best thing you can do is to go and write a telegram and tell your wife to go back to Rochester;" I don't think I had had a talk about my wife before that; there might have been something said about the family or something; I says, "You better write it; I am a poor writer." "No," he says, "I do not want to appear in this case at all;" he says, "We will go up in the room and you write the telegram." We went up into the room and I went to write the telegram, and I says, "Mr. Matthews will serve an injunction on our things or something—won't let her move, when he finds out that I have left them in that kind of a way; there may be some way he can hold our things there." "Well," he says, "you write the telegram; we will have your brother go up there and help her;" and I sat down and wrote the telegram. "Write it so that she can move the 4th of July, and they can't attach her things," or your things, whatever it was; after I had written it I handed it to him and he says: "You pay for that," and I paid for it; I said, "I have some mistakes in this telegram; I have made some 'n's,' ought to be 'm's,'" I says, "You better write it;" he says, "I don't want to appear in the matter," or words to that effect; he took the pencil up; I delivered the message to a man in the telegraph office and paid for it; Mr. Everest was standing at my left, a few feet from me, if I remember right; it was the office at the hotel.

I remained there perhaps two hours before I went anywhere with him; he says, I better go down to Boston; I told him I did not want to go to Boston; I says: "We can just as well have the understanding here." "O," he says, "you better come to Boston;" he says, "We will go down on the boat to-night—5 o'clock boat, a nice trip, and we can fix everything all satisfactory there." I finally consented to go, and we went; I think he asked me how they were getting along in Buffalo—what shape I left them in; aside from the telegram, most of the time we talked it was about the Buffalo business; we went to the boat together; Mr. Everest bought the tickets; I think it was the Fall River line we took, I believe some time before 5 o'clock; we had the same state-room;

we got to Boston the next morning some time, I can't remember the exact time; I think it was Young's Hotel we went to; H. B. registered; we had a room together, with two beds; after registering, we had breakfast and went to church together, at Tremont Temple; I think it was; went back and had lunch; we took a boat and went down to Nantasket Beach; I think it was on the boat or at the hotel he says, "Now, I have registered you as 'friend,' and you don't want to be known here, and I will introduce you to Reynolds, or whoever I introduce you to, by the name of Milner." I says, "It does not make any difference what name you introduce me by, I suppose I have no interest one way or the other;" that is the name that I was known by while I was there.

We came back to the hotel after going to Nantasket Beach, and the next day he went to look at some carriages, and went down to the office; he says, "Now we will go down there;" I think before this we met Reynolds, the Vacuum Oil Company's agent in Boston; the company has an office and store-house there in charge of Reynolds; he says, "We will go down to the office, and that will be a nice place for you to stay; I want you to stay here in Boston and not go back; you can stay here and have a good time;" I done so, staid at the hotel a few days, or longer, I can not remember exactly as to that; Everest staid there, I think, three days, I would not be positive; the second day, I believe it was, I says, "I guess we better have an understanding now about what you are going to do with me." "Well," he says, "I tell you what I am going to do with you; I want you to stay with us, leave that company, not go back to them, and we will use you well; we will pay you \$1,450," or something along there, I forget the exact amount; he said, "You won't have much to do, and you can stay here in Boston, and keep away from those fellows, and we will protect you." Says I, "Who's going to make up if those fellows come on and sue me for damage?" I says, "Who is going to make this up? Who will make up this loss that I have been going to by sacrificing my property?" He says, "Leave that to me, I will fix that all right; you just do as I tell you and you will come out all right." The offer he made was a little less than \$1,500. I says, "Mr. Everest, you had better make that \$1,500, make it an even money;" he says, "All right;" I says, "Of course; I want this understood, that I am not to go into any hard work; I will do most anything except shovel coal;" I says, "I don't propose to do that." "Well," he says, "you won't be aaked to do that;" he says, "You stay here till we get ready for you, and we will fix things for you." He drew up a sort of a contract, and also wrote a letter; I forget the substance of the contract; don't remember the wording of it; I believe I signed it; I be eve he did; I think I asked him for a copy of it; I wouldn't be certain as to that. He says, "That will be right, you will get one all right." I never saw the contract after, to my knowledge; he also wrote a letter which I read, or he read to me, I can not be certain which; I saw him do nothing with it except put it in his pocket.

(Upon the defendants' objection, the court admitted testimony as to the contents of this letter only as against the defendant, H. B. Everest.)

The witness proceeded: It was headed, C. M. Everest, Rochester, N. Y.; I have made arrangements; tell Mrs. Miller, or show this letter to Mrs. Miller; I can not word it; I have made arrangements with Al. that we are to pay him \$1,500 a year; read this letter to Mrs. Miller; if she wants to communicate with him, or something like that; I can not remember the words to it, but it was to that effect; I think it was in that letter, I am not positive, to communicate with him through C. M.; I can not remember the exact wording of it—that everything was all right with me, that he had made everything all satisfactory with me, and to let my wife know it. He took me to the store, and introduced me there.

Q. What conversation did Everest have with the agent there in Boston, in your presence?—A. At the store I think he says, "I brought Mr. Miller down here to stay with you for a while, and as he is a stranger here, you kind of make it pleasaut for him, and he will stay here with you for some time, perhaps;" I can not give his exact words.

I continued to keep the room in the hotel until he went away. I told him I guessed I would change my location and get another place to stay, and he says, "All right, go wherever you like, stop wherever you like, and we will pay all your expenses while you are here." I went to a place on Beach street, I believe.

While in Boston, I used to walk down to the store—the office, rather—and stay there when Reynolds was out; go where I was a mind to when he was there; used to go around the town, stop down at Nantasket Beach and South Point, and them places; I believe I helped to store some oil once; that took a couple of hours, perhaps longer; Mr. Everest said, "If you want any money, Mr. Reynolds will give you what money you want; ask him and he will give it to you." I think I drew \$50; I can not say; I drew some money, I think, twice, I can not say as to the amount; I think it was three weeks I staid in Boston before I left at that time, perhaps not so long, perhaps longer; when I left Buffalo I left no word with Matthews where I was going; my wife knew I was going to New York, no further; while I was in Boston I got a letter from her

after I had been there, I think, two or three weeks; I then went to Rochester, having received a communication from my wife, wanting me to come home, about this power of attorney that I had given Mr. Truesdale; I went there, and saw C. M. Everest at his office; did not see H. B.; I think he had gone back to Colorado, but wouldn't be sure; he was not there; after getting this letter from my wife I telegraphed from Boston to C. M. Everest; after I arrived in Rochester he wanted to know what brought me back; I told him I came back in regard to the power of attorney I had given Mr. Truesdale; I told him that my wife thought that Mr. Truesdale was charging her too much for transacting the business; that was the reason I came home; he says, "You better fix matters as soon as you can and go back;" I transacted my business and went back to Boston; I don't remember how long I was in Rochester, it might have been a week or less; my wife had moved from Buffalo back to Rochester; when I went back to Boston I did the same as I had done before—hung around the office and warehouse, and occasionally helped to roll in a barrel of oil, something like that; staid in the office while Reynolds was out, with the other men there; I don't remember how long I staid in Boston that time, it was two or three weeks; I then went back to Rochester; I did not do anything for quite a little while, and I went to C. M. Everest and told him I wanted something to do. "Well," he says, "we have not got anything for you to do just now; you are all right;" he says, "We are going to put down a salt well at Leroy, and we want you to take charge of that when we get around to it;" it was, I can not say, a month or two before they had done anything about the salt well; I went to the Vacuum Oil Company's office and drew my pay, at the rate of \$1,500 a year; during that time I asked Charles what I had better do in regard to my stock that I had subscribed to, and my settling up with the Buffalo company; he says, "You better go up there and take Outerbridge with you, and see them;" he was, as I understood it, acting as their attorney; we came to Buffalo together; Outerbridge had told me at Rochester what to say; I had a talk also with Mr. Everest and Mr. Beach; we found Matthews; the first time, I believe, we spent half a day here; I came again to Buffalo with Outerbridge, perhaps a month or two after that; I think we went back the same day.

I never again went to work in the Rochester works, manufacturing oil, after I left there; I took charge of some men to dig a ditch there; we were, perhaps, a week or three or four days digging it; I had to go away then; that is all the work I remember of doing around there.

C. M. Everest told me to go to Buffalo and buy, or first go to Olean, I think, and see some parties about letting the contract to put down the well; I went and saw them; the result of it was that they let the contract to these parties; then I came to Buffalo and bought an engine and boiler of some firm here in Buffalo, had it shipped there, went there and hired a man to unload it, draw it up to where they were going to ———; I sank a well up there at Leroy for salt; I think C. M. told me he was doing it in his name, or his folks', I wouldn't be certain which; I guess I was employed three or four months sinking the well, perhaps longer, from the time we were first started to do anything about it; I think it was in September, 1881, when we first commenced operations to buy stuff, or October; I used to go up on the cars from Rochester in the morning and come back at night; sometimes I would stay up there a day or two; kept a record of how deep the drillers would go, and what state of rock they went through; when they got to cutting brine, I waited to find the gravity of the water and brine; reported progress to C. M., how they were getting along; that continued to, I think, December or January, maybe it was February when it was finished; I drew my pay regularly from the Vacuum office; did not do anything particularly after that, till I went to California; I think it was along about the 8th of May, 1882, that I left Rochester for California; I talked with Charles a number of times about going there; I told him I wanted something to do, something that I could pass my time away, and not be running round. "Well," he says, "there is not anything for you to do at present;" he says, "I wrote a letter to father, and see what he says in that letter that he wrote to you about going there;" I had a letter from H. B.; I had sent him a paper and wrote him a letter, which the one I received was the answer to.

The letter was offered and received in evidence as Exhibit "D."

EXHIBIT D.—H. B. Sten. May 13, 1887.

RIVERSIDE, CAL., February 23, 1882.

A. A. Miller, Esq.:

DEAR SIR: Your letter and the Le Roy paper came to hand.

I felt confident that you would find a body of rock salt in Le Roy. If you did not pass through such a body of salt, you must be very near to it to get brine of 80°.

The bitter water is a long distance above the salt body in Wyoming, and should be carried off.

I know so little about the progress of this well I am not prepared to express an opinion as to its value.

I should advise the sale of it, or, if no sale, a gift of it to enterprising citizens who would pump it and make salt.

Shall we get the \$1,500 of the citizens?

You ask what you will do. I suppose you will do whatever Cha. wishes you to. I know so little about what is to be done that I would not venture to say anything about it.

If I was to advise you I should say come to this country and plant out apricot, peaches, grapes, oranges, and lemons, and in a few years have a place that will be worth \$20,000. You can do it by economy and not very hard work in six years' time, and be independent, and live in a climate where only slight frosts occur in winter, and in which summer is no unhealthy season. The coast breezes make it lovely. Nights always cool and delicious.

We think now that we shall make it a home here. Ross Hart leaves a position and salary of \$2,400 per year and is now preparing the ground for trees. He thinks he will do better than work for that price, and so do I.

I am caring for 10 acres for C. M. E. next to mine, for I expect he will come here to live at no very distant day.

Pack up, sell your property there, and come on. Come right to my house, and I will help you to get a place and show you how to raise fruit and be an independent man.

Yours, respectfully,

H. B. EVEREST.

After that Charles said he had got a letter from his father; that they were going to start a cannery; his father was going to be a stockholder in a cannery, and that there was an opening there for me; that I could go there and it would be a good thing for me; I could learn the process, the business, and that father had made arrangements whereby the company will pay me \$50 a month; "The Vacuum Oil Company," he says, "will pay you \$75, that will make \$125, and my advice to you is to go;" I told him I would consider it; I done so and made up my mind to go; he allowed me, I believe, \$200 for expenses; my wife was to draw the \$75 a month from the Vacuum Company; the company that employed me was to pay me \$50 a month. I went to San Francisco, staid there a week or so, arrived at Colton Station, which is 3, 4, or 5 miles from Riverside; this is some 300 miles or so from San Francisco, in southern California; I arrived there on Sunday, I believe; took a stage-coach and rode to Riverside and went to the hotel; that evening, or afternoon, I walked up to Mr. Everest's house at Riverside; he says, "We have made all arrangements for you to go to work, and expected you here before." "Well," I says, "I am here now, and I am ready to go to-morrow;" he says, "All right, I am glad you came, bring your trunk up here to the house, and you can stay here nights till we get the cannery going, and you can board down at the hotel; we will fix up a nice room for you at the cannery, and then you can stay there;" the next day, I believe, they sent my trunk up to Mr. Everest's house, and I went to work at the cannery; he said, "I suppose you understand the arrangements?" "Yes, sir," I said, "I understand it all right;" he says, "We will have further understanding hereafter; I have made arrangements whereby you can go into this business and learn the process, business, and make a nice thing when you want to work;" they had a man there, a processor, and he showed me what he could during the time he staid there about the business; I only staid at H. B.'s house a few nights; I got my room fixed up at the cannery and moved up there; I believe I worked in the cannery till August; I never heard that the Vacuum Oil Company had anything to do with that cannery; I drew at the rate of \$50 a month while I was there.

The stockholders in the cannery got a little dissatisfied about the way the thing was running, and I thought it wasn't going to last; I told Mr. Everest I guessed we had better have an understanding about this matter, about whether they were going to make up what I had lost by this transaction; I told him I wanted to know what they proposed to do with me; I said, "It is about time we had an understanding now, what you are going to do with me; you have had me around from one place to another, and given me no steady employment; now I want to have an understanding, and if you don't propose to give it to me and make up what I have lost by this transaction, I am going to leave you, and I will give you notice according to our agreement in Boston, that if you wanted to dispense with my services you were to give me a year's notice, and if I wanted to leave you I was to give you a year's notice; now I will give you notice that I am going to leave you." "Well," he says, "this is kind of sudden," or something like that; he says, "I will write to Mr. Archbold, and advise that he release you;" I says, "If you propose to make good what I have sacrificed by this transaction, I want you to do so right off; the quicker you do it the better;" "Well," he says, "you will give me time,

won't you?" He says, "You know it takes a couple of weeks or longer to do business from here to New York;" I says, "Yes, sir, I will;" I waited two weeks, I believe, or longer; he says, "I have heard from those parties and they are willing to release you," or words to that effect; previous to this, before I had been there two days, he advised me to buy a piece of land; he says, "There is a piece of land over here that you can buy for \$1,200;" says he, "I would advise you to buy it;" I says, "I haven't got the money;" he says, "You can send and get it; we will go over and look at it;" he seemed to be very anxious to locate me there; I think we went over the first evening I was there; the result of it was he bought the land for me and took the deed in my name, as I understood it; I sent to my wife to get the money; I had some money in the bank in Rochester, and I sent a check to get the money for my land which I had in the bank. My wife, in place of sending the \$1,200, or thousand, whichever it was, sent out \$600, or C. M. Everest sent it.

(Witness produces a paper.)

This is the draft or receipt for the money.

(It was admitted that the paper was in Charles M. Everest's handwriting.)

It was offered and received in evidence as Exhibit E.

#### EXHIBIT E.

ROCHESTER, N. Y., *July 26, 1882.*

Received of Mrs. A. A. Miller six hundred dollars on account of draft for twelve hundred dollars, made by A. A. Miller on C. M. Everest and indorsed by me.  
\$600.]

H. B. EVEREST.

By C. M. E.

I believe this money came to H. B. Everest; he gave me credit for it, I suppose, on the purchase of the land; he had taken a deed of it for me; I never saw the deed till I made the transfer back to him; afterwards he told me that he had heard from these parties, and they were satisfied to release me, and he made out some papers, something in regard to the patent, that the Buffalo Company was infringing upon the Vacuum Oil Company's patent; I didn't pay particular attention to it; he did not read me or show me any letter purporting to come from Archbold; he simply said that he had heard from these parties, and everything was satisfactory, and they would release me; I told him then we would go and settle up; he made out papers, a receipt, I believe, for what was coming to me and we went to the lawyer's office; there this property was transferred to him, and I told him if he was ready to pay me, I would quit; we went over to the bank and he drew his check and paid me what was coming to me, I think a thousand dollars or more, I do not remember the exact amount; I had some further conversation with him before I left there, but nothing pertaining to this matter, as I remember; had some before we settled up, and after the time that he wrote to these parties, or said he would; he repeated the same thing that he said the first time I saw him, that if I had only done as I ought to have done, and come and told him at the time, he would have fixed things so that everything would have been all right, and says, "You went too far with it, and if you had come and told me about this thing, as I told you before, we would have just got them fellows right in a boat, and got them right in the middle of the stream, and we would have just tipped them two over and drowned them, and you would have been all right;" this was either coming down town on an evening or sitting somewheres; I can not say where this conversation took place; we talked it over a number of times, about what he would have done if I had done so and so.

What I was saying about a patent was, he made out a paper in the form of an affidavit, I believe; I saw the paper once; I do not remember reading it at the time; I was a little excited at the time; it was for me to make an affidavit, which he said he wanted to use in evidence in suits that they were bringing; he also said in the bank, "Now we have settled up, now we are good friends;" I says, "Mr. Everest, I have nothing against you, I do not suppose you have anything against me personally, but I feel as though that you hadn't, through the Standard Oil Company, hadn't used me well," that I thought they hadn't used me as they ought to, that they said if I come with them they would stand by me, and that any law suits, anything I lost by the transaction they would make good; and he says, "Now, we are about to leave one another," and he says, "If anything ever comes up in this matter I would like to have you stand by us, and we will give you—we will see that you are paid all right, and we will give you \$25 a day while we need your services;" I says, "Mr. Everest, I do not know as I am under any obligations to the Standard Oil Company;" I says, "I do not know as my interest lays that way, I do not think I shall do anything to benefit them, they have injured me all that they can, they have switched me all around, all over the country, they have got me out of employ, not given me anything

to do, which I sought to have them do; I do not think they have used me right, and I have sacrificed considerable money by this transaction, and you have always promised that it would be made good, and you have not done so; now," I say, "that settles it; I do not think I shall do anything in the way of the Standard Oil Company," or words to that effect; I can not remember, but it was to give them to understand that I did not have any great love for them, the way they had used me.

Shortly after that I came back from California to Rochester, where my wife was; then I moved back to California; I had some property there, or was about to buy some; I staid there until January, 1883; I only remained in Rochester a short time in 1882 before I went back to California; I took my family with me; C. M. Everest gave me the money for my expenses to California the first trip; I think it was \$200; they paid my expenses back from California to Rochester, that was the understanding I had with C. M. Everest before I went, that if I was dissatisfied they would pay me my expenses back; when I went again my expenses were my own business; after I got back to Rochester I can not tell how long it was before I did anything; the first work I did was for the Phoenix Oil Company, in Buffalo, manufacturing oils; I staid with them until August or September, I think it was, of 1883; I am now living at Corry, Pa., with my family; I am in the employ of Clark, Warren & Co., manufacturers of oil, and have been, I believe it will be three years in September.

(Witness is shown paper.)

This is the agreement between myself, Matthews, and J. Scott Wilson, that I have mentioned in my testimony.

The paper was offered and received in evidence as Exhibit F.

#### ARTICLES OF AGREEMENT BETWEEN WILSON, MATTHEWS & MILLER.

We, the undersigned, C. B. Wilson, C. B. Matthews, and Albert A. Miller (cut out with signatures) have this day formed a copartnership for the purpose of the purchase, manufacture, and sale of oil and (cut out with signatures) of such real estate and various appliances, material, machinery, stock, etc., necessary in carrying on the above-mentioned business.

Said copartnership to continue for the period of five years from date, and is to be known as the Buffalo Lubricating Oil Company. Each member of the firm agrees to furnish the sum of \$2,000 to aid in carrying on the business of the company, and agrees not to withdraw from the copartnership above mentioned without the written consent of the other members of the firm, and also upon the condition that he or she forfeit to the company the \$2,000 originally paid in by them. Any member wishing to withdraw from the firm shall make a written request to the company, or the request will not be considered.

The three members of this firm are each to share alike in the profits and losses of the above-mentioned business, and are each to give their time, influence, and best endeavors to advance the interests of the copartnership.

It is further agreed that Mrs. C. B. Wilson, in order to entitle her to an equal one-third interest in the property and business of the copartnership, is to furnish it with the services of her husband, J. Scott Wilson, such continuous service on his part to be received instead of individual effort on the part of Mrs. C. B. Wilson, in doing and extending the business of the company.

Dated and subscribed at Rochester, N. Y., this 15th day of March, 1881.

(Cut out).

C. B. MATTHEWS.

(Cut out).

We afterwards formed a stock company.

I don't remember whether or not I wrote to my wife from Boston while I was there first; I think I did; I wrote some letters to her; I think I received a letter from her in answer to it; I think I received a letter from Truesdale, accompanied by some papers.

(The witness now explained the construction of the still at the Buffalo works):

The two stills set side by side; they were bricked in on the outside, and the fires were put under; the oil was run into the still through a pipe connected at the top of the still; if I remember right, there were four pipes that led from this still that took off the evaporation, the gases; they pass off into what we term the "condenser;" the tail-house, where we cool the vapors, when we first erected the works, was right at the end of the box, as we call it, the water-box; after the pipes pass through the cold water it condenses the vapors, and they come into this tail-house; they pass into a receiver there, and from there into the tanks, which are located on the ground; that oil is naphtha, kerosene, or paraffine, as we term it.

Q. What would be the consequences in case too hot fires were applied and the gas should blow off the pipes and become ignited?—A. The consequences would be there would be a fire; if ignited there would be a fire.

Q. Are these gases explosive?—A. Yes, sir; if confined.

**Q.** In this first run of 175 barrels how much residuum should have been left in the still from which to manufacture lubricating oil under the usual process of manufacture?

(The defendants objected to the question as immaterial and irrelevant, and upon the ground that at the first experiment in new works it would of course not be expected that there would be a successful result; and that there was not the slightest evidence that Miller did anything amiss in connection with that experiment, or any imputation upon him yet.

The objection was overruled and the defendants excepted.)

**A.** I think there would be from the drawing that we wanted to get at that time perhaps 22 barrels of residuum, along there somewhere. I don't remember exactly what we were running, but I think we were running for what we term 28 gravity.

The certificate of incorporation of the Buffalo Lubricating Oil Company, Limited, was here offered and received in evidence from the files of the clerk's office of Erie County, and it is as follows:

STATE OF NEW YORK,

*Office of the Secretary of State, ss :*

It is hereby certified that an original certificate for the formation of a corporation in the class of limited liability corporations, under the corporate name of Buffalo Lubricating Oil Company, Limited, was filed in the office of the secretary of state under chapter 611, laws of 1875, entitled "An act to provide for the organization and regulation of certain business corporations," on the 15th day of April, 1881, and that the following is a true and correct copy of said original certificate (the same having been compared with said original) and that of the whole thereof:

BUFFALO, N. Y., April 13, 1881.

*To his honor the Secretary of State, State of New York, Albany, N. Y. :*

We desire to organize for incorporation a company under the provisions of the act passed June 21, 1875, such company to be known as the Buffalo Lubricating Oil Company, Limited, its object being the producing, dealing in, storing, conveying, and manufacturing petroleum into its various products.

Dealing in, storing, and conveying the products of petroleum.

Dealing in and manufacturing packages and things convenient or necessary in carrying on the aforesaid business.

Its principal operations to be carried on at Buffalo, N. Y.

The amount of its capital stock to be \$40,000.

Its capital stock to be divided into four hundred shares of \$100 each.

Its principal business office to be located at Buffalo, N. Y.

The duration of the corporation to be for the term of twenty years.

We, the undersigned residents and citizens of the State of New York, desire to form a corporation as herein stated.

C. B. MATTHEWS.

A. A. MILLER.

J. SCOTT WILSON.

J. L. MATTHEWS.

F. R. BEARDSLEY.

Subscribed and acknowledged before me this 13th April, 1881.

TIMOTHY COCHRANE,

*Justice of the Peace in and for the city of Buffalo, Erie County, New York.*

STATE OF NEW YORK,

*Erie County Clerk's Office, ss :*

I, Robert B. Foote, clerk of said county, and of the courts thereof, the same being courts of record, do hereby certify that Timothy Cochrane, whose name is subscribed to the proof or acknowledgment of the annexed instrument in writing, was at the time of taking such proof or acknowledgment a justice of the peace in and for the said county, duly commissioned, sworn, and authorized to take the same; and further, that I am well acquainted with his handwriting and verily believe that the signature to the said proof or acknowledgment is genuine. In testimony whereof I have hereunto set my hand and affixed the seal of said county, at Buffalo, this 14th day of April, A. D. 1881.

[SEAL.]

J. E. EWELL,  
*Deputy Clerk.*

And it is further hereby certified that upon the filing of said certificate, of which the foregoing is a true and correct copy, on the 15th day of April, 1881, as aforesaid, a license was issued by the secretary of state, pursuant to said act, to the five persons

named in and who made and acknowledged said certificate, empowering them as commissioners to open books for subscriptions to the capital stock of said proposed corporation at such times and places as they might determine.

And a verified record of the proceedings of said commissioners having this 3d day of June, 1881, been filed in the office of the secretary of state, containing a copy of the subscription list to the capital stock of said proposed corporation, together with a copy of the by-laws for said proposed corporation, adopted by the subscribers to said capital stock at a meeting of said subscribers held at No. 54 West Seneca street, Buffalo, N. Y., at 2 o'clock p. m., on the 26th day of May, 1881, pursuant to the provisions of said act, as appears from a verified record aforesaid, at which subscribers' meeting, as aforesaid, seven directors (being the number provided for in the said by-laws of said proposed corporation) were also chosen, whose names, as further appears from said verified record of proceedings filed as aforesaid, are as follows, to wit: Charles B. Matthews, C. B. Wilson, Frank R. Beardsley, Albert A. Miller, Charles C. Beardsley, Daniel R. Benedict, Hiram Benedict.

Now, therefore, I, Anson S. Wood, deputy secretary of state, do hereby certify that said corporation, to wit, Buffalo Lubricating Oil Company, Limited, is fully organized in accordance with said act, chapter 611, laws of 1875, and that all the provisions of said act have been duly observed in the organization of said corporation as hereinabove set forth.

Witness my hand and the seal of office of the secretary of state, at the city of Albany, this 3d day of June, 1881.

[L. S.]

ANSON S. WOOD,  
*Deputy Secretary of State.*

STATE OF NEW YORK,  
*Erie County Clerk's Office, ss:*

I, Joseph E. Ewell, clerk of said county, do hereby certify that I have compared the annexed copy of certificate of incorporation and copy indorsements thereon with an original record of the same and its indorsements, entered and on file in this office, and find the same to be true transcripts of and from the said originals and the whole of each thereof.

In witness whereof I have hereto set my hand and affixed the seal of said county, at Buffalo, this 23d day of June, 1884.

J. E. EWELL,  
*Clerk.*

The WITNESS. C. B. Wilson I think was Mrs. Wilson; the two Beardsleys were brothers, living in Wyoming at the time; the two Benedicts lived at Lockport, I believe; I was elected vice-president, I believe, of this company; I believe I subscribed for twenty shares of stock, for that or more, I don't remember which.

Upon cross-examination the witness said: The first Everest I became acquainted with was Horace Everest, brother of Hiram B.; that was in 1868 or 1869, I think; he was then engaged in the Vacuum Oil Works; I suppose I had been there to work about two weeks, I think, or perhaps not so long, when I became acquainted with H. B.; they sent for me, I being unknown to any of them before, so far as I knew of; they asked me to go to work in any sort of work that I might be able to do at first. There was a misunderstanding when I first went there about what I was to receive. I was first employed continuously a few weeks only, and then left on account of some misunderstanding between my employers and me about the rate of my payment. I staid away then perhaps six months, working at the carpenter trade in the employ of a man named Punnett; then I came back to the works, I think, in 1869; I went to work firing boilers; my object in going back was to learn the business; I proceeded to learn the business generally—all departments of it, as far as I was able. Before that I had had no occupation of a similar character at all; I had never been employed about steam-engines or machinery; I do not know whether I was firing the boilers three months or six months; then I took the running of the still—was called "stillman;" I continued to run the stills until I took charge of the work—until Mr. Everest made me superintendent of the entire manufacturing department; I think that was about 1877 or 1878. From that time on I had the supervision of the whole manufacturing of the oils; all the departments of manufacture were under my particular supervision, and continued to be down to the month of March, 1881.

Mr. Everest first came to hear of me through my brother Truman, who had already been in the employ of the company, and was at that time; it was through my brother being there that I was called upon to get employment there at that time, I believe; so far as I know my brother has continued there ever since.

When I first went there, if I remember right, I understood the works had been in operation a couple of years, perhaps longer; I do not remember as to that; it was comparatively a new establishment. I became acquainted with the two Everests who are defendants here shortly after I went to work, and have known them ever since, at least down to the time I left there, quite familiarly.

At the time I left the concern I believe I was getting paid by the month; I don't remember the amount; I think it was about \$112, or along there; it came to \$1,400 a year, or a little over, figuring in my house rent; the house belonged to the company, and I figured the rent of it as a part of my wages; they never charged me anything for the house. This sum of about \$112 a month was made up in two or three different forms, so much a month, I don't remember the exact amount, so much a day or an hour besides, and so much a year besides; that was the arrangement under which I was working for some time before I left them. Some time in the spring of every year we looked after accounts with the company, and closed up for the year.

I think it was in the year 1880 that I first became acquainted with Charles B. Matthews; it might have been earlier than that; I think Mr. Everest made me acquainted with him; I don't remember where; so far as I can remember, at the company's office; the first time that I remember now of knowing that he was in their employ he came to the works to interview me; the works were in one part of the city and the office in quite a different part; I do not remember the year that he came there; it was perhaps a year before I left—might have been two or three years; I believe that he then had charge of a printing office or something—something connected with a paper, or doing some business for that; I believe they were printing a paper at one time; I don't remember what sort of paper it was; I have seen it; Matthews, I understood, was connected some way with that paper; I also had reason to believe from the papers that he showed me that he had some other business; he came up to interview me in regard to something pertaining to a refinery; I do not really remember what it was; he had some papers that he showed me that I looked over; the papers were something pertaining to a patent; I could not say whether they were letters patent.

Q. Or copies of them?—A. They were simple drawings.

Q. Like those from the Patent Office, were they not?—A. I don't know as I ever saw any from the Patent Office.

Q. Did you never see any letters patent?—A. I don't remember; I may have; I think I have.

Q. And so you can not say anything about those papers, except that they looked like drawings?—A. Yes, sir.

Q. You inspected them at the time, did you?—A. He showed them to me.

Q. And you inspected them?—A. I looked them over; yes, sir.

Q. And you inspected them?—A. I examined what there was to it.

Q. And you inspected them?—A. I don't know what you mean by that.

Q. You do not know what "inspect" means?—A. I examined them and seen what they were.

Q. And you inspected them?—A. I said—I suppose you would call it inspecting to look at them, I don't know what you would call it.

Q. And then you learned, did you not, that Mr. Matthews had some other relation to the company than the editorial relation of the paper?—A. Why, I thought so when he showed me those papers, of course.

Q. And that that relation respected the letters patent of the company for various processes and products, and so on, did it not? That was what you understood?—A. I did not understand the question exactly.

Q. That his relation to the company had regard to the patented processes and products and apparatus of the company; that was what you understood, was it not?—

A. I understood that those were patents of other parties; I had no reason to think that he was specially charged with looking into the patents of other parties and of the company; I knew that he had these papers, that was all I knew. I understood he was looking after the company's interest, I never knew in what affairs.

As high as I can recollect, it was at the company's office that I first saw Mr. Matthews; it may have been at his house for what I can remember; his house was in Wyoming or Warsaw, somewhere in Wyoming County; I went up there to see a salt well that they had put down, to look it over, and to hunt; I went there merely on a pleasure excursion, not on behalf of the Everests; if I remember right, Mr. Everest gave me a pass.

I have been living at Corry very nigh three years; during that time I have been here in Buffalo some time, at different times may be two months or longer, during the three years; I have had business in Buffalo during that time, no occupation; I do not think it would exceed eight times that I have been here in those three years, I don't think that many, may be more, I can not remember; sometimes I have staid here several weeks together; my employment with Clark, Warren & Co. has been steam-fitting, general man, now I have charge of one department; I think during that time I was here once six or eight weeks together; we came here, and my wife was taken sick and had to stay; that was a year ago last winter, I believe.

When I went up to Warsaw or Wyoming in 1877 or '8, I believe I staid a couple of days; I believe there was a salt well completed there at that time in which I understood the Everests were interested; Mr. Matthews did not, to my knowledge,

have anything to do with that at that time ; he might have had, I don't remember whether or not ; I think I saw him while I was there.

Q. Is it not true that Mr. Matthews, when he came there to see you and consult with you at the works, had with him a book with cuts of different patents pertaining to the manufacture of oil ?—A. He might have had and showed them to me ; I don't remember ; I don't remember now.

Q. Now, did he not, as a matter of fact ?—A. As I say, I don't remember that he did have.

Q. Well, now, have you not so testified ?—A. I don't remember whether it was a book or just drawings, it might have been a book : I couldn't swear positive that it was a book.

Q. And they were drawings of patents, too, were they not ?—A. Well, I expect they were drawings of patents ; I don't remember as I—

Q. You do not quite want to swear that they were drawings of patents ?—A. No, sir ; I do not feel as if I—

Q. But, now, you have so sworn, have you not, on another occasion ?—A. I don't remember, perhaps I have.

Q. Oh, well, that is really what you understood them to be ?—A. As I remember now, I don't remember whether it was in a book form, or what form it was in.

Q. I am indifferent about the book form.—A. Whether they were patents or drawings.

Q. And he consulted you on the subject of the relations of these patents to the way the Vacuum Works were constructed, did he not ?—A. I think, if I remember right, it was pertaining to these patents, as he claimed that somebody was infringing on their patents, or something, and he was looking up the matter ; or somebody was claiming that the Vacuum Oil Company was infringing on their patents, I don't remember which.

Q. And that was his business, was it not ?—A. It seemed to be at that time ; yes, sir.

Q. And this was in the interest of the Vacuum Oil Company that he did this, as you understood, was it not ?—A. I so understood.

Q. You understood that from him, too, did you not ?—A. Well, I had reason to think so ; he did not say anything about it ; I understood so from him ; I should not have given him any information.

Q. Have you not, on a former occasion, testified "he was in the interest of the Vacuum Oil Company, as I understood it" ?—A. That is what I say now ; after that time I don't think I ever saw him at the works again ; I saw him a number of times at the office, passing into his office or going up in the elevator ; I believe he had a room where he done his business, the company's business, as I understood it ; I do not know anything about how long he was connected with the company ; I don't know whether he was connected with the company at the time he and I met in calling on Charles Everest, in the company's office, or not ; I can not swear that he was connected, I suppose that he was.

Q. But you did not know whether on that day he was in the employ of the company ?—A. No, sir ; not that I know of.

Q. And so, when Mr. Matthews informed Mr. Everest, just as you had a moment before, that he was going to leave the company, you did not infer, did you, that he was up to that time in the company's employ ?—A. I don't remember that he put it in just that way, that he was going to leave the company ; I don't know as I remember that he put it in just that way, that he was going to leave the company ; as I remember now, he said that he was going ; that we were going to build a works ; I don't remember that he said he was going to leave the company, he may have said it ; I don't remember that he did. I had been conferring with Matthews previously for some little time before that ; talked it over. During these two or three years, from 1878 or '9 down to the beginning of 1881, I had nothing at all to do with Matthews, that I remember of. That is the only business we ever done together—just that little matter—till this subject was talked of, about our going to Buffalo ; that was first talked of in the winter of 1881, I believe, might have been the last of 1880 ; as nearly as I can remember, in December, '80, or January or February, '81, along there some time. It was first suggested to me by J. Scott Wilson. I do not remember that he was then in the employ of the company ; he might have been, I don't think he was ; I knew that he had been in the employ of the company. I can not say whether I heard of his having left it ; I think I had heard that he was not with them ; it was, perhaps, in the latter part of 1880 that I heard that. I think it was in 1881 he commenced to talk with me on this subject ; it might have been in 1880. It might have been a week after Wilson suggested it to me that I heard from Mr. Matthews about it ; it may have been a month, I don't remember as to that ; I don't think it was so short a time as a week, it may have been, I don't remember. I think I then saw Mr. Matthews about it at his house or Wilson's, I don't remember. We met for the purpose of talking the matter over. This might have been in January or February ; I think it was in January, or along there some

time. I could not say whether at Wilson's or Matthews' house; I think the first talk we ever had was at Wilson's, I don't think it was at Matthews', I can not remember now which. I was in Buffalo on the 21st and 22d of March, last year. I may have been then under the impression that it was at Matthews' house that this meeting took place, I don't remember.

I think I first got acquainted with J. Scott Wilson in 1869 or '70; he was then living in Rochester. He might have been two or three years in the employ of the Vacuum Company, might have been longer; I knew, in fact, that he had been in their employ for several years prior to March, 1881, as agent to sell their oils, as I understood it, traveling through the country.

Before that first meeting we had, I had not talked with Mr. Matthews at all about leaving the Vacuum Company; I had, however, exchanged speech repeatedly on the subject with Wilson; he was following me around; about every time he would see me he would talk on that subject to me, about forming a stock company and going into the manufacture of oil; we were to manufacture oils, and get out all the products that were possible to be got, and make all kinds of oils that we were capable of making; we intended to make as good oil as the Vacuum Company was making, a little better if we could; I don't know as really the same kind—various grades of oil that they made; yes, sir, various grades that they made, and by the same processes that the company used, and by apparatus exactly the same that they used, or better, if we could get it; and before the 19th of March, 1881, when we went in to see Mr. Everest, we had already made considerable progress in those arrangements, I think; I think that we had made some purchases; I think I had been up here before that to look over land; yes, sir, I am pretty well satisfied that I had; I think we were up here one day, may be two, I do not remember; I did not offer any deduction from my pay to the Vacuum Oil Company for that purpose; I had already before this called upon the iron founder for the Vacuum Company, to take the patterns belonging to that company and reproduce parts of the apparatus of the company for that purpose; I believe that apparatus was at Emory Jones's, in Rochester; I received the bill for that myself, I think; I do not know as I did; I went and paid for the patterns before any bill came in to the Vacuum Company; when I spent that two days in Buffalo buying land for the new concern, I continued to be under pay from the Vacuum Company; they paid me till I quit them; at this time I had already been aware that the Vacuum Company claimed to own the exclusive right, by letters patent, to some of these products, processes, and apparatus that we proposed to use; I thought that the use of the patented processes or apparatus, or the manufacture of the patented product, was very likely to be followed by litigation, if the patents was any good, and that the litigation would determine whether or not the patents was any good; I had had occasion, before this time, as superintendent of the Vacuum Works, to order castings from time to time from Jones's foundry, and machines, or parts of them, from Jones's machine shop; at the time I ordered these, I do not think there was any Buffalo concern mentioned to Mr. Jones or his foreman; the patterns were, as I understood, the property of the Vacuum Oil Company; I believe Mr. Emory Jones is a reputable business man; I so understood at the time; I don't think I got of him castings from those patterns belonging to another man, telling him it was for the benefit of a rival concern; I do not think there was anything said about who the patterns were for; I simply ordered the castings, and that was all there was to it, according to the best of my recollections, and just as I had always ordered patterns, castings, or machines before.

I think that at this time Mr. Wilson told me he had left the employ of the Vacuum Company, but I would not be positive; I think it was about the time he first commenced to interview me on this subject of building a works; Matthews, Wilson, and I might have had a dozen consultations before the 19th of March, or half a dozen; when we were together we talked it over; we talked it over separately; I considered it worth something, Wilson's power to turn over the customers of the Vacuum Company to the new concern; he thought he swayed a pretty big power; nobody else did so, I guess; I never thought he did; but that was worth something, I so considered it.

Q. To catch the customers of the Vacuum Oil Company?—A. He claimed that he had lost them customers; that he gathered orders years when he was in business for himself, and he thought he would be quite a good man.

Q. It was said also by using the same processes, the same apparatus, and putting up goods in the same way, that you would be able to make a very large inroad upon the Vacuum Company's business, was it not?—A. I do not think there was anything said about the apparatus; simply said, if we produced as good products as they did, why, we could sell our oils as well as they could to anybody that wanted them; I don't remember that it was particularly talked about that we would sell to those who were already using their goods; it might have been, I do not remember that it was; it was also talked about that the goods would be put up in about the same way; according to the

best of our ability we proposed to make as good goods as they, and put them up as good as they did. I have been a good deal interrogated about these transactions from time to time; I have been interviewed a good many times by different parties about this business; I think this makes the fifth time that I have been examined judicially about these transactions; the first time was in June, 1884, at Buffalo, before Mr. W. H. Slocum, stenographer and notary public; that was a deposition made by me on behalf of the plaintiff in an action brought by the Buffalo Company against the Everest; I came down from Corry at that time for the purpose. The next time was in October, 1885, before the grand jury of this county. The next was in February, 1886, a second time before the grand jury of Erie County. The next time I was examined here before Mr. Thornton, a stenographer, in a new action brought by the Buffalo Company against the Everests, and Mr. Archbold, Mr. Rogers, Mr. McGregor, the Vacuum Oil Company, the Standard Oil Company, and some others; I believe that was an action to recover \$250,000; the first of these occasions I came from California to be examined; the other four times, including the present, I came from Corry for that purpose.

When the stock company was incorporated, as I understood it, that took up the property and business, such as it was, in the partnership that I had already formed with Mathews and Wilson; it simply succeeded to that; I subscribed for stock in the new company, I don't remember how much; it seemed to me that I subscribed for 10 or 20 shares, I don't remember exactly; I believe they were \$100-shares, according to my best recollection. Those who took stock in it besides were Mrs. Wilson, C. B. Matthews, the two Beardsleys, the two Benedicts; when it came to pay in I paid \$50 on my stock; that is all, I think, I ever paid in; the new company bought out my interest in the former partnership; we came to an understanding about it, but the \$50 was all that I ever paid into the stock; I believe that I was also one of the trustees of the new company, besides being vico-president; an arrangement was made under which salaries were fixed for several of the officers; I don't remember whether that arrangement was made by a resolution of the board of trustees; I think it was; I think I attended two or three meetings of the trustees, I don't remember; I do not remember when the salaries were fixed; I could not say whether it was after or before the incorporation.

I have seen the vacuum stills of the Buffalo Company, but not since it was connected. At the time when Charles Everest asked me if he and his father and the Vacuum Company had not always treated me well, or done well by me, I answered him that they had; and that was true; when he says something to me by way of protest against my breaking with them and going off to Buffalo, I told him I went out with these men in good faith; I think that was the expression, as I remember it; I meant good faith to these men that I had gone out with; I did not think anything about good faith towards the Everests or the Vacuum Oil Company.

Q. Since the time when you went out into the new company your feeling towards Mr. Wilson has become very much embittered, has it not?—A. Since the time he sued me when I was going to California; I had a little feeling against him, yes, sir; I have nothing against Mr. Wilson except that he misused me, as I supposed; deceived me in a good many ways; I don't remember having any trouble with him since I left the Buffalo Company; I may have told him that he was interfering with my business, or something of the sort, with the work that I was carrying on about the company's property; he had a habit of doing that; I may have told him that during the construction of the works; he wanted to hurry it up and get it completed; he was interfering with what I regarded as my province, and I did not like it—I did not like to have him interfere with it; I told him that I would attend to that part of it myself, or something like that; I don't know what I did tell him.

I don't think it was in the first conversation between Matthews, Wilson, and me that I made up my mind to go into the new arrangement; it may have been the first time, and it may have been along later; it was several weeks, at any rate, before I notified Charles Everest of my intention.

Q. And when was it that you first made up your mind that you would betray your new associates?—A. I think it was along in June that I commenced to talk that way with Everest, or he commenced to talk that way with me about leaving them; I think it was along the first of June that I commenced to talk that way to him; I may have had some talk with C. M. about it in May; I think I did.

Q. Had you in May made up your mind that you would betray them, and tell the Everests what they were doing, and commenced to act under instructions from the Everests instead of the Buffalo Company?—A. I think it was after the first interview with H. B.

Q. And that was, you think, about the last of May or the fore part of June?—A. I think it was.

Q. And so it was after you had determined to betray your new associates that you entered into a new agreement of incorporation with them, was it? The incorporation appears to have been on the 3d of June.—A. I had not made up my mind to leave them, nor did not, till I left.

Q. No; but merely to stay with them for a time, but to act under instructions from their rivals; that was the way the thing stood, was it not?—A. Up to June?

Q. Yes; up to the time you did leave them; it was some time in the latter part of May or the first of June, that you made up your mind to that; so it was after you made up your mind to that that you entered into an arrangement by which you were to be trustee and vice-president, and to receive \$1,200 a year, was it not?—A. I don't remember; there had been no arrangements made about my leaving; I believe the arrangement by which I was to be trustee and vice-president, and to receive \$1,200 a year, was made before that time.

Q. Of course there could be no meeting of trustees until the company was incorporated?—A. There was meetings of those that were, and the trustees elected before it was incorporated; it was at one of these meetings that this arrangement was made, if I remember right; it was made at the meeting—an election of trustees; I believe they were elected before they were incorporated; I don't know as there was any resolution passed in regard to fixing salaries; I think it was an understanding.

The first thing that I did in the way of betraying my new associates, I think it was the first interview I had with H. B. Everest and C. M. Everest; that consisted in telling them what we had got and what we had bought, and about how much we had laid out.

Q. Did you understand that you were doing any harm to your associates by telling the Everests what they had bought?—A. I knew that I was not doing right to—

Q. And did you understand that that was harming your associates any?—A. I thought—they had me so scared I thought I was going to—I considered that communicating these facts to the Everests was an injury to my associates. I felt like this, to let them know what we was going to have and what we did, that—that it would be an injury to them to know this company's business. I thought it would be injured. There was nothing unlawful in the Buffalo Company's business that I know of. The harm in telling them was I was betraying the company's business. Their object was to know, so that they could harm them; to know how to work and act. I don't know how they intended to act, of course.

Q. The only thing that you thought of was, perhaps, that you were disclosing the use of apparatus and processes on which the Vacuum Company claimed to hold an exclusive right; was not that all?—A. Yes.

Q. That was the only harm that you thought could come. In other words, that if it should turn out that the Buffalo Company was violating the law by infringing patent rights, it would be easier to prevent or stop the violation; that was the harm that you thought might come from telling them?—A. Yes, sir; I thought that was—

Q. Among these disclosures, which were the first that you did in the way of treachery to your new associates, did you disclose the fact that you had used the Vacuum Company's patterns to duplicate their apparatus; did you disclose the fact to the Everests?—A. Might have told them that we had patterns made there. I don't remember telling; I think it was mentioned, but I would not be positive. I think it was mentioned by Mr. C. M. Everest, I would not say as to that; I do not remember. I could not say whether they learned it in any way but from me; I don't remember how that was. That was not one of the things that I had specially on my mind to communicate to them. The Vacuum Company had sought to keep the processes and apparatus used there secret from the rest of the world. Those that we thought were seeking any information in regard to that line of business were supposed to be kept out.

Q. If a man came and told you, then, that he was of a rival concern and wanted to get at your processes, you excluded him?—A. None such came.

Q. No, I suppose not. Were there any other people whom you did exclude?—A. I never excluded any of those that didn't come around.

Q. And you did not exclude anybody?—A. They had signs, "No admittance except on business." I don't think they made it a strict rule to keep the people out. They never allowed me to take anybody around, or never told me to take anybody around and explain their methods of making oils. They told me they did not want their business generally known. After that change of ownership they did put restrictions with me on the visiting of their works. They refused to let me in. I don't know whether they ever from that time on instructed me to keep anybody out of there. I don't remember that they ever gave me any orders to keep people out.

Q. Last March you testified, did you not, in answer to this question: "After"—that is, after the change of ownership—"you say their methods were open to all the world; were they not?" Did you not make this answer: "It never put any restrictions; I never was instructed to keep anybody out from there."—A. I don't know as they ever gave me any written orders to keep people out or—

Q. Excuse me; you are not getting quite hold of my question. My question is only, did you last March make that answer to that question?—A. Perhaps I did; I do not deny it.

Q. Wasn't that so?—A. If I said so it was, as I so understood it.

Q. So it is true, is it not, that after that time "It"—this company—"never put any restrictions; you never were instructed to keep anybody out from there;" was not that true?—A. I think that is right; that I was never told to keep anybody out of the works.

Q. And you proposed, your people, to conduct the Buffalo business in a different way, did you not?—A. We proposed to keep men that we thought were trying to pry into our business out; yes, sir.

Q. That was a new system to you, was it not? You had not been used to that in Rochester, had you?—A. Well, I don't know; as I said before, we never kept anybody out that we were acquainted with.

Q. But you proposed to keep them out in Buffalo when you started anew?—A. We did, sir, propose to keep people out; I do not deny it.

Q. Your compensation for selling out your companions and their secrets which they wanted you to keep was to be \$1,500 a year, as I understand?—A. That is so. With the understanding that any losses or any—if they were to sue me, get any judgments against me, as I understood it, the Everests or whoever they were, were to protect me, so that I lost nothing by it, and any losses that I sustained by this transaction they were to make good.

Q. Well, that of course was mere indemnity; that was no profit to you; you were merely to be made good for any loss you were to suffer?—A. Yes, sir; on account of my leaving this company.

Q. That was the whole compensation, merely the salary of \$1,500 a year?—A. Yes, sir; that is what I got.

Q. Then the difference between that rate and the \$1,200 that you were already getting from the Buffalo company was only \$300 a year, was it not?—A. That was all.

Q. So that the real compensation for which you were selling them out was merely the same as \$300 a year; that is what it really comes to, is it not?—A. In money, yes, sir. I don't remember as to the last time in the year 1881 that I saw Mr. Matthews; I think it was the day that I settled up with the company; I might have seen him after that, I don't remember; I think that was the last time I was in Buffalo that year; I saw him twice after I left the company on the occasions when I came up here with Mr. Outerbridge; I think I saw him once after or before that in that year, after leaving the company; I don't know whether after or before; I think I was alone, I don't remember; I think both times that I was there with Mr. Outerbridge were in September, I don't know; it was after I had been in Boston; I don't think the two visits were more than two or three weeks apart; on those two occasions I believe we saw him at the office of the Buffalo company, here on Main street, I believe; on that occasion there was some conversation in regard to my leaving the company, and I think I expressed a willingness to return to the employment of the Buffalo company; I think he said that they had made other arrangements, something to that effect, and I took it he then substantially declined my suggestion. I don't remember whether I saw Mr. Matthews that year again or not; if I did it was very shortly after. I think I met him one day, and he said he would like to see me and have a talk with me; that was all that passed, that I remember; if it was after being here with Outerbridge that he invited me to come and have a talk with him, I didn't go.

I think the next time I saw Mr. Matthews was after the second time that I came back from California; I think it was in March, I would not be positive; that would be 1883; I think I had been home from California a couple of months. At that time I was not engaged in any business; I hadn't done anything. In August, previous to that, I had left the employ of the Vacuum Oil Company, and after that I had been employed in California independently. After reaching Rochester in January, 1883, I was there with my family for a couple of months without any particular occupation, and rather on the lookout for it. Then I came up to Buffalo to look around for something to do here; I think it was March, 1883. That was what I came up for, to look for work. I believe at that time I met Mr. Matthews here; I would not say where I met him; I think I went to the office; I may have met him on the street, I don't remember. According to the best of my recollection this was the first time since the fall of 1881 that I had seen him; I don't think I met him in the course of my short visit East from California, before I went back again. During this interval of about a year and a half I had had no communication with Mr. Matthews but one letter, which I received in Rochester just before my coming up here; I should not have come up here quite as quick if I hadn't received that letter; I haven't got that letter; that was the only communication that I had with him of any kind, direct or indirect, during these eighteen months; I don't know anything about how he learned that I was in Rochester and not in California; I think it was about March, 1883, that I came up to Buffalo in response to this invitation from Matthews; it might have been later; I don't think it was as early as February; I think I staid here two days, came up one day and went back the next; I may have staid longer; I don't remember where I

staid while here; during that time I spent about an hour or two with Mr. Matthews, perhaps; he did not find me any employment; I think I then went back to Rochester; I came here again very shortly after the first visit; I got the position here before I went back; I would not be positive whether I got it at that time—if I didn't get it then, I was to come up again to see the party about getting the position; I do not know but I asked Matthews something about some parties who I understood wanted a man, perhaps I did; I don't remember as that was the subject in his letter; he just simply said he would like to see me—something of that kind. When I came again I got a position with the Phoenix Oil Company. I didn't, that I remember, come down here the second time in response to a communication from Mr. Matthews; if I remember right, I saw the parties before I went away the first time and made arrangements; Mr. Matthews did not introduce me to the parties the first time; I think he said, "You might go and see those parties," something like that; I don't think he gave me a note of introduction to them; he might have, I don't remember that he did, but I don't think that he did. They asked me, after I had talked with the gentleman, who I could refer them to, and I says, "I can refer you to different parties," and amongst them I think I referred them to Mr. Matthews; I don't know whether they followed up that reference, I don't remember; I asked Mr. Matthews the question—I says, "I am looking for a position," and I says, "I know I have not always used you right, and I want to go and see these parties, and if I should say to them, I can refer them to you, why I suppose you won't bear down too hard on me," something like that; he says, "No;" he says, "I will tell them you are capable of manufacturing oil," I think he said; I don't think he showed any unkindness towards me on that occasion; the understanding with the Phoenix was, which I afterwards fulfilled, that I was to go there and take charge of their works, be superintendent of the manufactory, just the same position I had filled in the other two companies. I continued there until they sold out; I can not remember how long. I think either August or September of that year; I was hired by them for a year, then they sold out the property and they paid me up to the time I worked; I did not attempt to collect it from them, the balance; then I was employed by the Atlas Refining Company, I believe; I think that was the spring of 1884. In the interval between September, 1883, and the spring of 1884, I was living on Elk street, in Buffalo; I do not remember that I had any particular employment then; I don't remember what I did do; I don't know as I done anything; I was not doing anything for the Buffalo company at that time. I can not fix the date of this first visit that I made to Mr. Matthews; I don't remember as there had been any suit commenced by the Buffalo company against the Everests; there might have been, I don't think there was; I don't remember whether there was or not. During this first visit, when I came one day and went back the next, I don't believe I was over three or four hours with Mr. Matthews; two or three hours, I don't know how long, it might have been longer; I had nothing else in particular to do except to see the Phoenix people and some other parties about employment; I think I went with Mr. Matthews to see a lawyer; I think then the subject of my leaving the Vacuum Company was discussed to some extent; we talked the matter over.

From September, 1883, to the spring of 1884, I was living in Buffalo, but without any particular occupation; my wife and daughter were with me; we were keeping house; during all that time I think I was entirely idle; it seems to me I worked a short time for a railroad company, that was only for a few weeks. During that time I don't think I went into the office of the Buffalo Lubricating Company twice; perhaps I did; I don't think I did go to their office in fact; I never went to their works at that time.

Q. Can you say from what your support was derived during this time from September to the following spring?—A. I had money.

Q. Money that you brought with you from California?—A. My wife had money; yes, sir; I paid for my living out of the money we had.

Q. You had no source of income besides that?—A. Why, yes, we had a house that was rented; that brought some money in. In 1884 I went to work for the Atlas; I think I staid with them two or three months; I would not be positive how long. I saw Mr. Southard to get employment there; I was not acquainted with him already; I gave him no references to anybody, and he didn't require any; I took charge of a lot of men that he sent from their other works to tear down these works; that lasted for two or three months; I think I next went to Cleveland; I think it was in March or April, I would not be certain about it; I am mistaken about that, it was in June or July that I went to Cleveland; it was shortly after my leaving the Atlas; I was employed there by the Cleveland Refining Company; I staid till they burned out; I don't know whether it was in August or September. The next place I went to was Clark & Warren's, in Corry, where I have been ever since in the capacity of general workman around the works, doing the pipe fitting, as they call it, and steam fitting, and in the capacity of foreman in one department; I had been introduced to Mr. Warren before I went to Corry; I think it was at the Phoenix Oil Refinery, in Buffalo. When I came up to Buffalo in pursuance of the invitation from Matthews, I think I

went direct to his office before I went to see these other parties; and there in the talk with Matthews, there was conversation about some suits between the Standard or the Vacuum and Buffalo company; I don't remember whether they were patent suits, or whether he was about to commence suit or what; I think both were said; I think he told me that they were patent suits brought against them; I think I told him that I didn't see how the plaintiffs could make anything out of those suits; I think I might have said so; I never thought the patent was any good; I never did; I talked with Mr. Everest about it. At the same time Matthews said something to me about the Buffalo company bringing a suit against the Everests. I think he did at that time; a suit for damages for some thing or other; I don't think he asked me what I could do to help them in that suit; he asked me, I think, if he brought suit against the Vacuum Company, if I would—if he wanted to use me as a witness, if I would be one; I told him I would.

Q. And he told you that the suit he was going to bring against them for damages was for trying to injure their business, and selling inferior oils or something, for loss they had sustained by taking away and intimidating their customers, and one thing and another; was not that what he told you?—A. Something similar to that; I don't remember exactly as that is the words; I don't remember all that I said to that; I don't remember of saying any such thing as that I thought I could help him a good deal about getting damages from the Everests; when he suggested to me to go out with him and talk the same matter over with the lawyers, I think he asked me to go and see a lawyer with him, and I did; I think the gentleman is now a judge; I don't remember the name; I think it is Judge Corlett; I would not be positive; I don't remember whether it was Corlett; whoever was counsel at that time for the Buffalo company; I went to the lawyer's office with Mr. Matthews and talked the matter over with all three together, and immediately after that I obtained employment at the Phoenix Oil Works; I went to work immediately after, but I don't know whether I made any arrangement, before we went to the office to see these lawyers, with the parties or not; that I don't remember; I could not say it was just before, or just after; it was just about the same time.

I say that before I came East from California, I had never had any communication with any of the Buffalo people about the bringing of suits for damages against the Rochester people, direct or indirect. When Mr. Matthews spoke to me about proposing to bring a suit for damages, I don't remember that he said any amount that they proposed to demand as damages from the Rochester people; he might have said, but I don't remember now of his saying any amount; he might have said a hundred thousand dollars; so far as I can at present recollect, that is my impression. Nothing was said by him to me on the subject of any interest that I would have in the result of such a litigation, nor never since.

After I left this State to live I came back here, I think, about five or six times, for the purpose of conferring with the Buffalo people or their lawyers on the subject of this litigation.

Q. There were five times that you came in order to testify in this litigation, and you came about five times for the purpose of conferring with them, you think?—A. I don't think I came about five times. I think I came two or three times that I came down that they did not do anything—it was put off or postponed. I came intending to testify, expecting to; I understood that I could not be compelled to leave my residence in Cleveland or Corry to come here to testify in any of these cases; I understood that I need not come unless I was a mind to; I had a mind to come because I told Mr. Matthews I would; I don't know when I told him that I would come; I think it was before I went to Cleveland that he says, "If I want you, will you come?" I told him I would; I didn't tell him I would come as often as I was wanted; I told him that I would come; that is all, I think, that was said; I don't think there was anything about coming often; I paid my own expenses when I was coming all these times that I came, I received something before I got away, usually; I got my pay for my expenses; I never got much pay; when I came for Mr. Matthews my expenses were paid by him; when I came for the district attorney they were to be paid by him; I know that my wife got money at different times to pay our expenses; I don't think that I have ever received very much; I don't know the amount; I do not, of course, know what amount she has received.

Q. When you parted with Mr. H. B. Everest in California to come East, what did you tell him that you thought your services were worth to keep out of the oil trade?—

A. We were talking one night at his house about that, and I was talking about it this time that he was about to write these parties. He says, "What do you consider your services worth, or that we had ought to make up to you?" something of that kind; I says, I don't know whether it was \$5,000 or \$10,000; I don't know what I said. I don't remember exactly what I did say.

Q. But that you thought merely to keep out of the business was worth \$5,000 or \$10,000 to you, or to them, which did you say?—A. I did not think to keep out of the business, that was not the way I put it. I put it in this way, to make up what

I had sacrificed and lost. It was not to be kept out of the business at all, as I understood it. It was merely to make up losses that I had been put to in this transaction, as they led me to believe all the time that they were going to—I don't think he asked what I considered my services worth to keep out of the oil business; he may have asked me, but I don't remember that he put it in that way. I may have said to Mr. Everest that I thought it was worth \$20,000 in cash for me to keep out of the oil business, but I didn't so construe it at the time that my services was worth that; I don't think I said so; I may have said so, but I don't think that I told him my services was worth that much to keep out of the oil business; I don't think I put it in that way. At the time we left the Vacuum Company, I don't think I made any effort to induce other employes of that company to come away; I don't think I asked anybody directly to come; I asked one man, Mr. Patterson, I says, "We are going to Buffalo and go into business, and if we get so we need your services, and you can better your condition, will you come?" I don't know whether that was after or before we had announced to Mr. Everest that we were going; I think it was after; I was around the works more or less after we made that communication to Mr. Everest; I continued to live in the Everests' house till I moved to Buffalo; I don't remember of saying to Mr. Patterson, about the time of our leaving, that the Standard and Vacuum Companies would give the Buffalo people almost any amount of money rather than let them build; I don't say that I didn't say it; I don't remember of saying any such thing; he told me at the time this conversation took place that he would not leave the Vacuum Company; I didn't at that time say to him any such thing as this, "By God, I will make it just as hot for you as I can; I will take Gable and every other good man on the place, and then see how you can make it go." I do not think I said anything of that kind; I don't remember anything of that kind; I don't think I said it; I will not say that I didn't say something to him; I don't think that there was any hotness or anything of that kind to him; I may have said something to him, but nothing in that language; I may have said something to him, but not about anything similar to that; I don't remember; I don't remember of trying to induce anybody to leave the Vacuum Company to go to Buffalo; I might have asked August Gable to leave the Vacuum Company to go to Buffalo, might have asked him if he would go or something of that kind; I don't remember whether I did or not; I might have asked him; I live on Pleasant street, in Corry; I rent a house of a man by the name of Clemons, I believe, and keep house; I understand he lives at Hartford, Conn.; I have never spoken to him only once or twice; I think I saw him and spoke to him two or three times before I rented of him; he was living at Corry then; his name is Henry D. Clemons; I think I have seen his son Edward, a boy of eighteen or nineteen; it seems to me I have spoken to him, though I don't know that I have; they were both living in Corry when I rented the house; that was two years ago this spring, I think, in April; at that time he was living at the corner of Pleasant and Northwest streets, in Corry; I called at his house there about the 13th of April, 1885, in order to engage the house; I saw him and his son Edward at the house at that time.

Q. Did you, at that time, speak to him, not only about renting there, but about buying the house and lot?—A. I think there was something said about buying—that I might; I don't know but I asked him the question what he would take for it, if he wanted to sell it I might want to buy it, something of the kind, I don't remember; perhaps I did; I don't think I said anything there about the means which I would have of paying for it; I had means enough to pay for it without saying anything about it.

Q. Did you, at that time and place, say to him this, or this in substance, that you were connected with the Buffalo Lubricating Oil Company; that they had commenced a suit against the Standard Oil Company for \$250,000?—A. Never said any such thing, that I was connected with the Buffalo Lubricating Oil Company.

Q. Or that you were connected with that suit?—A. I don't remember of saying anything about being connected with the suit, because they had not commenced any such suit; I believe they had commenced one suit at that time; I did not say that, or that in substance, which you have just asked me.

Q. Did you, at that time and place, say to him that the Buffalo Company had already got judgment against the Standard Company in one suit for a large amount, and that they were sure to win?—A. I don't remember of saying anything of the kind; I don't remember; yes, I say I didn't, or that in substance. I never said to him, nor anybody else, that I would receive, as my share of the judgment to be obtained in the \$250,000 suit against the Standard Oil Company, not less than \$40,000, nor that in substance, to him or anybody else, that I would receive a cent. I never said to him or anybody else, in connection with the purchasing of his house and lot, that I would soon have money enough from the judgments already obtained and to be obtained against the Standard Company to pay for it, and much more, or that in substance. I called upon Henry D. Clemons on or about the 27th of April, 1885, at his place of business, in Corry. At that time he and I executed a lease of the

premises. I didn't then and there, or at any time, make to him statements in regard to which I have already been asked, or those statements in substance, or any of them. I didn't add to them that pending those suits I was obliged to seek employment elsewhere than in Buffalo.

(Witness is shown paper.)

Q. Is that the affidavit which you testified on your direct examination, that you subscribed and swore to in California?—A. That is my signature.

Q. And you swore to it then and there?—A. I think I did, before E. Conway, notary public.

The paper was offered and received in evidence as defendant's Exhibit I.

#### DEFENDANT'S EXHIBIT NO. 1.

STATE OF CALIFORNIA,  
County of San Bernardino, ss :

#### AFFIDAVIT.

The undersigned, Albert A. Miller, of Rochester, N. Y., makes this statement regarding the following named and described patents:

M. P. Ewing, improvement in materials for lubricating. Dated September 11, 1866. No. 58020. Re-issued under date September 26, 1876. No. 7322. Hiram B. Everest, improvement in apparatus for distilling petroleum. Dated September 3, 1876. No. 68426. Hiram B. Everest, improvement in determining the grade of lubricating oils. Dated March 7, 1876. No. 174506. Hiram B. Everest, improvement in the distillation of oils. Dated March 4, 1879. No. 212914. That I am well acquainted with the processes, improvements, and manufacturers of petroleum, as described in the above-named patents, and that I am cognizant of the fact of their infringement by the Buffalo Lubricating Oil Company, Limited, of Buffalo, N. Y., and that, so far as I know, the same are good and valid patents.

ALBERT A. MILLER.

Subscribed and sworn to before me, this 11th day of August, 1882.

E. CONWAY,  
Notary Public.

STATE OF CALIFORNIA,  
County of San Bernardino :

I, A. F. McKenney, county clerk and *ex-officio* clerk of the superior court in and for said county, hereby certify that E. Conway, whose name is subscribed to the foregoing instrument, was, at the date thereof, a notary public, authorized to administer oaths, etc., and all his official acts as such notary public are entitled to full faith and credit, and I verily believe that the signature attached to said instrument to be his signature.

In witness whereof I have hereunto set my hand and affixed my official seal this 12th day of August, 1882.

A. F. MCKENNEY, Clerk.

By S. M. WALL, Deputy Clerk.

Q. These are the only patents that you have known of as owned or used by the Rochester people, are they not?—A. I think they claim some other patents—Mr. Everest did; I think he claimed a patent on a process for applying steam to the oil; also, I think he claimed another patent on a method of fire-testing oil.

Q. The patent for determining the grade of lubricating oils was the fire-test patent, was it not?—A. I believe it was—yes, sir; the patent for the use of steam was the patent for the improvement in the distillation of oils; that is what he claims; so then these patents are the ones that I understood they relied upon in protecting their property, and these are the patents which I was of the opinion were not good for anything.

Q. And they are the patents in regard to which you, in August, 1882, declared, and swore, in the presence of the ever-living God, were good and valid patents, so far as you knew. They are the same, are they not?—A. Well, I don't know whether those are the same ones there; so far as I knew—of course, I didn't know whether they were good—I—

Q. Will you be kind enough to indicate what the patents were that you have said to-day were good-for-nothing patents?—A. He claimed a patent on the method of manufacturing seal oil, a seal lubricating oil; he claimed this method of applying steam to petroleum; his patent that he claimed was a good patent; we talked it over a number of times; I says: "If it is good, why do you not sustain it? Why do you allow other people to do it?" I do not say that that is not one of these patents mentioned here; I don't say it ain't; at the time that affidavit was made in the office, Mr.

Everest got considerably frustrated; when I swore to this affidavit I believed it to be true; I was a good deal excited at the time, and I don't hardly remember of his reading it; I signed a number of papers there; I don't think I swore to only that one; I don't know whether that is the paper I signed and swore to, or whether some other paper was signed and that swore to; I don't know how it was; I don't remember the reading it over to me even; I swore to it, however; I swore to it, I think; it is true that I swore to it, yes, and I don't dispute that the statement was true.

Q. And you were then personally cognizant of the infringement by the Buffalo company of all these four letters patent?—A. Not all of them; no, sir. I think the 11th of August, 1882, was the same day that we settled up—that I settled up with Mr. Everest.

Q. At the time of this parting conversation with Hiram B. Everest in California, after you named to him the sum of \$5,000, \$10,000, or \$20,000, did you say to him that it would cost the Standard \$50,000 before they got rid of you?—A. No, sir; not that I remember of; I don't remember that I said anything about it costing the Standard Oil Company any money, or the Everests, or the Vacuum Company; I don't remember saying anything of the kind; I didn't say anything about it costing the Standard Oil Company any money; I say that I didn't say anything of the kind, or the Vacuum Company, or the Everests; I had nothing against the Everests; I know Fred. G. Saxton, of Corey; I am pretty well acquainted with him; A. G. Mack was the commander of the Eighteenth Battery, in which I was a soldier during the war; I knew of him at Rochester before the war; I was not personally acquainted with him; I don't know where he lives.

Q. Did you, at Corry, about the 13th or 14th of December, 1885, say to Saxton and Mack, or either of them, in Saxton's Arcade Saloon, in Corry, this, or this in substance, that if you had remained with the Standard Oil Company, instead of going off with that Buffalo gang, you would be worth \$35,000 instead of nothing?—A. I told him if I had remained with the Buffalo Lubricating Oil Company I would never have said anything about—

Q. That you would have been worth \$35,000 instead of nothing?—A. Probably; yes, sir. I didn't say what you asked me; I didn't say that if I remained with the Standard Oil Company or the Vacuum; I didn't say to them, or either of them, that it was the mistake of my life leaving the Standard or the Vacuum, that I was bound to go there again; never said any such thing, nor that in substance, nor this (holding out my hand before them), "Here is a palm, black and rough, and itching, the party that fills it the fullest can get it and me; never said anything of the kind.

Q. Did you, at that time and place, turn to Captain Mack and say this, or this in substance, "If you have got any proposition to make, now is your time?"—A. I told him, at my house, never at any other place, or in the presence of my wife.

Q. Did you, shortly after testifying before the grand jury, in Buffalo, say to Saxton, at Corry, this, or this in substance, "That suit at Buffalo is a damned humbug, but there is some money in it, and you and I may as well make it as any one else?"—A. Never said anything of the kind to him. When Bristow went to Buffalo, I understood what the purpose was of his going; it was to find out how the stills were constructed, to get samples of oil, see the oil test, see what they had there and how much they had; and it was to find out also by what processes we were doing the work; I understood it was in case they wanted to use him as a witness in the patent cases; when I was at New York, at the Union Square Hotel, with Mr. H. B. Everest, I can't say whether the gentleman was already with him when I got there, or whether he came in afterwards; I remember of his introducing me to a gentleman; I think the name was Rogers; I am satisfied in my own mind that that was the name; I was examined in regard to that transaction in March, 1886, before Mr. Thornton; I think I testified thus: "I believe there was a gentleman with him, when I first met him, or he came in while we were talking before I sat down;" that was according to the best of my recollection at the time; in answer to the question, "Who was he?" I said, "He introduced him as Mr. McGregor;" but I corrected it afterwards at the close of the testimony on the following day; at the examination I made a mistake in the name.

Q. How long had you known Mr. McGregor?—A. I never knew him until that time; I knew of him.

Q. Till that time?—A. Yes, sir.

Q. Did you know him at that time?—A. Why, after I was introduced to him.

Q. So then, after you were introduced to him there you knew Mr. McGregor, and carried the name in your mind?—A. Yes, sir.

Q. In March, 1886, upon your examination, after you said that introduction, he asked, "Are you sure of the name?" and did you answer, "I should say to the best of my recollection that was his name?"—A. What?

Q. Never mind what; were you asked that question, and did you make that answer?—A. I may have made the answer, but I found—

Q. You will not say whether you did or did not make that answer?—A. Well, I don't remember; but I found a memorandum that put me in mind of his name.

Q. You found the memorandum afterwards?—A. Yes, sir.

Q. So you can not remember the name, but you made a memorandum?—A. I could not remember all the men that I was introduced to.

Q. But you at first testified, under examination by Mr. Moot, for the plaintiff, "He introduced him as Mr. McGregor," and then, in answer to Mr. Moot's question, "Are you sure of the name?" you answered, "I should say to the best of my recollection that was his name," did you not?—A. I said that according to the best of my recollection.

Q. And yet, at that time, you neither knew Mr. Rogers nor Mr. McGregor?—A. I knew of them.

Q. You knew of them?—A. Yes, sir.

Q. If he was not actually in the room when you came there, he came in before you had taken a seat?—A. I don't remember. He might have been in the room, and he might have come in afterwards, or he might have been sitting down; I don't remember, as I know of. In March, 1886, I perhaps testified thus: "I believe there was a gentleman with him when I first met him, or he came in while we were talking, before I sat down." According to the best of my recollection at that time it was true. I don't know as my recollection upon this subject has changed since March, 1886. He staid there a very short time; I could not say how long.

Q. And then was there any more conversation than this Mr. Everest said, after he introduced him, "This is the gentleman I spoke to you about," and then this gentleman (Rogers or McGregor) said to Mr. Everest, "If you do not go to Boston to-night," and then turned to you and said, "I will see you again Mr. Miller," or words to that effect; was not that exactly what occurred?—A. I do not remember. According to the best of my recollection, something of that kind was said.

Q. That was just the way it happened, was it not?—A. I could not swear positively. It was, according to the best of my recollection.

Q. Did you not swear positively to that in March, 1886, under examination by Mr. Moot?—A. I think I did.

Q. According to the best of your recollection to-day, that was exactly what happened, was it not?—A. There is so much of it that I can not remember everything. I have to say it so many times that I can not repeat the exact words every time for about four or five years. I give as nigh to it as I can remember.

Q. That, then, is, according to your present recollection, just what took place at that time, is it not?—A. As I remember, just as I have stated before.

Q. Was not this, according to your present recollection, just what occurred after the introduction of this gentlemen: that Mr. Everest says, "This is the gentleman I spoke to you about;" that then he said to Mr. Everest, "If you do not go to Boston to-night," and then, turning to you, he said, "I will see you again, Mr. Miller," or words to that effect?—A. I think he said so. I think he said, "I will see you again." I do not think he turned to me particularly. I think it occurred the way I have stated.

Q. And did you so testify on the 25th day of March, 1886, before Mr. Thornton, in Buffalo, as I have now asked you?—A. According to my best recollection, I think I testified that way.

Q. What room of the hotel was this in?—A. I think it was in the reception-room or office. It was the public room of the hotel; and I think we remained standing. I have told all that passed, according to the best of my recollection, while we three were there together. After that conversation the gentleman immediately left. After that Mr. Everest and I had dinner together, I think. Then Mr. Everest, for the first time, suggested that I had better go to Boston with him. On my direct examination I testified that in my interview with H. B. Everest, shortly before I left California, I testified that he said he would write Archbold.

Q. Are you sure that he said he would write to Archbold?—A. He might have said he would write to these parties; I think, according to my best recollection, he said, "I will write to Archbold," but I am not positive.

Being further examined for the prosecution, the witness testified:

I am entirely willing Mr. George Truesdale shall state in this court what took place in the office there on these two separate occasions of which you have spoken; if he is here, I would like to have him state what occurred, and I withdraw any legal objection that I might have.

The second time I went to work for the Vacuum Company, Mr. Everest said he would like to hire me for a year; I said, "All right," and made arrangements for pay; he said what he would pay me 25 cents an hour, I believe it was; I went to work that year; I didn't have steady work all that year, but I went back again, when they wanted me; they sent for me and I went back and continued to work in that way from year to year with them; sometimes we drew our pay by the week, sometimes by the month, and sometimes I had a book, and went and got my pay when I wanted it; they figured part of it by the hour, and part of it by the month, and the way was, I was to have so much an hour or per week, and then there was an addition to that of

\$100, and then another addition of \$100 more; these additions of \$100 were along about the last two or three years; the addition was \$100 a year; I could get it at any time; I had interviews with Mr. Everest; I used to talk with him about once a year; I would say, "Well, this year is gone by; suppose you will want me any longer?" He says, "We will want you just as long as we want you: when you get ready to go, you can go, and when we get ready to have you go, you can go;" that is the way that it went from year to year. That is what he said, "You are not obliged to stay, and we are not obliged to keep you, or any thing of that kind." I don't remember of ever anything being said that I should stay a year or more. "We want you to stay," that was always the talk every time we had talk about it.

I got some castings made by J. E. Jones & Co., of Rochester; they were what were termed "headers;" they are a round piece of iron, probably 3 feet long, with six or eight holes bored in them, simply a piece of cast-iron about 3 feet, perhaps 3 feet 6 inches, and about 6 or 8 inches in diameter, the pipes screw into; I could get them made anywhere; there was no patent on it that I know of; it is a thing that has been in use; the entire cost of these castings was about \$9.50 or \$10; I don't know what it would have cost to have made the patterns, probably a dollar or two dollars, maybe 75 cents; I don't know; I went right there in the daytime and ordered castings made; when I wanted them I went there, and, I believe, paid for them and had them taken away, or took them away myself; I could have made the patterns myself or have had them made; there was no patent or any restriction to my doing it, to my knowledge; there was no patent on any such thing as that, simply a piece of cast-iron generally used throughout the country; there was not anything said there by me to Jones, that I remember of, to keep quiet about it, or anything of that kind.

When I came up here to Buffalo, while I was in the employ of the Rochester company, to look after some land, I think, I was only absent one day from the works at Rochester; it might have been two; I don't remember. It was Mr. Outerbridge and Mr. Everest and Beach that told me to come up here and offer my services to return to the Buffalo Company; they said that that would be a good way to get out of it; Mr. Everest said, "You had better go up there, but I don't know what to do about your stock;" and I said, "What will I do with my stock?" "Well," he says, "I don't know what you had better do about it;" I says, "Maybe you had better buy it," and Mr. Everest turned to Mr. Beach and asked him what he thought about buying the stock; Beach said it would be a good idea, if they owned my stock, they could have access to the company's books, that it would be a pretty good scheme, and C. M. said, "I don't know what to do about it;" he says, "I will consider it;" he says, "You go and see Outerbridge and he will tell you what to tell them." Beach is a man connected with the Vacuum Oil Company, book-keeper or corresponding secretary, or something; I think he was secretary at that time; I can not say positively.

I went to see Outerbridge; he says, "We will go up there, and you offer your services, and tell Matthews that you are ready to go back; of course he won't accept you; I know that he probably don't want you any more, but you tell him that." He says, "That will be a pretty good way of getting out of it for you, and if he accepts you, all right; you take the position and go to work." This is what Outerbridge told me to say and do. Outerbridge told me to demand a statement of my account; if he refused to accept my services, to demand a statement of my account. We came here, and I done so. Before coming up here Everest says, "If they accept your services, go to work for them." I don't remember at present anything further being said what I was to do. I came to Buffalo and got a position with the Phoenix Oil Company; I think I staid with them five or six months; it was in the fall of 1882 that I got back from California; I think it was in March, 1883, that I went to work for the Phoenix Company; I was in the employ of the Atlas Oil Company; Mr. George S. Southard was its manager. The Cleveland Refinery Company was destroyed by fire.

I was down here about two weeks ago, when this case was about to be tried, and at that time I got an order from the court to pay my actual traveling expenses; Mr. Matthews never paid me a dollar except for my actual traveling expenses and the time that I was docked by my employers in Corry.

At the time I made this affidavit I understood by Mr. Everest that there was other patents that he owned besides those mentioned in it. I understood that he had a patent for the manufacture of what we called sweet oil; that is the one that he always claimed was the biggest, was one of his greatest patents. I believe I understood that that patent was named here in that affidavit; I think that is one included in the affidavit; he had patents, as I understood, covering the vacuum process and covering the manufacture of sweet oil, no matter by what process. I don't know how many patents he had that are not mentioned in this affidavit.

(Counsel presents Ex. No. 1 to witness, who examines it.)

I think there were other patents not mentioned in that affidavit. He had a patent on a harness oil, I believe, or claimed to have, at least; I don't know whether he had it, he claimed to have a patent copyright on label; I don't remember whether I un-

I signed my testimony taken  
- was written on the foot - I  
the word 'Rogers' in place

testified as follows:

at Carry. He had been em-  
ployed years, maybe, prior to our  
marriage, consisting of some work  
of the Rochester Company  
in the company's house on  
the 5th of April 1901. We  
were living with an owner with us  
and before we moved up here,  
residing in the building of the  
company, I went from here to Rochester.  
I wanted to move the 5th,

and was about a week or two  
at that time. I know H. B. and  
at that time I went down I saw the  
husband. I think there were  
more than there. I could not say  
if they were talking together,  
going to the further end of Mr.  
I pay any attention to their  
husband were doing the talk-  
ing in any particular. I could not  
remember whether we all

the first time we went there  
I think some time along in the  
first how long after that before  
I was there. I can not remember if  
there the second time but Mr.  
and were there, these are the  
times but I was there several times

from home sometimes. He would  
stay long. I can not tell about  
these or four times when we  
went out to Buffalo where I lived  
then. That day I received a tele-  
gram to the works to my husband.  
That night; when he went away I  
went to the works. That was Friday night.  
That is destroyed. It told me to  
go to the works. The telegram appeared  
in the office. It was announced that  
he went to Rochester. My nephew,  
employed at the Buffalo La-

boratory in his office. I can't  
say my best recollection is he  
was at the Lubricating Oil Company.  
It was in my hand.  
the substance was to get it  
understand it—the Buffalo La-  
boratory. He said to mail it, to give

how they were to vote the  
how. I had no conversation  
I don't know how long after  
while I was living in Buffalo. I  
Buffalo, and went to Charles's  
substance was all about this con-

what it could be sold; give

I don't remember.

"I was mad at Al at the  
time; they were deeds and  
package of papers to my  
Mrs. Miller, if you are not  
trust you," and I handed  
over them the next day; I

Truandale's office. I can  
think; I stayed to Rock-  
old's say who brought the  
those were no papers ex-  
husband and the Liver-  
at I got the telegram and  
don't know as what think  
are Upton, I don't know; it  
is to me it was, I can not  
see two or three weeks be-  
I saw C. M. Liverant in the  
house, I asked him how  
ere he was, there was two  
as that was about all the  
harley and he would send  
and gave it to Charley. I  
Liverant would be would  
over to the letter, I think  
it sent the letter, I would  
in some way I found out  
as after my husband had  
to me, I suppose from his

and received in evidence as

"BOSTON, July 6, 1881.

Miller, at \$1,500 a year, so  
soon to quit, we give him the  
and pay him as he shall di-  
rector, or some other place;  
He will want Reynolds  
ok he can purchase second-  
vice Rocker shall go up to get  
from Mr. Williams yet? I  
and Stonington Line, to-night.

"PAPA.

York draft to order of Rey-  
which you may forward."  
weeks before I saw him he  
long ago I do not remember;  
office once at Mr. Tru-  
Mr. Truandale went over to  
remember what took place  
property, our property, but I  
as was said I do not remem-  
as to go to three real estate  
as high as I can get at it;  
also told me to go to Mr.  
it is he is a Rochester man;  
told me to go to him and ask  
I went, Charles also ad-  
o him wrote the list of real  
think; he handed it to me;

if he took any of my papers,  
mail, or both, or disposed of  
on ground that it was rumo-  
red the defendants escaped.  
He said that is what they  
say I did not sell. I don't  
lose the sale of my property.  
any real estate agent. He  
he gave me a list entire of  
names while in Boston be-  
fore him. I learned his address

before the first time. I had a  
man in Boston. I asked him if he  
was in and yes. He came  
in. I couldn't say for sure. I  
he stayed a week, or maybe  
another how long. The Ever-  
est while I was finishing work.  
me and read a letter that he  
wrote that has been read. It  
is a year. It was while  
about. I think he was there  
before I had with him at my  
house two weeks. I can not  
conversations with C. M. Co.  
to know, did not want the  
my husband was gone. I  
and remember how long Al  
felt late in the fall. He got  
out of the fall. I never saw him but  
many to Rochester while my

When my husband came  
I don't remember how long  
before he drew his pay, he had  
months he was doing nothing.  
and drove from Rochester to  
don't remember. Another time  
he was up there in the winter  
the Vacuum Company. Before  
C. M. I went down to the  
his private office, and asked  
the wouldn't that I didn't want  
anything that he knew that  
I didn't want him to go. I  
never worked in an oil works;  
I would give him something to do  
if he had nothing else to do.  
I do not think there was any  
with him about California  
moments. Al was to go to the  
company, and if he did not like  
the month there, and I drove  
on, of course, I converted to  
August. I think during that  
from the company at that  
was gone. I don't think I  
till he came and told me that  
I need a Plymouth sedan.  
father's house, Mrs. White, on  
to the gate to speak to him,  
now what to think of it, and  
I know, I did not know what  
suppose Al was in California.  
I can not remember anything  
me and my daughter. I was  
as to regard to what I should do,

I drew money of the company the first of the month, and I don't think I drew it but twice, it seems to me, when he was gone; I don't know just how often, but I think it was twice; the first of the month was pay-day; I don't think there was but two pay-days while he was gone; I don't remember just; two or three; I went the first of every month and got \$75. After Al. came back he stayed in Rochester about two weeks, I think, then went back to California, and I went with him; we remained there till January, 1883; I saw H. B. Everest in California, at the depot at Colton; not when we arrived or departed; I went over to the train one night, or one afternoon, I saw H. B. Everest; he said he was going to Los Angeles; I don't know as he saw me, but I saw him; I had no talk with him; I had no talk with him while I was in California; then we returned from California to Rochester; Al. then went to work in the Phoenix Oil works in Buffalo; we moved up here; Al. continued to work for them till down to the fall. About in the summer of 1881 Charles Everest, or H. B. Everest, gave me money in the Vacuum Company's office in Rochester to send up here to the Buffalo company and get samples of their oil and send them to our address in Rochester; he told me to send Truman Miller, my nephew, up here; he was not at that time in the Buffalo works; he was living in Rochester; I don't know as he was employed; I gave him the money; Mr. Everest did not tell me what he wanted of the oil, he did not say what for. I am living at Corry, and have been here to Buffalo a number of times with my husband.

Q. Did Mr. Matthews ever give you a dollar, except for actual expenses, and the time that Al. was docked while he was here?

(To this the defendants objected as incompetent and immaterial. The objection was overruled, and the defendants excepted.)

A. No, sir; he never did. While my husband was in California, he sent for \$1,200 to pay for some property. I talked it over with some one, and I thought I would not send him but \$600 and let Mr. H. B. Everest take a mortgage for the other six hundred, and pay it out of his pay; so I sent \$600; none of this money that I had drawn from the Vacuum Company while Al. was gone.

On cross-examination, the witness testified: Before I removed from Buffalo, on the 5th of July, 1881, I don't just remember how many times I had been to Rochester to see either of the Messrs. Everest in regard to my husband returning into the employ of the Vacuum Oil Company; I don't think I told in my direct examination just the times, just the number of times; I can't remember the times of everything; three or four times maybe; I guess two or three times; I think so. The first one before I removed was along in June; in the middle of June, I think; I don't think I went down until in the middle of June; along in June; between the middle of June and the 5th of July, I think. I went two or three times; I can't just tell. After I thought we were going to lose everything I was quite anxious to return to Rochester; not till then. I was born in Rochester and had lived there all my life; I had never lived in Buffalo, and had no acquaintances there; all my relations had been in Rochester, social, church, and everything of the sort; Mr. Miller had lived there for a great many years, and had never lived in Buffalo, as I understood. I was not home-sick in Buffalo till I was going to lose what I had, then I wanted to go. I recollect meeting Mr. H. B. Everest at Mr. C. M. Everest's house, at Rochester.

Q. Now, upon that occasion, the first time that you were in Rochester and saw Mr. Everest, you went to Mr. C. M. Everest's house, did you not?—A. I think I did, the first time I saw him; I don't know; come to think it over, I think the first time I saw him was in Truesdale's office, but I do not just remember so much of it; I think the first time I saw Mr. H. B. Everest on this subject at all was at Mr. Truesdale's office; I am not really sure.

Q. Don't you recollect that you went to Mr. Everest's house, and that H. B. was there, and that you saw him in the parlor and asked him to do what he could to take your husband back into the employ of the Vacuum Oil Company?—A. I did not; I never asked him to take him back. I recollect going there; I recollect I felt bad because I was talked to so much about it; I had reason to feel bad; I am trying to tell the truth as nigh as I can remember. I don't remember I shed tears; I did feel bad; I don't think the occasion of that bad feeling was that Mr. H. B. Everest was using reproachful language for my husband's having left the employ of the company in the way he did; it was because I thought we were going to lose everything, and would not have nothing left; that was what I felt bad for, was shedding tears for, if I did; I don't know as I did. I knew if I got my property into money the creditors could not take it; that is what I was advised by them; I did not understand law; I took their advice, giving Mr. Truesdale power of attorney; got some of it into money; some of it was sold—the mortgages; the real estate was not sold at all; I stopped him selling it; I thought there was too much expense on it. I only saw Mr. H. B. Everest once at Mr. Truesdale's office; I saw Mr. C. M. Everest there another time; he came to see me; I think it was before I removed to Rochester; I could not say just—I think it was before I removed; no, I did not see him after I moved to Rochester, I don't think; I think it was before; I wouldn't be certain.

Q. The power of attorney to sell that real estate was given on the 23d of June, and the power of attorney to sell the mortgages was given on the 27th of June; now, do you think you were down at Rochester afterwards, and before you removed?—A. I don't just remember.

Q. I understood your testimony on your direct examination that this conversation at Mr. Truesdale's office was after your husband had gone to Boston, and after you had removed to Rochester.—A. Well, it seems to me that it was sent to my husband; I think it was, and Mr. Truesdale went over for me; I think it was after I had gone to Rochester; I aint certain. I did not see Mr. H. B. Everest and Mr. Charles M. Everest at Mr. Truesdale's together but once; it seems to me it was after I removed to Rochester that I saw either of them at Mr. Truesdale's, I wouldn't say for sure. I don't know how long Mr. C. M. Everest had had the letter from his father (Exhibit G) before he read it to me; I don't know whether he said he had just received it or not; he came in there to my house, on Plymouth avenue, and read the letter to me; my house was not then close by the works; I did not go back into the company's house after I moved to Buffalo; I moved into Mr. White's house, on Plymouth avenue; I don't think that after that letter was received I knew just then my husband's address; it was longer than two weeks that he was in Boston before he returned to Rochester; there was two weeks that I did not know where he was; I think I must have been back in Rochester a month or six weeks before he returned there the first time; I do not just remember. After he came back from Boston the second time he was quite awhile around doing nothing; a little while, it must have been, maybe, two months; I don't know just how long; I can't remember just how long it was; I know he was longer than two months doing nothing; I can't tell just the time; I know it was a good while; I did not urge my husband to return to Rochester.

Truman Miller, who assisted me in moving from Buffalo, is my husband's nephew; he boarded with me at that time, and was in the employ of the Buffalo Lubricating Oil Company.

On further examination for the prosecution, the witness said:

I don't think my husband and I went to see Truesdale before the occasion when H. B. Everest was present; no, sir; I did not; I executed Exhibit B there in Mr. Truesdale's office; that was not the occasion when the Everests were there; I had been there before with the Everests, before this paper was executed.

JOSEPH S. STEARNS, a witness on behalf of the prosecution, testified:

Prior to three weeks ago I lived at Cambridge, Mass.; I have been in the oil business; I know Charles M. Everest; made his acquaintance in 1882, in Boston; the Vacuum Oil Company had a place of business in Boston, at 51 Purchase street; William A. Root was in charge of it, when I first knew of it, as manager; in February, 1882, Mr. Root and Mr. Charles Everest employed me for the company; I have met Mr. H. B. Everest lately right here; I never knew him before; the business carried on in Boston by the Vacuum Oil Company was selling lubricating oils to factories, railroads, anybody that wanted it, dealers, or anything, and some illuminating oil; I was first employed to go amongst factories, around in different counties where I traveled; it included railroads; I remained in their employ from then until the fall of 1882; I can only give a rough idea of the extent of the business of the Vacuum Company of Boston; some roads would buy 20 barrels, some 90 to 100 at a time; there were quite a number of men in the employ of the company, selling; I could not say how many; I received oils from 51 Purchase street; I suppose they were shipped from Rochester; I don't know that; I made reports of sales to Mr. Root in Boston, one to the Vacuum Oil Company in Rochester, one to Mr. Waring in New York; I think it was 44 Broadway; I wouldn't be sure; I don't know whether that is the Standard Oil Company's office; I don't know who Mr. Waring is; Mr. Root instructed me to report to him; his first name is "O. T."; I don't know what the "O." represents; I had forms upon which to make reports every day; my reports were not acknowledged from the New York office; I have been at the New York office; I met Mr. Charles Everest there and the other gentlemen in the office; I can not remember any of the names; I could tell if I heard them; I had letters from the Rochester manufactory once in a while; I never addressed my New York reports to anybody but Mr. Waring.

I had instructions from C. M. Everest in regard to the sales of these oils; the Buffalo Lubricating Oil Company had an agency after that in Boston; while I was connected with the Vacuum their oils were being sold there; when I was first hired Mr. C. M. Everest told me to get all the trade I could; then at different times, for some time on, we would have talks about different things; then, after awhile, Mr. Reynolds, who worked with us, left, and I was put in his place; Mr. Reynolds took charge of the Buffalo Lubricating Company in Boston; then he went around to customers that he had been selling to, and some that I had, and cut the prices down, and I went around and cut the prices farther; Reynolds went around first and cut the prices; Mr. Everest told me to put the price down, but not to lose any money, just as low as

I could get it, that is, to follow them down, if they came down to follow them down, and get the trade and protect it; that was all, only not to sell at a loss; he told me to tell the customers that the Buffalo Company were using their patents. Some time during the time that I worked for them, I think it was in substance, Charles Everest told me that the Buffalo Company were a concern that had started and had \$40,000 capital, \$25,000 paid in; he didn't think they had a great sight of money; something of that sort; I couldn't swear just positive what it was; I believe he said they would not last a great while, a few months, three or four months, six months, somewhere along there; I couldn't say for certainty for that; that is as I recollect it, I think; he might have said that he would give the Buffalo Lubricating Oil Company just thirty days to live, but I couldn't say positive; I think he told me to say to customers that the Buffalo Company were using their patents and had no right to make their oil; "using their patents" I could swear to, the other I could not; I did use these arguments to the customers; he further said that the crude oil from which the Buffalo oils were made was not as good as theirs; I don't know as he said directly that they were using dipped oil, but I took it that way; Mr. Everest came to Boston; I showed him a sample of the oil that we had in a bottle, and he told me that it was not good; I turned it upside down and there would be black specks all over the bottle inside; take it and rub it over your hand, and it would be dirty and black; it didn't have a good smell; he said it was not good oil, and I think he told me it must be made out of dipped oil; it did not smell nice and that they could not afford to sell crude oil at the same price they did dipped oil; that was the reason they were selling their oils so low, they were selling dipped oil, crude oil cost more; that was the way I understood it; that was in '82; it might not have been just those words, but that is my recollection now; I think he told me to tell the customers that they had suits commenced against the Buffalo people for infringing on their patent rights, or something of that sort; I was to do all I could to get the trade; to use most any argument that came along to get the trade, that is, in the natural course of business; he did not tell me to lie about it; not that way, don't do that in business generally; he told me if there was any loss on oil to let the Buffalo Company get it; there was no other competitor in the market in Boston than the Buffalo Company; not anybody that was cutting prices, that I knew of; I was getting from one road 20 cents a gallon for lubricating oil; we got the price down to 18 cents, and got down then, I believe, to 8 cents, so that I have been selling them since then at 8 cents.

I should say Charles Everest was in Boston five or six times while I was in the employ of the Vacuum Company, perhaps not but four or five times; I have never been at the Rochester works; I sold oil, I supposed it was manufactured at Rochester, all that I sold; I don't know of any way of knowing, only I know that it was delivered from the Boston office; C. M. Everest never told me to tell the trade that the purchasers would be liable for damages if they handled the Buffalo oil, or anything of that sort.

Cross-examined: These statements which I was instructed to make to my customers about the oils of the Buffalo Company were true.

FRANK R. BEARDSLEY, a witness for the prosecution, testified as follows:

I have lived in Buffalo since April, 1881; I was here while the Buffalo Company's works were building; I was employed there by Mr. Matthews, by the company; I know Albert A. Miller and the two Everests; I was in the employ of the Rochester Company from about May, 1879, until April, 1881; I am a brother-in-law of Charles B. Matthews; I came to Buffalo, to this company, and subscribed for some of its stock; before I came here I saw C. M. Everest several times at their office at the works, while I was working there; he first spoke to me about my coming here; he said he supposed I knew about the new company, or these gentlemen going to Buffalo—Mr. Matthews, Mr. Miller, and Mr. Wilson; I told him I just heard of it; he said, "I suppose you will go with them;" I said, "I have no arrangement, I do not expect to now;" "Well," he said, "I suppose you will probably go with them," and talked about it a few moments there in the office at the works; and before he went, he said, "I have nothing against you, Frank, but if you go to Buffalo I shall try and fix it so that they won't be able to pay you much salary."

I had some talk with him on the telephone, perhaps a week after that, just before I came away, in reference to when I should leave, and he told me that I could go, I think, the following night, which, I think, was Saturday night; I was shipping clerk for the Vacuum Company; when I came to Buffalo I assisted Miller; he had charge of the construction; we had no one else that could construct the works or make oil; there was one still connected so as to run; about the middle of June the first run was made; Miller had been away, off and on, considerable of the time; I saw this first run of oil; the still was charged with oil and fired up early in the morning before I went out, and about the middle of the forenoon the safety-valve blew off; the safety-valve is located on the condenser [referring to the map].

was connected right here over the condenser on the end of one of those pipes where the pipe turns to go down there into the water.

When the safety-valve blew up, the vapor floated back over the stills towards the Atlas works; the vapor was light-colored, and resembled steam; there was quite a large volume started up first, and then the wind blew it off over the still; it is inflammable, so that if it came in contact with any fire, it would have taken fire immediately.

Q. The works would have taken fire?—A. Yes, sir; I do not know where Miller was when the safety-valve blew off; we looked around the works pretty thoroughly and then my brother sent a man over to the Atlas works; I do not know as any one came clear over from the Atlas works when this vapor was passing out; Miller was found and came back in a little while.

Q. What had been done, if you know, to the safety-valve prior to the first run?—A. It had been packed with plaster of Paris and weights hung on the lever.

Q. At whose directions?—A. I do not know which men did the packing of the plaster Paris or the hanging of the weights.

(The defendants' counsel thereupon moved to strike out the witness's statement as to what had been done to the safety-valve, as he did not remember at whose direction it was done. The court denied the motion, and the defendants excepted.)

Q. Were you around there continuously while the works were being built?—A. I was there the larger part of the time.

Q. Who directed the work to be done and the manner of its doing?—A. Mr. Miller, exclusively; he had charge of it; I saw the weights upon the safety-valve, but I did not see the men hang them there; I saw the packing of the safety-valve with the plaster Paris, but I did not see it done. This same safety-valve blew off again in the afternoon of the same day.

Q. What blew off again?—A. The same safety-valve.

Q. Did you see who put it back?—A. It adjusted itself after the blowing off.

Q. Then it blew off again in the afternoon?—A. Yes, sir; I was there; we tried to find Miller again; I went over to the Atlas works after looking around our own works, and found him there at their derrick, watching the drilling of a well.

I saw the character of the fire under the boilers; it was a very hot fire; I noticed the condition of the front portion of the still; it is of iron, about 10 feet in diameter and 15 in length, something in the shape of an ordinary boiler such as we see on an engine; the fire is applied beneath; it was an extremely hot fire; the front showed a very hot fire; it was red in some places; I have never seen a fire under a still as hot as that since; the fireman was Louis Lapress.

I found Miller the second time; he came back to the works with me and directed to have the doors of the still opened to cool the fires; after this was done the safety-valve gradually stopped blowing off; I should say this was 3 or 4 o'clock in the afternoon; I saw the residuum that was left in the still; the kerosene went over; what did not escape through the safety-valve was condensed and run into the ground tanks.

Q. What was the residuum in the still from which you make these lubricating oils? What condition was that in?

(The defendants objected to this question as incompetent and immaterial. The objection was overruled, and the defendants excepted.)

A. The residuum left in the still was black—charred, had coke with it; I have seen these stills run since that time; I have been there at the works continuously since; I know what residuum is left, what it is.

Q. State what it should have been, if run properly.

(The defendants' counsel objected to the question as incompetent and immaterial, and that expert skill acquired since that time does not authorize him to speak.)

(To the court :) I have been engaged in the manufacture of oils since that time, and now am familiar with the process, and with the products as obtained.

(The objection was then overruled, and the defendants excepted.)

A. It should have been a green cylinder stock; the oil was spoiled, the residuum, it was only fit for fuel; I do not recall how many barrels in the still; the brick-work around this still was cracked in several places on the side; this first run was the 15th of June; I have become familiar with the manufacture of this oil since that time, and know the quantity of heat that is safe to use, and what is not safe; it usually requires about twelve hours of fire under the still to run a batch in the still, and further time for steam.

Q. You may state whether or not the fire that you saw, upon the running of this first batch of oil, was more intense than should have been applied in the usual course of the manufacture of oil.

(The defendants objected to this question as incompetent and not a matter in relation to which the opinion of the witness can be received. The objection was overruled, and the defendants excepted.)

A. It was. I have learned from my experience what would be a dangerous fire.

Q. You may state whether or not the fire applied, the intensity of the fire or heat applied, on this occasion, was dangerous to the safety of the works or otherwise.

(The defendants objected to the question for the same reason stated for the last preceding objection. The objection was overruled, and the defendants excepted.)

A. It was. It was within two weeks after the running of the first batch that Miller went away for good, and was not seen at the works any more; there was no experienced man there to take his place when he went away; Mr. Matthews was not at the works much of the time; I didn't know where Miller had gone these times he was absent; Mr. Matthews and I went down to the depots several times at night to search for Miller, sometimes at midnight or later, watch the train; I have been to the Central depot, and I have been to East Buffalo, and down to the Louisiana street crossing, where the trains stop; I never succeeded in finding him; I was at this time one of the stockholders of the Buffalo Company and one of the directors; I did not know Miller's whereabouts for a long time after the 1st of July. I am now manager of the works.

Q. State what was done in trying to manage the works without Miller, or in getting somebody to take his place, or, in fact, growing out of the departure of Mr. Miller, within your knowledge.

(To this the defendants objected as immaterial. The objection was overruled, and the defendants excepted.)

A. We tried to find a man to take his place, but we were unable to do so, made inquiries and could not find any one that was experienced; I tried to experiment and do the best I could; we went to work and made experiments, and tried to put the pipes together and fittings, and made a great many mistakes, because we did not know how they should go; when we put them together and tried them one way, and then have a man take them down and try it again; we were experimenting in that way for as much as a year before we had things so that they ran successful; we made inquiries, and tried to find some one that we thought would be reliable, but were unable to do so; we did not dare to advertise for a man; I did not make inquiries anywhere outside of Buffalo, but I knew of no one in the city that we dared to speak to on the subject; at the time Miller left the Buffalo Company had contracts made for the delivery of oil to be manufactured here; it was not possible to fill any of those contracts; we experimented somewhat beyond a year; we learned the business ourselves by experimenting and picking it up as fast as we could.

Q. Do you know of your knowledge, at the time of the starting of the Buffalo works, what the profit was or could be realized per barrel at that time upon the manufacture of lubricating oil from petroleum?

(The defendants objected to this as immaterial.

The district attorney stated that the evidence was offered upon the question of motive.

The objection was overruled and the defendants excepted.)

A. It was \$5 or \$6 per barrel on the residuum; the profit at that time on the kerosene illuminating oil, I think, was three or four dollars a barrel, perhaps five.

Q. Do you know how much the capacity of these works was if operated to the best advantage on the 1st of July 1881?

(To this the same objection, ruling, and exception were had.)

A. The capacity of these two stills was 400 barrels of crude a day; there was only one ready to operate when Miller left; the two others were partially completed; they were on the ground; the capacity of the number three still was about 50 barrels of crude per day; numbers one and two were the same size; the capacity of the two 400 barrels of crude a day.

Q. How many barrels, if you know, of lubricating oils could 400 barrels make in the usual course of your business?

(The same objection, ruling, and exception were had as last above.)

A. About 80 barrels of cylinder stock; the balance of the amount would be kerosene, naphtha, gasoline, and paraffine, with the exception of a small loss in distillation; the percentage of loss is from 4 to 7 per cent.

On cross-examination the witness said: I have now become familiar with the process of distillation of oil, and the machinery by which it is done; I consider myself intelligent enough to speak upon these questions which have been addressed to me by the district attorney; I know about the construction of a still, with its pipes and attachments, and the fire that should be applied to it, and all that; a safety-valve is to relieve the pressure from a still or boiler when the pressure becomes too great for safety.

Q. What is the object or purpose of packing any safety or any other valve in machinery?—A. It is usually done to keep it from leaking. There are different kinds of valves and of course different uses.

Q. Whenever a valve is imperfect, in order to secure its perfect working you pack it, do you not?—A. Well, we pack the joints to prevent leaking, with different substances.

Q. But if one of these joints is a joint with a valve you pack it, do you not?—A. Yes, sir; usually.

Q. You do if you want to get a good result?—A. It depends upon the kinds of valve you are speaking of.

Q. I am speaking of a valve that requires packing.—A. A safety-valve?

Q. I do not care whether it is a safety-valve or any other valve; if it leaks you pack it, do you not?—A. Well, safety-valves are not usually packed.

Q. Why?—A. They usually work with springs or weights, without packing.

Q. But suppose the seat into which the valve shuts is not tight, then what would you do?—A. They are usually ground; the metal surfaces are ground to make them fit together tight.

Q. Suppose they did not?—A. They are ground again until they are made tight so that they fit.

Q. Suppose where it was attached to the boiler that there was an imperfection—it not being tight—then how do you secure it?—A. That is the only way I know that safety-valves are made tight, by grinding and putting in new metal seat. These safety valves that were on this still were of a different kind; they were packed at this time in plaster of Paris.

Q. What were they packed for?—A. Well, they were packed to keep them from leaking and flying off.

Q. But if they had leaked they would not have answered their purpose, would they, as well as though they were tight?—A. Well, if they had leaked the vapor would have escaped all the time.

Q. And that was a thing to be guarded against, was it not?—A. I do not know why they were packed at that time in plaster of Paris.

Q. I am not talking about that particular time; if a valve leaks it does not answer its purpose?—A. No, sir.

Q. If you have no other way of making it perfect you pack it, do you not?—A. Not a safety-valve, they are ground.

Q. I say if there is no other way to do it, you pack it?—A. I never saw a safety-valve packed in that way except on that occasion, except that valve; they are usually of a different manufacture. I should not pack a safety-valve in that way; I should grind it.

Q. If there is no other way to secure it, to make it tight, then you would pack it, would you not?—A. No, sir; I should not pack a safety-valve.

Q. Will you answer my question?—A. I should not pack a safety-valve with plaster of Paris under any circumstances.

Q. I did not say anything about plaster of Paris yet. Now, if there is no other way of securing a valve to make it tight, then you would pack it, would you not?—A. I should not pack a safety-valve; no, sir.

Q. How is a safety-valve secured to prevent it constantly rising and letting the vapor escape?—A. It either has springs or weights to hold it to its seat—ordinary safety-valves.

Q. Was this an ordinary or an extraordinary safety-valve?—A. Well, it was rather extraordinary; it had a lever upon which weights were placed, but the lever of this one was not graduated. It was just a plain bar of iron.

Q. Then there was nothing by which the valve would operate when the pressure got above a certain point?—A. When the pressure became too great, so that the weights and packing could not stand it, it would fly up.

Q. There was no way in which you could graduate the pressure in the boiler by this valve without any guess-work, was there?—A. By this valve; yes, sir.

Q. And you regarded that as a proper still to commence operations with, did you?—A. I did not have any directing about that valve; that was the kind of valve that was put on there; I know that Miller ordered it made; I don't know as he ordered it made without graduating marks upon it; I think that Mr. Miller sent me to the founder with the order, if I remember right; I don't remember whether he explained it to me; I think he explained it, though, how the lever should be made; the lever resembled an ordinary lever very much; it was a straight bar of iron; I don't consider it a proper lever; I don't know at that time as I knew anything about safety-valves; I presume at that time I knew enough to know that a safety-valve is so arranged that when the pressure in the boiler or still, or any other device upon which it is placed, reaches a certain point it will open of itself. We don't use that valve now; we have the regular safety-valve; that was not a regular one, that was a kind of a home-made concern, made to order; a regular safety-valve has a ground seat, with a lever with a graduating place showing the pressure where you set the weight; I think this valve was made here in Buffalo; I can not tell who made it; I think I took the order to George W. Tift's, but still I wouldn't be positive; we had some grates cast; I don't know as I knew what the device was used for, or that it was to be used as a safety-valve; if I remember right I think Mr. Miller had his pieces made separate and a man put them together at the works, put the lever on and fixed the

arrangement; I ordered the pieces for this valve from Tift's—valve and fittings; it was made with a 4-inch elbow, and some other pieces bolted on to it; I don't know that at Mr. Tift's works they knew what we wanted to use it for; I am not sure whether I knew at the time the pieces were got; I saw it being put on, though, afterwards; I think I have found out since that they used a valve of that kind, that the Vacuum Oil Company in the city of Rochester used a valve of that kind; I think it was like the pattern of the Vacuum Oil Company; I don't think I ever examined any safety-valves at the Vacuum Oil Works, or took particular notice of them. This still, I think, had a gauge-pipe attached to it when this was commenced, that is to show how full the still is; it is by that, and by gauging the tank from which the crude is pumped, that we determine the quantity of oil that is in the still; it is a little more accurate to gauge the tank from which it is pumped, although the gauge-pipe is very near. I do not know the difference in the distillation of oil between fractional distillation and destructive distillation, not by those terms; I am not familiar with those particular terms.

Q. Now, fractional distillation is where the vapors are produced at the lowest possible temperature, and are not overheated or decomposed; destructive distillation is where the heat is much greater, and the component parts of the oil are separated in the distillation; now, which was this?—A. I think this was what you would call destructive distillation; according to those definitions destruction requires a very much higher degree of temperature than fractional distillation. When we started up these works some of the apparatus had been used, was second-hand; we had a pump that was used in the oil regions; that had not very much to do with the distillation of oil. The stills were new, right from the shop; they are set in brick-work which had been recent laid, and the mortar was fresh; the brick-work was not thoroughly dried, any of it; it should not be the case that the brick-work in which the stills are set cracks if it was fired carefully for the first few times until it dried; I don't think the brick-work in the other still was cracked after use; it may be now from long use, but not on the first run, if it was run carefully and heated slowly; the distinction is between the first run and some subsequent run because it was run hotter, of course; if the fires are started carefully when the brick-work is fresh, and heated slowly, they should not crack to any great extent; might be some little crack.

Q. Would you expect to get just as good a result, would you, in starting up works anew, where they have never been tried before, as you would where the works had got into good working order?—A. Well, you might not get the first few runs as accurately to the gravity until you saw how the still would run; I should expect to succeed at first, and make a decent oil, if I understood the business; new works, new machinery, when first put in operation ought to produce as good results as after use for a time if they are run carefully; I think they do run successfully if they are arranged right, perhaps not as accurately to the gravity until a few runs are made and you get used to them.

I left the employ of the Vacuum Oil Company just before April 1, 1881; I was employed there shipping, and knew, of course, the customers to whom the oil was shipped; I think nearly all of them passed through the office there, the orders; perhaps not quite all but nearly all; I went to the Vacuum Oil Company in May, 1879, and left April 1, 1881; I had a conversation with Miller about my coming to Buffalo, and I think it was the same day that I talked with Mr. Everest; I am not certain whether it was just before or after; I had no conversation with Mr. Matthews about my leaving until after; they told Mr. Everest that day that Mr. Miller and Mr. Matthews went to the office; when they came back I think it was Mr. Miller told me that they had talked with Mr. Everest; before that time I had no idea of leaving.

After Mr. Miller left we were unable to find any one to fill his place; I did not myself inquire of anybody outside of the city of Buffalo; I don't think I inquired of anybody in the city to any extent; I don't now recollect having talked with anybody about it; I don't know as I ever saw Mr. Matthews inquire of anybody; I do not know that he ever inquired of anybody.

I should think the arm of this safety-valve was about 2 feet long, perhaps 2 feet and 3 or 4 inches; from my recollection I should say that the weight of the iron that was on it was 20 to 25 pounds; the size of the opening of the valve was about 3 inches in diameter, or a little over; the amount of pressure that would be safe in the still with that length of arm and that opening, and with a weight of 25 pounds at the end of the lever, would depend upon the amount of pressure that the plaster of Paris cement held beside these weights, not only the weights, but the cement; a regular safety-valve is ground so that it needs no packing, so that nothing escapes until it raises.

Q. We will assume that nothing would escape from the valve until it is lifted—do you know what pressure it would require—that is, what pressure upon the still would be indicated by a proper gauge, before the valve would be raised?—A. As I understand you it was in a cement of plaster of Paris.

to not care whether it was by  
me so that nothing escaped—  
any before that valve would be  
lost, whether it held tight or

since the valve was absolutely  
There would be a great dif-

whether your cement will hold  
depend very largely on how

be sure that these two parts

protect the joints?—A. It was  
together in it as you would

to that what you mean?—A.  
did cement two plates together.  
is there which, as you under-  
purpose of holding the valve  
do so, at that time I did not

ed but some cement that was  
it did not have anything to do  
the case.

or, that still would bear with  
try to carry now, this allow  
of the inside diameter was 8

some still, it is quite common  
very common on a still, a  
it only carries 5 or 6 pounds;

usually, it has occurred some-  
they have blown off slightly,  
the occasionally, then we dash

these gets too hot they blow off,  
any more of more than 5 or 6  
off, they are there for safety;

do not blow off, they come in to  
that they didn't blow off, and  
them, if you haven't a safety-

if there was sufficient pres-  
the still covered, the still might  
be another safe pressure; I

have that, I have no means of  
on the safety valve, as it was  
held down, the boiler would ex-

in device at that time, that the  
think that it was connected  
of the fireman, I can not say

minutes, perhaps not more than  
room when it blew off again; I  
came too much pressure again,

it could not be estimated very  
is it and then lapped around, I  
intensity of seeing any one doing

every.  
a man from Rochester we had  
building stills; his name was  
there by the name of Kelly, he

July, 1881, to January 1, 1882,  
many men we had out in the  
except Mr. Wilson; I understood

by brand names that I know of;  
only this one still ready for op-  
Miller went away, I don't re-

the first of August; that was  
the manufacture with the first still  
was ready we commenced the

manufacture with that; number three still we began to try to run the first of August; these are all the stills we have ever had; we continued the use of those stills right along from that time to this; I don't know how much crude oil we used there in the year 1886; I can not tell without looking it up from the books very closely; I can not give anything near it without looking it up; not within a thousand barrels; I can not give you any idea how much crude oil we used there in any one year since 1881; I can tell the capacity of that run at full blast; we have at times run it at full capacity; I can not give anything like what we have done in any one year; late years we are manufacturing our kerosene in the same stills, and that takes up a great part of the time; I could not tell without looking up the books how much oil we would use in any one year; the capacity, one still would be 200 barrels every twenty-four hours; I do not mean that, in point of fact, they run the still to its full capacity, unless it is for a short time; there would be delays, of course, sometimes; the most of the use of the vacuum still was for mixing engine oils and cylinder oils, and sometimes running Franklin crudes; I think the whole amount of crude for the first year up to January 1, 1882, was between 16,000 and 17,000 barrels; I think I had the most to do about superintending the manufacture; we all did what we could toward it; there was no one there that knew any more about it than I did, I don't think; we found that Griffin did not know but a little about it; he claimed to know; Keily only operated on the vacuum still; he did not understand the business very well; I don't think we ever ran as small a quantity as 16,000 or 18,000 barrels of crude oil in that length of time; I could not state definitely how much we used in any one year, but then I know we were idle some of that time quite a good deal of it; why I think we never used so little as that in any other six months is because we have run more of the time since that at times; I think at times we have run twice or three times as much in a month as we did in any of those months; I think we have books in our concern at the office which will show accurately what we have run.

The safety-valve is a disk or plate which fits down on to the seat; there was a groove cut in the seat, and a projection that fitted down into this groove, so that it was not two level surfaces, but one fitted down into the other; the plaster of Paris was filled into this groove and on to the surface; this tongue on the disk fitted down into the groove; this plaster of Paris was put into that groove and across the surface of the top of the valve; it was not only in the groove, but it was on the top surface of either side.

The profit on the oil in 1881 was \$5 or \$6 per barrel on the lubricating oil, and on the kerosene perhaps \$4 or \$5, might have been more, possibly less; I would not want to state that of my own knowledge positively, but that is my impression, I have nothing to do with the selling; I have to do with the manufacture; I stated in answer to the district attorney that those were the profits.

Q. Don't you know that at that very time the price of illuminating oils, delivered to the grocers in the city of Buffalo, was less than \$2.50 per barrel?—A. That would depend on the grade of the oil; any grade of illuminating oil that was manufactured by this company; no, sir; I don't know any thing of the kind; I think kerosene at 20 cents a gallon would figure more than that, or 18 cents; I think kerosene is retailing in Buffalo, by the store-keepers, at 18 or 20 cents a gallon; we were not selling illuminating oil then at all, not manufacturing it; we were not manufacturing the lighter parts; we sold that in bulk, the light ends that came off from the oils; I think the refined oil was retailing at 18 or 20 cents a gallon in barrel lots; all I know about the price of lubricating oil was that we got 35 cents a gallon for this residuum along in that fall; I could not say how low our agents sold that oil delivered to our customers; I do not think this cylinder stock was sold at a great deal less than \$5 a barrel, it might have been, but I do not think so.

Being again examined by the district attorney, the witness said: The way the safety-valve blew off upon this occasion was, this cover rose up until the opening was nearly wide open, I should think, and the vapor came out in quite a large volume from that; as soon as it left the pipe, it spread out and occupied a large space.

LOUIS LAPRESS, being examined as a witness for the prosecution, testified:

I live in Buffalo, and am working for the Buffalo Lubricating Oil Company as a cooper; I was here at the time these works were building, and was engaged upon that from the beginning; I knew Albert A. Miller at that time, slightly; he was conducting the erection of the works; no one besides him, that I am aware of; I did not see the putting together of this safety valve, or know who did it; it was sealed down with plaster of Paris and loaded with weights at the end of the safety valve rod; I can not tell you the number of weights just at the present time; I don't know as I ever knew; there were several weights on the end of the rod or the lever; my business at that time was I generally followed engineering and firing; I was driving the delivery wagon at the time; I was there when this first batch was run; I was put on the boilers that day, and also instructed to fire the still; I don't know as I started it, but I run it after it was started; Albert Miller directed it; he directed me as to the build-

ing of the fires; as near as I can recollect he told me to fire this still, to fire it as heavily as I possibly could, and I did so along up until some time during the forenoon; he came to me and made it to me in this way: He says, "Damn it," he said, "You ain't firing this still half;" he said, "Fire this still;" he says, "I want you to fire this still; you ain't got no fire under it;" I think, if I recollect right at the present time, he took the shovel from my hands and throwed in some coal himself; at that time I had an ordinary fire, and he threw in some coal. We have not, to my knowledge, had fires under this still as hot as that since I have been there; the result was that our safety-valve blew off; I saw the benzine or light oils come out; I can't tell how high the gases came; I know it went above our still, fast above our still into the Atlas; I don't know where Miller was during when he said to fire up and then came back and threw on the coal; he was not around there to my knowledge; I did not see him there after that; I noticed the fire-box in front of the still; it showed the indications of a very heavy fire under the still; the indications was cherry-red furnace front; the front of the fire-box was red; it looked to me as though it was naturally red. After the safety-valve blew off, I believe the fire was checked down until she cooled off so that the safety-valve got up to her place again; I don't recollect who arranged the safety-valve; Miller told me to go and fire the still again; no further directions that I know of at that time; he told me to shovel the coal into it, fire her up, and I had not been firing her properly; then I built all the fire I could possibly put in her; I did not see him any more, as I recollect, until the safety-valve blowed off in the afternoon sometime; I don't know where Miller was at the time; I did not see him there at the still; I saw the residuum that was left in the still; it was coke and burnt oil; I think the brick-work around the still was cracked in a few places from that firing that day.

Upon cross-examination, the witness said: I have lived in Buffalo since along in April, 1881; I came at the beginning of the construction of these works from Wyoming village; I had been acquainted with Mr. Matthews before then; I think I have known him somewhere in the neighborhood of eight years; I had been employed by him before in running a salt well at Wyoming; my duties were pumping the brine and firing the boiler, that was all. I can't tell you just at the present time how long I was there; I had sole charge of the boiler; that was for pumping brine; there was no evaporation that I know of; I pumped it on the ground or in the tank and it ran on the ground; I was engaged in that part of two summers, I think of 1879 and 1880; during the other times in that period, when I was not so engaged, I was working on the farm, part of the time in Mr. Matthews' employ; I can't tell how much; before that time I was living in Canada; came from there somewhere in 1879; it was upon request of Mr. Matthews that I came to Buffalo to go to work about the oil works; it was through word I got through Mr. Beardale; I had known him at Wyoming about the same length of time; it was Mr. Everest, as I understood, that was interested in the salt well; I did not know the Everests. When I came here in April, 1881, I went to work at once about the oil works, jobbing around the yard, nothing else to my knowledge; in Canada I was firing and running an engine at a saw-mill, I think for some six or seven years; I had had something to do with engines and boilers before that, a year or two or three before that. I was working in a saw-mill with my father and running the engine and boiler; before that I had nothing to do with engines or boilers that I am aware of. I think I was jobbing around the yard about two or three weeks, then I went to driving their delivery wagon; I can not tell about how long I was engaged in that; it was not two years, it was more than a week; I do not know whether it was six months, nor whether it was a year; I do not know as I can recollect whether it was a year and a half; I do not know as it was two years; there is nothing that I can tell about the length of time that I drove that delivery wagon except that it was more than a week; there is nothing at all; I do not know if it was ten years; I can not tell when I began firing under that boiler; I do not know as I can tell within a year, and tell the truth about the matter; I fired that boiler several days before I took it to fire entirely; I can not tell you when I began firing under that boiler; I have forgotten the date, and the day, and the time; I can say that I did not drive that wagon for ten years after April, 1881; I can say that I drove it for six months from that time; I can say that I did not drive it for three years from that time; I do not know that I drove it for one year; I should hardly think I did; I can not say positively whether I did or did not; I do not think I did for two years; no, I did not; I can not say positively whether I did or did not drive it one year. During my employment at these works my business never has been both to fire under the boiler and to drive the delivery wagon at the same time; I am employed by them now, and have been ever since April, 1881; I can not tell when I began to be employed as fireman; I can not tell about when I began; I am not positive if it was six months after I went there; I would not want to be positive whether it was as long as a year after I went there when I began firing; I do not know whether it was as long as two years after I went there when I began firing under that boiler; I do not believe it was; I can not say whether it was or was not as long as two years.

Q. Can you explain why it is that you are able to remember with so much more

distinctness when you were under direct examination than you can now?—A. No, sir; that I do not. I continued firing the boiler up till last fall some time; from last fall on I have been cooping, fixing and repairing barrels for the company; Mr. Boyle is employed in my place as fireman now.

I never knew Albert Miller at all until I came to the works; if I recollect right I first saw him, I think it was, opposite the pump-house, standing there looking at some pumps; I believe he was charged with the whole business of superintending the construction, as near as I can understand. I was never in the world at the Vacuum Company's works in Rochester. I did the first firing that was done under the first still; I can not say whether I prepared the fire; I don't know as I did; I don't know but what I did; I can't tell whether I did or not; I can not tell whether I lit the fire or not; I can not tell whether the fire was burning when I came there to tend it, or not; the fire was not so hot when I first came there as it was afterwards; I can not tell exactly whether the fire was burning or not when I came there; I can not tell whether I saw anybody else light the fire, nor at what hour in that day I came to tend to the fire; I think it was about 8 o'clock somewhere, as near as I can judge; I don't remember whether or not there was fire going at 8 o'clock in the morning; I think it was going, if I am not mistaken; I was driving the company's delivery wagon the day before; I didn't do any of that on the day the fire was started; I came to the works that day at 7 o'clock in the morning; before I went to the fire to tend it, I fired the boiler; there was a fire for the boiler and a fire for the still; I was charged with the duty that day of tending to both of them; I never was afterwards; I only continued to do it that day; after that my duty was driving the delivery wagon; it was only that one day that I fired the boiler and still before I was taken off and put upon other work; I can not tell exactly how long it was after that before I came back to duty as a fireman; I can not tell any thing about how long it was; I don't recollect; I don't think it was a year; I can not recollect exactly the time; I presume I could tell within three years, but could not tell just exactly the time; I when I began firing; I do not know whether it was as long as two years after I went should judge six or seven months, somewhere in that neighborhood of this six or seven months after that first day; I may have fired the boiler on and off, I would not be positive as to that; it was only on and off for a few hours at a time, that is all; my almost exclusive duty during those six or seven months was driving a wagon.

I didn't converse with Miller at all about my duty as fireman before 8 o'clock on that day, as I am aware of; he came into the fire-hole and told me that I was to fire the still along with the boiler; that was the only conversation that I had with him; I was already at work firing the boiler; went on it in the morning; he told me the night before that I was to go on the boiler, I believe; in the morning he came, somewhere about 8 o'clock, or as near it as I can judge, and told me I was to fire this still with the boiler; I had no more conversation with him the night before than I have now given, not any more that I recollect of particularly, at all; he gave me then no particular instruction; on the morning of this day I didn't talk with him any more than that, I think; I think he came in and told me to do this work and went right off, and then I went to work firing the still as well as the boiler; I can not tell whether the fire was already begun under both; I can tell under the boiler—the fire had been under all night, but I can not tell under the still, whether it was going or whether it was not going; I don't recollect how long it was before I saw Miller again; I think not until along in the forenoon some time, or the afternoon, I don't recollect which; the forenoon, I think it was; I believe I have given all the conversation that passed between him and me that I have spoken of when he told me to go and fire the still; I have given it in answer to these questions that you have been asking me now; I believe the words he used when he came in and found me firing the boiler, that I was to fire the still as well as the boiler.

Q. Then he turned around and went away, and then you went to firing the still?—

A. I believe, sir, that is the words he used, as near as I can recollect them; I saw him again somewhere along about noon or afternoon, I can't tell just exactly when.

Q. The time that you next saw him again after you went to firing the still was when he came back after the safety-valve blew open?—A. I don't remember exactly whether it was before or afterwards; I remember his coming to me at some time during the day and telling me that I was not firing the still hard enough, to fire up; whether it was before this or after this I am not positive to swear; I can not tell whether it was before or after the safety-valve blew open that he came and made those remarks to me. After this day's firing it was six or seven months, or somewhere along there—some time, I don't know exactly the day or time, before I was put permanently at work firing again.

Q. Well, from that time you continued right on until last fall firing still and boiler?—

A. Yes, sir; not still; no, sir; I had had nothing to do with the still; I never did fire the still before or afterwards, except that one morning; never seen one before.

Q. So you have never had occasion, except that one morning, to examine the fire-box for indications of a heavy fire there?—A. Yes, sir; I have passed back and forth

business; I have never since that time, to my recollection, seen the fire-box look red; I have not been making a habit of inspecting the fire-box as I went by; I have often looked at them as I passed by them; looked in their fire-holes and opened their doors; I don't remember since that time of having seen any red on the fire-box.

Q. Did you make any examination before you began to fire the boiler, or the still, or those appendages, of any kind?—A. I looked at my boiler to see how it was, but for the still part I knew nothing about it; never had seen one before; I didn't know whether it was right or wrong; I didn't trouble myself about the safety-valve, anything more than I noticed how it was fixed; it was right over me, and there was a hole, so that I couldn't help but see it if I stepped out doors; I did look at it; I had been nearly all my life accustomed to safety-valves; I had never fired a boiler that hadn't a safety-valve; I had been in the habit of seeing them weighted down; I had never in my life seen a safety-valve that was not weighted down. When the fire was moderated I opened the doors to moderate it; then the safety-valve settled down to its place again, after a time, until the fire was made too hot again; when it settled back, I think, it didn't leak gas, until it blew off again; as near as I can recollect, it settled down to a tight, close joint.

Q. The safety-valve, after it blew off, tried to operate exactly as a safety-valve should, didn't it?—A. No, sir; I don't think it did; I think it didn't settle right back to its place till it was placed there by somebody.

Q. Then why did you say that it did?—A. I merely say it did; I say I think it went back to its place by somebody putting it there, I think; I didn't notice anybody put it there, for I wasn't there; I went away from the place.

Q. Then why are you telling us that somebody put it back?—A. I say I don't think it went back of its own accord.

Stenographer reads from the witness's direct examination as follows :

“Q. After the safety-valve blew off, what was done?—A. I believe the fires were checked down until she cooled off, so that the safety-valve got set up to her place again.”

“Q. Do you want to modify that now?—A. Yes, sir.”

Being further examined by the district attorney, the witness says :

As near as I can recollect, the boiler that I fired was about 20 feet from the still, I should imagine; while I was firing the boiler there that day I frequently saw the fire in the still; I was back and forth from the boiler to the fire.

Being further cross-examined, the witness says: The brick-work, after the fire, was cracked in two or three places; I don't recollect just how many; I don't remember how long it was before anything was done to repair those cracks; I don't know as there was ever anything done; I wasn't there.

JEREMIAH THOMAS, a witness for the prosecution, testified as follows :

My business is firing stationary boilers; I am now in the employ of the Buffalo Lubricating Oil Company, and have been close on to six years; I wasn't there at the beginning; they had commenced some work before I made an engagement with the company; they hadn't run any oil; I hired to do the boiler work or corking, and on the tank they were building, an iron tank, number 1 tank; I know Albert A. Miller; he had charge of the works when I came there; of the still and everything connected with it, as far as I know; during the construction Miller was absent at times; I don't know where he was, or what he was doing; I am not certain whether I was there the day this first batch was run; but I was there and worked every day when the weather would permit, while I had out-doors work; I might have been there on the occasion when the safety-valve blew off, but I don't remember anything about it more than hearsay; quite likely if I was working that day, I was on the ground, but I wasn't near the safety-valve; I don't remember seeing the vapor blow off; when they were getting ready to run oil, perhaps at that time I might have been assisting to connect some of the other stills, or I might have been still working at some of this iron-work around the yard; those yards are quite extensive; I might be working in one part of the yard and not be in a position to observe the still or safety-valve; I heard about this first run being talked of afterwards around the yards there; I think it was the following day that I looked at the residuum left in the still after this first run, when they got it out of the still; I didn't help take it out; there were two men taking it out; I think they were from Rochester, and one man's name was Raynard, and the other man's name—his first name was Richard; I have forgotten his family name; it looked pretty black.

Shortly after that Miller went away for good; I know nothing about how they endeavored to get in a man to run these works, more than when I saw a man come after some time; I know of experimenting, changing pipes; I can not say how many times they changed them; I know the work that I was engaged on myself; I assisted in

changing them; I could not say how many times I changed them, or any of them; several times in one day; I couldn't make them fit right in the first place.

One time some person in Rochester gave me some bottles; it was Truman Miller; I understood at the time he was night foreman at the Vacuum Oil Works; I brought the bottles to Buffalo. I never owned any stock in the Buffalo Company.

Upon cross-examination, the witness said: I was employed by Albert A. Miller about the middle of May, 1881; I didn't do the boiler-making work. It might have been six weeks or more after Miller left, or it might have been a little less, before we got the vacuum stills in a condition to run; at the time Miller left, the vacuum still was on the ground; it was set, but the connections were not all made; as soon as the man who took charge of it claimed it was ready they started it; that was Mr. Kely; he run it from that time for eight or nine months, as I recollect; I had never had any experience in oil distilling before this; the residuum that came out of the still might look black and still look blacker; there are degrees; the color of the residuum is pretty dark, some of it; different shades I have seen; in mixtures, that may depend upon the quality of the crude oil that is put in; perhaps that affects it, at any rate.

We had to change the pipes more or less; I couldn't say that I got them right myself at all; they had to be changed until they were right and considered safe; a competent hand would, no doubt, have got them right at the start; this is the only new works that I was ever engaged in; I haven't any very large experience after all; any gas-fitter could, I suppose, have fitted those pipes most likely, with one-third the trouble it took me; I wasn't much acquainted with Buffalo, and have been here but a short time.

CHARLES BEARDSLEY, a witness for the prosecution, testified:

I have resided in Buffalo, I think, since about the 1st of June, 1881; I have been since with the Buffalo Lubricating Oil Company; prior to that my business was fireman in Wyoming; I was brought up on a farm, and came here and went in the employ of the Oil Company; I was at the works several times, before I came to stay permanently, for a day at a time; I came here to be an assistant under Mr. Miller; he was superintending the construction of the works; I was helping around the works what I could in one capacity and another under Mr. Miller; when I got here and was working out there, Miller was absent at times from the works in the month of June; he might have been away a third of the time, perhaps, of the working hours; I couldn't say exactly how much he was away; I can't say of my own knowledge where he was; when he was away we were going on with the works the best we could under what instructions we had; I had no knowledge of the construction of an oil refinery of this nature; I knew of no person around there who did, except Miller; I think I know now how to run a works of that kind; I have learned that by experience at the works. When Miller was gone I think we made endeavors to find him; made inquiries if anyone had seen him; I think some of the time we went to the depots to see if we could see him there; I don't know that we ever succeeded in finding him; I don't recall any times that we did.

I was there upon the occasion of the first run; Miller was there that day some portion of the time; Lapress did the firing for the still; I saw the fires under the still that day; the fire surface was very large under the still, and there was a very heavy fire; I have seen the fires since that were used in the distillation of oil; I have never seen a still fired as hard as that one was; the fire-box was quite red; I think I heard Miller instruct the fireman to put more fire under the still once; I think there was a very strong fire at that time, if I remember; after the still had been running part of the forenoon the safety-valve blew off very heavily; it emitted what we call vapor; I saw it rise in the air; it went towards the Atlas, went to the southeast there; Miller was away from the yard at the time that the safety-valve blew off; the first thing I done was to try to find Mr. Miller; I went towards the Atlas yard, I think, the first place I went; I see him in the yard; I went as far as the Atlas line, I think, over in that direction, I couldn't tell exactly, and I met Mr. Smith at that point, the superintendent of the Atlas, and inquired if he had seen Miller; after a little while we succeeded in finding Miller; I came back to the works and sent a man out in one or two directions to see if they could find him; he came back in a little while, I could not tell how long it was; it might have been twenty minutes, perhaps half an hour; I think the fires were slackened, and some went to work to try and fix the safety-valve back; I think it was still leaking, but not like the first excess; I couldn't tell who tried to fix it back; I don't remember; I couldn't tell whether it was Miller or some one else; I remember of their going up to fix it, that is all; I was there all the time, till they had fixed it; I think Miller was there a little while and the still was started again; after that I saw the fires under the still again; I think it was fired quite heavily again right on; Miller was there once in a while, and once in a while he was away; he was not continuously there; there was another escape of vapor from the safety-valve some time during the afternoon; I think the fire was finally drawn or cooled off towards night, in the evening; I can not tell whether

they were drawn or went out; might have done either way; I had never seen stills run before; was green at the business; I didn't know the danger of this vapor of firing until I was warned by Mr. Smith.

Q. Do you know whether these gases are explosive or not?—A. Yes, sir; I suppose they are.

Q. Do you know whether the gases that were thrown off on that occasion were explosive or not?—A. I suppose they were.

(The defendants moved to have the answer stricken out as incompetent and immaterial. The motion was denied, and the defendants excepted.)

It might have been three or four weeks after this before the vacuum still was in running order; I couldn't state exactly; a man by the name of Keiley was running it first; I think he was running it first; I think he was there eight or nine months, something like that; it may have been something like a year before we could make each kind of oil that we were trying to make, and during that year we were experimenting. I couldn't tell how many men we had in our employ when Miller went away; it might have been fifteen or twenty, somewhere; I couldn't tell exactly the number; I don't remember that Miller ever returned to the works after he left for good that time; he never took charge of them again.

Upon cross-examination the witness said: I am forty-two years old, and have resided here continuously since some time near the middle of June, 1881. I had never lived here before; Frank Beardsley, who has already testified, is a brother of mine; I came here direct from Wyoming; Charles B. Matthews married my sister; I have known him as long as I can remember; I don't know that I was ever connected with him in business before; my brother has not, that I know of; I came here to go into this business; I don't know whether it was exactly by his invitation, or what it was about that; I suppose that it was on his invitation, I don't remember about that; all the knowledge that I have on the subject of the chemistry of distillation comes from my experience here in the last six years; I have never made chemistry a study at all, except as I have made it a practical study, so far as it was necessary to perform my duties about the works; I don't know that I ever made any particular study of chemistry.

Q. Now, the vapor that you say passed off at the safety-valve, did you ever see it pass off on any other occasion than this?—A. Once in a great while there is a slight raise of the safety-valves, but the stills are not supposed to be run hard enough for that.

Q. I don't ask you about what is supposed. Are you able to tell in any language, either ordinary or scientific, what the vapor is that passes off from the safety-valve when it is raised?—A. Do you mean what it is composed of?

Q. What it is; for example, is it carbolic acid gas?—A. I couldn't tell you as to that; in testing oils, I have seen it take fire.

Q. The vapor that passes off at the safety-valve?—A. No, sir; not the safety-valve.

Q. That is the vapor that I am asking you about; I am not asking you whether you can get vapor out of oil that will take fire. I am asking you about this particular vapor.—A. It would get afire if it came in contact with the fire.

Q. I simply asked you if you ever saw that vapor take fire?—A. I don't know that I ever have; I don't know as I ever saw it take fire from the explosion of a still; I can't say that I ever seen any vapor take fire of that kind; I never saw it come in contact with fire as I know of; I have seen it when we have been testing oil and heating it up, that that vapor will take fire; when oil is heated up it throws off a vapor; it would be the same vapor.

Q. I beg pardon; I must recall your attention to the question, and ask you to give me an answer to that or nothing. In what way are you able to determine that the vapor found in testing oil is the same chemical substance that passes through the safety-valve when it escapes?

The COURT. Answer the question.

A. I don't see how I can make any answer to that any plainer; when the safety-valve opened I was in the yard; I think somewhere near the still; as I remember it I was 50 or 60 feet away; I couldn't tell exactly; I don't remember just what I was doing there; I couldn't say that there was any one with me at the moment, or wasn't; I then went over to the still, and asked the fireman where Mr. Miller was; I think that was the first thing I done; I can't tell whether my back or my face was towards the still and the safety-valve at the time; I know I heard a little noise and looked that way; I heard a little noise, and then I turned; I don't know from that whether my back was probably to it; I can't tell whether I was looking out or not.

Q. Then what did you see?—A. There was a column of vapor rising, or a column of something; I don't know what it was, whether it was steam, or vapor, or what it was; vapor is light-colored that rises from the safety-valve.

Q. Does it differ particularly from the vapor of escaping steam in appearance?—A. I think it appears like it; don't look like steam; it isn't exactly the shape of it.

Q. Lighter colored than steam, do you think?—A. Yes, sir; it isn't—

Q. Or lighter in gravity than the vapor of steam?—A. I don't know as to that, whether that would be lighter gravity or not; it was rising up and spreading out; it went over towards the Atlas yard; went right that way away from the fire, and continued to rise; as it went off towards the Atlas, it did not continue to rise; it settles down more; I don't think it rose much, and was dissipated as the wind carried it, spreading out. I watched it while it was going off so hard and stood there around it, one place and another; it might have risen 30 feet above the still; perhaps more, I can't tell exactly; it wouldn't go a hundred I don't think; there was no building between that and the Atlas Works; I think it was all vacant there; the still is near the south end of the property; may be 29 feet from the Buffalo Creek Railroad, I can't tell; the Atlas Works were off to that side; what was known as the Solar Works were next to these, and the next on the east of the Solar were the Atlas; this went right over that way towards the Atlas and Solar; we always speak of it as the Atlas, most always, although the Solar was the nearest; I think that the tanks of the Solar came first next to our works; it didn't reach any buildings there; go right over the tanks there, 10 or 12 feet high.

As the still was relieved of the pressure, of course the volume stopped; the cloud that was floating over east of it, I don't know how long I followed that with my eye; it went off over the Solar towards the Atlas, and I can't tell how far it would reach; I didn't see it settle anywhere; it would not reach to the Atlas, I should not say to their line; it goes out like steam; it faded out in the distance.

Q. Will you be good enough to tell me and the jury how you know this is an inflammable gas?—A. I know it in one way by reading—by information; I can't say just where I have read it, and by talking with—one way I should be quite sure of it is what Mr. Smith told me, the superintendent of the Atlas Works.

Q. Then your whole knowledge on the subject is from what a man by the name of Smith told you, is it?—A. No, sir, it isn't; it is the general understanding of still men and oil men; it is my understanding that it is an inflammable gas; I don't know that I have ever fired any of it myself to see; I expect that my knowledge of it comes from information that I have received in one way or another; I couldn't tell you just how.

Q. All that you know as to whether this is or is not an inflammable gas come simply from what some one has told you?—A. If the question means by practical experience in firing the vapor myself, I never have; I have from general information and reading, and experimenting is the only way I know anything about it.

Q. Experimenting; what experiments have you made that have taught you that that is an inflammable gas?—A. In handling oil, we are always very careful in vapors not to come in contact with fire; that is all I know about it, except what somebody has told me, and experience in handling oil is all I know about it; I suppose the vapor taken from oil is alike, if it is produced by heat.

Q. All vapor that is taken off from oil is alike; let that stand?—A. Not all the same—

I am a stockholder and one of the directors of the Buffalo Lubricating Oil Company; I am at the office now, acting in the capacity of a cashier; I think I came to the works for the first time, to remain permanently, the day the still was first fired, and when I saw the gas escaping from the safety-valve; I had been there more or less a good many times; from that time on, I had been at the works with my brother managing the works. I think I came to the office as cashier in 1883; I would not be certain; I have continued to be cashier from that time on; before that I was at the works with my brother in the management of the works; I think I was giving directions to the men; I began giving directions to the men, I think it was immediately after Miller went away; my brother and I took charge of the manufacture of oil; began immediately, and he has continued since, and I came to the office in 1883.

This vapor which passes off at the safety-valve would be different in density somewhat, whether the still had been running a long time or not; that is, it floats in the air even from the tail pipes; it doesn't turn to fluid when the still first starts.

There was a steam connection to the still at this time; I do not think the steam had been admitted to the still at this time; I do not think so, because that is never put in until the distillate has reached a lower gravity; it is not put in at the beginning of the run; this was not exactly at the beginning; the fire had been under, of course, some time; I could not swear to the exact time at the time the safety-valve blew off; the petroleum was in before the fire started; I could not give the exact time, it perhaps might have been an hour and a half or two hours, something like that, I could not tell; I don't think it was a good deal more than that; I think I was there that morning before the fire was started; I could not say that I saw the fire lit; I know the still was filled; I was there at the beginning of the operation; I have no doubt that I—I don't know that I could say that I saw the fire lighted. How long after the start of the fire the steam is ordinarily introduced would depend

on how fast the distillation had progressed, and that would depend to some extent on how hot the fire was; this fire was started very heavy from the beginning; the steam would be introduced earlier if the fire had been burning very strong than it would if it had been burning slow; I understand the fire had been burning very strong; it might be as long as three or four hours after the fire is started that the steam is ordinarily introduced; I could not tell exactly; it would not be a great deal less; I should not think it should under any conditions be a great deal less than that; I don't know that I ever fired the still, but I was around it when it was running, and have—what you would call running it; I have tested the distillate in the tail pipes, I think, sometimes; I know I have since that; I can not say that I have ever admitted the steam myself, but I probably would tell the boiler man to admit it.

Q. You do not really know at all, do you, Mr. Beardsley, whether there was steam in that still or not?—A. I think there was not, at this time; that is my best recollection.

Q. That is not what I asked you. You do not really know whether there was or not, do you? If you do, say so, and if you do not, say that.—A. I don't think it was in the still at this time.

Question read by the stenographer as follows: "You do not really know whether there was or not, do you?"

The COURT. So that you can swear?—A. I think it was not, that is what I should—

Q. You do not really know whether there was or not?—A. I should say to the best of my recollection, I should swear it was not in at this time.

The COURT. He wants an answer, yes or no.—A. I should say it was not in at this time.

Q. Are you prepared to answer my question?—A. If the question is to be answered yes or no—is that the idea?

The COURT. Can you swear positively whether it was or it was not in? A. I think I can, that it was not in; that is what I should say.

Q. Now, you know there was no steam in that still, do you?

Mr. MARCY. I submit that he has answered the question.

The COURT. What is the answer?—A. I should say that it was not in at this time.

Q. You know that there was no steam in that still, do you?

The COURT. It can be answered yes or no, or you can say that you can not swear positively.

A. I would just like to say this, perhaps it is not an answer—

The COURT. The question calls for an answer, yes or no, or you can state that you can not swear positively.

A. I should answer no; that is the best I can. I know that I saw the safety-valve; whether I examined it particularly, I can not say; the safety-valve was in plain sight from the ground, and I went over the stills and saw the connections; I do not know that I examined that safety-valve particularly; I think I saw Mr. Miller when he was trying to fix it back again after the vapor had went out; that was immediately upon his return, or very soon after; not immediately, very soon after; he done something with it to make the joint tight with plaster of Paris; he made a mixture of plaster of Paris of some kind; packed it up as well as he could with oil in the still, and then the valve or the disk came close down upon the soft plaster of Paris; there would be particles of the old plaster of Paris in the groove, of course, that had been broken up when it would go back, and then this fresh plaster of Paris was spread around as well as it could be, I think, to make the joint good; I do not know just as to that; I do not think Miller was drunk when he came back there; I do not think he appeared to have been drinking; I know I noticed no appearance of his having been drunk.

I think it was a year or so before we could make an oil that we were trying to make; we might make one kind, and then some other kind we could not make; kept trying to make it, experimenting with it; we were selling oil all the time, more or less; when we were running the still we would have quite a stock, and we often had some shipped back; then we run it again, or tried to fix it in some different way, so that it would be satisfactory; I do not remember just how we did manage that; I think we advertised engine oils and cylinder oils; we were firing some, compounding; we bought considerable; I think we were recommending our oils, because we could not sell them if we did not; we were recommending that we were making different kinds of oils; I could not say that we were recommending them as the best; I know that we were trying to sell the oils; I don't remember just what was done.

I think there were perhaps three or four lots of oil made after this first batch during the time that Miller remained there; I could not say exactly. I don't know that I know anything exactly about the quantity of crude oil that was run by this company at different times; I think that the first year we had run sixteen or seventeen thousand, or fifteen or sixteen, I don't remember just what it was; something like that that we bought of crude oil; I think that was during the first six months, up to Jan-

uary, 1882; something like that; I don't know that I have seen the amount run afterwards, that we have footed it up; perhaps we have; I don't know about that.

Q. Was there any complaint made to Miller on the day that this occurrence happened, and of the first run, when he came back from somewhere else?—A. I remember telling him that I wished he would stay in the yard for us; I was afraid of the still, and I didn't know what to do with it, and I wished he would stay there in the yard and not go out while this was still running; of course I was frightened at this explosion; my brother was there at the time, and the men around the works, in different parts of the yard; I don't think any of the officers or trustees of the company were there, aside from my brother and myself.

Being further examined by the district attorney, the witness said: After the safety-valve had blown off I saw Miller fix it up with plaster of Paris; I think he did, or a man or two with him were fixing it when he came back. I don't pretend to be a chemist. The knowledge that I have derived in regard to the inflammability and explosiveness of gases is from the experience that I have had there at the works, and general information. The crude oil is placed in these stills, heat is applied underneath, and these gases are thrown off into the pipes, which, being condensed by passing through cold water, turns to a fluid, the form of distillate again. There is different degrees of explosiveness in the distillate, according to its gravity. The first of the gases that was thrown over would be very light in gravity, very explosive. I have experimented with these oils by placing a small portion under a lamp and testing it. In testing oils all kinds are tested. The tests of different kinds of oils are put in a cup something like this [indicating tumbler]; some of the cups used are inclosed and others are not; then a fire is put underneath this cup and it is raised to a certain heat, and then, as the gases begin to go off a taper light is passed over it, and at the degree of heat is called the fire test, or sometimes the flash after the fire test; and the different kinds of oil are—

Q. Are these gases that you have made a test of, that you are now speaking about, the same as the vapor that arises from petroleum when coming from the still?

(The defendants objected on the ground that the witness has already declared himself wholly incompetent to tell; that the witness is incompetent to testify to such a question. The objection was overruled, and the defendants excepted.)

A. I suppose they are the same, as they are generated by heat under the oil. They are of the same nature.

(The defendants moved to strike out the answer. The motion was denied, and the defendants excepted.)

I have made tests of the distillate produced from the evaporation of petroleum.

The prosecution here read from a deposition made by the defendant Hiram B. Everest, taken on behalf of defendants in an action in the supreme court wherein the Buffalo Lubricating Oil Company, Limited, was plaintiff, and Hiram B. Everest, and Charles M. Everest were defendants, before Adelbert Cronise, referee.

The court ruled that this declaration should be received as evidence only as against the two Everests, and by request of defendants' counsel reserved the question whether it should be received against C. M. Everest. And such reservation applies to the subsequent rulings of the court upon the admissions of the deposition.

The deposition was taken at Rochester on the 8th of January, 1885; the portion read was to the following effect:

The night Miller came down with his wife I think he staid there a couple of hours. During that period we talked about this oil matter and this company. He had not then decided to leave the company, not unless he could get his matters in a satisfactory shape. What he meant by that was to avoid any liability on that five thousand dollar note. I did not understand it was to avoid liability on anything else, and I think he talked of keeping his stock. I didn't talk over with him how he could avoid the liability on that note any more than that I made a suggestion.

(The deposition was offered in duplicate form, both duplicates being originals. Both were received in evidence, and the one offered by the district attorney reads as in the text; the one offered by the defendants reads, "he made a suggestion.")

He had some mortgages and owned some lots, and he would dispose of them and thereby get himself in shape, as he expressed it. I understood this meant to get his property beyond the reach of liability. I told him I could not have anything to do with that kind of business; that all I could do was to advise him to go to some attorney; I knew he was going to an attorney to put himself in shape, as he expressed it; that was to get his property out of his hands; you might call it so.

Q. You say you went with him to Mr. Truesdale, and you told Mr. Truesdale that they wanted to transact some business about this property?—A. No; I told Mr. Truesdale I had come there with Mr. Miller, and he wanted to transact some business; that he had been with us for some time; and Miller told me, "He is my old attorney;" and I said, "All right, then I will go."

Q. Did you employ Mr. Truesdale?—A. No, sir.

Q. Did you ever employ him?—A. No, sir.

**GEORGE, TRUESDALE**, a witness on behalf of the prosecution, testified as follows: I live in the city of Rochester, and have about twenty-five years or upwards. I have been an attorney at law upwards of twenty years; I have known Albert A. Miller since about 1872 or '73; I have done business for him as his attorney; I know his wife, and also Hiram B. Everest and Charles M. Everest. In 1881—June or July, I think; I would not be positive of the exact date—Albert A. Miller was at my office, 112 Powers Block, Rochester, with Hiram B. Everest; I could not say whether they came in together or not. They were there on two occasions; only Mr. Everest, Mr. Miller, and myself were there at the time in my private office; there was a partition in the room and Mr. Humphrey occupied the other side; I do not know who was out there.

The defendants, by permission of the court, here cross-examined the witness.

Q. Was the interview between you and these gentlemen of a professional character?—A. I should say yes.

Q. They called upon you for advice from you in your capacity of attorney and counselor?—A. They did; at least they asked me questions of law.

Q. And you regarded them at that time as your clients for the purpose of an interview, did you not?—A. I did.

Q. The communications made by them to you were made for the purpose of obtaining your professional opinion and advice, were they not?—A. No other purpose that I knew of, or understood.

By the **DISTRICT ATTORNEY**. I had never done any business for Mr. Everest. Miller was my client. Mr. Everest had made no prior engagement with me with regard to this meeting.

By the **DEFENDANTS' COUNSEL**. Mr. Miller had made an arrangement with me before for the meeting.

By the **DISTRICT ATTORNEY**. Q. State what took place there between you and Mr. Miller.

(The defendants objected on the ground that the communication was forbidden to be received in evidence by section 835 of the Code of Civil Procedure.)

Thereupon the district attorney further examined the witness, as follows: I was examined as a witness on behalf of Hiram B. Everest and Charles M. Everest in an action in the supreme court, in which the Buffalo Lubricating Oil Company, Limited, was plaintiff, and Hiram B. Everest and Charles M. Everest were defendants, before Adelbert Cronise, referee. Upon that reference I testified in regard to what took place at my office on this occasion between myself, Hiram B. Everest, and Albert A. Miller.

By the **DEFENDANTS' COUNSEL**. My examination was had, because I was ill at the time at my house; it was a deposition taken in pursuance of an order of the court on account of my illness. At that time I think I raised the objection in reference to this interview, that it was privileged communication. (Paper shown to witness.) That seems to be my deposition.

By the **COURT**. Q. Did you advise Mr. Everest in reference to any of his matters, transactions, or conduct?—A. Perhaps, if I may answer it a little indirectly, there would be asked, perhaps, questions, and Mr. Everest requested me to look up the law carefully on the subject, and he would see me a second time.

By the **DISTRICT ATTORNEY**. Q. I want to ask the question whether or not you were advising Miller or Everest upon that occasion?

(To this the defendants' counsel objected. The objection was overruled and the defendants excepted.)

A. I advised as to proposed action of Mr. Miller; answered the questions that were propounded by both of them.

The examination of the witness was suspended and the district attorney read further portions from the deposition of Hiram B. Everest, the substance of which is as follows: My home is in Riverside, Cal.; I commenced to reside there in the fall of 1881; prior to that I lived in Denver; I moved there from Rochester in March, 1879; prior to 1879 I lived in Rochester; I was the chief promoter and organizer of the Vacuum Oil Company in the beginning; it was incorporated October 1, 1866; I had the principal management of that concern down to the time I left Rochester; C. B. Matthews, J. Scott Wilson, and Albert Miller were once in the employ of that company; Mr. Miller did his first work for our company in October or November, 1868; he worked two weeks as carpenter; after that he came again in January, 1879, and I hired him to learn the business; his first work was firing the boiler; he was in our employ from this January, 1869, up to March 19, 1881; he was promoted from fireman to stillman, and finally to having charge of the construction.

Mr. Wilson, when he first began to work for the company, had oils from us which he sold; you might call it commission, or you might not; but his first work on a salary began, I think, in September, 1878; I can not give the exact date when he retired; he quit us in the spring or early part of 1881; he was a selling agent of the oils, employed by us,

Mr. Matthews's connection with the company dates, as I recollect, from the winter of 1877-'78; his first work was to go with me to take leases of land in the neighborhood where he lived, in Wyoming, for the purpose of developing an oil territory; during the spring or summer following of 1878 he had charge of putting down the test well on what was part of his farm at that time, and once a part of my father's farm. He had charge of some experiments there in making salt; he afterwards had charge of putting down a well in LeRoy; that was the character of his early work; it changed from that to his moving his family to Rochester and entering into our office or one of our rooms; I have not looked that up, but it must have been in 1879; he had charge of editing a paper advertising our concern; we tried to make it a family paper, but we lost money on it and dropped it; rather, I put him in charge of a patent suit; I think I had commenced it when he came there, but I went away; we commenced a suit against one Cotter, in Pittsburgh, and he had charge of and hunted up the testimony to carry on that case; that was the character of his work; he never engaged to any extent as an agent in selling the goods, neither was he employed as a book-keeper in the office.

I think our books show that Mr. Miller and Mr. Matthews left at the same time; I think it was March 19 that they both gave notice that they were to leave, but Mr. Matthews didn't take pay only up to the 1st of March; the first I knew that these three men had quit was a letter from my son, dated March 19; I was then in Denver; I returned to Rochester, and reached there on the 28th of May, Saturday; prior to that day, and after I learned that they had quit, I had no conversation or other communication with either of these gentlemen, any more than I wrote a letter to my son which he was to read to Mr. Miller; I presume that letter could be found.

After the 28th of May I first saw Miller on the evening of the 30th at my son's house in the city of Rochester.

A portion of the deposition was here omitted as follows (afterwards read by defendants):

The way I came to see him was, the same day that I arrived, the 28th of May, Truman Miller, Al.'s brother, called on me at the house and said Al. wanted to see me, and wanted to know when I could meet him, and where; I told him he could see me on Monday evening at my son's house. He said he would telegraph to Al., as he had promised to do.

The district attorney resumed reading as follows:

On Monday evening at about 8 o'clock, Albert Miller, we call him Al., came to my house.

The district attorney here omitted the following portion of the deposition (afterwards read by defendants):

I received him and my son was present. After the usual greeting I said to him, "Al., what have you come down for; to make me a proposition?" "No," he says, "I have come down to have you make me one." I said to him, "It is too late; I have no proposition to make." He then went on to say that he was sorry that he had left our employ; that he had been deceived as regards the amount of money he was to get as a bonus for leaving. I asked him how much that was; he said that he was to receive from persons connected with the company, or it was represented by Matthews and Wilson that he would get, \$25,000 bonus; he hadn't seen anything of it yet; he also said he had to do all the work of building the establishment at Buffalo, make the plans and order everything, and he was tired and sick of it; he was found fault with by Wilson, and it didn't work as he expected.

The district attorney here resumed reading as follows:

He said further that he didn't want to stay very long; he had to go back that night. I asked him why, and he said he didn't want Matthews to know he had been down to my house. I asked him considerable many questions as regards what he had done there; I wanted to get information. I don't think there was anything said at that interview about his leaving the Buffalo Company and returning to our employ.

That interview ceased at about half-past 9 or 10 o'clock that evening, and he said he would come down again, which he did on the Thursday or Friday evening following; the second conversation was the Thursday or Friday evening following the first one; it was at the same place; my son was present; I recollect particularly he said he would like to make some arrangements with me or my concern to get back from the Buffalo employ, but he didn't think it would be safe to do it for several reasons; one reason was because he had his name on a note for about five thousand dollars, which was in a Warsaw Bank, I believe, and if he should leave them he might be held on that note; another was, that he had put some money into the concern which he might entirely lose.

Q. What, if anything, was said on that occasion about this coming back into your employ?—A. I think it was broached that evening that if he should settle up his business in such shape that he could come back without disadvantage to himself that I would employ him again. He said, "I guess I had better be going; I can't

stay long." "But," said I, "Al., stay all night." "No," he said, "I can't do that; I don't want them to know I have been down." He went back to Buffalo that night, I suppose; he said he was going; he arranged that night to come down the next Monday evening, which was the 6th of June, and to have his wife come with him, and stay over night; he said he would and he did; he came to my house as before, or to my son's house, and his principal talks as regards himself, his relations, connection with the Buffalo Lubricating Oil Company, how he was likely, if he came back to my employ, to lose money; and I suggested he should come to my office in the morning, and I would go with him and his wife to some attorney, which we did do; we went to Mr. Truesdale, who had been his attorney before; I told Mr. Truesdale that my sympathies were with Mr. Miller; that he had got himself into a scrape at Buffalo, and I wished he would do what he could for him, and I retired.

The district attorney omitted the passage following (afterwards read by defendants):

What he did do I did not know until recently I went to Mr. Truesdale to get the date; neither do I know, of my personal knowledge, what was done. That ended my part of his taking care of his property.

The district attorney read further from the deposition as follows:

My next interview with him was on the 2d day of July, at the Union Square Hotel, New York City.

At the last interview that I have detailed, the evening of the 6th of June, I said to him after he had got his matters straightened out and had left that company, I would consider it; I would hire him at fair rates; I didn't say what rates.

The meeting him in New York came about in this way: I wrote a letter, and I must have telegraphed before writing this letter, for I wrote a letter on the 1st of July to my son in regard to Miller in response to some communication received from my son, I could not say what, that when he had left their employ to have him meet me in the East; the reason I had him meet me in the East was this: I had made arrangements to go directly from New York on a limited ticket to Denver, and I could not very well meet him here; either in response to a telegram, or some other information conveyed to my son, he came to New York, leaving Buffalo at 9 p. m., July 1. I received a telegram from my son that he would be there; went to the depot to meet him, but the train was late; went about my business about town; came back and he was there, at the Union Square Hotel. I was going to Boston that night, and I had very little time to see him. At this hotel the first leading question I asked him was this: "Have you left the Buffalo Lubricating Oil Company for good?" He said, "I have." I told him I was ready to talk business with him then; I wanted to know a good deal about it and had very little time; I think the boat goes about 4.30 in the afternoon; I told him if he would go over to Boston with me I would pay his expenses; he did so; we went to Boston together; he said, "Mr. Everest, at any rate I am entitled to a vacation; I have worked hard."

Q. What took place between you as to his going into your employ?—A. I didn't make any definite arrangement what I would give him, only I would be fair with him, neither did I that Saturday night or Sunday following; I talked with him more in reference to what they had done; getting information; the Fourth of July was Monday; we went out on the Common, and we talked a great deal; he had an idea that he must have a larger salary than I thought he ought to have; I think he asked me \$2,500 salary; I told him that I could not give him any more than he had been getting when he left us, which was equivalent to \$1,500 a year; at the time he quit he was receiving \$112 a month and a house to live in, and a barn for his horse, which I considered worth \$3 a week, which made \$1,500 a year, and I proposed to give it him again; and he formally accepted on the 5th of July. On the morning of the 5th I wrote a letter to my son, which I would like to have produced here; the substance of my bargain was that he should work for me indefinitely at \$1,500 a year; I was to give him a year's notice when I wanted him to quit, and he was to give me a year's notice when he wished to quit; he was to do any fair job which I should present to him, either at Rochester or any other place; he made exception that he should not heave coal or dig in a mine for it.

Q. Now, then, what did you set him at?—A. As he was desirous of remaining out of reach of these people in Buffalo, I made an arrangement to leave him there in Boston for a few days; and at his request I told him he could go to the store, and I would arrange with Mr. Reynolds to give him work; he could mix oils, and perhaps tend the store, and let Mr. Reynolds go out and make sales, and if he was successful in that he might possibly remain; we had a branch house there; I left him there, and that was the last I had anything to do with him personally.

The next I had to do with him was when he came to California; that was in June, 1882; he had indicated to me, either by letter or otherwise, I could not now say how, that he would like to go to California to live; and I thought it would be a good thing for our company to have him do so, so I wrote him a letter describing the country somewhat, and saying I would assist him in starting fruit-raising, if he would come

there, and after that I made an arrangement with a canning company—canning of fruits—that he should come there and work for that company—learn the process; he did come in response to my request, at the expense of our company, and went to work for this canning company; that was in June, 1882. I could not say how long he staid in California, but he settled up with me on the 11th of August; he located on a farm where I thought he wouldn't do us any more harm, and I settled with him on the business arrangement made in Boston; bought him off by paying one thousand dollars; I gave him a bonus of a thousand dollars to be released from the bargain.

Miller purchased a lot in the village soon after he came there for the sum of \$1,000; he hadn't the money; he said his wife had the money, and made a draft on his wife to pay for this lot, which I got cashed for him at the bank, but when it went forward for collection, his wife failed to pay only one half of it, and I took it off from his hands; I can not say that this had anything to do with the thousand dollars that I gave him bonus for being released from his bargain. The thousand dollars wasn't paid for that lot; it was paid in to close up the business, and he was to use that in buying a farm in San Bernardino. He didn't like the village lot, and I took it off his hands.

Q. State whether you did or did not hold out any inducement, or say anything to Mr. Miller about leaving the employment of the Buffalo Lubricating Oil Company until after he had informed you that he had severed his connection with it?—A. I never made him any definite offer; I said to him, perhaps a number of times, that when he had fixed up his business, and left, I was ready to employ him again; that was all that I said upon the subject; I never proposed to hire him until he had settled up and quit; I don't know as I should say settled up, decided to leave them for good; perhaps I should explain that in a letter that I wrote from Denver, I did make a proposition there that I would see him safe from any loss if he would abandon the project then, before had gone any further; he had just commenced; that is, just as soon as I got notice—a letter—that he had quit, I endeavored to regain him by making him a special offer, which was read to him in that letter; but I mean to say, after he had gone to Buffalo and was in the employ of that company; that company had not been formed then as I understand it.

The district attorney omitted the succeeding portion of the deposition, as follows (afterwards read by defendants):

In my first conversation with Mr. Miller there was nothing said about his coming back, except that he was sorry that he had left, and I told him that I had no proposition to make.

Q. He said that you stated that it would be only a matter of a few days before the Lubricating Oil Company would be out of existence, that you proposed to commence suit against them?—A. The first part of that proposition I would swear positively I never made, that in a few days the Buffalo Lubricating Oil Company would be out of existence.

The district attorney then read from the deposition, as follows:

I can't say whether that night I said I would commence suits; I have said it repeatedly; as far as I said about getting an injunction, I hoped to get an injunction.

The district attorney then omitted the succeeding part of said deposition as follows (afterward read by defendants):

Q. Miller testified that you said the best thing he could do was to leave them and dispose of his property so that when they got a judgment against the Lubricating Oil Company they could not come on him, so that as a stockholder he could not be reached by a judgment; was there anything of that kind?—A. There was nothing of that sort said at that interview, or any interview, in regard that he had better get his property out of his hands so that our company could get a judgment against him; I never said anything of that sort.

Q. He said that you said you would ruin the company, that they would lose all they had put into it?—A. I never made any statement in which the word ruin was incorporated, or anything of that kind; I never made threats that I would ruin the company, or destroy the company; I said we would maintain our rights in every legal way as far as that; I never said that we would ruin the company; I think I said Matthews was sharp enough to look out for himself, and he must look out for himself; I said nothing about putting his property out of his hands so that it could not be reached by a judgment; he proposed to put his business in such a shape that they could not make him pay this note that he said it wasn't right for him to pay; I didn't advise him whether it was right or not; he said it was not right for him to pay that note, or any part of it; I didn't raise any objection to it, neither did I advise him; I told him I could not do any business of that kind for him, he had better go to his attorney, and if he wished I would go with him; I did, as I testified a short time ago—went to Mr. Truesdale; I think Mr. Miller is mistaken in testifying that in the latter part of June he met me at the New York Central depot, in Rochester; I wasn't in Rochester at that time; I do not think it is so that I went into the car and talked with him about business; I have no recollection of meeting him in the depot; I went to New York the latter part of June, and returned in July.

Q. Miller says in that conversation you proposed to sue them and bust them up,

and for him to follow your advice and he would come off all right; was there anything of that kind said at any time?—A. No, sir; not by me; the term “bust them up” is one of his own coining; he uses it frequently.

Q. He says at this time he was going to Buffalo, and you to New York; when you went to New York did you meet him at the train?—A. No, sir; I have no recollection of meeting him in Rochester; I don't think I saw him after the 7th of June until the 2d of July; if I did I have no recollection of it; all that I did in reference to having him meet me in New York I did through my son; I don't think I had any communication with him, though I might have had; I would not be positive on that point.

The district attorney here read further from the deposition as follows:

Q. He says that at New York you told him he had better telegraph his wife to have her remove immediately back to Rochester, and that he told you that there might be some way whereby Matthews could stop her moving, and that you said, “Telegraph her to move and get her things on the cars before the 5th of July.” State if there was any such conversation, and if so, what?—A. There was a conversation in regard to his wife moving from Buffalo to Rochester; he said that he was very anxious to do so, and he wanted her to move just as soon as it was decided that I would employ him. I suggested that I should do, in hiring him, the fair thing, but I could not say just what I would give him; that if she was to move, it would be a good plan to move on the 4th; they could not serve an attachment, etc. I admit saying that. He said something there about a telegram; I told him that I thought it would be a good plan for him to telegraph to his brother and have him do this business, and he said, “You write the telegram;” and I told him I did not write telegrams on such business as that, he could write his own telegrams; he wanted me to look it over, and I did and made one letter a little plainer, that was all. I didn't dictate the telegram; I didn't pay for this telegram; neither did I pay for his coming to New York, but after the time he said he would go into my employ; from that moment I paid his fare, from the time that he said he had left the Buffalo Company for good.

Q. He says that you said if he would leave the Buffalo Company and come into your employ that you would see he did not lose anything, and that you would give him the same salary that he had been getting, on the 4th of July?—A. I never made him any definite proposition, except to pay him \$1,500 a year, and with that he wasn't to go back into our works unless I saw fit. I did not say anything to him that he should not lose anything by this transaction; not that time. The only time I said that was in the letter to my son, written on the 25th of March.

Q. He says that he said to you that they would probably sue him, and might get a judgment against him for damages for leaving, and that you said you would see to that, and that he should not lose anything by the Buffalo Lubricating Oil Company.—

A. Not in that form, nor to that effect. I told him I would stand by him as far as I could legitimately.

Q. Was there anything said about your protecting him?—A. Not in a financial way, sir.

The district attorney here omitted the succeeding portion of the deposition, as follows (afterwards read by the defendants):

Q. He says that you stated that it had gone so far that all there was about it now was that you would have to crush them by suing them, and it was only a matter of a few days before they would be out of existence.—A. I never made such a statement as that, sir. As near as I can remember, he said himself that it would be a hard matter for them to get anybody to fill his place. I did not say that; I think not. I could not swear positively to that. I have endeavored to think these things out; but could not swear positively on that. I did not say anything to him to this effect, that I would resort to all the means I could to destroy the company. I never used the word “destroy” in connection with the Buffalo Lubricating Company; it is not in my vocabulary. I said nothing to Miller further than I have stated, that I would use all my means to protect my legal rights. I have never put it stronger. At Boston he didn't want to be known. There was nothing said by me that he should not let himself be known. That was his request that I should not give him away. He didn't even want to write home to his wife and have it mailed at Boston.

The district attorney here read further from the deposition, as follows:

I introduced him to Mr. Reynolds by the name of Milliner. I did that because he wanted me to. He was told to go to work in the store, so that Mr. Reynolds could go out and sell oils, and thereby make himself useful. I might say in regard to this introduction that Mr. Reynolds well knew it was Mr. Miller. It was only a joke.

Q. Miller says at a conversation he had with you out in California you said that if he had let you know about it and let you manage it, you would have broken them up. The way he worded it was something like this: If you had had the management of it you would have let them go on and let him remain in your employ, and let them get in the middle of the stream, and then tip them over and drown them. What is there about that?—A. I have no recollection of any such statement as that.

The district attorney here omitted the succeeding part of the deposition as follows (afterwards read by the defendants):

Q. Or anything like that?—A. Nothing that I remember of that they could construe into any such thing as that. Well, I will say this, if I have a right to say it, I was fearful of his faithfulness to me all the time; and being in that state of mind I should not have left him—

I have copies of the papers that were exchanged at the time that he and I settled in California. [Producing them.] Miller made this statement: "Mr. Everest, you have always been kind to me, and I shall do nothing to injure you, but I am going to bust the Standard." I said, "Al., how will you go to work to do that?" "More ways than one," he said, "they can not afford to let me loose;" he said, "I shan't be bought off, either, unless I get something for it; it will cost them more than twenty-five or fifty thousand dollars before they get through with me." I said, "Al., I think you can make more money raising fruit in California than you can fighting the Standard." This conversation was had immediately after I paid him the thousand dollars.

The district attorney continued to read the rest of the direct examination of H. B. Everest in the deposition, and the beginning of the cross-examination, as follows: On the 5th of July, while I was in Boston, I wrote my son a letter containing the substance of my arrangement with Miller; early on the morning of the 5th I wrote out our agreement, as we had talked it on the 4th, and read the paper to him; he assented to it, and I sent it home to Charles, as the basis of our agreement.

Cross-examined: I was not originally president of the Vacuum Oil Company; I was superintendent, and had the full management of the business; my brother-in-law, Mr. John D. Helmer, was president; I had general superintendence under the name of secretary; just when I came in as president of the company I think was about the time I went to Denver, in about 1879; I held just half of the stock in my name up to July 25, 1879; my son held two shares, I think, and that made a majority, what I and my son held; my brother-in-law held some; he owned twelve shares; my sister owned some.

Q. Now when was it that transfer was made to that company, the Standard Oil Company?

(Counsel for the defendants objected on behalf of each of the defendants Everest to this question, and to all that follows in said deposition, down to the words, "that do you any good," as incompetent as against C. M. Everest, and immaterial as against H. B. Everest.)

A. The transfer of a portion of our stock was made July 25, 1879, not to the Standard Oil Company, but to a trustee, who might have represented the Standard's interests; his name has gone from me; he is an attorney in New York.

Q. As you understood it, it went to the Standard Oil Company?

(To this question the defendants' counsel specifically renewed the last objection, which was overruled, and the defendants excepted.)

A. It went to the Standard Oil Trust; the Standard Oil Company is an organization of Cleveland.

Q. Now, then, who did you understand then controlled this interest which was transferred at this time, in 1879?

(To this question the defendants specifically renewed the last objection, which was overruled, and the defendants excepted.)

A. The Standard Oil Trust; you probably know as much as I do about what is the Standard Oil Trust.

Q. Well, is it what is commonly understood as the Standard Company?

(To this the defendants specifically renewed the last objection, which was overruled, and the defendants excepted.)

A. I can not say. I continued after that as president of the company, and one of the directors.

Q. Do you know whether the balance of the stock, in addition to what you yourself had, and the others, went to the Standard Company?—A. I suppose I could tell all about it, if necessary. In the sale of the stock of the Vacuum Oil Company to the Standard interests (if you please to have it that way, I can not say, Standard Oil, Standard interest, or Standard trust), there was three-fourths of the whole value or capital of the concern transferred; three-fourths of mine and three-fourths of the other stockholders. I used my own judgement, and they all acquiesced in it, and we concluded to sell it; the same amount of stock is now owned by each stockholder that was after the transfer of July 25, except what has been changed from one name to the other, from the trustee to the Standard Oil Trust; and there were three men, Henry H. Rogers, A. M. McGregor, and John D. Archbold, I think those are the names that held then, and do now, five shares each of the stock of our company; they are directors of our company; I don't know anything about whether they are directors of the Standard Oil Company.

Q. You have no understanding on that subject, and can not tell?—A. I don't know anything about the Standard Oil Company; I don't know anything about John D.

Archbold's relations, only that I have understood, if you will have it, that he is a member of the executive committee of the Standard Trust; that do you any good?

Miller had been at work for us since 1868; at the time when he left our employ, when this company was formed, he was the man in charge of the stills and some other work; he was a competent man for that business, and I should hardly say that he had the management of the stills wholly; Mr. Patterson had the management when he run them, Mr. Miller when he run them; Miller was promoted from firing the boiler to running the still within three months after he came to us; he run his shift with the others thirteen years, except when he was away; Patterson came in there to learn the business, and was called as good a man, if not better, than Miller; he was employed there when Miller went to the other company; when I went away, in 1879, my son took the position which I had been occupying and has continued under it since; he has since that time been, and is now, the real manager of the company; I have been its nominal head; at the same time I was consulted about a great many things concerning the business, and I gave him a vacation occasionally and I ran the business; I knew enough about the business at any time to step in and conduct it, and do now, and did so at these periods.

I hadn't been here for two years when Miller went away to Buffalo, except to relieve my son on vacations; so far as I know, when Miller, Matthews, and Wilson left, we contemplated continuing all of them in our employ the same as before; I have no knowledge, from the active management here, whether there was any intention of dispensing with the services of some of them, Matthews or Miller or Wilson; I had no information about it; I don't think I had been consulted about it; it hadn't been the subject of consultation, no more than my son said at one time that he didn't think Matthews was of so much importance to our company as I did; I could not say what my son said about the importance of Mr. Wilson; I had said nothing that I know of; nothing was said upon the subject of Miller; he was a fixture in our company; Mr. Wilson was hired by the year; Miller I had made some other arrangements with before I went away and I supposed it continued; the change had been, instead of paying him by the hour and a bonus at the end of the year, it settled down to a certain amount a month.

When I first heard they had quit I was in Denver, and wrote to my son; he wrote to me that these three had quit.

Q. And you say then you undertook to stop the formation of the partnership, and to retain them in your employ?—A. No, sir; I didn't say that; I undertook to retain Miller in our employ; I did not undertake to retain the other two; I can not say that I desired that the other two should start an oil business at Buffalo.

Q. Independent of Miller, they were not at all formidable?—A. Mr. Wilson had some knowledge of manufacturing oils, but not much, particularly Matthews.

Q. Mr. Miller was the only one you cared to retain?—A. Mr. Miller was the one who understood our methods, and to have him go to them, or any other corporation, and give away our processes, and show other people how to make our goods, would be very damaging to us; and he had given us no notice of leaving, and I thought it no more than my duty to the company to use every effort reasonable to prevent him from leaving; that was my idea at the time I wrote this letter from Denver; just that.

Q. Did you think that the Buffalo Company would be able to go on and continue business without Mr. Miller?—A. I wasn't aware that the Buffalo Company had been formed.

Q. Did you at that time regard Mr. Miller as being indispensable to that company, assuming that one had been formed?—A. I didn't regard it in that light; I was looking at it if Mr. Miller left our employ and went anywhere to making our goods, and gave away our processes it would result in great damage to us, and for that reason I was willing to pay him an amount.

Q. I ask you if you did not think that the success of the company depended upon Miller's remaining?—A. If I had given it consideration, I should have said that would be the result, sir; he had practical knowledge of the business; there is no doubt about it; I don't think Matthews could have gone to the works and run oils, not unless he employed Mr. Miller or some other man.

At the time I received notice about Miller, I had no information only this letter from Charles; that letter stated that they expected to go to Buffalo to build oil works; I don't recollect whether it said they formed a company or partnership; he stated that Matthews and Miller and Wilson had all left our employ; that they were going to Buffalo to build works; I did not, when I wrote that letter, consult with any person with respect to his letter; after writing the letter, and before I met Miller on the 30th of May, I didn't consult anybody but Charles; I did not consult personally with Mr. Archbold at that time; I might have talked with him on that as I did on all our business matters when I met him in New York; I could not say that I did; I don't think I did talk with him in respect to Miller; I couldn't say whether I did or didn't.

I had my first conversation here with Miller on the evening of the 30th of May;

he came down to see; he told me in regard to what they had done and what they were doing, but I could not say now just how much he said they had done. I think he said they had the stills there at that time. I tried to find out how much money was going in it, and who was in it, and I remember he said there was a man by the name of Benedict, of Lockport, had gone in; I think it was on this first interview, but I wouldn't be positive; I inquired of him as to how it was being constructed, if they were building a vacuum still—either at that interview or some other; I wanted to know how they were building the works, to see if they were infringing on our patents; Miller didn't give me full information on that subject; he didn't have time at that interview, nor any of those interviews; I did not suggest his coming again; he suggested it himself; I said that was all right, I would like to see him. I think I told him the first or second time, when he came down again he had better come so as to stay longer, I wanted to talk with him about these works; he told me on this first occasion that he did want Matthews to know about it; he did not state the reason why; I did not ask him; I can not say that I understood particularly what his reason or motive was; I don't know as I ever gave that a thought, as to what his reasons were; it was spoken about the third time, and Matthews knew, I guess; I didn't know whether he did or not; he brought his wife down; I can not say that I made any reply to it, when he said he didn't want Matthews to know; I could see naturally, anybody could; I did not know whether or not Matthews knew anything about our talk together, my negotiation with him, I didn't ask him. As to the first two, I understood he didn't want Matthews to know; as to the third, I understood that, because he came down and staid longer—staid over night—and brought his wife with him. It is not from that circumstance alone; I had suggested that it would be better for him to come and stay all night and bring his wife with him. I could not say Matthews knew, as I remember, only what he said himself; I said nothing about it.

Here follows in the deposition the portion read by the district attorney immediately before George Truesdale was called as a witness. The district attorney proceeded with the cross-examination in the deposition, as follows:

What I have stated here now is the only thing I remember of having to do with Truesdale. Miller's wife was with him, and went with us at that time; I could not say whether Charles went or not; I don't think he did; I don't think I remained in that office over five minutes; I didn't hear the details of the transaction; I didn't wait to hear it; I did not know how long Miller was there; Miller had said that the company might sue him for damages for leaving them; he didn't say anything about judgment; neither did I. He seemed to think they would sue him for damages; he said that to me; I could not say whether I made any reply to it or not.

The district attorney omitted the succeeding portion of the cross-examination in the deposition as follows (afterwards read by defendants):

Q. Did you say anything to him upon that occasion? Did you tell him that he could—that this still could be fixed so it would blow up?—A. No, sir.

Q. Did you say that?—A. No, sir.

Q. Did you hear any such conversation as that between Miller and any one else?—A. No, sir; I never heard any such conversation.

Q. Or that suggestion?—A. No, sir.

The district attorney proceeded from this point with the cross-examination, as follows:

Q. Did you hear any suggestion, either from Miller or any one else, that the pipes in the stills could be misplaced?—A. I heard Miller say once that he could fix the pipes so they would not work as they ought to. That was at one of these interviews, I think the last. I could not say now when that was, with respect to the time when he transferred his property. I know I made no reply to it. I can not recollect the time; I simply have an impression that he said he could change the pipes in the still. I can not say when he said it; I made no reply to it. I thought it would be a very scandalous proceeding.

Q. You understood by the misplacing of the pipes what would be the result?—A. That would depend on how they were misplaced.

Q. You say it would be a scandalous proceeding. How did you understand the pipes would be misplaced?—A. I don't think he wished to do damage to the company.

Q. How could damage result?—A. That would depend on how they were misplaced. By putting the pipes wrong side up the performance would blow—

Q. Would either blow the oil over?—A. Yes; might not work properly.

Q. That is, the oil when hot?—A. Yes, sir; might take place so as to do damage.

Q. And if it blowed over it would blow it so as to blow everything all to pieces?—A. No; I don't think you could misplace them so as to blow everything to pieces.

Q. Take the still; what would be the effect of any displacement of these pipes which might be made in this still?—A. As I said before, it would depend on how they were misplaced.

Q. As I understand, they could be misplaced so they would puke the still ; so it would not refine and make good oil ?—A. It wouldn't work properly.

Q. Now, is there any other way by which the misplacement of the pipes could result in damage ?—A. I can not conceive anything that could be done ; I should not know how to go to work to misplace pipes to blow up the still.

Q. It could be fixed by a misplacement of pipes to blow off the safety-valve ; that would bring the oil in contact with the fire, would it not ?—A. I don't think so, unless you should stop up the outlet.

Q. That could be done ?—A. Yes ; you can burst anything if you try.

Q. That would depend on the heat and the temperature, would it not ?—A. If you stop the outlet long enough it would be bursted, and that would blow the whole thing up. Miller did not say that he was at work during the day, the two evenings he met me ; I did not so understand it ; I don't know whether he was at work or waiting for matters to develop ; I can not locate to you definitely the occasion he spoke to me about that these pipes might be misplaced ; I can not say but he made that remark to me in New York ; I can not say but he did ; I suppose after that conversation he went back to continue in the employ of the Buffalo company ; I did not send anybody up with him. All I can say about meeting Miller in the depot previous to meeting him in New York is, I have no recollection of meeting him there ; I certainly did not meet him after the 26th of June ; I don't recollect a conversation in which I told him when I was going to New York.

The district attorney here omitted the succeeding portion of the deposition, as follows (afterwards read by defendants):

I did not, at any time, send any person up from here to see Miller ; I never heard whether or not my son did ; I can not say that he did to see Mrs. Miller ; it was not until after I received C. M.'s telegram that any steps were taken for removing Mrs. Miller from Buffalo ; that was the first I knew about it ; I did not send a telegram ; I was telegraphing to Charles two or three times a day ; I presume I telegraphed that if Miller wanted to see me he would have to come to New York, or meet me in the East ; I could not say how long it was after the conversation in which he spoke about the displacement of the pipes that I sent word to Charles ; I am not clear on these points ; there was correspondence and telegrams going on between us ; I would not be so positive that Miller told me that ; my son may have told me ; I had that impression about displacing pipes ; it was after I went to New York that I, of course, informed Charles that if Miller wanted to see me he must come East ; when I sent this telegram for Miller to come, I supposed he was in Buffalo ; I have no recollection of any definite telegram ; only that if he wanted to see me he must come East ; I have no recollection whether or not at any time I telegraphed to Mr. Miller, or Mrs. Miller, at Buffalo ; I received a telegram that he would come to New York on the 9 p. m. train the 1st of July ; I received that from C. M., and the next day I met Miller there ; he left Buffalo at 9 p. m. I suggested that if Mrs. Miller left Buffalo on the 4th they could not get an attachment ; I thought he had better not wait.

Q. There was a conversation that the company might make some trouble for Miller and his property ?—A. I said Matthews might do something to bother him ; this telegram was written by Miller, and I fixed one letter, and that was sent, and that was a telegram to her to move ; I think I suggested that Truman, his brother, had better go up and help him ; he was then at our works ; he is still in Rochester ; I think that that telegram designated that Truman would help ; whether he did or not I don't know ; I can not say how I got word to Truman ; think there must have been a telegram sent to Truman, if you reason it out in that way ; Miller and I didn't talk that night in the Union Square Hotel ; we went on to the steam-boat, which leaves at 4:30 or 5 ; we didn't stay very long at the hotel ; we went to Boston ; I registered my name and friend because he wanted to be incog. ; I was perfectly content that he should keep out of sight of Matthews ; it would be a reasonable conclusion that that was what it was done for ; I didn't take him to Boston for that purpose ; I took him to have that conversation and additional ; I wanted to have him tell the whole story about his connection up there ; about what they were building, how they were infringing, and how they were going to infringe, on our patents ; I anticipated a great deal of trouble ; I thought it was better for me to hire him back, if I could, and keep him away from that concern and others ; I didn't introduce and register in that way for the purpose of concealing his whereabouts ; not particularly for that ; I don't say that I was opposed to it ; if I had been I should not have done it ; I had a talk on the 4th of July—that was after we were registered, of course ; I was to give him the same salary as before ; while he was in Boston he was to get pay of Reynolds ; I arranged that when he wanted money, Reynolds should get it for him from Rochester ; he was to apply to Reynolds and Reynolds should send to Rochester ; I told Reynolds what his wages were ; there was no direction made at that time as to any payment to be made to Mrs. Miller ; there was afterwards ; then I left him ; I received no report from him at all, nor from Reynolds ; he had to report all moneys in general

that they received and paid out; there was nothing peculiar about Miller's case, only he was to work there and receive his money from Rochester; I don't recollect that he was to report any special case about Miller. I told Reynolds to entertain Miller; there was nothing said about going to the beach; I don't remember about "letting him get lonesome"; I told him he was to put up oils; he was to do as much work in the store as he could, and let Reynolds go out and sell oils; that would be quite a benefit; I don't know whether there was anything said about Miller's getting homesick down there; there might have been; I haven't had that brought to my mind; I can't say whether I told Reynolds to see that Miller didn't get homesick; I am apt to say many pleasant things; I don't know whether I said that on this occasion; it would be just like me.

From Boston I went to New York, Saratoga, Philadelphia. I was in that vicinity until the 23d of July; I don't remember as I had anything to do with Miller; I didn't communicate back to any person, except my son, where Miller was; I had no conversation with Mr. Archbold about it; I saw Mr. Archbold in New York upon my return from Boston; I had no conversation with him about Miller anything more than that I had hired him, nor about the Buffalo company; we didn't talk about such a matter as that. I presume I saw him four or five times after I left Miller at Boston, each time in New York. I did not see any other members of the executive committee that I knew to be members. I do not know. There are reports of sales of the Vacuum Oil Company made to certain parties in New York; I could not say whether the reports are sent to McGregor, Archbold, or Rogers; I could not say whether to one of them; might be to some of their clerks; they are made out and sent. We have agents upon the road for the Vacuum Oil Company; they do not make reports to the Trust Company; they are employed by us and report to us; they do not report to any one else besides us that I am aware of; I do not know as I could tell how many actions we have commenced against the Buffalo Lubricating Oil Company; probably three or four; no more than was necessary to maintain our rights; might be five. They undertook to group some of these patents and make one suit of them.

The district attorney here omitted the succeeding portion of the cross-examination as follows (afterwards read by defendant):

Q. Now, did you in any of these conversations which you had with Miller state to him that you were going to sue the company, and that it would be only a few days before it would be out of existence?—A. No, sir; not in that language, nor that in substance. I told him that we intended to notify these parties, and to begin suits against them to maintain our rights, and that we probably should get an injunction, as we have already obtained one; it would not stop their doing business. I did not tell him that would result in the stoppage of their business; I told him the same as I would tell anybody, so that he would know; I did not tell him so that he should understand that this company was to be broken up in their business; I didn't intend that he should understand that I was doing anything with the intention of breaking up their business. We intended to maintain our rights, and we were frequently spoken to about this concern and I always said we should endeavor to maintain our rights. The case that I employed Matthews on was the Cotter case. We commenced it against Cotter at my own request; that was before the Standard Oil Trust had any interest; it was not at their request, nor that of any person in their interest; they were not anxious to have that commenced, I don't think, at that time.

Q. At the time when you brought these actions against the Buffalo Lubricating Oil Company did you know that there were other parties who were using the same processes as the Buffalo Lubricating Oil Company and making the same oils?—A. The Buffalo Company first built the apparatus.

Q. That were making the same kind of oil as the Buffalo Lubricating Oil Company by the same processes?—A. I don't think there were; I am positive that I don't know. You see these processes vary so much. There were parties making similar oils by processes a little different, substantially the same so far as the vacuum process is concerned. I don't think I brought any action against anybody else than Cotter; it wasn't necessary as long as this suit was going on. The Cotter suit was brought a long time previous to bringing these suits.

The district attorney here resumed the reading of the cross-examination in the deposition, as follows:

Q. Did you at any time say to Miller that you would protect him in any way?—A. Yes; I said it in that letter of the 25th of March to my son.

Q. Did you at any other time?—A. I said that I would assist him, give him advice, in helping him out of his difficulties, no way financially.

Q. Now, at that time when you were talking with him, you thought it would be a hard matter to fill his place with this company?—A. Well, I was in hopes it would.

Q. You thought, in point of fact, it would, didn't you? You thought it would be a hard matter to fill his place?—A. I wasn't working in the interest of Matthews; I

couldn't say I thought it would be a hard matter; I don't recollect. They were trying to get men from our works; I thought at that time it would be a very hard matter to fill Miller's place; I do not know of my own knowledge of Matthews trying to get men out of our works; I was not present; all I know is what men have told me; Patterson has told me, Charles, one other. I can not say whether Matthews had any conversation on the subject of Patterson leaving our employ, only as I have been told.

When I said to somebody that I thought this Buffalo Company would have a pretty hard time of it, I meant there was a good deal of competition in the business, and they didn't understand it well enough so that they could go forward and make the success they thought they could. There was no other reason; that is all; other works starting out has caused a competition; these are not the only works that have been built; my son says there have been quite a number; when I made that statement I had in my mind at that time that the hard times which they would have simply grew out of the legitimacy of the business, and that we should endeavor to maintain our rights, and that we might serve an injunction, so that they could not use the fire test, for instance; there might have been some other reason; that was the chief reason that they would not succeed; I always liked Matthews pretty well; pretty good fellow; I didn't in any conversation that I had with Miller say anything about tipping them over in the stream and drowning them; if I ever made such a remark, it was in a playful manner; I am in the habit of making playful remarks; if I made any such remark, it was in a joke.

The district attorney here omitted the succeeding portion of the cross-examination, as follows (afterwards read by the defendants):

Q. Now, will you tell me whether Mr Miller, when he told you that he would injure the Standard Oil Company, did you understand that he could be of any injury to you if he did?—A. If he busted the Standard?

Q. Yes.—A. Would not injure me a particle if he busted the Standard—busted the whole thing.

The district attorney resumed the reading of the cross-examination as follows:

Q. You didn't pay him up to settle with him until he got this farm?—A. I suppose he was going to get this farm and live there; when I paid this thousand dollars bonus, I hoped he was located there, and that I would not have any more trouble.

The district attorney here omitted the following passage from the cross-examination (afterward read by defendants):

Q. From the time you employed, down to the time you left him in California, did he do any work for you of the character he was doing before he left the works and went to the Buffalo Company?—A. No, sir; after his leaving the company we didn't dare put him there for fear he would be traitor to us. We carefully avoided putting him in a position whereby he might do us still further injury.

The district attorney resumed the reading of the cross-examination, as follows:

We tried to keep him in work that wouldn't do injury, because we couldn't have confidence in a man who had betrayed us once. I owned five thousand dollars stock in the canning business which I put him in in California. The Vacuum Company had no interest in it, nor the Standard. I think he was paid in the canning factory \$75 a month. I am not positive what they did pay him, but whatever they paid him, the Vacuum Oil Company paid the balance. His labors were not of much importance to the Vacuum Oil Company.

Q. Were his services, previous to that, of as much value to the company?—A. Well, yes; when he was putting down the salt well, and they might have been in Boston. I didn't have very much to do with him.

The defendants' counsel here read in evidence the portions of the foregoing deposition which had been omitted, as above stated, by the district attorney.

The witness Truesdale was here recalled by the prosecution for further examination.

Q. You may state, Mr. Truesdale, the conversation you had there on that occasion.

(The defendants renewed their objection to his testimony in regard to the communications passing between himself and the defendants Everest. The objection was overruled, and the defendants excepted. The witness thereupon proceeded:)

A. Mr. Everest stated that Miller had left his employ and got engaged with another oil concern in the city of Buffalo; that he desired to get back again; he wanted him to come back; and he said he supposed Miller had explained to me his situation and the obligations he was under to the Buffalo Company. I told him that he had made some statements to me about his contract with the parties in Buffalo; that he had spoken about being an indorser or party to the note made by—I think he said Matthews and Wilson and himself, and I think another party, four or five of them had made; indorsed a note to raise money, done to start the Buffalo business, and that he had a contract or an agreement with them to go into a company at Buffalo to manufacture oil, and that he wanted to know how he could get out of that arrangement. I stated what I had said to Miller, that he would,

of course, be liable on the note if he was charged properly, when it became due, and that if he wanted to get out of that arrangement, my advice to him had been to see if he couldn't get released; if they wouldn't release him, or buy out his interest; that if he couldn't do that, the only other way I saw was for him to leave them, and take the consequences; I told him that I did not know the exact terms of his contract, but if he had entered into a contract and violated it, I presumed there would be a liability for damages as well as a liability for the debts of the Buffalo party; Mr. Miller and Everest both talked on the subject, and Mr. Everest says, "I think there is other ways for Miller to get out of it." I told him I saw no way except either to back out or sell out—no other honorable way; Mr. Everest says, substantially, I think, in these words: "Suppose he should arrange the machinery so it would bust up, or smash up; what would the consequences be?" something to that effect. "Well," I says, "my opinion, if it is negligently, carelessly done, not purposely done, he would be only civilly liable for damages caused by his negligence; but if it was willfully done, there would be a further criminal liability for malicious injury to the property of the parties, the company." Mr. Everest said he thought there wouldn't be anything only civil liability, and said that he would. He referred to the fact that I had been police justice, had some experience in criminal law, and he said that he would like to have me look up the law carefully on that point, and that they would see me again; there was conversation about Miller getting his property out of the way of an execution by turning it over to his brother or his wife. "Well," I told him, "that might be a hindrance, but unless it was a bona fide sale it wouldn't protect his property, and only might possibly be a hindrance to his creditors in making collections;" he said that it better be done, be some help—something to that effect; there were statements made about what Miller had done, I think; before that he had given me power of attorney to dispose of his real estate and some bonds and mortgages that he held when he moved to Buffalo, and there were some sales made, I think; as I understood it, he lived in Buffalo at the time of this interview—had for some time; it is my impression that his power of attorney was given before he moved to Buffalo; it is my best recollection that it was given in contemplation of moving from Rochester, to leave his business in my hands before he moved to Buffalo; there was a good deal of talk on the subject of his property; I think that is substantially all that occurred at this first interview.

Q. What statement, if any, did you make to Mr. Everest about his criminal liability?—A. One or the other—it was at a subsequent interview—I do not know—the next day or two they called again, Mr. Miller and Mr. Everest—both the Messrs. Everest; as I recollect, they were both present the second time, and Mr. Everest wanted to know if I had looked up that matter, and I told him I had looked it up; he asked me what I thought about it; I told him my impression was not changed; that such a course as that would involve Mr. Miller in a criminal liability, if he did it on purpose, and everybody who advised him or counseled him of such course would be equally liable with him, and the consequences were if they followed that course they would get into State's prison. I says, "Mr. Miller, if he is an honest man, won't think of taking any such action as that;" and I told him I would advise him to keep out of any such thing; and Mr. Everest says, "Such things will have to be found out before they can be punished;" I told him I thought the suggestion was altogether wrong, and the action would certainly be very hazardous as well as wrong; I think that is all there was, substantially.

By the COURT: Have you given us the date of these interviews?—A. I have not; at the commencement of my testimony I stated that the interview was somewhere in June or July, 1881; it was while Miller was in Buffalo, as I understood it; that is all I recollect.

By the DISTRICT ATTORNEY: Q. What was said by Mr. Everest, if anything, about it, that they would have to catch Miller first, when you told him it might land him in state's prison, or something of the kind?—A. Well, he said they would have to find it out, or something of the kind.

Q. State whether or not anything was said there by Mr. Everest, to this effect, that they would have to find him, Miller, first, and that "We will take care of him;" or that "We will or can take care of him?"—A. Yes, sir; that was said, substantially, that they would protect him: "We will protect him and take care of him." I afterwards learned that Mr. Miller was in Boston; it was a short time after these conversations; I can not give the exact time; I learned it from C. M. Everest; I had occasion to bring an action against Mr. Miller upon a note, and called upon Mr. Everest for his address; he gave me Boston; I don't know the particular location in the city.

Upon cross-examination, the witness said:

Q. How many times did either of the Messrs. Everest call upon you with Miller?—A. Twice; only twice that I saw them there at my house; these calls, I think, were a couple of days apart; one or two days; my present impression is that it wasn't more than that; it wasn't very long after that that I heard Miller was in Boston;

I can not tell about how long; I commenced an action, and I could tell by my register, but I did not look at it; I can not tell here from my recollection; I have no memorandum with me here which would enable me to say about how long; I think it was more than a week; it was some little time; I know that I did not have the note at the time; perhaps some weeks afterwards, how many I am not now able to say; I should think it was something more than a week, probably; the first interview, at which only H. B. Everest was present, lasted a good part of the afternoon; I could not say exactly how long; I think it was a little before that that these two powers of attorney to me had been executed; I don't know that there was two; I think there were two; which was first I can not state; I think there were two executed a short time apart; they were drawn, as I stated, to enable me to dispose of his property without bringing him and his wife from Buffalo; they were intended to be bona fide sales to get the money for him to use in his Buffalo business; they were not, so far as I know, executed for any improper purposes.

I am not able to say how long after the execution of these papers the first conversation was; the first interview lasted from shortly after 2, I think, until in the neighborhood of half-past 4 or 5; I guess it was a couple of hours, or an hour and a half; the second interview, in which both the Everests, as well as Miller, took part, I think, was a shorter interview; perhaps it was an hour, or such a matter; there was a good deal of conversation; I can't give the exact time.

Q. We must infer then, that what you have given of the conversation in the two interviews is only a very small portion of what passed; isn't that correct?—A. Well, Miller and Everest talked a good deal apart; during that time I was taking no part in the conversation, not specially; I am quite sure they talked a good deal that I didn't hear; didn't attempt to; I don't remember whether during that time I was attending to other affairs; I don't remember whether I was attending to any other business at that same time or not; I think Mr. Everest opened the conversation, and he opened it by telling me of Miller's leaving him and going into a Buffalo concern, and that Miller desired to get back to his employment.

Q. Did anybody say anything in response to that remark, either you or Miller?—A. Well, the fact that Miller had been and interviewed me before was referred to; I don't know whether it was just then or not; the fact was referred to that Miller had before expressed to me a desire to get back, but this was the first time that I had heard anything from Mr. Everest about his desire to get back; I could not say how long before it was that Miller had told me; I think it was that morning; both these interviews was at my office in Powers' block; Mr. Bernhard, whose name is signed to the acknowledgment of one of these instruments, was a clerk for Mr. Humphrey not far from that time; while I occupied a part of that office he was a part of the time a clerk for Mr. Humphrey. I told Mr. Miller and Mr. Everest that if Miller violated that contract with the Buffalo company he would be liable for damages such as the company might be able to establish against him in an action.

Q. Did the conversation proceed as to protecting Mr. Miller from the consequences of such a breach of contract if he should make up his mind to commit it?—A. I think it was mentioned in that connection; as they talked further on the subject, and considerable part of the discussion was how to avoid those claims for damages; I think it was stated by Miller that they could not get along without him, and if they could sue him they probably would, if he left; I think something was said about discharging Miller, and about his escaping liability for leaving them if they should turn him away; in that connection it was spoken of substantially to the effect that they were not likely to discharge him because he was a useful man to them, or something to that effect.

Q. Then was it not suggested that if he should show himself to be a careless, negligent man they might be glad to get rid of him?—A. Well, that was the natural inference.

Q. And that was what they were talking about, was it not?—A. In the direction of being a manner of getting out of his contract or his arrangement with the Buffalo parties.

Q. It was in that connection that the question was asked in regard to his being careless about the works, so that some derangement should occur and they would dismiss him and get rid of him, or words to that effect?—A. I don't know as there was words to that effect, but—

Q. That was in substance, was it not, what was talked about?—A. Well, as I said, I don't know as it was expressly mentioned in that manner, but that was the inference I got from what was said; and in that connection I answered that if Miller should do anything purposely to injure the works at all that he would become criminally liable, and that those who took part in it would become criminally liable.

Q. And Mr. Everest said that for such small carelessness as would cause them to want to get rid of him, he didn't suppose there could be criminal liability, or sub-

stantially that?—A. In substance that; if it was carelessness merely, he would not be criminally liable.

Q. Do you not remember whether at one of these conversations Miller declared, in the presence of one or both of the Everests, with strong emphasis, that he would under no circumstances do anything that would bring about a criminal liability?—A. Well, I could not say that Miller made any remark on that subject; he might have said so; I could not say that he did nor did not.

Q. You have said that Mr. Everest said in relation to Miller, "We will protect him; we will take care of him," or something of that sort, have you not?—A. Yes; I understood by that that he was to protect him from loss by any judgments that might be got against him.

Q. That was all that you understood from what he said, was it not?—A. Well, I don't know as I could say it was all; the expression was at the time used in that way, that "we will take care of him."

Q. It was on the 4th of March, 1885, that your deposition was taken, was it not?—A. About that time.

Q. On hearing your deposition read over to you did you yourself require this addition to be made at the close of it before signing: "The talk about taking care of Miller was in reference to suits against him for damages for violation of his contract with the Buffalo company, and upon his liability as a member of the company. I don't think it was used in reference to protecting him from any criminal liability?"—A. Perhaps I so stated; I presume I so stated as it seems to be; I might have so stated; I think I was able to sit up when that was taken; I had been sick a bed; I could not say whether I requested Mr. Cronise to sign my name for me when he administered the oath; I know I was sitting up and I guess dressed; I could not say that I know Cronise's signature.

(Witness shown paper.)

Q. Please look at the changes made throughout that deposition and noted in the margin with the initials "A. C.," and see then if you are not satisfied that this is the original deposition to which you swore?—A. It seems to me the original deposition was written by Mr. Cronise at my house at the time, and it was not type-written; I could not say whether it was taken by a stenographer.

Q. Upon examining this again are you not able to say that it was upon your own motion, and nobody's else, that this addition was made before you were willing to sign it?—A. My recollection is I requested some corrections be made when the deposition was read over to me.

Q. Is it not your impression that you requested that addition to be made before you were willing to let it go?—A. Well, I can not distinctly recall what the corrections were; that might have been one of them; I do not think that I could state any further.

Q. Your recollection is more distinct of the occurrences of six years ago than of two, is it not?—A. Well, more distinct about the facts of this transaction, perhaps, than they are about the proceedings on taking the deposition.

Q. Of course two years and two months ago your recollection was still more exact than it is now, was it not?—A. I don't think it was, because my attention hadn't been called, I do not think, to the transaction until about that time; I don't know that my recollection about these occurrences is any better now than it was then; it had not been particularly called to them a short time before this deposition was taken; I was subpoenaed to attend this court at Buffalo; the main part of this interview was pretty strongly impressed upon me.

Q. But if it shall appear that you did make this addition to your deposition before signing, you are then satisfied that it was a true correction of the events of the narrative as it stood before that, are you not?—A. I think so; yes, sir.

The prosecution here offered in evidence a contract dated July 25, 1879, as follows:

"This agreement, made this 25th day of July, A. D. 1879, by and between the Acme Oil Company, a New York corporation, of the first part, and Hiram B. Everest and Charles M. Everest, of Rochester, in the State of New York, of the second part.

"Whereas the parties of the second part have this day, at the special instance and request of the party of the first part, sole assignee, to set over unto John D. Archbold, Henry H. Rogers, and Ambrose McGregor three-fourths of the capital stock of the Vacuum Oil Company, a New York corporation, and have entered into an agreement in writing with their said vendees and the said Vacuum Oil Company, of even date herewith, as by reference to said agreement will more fully appear.

"Now, therefore, this agreement witnesseth, that in consideration of the premises, and of \$1 by the parties of the second part to the party of the first part in hand paid, the receipt whereof is hereby acknowledged, the party of the first part covenants, guaranties, and agrees to and with the party of the second part that the said Vacuum Oil Company shall pay to the said parties of the second part, for and during the term of five years, commencing this day, as salary for the services of the parties of the second part, hereinafter set forth, the sum of \$10,000 per year, in equal quarter-

yearly installments; the said salary to be paid to and divided between the parties of the second part in such proportion to each of them as shall hereafter be agreed upon between the parties of the second part; that the said Vacuum Oil Company shall employ the parties of the second part to render for it the said services for and during the said term; and in consideration of the premises the parties of the second part covenant and agree with the party of first part, that they, the parties of the second part, shall and will, for and during the said term of five years, give to the said Vacuum Oil Company, in the diligent and faithful superintendence and management of the business, all their skill, knowledge, experience, and services. The said Charles M. Everest to fully devote his time and services to the superintendence and management of the said business exclusively, and the said Hiram B. Everest to employ so much of his time and personal services in said superintendence and management as the necessities of the said business shall require.

"It is further agreed by and between the parties hereto that, in case of the death of either of the parties of the second part during the said term, the survivor of them shall thereafter receive for his said services during the remainder of the said term, such portion of the said yearly salary of \$10,000 as shall belong to him as his share thereof, not exceeding two-thirds thereof, in pursuance of the agreement between the parties of the second part existing at the time of such decease; that the parties of the second part shall and will, neither of them, during their term or terms of service, in pursuance of this agreement, refine, manufacture, or deal in petroleum or any of its products except and on account of the said Vacuum Oil Company.

"That all improvements, machinery, methods, appliances, and products invented or discovered by the parties of the second part, or either of them, in connection with the oil business heretofore or hereafter during such term of service, shall belong and be conveyed to the said Vacuum Oil Company; that at the close of the said term of five years all the provisions of this agreement and the term thereof shall, if so required by the said Vacuum Oil Company, be continued and extended for the further term of five years by the said parties of the second part or the survivor of them; but in the event that at the end of said first term of five years the said Hiram B. Everest desires to and shall withdraw himself for and during the said further term entirely from the oil business, he shall not be required to continue his said service, and the said Charles M. Everest shall, in that case, if so required by the said Vacuum Oil Company, continue in the said superintendence and management of its business for the said further term of five years, at a salary to be reasonably agreed upon by and between him and the said Vacuum Oil Company.

"It is hereby fully understood and agreed by and between the parties hereto that neither of the parties of the second part shall or will for or during the ten years from this date, refine or manufacture petroleum, or deal in any of the products of petroleum except for and on account of the said Vacuum Oil Company, at Rochester aforesaid, or at any point where he or his goods shall, in such business, come in competition with the said Vacuum Oil Company, or the party of the first part, or the manufactures of either of the said oil companies.

"In witness whereof the said party of the first part, by its president, has executed these presents and affixed its corporate seal, and the said parties of the second part have set their hands and seals hereto the day and year aforesaid.

"ACME OIL COMPANY, [L. S.]

"By JOHN D. ARCHBOLD,

"President.

"HIRAM B. EVEREST, [L. S.]

"By CHARLES M. EVEREST,

"Attorney in fact.

"CHARLES M. EVEREST. [L. S.]"

(To this the defendants objected as incompetent and immaterial. The objection was overruled, the paper was received in evidence, and the defendants excepted.)

The prosecution here offered in evidence another agreement bearing the same date, as follows:

"This agreement, made this 25th day of July, A. D. 1879, by and between Hiram B. Everest and Charles M. Everest, of Rochester, N. Y., of the first part; John D. Archbold, of Titusville, Pa.; Ambrose M. McGregor, of Cleveland, Ohio, and Henry H. Rogers, of New York City, of the second part, and the Vacuum Oil Company, a New York corporation, of the third part, witnesseth:

"That the parties of the first part, in consideration of \$200,000, to them in hand paid by the parties of the second part, the receipt whereof is hereby acknowledged, have bargained, sold, assigned, transferred, and set over unto the said parties of the second part and their assigns, seventy-five shares, being three-fourths of the capital stock of the Vacuum Oil Company, the party of the third part. That the said Charles M. Everest of the first part has also, in consideration of the further sum of \$18,750, to him in hand paid by the parties of the second part, and the further sum of money to

him in hand paid by the holders of the remaining one-fourth of the capital stock of the party of the third part, granted, bargained, sold, assigned, and conveyed to the party of the third part, its successors and assigns, his, the said Charles M. Everest's oil warehouse at Rochester aforesaid, with the land upon which the same is situated, and the oil business of the said Charles M. Everest, and all the appurtenances to his property and business belonging or appertaining that each of the parties of the first part have, for the consideration aforesaid further bargained, sold, assigned, transferred, and set over unto the party of the third part, its successors and assigns, all the good will and successorship of his trade or business of refining and manufacturing petroleum and its products, and of dealing in the products of petroleum. That further, in consideration of the premises, the parties of the first part do, each for himself, covenant, grant, and agree to and with the parties of the second part and their legal representatives, and also with the party of the third part, its successors and assigns, that except for and on account of the party of the third part and its successors, neither of the parties of the first part shall or will, at any time within ten years from the date of this agreement, engage or concern himself in the trade or business of refining or manufacturing petroleum or dealing in any of the products of petroleum, at Rochester aforesaid, or at any place within 100 miles thereof. It being considered and agreed by and between the parties hereto that this covenant and the faithful fulfillment thereof by the parties of the second part, respectively, is necessary to the full possession and enjoyment by the vendees aforesaid, respectively, of the business and good will, successorship and property conveyed as aforesaid.

"In witness whereof the parties of the first part have hereunto set their hands and seals the day and year first above written.

"HIRAM B. EVEREST,  
 "By CHARLES M. EVEREST,  
*"Attorney in fact."*  
 "CHARLES M. EVEREST."

(To this the defendants objected as incompetent and immaterial. The objection was overruled, the paper was received in evidence, and the defendants excepted.)

WILLIAM H. PITT, a witness for the prosecution, testified as follows:

I reside at Buffalo, and am a teacher in the high school; I have charge there of the department of physics and chemistry, and have had for fifteen years; I graduated at Union College and have been engaged in the study of chemistry for a number of years past: I am familiar in a general sense with the process of the distillation of petroleum; I have made some study of it.

Q. If heat is applied to a mass of crude petroleum, what gas will be thrown off from the petroleum by the application of heat?—A. It depends on the temperature; the amount of heat applied to petroleum changes the nature of the gases that are thrown off.

Q. If a quantity of crude petroleum, say about 175 barrels, were placed in an iron still, which is closed, the still being about 10 feet in diameter and about 15 feet in length, placed horizontally, and under this still the fire is kindled, the fire becomes so hot that the fire-box becomes red, what gases, if any, would be created or arise from the application of such a fire as that, to such a body of petroleum, in such a tank or still?—A. Well, a good many series of gases. Petroleum is a mixture of hydrocarbon, and different varieties would be set free at different temperatures; this temperature, I would say, would set free a good many of them; the gases would be created or thrown off from the lower series, clear up, depending upon the heat; I don't know as I can remember all the gases, beginning from the lower degrees of heat, running upward toward the highest; the first series, about 100° temperature, would be, I think, what they call rigoline, and then benzine, naphtha, gasoline—I think one called gasoline.

Q. These are thrown off at what temperature? Just give us the temperature, if you can, of each of the gases that are thrown off in their order.—A. I should say about 100° Fahrenheit; I should say the first 37 centigrades, perhaps 38; the first would be at about 100° Fahrenheit; I am not positive about the degrees, but in that neighborhood; 100, 130 Fahrenheit, 200, 230, 240, 250, 360, 400, and so on; I have not referred to them in a good while, but those are about the degrees; different gases are thrown off at those different degrees; the first is what is generally known as rigoline; that is about 100 Fahrenheit; gasoline, I think, about 130, in that neighborhood; benzine is near 200; naphtha would be over 200—200 to 230, I should say; then comes the common kerosene, from 130—to common kerosene about 330 or 340, to 450 or 460, as near as I can recollect; that is the best of my recollection; this is Fahrenheit.

Q. These vapors that are thrown off, beginning at the lowest degree, what is their nature as to whether they are flammable or inflammable, or otherwise?—A. Well, it is generally concluded that the vapors, all the vapors—

By DEFENDANTS' COUNSEL. I suggest that you ask him, first, if he knows.

A. I do somewhat know the nature of these vapors that are thrown off; I have tested them to see whether they are flammable or inflammable; all the vapors of petroleum, under favorable circumstances and conditions are considered inflammable—that is, they are combustible; the first distillates—that is, those first arising from the crude oil, mixed with air, are considered the most explosive under ordinary conditions; those vapors, to be inflammable have to mix with air; it is when they are thrown in contact with the air that they then possess that quality of inflammability; the mere mixing of the vapor with the air will not in itself render them inflammable or combustible.

Q. What else is required to render them inflammable or combustible besides mixing them with air?—A. It must be raised to a proper temperature—flame heat; flame will ignite them; it requires the application of fire to them to render them combustible.

Q. Does the inflammability of vapors so produced vary, or would the quantity or bulk of the vapors have any tendency to increase or diminish the inflammability; that is, whether a large body of vapors of that kind would be more inflammable or combustible than a smaller body?—A. All that is necessary, the proper proportion of vapor with a certain quantity of air, whether large or small.

Q. If heat were applied to a still, such as I have described, for a period of about two hours, and the vapors were to accumulate and pass through tubes until such time as a quantity or bulk of them could be thrown into the air at once, what would you say as to whether the discharge of such a quantity of vapor into the air, so accumulated, would be inflammable or not?—A. If the density of the vapor was sufficient, mingled with the air, it would be; they would be inflammable; they would burn if a proper quantity were mixed; I mean by that, if there was only a small quantity in the air, that combustion could not take place; there would be too far a space between the particles of the oxygen and the particles of this hydro-carbon; they must be near enough together to burn.

Q. See if I can understand it in simpler language, Professor; that is, if a small amount of vapor was thrown into the air it would not be inflammable; it would dissipate into the air?—A. It would dissipate; it would not be inflammable.

Q. If large quantities of such vapors were thrown into the air it would be inflammable?

(To this the defendants objected as so indefinite as not to present any fact that is in evidence in the case. The objection was overruled and the defendants excepted.)

A. That is so; precisely analogous to the escape of common illuminating gas into the air; a very little of it would not be dangerous; it would burn; but if there was a sufficient amount combustion would take place.

Q. Can you illustrate it so that we can understand as to about the quantity of such gases that would have to be discharged into the air so that they would become inflammable?—A. It would depend so much on the conditions that I could not answer that definitely. A small quantity of ordinary illuminating gas discharged in the air is not in itself dangerous. If the gas is allowed to escape for a considerable time, until sufficient volume accumulates, it does become dangerous. When the vapors arising from crude petroleum accumulate and are discharged in the air, they are then considered inflammable.

Upon cross-examination the witness said: I have had my attention especially called to the processes of distillation of petroleum. Last summer I was in Olean, and there examined processes somewhat particularly for the purpose of making chemical observations and tests, and since then I have had my attention particularly called to the same subject, but not in connection with this inquiry which is going on here; it was in connection with my studies and instruction at the high school. The gases that are thrown off in succession by the raising of the temperature of the petroleum begin to be set free, I should say, at an application of the ordinary temperature.

Q. That is, in a cold day, if crude petroleum is exposed to the air some gases will begin to escape?—A. If it is first drawn, yes; at sixty-five or seventy degrees, at the ordinary temperature, vapors rise from petroleum.

Q. But there are so many ordinary temperatures the expression hardly seems to carry scientific exactness with it; now we have it at sixty-five to seventy?—A. Common, living temperature, ordinary. Gases would continue to be evolved up to near a red heat.

Q. What is red heat?—A. Red color.

Q. That is perhaps as near as you are able to define the phrase?—A. They will be evolved at all temperature—white heat.

Q. At white heat?—A. Yes, sir, if you put crude petroleum on it.

Q. Can you define white heat?—A. The highest heat we can get; it is the heat of the sun.

Q. That is at what point?—A. I should say five or six thousand degrees.

Q. In the sun itself do you mean?—A. Probably estimated white heat.

Q. In the sun itself do you estimate to be five or six thousand degrees?—A. Yes, sir; well, white heat is considered to be about five thousand degrees, but you can not get a white heat, I should say, five or six thousand degrees.

Q. Fahrenheit?—A. Fahrenheit; I mean if petroleum when thrown on white hot substance it would be decomposed and evolve gases; that is all.

Q. All the measures of heat that you may make use of are by the Fahrenheit thermometer, I suppose?—A. I use centigrade sometimes; when I am speaking here I refer to the Fahrenheit standard only; I think I spoke of centigrade once.

Q. You say that they continue to be given off, and would continue, if the heat, beginning at sixty-five degrees, were suddenly increased up to five thousand degrees?—

A. I do not say so, sir.

Q. Suppose the heat to be gradually increased from sixty-five upward, at what period would gases cease to be thrown off from the body of crude petroleum?—A. It would depend upon the petroleum.

Q. Take, if you please, the same petroleum which the district attorney spoke of, and upon which your answers to him are predicated; apply the question, if you please, to the same petroleum?—A. In the mass the bottom of the retort might be heated, possibly, to a red heat before pure carbonization took place, before all the hydrocarbons were expelled, principally pure carbon would be left.

Q. The phrase "red heat" I suppose is an exact scientific phrase, is it? I observe that you use the phrase "red heat," and that conveys an exact scientific idea, does it?—A. And white heat; I use them both, red and white.

Q. Now I am asking you only about the phrase, "red heat"?—A. Well, it is a term we use, yes.

Q. Has it any other scientific equivalent?—A. I suppose so; yes. It is very difficult to measure the higher degrees of heat, as we have—

Q. So that it has, you suppose, some other exact, scientific equivalent, but at the moment are you able to state that equivalent?—A. I can not; I do not recollect. With the application of heat in the still, I suppose the flames of fire come in contact with the still itself; that however is merely my supposition.

Q. You are not actually informed as to whether the flames of fire come in actual contact with the still itself or not?—A. The heat I suppose will; you mean flames?

Q. Well, excuse me, Professor, inasmuch as I said flames, I mean it?—A. Well, I suppose they do; I never examined, that the flames of heat come in contact with the still; I think in the practical successful manufacture of the distillates from crude petroleum, it is proper to apply from about a hundred up to three or four hundred degrees of heat, to the still, up to kerosene.

Q. So, then, Professor, your judgment as a scientific man, would be that a practical and economical way of making some of the products of petroleum would be to set the still in the shade in a very hot, midsummer day, and keep the fire away from it, would it?—A. I never knew a day of four hundred degrees.

Q. You have known 100 degrees?—A. Yes, sir; the first distillates from petroleum I should say were the most explosive. By distillates I mean the gases or vapors generated by heat; we sometimes apply the same name to gases and vapors; there is a scientific difference between them; gas is generally understood to be a state of matter that is not so easily condensed as vapors by cold or pressure; it is permanent at common temperatures. I should say vapor is easily condensed by cold or pressure, so that really vapor and gases are the same thing, only vapors are more easily condensed than gases. We call steam at common temperature, boiling temperature, a vapor; as it rises from water through evaporation we call it a vapor.

Q. Steam, then, is a vapor and not a gas?—A. No, I don't say so.

Q. Steam is then a vapor and a gas also?—A. The vapor of water, the vapor which arises from water, we call a vapor at common temperatures, or warm; but when it boils, at 212 Fahrenheit, we generally apply the term steam to it.

Q. You hardly have reached an answer to the question; the question was, whether steam, that is, that which we call steam in order to be accurate, whether that is a gas or a vapor?—A. At what temperature, sir?

Q. Well, we will be liberal about that; take any temperature you like.—A. It obeys the laws of pure gas at high temperature; kept at that temperature, it is a gas following the same laws as incondensable gases—as the air. Steam is an incondensable gas if it is kept hot enough; it acts like the air; the same laws govern it as would the common atmosphere provided it is properly heated—kept heated.

Q. You are not prepared yet, then, to say whether steam is a vapor or gas?—A. You may consider it either.

Q. But, after all, I would like to know what you consider it, Professor?—A. I consider steam, highly heated, a pure gas.

Q. Now, steam not quite so highly heated, is that a pure gas?—A. It does not follow the laws of pure gases at a low temperature.

Q. Then, I suppose, by that you mean it is not a pure gas?—A. It does not follow those laws.

Q. I do not want to be captious, but I should like to know whether you mean by that that it is not pure gas at a lower temperature?—A. I consider gaseous bodies mere solids, not fluids; under this definition vapors and gases are included; steam at a lower temperature does not follow the same laws that pure gases follow when we apply heat to it. I consider pure gas a gas that obeys what we call Mariotte's law.

Q. Who is he, if you please?—A. Well, it is a law about gases; he discovered it; if you heat them one degree they expand a certain amount, and vapor or water won't do that, does not follow those laws.

Q. Then you are, or are you not, able to say whether steam at a lower temperature is not a pure gas?—A. I consider vapor and gas the same condition of matter with different degrees of heat in them; they are neither fluid nor solid, but they are a gaseous state of matter; but steam at a low temperature does not follow the same laws that the common air will, or any fixed gas; that is not easily condensed. I consider vapor a gas, both of them a gaseous state of matter, but that the vapor does not follow the same laws as pure, as a fixed gas; that vapor does not follow the same laws as a fixed gas. I call the air a permanent gas; when permanent gases are heated they expand a certain amount for every degree of temperature, and these vapors which will readily condense are not fixed gases, do not expand so.

Q. These things that are given off from petroleum upon application of heat, are they vapors or gases?—A. I consider all matter that is neither fluid nor solid a gaseous state, they are in a gaseous state; the first that arises from petroleum is a fixed gas; marsh gas first arises from petroleum; the next, I think, is called rigoline.

Q. And that is a gas?—A. That will condense to a liquid.

Q. And that is a gas?—A. It is a gaseous state of matter when it is driven off; yes, sir.

Q. It is a gas, then?—A. A gaseous state of matter.

Q. It is a gas?—A. And a vapor, both. The next one, I think, is gasoline, and that is both a gas and a vapor; I think the next is a chemical called benzine; that is both a gas and a vapor; and so all the way up. They are all both vapors and gases.

Q. What do these several vapors or gases look like? Can you see them?—A. You may see them if they are condensed.

Q. When they are condensed they are no longer vapors, I suppose, or gases?—A. Why, we apply the term to steam; we say we see steam, but it is not steam in the air; it is condensed.

Q. It is a vapor, then, that you see, is it not?—A. Called a vapor, of course.

Q. Is it not scientifically a vapor?—A. Oh, yes; called so.

Q. And it is not scientifically a vapor?—A. Why, certainly, yes; we call it a vapor; I call it a vapor; scientifically and practically a vapor that arises in the air; pure steam is invisible; what we see and call steam is generally simply what was steam, and has become condensed by contact with the cooler air.

Q. Well, is it not always?—A. It does not always come in contact with the air.

Q. Of course not, and when it does not you do not see it, do you?—A. You may; I have seen it when it did not come in contact with air, in a retort; it looked the same as it does now in the air, the same color it appears in the air; I mean that if steam should escape into pure nitrogen gas, cold, it would be condensed and become visible, same as if it were to escape into the common air; if the air were excluded from the retort, the steam would then, upon condensing, be perfectly colorless, I presume.

Q. Do you know anything that is not combustible?—A. I don't think gold is; I don't know that it is not; I only know what they tell me; there is one thing that nobody has ever seen, they say is not combustible; they call it fluorine; nobody ever saw it.

Q. Therefore nobody is able to say whether it is combustible or not?—A. I have always thought it was, if you could get it.

Q. Did you ever make what is called fractional distillation of petroleum, to determine the vapors, or not, of this series of gases that you have spoken of?—A. I have up to the kerosene series; I am not able to give the result of that fractional distillation more exactly, than I know of, than I have upon my direct examination; I made some experiments last fall here in my laboratory at Buffalo, after my visit to Olean; at Olean I did not determine the temperatures of the various grades of oil, as distilled; I did that here; I simply used a glass retort, a condenser; a common glass tubulated retort would hold about a quart, or near that; the beak of it was put in a glass condenser globe; I kept it cold by running water; condensed the vapors; I had a thermometer to take the temperature, and kept it at several different temperatures, and examined the products distilled. I never have been to the Buffalo Lubricating Works to examine their process there; I do not know anything about how nearly my experiments were identical with the process there employed; I never thought of that; I have no practical acquaintance whatever with the practical operations of the manufacture of petroleum products; I have not by observation at the place where they were practically in operation, only from what I could learn from the officers and common inspection; I never worked in a works nor had any practice whatever; I am not

prepared now to give the degrees of density of these various gases or vapors of petroleum, so long since I examined them; I think the common kerosene vapor is about forty Beaumé; I am speaking now of the oil; the vapor density I could not tell you; the phrase "specific gravity" is used in regard to vapors or gases; that is the same thing as density; these gases or vapors are so various, so many, that I would not like to give the figures on their specific gravity; I would prefer not to on any of them.

Q. You would rather not, I suppose, because you can not at present?—A. I can not recall the vapors, so long since I have read them; I prefer not to recall approximately the figures; some are lighter than air, some are heavier; I think the first would be lighter than air, those that are evolved at the lower temperature; those at the higher temperatures, I should say, would be heavier, some of them—paraffine series.

Q. You are quite sure that some of them are lighter than air, are you?—A. In a fluid state, do you mean?

Q. Is one of these things, when it comes into the fluid state, is it a vapor or gas?—A. I mean liquid state we call all vapors or gases fluids; after it becomes in a liquid state, I should say it is not then a vapor or a gas.

Q. May I ask, then, what, exactly, you meant by asking whether I meant the vapors or gases in a liquid state?—A. These distilled from petroleum, or gases and vapors, when they are condensed we call them liquids. I did not know which you referred to.

Q. I was particularly saying vapors or gases; just answer the question; you are quite sure that some of them are lighter than air?—A. I am. I know that by experiment; I did not test the specific gravity; the way I ascertained the comparative gravity, so far as to be able to say that, is that they rise in the air, escape; not all of them do; the heavier hydro-carbons fall.

Q. Which are they by name; one would naturally suppose it would be the heavy ones that would fall, but perhaps that would be a bold deduction. Could you say which are the heavier ones that fall?—A. I look upon marsh gas and the first as the lighter gases; and the heavier hydro-carbons, condensed, I should say, are the heavier; this marsh gas is identical with natural marsh gas, which is the result of decomposing organic matter upon low ground.

Q. Could you collect the natural marsh gas, which you say is lighter than air, in a balloon?—A. Yes; I am quite sure of that.

Q. It is suggested that I misapprehend you; probably what you intend to say is that you could collect the marsh gas and put it into a balloon; that was your idea, was it not, in answering the question, or did you mean that by navigating the air at a considerable distance above the earth, in a balloon, over a marsh, you could collect the marsh gas; is that what you meant?—A. I did not. What I meant was that I could collect it in a balloon from the marsh; I meant if the balloon was near enough to the ground.

Q. You could not get it up in the air, this gas which is lighter than air; you can collect it close to the surface of the marsh, could you not, and not elsewhere; is not that a fact?—A. You can get it off petroleum; it occurs in petroleum; you can get the natural marsh gas off from petroleum; the natural marsh gas that is evolved by what we call the decomposition of organic matter; it is the same.

Q. The process of distillation is simply the same process which goes on in the natural decomposition of organic matter, is it?—A. In destructive distillation, similar.

Q. What is the effect of the introduction into a still such as has been described to you, containing 175 barrels of crude petroleum, of a body of live steam? You will bear in mind that the scientific statement was made to you that there was under it somewhere a fire, pretty hot; now having those exact scientific conditions, will you tell what would be the effect of introducing into the still a body of live steam?—A. I prefer not to answer that, because it would depend so much on the temperature, I suppose.

Q. But after all, you have the temperature quite as exactly given as it was given before, and you did not decline to answer then.—A. That was in reference to vapors that escape.

Q. Now, I am asking in reference to something else. You were content then with the statement that the fire was a pretty hot fire, very hot fire, I believe, which is perhaps still more scientifically exact, but the want of that condition being stated with something like exactness invalidates, does it not, practically the opinion that you have already expressed as to the operation in the still without the steam?—A. It would make a difference with the steam; yes.

Q. And it makes a vast difference how hot that fire was, does it not?—A. Yes, sir.

Q. And the expression "a very hot fire" does not convey any kind of scientific foundation for an opinion, does it?—A. Only comparatively.

Q. It does not furnish the basis for anything better than a mere guess, does it?—A. We have a commonly accepted idea what a very hot fire is.

Q. Will you give me the scientific definition of a very hot fire?—A. I say there is nothing exact about it; it is only comparative.

Q. You have not any kind of scientific conception of what is meant by that phrase, have you?—A. Not precise.

Q. No, not at all?—A. Not precise.

CHARLES B. MATTHEWS, a witness on behalf of the prosecution, testified as follows:

I live at 270 Niagara street, Buffalo; I have lived in Buffalo since the spring of 1881; my business is manufacturing petroleum oils; I know the defendant, McGregor, by sight, and know all the other four defendants.

I have been in the business of manufacturing oil since the summer of 1881; prior to that I was principally farming near Wyoming, N. Y.; I there made the acquaintance of Hiram B. Everest in the winter of 1878; he came there to lease lands for the purpose of drilling a test-well for oil; I think I made the acquaintance of Charles M. Everest in the spring of 1878, at Rochester; I think I first saw John D. Archbold in the Vacuum Oil office in Rochester, in the summer of 1879; I saw him several times during 1879 and 1880 in New York, and I think twice in Rochester; I first met Mr. Rogers in 1879; I am not sure whether it was at the Vacuum office in Rochester or in his own office, or the Standard office in New York; I saw Mr. McGregor at Rochester in the fall of 1879; I do not recollect any other time; and was introduced to him by C. M. Everest; I began doing a little work for the Vacuum Oil Company at Wyoming. Hiram Everest came up there to lease lands to build a test-well for oil, and he asked me to assist him in purchasing lands from the neighbors, the farmers in that locality, and I went with him for several days; then he pretty much ceased coming there and I went on under his direction and leased about 15,000 acres of land for that company; they afterwards decided to put down a test-well for oil on my farm, and Mr. Everest asked me to look after it somewhat, and I went with him to Bradford and engaged a man to drill the well; afterwards bought the supplies and kept a record of the rocks through which the drill passed in drilling this well; after we got through with the well I was employed visiting points regarding the manufacture of salt; that lasted several weeks; next I was asked to go with Mr. Everest to Pittsburgh in regard to the patent which the Vacuum Oil Company held, a patent taken out by N. P. Ewing, and claimed as a patent on burned residual petroleum oil; I was with H. B. Everest, and had a talk with Mr. Cotter, who was a manufacturer of oil at Freedom, near Pittsburgh, and saw a man at Pittsburgh by the name of Payne, and another man by the name of Abbott, who were oil manufacturers or dealers, and I saw several other parties whose names I can not recall; H. B. Everest told me it was in reference to this patent suit which he expected to bring that he wanted me to go to Pittsburgh, and he wanted I should look after the matter somewhat, in his interest.

Q. State what was done there in Everest's presence; what he said.

(To this the defendants objected as immaterial. The objection was overruled, and the defendants excepted.)

A. He told Mr. Cotter he was going to bring an action against him for making oil claimed by this Ewing patent; Mr. Cotter told him that he had a right to make the oil; that is about all that was said that I recollect of; I was in Pittsburg a day or two with H. B. Everest, and then returned to Wyoming, where I lived; after that I removed to Rochester to assist the Vacuum Oil Company on the paper they were publishing, or about to publish; the name of it was The People's Journal; it started, ran a few months, and was suspended by the publishers; during this time that I was engaged on the paper, and prior to that, I was also looking after this batch of litigations, and had frequent talks with the Everests and Henry Rogers, and some with Mr. Archbold, relating to the litigation.

I also sold some leases for the Vacuum Oil Company that they had of some oil lands at Wellsville, or near there, in Allegany County, N. Y. I had no written contract of employment, nor any verbal contract, as to any particular time; up to the time I left Wyoming, I think I got \$50 a month; attended to my own affairs and looked after theirs somewhat; after I went to Rochester I received what amounted to \$100 a month and still looked after my farming matters and other business of my own.

About the middle of March, 1881, I had a conversation with C. M. Everest in the private office of the Vacuum Oil Company, Savings Bank Building, Rochester, in regard to going to Buffalo; Miller had been there a few minutes when I came and found him there; I said, "I suppose Mr. Miller has told you that we are going into the oil business in Buffalo." He said that he had; that he had something of a headache. He asked me, "What are you going to call the company?" I told him the "Buffalo Lubricating Oil Company we expected would be the name." "Well," he says, "as men I respect you, but as to the Buffalo Oil Company, I shall do what I can to injure or destroy it." I can not tell which word he used; as I recollect, I said we did not expect any favors from them. He asked me, "How are you going to get your crude?"

I said that we would get it from the Atlas pipe-line, or oil company, I don't remember which term I used; and he says, "You will wake up some day and find that"—well, I don't remember, sure, whether he said it would be in the Standard, or there would be no Atlas Oil Company; I can't say which it was. "You will wake up some day and find it is in the Standard," I think that was the way he expressed it; my recollection is I said to that I thought they would stick to their business; he further said that they had methods of making money I didn't know anything about; I can not recall any further conversation; my recollection of it is that when I came in Miller was there and when I went out he was there.

Prior to this I had made a move in regard to establishing our works here in Buffalo; we had made an agreement; this agreement (Exhibit F) had been made at that time; Miller's and Wilson's signatures were in the places cut out.

I don't remember any further conversation with C. M. Everest at any time subsequent to the one I have spoken of; I don't remember any with H. B. Everest after his return from Denver.

We came here to Buffalo and made purchase of lands upon which these works now stand; we first bought two acres and a half; subsequently two and a half acres more, by contract; the first purchase I think was an option; I gave so much money for the privilege to buy for a few months; I had no practical knowledge of the construction of a refinery of this kind; I could not make the oils myself, or run the stills; there was no person that went with us in our employ who could do that successfully except Miller; there was no other went with us who knew how to direct the works and manufacture the oil.

Prior to the conversation with C. M. Everest of which I have spoken I had a conversation with him in the oil company's office, or a room across the hall which they used for other purposes; I told him that my salary was not satisfactory to me, and that I wanted more pay; subsequently we spoke about it and he said, "If you want more pay you can go; I am satisfied; you can go or remain, just as you like, but you can not have any increase of salary."

It was about the middle of March that Miller commenced to take charge of these works; he began doing something in regard to getting materials; he superintended the erection of the works; I assisted him in purchasing material and getting machinery and other things needed for the work; we had occasion to borrow money; I borrowed \$5,000 at Warsaw.

Q. Where is that note?

(The defendants objected to this as immaterial. The objection was overruled, and the defendants excepted.)

A. I suppose in the papers of this case; I don't know; there was a note upon which Miller was maker or indorser; the amount is \$5,000.

There was a written contract with Miller previous to the incorporation of the Buffalo Lubricating Oil Company; I suppose it is the one I just handed you (the district attorney) but I may have made a mistake; if that is not it I will bring it hereafter.

There was a time when Miller commenced to absent himself from the construction of the works. This was before the sills were set; I mean before they were placed and bricked up. During the month of May he was gone a quarter or a sixth of the time; sometimes I knew where he was and sometimes I did not, generally did not; I did not know what he was doing; I made inquiry of the men at the works and of others that he should inform me of his absence. In the month of June I went to the depots and watched his arrival on the trains; made inquiry also; I went with Frank Beardsley, and went alone. His absence greatly retarded the construction of the works. It was about the last of March that Mrs. Miller moved to Buffalo; they occupied a house on Elk street; our works are on the corner of Elk and Babcock, 2 miles from the corner of Main and Seneca; the works were half a mile from where the Millers lived. We had not established any office in Buffalo at that time; Frank and Charles Beardsley were at the time in our employ; Frank was connected with the works at the time of Miller's being here; Charles C. came in June. I was not at the works upon the day of the first running of the first batch of oil; I can not tell where I was upon that day, only that I was not there; I was there subsequently; the subject of the first running was a matter of discussion there at the works; I was there the next day; since that time I have become acquainted somewhat with the method of running these works; I have seen, from time to time, the residuum that is left in the still which is used in the manufacture of lubricating oil, and have become acquainted with its appearance; I saw the residuum that was left from the first running; it was very black, parts of it, and part liquid; this residuum could not be used for the manufacture of lubricating oil. At the time Miller disappeared I was president of the company and Miller was vice-president; all the stockholders were the board of directors; they were Hiram Benedict, the two Beardsleys, Mrs. Wilson, J. Scott Wilson, and myself. I had no notice from Miller or any other person that he was going to leave at the time he did for good; his going was unknown to me.

**Q.** State fully from the time Mr. Miller left what was done at the works, what exertions you used to procure any person to run them, and the conduct of the works.

(The defendants objected to this as incompetent and immaterial. The objection was overruled, and the defendants excepted.)

**A.** There was one still in a condition to run; there was no person left at our works who was capable of running the stills and making oil successfully, or who had a practical knowledge of running the still.

**Q.** State what occurred in the conduct of your works?

(To this the same objection, ruling, and exception were had.)

**A.** We had some oil manufactured of an inferior quality. Some oil was run under the direction of Mr. Wilson with very poor results; I made inquiry as to securing some one else to take Miller's place; I talked with men at the works and anybody that I thought would be likely to be able to tell me; I did not go out of Buffalo for the purpose of inquiry; I only inquired of men that I thought would be likely to know; I can not give their names. These inquiries ran along for perhaps a year; we finally got somebody to come there and try to run our works, a man by the name of Martin C. Kiley; he was not satisfactory; no one else came during the first year, that I remember of, that claimed to have practical knowledge on the subject. Frank Beardsley principally did the experimenting down there trying to make oil. The quality of the oil during these experiments was generally inferior; we had contracts to supply oils during this time; I think we had existing contracts at the time Miller left; we were not able to fulfill our contracts from the oil manufactured from our works. We continued our works a year or more before we were able to make successfully good oil; good, merchantable oil. The capacity of our works, if properly conducted for the period of the first six months, if they could have been run by a competent person, was 300 or 400 barrels a day of crude oil; in fact we run in the first six months 15,000 or 16,000 barrels of crude oil; we got our oils from the Atlas Oil Company principally; we ceased getting oil from those parties about the 1st of January, 1882. The next time I saw Miller after he left was in Buffalo, some time in August, I think, with a man I never saw before or since; I did not see Mr. Outerbridge upon that occasion; Miller came again to see me; I saw him in Buffalo about the middle of September; Mr. Outerbridge, the attorney here, was with him; he came to the Buffalo Lubricating Oil Company's office on Seneca street; Miller said he came up to look at the books; Outerbridge was present; I had conversation with Outerbridge.

**Q.** What was it?

(To this the defendants objected as immaterial and incompetent. The objection was overruled, and the defendants excepted.)

**A.** Miller asked to look at the books; I asked him what he wanted to see the books for; he said he had a right to look at the company's books: Mr. Outerbridge said that they came up there to look at the books; I said I did not think they needed to look at them; I think, however, before that Miller said that he had come back to offer himself, "Do you want me to go to work for the company?" I told him no, that we had other arrangements; I think I asked him where he had been, and he said he had been sick; then they proceeded to question further about the books, Miller did; and I said that if he wanted to know anything specially about the books to ask what he wanted, and Outerbridge said he wanted to know how Miller stood with the company; I told him that I would have a statement made out and sent to him, if that would answer; I think Mr. Outerbridge called for the company stock-book, and it was given him by Mr. Daniel Benedict, who was there; I think he gave him the stock-book, and he and Miller looked at it a little while and gave it back and went away by our agreeing to send a statement to Rochester, which we did do; we did not settle up with Miller on that occasion; that is substantially what occurred there as I recollect it. They came up again, both of them, in a few days; I saw them at the company's office; I asked Miller what he would take for his stock in the company, and he told me; Outerbridge said that they wanted some receipt in regard to the liability of the stockholders, if the arrangement was made, and I told him that we would give it; the price was agreed upon, and I gave him a check for the amount, gave him a statement; that is the substance of the conversation, if I recollect it. I have acquired knowledge by experience in regard to the manufacture of oil from petroleum by the process that was in use at the time that Miller was with us; as to whether the gases thrown off from the petroleum by heating the stills were inflammable or not, I have seen oil heated and a light applied to the vapors eliminated from hot oil in testing the same; when fire was applied I have seen explosions of the vapor or gas, and fire ensued; I have had experience in regard to the inflammability of crude petroleum; at the time of this first running, our crude oil was in a tank quite a number of rods from the stills; there is difficulty in extinguishing petroleum stored in quantities when it takes fire; I have seen a tank of crude oil in flames in Buffalo, in Pennsylvania, and elsewhere; generally the fire can not be extinguished; the oil can be pumped away; if it is in a tank the fire becomes extinguished when the oil is

removed; the oil burned from the top; crude petroleum is highly explosive after it becomes heated to a certain degree; I could not say definitely about how much crude petroleum we had stored there at the time of this first run; the tail-house at this time was right at the end of the condenser, or water-box [witness indicates upon the map]; it has been removed to this point I show you; the tail-house is where the light oils are run through after they are condensed; the point at which they are discharged.

Q. State whether or not, at the time, you had difficulty in procuring crude petroleum to be used in your manufactory.

(To this the defendants objected as immaterial. The objection was overruled, and the defendants excepted.)

A. Yes, sir. I had two or three conversations with Charles M. Everest about the raise of my salary. My duties in the office of the Buffalo Lubricating Company were quite general. I was manager of the office and sales of the oil; purchased supplies and oils, machinery, and tanks.

Upon cross-examination the witness said: I am forty-two years old, and was born in Covington, Wyoming County; I lived in that county until 1870, and went then to Kansas, Marshall County; I lived there until 1873; I do not recollect being engaged in any occupation aside from farming before leaving Wyoming County for Kansas; I was on my mother's farm, and had been so engaged all my life; in Marshall County, Kansas, my occupation was principally farming and dealing in real estate; in 1873 I returned to the town of Wyoming; in that summer I was producing oil in Butler County, Pennsylvania; I considered my home still in Kansas; my family was at Wyoming, but I expected to return to Kansas; I gave up the purpose of returning to Kansas when I bought some land at Wyoming; I rather think it was in 1873, the same year that I returned from Kansas; I first went, I think, in February, to Pennsylvania and I sold my fixtures there in July; I arranged for my interests in Pennsylvania immediately upon going there, and sold out in July; what I was doing in Pennsylvania was watching the progress of a drill in a well in which three of us were interested, Hiram Benedict, now in the Buffalo Company, and a man by the name of Stall; I did something more than watching; I did some little errands about, but it was business that I was familiar with, and I was not there a great while all told, probably not three weeks of solid time. The rest of the time from February to July I was principally in Wyoming, mostly living with my father-in-law; that is all that I now recall that I was doing there; I bought a farm in Wyoming subsequently, I think in the same year; I bought two farms; in the spring of 1874 I went onto one of them and rented the other, I think; the farm that I went upon I began to work myself, and continued to work it until the present time; I have been working it myself for the last six years; men have been working it under my direction; I have spent very little of my time during the last six years working that farm.

It was in 1878 that I first took up another occupation in addition to operating that farm; that was the employment by the Vacuum Oil Company in regard to the salt well, in February, 1878; from that time to the 1st of March, 1881, I was continuously in the employment of the Vacuum Oil Company; I still had charge of my business at Wyoming; it was understood and arranged that I should look after the farm there; I did some work after that, in March, but I did not charge for it; I was working for them somewhat down to the middle of March; I was under their orders to that time, but not under their pay after the 1st of March; what terminated my employment on the 1st of March was the question whether I should leave them or not, in my own mind; I told them I should not charge anything for my services after March 1; I can not tell just the time I told them that; it was not before the interview when Miller and I saw Charles Everest.

Q. How long after that interview was it?—A. I don't know whether I told them, or whether I stated it in a bill, or just how it was, but that was the way the matter was arranged; I can not tell just how long it was after that interview in the middle of March that I first stated I would make no charge for my services rendered after March 1; I think the services which I did render during the first half of March were of use to the company; they were rendered in my general employment, which did not appear at that time to have been terminated; my not receiving pay for my services after March 1 was, I think, simply out of consideration of delicacy on my part; I had rented a house for a year, in February; I had not determined whether I should remain with them at this salary, and I finally concluded to leave them; I wanted to finish up what business I had in my hands, that I could do perhaps better under their influence than some new man could.

Q. When did the conception first enter your mind of establishing a business in competition with the business of your employer, using the processes which he used, keeping the apparatus which it used and owned, and employing the employes whom it employed, including yourself?—A. I don't know; I don't know whether it was in the month of December, 1880; the idea of going into business was suggested by others, by J. Scott Wilson; I don't know that it was as early as December, 1880; I

don't know that it was as early as January, 1881; I think it was as early as February, 1881; I can not say whether as early as the beginning of February; it was probably as early as the middle of February; that is as near as I am able to fix the time when the first suggestion was made to me by J. Scott Wilson upon that subject; I remember that a suggestion of that kind was made earlier; it was in the fall of 1880, before the interview with C. M. Everest and Miller about the middle of March; I don't recollect that anything further had been done at Buffalo towards the establishment of these works than an agreement for land; I don't know exactly how long before the middle of March that was; we had examined land before that; my recollection is that Wilson and I came up here and looked at the land, and that Miller came up, and I think he looked at it, and I think that that was the time or the point in the matter that Miller decided to go with us; I should say that it was perhaps a week before the middle of March when we saw C. M. Everest; I don't remember definitely; I think it was not two or three weeks before; I think we saw no other land before we negotiated for this; this was all the land I recollect of that we examined for the purpose of buying; immediately after we first examined it we got an option that we might buy it, and gave him \$50; I am not sure whether it was the first time I saw it or whether it was after Miller had seen it; I am not positive about that. Kiley staid with us several months after he came; I think he came the latter part of July; I think he was here until perhaps into the edge of winter; I should say five or six months; I think a man that we had by the name of Porter was the next man; he had been working with us from nearly the commencement; he had lived in Canada; he was a man we found in Buffalo when we began to build, and he came there as a pump repairer or machinist, or something of the kind; he staid with us in Kiley's place until the present time. The oil that we made during the first six months, we sold what we could; it was not altogether unmerchantable oil.

Q. Then why did you say upon your direct examination that it was a year or more before you made merchantable oil?—A. I said so because there is a degree of value in the oil; it might do for one purpose at a higher price, and another purpose at a lower price; it is a matter of degree; I did not have an opportunity to give that qualification before.

Q. You were asked how long it was before you could make merchantable oil, and you answered promptly that it was a year or more, did you not?—A. Yes, sir.

Q. Now you say it was not a year or more, but that all the oil you made was merchantable?—A. I should answer just as I did; yes, sir.

Q. Then for the purpose of one question it was, for the purpose of the cross-examining question it was not; is that so?—A. It is a matter of degree; it is not a matter of argument—a degree of value; I do not remember whether I stated a degree of value in my answer to the district attorney's question; I guess I said it was a year before we could make merchantable oil; it was a year or more before we made merchantable oil.

Q. Then during the first year you were selling unmerchantable oil, were you?—A. I think so; yes, sir.

Q. Did you represent it as merchantable oil when you sold it?—A. Some of it was merchantable oil.

Q. Then you were not, during the first year, selling simply unmerchantable oil; is that so?—A. I guess that is so.

Q. Then it was not a year before you made merchantable oil, was it?—A. We sold the oil that we made, and it was merchantable for some purposes.

Q. It was merchantable oil, was it not?—A. For some purposes; yes, sir.

Q. Now, let me have this question in the way in which you wish your answer to it to stand finally. Did you during the first year of your operations make merchantable oil or not?—A. We made some.

Q. Then when you said that it was a year before you made merchantable oil, you said that which was not true, did you not?—A. No, sir; I did not. I think it was about the 1st of July that we had our second still in operation.

Q. Was it in satisfactory operation from that time, or did it require adjustment and modification before you got it into running order?—A. The still was all right; it required a man to operate it; from the 1st of July onward it was all right so far as I know; we got a third still in operation somewhere in August; these three constituted our entire force.

During all the existence of this company I have been acquainted in a general way with the amounts of crude manufactured by it; I purchased it; I knew what I purchased, substantially; I guess nobody knew better than I what I purchased; we did not purchase any that was not paid for, and none was paid for that was not purchased, so far as I remember; I continued to make the purchases from that time on, when I was here, and I was here most of the time; if they wanted oil, and I was not here, they bought it; we got the crude from the Atlas Refining Company; it was delivered to our works in pipe, a little pipe that they laid over from their own works, having no connection with any general line of pipe, as I understand it; at the begin-

ning of 1882 we ceased to buy from the Atlas, and then bought in the open market as we best could; from that on the deliveries were made to us in tank cars, uniformly, I think; I think we received no deliveries by pipe lines; I know we did not get any of any account; I don't think we got any; the deliveries were made from the green line of tank cars—a Pennsylvania company; I think that is the name upon the receipts we gave; it might have been Empire Line; as I recollect it, it was by that line exclusively that we received it then and continued to down to this last winter.

I don't know how much oil we ran in the years 1882 to 1886, inclusive; I know something about it, but I don't know how much; I think we ran more in 1883 than we did in 1882; I can't say how much we ran in either year; we ran more in 1882 than we did in 1881, as I now recollect it; I don't know how much more we ran; I can tell nothing more about it than we ran more than we had before; that is just about as near as I can give it; I think we did not run two hundred thousand barrels in 1882; I think not one hundred and fifty thousand; I should think somewhere in the neighborhood of one hundred twenty-five thousand; that is as near as I think now that I am able to give it; in 1883, I think, we ran less of crude; I don't know how much less; I do not think we ran one hundred thousand barrels in 1883; we were changing our works and preparing, and did manufacture kerosene and barreled it, and that took our operations when we completed the oil and turned it out in the market; I know we did not turn out as much, because we turned out the finished product of all the light oils; I should guess we ran less than one hundred thousand in 1883; I guess we ran as little as seventy-five thousand; it is my best judgment that it was as little as that; my best recollection is, I should think it might be as little as fifty thousand barrels, in 1883; in 1884, I should think about the same as 1883, substantially; in 1885 not very different from 1884; I should think in the neighborhood of fifty thousand barrels of crude; I do not recollect any special difference in 1886; it just depended on the way you made it up, and how much we filtered, and how fine we made it, and a great many other circumstances; I do not think we made as much in 1885 as we had in 1884; I should judge ten or fifteen thousand barrels less in 1885 than 1884; it is about my recollection that in 1885 our total consumption of crude came down to from thirty to forty thousand barrels; I can not say it did not fall below thirty thousand; I do not think it fell below twenty-five thousand; I will not say positively about it; I do not like to say positively that it did not fall below twenty thousand barrels in 1885; I do not think it fell in 1885 below fifteen thousand barrels; I do not think it did; I am not certain; I am pretty sure that our total consumption of crude in 1885 did not fall below twelve thousand barrels; I am pretty certain that it did not; that is right.

My duty in looking after the patent litigation of the Vacuum Oil Company continued through some part of 1879 and the whole of 1880, and down to the time that I heard that it was abandoned, which was about the last of 1880. My duty in looking after that litigation called me into consultation from time to time with the various counsel of the company.

The action of the Buffalo company against the Everests was begun in the spring of 1883; I suppose I verified the complaint in that action; there was another action begun by that company against the Everests and others, I think in the spring of 1885; I suppose I verified the complaint in that action; it was after I met Miller, after his return from California, that the first action was begun; I think in the neighborhood of a month after; I think it was in the winter of 1882 and 1883, or the spring of 1883, that I had that meeting with Miller in Buffalo.

The capacity of the first still that we got into operating order was 180 barrels; that would require 160 or 170 barrels for a charge; within 10 or 20 barrels of the entire capacity of the still, as I understand, would be a proper charge; the capacity of the next still was the same; neither of these were vacuum stills; the capacity of the third and last still was 40 barrels; that was a vacuum still.

It was in September that Miller came back to me and offered to go back to work with the company; about the middle of the month, 1881; that was on the first of the two visits that he made to me with Mr. Outerbridge; the second visit, upon which we settled up with him, was a few days after, a week or perhaps ten days; that was, I should think, about the third week of September, 1881; when he offered to return I told him we did not want him; that we had made other arrangements; the other arrangements we had made, we got the works to running after a fashion, and I did not think we could trust him; that is the reason I told him.

Q. You said in answer to the district attorney's question that you know that the gas passing off from the safety-valve, upon the heating of the still to a point which lifts the valve, is identical with the gas which you have seen following experiments from crude petroleum; do you know that to be so?—A. I think that is so; I would not say as to the minuteness of the identity, but it is of the same character; the gas which passes off is petroleum vapor; some of it is gas and some vapor; it is gas mixed with vapor; I know that that gas mixed with vapor is explosive; I have seen it explode in testing oils a good many times; you can only eliminate a small amount of

it, but it will go with a puff when you put a paper to it, or a match; you can not get up a large amount but it goes with a puff, which shows it is explosive matter.

Q. What more do you know about it?—A. I have seen it coming from a well, and burned several men and derricks and property; it exploded; the gases crept quietly to the boiler unobserved and all at once the whole atmosphere was ablaze; I call that an explosion; I have seen oil burning and attempts made to put it out; all these gases are highly inflammable and the extent of the flame from the crude oil or gas would determine in my mind considerably as to the explosive character of the particular gas that was being burned; my opinion is that the greater extent of flame in the combustion of any given substance the more explosive that substance or the gases evolved from it are.

Q. Then you are satisfied that the gases evolved by applying heat to pitch pine are explosive, and that to a higher degree than the gases evolved by heat from white pine?—A. I did not say so; I do not desire to draw the distinction between white pine and pitch pine; I do not know that there is any distinction.

Q. Take pine then; you are of the opinion that the gases evolved by the burning of pine are explosive, and that to a greater degree than the gases evolved by the burning of hickory, are you?—A. There is more resinous, combustible matter in pine than hickory, some kinds of pine; I don't know that the gases evolved are explosive to a higher degree than those evolved by hickory.

I say that petroleum itself is explosive, crude petroleum highly explosive; the various gases and vapors evolved from it are all very highly combustible or explosive, or both; I know they are all explosive; I know it, because when they are confined and hot, the still or retort, or whatever it is, will explode; I know that the vessel containing these things explodes; steam is not explosive exactly in the sense that oil is; I call anything explosive that by heat explodes, creating a noise and breaking the substance in which it is confined; the noise is not necessarily essential to it; the noise depends upon the confinement; water is explosive; not explosive in the sense that some other things are; I should say it is not explosive; I think steam is explosive.

Q. Now, if you confine water as you have suggested in regard to petroleum, in a tank closely sealed, and apply fire to the outside of it in a sufficient degree to raise a body of water above the temperature of 212 (at this elevation above the sea I will add), what, in your judgment, would be the result?—A. If the tank was full of water it would burst the tank.

Q. It would explode the tank, would it?—A. It would burst the tank; I would hardly think it a proper expression in regard to water to say that it would explode the tank.

Q. You would not because water is water I suppose; is that it?—A. Well, the weight of the water might burst the vessel that it was contained in.

Q. Very well; I see you require scientific exactness; in a tank strong enough not to be broken by the weight of the water?—A. Of course, I desire simply to express the difference in a simple way, between hot oil, even, hot, heavy oil, and water under a heavy heat.

A. Do, if you please.—A. In the heaviest petroleum that I know of, if heated hot and suddenly ejected into the air, it would take fire and burn vigorously, and there is no degree to which water can be heated and then ejected into the air, that by simply coming into contact with the air, it will create a conflagration.

Q. Then you use the phrases explosive and combustible and inflammable as scientific equivalents, do you?—A. I would not draw it that fine.

Q. When you say all this time that these fluids and gases and vapors are explosive, you mean that they are inflammable, do you not?—A. No, sir; I do not mean that; I mean that some of the gases evolved from petroleum are explosive, and they are all inflammable; those are explosive that are lightest in point of gravity, like gas itself, that is invisible, passes off in the air; those I call explosives; those are the lighter of the gases evolved. I had occasion to go to the works of the Vacuum Company I should think twenty times during the year and a half or two years that I was engaged with the company; it was pretty near the end of 1880 that I ascertained that the prosecution of the Cotter suit was abandoned; I should think within a month before the end. The action brought by our company against the Everests was brought in March or April, 1883; it was one for the recovery of damages against the Everests for their dealings with our company, which we complained of.

The capital stock of the Buffalo Lubricating Oil Company, Limited, was \$40,000; that company is now doing business by itself; I do not know exactly how much of that capital was paid up in June, 1881; its capital stock is now \$100,000; that has not all been paid up; about \$40,000 has; I think it was enlarged from \$40,000 to \$100,000 a year and a half or two years ago; I guess not all even of the last \$40,000 is quite paid in now; the last increase of our works was made a month ago; the last prior to that, in 1883; at the time that increase was completed, I think, they stood substantially as represented by the map, Exhibit A.

I can not tell definitely when our concern first began to advertise itself as man-

facturer and vendor of all kinds of fine lubricating oils; we had some advertising out in 1881; I do not know to what extent; I can not tell whether it was as early as the 3d of August, 1881, that our concern was advertising itself; I gave an order on solicitation to have an advertisement put in; I think it came out earlier than I expected; I was crowded by one of the solicitors; it was not anything that I sought at all; I did give the advertisement to put in; I do not remember that it was as early as that date; I was examined as a witness upon the trial of our first action against the Everests, in March, 1885; upon that examination, being shown The Oil, Paint, and Drng Reporter, dated August 3, 1881, I think I said, in regard to the advertisement shown me, that I recognized it as an advertisement of our company.

Q. I show you an advertisement and ask you if that is the one that you so identified?—A. This is an October advertisement. I would not swear that this is the same advertisement which was in the paper of August 3, 1881, to which I testified on my former examination, and to which I have testified now. I can not say whether I made any change in the advertisement between August and October.

Q. Now I show you the same paper under date October 19, 1881, and call your attention to the advertisement and ask if you recognize that as an advertisement of your company?—A. I do.

Advertisement was offered and received in evidence as Exhibit No. 2.

#### EXHIBIT NO. 2.

C. B. Matthews, president. Hiram Benedict, treasurer. Buffalo Lubricating Oil Company (limited). Manufacturers of fine lubricating oils for all purposes; winter and summer car-oil and leather and harness oils. Office, 14 and 15 Hayden block, corner Main and Seneca streets. Works, corner Elk and Babcock streets, Buffalo, N. Y.

I think that advertisement was true in the sense that we put it in.

Q. Did you not on the trial of that case, in March, 1885, testify in regard to this advertisement in the same terms, in the same paper, for August, 1881, in answer to the question, "Was that advertisement true or false?" answer, "I think it was true at the time it was inserted?"—A. I do not know whether this is the advertisement shown me then or not.

Q. I am not asking you whether you now know how you testified then. I am asking you whether you said that; just that and nothing more?—A. I can not tell; I do not know whether I did or not.

Q. Was this advertisement, which has been shown you, true at the time of the publication of the paper that you have just seen?—A. Well, true as any advertisement, about.

Q. That is your opinion of advertisements, then, is it?—A. Pretty nearly my opinion of them. Miller and Wilson and I had four or five or half a dozen consultations in Rochester, from the time this scheme was first suggested of going to Buffalo to set up a rival concern, up to the time we finally left the Vacuum company. In the course of some of these interviews the whole subject of the plan set on foot was discussed in detail.

Q. Did you not in the course of those interviews, shortly before the time of your leaving the employ of the Vacuum company, at the house of Mr. Wilson in Rochester, while talking with him and Mr. Miller about coming to Buffalo for that purpose, say to them this, or this in substance, that if you started this concern the Standard Oil Company would have to buy it out?—A. No, sir.

Q. Did you not in the course of those interviews, at about that time and place, say to them this, or this in substance: "We must make a good showing, and then the Standard will buy us out?"—A. No, sir.

Q. Did you not at Wilson's house, at about the same time, say to him and Miller, or either of them, that if you could duplicate the products and apparatus of the Vacuum Oil Company, that company or the Standard would buy you out; that they could not afford to let you run?—A. No, sir.

Q. Did you not at or about that time, and at that place, say this in substance: "We can go to the customers of the Vacuum Oil Company and say to them, 'We have the same processes and the same apparatus and the same oils as the Vacuum Oil Company, and we have still their old superintendent, Mr. Miller, to manufacture the oils'"?—A. I might have said something like that in substance; I do not recollect it, though.

Q. Did you not, at the same place, during those conversations, say to them, or to one of them, this in substance, that you expected to get from \$100,000 to \$150,000 by being bought out by the Vacuum and Standard people?—A. I did not.

Q. Did you not, at about the time Miller left the employ of the Buffalo company, say to J. Scott Wilson, at the works or the office of that company in Buffalo, this in substance: "I am glad he has gone?"—A. I think not; I would not say positively.

Q. Did you not, at your office in Buffalo, about the 15th of July, 1881, say to C. M. Everest this in substance, that Miller was a pimp and a drunken loafer, and you were glad to get rid of him?—A. I think not; I would not say positively about that; I had a talk with him afterwards; I had some such conversation, but I am of the opinion that it was some time later than that that I said something of that character. That was my opinion at the time I said it, whenever that was, if I did say it. I know Joseph F. Stearns, who has testified as a witness here; he was in the employ of the Vacuum Oil Company before he came into that of the Buffalo company; it was not upon my invitation that he left the employ of the Vacuum company to enter that of our company; I made the arrangement with him; I do not know whether it was in 1884 or 1885; I could not say whether it was in the latter part of 1884. It was in Boston that Stearns was employed, and I made the arrangement with him there; I had a conversation with him at my office, the Lubricating company's office; I did not talk much with him; he came in there and was introduced by Mr. Reynolds, and was anxious to do business with us; I have no recollection of any other place than that where I had talked with him about being employed by our company. I can not say positively now that I had more than one talk with him at that place about it; my talks with Stearns in Boston might cover three months, and it might be six months or a year; I was there occasionally; did not spend very much time there; I can not tell you how many times during 1884 I was there; I do not recollect any other place than our company's office in Boston that I had talks with Stearns; I do not remember talking over with Stearns the litigation between our company and the Vacuum company about the latter part of 1884; I might have told him, in the course of such a conversation, that we had a suit for \$100,000 pending against the Vacuum company or against the Everests; I do not remember; I never told him this, or this in substance, that if we could get judgment in that suit, we could put the Everests behind the bars, and that was the only way we could get the Standard company to give the price asked by the Buffalo company.

Q. Did you not at that time and place say to Stearns this in substance, that the Everests would pay anything in the world before they would allow themselves to be locked up?—A. I do not recollect it; I might have said it, but I do not think I did. I will say I did not say it.

Q. Did not Stearns, in answer to that, ask you how you could lock him up in a civil suit?—A. No, nor that in substance.

Q. And did you not answer him in substance, that a man by the name of Miller had given his deposition to the effect that he was hired by the Everests to injure the Buffalo works, and that you had got Miller in black and white?—A. I do not recollect it; I might have said it; I do not recollect it.

Q. Did not Stearns then say to you, in substance, that he believed Miller was not reliable?—A. I do not think he did.

Q. Did you not thereupon say, in substance, that you did not think Miller was reliable; that as a matter of fact he had lied to you?—A. I have no recollection of this alleged talk; I have no recollection of saying that.

Q. Did you not further say to him this, in substance or in terms: "We do not care as long as we have got it in black and white where he can not back out of it; we can use it any way?"—A. No, sir.

Q. Nor in substance?—A. I think not. I think I met Stearns in Albany once. It was in the winter. I guess it was about the time the United States court was sitting in Albany. I do not remember where I met him there. I remember meeting him in Albany; I can not say as it was this particular time or not; during a talk with him there about some railroad trade there, of the canal company. I can not say sure whether I had more than one talk with him in Albany. I think that he and I went to the office of the Delaware and Hudson Canal Company.

Q. At that time and place did you talk again with Stearns about your litigation with the Vacuum people?—A. I have no recollection of it.

Q. Did you say to him, in substance, "I must get the Standard people where I can pinch them before they will come to my terms?"—A. No, sir; nor that in substance.

Q. Did you say this, in substance or in terms: "We have not yet set a price, but we will see what we want, and I think we can get it, if we can get our judgment against them, because that will give us a hold for criminal suit against them?"—A. I never said any such thing to him.

Q. Did you say this, in substance: "We ought to have brought our suit for \$250,000, and we are sorry we did not?"—A. I might have said it; I do not recollect it. I have no recollection at all, not the slightest, on the subject of any conversation with Stearns, at that time, except about selling oil to the Delaware and Hudson Company. Mr. Stearns came on to testify in the trial of our civil action for \$100,000, in March, 1885.

Q. Do you mean to say that when you met him in January, 1885, you did not talk with him about the approaching trial of that case?—A. I was talking to him proba-

bly about a patent suit that we were at Albany to try; one of these patent suits, and I might have mentioned it; I do not recollect that, even. The United States Court was then in session at Albany; I remember that now.

Q. And you are of the opinion that in the latter half of January you did not talk with Stearns about the approaching trial of your great case, in which he was to testify for you in March?—A. I have no recollection of it. He came on then at my request from Massachusetts to testify on that trial, and did testify. It was upon my request that he came on to testify upon this trial.

Q. Did you not, in Buffalo, just before the trial of that civil action, say to him this, in substance: "We must win this suit at all hazards, so we can get the criminal suit started; then they will be in our power and we can make them come to our terms?"—A. No, sir.

Q. Did not Mr. Stearns tell you in Buffalo, some time in September or October, 1885, in reference to the Young's Hotel register, that he had learned from the chief clerk of that hotel that the words "A friend," after the name of H. B. Everest, were added by the clerk himself?—A. I do not recollect his having told me any such thing. I can not swear positively he did not.

Q. Did he not, shortly after that, tell you that again?—A. I do not recollect it. I did not say to him, on one or both of these occasions, that he must say nothing about it; that I wanted it understood that Mr. Everest wrote it all, nor that in substance.

I do not remember of offering any special inducement to any witness to be present or to testify upon this trial. I say I have not. In two cases I have offered more than mere expenses for coming. Mr. Miller said that they could not leave their daughter, and I said that I would see that if their daughter had to come that her expenses were paid. In reference to Mr. Stearns, he wrote that he could not come without his wife, and I said that the district attorney would make it right or that I would make it right. That is all the special inducement that I am aware of in regard to this whole proceeding. Mrs. Stearns was not expected to be a witness. I think I wrote to Mr. Stearns as late as the 28th of April last, and addressed the letter to him marking it "personal," I think, and I said in it to him, "the district attorney will pay your expenses and I will see that you are fully satisfied for coming when you are here."

Q. And you said further, did you not, "There are reasons why I prefer not to send you any money from here, but if you find it necessary before coming you can make sight draft on me for what you need before starting;" did you not?—A. I think that is about as I recollect it. I was out of money, and he wrote that he was. I know Arthur A. Illsley; he lives somewhere about Boston; I have seen him at Boston at different times; he was not present at any of the conversations with Stearns at Boston about which I have been asked, that I recollect of.

Q. Did you not, on the 27th of December, 1880, write a letter to Mr. H. B. Everest in regard to the suit against Cotter?—A. I do not remember.

[A letter produced by defendants' counsel.]

WITNESS. This is my handwriting.

Q. Did you not, on the 27th of December, 1880, write these words to Mr. Everest: "Last week I saw Mr. Rogers and C. Brown, and the next move decided upon in the Cotter case is to have Cotter examined under oath by the attorneys on both sides, and should he testify that the S. O. Company have not in any manner agreed to protect him against a loss or damage in consequence of past infringement of your patent, then the attorneys are to take the testimony to the court and explain the relation of the parties to each other, and then, if the court is willing that the case should proceed, the case will be tried on its merits?"—A. I did. That is all my letter contains upon the subject. I think I was writing this from the city of Rochester, from the letter being dated from there.

I do not remember whether it was in 1885 or 1886 that I first made his acquaintance. When I first knew him he was at work for the Buffalo Lubricating Oil Company. I knew him recently, while he was at work for the Vacuum Oil Company. I did not hire him.

I never made a special study of the different kinds of crude oil until I began the manufacture of petroleum oils, in 1881. The first civil action against the Everests was begun in the spring of 1883. The next proceeding that we instituted against them was my company-brought an action against them and others in the spring of 1885. That was to recover \$250,000 damages. The next proceeding I instituted that I recollect of was coming before the grand jury of this county in October, 1885, and procuring an indictment of these same five defendants by the grand jury. The next was coming before the grand jury in 1886 and obtaining the present indictment.

I know William O. Allison, and have for five or six years. He lives in New Jersey. His occupation is selling cotton oil, trust stock, and publishing paper, The Oil, Paint and Drug Reporter, the same paper which has been exhibited to me, containing the advertisement of our company. In the summer of 1885 I think I saw Mr. Allison here in Buffalo, and also in the fall of 1885, in my office, 55 Main street, and at my house

the same day. I do not recollect that I saw him at the Mansion House; perhaps I did. On those occasions I think these suits were referred to. I think they were fully talked about between him and me.

Q. All the litigations pending, the actions that your company has brought, and these indictments or the prior one, or the one that was to be brought, were discussed, were they not?—A. I think something was said about the indictment; I think it had actually been brought.

Q. At that time there was conversation between you and Mr. Allison as to the terms upon which all this litigation could be settled, was there not?—A. I think not.

Q. There was nothing said on that subject?—A. No, sir; I do not remember that there was any talk about the settlement of any litigation.

Q. Did you not then say this, in substance, to Mr. Allison, then and there, that all the difficulties with the Buffalo company could be settled for the sum of \$300,000?—

A. No, sir; nor that in substance. A short time after that I saw Mr. Allison in Syracuse; I think I saw Mr. Allison in Syracuse at the Globe Hotel; I think I had telegraphed him to meet me there; I do not know that I had; I think my conversation with him then continued half an hour or an hour; during that time the subject of conversation was in part the differences between the Buffalo Company and these other parties, and the possibility of settling them.

Q. Was it not then suggested by Mr. Allison, in substance, that the sum of \$300,000 was excessive as a consideration of settlement?—A. No, sir.

Q. Did you not then say to him, in substance, that \$250,000 would be, or might be, accepted?—A. We were not talking about that.

Q. You did not, then, say that?—A. He was talking about buying our property, and we talked about it in that regard, not of settling the litigation. I think there was something said about buying the stock of our company.

Q. And you proposed that it should be bought for \$300,000, did you?—A. Well, that price was mentioned in connection with that subject; I am not sure whether it was mentioned by me or by him.

Q. And then, when it was mentioned by him, was it not mentioned with the remark that it was rather a high price for the property?—A. Perhaps so; I do not recollect.

Q. And in answer to that, did you not remark, in substance, that the property could be bought perhaps for \$250,000?—A. It is possible; I think there was something of the sort said; yes, sir. I do not know that that was said to me.

Q. This made no special impression upon your mind at the time?—A. Nothing extraordinary; no, sir. I was not daily having transactions of \$300,000, or of \$250,000.

Q. Then, at that conference with Mr. Allison, did you say to him, in substance, that he might communicate to the New York parties the proposition for \$250,000 in settlement or purchase?—A. No, sir, not that I recollect of; I do not recollect no such thing.

I saw Mr. Allison some time after that; I think I saw him at his house at Englewood, N. J. I do not remember seeing him in New York about that time; I have seen him at the Astor House, in New York, but I do not know whether it was along at this period or not. Within a month after the meeting at the Globe Hotel I was one day, or a part of a day, at Mr. Allison's house at Englewood; I do not know but what I staid there over night; I guess I did; I am sure I did; I can not now fix the date of it.

Q. Did you not, at that time and place, say to Mr. Allison this, in substance or in words, that if the \$250,000 was paid the criminal case would be nolprossed?—A. No, sir; nothing of the kind.

Q. Was not the question then discussed between you and him of how the criminal action could be nolprossed?—A. He said that he could settle it; I told him I thought it could not be settled.

Q. You did not then suggest to Mr. Allison that if that money was paid the criminal prosecution would be nolprossed or discontinued?—A. No, sir.

Q. Did you not speak to him, at that time and place, about getting Miller out of the way?—A. No, sir.

Q. You did not say that he could be got out of the way?—A. I do not recollect of any talk with him about Miller at any time.

Q. Do you say that you did not say that to him?—A. I think I did not.

Q. Will you say that you did not?—A. Well, I will make it as positive as I have, that I think I had no talk with him about it in any of those interviews.

Q. Did you not, at any of those interviews, suggest to Allison, in connection with the talk about settling, that if the money were paid the matter should be kept a secret?—A. No, sir; nor that in substance.

Q. Did you say this in substance, to Allison at any of these interviews, that you in that event should secretly be taken into the employment of the Standard Oil Company?—A. No, sir.

Q. Or that in substance?—A. No, sir.

Q. Did you say this, in substance, that if you were so taken into its employ you would thus be able to control all the outside trade in Buffalo in favor of the Standard?—A. No, sir.

at to look after Miller?—A.

the Globe Hotel in Syracuse the master should be kept payment of the Standard Oil the outside trade in Buffalo

in substance, that if the of which one of \$100,000 himself?—A. No, sir.

he wanted so much for your much to be paid to the law-

man, or otherwise, make that

November, 1855, I saw him and Moore's office; that was

conversations with Alfred P. May and others, and with in substance?—A. I did not. not submit such a proposition; he did not say so; number whether I asked him

do so, or that in substance?—

and settle all debts, civil and except so far as it refers about the criminal process and I figured up the value of the works; I do not remember Dudley, of Buffalo; on conversation with him, in which I did not make a proposition

proposition to him?—A. I did him, I did not a price on our I know Benjamin Brewster; I do not say that I know J. A. them, in March, 1855, at 140 office with Mr. Rogers; I did while property for \$100,000, or have spoken in a building; simply brought in, except the Arman from the city; in

thence and; in left the other marked "barreling house," with the exception of the house than there was at that time. Moore came to be taken out of I urged to have me get this Wilson, and he kept inquiry and I said there was particular arrangement regarding the Wilson, and Miller wanted his had previously turn his out; that it might be handy to my pocket. In regard to the the same we intended when retirement, and that we expected we would say. There were and the advertisement was and I was urged to put it in conversation with Mr. Stearns

about his coming to Buffalo as a witness; I received a letter from him, which is now in the possession of the company. I now recall some conversation with Mr. Stearns regarding that register and those names, but where it was I can not say; I know we talked about the names on the register, but I think he said that it was not all in the same handwriting; that is about all I recall; that is the only modification that I think of that I wish to make of my testimony. I have been to Young's Hotel in Boston; [being shown a book] I know the handwriting of H. B. Everest; I have seen him write; I have had correspondence with him; I have got a letter from him.

(Witness's attention is directed to a page under date of Sunday, July 3, 1881, and the signature on the fourth line from the bottom of the left-hand page.)

I have seen that signature before; I never saw it in Boston; the writing is Hiram B. Everest's, and the word Rochester.

Being further cross-examined: I could not swear to the words "and friend" being in H. B. Everest's handwriting; I can not swear that they are not. Some years ago I was in correspondence with him; I am not positive whether these words are in his handwriting; the word friend is cramped there a little for room and I do not know, I think that it is in his handwriting.

The prosecution here put in evidence the entry referred to, and the further fact that Albert A. Miller's name does not appear in the register upon that page.

**JOHN BYRNE**, a witness called on behalf of the people, testified:

I reside in the city of Buffalo, and have for the last forty years. I was formerly superintendent of police, and have now a detective agency here.

Q. Were you employed by any of the defendants in this action in regard to the employment of one Lane Burrell?—A. I had a man by that name employed.

Q. Were you in the employ of any of the defendants in regard to this litigation?—A. Yes, sir. I employed Lane Burrell in 1885 or 1886, I think.

Q. At the time that he was in your employ he was also employed at the works of the Buffalo Lubricating Oil Company?—A. Yes, sir.

Q. And while in your employ, and in the employ of the Buffalo Lubricating Oil Company, did he make reports to you from day to day; did he make reports to you?—A. Yes, sir.

Q. What did you do with those reports?—A. I filed them in my office.

Q. What else did you do with those reports?—A. Forwarded copies, one to New York and one to Rochester. The one forwarded to New York was addressed to Mr. Dodd and the one forwarded to Rochester to Mr. Outerbridge. I met Mr. Dodd at New York City, at No. 44 Broadway, which is the office of the Standard Oil Company. I received my pay from Mr. Dodd.

Being cross-examined by counsel for Archbold, Rogers, and McGregor, the witness said:

My instructions from Mr. Dodd were in writing. I have these instructions here.

(Witness then produces paper, which he says are the original instructions from Mr. Dodd.)

Mr. Dodd gave me these instructions at his office in New York. I think when I was in Mr. Dodd's office in New York I was introduced by him to Mr. John D. Archbold. I think this was in the month of May, 1885. I knew at that time that Mr. Dodd was attorney for Mr. Archbold, Mr. Rogers, and Mr. McGregor in a suit brought in the supreme court in this county against those individuals, together with other parties and corporations.

The instructions are as follows:

During the year 1881 the Buffalo Lubricating Oil Company was organized. Two of its members, Albert A. Miller and J. Scott Wilson, were previously thereto employees of the Vacuum Oil Company, of Rochester. We have reason to believe that Miller and Wilson were taken into the Buffalo Lubricating Oil Company for the reason that they were acquainted with the patented and secret processes for the manufacture of oil by the Vacuum Oil Company, and that they were given an interest in the Buffalo Lubricating Oil Company in consideration of constructing the Buffalo works so that the Vacuum processes might be used. We want all the light we can get on that subject.

(2) We desire to know who are connected with Matthews in the present suit against us; who is assisting him with capital, and what the objects of the parties associated with him may be.

(3) We desire to know whether Albert A. Miller is at present connected with Matthews, and what his present connection with the case may be. He is now employed at the works of Clark & Warren, Corry, Pa. Much may be learned from him of the history of the whole matter embracing the original design of the framers of the Buffalo Company, in getting him and Wilson away from Rochester Company. If he is promised a part of the proceeds recovered in these suits, we are quite anxious to know it.

(4) We desire to know if the Buffalo Lubricating Oil Company is violating an injunction against the infringement of a patent of the Vacuum Oil Company.

In order that we may judge of this, discover whether the Buffalo Lubricating Oil Company, during the process of manufacture, draw samples of oil from their stills, and if so, what they do with those samples; in other words, do they obtain from them the gravity and fire test, or does Mr. Beardsley take the samples where no one can see what he does with them?

(5) We also desire to know whether Clark & Warren, of Corry, are infringing the Vacuum processes; learn whether Albert A. Miller is their stillman, for he is acquainted with the process and would likely use it; also learn, as asked above, in regard to the Buffalo Oil Company, as to the drawing of samples of oil from the stills during the process.

(6) We have reason to believe that the suit is brought for the purpose of forcing the Standard to purchase the works of the Buffalo Lubricating Oil Company, and Matthews has made certain statements to that effect; would like reports of any statements or admissions by him in relation to his objects in these suits.

The witness, being further examined by the district attorney, testified:

What I did was in reference to ascertaining what I could upon the subjects contained in these instructions, and that is all I did.

Q. You went into the Buffalo Lubricating Oil Works, and hired a man that was in the employ there?—A. I did not.

Q. Who was the man that you employed that you spoke about yesterday?—A. I employed Mr. Burrell, but he was not in the employ of the Buffalo Lubricating works when I hired him. He remained in my employ some months. While he was in my employ, he was also in the employ of the Buffalo Lubricating Oil Works. I did not get him that employment, but I told him to get it, and he made reports to me.

CHARLES B. MATTHEWS, being further called for cross-examination, testified:

I know William E. Cotter, of Philadelphia. I first saw him in 1879. It was in connection with the suit which the Everests afterwards brought against him upon the patent. I once called at his store in Philadelphia. I think I called at his house in Philadelphia; I think in 1881 or 1882. I am very confident that I did not in the spring of 1885. I have no recollection of calling there but once, and I should think it was about the year 1882.

Q. Did you, about the spring of 1885, at his house in Philadelphia, talk with him about your litigation which has been under consideration in this trial?—A. I don't think I did. I do not think I talked with him, about the spring of 1885, at his house in Philadelphia, about my litigation which has been under consideration in this trial.

Q. Did you in the course of that conversation say to him this, or this in substance, "This thing of building refineries, and expecting the Standard to buy them out, is a poor investment, at least it seems so to you and me?"—A. I did not say anything of the kind.

Q. Did he answer to that, in substance, "The Standard's day for buying out refineries is past?"—A. I do not recollect anything of the kind. I do not care to make it any more definite than that; I do not remember it.

Q. To that did you answer this, or this in substance, "I intend they shall buy me out, or I shall make it very warm for them?"—A. I said nothing of the kind.

Q. Were you at his house in Philadelphia in the fall of 1884 or 1885?—A. I never was at his house but once, and I do not think I ever saw him at his store. I do not remember of ever seeing him but once in Philadelphia, and that was at his house about the year 1882. I do not recollect seeing him in the fall of 1884 at his house or his store in Philadelphia.

Q. Did you then and there, in substance, ask him to aid you in your company's litigation against the Everests and the Standard, saying that if he would he could make a good thing out of it?—A. No, sir.

I have seen Mr. Allison here in Buffalo since this trial began. I met him in this room, I think. I had a slight conversation with him, meeting him here in the courthouse one day last week.

Q. Did you ask him, in substance, why he came on here to testify, telling him they could not compel him to come?—A. No, sir; nothing to that effect.

Q. Did you say to him this, or this in substance, "I suppose you have come to prove that I tried to sell out to the Standard"?—A. I said something of the kind, not as you put it, though.

Q. You said that in substance then, did you?—A. Well, I guess so.

Q. Did you then say to him, "You can go home, I will admit it"?—A. I guess likely I did, something of the kind, in substance, something that might be construed into that, very like.

Q. You intended it to be construed into that, did you not?—A. No,

Q. But that might be construed into that, but that you did not intend so to be construed?—A. I admitted I tried to sell out; I do not think I said the word Standard; I asked Mr. Allison why he was here and he drew out a subpoena, and I read it; he said he thought he could not be forced to come as he lived in New Jersey, and he found that he could.

I should like to make a correction in my statement yesterday in regard to the quantity of crude oil that was used in our works in 1882; my correction is that there was fifty thousand or less used, instead of one hundred, as the report which I read seems to say.

Q. Does not the report that you have read make you say that you used 125,000 barrels of crude?—A. Well, I think it does.

Q. And is not that what you said?—A. That is what I said.

Q. And did you not say it after a great many questions were asked you about it?—A. Some questions were asked.

Q. And you did not say it after you had first said that it might have been as high as one hundred fifty thousand?—A. Very likely.

Q. And did you not settle down upon one hundred twenty-five thousand as a minimum amount that you were willing to put for the oil you used?—A. I think so; that is why I want to correct it.

Q. Now how have you got the basis of correction in the meantime?—A. Running estimates in my mind; I had not thought of this question.

Q. Now you are quite sure that you used about fifty thousand, are you?—A. Fifty or less; thereabouts.

Q. Well, now, whereabouts; was it above or below fifty, because it is for the benefit of accuracy that you have come back to make this statement, of course?—A. It is less than fifty, I think; I am sure that it was not more than 50,000 barrels.

Q. Are you sure that it was more than forty thousand?—A. I have not made any examinations of any books or any figures; I have been just simply running in my mind from years past; there are books that show it, I suppose.

Q. But you have preferred not to take the trouble to examine the books, have you not?—A. I did not know that that question was coming up here in any form; I know it had come up yesterday, and I thought about it.

Q. And you had the means of obtaining the exact information, had you not?—A. If I had the time I had the means.

Q. And you have not done so?—A. No, sir.

Q. At the time you verified the complaint in the first action for damages against the Everests there was nothing in the complaint setting up the occurrences of the 15th of June as a cause for damages, was there?—A. I considered that there was; it mentioned conspiracy, and the damages followed, and that included the other.

Q. Was there one word in that complaint mentioning that occurrence of June 15?—A. Not this specifically as a crime, but it was a damage; it was only mentioned in connection with others.

By the COURT. Now, then, was there anything in the complaint in reference to the attempt, or the alleged attempt, to blow up the works?

The WITNESS. It is a very difficult question to answer; I think I heard a great deal of talk about it; the lawyers on one side said that it was, and on the other side they said that it was not. The general word "destroyed" comprised it, and I am not able to tell which lawyers were right, what "destruction" meant; there was, however, no specific mention in the complaint of the alleged injury to the works, or the attempted injury on the 15th of June.

Being further examined by the district attorney, the witness testified:

Q. You may state whether or not at the time of the preparation of the complaint in the first action of the Buffalo company against the Everests, you stated to the party who drew the pleadings the facts in regard to the blowing up, or attempted blowing up, of these works.

(To this the defendants objected to as incompetent. The objection was overruled.)

A. I did not.

Q. Did you know, at the time these pleadings were drawn, in regard to the fact of the attempted blowing up of the works?

(To this the defendants objected as incompetent and immaterial. The objection was overruled.)

A. I did not.

Q. From whom did you first get your information in regard to this subject?

(To this the same objection and ruling were had.)

A. I think it was in the month of February, 1885, at Rochester, from Mr. George Truesdale's sworn testimony; George Truesdale, a witness who was here.

Being further cross-examined, the witness said: I first learned anything in regard to that subject from Mr. Truesdale, in Rochester, in the month of February, 1885, from Truesdale's deposition; it was, I guess, perhaps six months before Truesdale was examined that I had a talk with him; the last talk I had with him before he was ex-

amined was, I guess, about fifteen or twenty minutes before; I had a talk with him, I think, a day or two before he was examined; the time he was examined was the first I had learned definitely of this transaction; I know that that is true; Miller was examined as a witness at one time; his examination preceded that of Truesdale by about six months; he testified on this subject, but not fully; that is my recollection of it; he testified as to conversations that he alleged he had with the Messrs. Everest on this subject; not fully; he did not, I think, testify upon that subject more fully than he has upon this occasion.

Q. Then you did not know about the subject, about this matter, more than six months before the action was brought to trial, did you not?—A. I knew something about it. There was never any application made to amend our complaint setting up what I now claim the fact to be, not that I know of; if there was, it was made at the opening of the court.

ELDON H. HAMILTON, a witness for the prosecution, testified that in 1881 he was working for the Vacuum Oil Company at the Boston office as shipping clerk and salesman; and that on the 3d or 4th morning of July of that year the defendant H. B. Everest arrived at the Boston store in company with Albert A. Miller; that he could not tell how long Miller staid in Boston, but that he went away once, and that he was there altogether perhaps two months or ten weeks, perhaps not so long; that Miller did nothing around the place, but went and came as he saw fit; that sometimes he would stay there pretty nearly all day, and other days would, perhaps, be there no more than an hour or so; that he did no work.

FRANK N. BEACH, a witness called on behalf of the people, testified as follows:

I reside in Rochester, N. Y., and am secretary of the Vacuum Oil Company; I was appointed and have been since 1880. At about that time I came to Rochester from Titusville, Pa., at the request of Mr. Hiram B. Everest. Before entering the employ of the Vacuum Oil Company I had been engaged as a broker at Titusville, Pa., and I had also been employed by the Enterprise Transit Pipe Line Company. As the secretary of the Vacuum Oil Company I kept the book of record, the secretary's record book of any meetings that were held; I also had charge of a portion of the books of the company; I also had a little to do with the correspondence of the company. I was subpoenaed here to produce the books of the company containing the account of Albert A. Miller with the Vacuum Oil Company. I have a statement of Albert A. Miller's account, but I have not brought the books.

(Witness produces statement, and the district attorney produces another account, and hands it to the witness.)

Q. I would like you to look over that account, Mr. Beach, and see if you ever swore that that was a correct statement of Miller's account as it appears upon your books.—A. I think it is.

Q. Does not your book contain a debit in Miller's account of \$1,000, made when Miller was in California, which does not appear upon this paper you produce?—A. No, sir; it did not go into Mr. Miller's account.

Q. Why did it not go upon the books?—A. Mr. H. B. Everest paid the money in California, and I think that was afterwards paid back to Mr. H. B. Everest by the Vacuum Oil Company, and I think it was credited to Mr. H. B. Everest's account upon the books of the Vacuum Oil Company.

(The district attorney thereupon offers in evidence the two accounts; the one produced by the witness and the other produced by himself.

Received in evidence, and marked Exhibits O and P.)

#### EXHIBIT O.

##### *State of Albert A. Miller, account.*

1881.

## STATE OF NEW YORK,

County of Monroe, ss:

F. N. Beach, being duly sworn, says he is the secretary of the Vacuum Oil Company, Rochester, N. Y., and that he has supervision of the books of said company. The foregoing statement of account embraces the full, true, and correct copy of each and every entry upon any and all books or documents or accounts of said Vacuum Oil Company, containing or referring to any account of Albert A. Miller, during or or since 1881.

F. N. BEACH.

Subscribed and sworn to before me this 21st day of February, 1885.

A. L. MABBETT,  
Notary Public.

I also was subpoenaed to produce here the record books containing the proceeding of the board of directors of the company, and I now produce the same. I know John D. Archbold, and I know his handwriting.

The district attorney then calls the attention of the witness to the meeting of the board of directors of the Vacuum Oil Company held January 18, 1881.

Witness says these meetings are in the handwriting of John D. Archbold.

The district attorney then read from the meeting of January 18, 1881:

"Meeting of the directors of the Vacuum Oil Company held January 18, 1881.

"Meeting called to order by Charles M. Everest, vice-president. Present, Henry H. Rogers, Charles M. Everest, and John D. Archbold.

"On motion John D. Archbold was appointed secretary.

"Waiver of notice by A. M. McGregor and H. B. Everest presented to the secretary.

"H. H. Rogers moved that a dividend of 40 per cent., payable as of January 1st, and 10 per cent., payable as of January 1st, be paid at once from the earnings of the company.

"Carried.

"On motion, adjourned.

"(Signed)

"JOHN D. ARCHBOLD,  
Secretary pro tem."

The district attorney further offered and read from the minutes of December 23, 1881, from page 72 of the record book, as follows:

"On motion of H. H. Rogers, and seconded by John D. Archbold, a division of (blank) per cent. of the capital stock of the company was declared, payable on the 27th of December, 1881."

(The defendants' counsel objected to the admission of this evidence.)

By the COURT. I will allow the district attorney to read the resolution, omitting the amount of the dividend in this one instance.

(Defendants' counsel excepts.)

The district attorney further reads from the minutes of July 28, 1883, so far as to show that a dividend was declared, but without reading the amount.

To this the defendants' counsel objected. The objection was overruled, and the defendants excepted.

On motion, a dividend of (blank) per cent. be declared from the earnings of the company; (blank) per cent. payable in cash at once, and (blank) August 10, 1883. Present, H. H. Rogers, A. M. McGregor, J. D. Archbold, and C. M. Everest.

"J. D. ARCHBOLD,  
Secretary."

The prosecution here offered in evidence a certified copy of the articles of incorporation of the Vacuum Oil Company. The defendants objected to it as immaterial. The objection was overruled, and the paper was received in evidence as Ex. Q, and the defendants excepted.

#### EXHIBIT Q.

STATE OF NEW YORK,  
*Monroe County, ss :*

We whose names are hereto annexed do hereby certify, that we have associated together as a manufacturing corporation to continue in existence till the 1st day of August, 1886, for the purpose of conducting and carrying on the manufacture of oils from petroleum; that the corporate name of the said company is The Vacuum Oil Company; that the amount of the capital stock thereof is \$10,000, and is divided into forty share of \$250 each; that the number of trustees of the said company is five; and that the following are the names of the trustees who will manage its concerns for the first year, viz: Hiram B. Everest, Joseph Everest, Mathew P. Ewing, John D. Helmer, and John H. Jeffres; and we do further certify that the manufacturing operations of said company will be carried on in the city of Rochester, in the county of Monroe aforesaid.

Dated August 28, 1886.

HIRAM B. EVEREST.	[L. S.]
JOSEPH EVEREST.	[L. S.]
M. P. EWING.	[L. S.]
JOHN D. HELMER.	[L. S.]
JOHN H. JEFFRES.	[L. S.]

WYOMING COUNTY,  
*Town of Pike, ss :*

On this 1st day of September, 1866, before me, the subscriber, a justice of the peace in and for said county, appeared John D. Helmer, to me known to be the same person described in and who executed the foregoing instrument, and acknowledged that he executed the same.

O. W. EMORY,  
*Justice of the Peace.*

MONROE COUNTY,  
*City of Rochester, ss :*

On this 30th day of August, 1866, before me, the subscriber, a commissioner of deeds in and for said county, appeared Hiram B. Everest, Joseph Everest, Mathew P. Ewing, and John H. Jeffres, to me known to be the same persons described in and who executed the foregoing instrument, and severally acknowledged the execution thereof.

WM. L. INGRAHAM,  
*Commissioner of Deeds.*

STATE OF NEW YORK,  
*Monroe County Clerk's Office, Rochester, N. Y. :*

I, Maurice Leyden, clerk of the county of Monroe, of the county court of said county and of the supreme court, both being courts of record, having a common seal, do hereby certify that I have compared the copy of articles association (Vacuum Oil Company) hereto annexed with the original now on file in this office, and that the same is a transcript thereof and of the whole of said original.

In testimony whereof, I have hereunto set my hand and affixed the seal of said county this 30th day of April, A. D. 1887.

MAURICE LEYDEN,  
*Clerk.*

(Endorsed :) The Vacuum Oil Company, of Rochester. Articles association.

The prosecution here rested their case.

The defendants' counsel here moved the court to advise the jury to render a verdict of acquittal of the defendants John D. Archbold, Henry H. Rogers, and Ambrose McGregor. The jury thereupon rendered a verdict of acquittal as to those defendants, in pursuance of the advice of the court.

The defendants' counsel then requested the court to direct a verdict of acquittal of the defendants Charles M. and H. B. Everest upon the grounds: (1) That the evidence in the case is not sufficient to warrant the conviction of the offense alleged in the indictment; that the indictment charges one indivisible crime, consisting of many elements, which elements are unified by a paragraph in the pleading inserted for that purpose, and on account of which defendants' demurrer was overruled; that the prosecution can not succeed without proving all the elements which thus united make up the crime charged in the indictment. (2) That there is no evidence of any overt act committed in the county of Erie, and therefore that the courts of sessions and oyer and terminer of Erie County have no jurisdiction. The motion was denied, and the defendants excepted.

HENRY D. CLEMONS, a witness on behalf of the defendants, testified:

I formerly resided in Corry, Pa., and removed to Hartford, Conn., April 28, 1885. I know Albert A. Miller; he rented a house of me in Corry, in April, 1885; I saw him and made a verbal agreement with him on the 13th of April; the lease was not given on that day; I saw him at my house on the corner of Northwest and Pleasant streets in Corry; that is the house that I leased to him. On that day I had a conversation with him at my house; there were present besides ourselves, my wife, another lady, and my two sons, one about five years old; Miller at that time stated to me that he was in connection with the Buffalo Lubricating Oil Company, and that they had commenced a suit for damages against the Standard Oil Company for \$250,000; that they had already got judgments against the Standard Company in one suit for a large amount; that they were sure to win, and that he, Miller, would receive as his share of the judgment to be obtained not less than \$40,000. He spoke at that time of purchasing my house and lot; he said in reference to that that he would soon have money enough from the judgments already obtained, and to be obtained, to pay for it, and much more; I executed to him the lease of my house on the evening of the 27th of April, 1885, at the works of the American Writing Machine Company on North Center street, the third door north of the railroad track. At that time he repeated to me the statements which he made to me before at my house; he said to me at that time that pending those suits he was obliged to seek employment elsewhere than in Buffalo.

Upon cross-examination the witness said: I am in the employ of the American Writing Machine Company, manufacturing writing machines, and have been since April 29, 1885; I have a memorandum of the date; I looked at it last perhaps two months ago, for the purpose of finding out when I arrived in Hartford; I wanted to find that out on certain business that I had wanted to attend to, business in Corry; in writing to my agent about the rent and other matters that I had with my agent there in Corry it was necessary, in writing to my agent, that I should have the exact date when I arrived in Hartford; I made the record in a memorandum book when I arrived in Hartford, the same day I got there; I got in Hartford at 12 o'clock and 5 minutes, noon, or p. m., just five minutes; I looked at my watch at the depot; it was not any later nor any earlier; I did not make the record then, not until evening, when I make my records of the proceedings of the day; I don't know at what time I took out my book—it was in the evening; I did not take out my watch; it was not important that I should know just at what time I got into Hartford; five minutes earlier or five minutes later would have made no difference; I did not put it on the tick that I arrived at Hartford at 12.05; this book is in Hartford; I did not bring it up here. I came here yesterday morning; the defendants, or one of their agents in the case, sent for me; it was A. G. Mack; his name was signed to the telegram; I know him; he is a relative of my wife's; he is her uncle; I have known him about twenty years, and have met him perhaps four times in the twenty years; I never saw him at Corry; my wife lived in Corry while I did; I had made a previous arrangement with Captain Mack to come to Buffalo upon the telegram; that was about the 1st of March, in Hartford; he was there to see me about this lawsuit; he staid with me over night, and made arrangements about my transportation here, and for my time a reasonable recompense, the same amount that I received from the company—I worked for \$5 a day—for all the time that I lost attending to this suit; I made a statement to him there at our house in regard to a conversation that I had with Miller in Corry; he wrote it down in the first place; afterwards I wrote it and corrected it myself; he wrote it all out after he had talked with me; I took the statement and re-wrote it, corrected it; I last saw it in Buffalo this morning with Mr. Outerbridge, one of the attorneys for the defendants; it was in the rotunda of the court-house; I did not ask to see it; I read it over; he didn't ask me to; I read it over for the simple reason of reading it over.

Q. Just to practice in reading?—A. Well, perhaps we might call it practice in

reading. I resided at Corry about eighteen years. At the beginning I was connected for a number of years with the Erie Tank Line Company; that was not a company owned or controlled by the Standard Oil Company. Next I was in a box manufactory, perhaps one year; then superintendent of a brush block manufacturing company; then I was in the employ of the Climax Mower and Reaper Company, perhaps ten or twelve years; then in the employ of the American Writing Machine Company; then I went East. I have a present recollection that the conversation of April 13, 1885, was in the evening; I put it down in my diary or memorandum book, which is now in Hartford; I don't know that I put down the hour; it was about half-past 7; I didn't return from the shop until about 7, and I had just got through supper when he came; I didn't bring that book from Hartford because I packed it away at the end of the year. The last time that I saw that book was perhaps two months ago; that was the last time that I looked at these memoranda in regard to Miller coming there April 13, 1885; that was not the time Captain Mack was there. I was looking over these memoranda about Miller two months ago in connection with renting my house, sending to my agent in Corry. He had sent no statement of moneys received, or anything of the kind, and I was looking and asking him to make a statement of all moneys received, and what he had done with the moneys. At the time in question I didn't fix the price upon my house to Miller; Miller did not say in what capacity he was connected with the Buffalo Lubricating Oil Company; he said, "We have commenced a suit."

I did not write this all out that Miller said, in my book, nor any portion of it; I did not write in my book that he said that he was connected with the Buffalo Lubricating Oil Company, nor that "We had commenced a suit for damages against the Standard Oil Company for \$250,000," nor anything like those two sentences; nor that the Buffalo company had already got judgment against the Standard company in one suit for a large amount, and that they were sure to win; I did not, at that time, know that no such thing had taken place, nor anything about it; I did not know that there was, in fact, no judgment against the Standard Oil Company; I did not know anything about it except what Miller told me; I had reason to believe that he was telling me the truth; I did not write down that Miller said that he was to get \$40,000; after this conversation with Miller I couldn't tell when was the next time I thought about what Miller had said; I did not write down in my book whenever I thought of it.

Captain Mack is the brother of my wife's mother; he did not tell me, while at Hartford, what his employment was in this case.

I left Corry the next day after the conversation with Miller, of which I have spoken.

I have heard that my wife's mother came on from her home at Oil City to Corry while Captain Mack was in Corry, and after Miller had rented the house of me; it was perhaps two months after she came to Corry before I knew it; I have been told that she met Captain Mack there; I didn't know that she was instrumental in introducing Captain Mack with the Millers, or soliciting that he should board with them; I have reason to believe that Captain Mack has been employed as a detective for the Everests; I don't know that he has given money to people with instructions to get Miller out and get him intoxicated and see what they could get out of him.

The conversation of the 13th of April occupied perhaps an hour; I think on the 27th, perhaps, he was nearly an hour in the office; L. D. Pierce was present at the time of the execution of the lease; he signed it as a witness.

EDWARD J. CLEMONS, a witness for the defense, testified: I am the son of the last witness, and live at Hartford; I was present at my father's house in Corry on the 13th of April, 1885, when there was a conversation between him and Albert A. Miller; at that time and place I heard Miller say this in substance, that he was connected with the Buffalo Lubricating Oil Company, that they had commenced a suit for damages against the Standard Oil Company for \$250,000; he said that the Buffalo company had already got judgments against the Standard company for a large amount, and that they were sure to win; he said that he would receive as his share of the judgment to be obtained in the \$250,000 suit against the Standard Oil Company not less than \$40,000; I believe he had a conversation with my father at that time in regard to purchasing the house and lot; he said at that time that he would soon have money enough from the judgments already obtained, and to be obtained, against the Standard company to pay for the house and lot, and much more.

Being cross-examined, the witness said: I am eighteen years old; I don't know positively whether Miller used those words or the substance of those words.

After this conversation in Corry, I don't remember when I first talked it over with my father or my mother; it was sometimes talked about at the table at our home; we commenced to talk about it soon after that time; I don't know how many times we have talked it over; I have not kept a memorandum of it; I can recall two or three times; I can not give about the time of the first occasion; one date was during this winter after Captain Mack had arrived in Hartford; we talked it over in our sitting room; my father and mother, Captain Mack, my little brother, six or seven

years old, and I were present; on that occasion the subject of my coming to Buffalo as a witness was talked about; my expenses were to be paid; and for my time, the same that I received at the American Writing Machine Company, that was, \$2 a day; money was paid to my father for our expenses to get here with; we came together; during the journey I didn't talk over with my father the subject-matter of my testimony to be given here, not a word; I have some since I have been here; we have spoken about it in this court room yesterday; I have not seen the statement that my father furnished Captain Mack since I left Hartford; I did not hear it read out in the hall, when my father read it over; he did not tell me the substance of it; I heard him testify this morning; I made a statement to Captain Mack as to my recollection of the conversation in Corry; it agreed precisely with my father's; I made a statement at the same time in writing that my father did; we both sat down to write at the same time at different tables; my father got through first; I did not read my statement over to my father; I could not tell whether he read his over to me; I don't know where the statement is that I made out; I don't remember when I last saw it; it was in Hartford in the hands of A. G. Mack; I never saw again the statement that I made out; it was the latter part of last summer or the early fall.

I saw Captain Mack again in Hartford last March, I believe; I did not then see him write out a statement, and I wrote out none.

I was with my father in Corry the whole time that he lived there; I did not see Captain Mack in Corry; at the time that I made this statement to Captain Mack I didn't understand that he was the employed agent of the Everests, or the defendants in this litigation; he did not state at that time what he wanted my evidence for, or what he wanted us to come to Buffalo for; I don't think that he wanted us to come to Buffalo; in March he stated why he wanted us to come here—the last time he was in Hartford; I was not aware that he was in the employ of the defendants; I did not understand so; I supposed he must have had something to do with the case on behalf of the defense; I did not know anything about it; I surmised that he was; I have not seen Captain Mack around here to-day.

Being again examined for the defendants, the witness said: My mother is now sick

ALFRED P. WRIGHT, a witness for the defendants, testified: I live in Buffalo and am a commission merchant; I know Charles B. Matthews; I had two conversations with him in 1885, likely to be October or November; one of them was at Henry Morse & Company's back office; the other one was, I think, on the corner near there.

Q. Then did you have a conversation with him in regard to the suits which he had then pending against the Standard Oil Company and the Messrs. Everest, and this indictment?—A. I had a talk with him about buying out his plant and settling up this litigation.

Q. The litigation of which I have spoken?—A. Yes, sir.

Q. Did he, at that time, propose to sell to you the works of the company, and to settle and withdraw the suits, civil and criminal, for \$300,000?—A. I so understood him.

Q. Did you say to him that you would not submit that proposition?—A. There were two gentlemen present at that interview; Mr. Hiram Benedict was the other.

Q. Did you say to him that you would not submit that proposition?—A. I did.

Q. Did he then propose to sell the works and settle all suits, civil and criminal, for \$250,000, at that time?—A. No, sir.

Q. Did he at a subsequent time?—A. Yes, sir; he did.

Q. Did you have a conversation as to the value of the works, of the plant, as you properly term it?—A. Mr. Matthews, Mr. Benedict and myself, all talked about the value of the works when we were talking about this settlement.

Q. Did he put the value of the works at \$70,000?—A. Well, it was figured up between these three gentlemen as from \$70,000 to \$80,000 for what the plant was now worth.

Being cross-examined, the witness said:

Q. You know John D. Archbold?—A. Yes, sir.

Q. And how long have you known him?—A. Well, I should say six years, perhaps it is seven.

Q. Do you know Henry H. Rogers?—A. Yes, sir.

Q. And how long have you known him?—A. Well, I don't think I can answer that question; I have known him for a couple of years, at least; I don't know but that I was introduced to him before.

Q. Do you know Mr. McGregor?—A. I don't.

Q. You know John D. Rockefeller?—A. Yes, sir.

Q. You are a stockholder in the Rock City Pipe Line?

Mr. COGSWELL. That is objected to.

A. I was at one time.

Q. When did that cease?

Mr. COGSWELL. That is objected to.

The COURT. I think I will let him answer.

A. Well, I should say it was four or five years ago, at least.

Being cross-examined, the witness said: The first time I met Mr. Matthews upon the occasion in question, I met him in Henry Morse & Company's office; Mr. Morse has an office on Seneca street, right opposite the Board of Trade, just as you go down stairs, or did have it at that time; I met Mr. Matthews there by appointment with Mr. Benedict at that time; I asked Mr. Benedict to come there and Mr. Matthews to come with him; the meeting was at my suggestion; I did not want to engage personally in the purchase of these works; at the early stage of the talk I was not acting for anybody.

Q. Well, at the early stage of the talk, did you want to go into the oil business, Mr. Wright?—A. No, sir; I had no interest in making the purchase, only I expected to get the commission, if I could get the trade; I did not care particularly which side should pay the commission; I did not want to buy as a speculation; I expected to get my commission from one side or the other; I was thinking of the buyer, or the seller; I was thinking it would probably come out of the seller; I expected a friend of mine, Mr. Daniel O'Day, would be the buyer; he has the reputation of being a Standard Oil Company man; I don't know that he is, because I have never seen any written documents; but I know that he is interested in it from his own conversation; he lives in Buffalo; it was not at his suggestion that I was to endeavor to purchase the works; it was at the suggestion of myself to Mr. Benedict, as a friend of Mr. Benedict; I was at the time acting as a friend of Mr. Benedict; I expected to make a commission out of it from Benedict, if I made the trade; I was the moving party in the matter, not Mr. Matthews nor Mr. Benedict; the conversation in Mr. Morse's office occupied, I should judge, half an hour; I am positive that something was said about the criminal prosecution.

Q. Were you anxious to settle any prosecution?—A. I was anxious to have Mr. Benedict close up that trade.

Q. Were you anxious to settle any criminal prosecution?—A. Yes, sir; I had not the slightest personal interest in it; I wanted to settle that matter.

Q. For whom were you anxious to settle any criminal prosecution?—A. I should say, nobody.

Q. You have already stated that you had, personally, no interest to settle any criminal prosecution?—A. No.

Q. And you further stated that you were anxious to settle the criminal prosecution?—A. Yes.

Q. If you were not anxious for yourself, for whom were you anxious to settle the criminal prosecution?—A. I say I was anxious for Mr. Benedict; I was interested for Mr. Benedict; he was not indicted; he had nothing to fear from any criminal prosecution; he was one of the owners of the stock of the Buffalo Lubricating Oil Company, but it made quite a difference to Mr. Benedict what price he got; I was looking after the interests of Mr. Benedict; I don't say purely that; I wanted to make this trade for my friends, the gentlemen who were interested in this suit; for Mr. O'Day, not for any other parties. We had a second conversation on Seneca street; I can not just tell where it was, between Main and Pearl; I don't think it was by appointment; I met Mr. Matthews; I don't now remember whether Mr. Benedict was present or not, but I am inclined to think he was, though I am not sure; I should say it was three or four days, perhaps a week, after the first meeting; it was not by appointment of either me or Mr. Matthews, that I remember; I knew of no method of settling a criminal action except by consent of the court, and under advisement of the court.

Q. You did not for a moment suppose that there was any court that would enter into an agreement for the settlement of a criminal action?—A. I hadn't any thought about that.

Q. Then you knew it was impossible for any person to settle a criminal action except the court, did you not?—A. I suppose that is the law.

Upon being further examined for the defense, the witness said: My reasons for answering that it was for Mr. Benedict that I was anxious to settle the criminal prosecution, was, that I was anxious to have him settle the whole matter; I had talked with him a number of times about it; that I was a personal friend of his, and thought it was the wisest thing for him to settle these suits, and get out of the oil business in the way he was now doing it, and in furtherance of that, I had a number of interviews with Mr. Benedict, and these two interviews that I speak of with Mr. Matthews, which extended over perhaps a period of at least a month; in fact my first interviews, three or four of them, with Mr. Benedict were before I ever talked with Mr. O'Day about it.

The witness CHARLES B. MATTHEWS, being recalled for further cross-examination, testified:

I have seen Mr. Benjamin Browster here in this room; I don't recollect having a conversation with him in the spring of 1882, at No. 44 Broadway; I don't think that

at that time and place I offered to him and Mr. J. A. Bostwick to sell our Buffalo property here, the Buffalo Lubricating Oil Company, for \$100,000

**BENJAMIN BREWSTER**, a witness for the defendants, testified as follows:

I live in New York; I have met Mr. Charles B. Matthews; I met him in New York, at 44 Broadway, at my office; I am unable to fix the date, but during the year 1882; my best recollection is that it was in the spring; in the spring of 1882, at No. 44 Broadway, Mr. Matthews offered to sell me the property of the Buffalo Lubricating Oil Company here, for \$100,000.

Upon cross-examination, the witness testified: I am a director of the Standard Oil Company, and have been for several years; I am a trustee of the Standard Oil Trust, and have been since its formation; I am what is called a Standard Oil Company man; I have no recollection about the purchase of the Vacuum oil stock and its transfer to the Standard Oil Company; I have known latterly that it did own a majority in the stock; I don't think I had any definite knowledge that there were to be built works here in Buffalo that were not controlled by the Standard Oil Company, or Standard Oil Trust, until about the time that this conversation, this interview, between Mr. Matthews and myself occurred; I have no impression on my mind to the effect that I knew there was such an institution as the Buffalo Lubricating Oil Company up to the time of that conversation; I may have known there was such a concern; I never knew Mr. Matthews before I met him on this occasion; so far as I know, I never had met him; it was at my private office, 44 Broadway, that I met him.

Q. What branch of the business of the Standard Oil Trust do you take care of?

(To this the defendants objected as incompetent, irrelevant, and immaterial; the objection was overruled and the defendants excepted.)

A. I am the treasurer of the trust. I am a director of the Rock Island Railway, of the Chicago and Indiana Coal Railway, of the Keokuk and Des Moines Railway; I think of no others; I give very little attention to the railroad interests, mostly to the Standard Oil Company.

Q. Do you give any attention to your railroad interests?

(The defendants objected to this as incompetent, immaterial, and irrelevant; the objection was overruled and the defendants excepted.)

A. Only in an advisory way as a director.

Q. Then we are to consider you, Mr. Brewster, as a busy man?—A. Yes, sir.

Q. As treasurer of the Standard Oil Trust, and representing so many railroad interests, and in connection with this busy life of yours, it may be that you do not recollect everything that transpires correctly?—A. That is correct. Upon the occasion in question I think Mr. Bostwick asked me to meet Mr. Matthews, and see what he had to say; Mr. J. A. Bostwick, who was at that time an associated trustee of the Standard Oil Trust; he was also connected with the Standard Oil Company; I do not recollect that the subject of the purchase of any tanks was a part of the conversation; I think it was not; I think the conversation related to the sale of the Buffalo Lubricating Oil Works and business, and that is all; I think at that time we were not foreclosing any mortgages upon the Solar Works; I think this was subsequent to that; I am not positive; there was not a word in relation to the purchase of tanks, as I believe; this conversation was solely upon the matter of selling the business and plant of the Buffalo Lubricating Oil Works.

Q. Did you, at the time of the interview in question, have any information of any methods that had been used to interfere with the business of the Buffalo Lubricating Oil Company?—A. I had not; I knew at the time of the purchase of the Atlas Oil Works here in Buffalo.

The witness, by permission of the court, further stated: I only thought it was fair to say, that my interest in railroads is older than my interest in the Standard, and was prior; they have no connection whatever.

**WILLIAM O. ALLISON**, a witness for the defendants, testified as follows:

I live at Englewood, N. J.; I know C. B. Matthews, and have for four or five years perhaps; I met him here in Buffalo in 1885, at his office; I don't remember the street; I also saw him at a hotel not far from his office, but I don't remember what street it was; assuming that his office is on Main street, the hotel is entered from a street leading off from Main street; on these occasions the subject of these suits was talked of between us—the indictment as well as the civil suits; there was a conversation between us as to the terms upon which all this litigation could be settled.

Q. Did he say to you at that time that all the difficulties with the Buffalo Company could be settled for the sum of \$300,000?—A. Yes, sir; I saw him after that at Syracuse, at the Globe Hotel, about a week or ten days after; he had telegraphed me to meet him there, and we had there a conversation of considerable length; the subject of it was the differences between the Buffalo Company and the Everests, the

Standard Oil Company, Archbold, and McGregor; I suggested to him, in substance, that \$300,000 was an excessive sum as a consideration of that settlement.

Q. Did he, in answer to that, say to you that \$250,000 might be accepted, or that in substance?—A. Yes, sir; he said to me, in substance, that I might communicate to the New York parties the proposition for a settlement at \$250,000; he met me at one time at my residence in Englewood; he also met me at the Astor House, in New York, in December, about a month after the meeting at the Globe Hotel; I think I met him more than one time at the Astor House.

Q. Did he, at that time, say to you that if \$250,000 was paid the criminal case would be nolle prossed?—A. Yes, sir; "nolle prossed" is the legal term, I think, he used.

Q. Was the question discussed between you and him of how the criminal case could be nolle prossed?—A. Yes, sir.

Q. Did he say that he could settle it?—A. He said that he could do such things as would cause its settlement.

Q. Well, I will come to that in this case. Did he say to you that if the money was paid—I do not know but I have asked that question—the criminal prosecution would be nolle prossed?—A. Yes, sir.

Q. Did he say to you that if the money was paid the matter should be kept secret?—A. Yes, sir.

Q. Did he say to you, in substance, that in that event he should be taken into the employment of the Standard Oil Company?—A. Yes, sir; or that in substance.

Q. And that if he was so taken into this employ he would be able to control all the outside trade in Buffalo in favor of the Standard?—A. All, or the principal outside trade.

Q. Did he say to you on that subject that in case a settlement was brought about he would expect to take care—look after Miller himself?—A. Yes, sir.

Q. Did he say to you at the Globe Hotel that if the sum of \$250,000 was paid he wanted it paid in two sums?—A. He made such a statement. I am not clear whether the one statement was made at the Globe Hotel, or one at the Astor House, or one at my cottage; I can not swear positively where each and every statement was made; one of them was made at either one of those places. My recollection is that he wanted it in one sum of \$100,000 for the company, and the difference of one hundred and fifty thousand or two hundred thousand for himself.

At this point the witness CHARLES B. MATTHEWS was recalled for further cross-examination, and testified:

I did not state to Mr. Allison at the Globe Hotel, at the time which I was interrogated about when I was on the stand before, in speaking of the discontinuance or nolle prossing of the indictment against these parties, that if the matter was settled, and the money paid, Miller was out of the State, and could not be got back unless I required it; I did not, at either of these occasions that I have spoken of—the Globe Hotel, the Astor House, or Mr. Allison's residence—I did not, on either of these occasions, in talking in reference to this same subject of discontinuing or nolle prossing the indictment, say that I should also need a vacation, and I would go to California.

The witness ALLISON, being recalled, further testified:

Q. Did Mr. Matthews state to you, at the Globe Hotel, in conversing about nolle prossing the indictment, that Miller was out of the State and could not be got back unless he required it?—A. That he could not be gotten back, and they could not compel him to come into the State to testify, and that he would not come unless he wished it.

Q. Did he say anything in regard to his own absence from the State?—A. Yes, sir; he said about that time—

Q. Did he say to you that he should also need a vacation, and that he would go to California?—A. Yes, sir; or to Europe.

Upon cross-examination the witness said: I have lived at Englewood for thirty-eight years. I came on as a witness in this case, having received a subpoena from Mr. Curtis, I think his name is; a clerk, I think, in the Standard building. My business is, I am a broker in securities. I am connected with a railroad as secretary of the Palisade Railroad in New Jersey. It is not running; it is in construction. I am owner of a publication, the Painter's Magazine. I have run various other publications. The first was the Oil, Paint, and Drug Reporter. I have no interest in business with any of these gentlemen here in Buffalo. I think never have had. The magazine which I publish I own exclusively; no one else has any interest in it. I don't remember that I have had any talk with Mr. Archbold in regard to the subject-matter of my testimony since I have been here. I have talked with him since I have been here in the court to-day, probably yesterday. I have been here in Buffalo since a week ago Monday. I am stopping at the Genesee. Some of these defendants are stopping there. I have had talk with Mr. Rogers, very casually, upon the subject of my testimony; not with Mr. McGregor.

I have known Hiram Everest probably fifteen years. I made his acquaintance in the oil trade, I don't remember just where. I was a reporter and met him. I met him in the lubricating-oil trade. He was then manufacturing and selling lubricating oils. I was then reporting the markets for oils for newspapers. I reported for various publications. I have not met him frequently for a great many years. I have known Charles M. Everest perhaps three or four or five years. I never knew him very well. I first met Mr. Matthews perhaps four years ago; I do not recollect. I first met him in regard to the occurrence I have spoken of on the 7th of November at his office in Buffalo. I was on my way to California and stopped over here; not at the request of any individual. I did not come here at the request of any person to see Mr. Matthews. I did not come here upon my own motion, but for the publishers of the Oil, Paint, and Drug Reporter. I did not come here at Mr. Matthews' request, I think. I stopped off here to look after the interests of the paper and see Mr. Matthews. I don't remember whether I sent any telegram to Mr. Matthews prior to my coming. I don't think I had any other business here in Buffalo than to see Mr. Matthews.

I don't recollect who besides Mr. Matthews I saw in Buffalo upon the occasion in question. I think nobody that I understood to be connected with the oil interests here or elsewhere.

Q. Did you have any interest in these lawsuits?—A. No, sir; only a friendly interest for Mr. Matthews and the other gentlemen—the Messrs. Everest and Rogers, and Archbold. I will leave out McGregor. I came as a mutual friend.

Q. Then you came here as a friend for Rogers, Archbold, McGregor, and Everest?—A. And Matthews.

Q. As a mutual friend?—A. Yes, sir; no one suggested that I should come as a mutual friend; I do not recollect how I learned of these litigations; I don't know positively how long I had any knowledge of them previous to coming to Buffalo; I do not think I knew in detail what they were about; I knew from common report; I probably saw it in the newspapers, and probably heard it discussed by oil men; I will not say which newspaper I saw it in, I read a great many; I will not say what oil men I heard discussing it; I can tell that I have talked on this subject to various oil men, but I don't know whether it was before or after this time; I had some information before I came to Buffalo; I don't think I had any talk with either Rogers, Archbold, or McGregor about these litigations before coming to Buffalo; it may have been mentioned by them, or by me; I think I knew of an indictment against these gentlemen, before coming here, but I am not sure; I did not come here for the purpose of settling any litigation; it is rather difficult for me to say just what was in my mind when I called upon Mr. Matthews, but I thought I would call upon Mr. Matthews and see what he wanted; I was not a party to these transactions, was not financially interested in the litigations personally, but was as a friend of Matthews, Archbold, Rogers, and McGregor; I had absolutely no instructions from anybody as how to settle these litigations; I told Mr. Matthews so; I wanted to find out what Mr. Matthews wanted—what he had to say. After I got through with this talk, I reported the result of the conversation, I think, to my wife in Syracuse; I went from Buffalo to Cleveland, and then back to Syracuse.

Q. Then you sat down and told your wife about it, did you?—A. I did not say all about it; I never told any one all about it.

Q. You have not told us all about it, have you?—A. No, not by a great deal.

Q. And did you tell your wife all that you have told here?—A. I don't know.

Q. Well, what is your best judgment about it?—A. Perhaps not.

Q. Was your wife interested as a friend to the defendants and Matthews?

Mr. BACON. We object to that. We withdraw the objection.

Q. Did she know these gentlemen?—A. No, sir. The next person to whom I reported my conversation with Matthews was Archbold, or Archbold and Rogers; I don't recollect how long after I got back to New York it was before I told them; it may have been two days or three; I went to them for the purpose of telling them the substance of the conversation; I do not think my wife is a relative of any of these gentlemen; I met them at 26 Broadway, their office; I don't remember telling any one besides them of my interview with Matthews; I don't recollect whether I made any arrangement with Mr. Matthews to come to Cleveland when I left him in Buffalo; I may have made some suggestion to him; I may have told him, I think I did, that I was going to Cleveland, and that if I telegraphed him to come on, I wanted him to come on to Cleveland; I did not know what I wanted him to come to Cleveland, for I did not know what arrangement might be made; I did not know that I would want him to come there at all; I did not intend seeing any one in Cleveland; I do not think I mentioned this matter to any one in Cleveland; I had no particular one in mind that I was to meet in Cleveland; had I found some one there with whom I might have negotiated, I might have asked Mr. Matthews to come and be near the negotiation; by some one I mean Mr. Rogers or Mr. Archbold; I did not expect to meet them there; I had no business in Cleveland in regard to my paper; I was only

taking this in as an incidental matter; it was an intention to do a friendly thing for Mr. Matthews; I do not recollect when I became a friend to Mr. Archbold; I have never been personally unfriendly with him; I am not now in any way connected in any business enterprise with either Archbold, Rogers, or McGregor.

Q. Are you in any way connected with the sale of any bonds or any certificates connected with the manufacture of cotton-seed oil?—A. Yes, sir; I am not the agent of any corporation to sell certificates; I am selling cotton-oil trust certificates; I can not say from my personal knowledge whether it is an incorporation; I believe it is not; neither Rogers, Archbold, nor McGregor is interested, to my knowledge, either as shareholders or in any other way.

Being further examined by defendant's counsel, the witness said: In the conversation with Matthews after he had made this statement of what he would do, he said that he thought he would come and see me about this matter, and that somebody else had been talking, or his associate, either Mr. or Mr. Benedict, the one who is connected with the canals or the canal-boats, had been talking with somebody else about settling this matter, but he would rather negotiate through me; he said that I could see the parties in New York, and we would communicate or meet again; I did meet Mr. Matthews next, after seeing him here, at Syracuse; I don't remember whether I replied to his telegram saying, "Meet me in Syracuse," or whether the telegram I considered was sufficient without answering it; I received a communication from him with reference to meeting him in Syracuse; my wife is a Syracuse lady, daughter of Judge Comstock; when I got there, I conversed with her in regard to the matter as a matter of curiosity, not in detail, in a general way; I think I was negotiating with Mr. Matthews upon this subject, and receiving telegrams from him, and making appointments to meet him, upon that subject, until after the 1st of March, 1886; I conclude that from a telegram dated about that date.

Q. And I think you also said that you did not happen to be fortunate enough to own any stock in the Standard Oil Company?—A. I have owned a hundred shares of Standard Trust for a month about, and that is the only time I ever had any in my life.

Being further cross-examined by the district attorney, the witness said: I may have asked Matthews if I might talk with the New York parties; I do not recollect

FREDERICK G. SAXTON, a witness for the defendants, testified:

I live in Corry, and know Albert A. Miller; I lived there in 1885; my business was keeping a saloon; in the month of December, 1885, Miller was in my saloon, and Captain Mack was there; on that occasion he said to me and Captain Mack, or one of us, that it was the mistake of his life, leaving the Standard or Vacuum Oil Company, and he was bound to get there again; on that occasion he held out his hand, and said, "Here is a palm, black and rough and itching; the party that fills it the fullest can get it and me;" at that time he turned to Captain Mack, and said, "If you have got any proposition to make, now is your time."

Q. Did he say this: "That suit at Buffalo is a damned humbug, but there is some money in it, and you and I may as well make it as anybody else?"—A. He said it was a damned sham, and we might as well make the money out of it as anybody.

Being cross-examined, the witness said:

I have kept a saloon in Corry for two years; I know Captain Mack; he was at my saloon considerable; I can't tell about how much of his time he spent there; he might have been there one-fourth of his time; I think it is doubtful about that; I once had a letter in my possession from Mr. Mack, which I read or showed to Miller; I think he gave me the letter in my saloon; I think I handed it to Miller; on the occasion when I handed him the letter I sent for him.

(Shown a paper.)

That is my handwriting upon the envelope; I can not remember whether I put it in the post-office or not, or whether I sent it down; it seems to me that I stamped it and neglected to put it in the post-office, and then found somebody that was going to the works, and then sent it with them; I am not positive; in answer to this letter Miller called.

The letter and envelope were here offered in evidence.

(The defendants objected to them as utterly immaterial. The objection was overruled, and the defendants excepted.)

The letter and envelope were received in evidence as Exhibits S and T, and are hereto annexed.

(Witness is shown another paper.)

That is my handwriting; I sent it to Mr. Miller; I couldn't tell whether it was in answer to that communication that Miller called upon the occasion of which I have spoken in my testimony; I think the date of the letter was Saturday evening, and he did not come, but came on Sunday.

The letter was offered in evidence.

(The defendants objected to it as immaterial. The objection was overruled, and the defendants excepted.)

The letter was received in evidence as Exhibit U, and is hereto annexed.

(Another letter shown witness.)

That is my handwriting; I can not tell you whether I sent it to Miller or not: I sent him two or three, but I can not tell exactly about this; I might have sent it, I am not positive about it; I should judge I wrote it, it looks like my writing.

(The letter was offered in evidence. The same objection, ruling, and exception were had.)

The paper was received in evidence as Exhibit V, and is hereto annexed.

(Witness is shown another paper.)

I can not swear that that is my writing; I wouldn't want to swear that it is; I do not know; I have known folks to imitate handwriting; I generally know my own writing; that looks like my writing, but I wouldn't swear it was; some of it does and some does not; the "A" in April does not; the rest of it looks very much like my handwriting, with the exception of the "A;" it might be my handwriting; I think perhaps it is; I do not deny the making of the "A", but I do not remember of making the "A" or not; I couldn't tell you whether I sent that to Miller or not.

Q. Do you think it is your writing, with the exception of the "A"?—A. Yes, sir.

The paper was offered and received in evidence as Exhibit W, and is hereto annexed.

I was sending Miller these letters because there was something I wished to know of him; it was in regard to some letters; I couldn't tell you exactly what letters; I was after letters, some letters that Miller had received.

Q. But you said in one of these communications, did you not, "I would like to have you call on me at once as I have something to our interest, strictly private to you and me; call on me between 10 and 2 o'clock to-morrow at my saloon, back door, when I am alone; don't fail"?—A. Yes, sir; it might have been to my interest if I did not know what letters they were. I had been informed by Captain Mack that he had received letters; I could not tell who the letters were from that Miller had, that I wanted to see; I was desirous to get the letters; I do not know the contents of the letters; I did not know their importance nor anything about them; the reason I said "something to our interest" was because I was requested to get them; I was not offered or promised anything for getting them; my interest was assisting a friend of mine, Captain Mack; he had been my friend some little time—six or seven months; he was stopping at the hotel opposite my place; patronizing my place not to any great extent; I wanted Miller to come to the back door because we did not keep the front door open on Sunday; we do not have a Sunday law down there; all the interest that I had in this case was to get some letters for Captain Mack; Miller did come on the Sunday; I do not remember the time, nor whether I gave him liquor or not; I was not there to give him liquor; I did not get the letters; I asked Miller for them; I didn't expect he would give them to me, not at that time; I never got them; Captain Mack asked me to come here as a witness; he asked me some time ago.

I did not answer any questions of the counsel on the other side as to what I heard Miller say on that day; it was one Sunday that he was in there; I can not remember the exact date when we had the talk concerning which I have spoken, but I think it was the 3d or 4th of April; it was in answer to some of these letters; I have had talks with him since the Sunday in question; the conversation of which I have spoken was before the Sunday that he was there at the time that I asked him for the letters.

Q. Did you state to Mr. Miller on that occasion in regard to the letters, showing him at the same time a letter that you had received, that you wanted him to give you some letters for Mr. Matthews, that the Standard Oil Company wanted to buy them, and you and he could make some money out of it?—A. If they were of any value, I told him, yes, sir; I had no idea at all how much money I expected to make in getting the letters; I was promised nothing.

Q. But you told Miller that if he would give up the letters the Standard Oil people wanted them, and you could get some money out of it. How did you know you could get some money out of it?—A. Through Miller; I was the one that asked him to come; I had had a letter previous to that; it was either from Mr. Outerbridge or Captain Mack, I can not swear which; I think I have that letter in my possession.

Q. You have got so many you can not tell; look them over and see if you can find it.—A. I do not think I have it here; I can not find it; I don't remember when I last saw it; I have written Mr. Outerbridge once or twice; I might have received three or four letters from him; I have received a good many from Mack; he and I have not been very industrious in correspondence; not more than friendly correspondence; I have had quite a number of letters from him at different times; I have not been particularly in the employ of Mack and Outerbridge.

Q. Have you in any way been employed or solicited in this matter in regard to Miller by Mr. Outerbridge?—A. Nothing only in regard to some letters.

Q. Have you been solicited or employed by Mack in regard to those matters?—A. Yes, sir. When Miller came there in answer to my letter in regard to the letters, he came into the saloon—the front room; I don't remember whether there was anybody

there or not; I have stalls there, and curtains in front of them to shut them out; at one time, in answer to one of these letters from me, Miller came in this room, and I pulled the curtains back from one of the stalls, and there sat Outerbridge and Mack; that was the time when they wanted to get some letters from Miller; to commence the business, perhaps, I asked Miller what he would have; I don't remember what he took; I do not remember that Outerbridge spoke up and says, "No, let us have champagne;" I could not swear it did not take place, but I will swear that they did not get champagne; I couldn't tell whether Miller spoke up and says, "Beer is good enough for me, champagne is a little too high-toned;" possibly I might have replied that I had no champagne, because I had none; I couldn't tell you whether that happened; I don't remember.

Q. Then Outerbridge says, "Can you not go out and get some champagne?" and Miller says, "You needn't get any champagne for me." Did not that take place?—A. I could not tell; I don't remember it. I will not swear it did not.

Q. Then Outerbridge said, "Well, let us have whisky and seltzer." Did not that take place?—A. I don't remember what they called for. They got what they called for, probably. I couldn't tell how many drinks they got into Miller on that occasion; I don't know about how many; I have no recollection on the subject. I don't remember how long they were in there; they were some little time in there talking. I couldn't tell about how many rounds of drinks they had there; I do not recollect anything in regard to the number of drinks they had. I think they drank there. I could not tell how many times Miller drank; I don't know about how many nor how many I had either, nor Outerbridge. I have been paid nothing up to the present time in this matter but my expenses here. I wrote down this conversation of Miller at that time. I have it here in my pocket. Nobody told me to write it down; I wrote it down so as to remember it for evidence in this court. Captain Mack did not tell me to get Miller drunk. I was told that I was coming to this court at that time and before; I think it was on the 12th of December, 1885, that I was told. Captain Mack told me. He did not say in this court, as I know of, but he said in court. I couldn't tell how much liquor I furnished Miller at the time of the conversation which I wrote down. I am stopping at the Broezel House, in Buffalo. Captain Mack is stopping there. I have talked with him about this lawsuit some since I have been in Buffalo; it has also been mentioned by Mr. Outerbridge and the Everests. I have not been talking anything particular with Outerbridge; I have been talking with him since I have been in Buffalo, at his hotel, the Genesee. I have been talking with the Everests. I have never met them before. I have not talked with anybody else that I know of. Mr. Outerbridge first introduced me to the Everests. I did not talk over this lawsuit at all with them to amount to anything; it was spoken of; I don't think I told them what I was going to swear to.

Being examined on behalf of the defendants, the witness said:

I have found the letter from Mr. Outerbridge to Captain Mack, spoken of yesterday, which I showed to Mr. Miller. (Producing it.)

The paper was offered in evidence as Exhibit 4.

[T. G. Outerbridge, attorney and counselor at law, 105 Powers' Block.]

ROCHESTER, N. Y., April 8, 1886.

A. G. MACK, Esq., Corry.

DEAR SIR: You had better have Saxton say to Miller that he informed you of the talk with Miller, and that you wrote me about it, and that I say that no money whatever will be paid until I see the letters myself. And as to the amount to be paid, that also will be determined by me. Have Saxton say to Miller that as I am an attorney in the case I would not go upon the stand, and that even if I did it would be practically impossible to prove letters in that way. I want to see the letters myself, and I should be happy to have Miller present when I look at them. Miller knows me, and knows well enough that I am no shyster, and that there is nothing small about our people, and that if we agree to do a thing we will do it. All we want is simply to buy whatever letters Miller has in his possession, which we deem of value to us. And when we say we will pay him we will do it. Assure Miller, through Saxton, that I will not act unfairly by him, or take any mean advantage of him.

Yours, very truly,

T. G. OUTERBRIDGE.

I was seeking to get hold of some letters which Miller claimed that he had from Matthews; I had told Captain Mack that he so claimed; it was not a great while before this that Miller had told me that he had those letters.

Q. What did Miller say to you on the subject of having letters from Mr. Matthews which he wanted to sell to the Vacuum Oil Company?—A. I do not remember the

exact date when he was talking to me about those letters, but it was somewhere in February, I think; he told me he had some letters—a large stack of letters—and some of them from Matthews, and that he would sell the letters, and that if there was any money in it he might as well get it out; he wanted \$500 for what letters he had to sell; that he would not allow anybody to look at them until he got his money. This (Exhibit 4) is the letter which I showed him.

Upon further cross-examination the witness said: I can't tell whether the conversation that I have related with Miller about the letters was prior to the time that I wrote these letters here. I think some of them were sent for that purpose, to come and talk with me about it; I think one of them was sent for that purpose; I don't remember whether I had a talk with Miller about the letters prior to writing these. Mr. Outerbridge came up there to Corry once; he said nothing at all about giving liquor to Miller; neither did Mack.

Q. Did you swear to this yesterday, and is it true: "What letters were they that you wanted to see; whom were they from that Miller had?"—A. I could not tell?—A. I think when I first asked Miller I did not know who the letters were from; that was true at the time that I first had the conversation with Mr. Miller in regard to the letters; I didn't know whom all the letters were from.

The witness, JOSEPH S. STEARNS, being recalled as a witness on behalf of the defendants, testified: I had a conversation with Mr. Matthews in the latter part of 1884, in my office, or in Swan & Finch's office, in Boston; they were the gentlemen by whom I was employed.

Q. Did he, in that conversation, tell you that he had a suit for \$100,000 pending against the Vacuum Oil Company, or against the Everests?—A. Yes, sir.

Q. Did he tell you, at that time and place, that if he could get judgment in that suit he could put the Everests behind the bars, and that was the only way he could get the Standard people to pay the price asked by the Buffalo Company?—A. Yes, sir.

Q. Did he tell you that the Everests would pay anything in the world before they would allow themselves to be locked up?—A. Yes, sir.

Q. Did you ask him how he could lock them up by the civil suit?—A. Yes, sir.

Q. Did he answer, in substance to you, that a man by the name of Miller had given his deposition that he was hired by the Everests to injure the Buffalo works, and that he had got Miller in black and white?—A. Yes, sir.

Q. Did you say to him, in substance, that you did not believe Miller was reliable, and that as a matter of fact he had lied to him; and did he answer to you, "We do not care, as long as we have got it in black and white, where he can not back out of it; we can use it in any way?"—A. Yes, sir. After that I saw him in Albany; there was some court sitting there at that time; I don't know which one it was. I met Mr. Matthews at the Kenmore House.

Q. Did he state to you, at this time, this, in substance, "I must get the Standard people where I can pinch them before they will come to my terms?"—A. Not there; no, sir; that day he did at the Delaware and Hudson Railroad.

Q. Did he state it to you at your interview at Albany?—A. Yes, sir.

Q. Did he say, "We ought to have brought our suit for \$250,000, and we are sorry we did not?"—A. He said that in Buffalo to me.

Q. That was still another conversation?—A. Yes, sir.

Q. Did he say this at Albany: "We have not yet set a price, but we will see what we want, and I think we can get it, if we can get our judgment against them, because that will give us a hold for a criminal suit against them?"—A. "If we can get a judgment against them we can get what we want."

Q. Did he say, "That will give us a hold for a criminal suit against them?"—A. Yes, sir.

Q. Did he say to you, at Buffalo, when you were here to attend a trial at his request, "We must win this suit at all hazards, so we can get the criminal suit started; then they will be in our power and we can make them come to our terms?"—A. Yes, sir.

Q. Did you tell him, in September or October, 1885, in reference to the Young's Hotel register, that you had learned from the chief clerk of that hotel that the words, "A friend," after the name H. B. Everest, were added by the clerk?—A. Yes, sir.

Q. Did he say to you, in reply, that you must not say anything about it; that he wanted it understood that Mr. Everest wrote it all?—A. Yes, sir.

Upon cross-examination the witness said: This conversation in Albany was either in January or February, 1885.

I came on here at the request of the people, and I had a letter from Mr. Matthews (Produces it.)

After I got here I think I gave the letter to Mr. Outerbridge at the Genesee; I gave it to him to let him read it; I had no particular interest in letting him read it; I did it because I wanted to; I don't think there is anything wrong about the letter,

because I had other letters; I showed it to him because I wanted to, and because I had a right to; that was my business; I did not think there was anything wrong in the matter because the district attorney had said that my expenses would be paid if I came here; I supposed you had a right to do that; I was not particularly anxious that Outerbridge should see it; I have met Mr. Outerbridge every day quite a number of times since I have been here; I have had very few conversations with him in regard to this case, and what I could swear to; I should say we had spoken about it perhaps two or three times; I have had one talk with Mr. Bacon; I made no particular statement to him; I made no statement that was taken down in writing, to him or to Mr. Outerbridge; I told Mr. Root, agent of the Vacuum Oil Company in Boston, some things that had happened; I could not say where I told him; I think it was at 51 Purchase street; I should think it was some time last summer; Mr. Root did not, that I know of, take down my statement; at that time I was in the oil business for Swan & Finch.

The first conversation with Matthews, that I spoke of, was at 7 Exchange Place, at Boston; that is not the first time I have seen him; I saw him before at Atlantic avenue, in 1882; that was perhaps for three or four minutes; this other was December, 1884; I should say he was in my office an hour on that day, and the next day an hour, and I was with him the best part of the time for three or four days.

I was sworn as a witness in the civil case in March, 1885; I said nothing about that in March, 1885; I was not asked about it.

Matthews told me in 1884 that he was going to push this criminal suit—the indictment.

Q. You say that Matthews told you in 1884 that he was going to push this criminal suit?—A. Yes, sir.

Q. The indictment?—A. Yes, sir.

Q. Did you not know that in 1884 there was no indictment found?—A. No, sir; I knew there was no indictment found; yes, sir.

Q. You have just said that he was going to push the indictment; will you please tell the jury how he could say that when there was no indictment found?—A. I do not think I said so. I met him in Albany in January or February, 1885; I was there selling oil; I met him, I should think, about in the neighborhood of 1 o'clock, and left him in the neighborhood of 7; we stopped at the Kenmore; I ate dinner there; I was with him all the afternoon; I made no memorandum of any of these conversations. I wrote to Mr. Matthews, upon the receipt of a letter, that I had no money.

Q. The second time you saw Matthews you had rehearsed a part of that conversation?—A. I will take that back, and state where I did see him the second time; that slipped my mind, but I will state it now. I met him corner of Oliver street and Milk street, or else he came into my office. We had just started with Mr. Reynolds; that was, I think, in 1883; I do not think he staid there two minutes on that occasion; on the third time I saw him I gave a portion of the conversation.

Being further examined on behalf of the defendants, the witness says: At the conversation in December, 1884, Matthews said he had a civil suit against the Everests and the Vacuum Oil Company—that was the way I understood, or the Vacuum Oil Company—for \$100,000, and if he could once get a judgment in that, he could force the criminal suit, and put the Everests behind the bars; they would do anything before they would allow themselves to be locked up.

The letter received from Mr. Matthews, Mr. Outerbridge did not ask me to show him; I volunteered it.

Being further cross-examined, the witness said: I have been in the oil business for the last six months for Swan & Finch; that is not the Vacuum Oil Company; I am liable to go to the Vacuum Oil Company's, in Boston, two or three times a week some weeks, sometimes once a month, if I am down there; my teamster has a place that stands right there; I go in there, and visit with Mr. Root; I have not talked over this law suit lately; I dare say I have in the last six months; I don't know how many times; three or four times.

The witness MATTHEWS, being called for further cross-examination, testified: I do not recollect having any conversation on the 29th of December, 1885, at an office in Purchase street, in Boston, with Mr. Stearns, at which Mr. Illsley was present; I do not recollect being in Boston at that time; I would not swear that I was not.

Q. Did you say to Mr. Stearns, in the conversation that you had with him on that day and at that place, that you would need to get the Everests behind the bars before the Standard people would buy you out and pay you what you wanted?—A. I never said that to anybody; I do not recollect the conversation nor the visit you speak of; I haven't the slightest recollection of any such conversation that you speak of; I do not think it ever occurred.

Q. Did you say, in the same conversation, that Miller was a great liar?—A. I have no recollection of any such interview or conversation.

The witness STEARNS being recalled for the defendants, further testified: I had an interview with Mr. Matthews, in Boston, on the 29th of December, 1885, at 30 Purchase street; I fix the time by the telegraphic dispatch that I received from Mr. Matthews; Mr. Illsley was present on that occasion; on that occasion Mr. Matthews said to me that he would have to get the Everests behind the bars before he could bring the Standard Company to buy him out and pay him what he wanted; he said, upon that occasion, in substance, that he considered Miller a great liar.

Upon cross-examination, the witness said: I do not know that this morning is the first time I ever told this; I told it to that gentleman (indicating Judge Brundage, of counsel for the defendants); he was going by, and I beckoned to him.

ARTHUR A. ILLSLEY, a witness for the defendants, testified:

I live in Massachusetts; I was present at a conversation between Messrs. Stearns and Matthews, at 30 Purchase street, Boston, the office of the Buffalo Lubricating Oil Company, Limited, at that time, in the last of December, 1885.

Q. State whether, on that occasion, Mr. Matthews said he should have to get the Everests behind the bars before he could bring the Standard people, or the Standard, to buy him out, and pay him what he wanted?—A. Yes, sir; in substance.

Q. Did he, on that same occasion, say that he considered Miller a great liar?—A. Yes, sir; in substance.

Q. Did you learn of the trial of the suit at Buffalo against the Everests?—A. Yes, sir.

Q. Well, was it before that or after that?—A. It was after the trial.

Cross-examined the witness said: I work for the Vacuum Oil Company, in Boston, and have since November, 1886; I got in there after leaving the Buffalo Lubricating Oil Company; Mr. Stearns and Mr. Matthews were present at this conversation; Mr. Benedict was not; I came on from Boston in company with Mr. Stearns and his wife; I am stopping at the Genesee; I put this conversation down in writing, not at the time, nearly two years afterwards; Mr. Root, agent of the Vacuum Oil Company, asked me to do so; I gave it to him; I wrote it in the Vacuum office; Mr. Root was present when I wrote it—nobody else: I did not show it to Stearns; I have talked it over with him a little here; I did on the way from Boston up here; I have not talked it over with him more than two or three times; I told him what I was going to swear to; he did not tell me what he was going to; I never saw Captain Mack in Boston; I knew of his being there.

Q. Where is this paper that you wrote it down in, have you got it in your pocket?—A. No, sir; I have not.

Q. Who has got it?—A. I could not tell you.

Q. When did you last see it?—A. Not since last fall.

Q. In Mr. Root's office?—A. It was the last I know of it.

Q. You had given it to him some years before that?—A. I gave it to him last fall. I had no conversation with Matthews on that occasion any more than to pass the time of day; I was in the office; I think I was not doing any work. The office is 8 or 10 feet wide and twice as long, or such a matter; I was the shipper—I did not keep the books; I think I was standing by the stove when Mr. Matthews came in; Stearns was waiting for Mr. Matthews; I could not say how long the conversation was; not more than twenty minutes or so; I would not say positively whether I staid throughout; I think they were talking when I went out of the office; I heard a little about the suit that was tried in March; this was not far from 1 o'clock; I think I staid in the office most of the forenoon with Mr. Benedict; in the afternoon I was in the office part of the time and out in the store part of the time; I think there were no sales made that day—I don't remember of any; I do not recollect the subject of any conversation with Mr. Benedict.

Being further examined for the defendants, the witness said: This No. 30 Purchase street was the office then of the Buffalo Lubricating Oil Company; Mr. Stearns came into the office first, to the best of my recollection; Mr. Benedict was not present at the conversation I have spoken of; Mr. Matthews said that he had the Everests and the Standard people where he had been trying to get them for a long while, and that they would pay most any price rather than to be locked up; he said, in substance, also, that Miller was a man who could not be trusted; that, I believe, was all.

Being further cross-examined, the witness said:

Q. You swore here that Matthews said that Miller was a big liar, did you not, in answer to the counsel a minute ago?—A. Yes, sir.

Q. Now, you say that Matthews said that Miller was a man he could not trust?—A. Yes, sir.

Q. And you say those are the same, do you?—A. In substance, yes, sir.

Q. You say those are the same in substance, do you?—A. Yes, to the best of my knowledge.

Q. Did he state why he would like to see them behind the bars?—A. No, sir, I think not; I have given all that I recollect of the conversation.

Q. Now, was not this what he said, that "The Everests and the Standard people have attempted to ruin my business, and to break up the business of the Buffalo Lubricating Oil Company, and that I would like to see these men put behind the bars for it?"—A. I did not hear the first part of that; I did not hear a conversation in which there was such a statement as that.

Q. Then, out of all his conversation with Matthews you have given these two sentences, and that is all that you can remember?—A. I said that I heard him talking about the law suit that was tried in March of that year; I knew the fact that the civil suit had been tried before any criminal suit; I wrote this statement that I have spoken about at Mr. Root's request.

Being further examined on behalf of the defendants the witness said: Upon November, 1886, I had been in the employ of the Buffalo Company since February, 1885; prior to that in the employ of the Vacuum, since 1882.

**J. SCOTT WILSON**, a witness on behalf of the defendants, testified:

I live in Rochester, and have lived there, off and on, for nearly sixty years; I know Charles B. Matthews; I think I was introduced to him in 1878, in Rochester; I was then engaged in selling oil for myself; he was engaged, as I understood it from him and Mr. Everest, to put down an oil well, or a prospect well, in Wyoming, on the farm that he lives on; I entered the services of the Vacuum Oil Company September 16, 1878, to do their general business, whatever they should require of me; the understanding was that I should be purchasing oil in barrels, crude oils, sell oil, take orders; I was a purchaser and a salesman; I should say that I must have traveled through fifteen or sixteen States, perhaps, selling their oils; I continued to do that down to the 1st of March, 1881; prior to that time I had entered into an agreement with Matthews, but not with Miller, to leave the employ of that company; after I went into this enterprise I continued to live in Rochester; I continued with the Buffalo concern, I think, until about December, 1881; I think it was then that I left. I came up to Buffalo, and located the place for the works, about the 3d of March, 1881; I selected the premises myself first; before that I had acquainted myself with the arrangement and construction of the Rochester works; I was about the works very often when in Rochester while I was selling oil for the Rochester concern; I had acquainted myself with the construction of those works and a portion of the process of operation; I was acquainted with the process of the fire stills, but not of the vacuum stills; they are quite different in the two cases; it was arranged in the first place that there should be two stills constructed for the Buffalo works, both fire stills; while I was there the vacuum still was constructed; I think it got in operation some time in July, but I am not positive; it might have been the 1st of August; it was after the 15th of March; I think it was between the 15th and the 30th that the construction of the works began; between the middle and the last, along the last of March; prior to that I had been to Erie to order the stills; I think that was about the middle of March; I could not say how much of the time from the 3d of March I spent in Buffalo; a portion of it; I was traveling on the road looking after trade for the oil that we were to manufacture; I was here occasionally; I called upon a great many former customers and customers that I had been to see before; I was about the Buffalo concern more in March, perhaps, than any other month; I should say, perhaps, half the time in March; I should say perhaps half the time in March, I started to build that works, and I wanted to see it carried out to my ideas; I could not tell you what proportion of the time in April I was about the Buffalo works; I was there, off and on going from one place to another; of course I spent as much time in Buffalo as I could, because I wanted to watch the things as close as I could; I was there quite frequently, and also clear through up to the time the still had started; about the middle of June; I was in Rochester when the first still started; within a day or two after that I was at the Buffalo works; I went about the works at that time; I was there perhaps during the day, and might have been there two days; I spent the most of my time there; I was around looking after materials for the construction; I can not say how long after the first run they run it afterwards; within the week I should think. In this time that I was there I observed about the still or works no indication of any harm having come to the stills or to the works in any particular. I first heard about the blowing off of the safety-valve in that first run the same day that I came up from Rochester; the second day afterwards, I think it was; there was not then, to my knowledge, any talk about the place of any accident or explosion having taken place; I think my first attention was drawn to any accident or explosion having then occurred, in a complaint.

I think my acquaintance with the processes for the manufacture of oils from crude petroleum dates back to 1862 or 1863, somewhere along there; I first became acquainted with them in Rochester; not at the Vacuum Oil works; I had a place where I made oil myself, and then I afterwards went in with other parties and bought a refinery on the flats right below the falls at Rochester.

I was about the works about the time that Miller left the concern. At the time

that I came back and found Miller was gone, my impression is that the two fire stills were completed ready for running, and had been run; that is my recollection now, one was any way; my impression is that both were; I think the vacuum still set in the place that they intended to have it walled up, or was partially walled, with, I think, a jet pipe running through the still the whole length; that is my impression; they had then to put steam pipe to connect with what they called the super-heater; I was not acquainted with those arrangements myself only what I had seen of them.

After I came back and found that Miller had gone, I did something in regard to supplying his place (after Mr. Frank Beardsley had experimented in trying to start the works) myself, the still—the vacuum still; that experimenting by him continued I could not say how long, until he had made up his mind that he could not complete it; that could not have been more than perhaps ten days; may be not so much; then I went to look after the man that I knew could run their stills; I looked about Rochester; I heard where he was; I was looking for a particular man, a man that I had known that had worked for the Vacuum Oil Company before, running the still; I think his name is Kiley; I could not tell how long I have known him or of him, perhaps eight or ten years; when I first became acquainted with him he was running, as I understood it, the Vacuum Oil Company's still, and had charge of it; I was not then connected with the Vacuum Company; I was then in the oil business; for that eight or ten years I knew him when I met him; I had never had any dealings with him; when I went to look up him, I heard he was down at Charlotte working there in a garden, making gardens, and I sent my son after him, and he went and brought him; I knew something about his competency to direct and operate a vacuum still; that is why I went after him; I was at the Vacuum Company's works while he was at work there; I don't know that I saw him running a still; there is a difference between running a still and having charge of them; I was informed that he was running the stills—had charge of the business.

I then employed him for the Buffalo company; I think it was the latter part of July that he came to Buffalo and went to work; I should think perhaps a month after Miller left; it might have been a little more, it might have been a little less. He undertook to complete the vacuum still; he proceeded to complete it. Shortly afterward (I don't remember the time) it was completed under his supervision. It was then put into operation as soon as it was completed; I so understand it. Kiley then had charge of the vacuum still and Frank Beardsley had supervision of the other stills and the other works about the concern. My impression is that we had men at the works that could run those other stills—that is, fire them and run them to reduce the oil, and I did not think it was very necessary to get anybody up there. As I understood my position in the Buffalo company, I had the management of the oils—the control of them. I do not consider that I was any officer of the corporation; I think I was a trustee. I was not vice-president or secretary or any officer other than trustee. There was not, to my knowledge, any consultation among the officers of that company in regard to finding any one to take the general superintendence of manufacture in Miller's place. I think the thing was talked over among the trustees, and we concluded that Mr. Frank Beardsley was capable of taking charge, having suitable men to fire the stills. My understanding is that he had charge all during the time that I remained with the company. I think that Frank Beardsley was competent to take such superintendence. If I was going to choose between him and Miller I should take him in preference; that was my judgment in regard to it at that time.

I heard complaint from Miller prior to the 3d of June in regard to affairs at the Buffalo works. He told me that Mr. Matthews was trying to work in his friends to learn the business, and he did not propose to learn them how to make oil for them to shove him out.

I can speak as to the product of the vacuum still during the time I was there. As to the success of the vacuum still, I can not speak. I examined the product that came from Kiley's operation, compared it with that made by the Vacuum Oil Company, and I considered it fully as good, every bit of it; I was willing to go into the market with it. The company sold those products of the vacuum still in the market as equal or superior to those of the Vacuum Oil Company, of Rochester. I put them on the market as oils made by the vacuum process, not as the Vacuum company's oil, but the vacuum process; the same stills superintended by the former superintendent of the Vacuum Oil Company. During the time that I was with the company the product of the fire stills was good as a general thing.

At the time Miller left, I think, I remember there was a man in the employment of the Buffalo company by the name of Taylor. I know he ran good oil—satisfied me. I knew what the market wanted, and I knew that that oil would make it. Taylor came from Cleveland; I think I found him in Cleveland and employed him for the Buffalo company. I found him in the employ of Clark & Brothers; he was running the stills. I went up to the works and went around with him. I saw the oils that he had run; he showed me; I could judge from them. In my judgment, the oils were good, and would be satisfactory to the market. During the time that I was there the

concern was doing something in the way of compounding. I could not exactly state the amount of its business, but I did not consider it very extensive; it was not a large proportion. In such establishments that is an ordinary process of manufacture; that is done at the Vacuum oil concern in Rochester; I know it has been done there; I don't know that it is now. The process is putting different oils together and mixing animal oils with it. Animal oils with paraffine oils—lard oils, for instance, with paraffine; tallow, lard oils with what we call cylinder stock, and different ways. There are a great variety of ways of compounding oils. The business that was done while I was there in the way of compounding oils resulted from Miller's absence from the works. Miller had nothing to do, as I understand it, with compounding. There was no other than I at the works who knew anything about the mixing and compounding of oils, except it be Frank Beardsley; he said he had a copy of the Vacuum Oil Company's formula for compounding; if he was competent then, he knew about it. The object in compounding oils is, in some cases, to make it more limpid, and in other cases to make it stand more heat; in other cases to make it have more body to lubricate; in other cases to make it burn better. The object in compounding is to make it better.

Before going to Buffalo the conversations with Miller, Matthews, and myself were after the arrangements had been entered into with Mr. Matthews; those interviews were held at my house several times, and they were held at Mr. Matthews's house; about that time, at my house in Rochester, in the course of some one or more of those interviews, Matthews said to me and Miller like this: That the Vacuum Oil Company or the Standard would never allow us to start to make the same product that they made; they would be more fearful of us than anybody else, because we understood their business; because we understood the Vacuum Oil Company's process of making oil.

Q. Did he say this in substance: "We can go to the customers of the Vacuum Oil Company, and say to them, 'we have the same process and the same apparatus, and the same oils as the Vacuum Oil Company, and we have their old superintendent, Mr. Miller, to manufacture the oils!'"—A. That was the talk over in my house, after I had spoken to Mr. Miller.

Q. Did Matthews say anything to that effect?—A. Yes, sir.

Q. Did he, during those conversations, say to you or in your presence, in substance, that he expected to get from \$100,000 to \$150,000 by being bought out by the Vacuum Oil and Standard people?—A. He said that in substance; yes, sir.

Q. Did he, about the time that Miller left the employ of your company, say to you at the works, or the office of that company, this in substance: "I am glad he is gone."—A. He did, sir.

Q. After this run of oil did you hear anything said about the works about any loss of material from that accident?

To this the district attorney objected as too indefinite.

Mr. BACON. It can not be made any more definite, if the court please, than to ask if he heard anything said about it.

The COURT. He was one of the persons interested there, and should you not confine yourself to facts that were within his knowledge? You can show by him that he examined the product run that day, whether it was burned or otherwise injured.

Mr. BACON. He was not there, as it appears, until a day or two afterwards. I was asking whether he heard anything said about any loss of material about the concern that he was interested in this action.

(The objection was sustained, and the defendants excepted.)

A. I know of a safety-valve blowing open upon one of these stills after Miller left; I think it was in July; no injury resulted from it. I was engaged in business as an oil manufacturer, I can't remember the time, some years at Rochester; I am competent to run the fire stills, and was at that time. The blowing open of a safety-valve upon a still is not, I think, an unusual occurrence; I saw the safety-valve upon this still; there was not to my knowledge anything unusual in the arrangement or adjustment of it; as for the weighting of it I could not say. When I saw that first valve it was weighted down, and I could not tell you how heavy; it might have been weighted 1 pound or 20 or 50, I don't remember as to that.

Upon cross-examination, the witness said: I am now engaged in the oil business in Rochester; I am dealing with the Vacuum Oil Company some little on refined oils, burning oils; my business is making, compounding you might call it in a measure; I reduce some, I compound some, I mix oils; I put certain oils together and make certain varieties and kinds of oil that is used for machinery and steam cylinders.

Q. Do you manufacture oils by the process which is now conducted by the Vacuum Oil Company?—A. Well, we call it manufacture, that is the name it is; compounding oil is called manufacturing oil; under that head I do manufacture; compound into something similar to what the Vacuum company used to do when I was with them; I do not run the still, I run the tank; I do not buy the products of petroleum from the Vacuum Oil Company, only occasionally some paraffine oils; I mix other

oils with that. When I was engaged in the manufacturing of oil, otherwise than compounding, I had stills that sit over arches, and I had what was called petroleum oil stills for the purpose of reducing and separating the different products of petroleum oil. I attended to the practical management of the business partly; I was the only man that knew anything about it. The process of manufacturing which I carried on is different from the vacuum oil stills; it is not a process of manufacturing by the use of acids; it is manufacturing regular, natural, crude oil reduced by the heat from coal, separated. When I first commenced with the Vacuum Oil Company Mr. Everest told me that he wanted I should take the general supervision of the outside business; to buy crude oils, barrels, staves for barrels, and to do anything that he required; I done a good many things; I took orders for oil; I went to see parties to get their orders, I went to different oil-works to see how they made oils. I went to different wells to see what kind of oil the wells were producing; I was paid a salary; I continued to work for them under a salary until March 1, 1881. I could not say as to the day I began to sell oils on the road to customers for the Vacuum, but I think my first business was to go to Philadelphia and attend to some business there; I should think probably I commenced to sell oil in September, 1878, the latter part, or October, continued to the 1st of March, 1881. I did not consider selling oils for the Vacuum my principal business; I sold, I think, in some fifteen or twenty different States; I traveled about a great deal and went to a large number of different places; I took trips whenever I thought best in the commencement; I should say I traveled half the time or more. I had thought of leaving the Vacuum company the latter part of 1880, more particularly about November or December; I don't think I had any conversation with Hiram B. Everest on the subject of my dissatisfaction with my employment; I don't think I ever talked with anybody about my dissatisfaction; I think I told Mr. C. M. Everest, in October or November, that I did not want to travel any more; I had got tired of it and I wanted to go into business for myself; I said I wanted to go into dealing oils; I did not propose then to go into manufacture; I think it must have been in December or January that I first thought of beginning the manufacture of oils, it might have been a month earlier; I don't know that I first spoke to Mr. Matthews with reference to going into the manufacture of oils. So far as I was personally concerned, I did nothing towards starting the Buffalo works until after I had left the employ of the Vacuum, only talking it up. At the time I commenced to render services in preparing the Buffalo Lubricating Oil Works to start, I was not in the employ of the Vacuum Oil Company; prior to March 1, 1881, I had done nothing towards starting the Buffalo Lubricating Oil Works; it was after Mr. Matthews and I had entered into an arrangement that we three agreed to unite together for that purpose; it was somewhere between the 1st of March and the 20th; my first conversation in relation to starting the Buffalo works was along in November, 1880; it was in one of the Vacuum company's offices, between Mr. Matthews and myself; Mr. Matthews was not reluctant to enter into that agreement; he was quite anxious to go in; during those first months of November and December, Matthews and I had several conversations, and I took a northwestern and southwestern trip and got back in February, and we commenced talking the thing up pretty strong after that; to the best of my recollection it must have been somewhere near the middle of February that I came back; it may have been a little earlier; nothing had been agreed upon definitely prior to my return from my southern trip in February, 1881; it was the first days of March that we finally concluded to go ahead; that is the time we started to erect the concern, but we had agreed what we would do before that; we had agreed after my return from the West; I could not tell you just how long after; I think we talked the matter over, and I took a short eastern trip, and when I came back we talked it over again, and then we went to laying out plans; I was gone a number of days on my eastern trip; if I understand it, Mr. Matthews and myself had agreed virtually to come to Buffalo before I took my western trip; the thing had been talked up; he told me what he would do; I think I started the latter part of December; it was a southern, western and northwestern trip; in December, 1880, Matthews and I had agreed to go into partnership; I can not say positively whether an agreement was entered into until after my return; I think it was after my return that we agreed to start; that would be in February, 1881. I thought I knew Mr. Miller, I did not, however; somewhere in March, 1881, I first talked with him with reference to coming to Buffalo; that was after I had been here and looked at the site; I came here alone in the first place to look at it; according to my memorandum, it was March 3 that I did so; shortly after that, the down payment was made on the contract; it may not have been many days; Mr. Matthews came up here and took a contract on the property that I looked at, or, in other words, a refusal; he went out with me and looked at the land; I don't think Miller was with us on that trip, I am not positive; however; my understanding and recollection is that I did not speak to Miller with reference to coming to Buffalo and starting in the manufacture of oil until after I had been here on or about March 3 and examined a site to locate the works; it was in

my mind that Miller's part in the organization of the company was to be to do as I directed; I was to construct the work, not him; I think I had a practical knowledge as to the construction of the stills; Miller was to act jointly with me to carry out my views; I gave the orders for the stills; I was to supervise the construction; if I saw fit to do so, I was to do any and all parts of it—to supervise, control, direct the construction; I was to direct, and did direct; I had the knowledge to construct all that Mr. Matthews and I intended to construct, or Matthews and Miller and I intended to construct.

Q. Did you have the knowledge to construct all the works which the Buffalo Lubricating Oil Company did construct on its grounds?—A. That was not considered at all; did not talk about it; I do not know what there is in the works; I have not seen them since I left there; I know what they constructed before I left; I had the knowledge to construct the works which they did construct while I was a member, or belonging to that company. I did not say Mr. Miller was simply to act under my instructions or directions; he was to do what he could to further the business; I did not care much what he could do; I don't know as I understood in particular what he could do; I did not care so much about that; that was not what I wanted Mr. Miller for; I wanted him, as being a former superintendent of the Vacuum Oil Company, so as to give our oil character; that was what I wanted Miller for; that was the main thing.

Q. It was not his experience as a practical builder, or for his knowledge of the works that you wanted him for?—A. I don't think he was an experienced builder; I concluded from what I saw of him and his movements that he did not understand his business; I did not employ him because of his knowledge of the construction of oil works, or any part of it, not in the start; my first idea was it was simply to give our oils character in the market; my business to sell the oils; I did not hire Miller because of his superior skill in the manufacture of oils; I don't think I considered him at all as a manufacturer of oils; my consideration in the matter was that the simple reason for which Miller was taken into our combination, into our association, was, not for his knowledge of the practical construction of the stills or the works, nor for his competency as a manufacturer of oil, but simply to advertise our oils as being made by a man who had been the former superintendent of the Vacuum Oil Company; I could not say that was my sole consideration; I expected he would be able to go on there at the works or running the stills, tending to them when I was not there; that he would be of some assistance; that his services would of themselves be of some value; but it was not the qualification that you called my attention to that led me to desire to associate him in our company; the controlling thing in my mind was the other consideration, to give our oil character by having him as superintendent, employed in our business; I desired to say to our customers that our oils were made by the former superintendent of the Vacuum.

Miller gave me some reason for dissatisfaction while he was here in Buffalo; I thought he drank too much whisky; I thought he had too many men around him who drank whisky; I thought he was too extravagant in his purchases with the means that he had; I thought he did not push the fire stills as he ought to and let the vacuum still go; he and Mr. Matthews were determined to build a vacuum still; I was opposed to it; I wanted to use the money in the other stills; that was the reason. Mr. Miller had hired a number of those employes here in Buffalo; he brought a gang from Rochester; I said they were what I would naturally call a drunken gang of whisky drinkers; they appeared to be drunk to me; they did not appear to be attending to their business, nor progress with the putting up of the stills; I thought Miller was neglecting his business, tending to drinking whisky more than tending to his business; sitting around in the saloons; I don't think he was delaying the construction only in the way I have described; he bought stuff for the vacuum oil stills which we could have got along without; he bought a great many more materials than we needed for the time being; I don't know whether they have ever been used to the present time; as long as I was there, some of them were not used.

If these stills had been made as promptly as I thought they ought to have been made, they would have been completed about some time in May; according to my idea, somewhere about the 15th or 20th; that was my idea, to have the stills running in May. I concluded that Mr. Miller did not know much about it; in judging that the works could have been completed some time in May, I don't know that I took Miller into consideration; I don't know that I thought about that; I have no recollection of it; I could not tell how many days or weeks of delay was occasioned by reason of the things I have mentioned: according to my estimation, there was at least a delay of fifteen days in the completion of the works.

I commenced in March, 1881, seeking orders for oil for the Buffalo company; I did not make any contracts to deliver; I think I sold oil for the Buffalo works along in June, from the 15th to the latter part, I can't tell exactly; I came on the grounds the first or second day, I think, after the first run of oil; I think I knew of the oil being run on the same day, on the 15th; the result of that run of oil was talked

over; they told me they had spoiled the batch of oil I was waiting for; that is the way it came to be talked over; it was run too low; I had an order that I wanted to fill, that made me so anxious about it; to supply the omission, I bought from the Vacuum Oil Company; I was in the market trading at the same time, buying of them; I had been buying of them from the first of the month up; I had been buying and selling on my own account; I had an order and proposed to turn it in to our company if we could, but they could not furnish the oil in time, so I bought it on my own hook and collected the money myself; Mr. Matthews telegraphed me that the oil would not answer to fill my order; when I got back to Buffalo and went out to the works, I looked at some oil to see whether it was spoiled or not; looked at some black oil which was pointed out to me as the result of the run; that oil was not spoiled for some purposes; I did not use it nor sell it; I don't know what was done with it.

I got acquainted with Frank Beardsley at the Vacuum Oil Company's works somewhere along in 1878, 1879, or 1880; I don't know what year it was; I don't know what his employment there was; I knew he was up to the office there, but what his position was I do not know; he was in the office at the works and around the works, and I think I met him more than any other place in the office; he came to Buffalo after we started in there.

In May, 1881, I was on the road buying or selling oil on my own account; I do not think I looked after any trade, I only wanted to keep up the trade I had; my recollection is I spent most of my time in March, April, and May a good deal of the time in Buffalo, but I might have been on the road in May; I don't doubt it; I think I was on the road in June, July, August, and September; I was not out at the works very much only when I came to Buffalo; I would spend from one day to a week out there; I might say from half day to a week; I was doing some work out there; I was testing oil; I drew oils in the stills; fire-testing; I directed the firemen how to run the oil; I began to test oils in June. Prior to the time we began to manufacture, I went to Erie to see about the construction of the stills. I went to Nelson's in this city to see about the construction of a tank; I went to a railroad company to see about getting a side track; I went to the lumber district to see lumber; I went to Noyes's place to get boats; I went to divers places to get materials to construct that works; I did anything that was necessary that I wanted to. My principal business was not to purchase materials for the construction of the stills, it was to construct the works; that was the understanding from the start, that I should superintend and manage it, and they should be constructed as I directed. I was not to construct the stills; I was to see them put in place. I spent on the grounds of the Buffalo concern, prior to the time we began to manufacture, about as much time as I thought was necessary to give my directions, and see that they were carried out. I should say I spent perhaps half the time there; it may have been one-third or a quarter, and perhaps more; I could say that I spent all the time there that I was not engaged in anything else.

Q. Now, you ran a batch of oil, did you not?—A. Yes, sir; no, sir; hold up, I correct that; I didn't run a batch of oil; I directed the running of a batch of oil, and a man run it; the fireman ran a batch of oil; I directed it, however.

Q. He made a mistake, did he not?—A. I do not know.

Q. Well, the batch of oil was not very good that came out, was it?—A. The batch of oil was just what I had reason to expect.

Q. Did you run more than one batch of oil?—A. I do not know that I ever run a batch of oil only by direction.

Q. Did you direct more than one batch of oil?—A. Yes, sir.

Q. You directed the second batch of oil, did you not?—A. I directed a number of batches of oil. I directed Mr. Taylor how to run oil, and I directed Mr. Porter how to run oil, and Pat. Griffin how to run oil.

Q. Which still are you speaking of?—A. I am speaking of the fire still. I do not claim to understand how to run a vacuum oil still; I do not claim that.

Q. Who had the practical knowledge of how to run the vacuum oil still?—A. Well, sir, Mr. Kiley had.

Q. Mr. Kiley was not with you when you began to run your company?—A. No, sir. The still was not completed, so I do not know who could run it; I do not know that I had decided who should run it. I understood Mr. Kiley is now in State's prison; I have not seen him there.

Q. He was the gentleman that you contemplated intrusting with the running of that still?—A. I think he was full as good as the man that was left there; yea, sir, I had known Kiley, I think, back to 1867 or 1868. Prior to the time that we started in the Buffalo works I did not know that he had been in the workhouse two or three times; I became acquainted with him by seeing him at the Vacuum Oil Company's works; when I left there I could not tell you where he was working; I do not know whether he was then in their employ; I had not seen him there nor heard him talked of; I expected to find him in Rochester; I knew about where he lived; my son found

him; I hired him and came with him to Buffalo. I do not know whether I was a director of the Buffalo company; I know I was a stockholder; my wife was also; I do not remember whether I was a director or not; I know I had something to do about sending to get a license to start up, and as far as the balance is concerned I do not remember about that. I know that the board of directors assembled for the purpose, as I understood it, to form the company, that is, to give each party of the company a position, tell them what their positions were and what they should do, and so on. I attended their meeting of the board of directors, and yet I do not know whether I was a director or not. I did put money, personally, into that company for stock; I was a stockholder; the stock belonged to me.

I do not know when Frank Beardsley began to take charge of the stills; I did not consider he had charge after Miller left; I do not consider there was a man there that could run a still or manage it better than the man that I had to fire—Mr. Taylor—and I considered that he was the man that knew the business; I refer to both fire stills; I do not refer to the vacuum still at all; I do not know that Frank Beardsley ever fired a still; he began to assume the direction, I should think, along in July—the fore part, I should think; I was on the road perhaps half the time; I was out to the works a good deal too; I never saw Beardsley run a still, but I saw him fire-test oils in reducing it; I have seen him take the management and direction and control of the still from the beginning of the running of the batch of oil until its completion; I have seen him do it in the process of reducing, taking the oil into the little house we had there and fire-testing it, putting the thermometer into it to see how much heat it would hold before it would throw off the vapor; that was Frank Beardsley's business and mine; not more his than mine; I directed the running of these oils; he did not do it; there was not a man there who knew what the market required for these oils—how they should be made, what standard they should be to go on the market and meet the trade; they did not know anything about it; even Miller did not know; all he knew was what he had been told; there were parties there that were capable and did run the stills and make good oil; Frank Beardsley drew from those stills, in the process of reducing them, oil for the purpose of fire-testing it to see if we could get a 600 fire-test oil, or whatever fire-test we wanted; Beardsley was competent to do that.

I heard complaints made about the oils that were sold; I think not from a number of different concerns; I don't know that I ever heard any complaint from a customer; I heard complaints from Mr. Matthews; he told me that the customers complained; I do not call to mind any customers but perhaps one; I did not see all the oil that was shipped by the Buffalo concern; I do not think I have ever seen the correspondence of the customers with regard to the quality of oil produced; Matthews did not, to my remembrance, call my attention to the correspondence of customers on more than one occasion; he might have done it.

There was no superintendent of the works, as I understand it, that had anything more to do with it than I had. I had as much of the management as anybody, and more in directing and making the oils. I was the only one to direct making the oils.

Q. Mr. Wilson, you are acquainted with Judge Edward W. Hatch, of Buffalo?—A. Yes, sir.

Q. Do you know about a litigation that was commenced in the Supreme Court by the Buffalo Lubricating Oil Company against Mr. Everest?—A. Yes, sir; I heard of it, and knew of it.

Q. And you were a witness in that case?—A. I was.

Q. That case was tried in March, 1886?—A. I do not remember the date; it was tried in this other end of the building here.

Q. About March, 1885?—A. Well, perhaps.

Q. And you were a witness in that case?—A. Yes, sir.

Q. Before the trial of that case, do you remember of going to the law office of Judge Hatch, on Main street, in the city of Buffalo, and there having a conversation with him with reference to your knowledge of how you come to organize the Buffalo concern, and your connection with it?—A. I have no such recollection; no, sir.

Q. Do you recall the circumstance that there was a stenographer there, and that questions were asked to you, and that you made answers to them, going over substantially all of your connection with the Buffalo concern and its organization, and all your relations with it until the time you left?—A. No, sir; I have no recollection of the kind.

Q. You have no recollection?—A. I do not think I ever done anything of the kind.

Q. You think you did not do anything of the kind?—A. I think I did not; no, sir. I have no recollection of it. If you can bring up anything to see whereby I can refresh my recollection, I certainly might acknowledge it.

Q. Now, in this conversation at the office of Judge Hatch, in response to this question, "Now, go on and state to me the details of how you entered into that business arrangement, what the talk was that you had;" did you make this answer, or this in substance: "A. I had known from previous conversation with Miller that he was

not satisfied where he was. I remember one time, says I, 'Al, there would be a good chance in Buffalo; stocks made would bring good prices.' I knew that he could make just as good stock in Buffalo as he did there, and sell all he could make; I knew that from my experience going over the country, knowing what the people wanted, and who used it?"—A. I have no recollection, but then I did have——

Q. No; just answer that.—A. I say I have no recollection, only I have a recollection of certain things that you have read over, which I could explain.

(Question read by stenographer.)

A. Well, it is partly true, and partly I could not say it is true. My understanding is——

Q. No; will you please mark on that paper what part of the answer you say is true and what part you do not remember. Do you understand that all we want to know is, did you say so?—A. I understand what I did say; I can tell you what I did say.

Q. I am just asking you if you said that. I will ask you this question, in answer to this interrogatory asked of you at that time and place I have stated: "Now, go on and state to me the details of how you entered into that business arrangement, what the talk was that you had;" I understood you to say that you said this in answer: "A. I had known from previous conversation with Miller that he was not satisfied where he was. I remember one time, says I, 'Al, there would be a good chance in Buffalo; stocks made would bring good prices'?"—A. That was part of the conversation, but not all of it.

Q. No; there is more of it. And to the balance of that answer which I read to you, do you remember that you made that answer?—A. If I did, I did not make it correctly; did not make it understandingly.

Q. And do you say now that the balance of that answer is not true?—A. What portion of it?

Q. The balance of the answer which I have last read.—A. In relation to Miller's ability?

Q. Yes.—A. I said that I did not know but Miller was capable of making as good oil as was made by the Vacuum Oil Company. I might have said in substance: "I proposed to Mr. Matthews that we should go to Buffalo and start an oil works there; I afterwards talked with him about Miller, and I went to see him; he was already for it. I told Matthews that Miller wanted to go in. Matthews and myself were going in in the first place. I spoke to Matthews, but he did not fall in freely at first. I explained it that he could take charge of the business, construct the works, and run the oil; Matthews had to attend to the outside business, etc., and I travel and make the sales." That statement is substantially true, but not all, I do not think.

Q. And to this question asked of you at the same time and place, "And you and Matthews didn't pretend to know how to construct the building," did you make this answer, or this in substance: "A. That was one reason why I wanted Miller, because I did not feel myself capable to build it?"—A. I did not so understand it, and if I answered it I answered it wrong. I did not understand the question, because I certainly did understand, I did know, how to construct it.

Q. I do not care to have your reason to that question. Did you make that answer?—A. I think I did not; if I did, I did not understand the question.

Q. At the same time and place, was this question asked of you: "Had there been anything said about your leaving before you talked of this company?" and to which did you make this answer, or this in substance: "A. Yes, sir?"—A. I told them before I was going to leave; I had told the Everests I was going to leave three or four months before we talked of that company.

Q. At the same time and place, in speaking of Mr. Miller, was this question asked of you: "Q. How did he neglect it?" meaning the works of the Buffalo Lubricating Oil Company, and to which you made this answer, or this in substance: "By not getting the thing constructed in time, and then after he did get it constructed, by not running the oil right?"—A. I do not know; I would not deny it; I do not know whether I did or not; I might have said so, or I might not.

Q. At the same time and place: "Q. Did he work constantly?" to which you answered, "A. No, sir?"—A. That was true.

Q. "Was there anybody who could go ahead with the construction except Miller?"—"A. Not to my knowledge." Did he so ask of you, and did you so answer?—A. I did not include myself in that.

Q. At that time and place, did he ask of you: "Was there anybody who could go ahead with the construction except Miller?" and to that question did you answer, "Not to my knowledge?"—A. The vacuum still?

Q. Just answer that question; yes or no.—A. Yes, in one case, and no in the other.

Q. Can you answer that question; yes or no?—A. I can not answer it correctly without stating.

Q. No, sir; Mr. Wilson, the question is, did you answer so in reference to a question that was put to you at the time and place that I called your attention to? What do you say; did you so answer?—A. I could not say; if I did——

Q. Never mind; I do not care for your "ifs" about this.—A. If I did, it was in relation to the vacuum still.

Q. And at the same time and place, and immediately after the question before, was this question asked of you? "Q. That is, there was no man to say how the thing should be put up and done. Matthews could order the material, but he could not put it together?" to which you answered, "No, sir."—A. I did not include myself, sir.

Q. Was this question asked of you? "Q. How long was it when you first began to notice that Miller was slack in his work?" to which you made this answer, "I think from the start."—A. I might have answered that.

Q. Did you so answer?—A. I do not remember it.

Q. And were these questions, which I will read to you, asked of you, and did you make the following answers to them? "Q. Now, then, when did you undertake to run one batch?" to which you answered, "I do not remember, that is what they say." "Q. Do you recollect how you came out about that?" "A. No, sir; I forgot all about it; they told me I run a batch there and burned it, I do not recollect anything about it. I know that there was two batches spoiled, but if there was some spoiled by me I do not remember it." Were those questions asked of you, and did you so answer them?—A. They might have been; I did not perhaps recollect as well. I do not remember. I might have answered to some questions I did not understand, being a little hard of hearing.

Q. And at the same time and place were the following questions asked of you, and did you make the following answers? "Q. Now, what did you do when you found that Miller was gone?" "A. We thought we was in a bad boat." "Q. A bad boat, how?" "A. It occurred to me about this Kiley; he had run a still for the Lackawanna Company. I thought of him and suggested that perhaps we could find him. When Miller left the works we did not know how we were going to get out of it." "Q. Why?" "A. Because there was no one that could complete the construction." Were those questions asked of you, and did you make those answers?—A. If I did, they wa'n't correct.

Q. Did you?—A. I don't think I would answer such a question in that way, if I understood the question.

Q. In reference to the work done by Mr. Kiley, were these questions asked of you, and did you make these answers? "Q. Then, did you see him at work there?" "A. Yes, sir." "Q. How did he seem to make things go?" "A. He did not make them go as well as Miller did. I don't think the results were as good with the vacuum still."—A. I don't think I made that answer.

"Q. Did you know wherein his construction was at fault?" "A. No, sir." Did you make that answer?—A. I did not pretend to know anything about the vacuum still at all.

Q. At the same time and place was this asked of you? "Q. You are not able to tell?" "A. No, sir; there is a good deal of construction out of sight."—A. In the vacuum still, yes, sir.

Q. Was that asked of you, and did you so answer?—A. In relation to the vacuum still, I did.

Q. No, sir; just that question. Was that question asked of you and did you so answer?—A. I say in relation to the vacuum still, yes, sir; but the others I certainly did not understand.

Q. At the same time and place, were these questions asked of you, and did you make to the questions these answers? "Q. After Miller left this time, and after Kiley came there, were you on the road continuously?" to which you answered, "Yes, sir; a good deal of the time." "Q. How often were you at the works?" "A. Not very often." Were those questions asked of you, and did you so answer to them?—A. I certainly don't remember. I would not object to answering them if I did remember; there is no reason I should hesitate at all.

Q. At the same time and place was this asked of you? "Q. At any time, from these works up to the time you were connected with them there, would you get as good results from the oil there as Miller had made at the Vacuum Oil works?" "A. No, sir; I think not. I often told Mr. Matthews that instead of getting fifteen or twenty we ought to get thirty barrels."—A. No, sir; I knew better than that.

Q. "Q. I mean the quality," immediately following the former question. "A. They complained of not being sweet sometimes, it was not heavy gravity enough. For instance, the oil run twenty-six or twenty-seven, was burned more than twenty-five or twenty-five and one-half ought to be," did you?—A. I have no recollection of anything of the kind, sir; it don't seem reasonable to me that I should answer no.

Q. "Q. That was the result of improper manufacturing; it was burned when it should not have been?" "A. Yes, sir."—A. What batch was that?

Q. That was immediately following the other question I just read to you.—A. Was that the first or second batch?

Q. That was speaking generally of the oils manufactured by the company.—A. The only oil that I—

Q. Immediately following that question, was the following asked of you? "Whether that was from carelessness or lack of knowledge, you can not tell?" and to which you answered, "That was from lack of knowledge, not knowing how to apply the steam." Was that question asked of you, and did you make that answer?—A. If the question was asked me what caused the oil—

Q. You can say yes, or no, or you do not remember?—A. Well, I do not remember it just in that way.

Q. Immediately following the last question, was this asked of you? "Q. Do you recollect, during the continuance with the company, whether they had overcome these difficulties up to the time you had left?" and to which you answered, "I do not think they had entirely."—A. I don't know hardly how to answer that question.

Q. You can answer it yes, or no, or you don't remember.—A. Well, I don't remember; I can give you an explanation that you would understand, perhaps.

I believe the Vacuum Oil Company commenced a suit against me in June, 1881, I think it was settled some time in November, 1882; they discontinued it, and paid the costs that were made; they did not pay all I had laid out; I did not get all the costs that I laid out; when I talked of coming to Buffalo, I think I had a conversation with Charles M. Everest, at his office in Rochester, with reference to coming to Buffalo; that was after we had started to Buffalo, I think; I don't recollect that then he said to me this, or this in substance, "I shall do all I can to injure your trade or kill it."

Q. Now, Mr. Wilson, did you consider that there was anything improper in your coming to Buffalo to start the organization of the Buffalo Lubricating Oil Company?

Mr. BACON. That is objected to as wholly immaterial and irrelevant and incompetent.

The COURT. I think I will let him answer.

A. Not as I intended to have started it.

Q. Do you think that there was anything wrong or improper in the starting of the Buffalo Lubricating Oil works as they were started?—A. Yes, in respect to building the vacuum still; I consented to do that under protest; I do not see that I acted in regard to it; Mr. Miller and Mr. Matthews acted against my wishes; I had nothing to do with starting it; did not intend to start the vacuum still; I did not purchase the materials to start it; I purchased a tank for storage; I considered that the starting of the vacuum still was wrong, because I considered that we were infringing, and I considered it was no benefit to us; I wanted the other stills; I wanted nothing to do with that; I considered it infringing on Mr. Everest's patents, and I did not want to be mean enough to try to steal his patents; I know that those patents have since been decreed to be worthless; they were considered good then; I told Matthews and Miller that we did not want any vacuum still; I told them that in my house in Rochester, when we talked of coming to Buffalo; I let Matthews and Miller have their own way about the vacuum still; I could not help myself; what I did in reference to protesting was telling them that I did not want it; I preferred to work the fire still; we could make as good oil with that still as we wanted; we didn't want anything else; the vacuum still was very expensive, and it was infringing on what I considered the Vacuum Oil Company's rights; I don't know as I have now stated all that I did by way of protest; I had a good many talks; this was before the company came to Buffalo; I did more in the way of protesting than simply this conversation; I told Matthews and Miller here in Buffalo, after they started, we didn't want their stills; no use for them; I said a good many times I didn't want the vacuum still; all I could do was to talk about it.

Q. And yet, with your ideas on the subject, you consented to come into the Buffalo Company, and accept whatever benefit the company derived from the use of the vacuum still?—A. I was compelled to do that, sir; I did not do it out of choice; I was compelled to do it to try and save myself. I was, as the saying is, in a boat; I got in a tight place; I got in with parties who did not want to carry out their contracts, that did not do as they agreed to; I did not know before they came to Buffalo that they were going to have the vacuum still; when I knew it was when I saw them preparing to set the still up that I had bought for storage, to make a vacuum still of it, and buying traps, different parts, and putting it together. I knew there was not a vacuum still to be erected if they carried out my wishes. I knew there was not to be a vacuum still in the original talks of coming to Buffalo. I hired Mr. Kiley to run the vacuum still. I don't remember what we were out for the two tanks; this tank might have cost \$200; I don't remember; it was a 2,000-gallon tank; it was to be a forty or fifty barrel tank.

Being further examined on behalf of the defendants the witness said: My explanation of the delay in the completion of the works is that there was a detention in getting the brick-work up. As to the oil which was shown me as having been made in the first run, the oil itself was black, but I have made lubricating oils from oil as

black as that. I speak of the limpid portions of the residuum; they did not show me the liquid portions of the oil taken out; they only showed me the residuum. I have made oils that run railroads and other machinery out of as black residuum as that; I did not regard it as spoiled. In pointing that residuum out to me as having been spoiled, they told me they had spoiled a batch; they did not tell me how. I got a dispatch from Mr. Matthews, saying that they had spoiled the batch of oil that day, and they could not fill my order. I came up the first or second day after that to see; I did not see the distillate that came off. It was either the man that was firing, or one of the Beardsleys, that pointed out the residuum to me. I could not tell you who it was. There was no explanation or statement made to me as to how it got spoiled, only this, that Al. Miller had spent the day, or a portion of it, in a saloon across Elk street. That was mentioned in connection with the spoiling of the oil. There was not much of anything said about the spoiling of the batch at all; there was very little said about it.

The process of fire-testing at these works done by Frank Beardsley, and by myself, was the same process which was covered by the Vacuum Company's fire-test patent, as I understood it. It was not a great while after Kiley there, that the vacuum still was ready for operation. I think it was ready to run in the latter part of July, or the 1st of August. I think in June or July, of 1881, I think it was after Miller left, shortly after receiving a letter from Mr. Matthews, I run a batch of oil for the purpose of finding out what I could do in regard to getting a cold test. It might have been in July or August, after Miller left. The batch was not run in the way in which I intended to have it run, but I got what I wanted to find out; I didn't consider the batch was spoiled then. On the trial in March, 1885, of the action brought by the Buffalo Company against the Everests, I testified as witness on behalf of the Buffalo Lubricating Oil Company.

Being further cross-examined, the witness said: I made fire-tests of the oil for myself for the benefit of the company; I knew the Everests claimed to have a patent on the fire-test process. I saw the limpid portions of the residuum that was left after this first run of oil; there was some portion of the residuum that was not limpid; that portion was not altogether useless; it was good for fuel to burn to run the still with; I do not consider it good for the purpose of manufacturing lubricating oils.

Being further examined on behalf of the defendants, the witness said: I could not say how large the quantity was of the residuum which I found to be useful only as fuel; there could not have been many barrels as I understood it, because there was only six or eight barrels of the whole residuum; there might have been half of that which was available only as fuel; I could not say positively; if it had been a perfectly successful run instead of partly successful, it would have been worth, perhaps, from \$3 or \$4 a barrel for machine oil; in running illuminating oil there is always a residuum that is available only for fuel.

DAVID CUTHBERTSON, a witness on behalf of the defendants, testified:

I am in charge of the United States Signal-Service station in Buffalo, and I have brought with me the records of the observations of that office for the 15th of June, 1881. The nearest hour to meridian of the day that our observations are made is 10.52 a. m., true local time. The observations for that day and hour are: Actual reading of barometer, 29.450, correct to sea-level; barometric measure, 30.154; temperature of the air, 62.7; relative humidity, 55; direction of wind, northwest, steady, 9 miles an hour; clear weather. At this locality the ordinary barometric pressure during the month of June the actual reading of the barometer would be 29.20; that is, the actual reading at this elevation.

Being cross-examined, the witness said: The direction of the wind at 7 a. m. was from northwest, steady, 3 miles; at 2 p. m. it was southwest, steady, 7 miles; the barometric pressure increased generally on that day; rising barometer all day; at 2 o'clock its actual reading was 29.455; that was a rise of .005 since 10.52; this pressure would be very little affected by a distance of 2½ miles from where the figures were taken; it would increase the pressure to take my instruments from one elevation to another; a hundred feet would naturally make the barometer read one-tenth of an inch greater, but if you reduce the elevation you have more pressure on the ground; the barometer would naturally read higher than it does at my elevation; these observations were taken at an elevation of about 72 feet; the velocity of the wind at about 85 feet. At such an elevation, with such a light wind as 3 miles an hour, considerable eddies would naturally occur on the streets, but in the open field, open country, the general direction of the wind corresponds to that in the upper strata; that is, to the elevation of about from half a mile upward.

THOMPSON MCGOWAN, a witness on behalf of the defendants, testified: I live in Cleveland, Ohio, and have since 1877; I am forty-nine years old, and am a manufacturer of petroleum; I am in the employ of the Standard Oil Company and have been since September, 1877; before that I have been a manufacturer of petroleum on

my own account; I began that business in October, 1866, on the Allegheny River at Oleopolis; I was an officer of a stock company in which I owned stock; I was not at that time the manager also of other works; I had no part directly in their actual operation; that continued until 1868; I was then crude producing petroleum at the wells for one year; then in 1869 I became interested in a refinery on Oil Creek at Miller farm; I was superintendent, and that continued until 1876, and from 1870, I believe it was, as part owner; at the end of that time we sold the refinery and I went into the employ of the Acme Oil Company of Titusville; that lasted until September, 1877, when I removed to Cleveland; ever since that time I have been in the employ of the Standard Oil Company as an inspector of their illuminating oils; that brings me daily into relation with the process of manufacture at the works of that company in Cleveland; my duties at Titusville were of the same character as now, but in works of less extent.

I graduated at Princeton College in 1861. I have to some extent given special attention to the scientific subjects connected with the refinement of petroleum and the manufacture of petroleum products; I have also practical acquaintance with those processes during the period of time that I have named. I don't know the exact number of stills in use at the refinery in which I am employed; they are of various sizes; we have no vacuum stills; we use fire and steam stills; so far as my observation has extended of the stills with which I am connected and with other stills, safety-valves are ordinarily attached to them; I think they are attached to all the stills we have in Cleveland; it is the uniform usage to attach safety-valves to the stills; it has always been so since 1869; they have been attached very largely; prior to that, in the first works with which I was connected, we had no safety-valves at all, they were fire stills; there are other outlets to the fire still than that which is offered by the safety-valve; there are outlets provided so that the vapor as it is generated in the still can pass over and be condensed; that is a necessary part of the still; these outlets are never intentionally closed in any manner. There are quite a number of vapors or gases which are evolved from crude petroleum upon the operation of heat; they vary in density as you go down; there are series as you increase the heat; the density becomes greater as the distillation progresses; the first gases utilized in commerce come off from the petroleum at about 125, possibly; I mean by that that the body of the oil is raised to that temperature; in distillation the heat, of course, steadily increases; as it increases it evaporates one after the other of the succeeding hydrocarbons, each in section requiring a higher heat; the heat is applied continuously; as the successive products pass off they all pass through these same vapor-pipes; the name tail-pipe is applied to the end of the vapor-pipe which projects into what is known as the receiving-house. These various products are separated in this receiving-house; they are received there in a vessel possibly containing but one compartment and numerous pipes leading from it, or in a vessel divided into compartments as you pass down through; if you have but the one compartment, by opening a stop-cock on one pipe and closing it on another you can run the product to any storage tank you may desire; as they come over they increase in density as the distillation progresses and the heat rises; the attendant has to divert the product as it comes out in varying density into various receptacles; he does so by the use of a hydrometer.

Q. What is the proper method, when a fire still is first charged, of applying the fire in the fire-box; what degree of fire, if you can state?—A. The object at that time, of course, having a large body of cold liquid in your still, the object is to economize time as much as possible; hence we put under a still as much fire as we can, the purpose being to heat the body of the oil in the still as rapidly as possible and bring it to a vaporizing point as quickly as possible.

Q. In your judgment, upon firing a still of 175 barrels of crude petroleum, with a noon temperature in the atmosphere of about 60 degrees, is there, in your opinion, such a thing as making too hot a fire for the purpose of manufacturing?—A. At first it would be very difficult to obtain a fire hot enough to injure the petroleum; in fact, I can not conceive how it would be possible to do so, your object being to increase the temperature of your oil in the still as rapidly as possible in order to bring it to the point of utilization.

Q. Suppose, now, that under such conditions, in a still fired for the first time, the fire after two hours is carried to a degree of heat sufficient to lift the safety-valve, and out of the safety-valve is seen to issue a cloud of visible vapor resembling the vapor from steam, which floats away upon a breeze of 9 miles to the hour and then to dissipate itself gradually in the air; are you able to state from those conditions what in your opinion the escaping visible vapor is?—A. Under your statement of conditions, I should say that that vapor escaping was a mixture of steam, and in all probability some oil vapor with it.

Q. Supposing that steam had not actually been admitted intentionally to the still as part of the process of manufacture, are you able then to account for the escape of steam from the safety-valve?—A. Yes, I can account for it in this manner: We very frequently, when charging a still, we may pump into that still a crude oil accom-

panied with some water; it is a very common occurrence for us to find quite a percentage of water held in suspension in petroleum; on application of heat the water would begin to precipitate itself and descend to the bottom of the still; the petroleum is of less specific gravity than water; as you continue to heat your petroleum you finally precipitate that water; the density of the weight of the oil above it will permit your heating that water higher than the boiling point of water; I have seen it in actual experiment, under similar conditions, raised to a point higher than the boiling point of water; by careful manipulation I saw it raised once so that the oil above the water—a thermometer with the bulb suspended in the oil marked a temperature of 280 degrees; the boiling point of water is 212; in this experiment the heat was applied from beneath; the water was placed in a vessel, the oil poured on top of it, the heat applied from beneath, and heated cautiously and slowly without disturbing the oil at all, allowed to heat slowly until the oil marked that temperature; the temperature of the water below certainly could not be any less than that of the oil above.

Q. Suppose, then, in the case of the still which has been mentioned, that the fire applied to the still had brought the water precipitated below the oil to the boiling point of 212 degrees; what then occurs?—A. Without doubt in a case of that kind the water would be heated above its boiling point, influenced of course by the weight of the oil above it, to what extent I could not say; it would be heated higher than the boiling of water.

Q. In your opinion, it would probably remain unmoved, agitation not taking place until its temperature was something above the ordinary boiling point?—A. That I would not say; ebullition might occur and disturb it; sudden ebullition might occur, and the water would be immediately converted into steam. If the water under that condition of heat is converted into steam it would undoubtedly rise through the oil; if there was a sufficient quantity of it it would seek exit; if there was no safety-valve upon the still it would pass out, if it could, through the vapor-pipes of the still.

Q. Would there be any case in which it could not find exit through the vapor pipes?—A. The vapor pipes might at that time be carrying out and condensing the vapor that was being generated in the still, the vapor of the oil, and this sudden increase of steam might overtax the capacity of those vapor-pipes. If there were a safety-valve and if the pressure inside the still were sufficient it would open the safety-valve and after relieving the still of the pressure the safety-valve should close. Supposing under the conditions named that the gases generated from petroleum pass off with a cloud of vapor from the still through the safety-valve, there is no way known to me in which that combination of gas and steam vapor can explode in the open air. I have never seen the gases generated from petroleum by heat, such as in the absence of steam might pass out through the safety-valve in the first two hours of the firing. I have examined for the last twenty years, scientifically and practically, the subject of the gases from petroleum to some extent.

Q. Suppose the case of a still charged with crude petroleum, to which fire has been applied through the fire-box for a period of two or three hours, and suppose the absence of any water or steam, either by accidental precipitation from the petroleum, or by the manipulation of the manufacturer turning it into the still, and suppose that the generation of gases has proceeded so actively as itself to open the safety-valve and discharge the gases, what would be visible from the safety-valve?—A. I do not think that you would see anything; you might possibly, if you were so situated as to have a proper or good reflection of light, you might notice something as you will notice on a hot summer's day, but it would not have color, it would not have anything like the substance of a cloud of steam vapor, or of a cloud of atmospheric vapor in the sky; I do not think it could be seen at all except under the special favorable conditions that I spoke of.

Q. Suppose the escape by the application of an unduly hot fire to the still, the sudden escape through the safety-valve of vapors or gases generated too rapidly to pass off entirely through the vapor pipes, is that, or is it not, a purpose for which the safety-valve is provided?—A. The safety-valve is provided for the purpose of relieving the still from any undue expansion of vapors or gases which might be generated in it, whether they are oil vapors or steam, no matter what they may be, the safety-valve is placed there for that purpose.

Q. Suppose the escape of vapors or gases of petroleum under the conditions that I have named to you, and suppose that fire is brought in contact with the gases so escaping, what consequences would result from that application of fire?—A. That would depend upon the condition of gases, how they were commingled with air, and how they were supplied with oxygen. Under certain conditions you might get a flash, and the gases might be inflamed. It is not possible for any of these gases escaping from the still through the safety-valve under such conditions to explode. These conditions are necessary for an explosion to be caused by the petroleum gases or vapors—you must have the gases or vapors commingled with a certain proportion of air, and then have them confined. About equal parts of air and of vapor or gas will

give you, I think, as violent an explosion as you will get. With one part of vapor and thirteen of air you might begin to notice a little bit of a flash; as you increase the proportion of vapor to air you increase its explosive properties until you reach a proportion of about equal parts, possibly a little less vapor than air.

The very lightest gas that comes from crude petroleum, there is but a very little of it, is lighter than air; it is the very first product; there is so little that it is almost imperceptible; from a still of 175 barrels there would be no considerable amount of it; very little; when you reach the vapor, for example, what is known in trade as gasoline, or that known as rigoline, the vapor is heavier than air; escaping into the free atmosphere in a shade temperature of 60 or thereabouts, those gases would naturally fall; they might be carried by the heat of the still to a short distance from it; of course there is an upward current there, but after moving a short distance they would precipitate themselves; they would be dissipated in the atmosphere, and especially if there was any air moving—any wind; I do not think it would be possible for those gases or vapors escaping under those conditions, with a wind of 9 miles the hour blowing, to descend at about the point at which they were ejected; the effect of the wind, and of the heated air rising around the still, I think would be to prevent their fall, or coming in contact with the still fires.

Q. Suppose the case of gases unmixed with steam, emitted from the safety-valve of a petroleum still, is it possible for such gases to be carried by a wind of 9 miles the hour, in the form of a visible cloud like the vapor of steam, or an atmospheric cloud, to the distance of several hundred feet, and there to be lost by dissipation in the atmosphere?—A. They would be lost in being carried that distance; I think they would be entirely dissipated; it would not be possible for them to be carried in the form of a visible cloud.

Q. Have you ever seen the safety-valve of a petroleum still blown open under the operation of fire at the still?—A. I have seen a safety-valve open on a still, yes, sir.

Q. Have you seen it more than once?

Q. Suppose the case of the emission of pure petroleum gases from the safety-valve under the operation of an excessive fire, is there any possibility of ignition from that condition of things?—A. Yes, sir.

Q. Under what circumstances could that ignition take place?—A. If you have a low barometer, the air is still, quiet, the gases would come, coming from the safety-valve, if they are not carried away by the heat of the still, if that is not sufficient to carry away all of them from the still fires, they will naturally descend, and dropping down, may ignite from the still fire.

Q. What consequence then would result?—A. If the current was a continuous one, you might have the flame run back to the point of emission from the still; if that point is an open safety-valve, have the flame run back to it; if that continued open, and had not closed, itself, it would burn around the safety-valve; so long as the pressure from within existed, it would continue to burn there; it would be somewhat analogous to the burning of illuminating gas under pressure from the gas folder at the burner; when the pressure from the interior was relieved by the escape, and the safety-valve settled back into its place, the fire would be extinguished, if the safety-valve didn't leak; that would be like the turning off of the key at a gas-burner; I think there is not, under those conditions, any possibility of the fire passing back through the safety-valve into the still.

Q. Take the case which I have already supposed to you, of the blowing open of a safety-valve upon a petroleum still, fired for the first time after being set in brick, and within a few days after the setting was completed; in two or three hours after the first firing, it being fired as stills ordinarily are, with a usually hot fire, or even a fire somewhat more than usually hot, the appearance above the safety-valve of a considerable cloud, appearing like the vapor of steam, which is carried to the distance of several hundred feet, and there becomes gradually dissipated into the atmosphere and disappears; suppose, also, the meteorological, barometric, and thermometric conditions which have been stated here by the last witness, and what in your judgment was the character of the cloud thus observed?—A. I am of the opinion that it was a mixture of steam, and, from the open safety-valve, some oil vapor; possibly a mixture; undoubtedly there was some.

Q. Suppose, under the conditions of heat that I have stated in the case of a petroleum still of 175 barrels, being carried to a degree of temperature such as to force open the safety-valve, and hold it open for several minutes, until it settled back into its place, how large an amount of crude petroleum could, under that length of time, be carried off and lost in the atmosphere?—A. That would be a very difficult question to answer; in fact it would be impossible to answer it accurately; it would be more a matter of opinion, or conjecture, possibly, but I should not estimate that the vapor passing off during that time, in that way, through the safety-valve, would, when condensed, be more than a barrel; I do not know exactly the market value of a barrel of crude petroleum in June, 1881; possibly in the neighborhood of a dollar; the gases passing off in that way would include gases that would not ordinarily be

made use of as the manufactured product; you are having at that time a mixture of gases, some of which are condensed as they pass through the vapor pipes, others pass from the stand pipes uncondensed; if, at the time mentioned, instead of pure petroleum gases there was an admixture of the vapor of steam sufficient to form the considerable cloud which has been spoken of, that diminishes the amount of the petroleum lost by the accident; such an escape of gases by the operation of heat would not have any effect that I can imagine on the crude material remaining in the still; there would be no other effect from the passing away of the gases from the still than the loss of so much material. The appearance of the residuum left in the still after the firing is completed is usually black; its consistence depends on how you have conducted your distillation, and how far you have continued it in reducing the product left in your still; in the manufacturing of illuminating oils, the residuum left in the still would vary in gravity for 13, 14, 15, by the Baumé hydrometer; that is used and redistilled for the purpose of manufacturing lubricating oils and paraffying waxes; it has a decidedly mercantile value. I know a little about the manufacture of lubricating oil, not much; I have not engaged in the manufacture of lubricating oil, only illuminating oils.

Q. Suppose the case of a fire still of 175 barrels of crude petroleum, to which in the first two or three hours of firing, for a time, greater than ordinary heat has been applied, so as to open the safety-valve and hold it open before it settles in its place for from five minutes to ten or fifteen, could the heat so applied produce any injurious effect upon the residuum remaining after distillation?—A. No, sir; it could not.

Q. At what period in the process could the effect of burning or scorching the residuum take place?—A. As you progress in the distillation you arrive at a temperature which begins to do what is known among oil refiners as cracking, which is a breaking up of the hydro-carbon; at that time you begin to partially carbonize the oil; that is, upon reaching a temperature of possibly 600; it is toward the latter part of the distillation; I speak of the temperature of the oil.

Q. At that time has the reduced bulk of the material in the still anything to do with the danger of scorching or burning?—A. An undue fire at that time would, of course, increase that carbonization, and increase your precipitate of carbonized matter; that is the operation of scorching or burning; the means resorted to to prevent burning or scorching in the last hours of the process is running slowly, carefully, so gauging your fires as to prevent a too rapid distillation; we use steam during a portion of the distillation for the purpose of lifting the vapors out of the stills; the vapors are heavy. In an ordinary apparatus the door of the fire-box and the casing in which the door swings, usually made of iron, is visible; nothing more; the brick-work which incloses the still and fire-box covers the fire frontage, usually held to its place in the brick-work.

Q. Suppose that all, or nearly all, the visible front of the fire-box and the door are reddened by the heat, does that imply an unduly or dangerously hot fire?—A. It implies a hot fire; but I have seen the fire-front or the door, red in the early part, when you are firing to heat the oil rapidly, firing especially with coal. I have seen the safety-valves in use upon the fire stills of the Vacuum Company at Rochester. A valve constructed as that valve is constructed necessarily requires the use of some such substance as plaster of Paris upon the lip of the valve to receive the disk which comes down upon it, and which is the valve, to pack it to make the joint tight; the reason is this, in the safety-valve, as you usually find them, you have ground surfaces that come together that do not require any packing. I found there a safety-valve made of an elbow, an iron elbow, in the rim of which was cut a groove; the top of the valve as it came down had a ring which was intended to go down in that groove and fit as nearly as possible, but it wasn't ground. The object of the plaster of Paris, as I saw them using it there, was to make a joint, so as to prevent the escape of the vapor from the still; if such a valve were used upon the still without plaster of Paris or some similar substance, not having a tight joint, you would have an escape of the vapor from the valve; a constant leakage; providing it was not tight, you would have a constant leakage after distillation began.

Q. Have you had any experience in using or observing the use of valves similarly constructed to this?—A. No, sir; I am acquainted to some extent with the properties of plaster of Paris by experience; such an application of plaster of Paris upon the rim of the opening upon which the valve closes would have but very little effect in preventing the opening of a safety-valve such as that; there is no considerable cohesive power in plaster of Paris applied between two iron surfaces; I have never known it to be used as a cement for soldering iron; the effect upon the joint so made close by plaster of Paris, and the application of such heat as is ordinarily generated within the still to the iron parts between which the plaster of Paris lies, is that the iron expands, the plaster dries; of course the moisture is expelled from it and it dries and becomes hard and brittle; while it is not entirely loosened, for if it was you would have a leak there, yet its adhesion to the iron is not great. The brick-work in which the still and the fire-box are set is usually cracked by the operation of the fires, es-

pecially if they are not fired carefully when the wall is green; I am not able to recall any still in actual use about which the brick setting is not cracked, especially in one that has been in use any time.

Q. Suppose the case of a still charged with the amount of crude oil which I have mentioned to you, a fire started under it, and carried on as fires ordinarily are, for from two to three hours, and that upon the safety-valve opening and blowing off there is also a discharge from the still at the tail pipes, what does that discharge, in connection with those conditions, indicate?—A. You would naturally expect a discharge from the tail pipes; that is the proper outlet for the discharge, and you have the discharge there first; that is the process for which the fire is kindled and the whole operation carried on.

Being cross-examined, the witness said: My position as inspector of illuminating oils involves on my part an examination of the finished oils before they are put on the market, to ascertain whether they will comply with the requirements, what is required by the customers, by the laws of the States where the oils are to be marketed; the different States have different provisions of statute as to the degrees of fire-test that must be applied; I test the oils myself, but not all of them; I have a room in which I test them; to make the tests I heat the oils and the vapor is thrown off; I call it a vapor; I should distinguish a gas from a vapor by elasticity; that is a general broad distinction; I have been a student in chemistry; I studied it at Princeton College twenty-six years ago; so far as petroleum oils are concerned, I have followed it since; in college I devoted myself for two years to the study of chemistry, analytical chemistry; I have done very little original work in analysis; I have not published the result of any of my investigations; I do not pretend to be a pioneer in any branch of chemistry. I do not know whether the Acme Oil Company was controlled by the Standard people. I sold my works on Oil Creek in 1876; I am not proficient in the manufacture of lubricating oils; I never ran a vacuum still; I know nothing about that but the result of a casual examination given it at Rochester last Sunday; I was there possibly three-quarters of an hour or an hour; I went up there to examine this safety-valve; I looked at two safety-valves, on two stills, both of the same pattern; I never saw a safety-valve like it before in my life; I was informed that the elder Everest invented it; I did not understand that Albert A. Miller invented it; my recollection is that the elder Mr. Everest said that he had devised it; I think the bar upon the safety valve, the arm, was not graduated; I did not examine it to ascertain that. I have run stills myself in the manufacture of illuminating oil; in that process the residuum left is what we term tar; the crude petroleum is vaporized; the tar left is not hardened by exposure to the atmosphere, it becomes thick but not hardened; the residuum left in a fire still is afterwards subjected to another distillation in what is known as a tar still; from that we obtain coke, remaining in the still, which is sometimes utilized in the manufacture of carbon points; that is nearly a pure carbon. I have forgotten the exact year of the first time I saw a safety-valve blown open; it was in 1872 or 1873; it was at the Miller farm in Pennsylvania; I have a recollection about it to this date; we were unfortunate enough to get some water in the still and opened the safety-valve; nothing more happened than that; seeing this safety-valve open undoubtedly impressed itself upon my mind.

Q. How far did you go, yourself, away from it when you saw the safety-valve open?—A. It opened and closed so quick I did not have time to get away. I did not try to. The water mixed with the petroleum did not puke the still at that time. On the occasion of which I speak, the water was not in suspension; it came from steam. The other occasion was during those years from 1872 to 1875, both at the Miller farm. The safety-valve opened, and, I think, drove out vapor, but also some of the liquid from the still. That was not a safety-valve similar to the one in Rochester; certainly it was weighted.

What I mean by petroleum containing water in suspension is, there is a certain quantity of water held in intimate mixture with the petroleum, the particles of petroleum allowing the particles of water to be intermixed and held in suspension. The amount of water found in 100 gallons of petroleum would depend on the petroleum; how it has been handled. I have precipitated water from petroleum. The result of the analysis depends on the petroleum; where it is from. I have found as high as from nine-tenths of 1 per cent. to 1 per cent. in it; 1 per cent. in 100 gallons would be 1 gallon. I made this analysis in Cleveland. I did it by taking the petroleum, putting it in a graduated glass holding 100 cubic centimeters, filling the glass half full, and then diluting it with light petroleum, naphtha, so as to dilute the petroleum and reduce it, make it more limpid, change its specific gravity, and allowing the water to be precipitated and then gently heated. Taking a still of this kind and applying heat the first product that arises is known as methane; it is a gas; it will escape at the ordinary atmospheric temperature; it is passing from petroleum almost constantly; it is never condensed; it passes off as a gas; it is highly inflammable, and is explosive under proper conditions. The next is a gas known as ethane. That is also passing from the still at ordinary temperatures; it is very light; it does not con-

dense; it is explosive under proper conditions. The next vapor or gas that passes off, I remember, is propane. That is also a gas; you can condense it by cold and pressure; that passes out into the atmosphere through the stand pipe provided for the exit of such gases; that is explosive under proper conditions, and inflammable; these pass off in combustion. The next vapor or gas is known as buthane. That has a boiling point, if I remember correctly, at zero; below zero you would condense it into a liquid; that is inflammable, and under proper conditions is explosive; it does not condense in the stills we use; it passes off through the stand pipe. The next gas or vapor is known as anylhydride, or pentane. My recollection is that that has a boiling point of about 32; it is inflammable, and under proper conditions is explosive when in vapor form.

Q. Does that condense in the still?—A. We do not get it; no, sir; not ordinarily. The next vapor or gas is, in the succeeding series, known as hexane. I was speaking of the paraffine series; they are all inflammable, and explosive under proper conditions. The first vapor or gas that we get as a result, in the still or tail pipe, in the shape of a liquid, has a trade name of gasoline. That is usually the first one. Prior to that there are two products spoken of known as chimagene and rigoline, but they are not obtained in the ordinary method of distillation. Gasoline has a still temperature, when it is coming over, of about 125, my recollection is; that is about the temperature when it starts.

Q. Will gasoline, or the vapors that produce it, pass off under 160 degrees Fahrenheit?—A. Yes, sir. There are works on the subject; I have seen them, but I speak from my own personal experience in that respect; I have no regular laboratory in Cleveland; I have some apparatus, but very little; not a very extensive library; gasoline is itself inflammable; it is explosive when vaporized, and the vapor is under proper conditions; it is used in commerce for various purposes; I think the principal purpose is for street-lamps; it is used for heating purposes, but not to so great an extent as one of the heavier products; a flame coming in contact with gasoline would ignite it; it would burn; or if you had the gasoline vapors and they were in proper conditions it would explode; the color of gasoline vapor is not perceptible; gasoline vapor is not visible; I do not think it is visible while it is condensing; possibly just before it reaches the liquid form it might be visible, but I doubt that.

Q. Now, I want to know what, in your opinion, you find when examining the pipes of a still running over into the condenser, at the joints, sometimes, when they are not perfectly tight, you see passing off a bluish vapor, looks something, a little bit, like steam, but lighter, and a bluish tinge—I was down here at the works the other day and noticed that—what was it that I saw there?—A. The gasoline was rapidly condensing, and in all probability you noticed some air moisture; some of the condensed moisture of the air.

Q. You have seen it, have you not, in the stills that you have been connected with, passing off from loose joints?—A. I have seen escapes from loose joints.

Q. And it looks light color, does it not, as you see it?—A. That depends on circumstances; it depends on what is coming from the still; it does not depend on the barometric pressure; it depends on what product the still is evaporating at the time.

Q. Now, the still is running—at the tail the still is running kerosene; up on the pipes, at the loose joints, is passing off minutely something that looks like steam, only lighter in appearance, and has a bluish tinge; it is running in the morning when the fire has only been applied a short time, say 11 o'clock, the fire being applied at 7 or 8, a slow fire, and they are running kerosene at the tail; now, what is that we see passing off from the pipes at the loose joints?—A. Very light products were discharging from the joints at a time I wished to ascertain at what stage the distillation was.

Q. I don't know; they are running kerosene oil.—A. Kerosene is a generic term usually applied to the burning oil which is left.

Q. Well, what I understood when I was at the works trying to get a little practical knowledge down there, that at the tail it was found they were having kerosene illuminating oil?—A. They were then running heavy vapors.

Q. Now, what was that vapor or gas that was passing minutely, as I say, from certain portions of the pipes that were not hermetically sealed?—A. If they had reached the stage of cracking, and decomposition was taking place in the stills, you would see then oozing from these joints, just in the shape you mention, an oil vapor; that would be inflammable, and, under proper conditions, explosive; by proper conditions I mean the vapor must be mingled with air, and to explode must be confined. We get also from the distillation a product known as naphtha; it is a mixture of the hydrocarbons at a certain specific gravity; it is inflammable, and under certain conditions its vapors are explosive. There is a difference in the specific gravity between gasoline and naphtha, arising from the different hydrocarbons which enter into each of the two. Gasoline is a mixture of some of the hydrocarbons; undoubtedly they all contain carbon. The percentage of carbon in gasoline depends upon which of the hydrocarbons have entered into it. Hexane is composed of six parts of carbon and fourteen of hydrogen; the next, seven parts of carbon and sixteen of hydrogen; the

next has eight parts of carbon and eighteen of hydrogen. They follow a general law. I think there is in gasoline no other substance than carbon and hydrogen; at least if there is, it is so slight that it is not appreciable.

Oxygen gas is a supporter of combustion; pure hydrogen, I think, is not explosive under proper conditions; I would not testify that it was an explosive under any condition; naphtha is composed of carbon and hydrogen, the same as gasoline, but in different proportions; the more volatile the substance, the more explosive it is; gasoline is more easily exploded than naphtha; naphtha passes from the still at about 210 or 220.

The next product we get from the still we designate as heavy naphtha. They divide naphtha into two classes, light and heavy. Benzine is simply another name for naphtha; then you enter into the field of illuminating oils; you are getting into kerosene; there are kerosenes which will bear different degrees of heat before exploding. The reason that sometimes, in the early days, in lighting a kerosene lamp it would burst and throw the oil all over, is that it contained a larger portion of the lighter hydrocarbons. I should call that an explosion when the lamp was blown to pieces. I have never seen the fire-box of those stills.

Q. Suppose you should ascertain that a fire-box coming up on to the front part of the still was nearly six feet square, instead of just a door, and the entire front of it was of a cherry red at the time in question, what would you then say about the character of the heat applied?—A. You would have a very hot fire, sir. Escaping vapors from a still, coming in contact with the atmosphere, condense. Steam is visible; what we usually term steam is visible; in the form that we always see it, it is visible; steam is defined to be the vapor heated to a boiling point; it can become a gas. What we see coming from the mouth of a teakettle when water has been put in and a fire applied, a sort of a white mist, that is vapor of water; I should call it steam; in that form I have seen steam; it is steam in the gaseous state; steam just at the point of its maximum density. My definition of steam is, it is the vapor of water heated to a temperature of 212; I have seen a definition of steam that did not say it was invisible; I think that you will find it in Worcester's Dictionary; that is for some purposes a scientific work; I occasionally go to the dictionary in examining a scientific question, and get from that the definition as given by some scientists. Worcester gives a definition that steam is visible under those conditions; at its maximum density as a gas it becomes visible; in its gaseous state it is not. I do not know whether there was any water in this still or not on this occasion; there would be no reason to put any water in; there would be every reason to keep it out. This water in suspension, upon heating the contents of the still, is precipitated because it has greater specific gravity than the oil; by heating, the particles of the oil are rendered more mobile; the oil becomes more fluid so that the water can descend; you break up the intimate mixture existing between the particles of the water and the oil; in time it is all precipitated; the moment you begin to heat it it begins to precipitate itself, not the moment you begin to start your fire; the moment the oil becomes warm or changes its temperature, I judge the precipitation begins, the moment you begin to warm the oil; in time it would be all precipitated, and then it is located at the bottom of the still and the oil is upon the top; the water passes off before all the oil has; usually after the lighter products have been discharged from the still and the oil has reached a temperature that will vaporize the water, in the neighborhood of 225 degrees, along there, the still does then what the still men term, in their language, "lay down;" in other words, the fire is checked and the water is boiled from the oil under a slow fire.

Q. Here is your still running with as hot a fire as could be applied right through; about how long, under those circumstances, would the water remain in the still?—

A. It would require about two hours; from two to two and a half hours; in that neighborhood; with a hot fire kept up all the time, what is known as puking the still is a very frequent result. If there were water there that would be the natural result, and very frequently occurs.

Q. Take a still of this kind, applying a very hot fire within two hours and a half or three hours, a continuously hot, excessively hot fire, so that a safety-valve of the kind that you saw at the Vacuum works, in Rochester, weighted down with a weight of 20 or 25 pounds, the safety-valve proper being embedded in plaster of Paris, has blown off, do you mean to say that the escaping gases there are not inflammable?—

A. The pure gases would be inflammable. I should expect petroleum gases were coming out about that time, and those gases, in my opinion, would be inflammable, provided nothing else was coming with them; if the vapor of water was coming with them they would not be inflammable; if there were water in the still, as I understand it, they would not be inflammable. Blowing off at the safety-valve, you might and you might not have your safety-valve puked at that point; that would depend on the quantity of water. I would be expecting some kind of gases to come out at the safety-valve if it were blown off, and they might be explosive. If it happened to be a still day, whether the gases would settle around in the vicinity of the still would

depend also somewhat on the humidity of the atmosphere; to have the gases settle around the still a large amount of humidity in the atmosphere would be required; in a damp day you would expect them to settle close to the still.

Q. Having eliminated from your mind the idea that there is any water in the still, and that, under the conditions which I have mentioned, this gas is blowing off at the safety-valve, and that the humidity of the atmosphere is such that it will permit it to settle upon the ground, and that gas coming in contact with the fire of the still, what, you may tell us, would you expect would happen?—A. If the oil vapor was coming in sufficient quantity and passing down in a continuous current, as you have explained, coming in contact with the flame, that continuous current being maintained the fire naturally would run back on that until it reached the safety-valve, where the vapors coming from the safety-valve would continue burning.

Q. Might you not have an explosion?—A. No, sir; not there; not so long as the vapor continued to come from the still.

Q. Suppose it was quiet and it settled there in quantities on the ground—you know the size of the pipe?—A. Yes, sir; you would have a large flash and consume those vapors; if a person was in the vicinity where the vapors are surrounding him he would burn. Ordinary illuminating gas is a hydro-carbon similar to methane; it is in some way similar to some of the vapors that are thrown off from the still; by allowing illuminating gas to be contained in a room and applying fire to it it will ignite; you will have an explosion.

Q. I ask you if you think it would be a safe thing to fill a still with 175 barrels of kerosene, put under it an extremely hot fire, so that the front portion of the still is a cherry red, and a weighted safety-valve is blown off; would you consider that a safe thing to do?—A. I would not. I did not open the safety-valves at Rochester; they were not running, but I did not open either of them; the stills were warm, but not running. Plaster of Paris, when it has become hardened, has very little adhesive properties; my last experience in that matter I have had within the last six weeks or two months; to take plaster of Paris and place it upon the surface of the top of the safety-valve or in the creases, shutting it down so it becomes hardened, would perhaps make it in a slight degree more difficult to open the valve; I could not tell how many more pounds it would take; I have no experience in judging of that.

Q. If the gases, under the conditions I have mentioned, or vapors—just look at the map—this tail-house was within 4 or 5 feet of the condenser, and within 10 feet of the safety-valve—if these gases had come into the tail-house where they were running the kerosene, and they ignited, what would the result have been, if you can tell, igniting the kerosene or naphtha or benzine?—A. It would not become ignited there unless the gases were not in mixture with air in large enough proportion to give you a flame; it depends on that condition also.

Q. See if this might not have happened: Take it under the conditions I have mentioned, the gases had settled down around the condenser so that it entered the tail-house, entered the still-house and became ignited, might it not have fired the gases in the tail-house?—A. If those gases became ignited for any purpose.

Q. I say, might it not, if it settled down around there, the tail-house being within a few feet of the fire in the still, might it not have ignited the gases of the tail-house?—A. Your question there involves so many conditions. What is the distance from the still to that receiving-house?

Q. I do not care anything about that, sir. I ask you this: Suppose these gases had settled down around the condenser so that it permeated the still-house and also the tail-house, would it have been likely to ignite the gases in the tail-house, having been lighted from the still fire?—A. You may have the still fire igniting; would the fire run from the still-house to the tail-house?

Q. Yes; might that thing happen?—A. If you had a sufficient quantity of vapor there.

Q. We are supposing that we have.—A. On that supposition, yes, sir.

Q. Suppose you have the fire in the tail-house from your gases, and they are running benzine, and the fire from the vapor comes in contact with your benzine, what would you expect then?—A. The benzine would ignite.

Q. Would it explode?—A. No; I think not. Benzine in the form of vapor is explosive. If it came in contact with the benzine in the form that we find it condensed, liquid, it would burn. Supposing the kerosene was running at a low grade, in all probability that would burn, too. I do not think it would explode. We test oils to determine their vaporizing points. We want to determine that so as to see whether they comply with State statutes. The statutes declare that we shall not sell an oil in a state that will vaporize below a given temperature. The statute in New York requires that we should not sell an oil within the State which will vaporize at a temperature less than 125 degrees Fahrenheit, as determined by an instrument known as Elliott's test-cup. The adhesiveness of plaster of Paris depends somewhat upon the surface or surfaces to which it is applied.

Q. Are any of the vapors or gases evolved from the distillation of petroleum visi-

ble?—A. Yes. I don't know the amount of resistance necessary to separate two surfaces of iron put together as this safety-valve was.

Being further examined on behalf of the defendants, witness said:

The stand-pipe from the still is a pipe projecting in the air from the vapor-pipes as they come through the condenser to the receiving-house; they place upon that pipe, in the shape of an elbow—they call it a siphon—the purpose being to prevent the flow of gas as far as possible, from finding an exit into the receiving-house; before coming to that siphon a T is placed into that pipe, into which is screwed a stand-pipe, projecting in the air; through that stand-pipe the waste gases are allowed to escape. In the early part of the distillation, and at the close of it, those gases you will find escaping into the air. The size of such a pipe depends upon the size of the condensing-pipe at that point. In the case of a 175-barrel still the condensing-pipe at that point would be about 2 inches, possibly reduced to an inch and a half; that stands constantly open. These inflammable and explosive gases of which I speak are, during the early part of the process, constantly escaping into the free air from that pipe; that is its purpose, to allow those gases to escape. That stand-pipe is usually carried into the air a few feet above the roof of the receiving-house. The conditions to which I referred upon my cross-examination as proper to produce an explosion are, you must have a proper mixture of the gas or vapor with air, and then have the mixture confined; such an explosion is not possible in the open air.

Q. You have been asked in regard to the explosive qualities of ordinary illuminating gas. Suppose a leak from the bursting of a gas-main or the breaking of a street lamp passed into the free atmosphere, is an explosion of the illuminating gas freely escaping under such conditions possible?—A. Not an explosion, sir; you would have an ignition of it, and a continued combustion.

Q. A question has been put to you, based upon the hypothesis of an emission of inflammable gases from petroleum from the safety-valve of a still, reaching, in quantities sufficient for ignition, both the still-house and the tail-house; I ask you to suppose that hypothesis, with the further condition that the still-house and the tail-house are from 80 to 100 feet apart, is it a supposable case, within your experience and knowledge, that during an escape of from five to ten minutes from the safety-valve of a still of even absolutely pure petroleum gases or vapors, and sufficient quantity should settle both about the still-house and tail-house at that distance from each other to produce the result in regard to which you have testified?—A. No, sir; I do not believe that it would be possible for you in that length of time to have generated in the still and poured forth from the safety-valve a sufficient quantity of gas to fill that space and bring you into the conditions possible for a flame to run back from the fire to cover that space of ground; the volume would be too great.

Q. I suppose there is a good deal of supposition about this, is there not?—A. That depends upon the conditions.

WILLIAM H. PATTERSON, a witness on behalf of the defendants, testified: I live in Rochester, and am in the employ of the Vacuum Oil Company as superintendent of their works, of all their stills, and of their general operations; I have been about three years; I have been in their employ since 1875; before I became superintendent I had charge of the manufacturing of the oil for three or four years; before that I was employed as still man under Mr. Miller for three or four years, and before that as fireman; I have brought with me and exhibit to the jury a safety-valve from the works of the Vacuum Oil Company; this is of the character of those that were in use at the time Miller left the works of the company; the escaping gases pass into the valve, and through it here at the bottom; there is a groove around the lip of the elbow into which a flange on the valve sets; the surfaces are not ground; valves of that character are still in use upon the Vacuum Company's stills; at the time Miller was running the stills, and at the time he left we never used anything for packing the joint between the valve itself and the surface upon which it closes but water-lime or plaster of Paris; it was mixed up into a stiff dough-like plaster, and applied while it was yet soft, and sealed and weighed; the purpose of that application was to make a joint to keep the vapors from leaking through; that usage still prevails at the Vacuum Oil works; in case of the valve lifting by the expansion of gases within the still the valve separates, raises from the plaster of paris which has been placed in the joint; portions of the plaster of Paris will remain upon the groove below, or upon the flange above, or upon both; other portions will drop off; it breaks in parts; when by the reduction of heat or the relief of the interior of the still by the escape the valve settles back into its place, it is necessary to shut down the still and wait until the pressure is entirely gone, and repack. The repacking in that case is done just the same as the first operation; it might be possible to use such a valve as that without weighting it; the valve might be of some use without weights upon it; it certainly would be until there is a little pressure in the pipes, but it would not render very much service if used without being weighted. I don't think that it would be practicable to carry on the process of distillation with the valve merely held by

its own weight and the weight of the bar resting upon it and the cohesion of the plaster of Paris; it makes a great deal of trouble to have the valve open up a leak, there being no way to pack it without stopping the still, and for that reason I don't think it would be practicable or desirable to do that. The weight on the valve is ordinarily about 16 pounds; it is applied right on the end of the bar. I remember the time when Miller left the Vacuum works; he was around the works more or less shortly after he left the employ of the company; I had one or more conversations with him at that time around the works. At that time he said to me that the Standard and Vacuum companies would give the Buffalo people almost any amount of money rather than let them build; he asked me at that time to leave that company and go to Buffalo; upon my declining to go, he said to me this, or this in substance: "By God. I will make it just as hot for you as I can; I will take Gable and every other good man on the place, and then see how you can make it go."

Upon cross-examination, the witness said: I did not write down this conversation, neither did any one else for me. This was in the early spring of 1881; I have had occasion to recall this conversation several times since that; I stated the substance of it to Mr. Outerbridge two or three years ago; he reduced it to writing in his office; I have never seen it since; I have had it read over to me recently by Mr. Outerbridge at his room at the Genesee; I am stopping at the Broezel; I was up at the Genesee night before last, in his room, and he took out the paper and read it over to me there; there were two or three others in the room besides Mr. Outerbridge and me; Mr. Gable was there, Mr. C. M. Everest, Mr. Beach; he is secretary down there at Rochester; I was not there to exceed ten minutes; I don't know what the others were doing there, I simply know what I was doing myself; I told this conversation with Miller to a number of different persons before I told it to Mr. Outerbridge; I can not tell you the first one; I have talked with a great many persons, I presume with all the men in the works that were there at that time; there were about fifty or sixty; I have talked with all of them about it, mostly; I have talked with Mr. Bristow; with most all those that were there in the neighborhood that were familiar with the circumstances at that time; with Mr. Kavanaugh, a man that lives there in the neighborhood, soon after Mr. Miller left; he is there in Rochester; that was in 1882 or 1883; I have talked with the King boys, relatives of mine and also of Miller's. I was convicted of a crime when I was a young boy; was in the house of refuge a year and a half; I have never been convicted since only in Libby Prison; I was in the Army. This safety-valve was in use somewhere in 1880, and it has been used since. Those stills were never run without a weight on the safety-valve, that I know of; at that time we had different-sized weights; we don't now. In packing a valve we don't generally use quicklime or plaster of Paris, or mix them together.

Being further examined on behalf of the defendants, the witness said: I am past forty-four years old; I was in Libby Prison, Richmond, Va., as a prisoner of war in the United States service.

AUGUST GABLE, a witness on behalf of the defendants, testified: I am twenty-seven years old, and have lived in Rochester all my life; I have been in the employ of the Vacuum Oil Company, I think, thirteen or fourteen years; I am now vacuum still man; at the time Miller left the works I was helping Mr. Patterson, under Mr. Miller, as still man; I partly ran a still. Within two or three weeks after Miller left that company I had conversations with him around the works; he then asked me if I would not leave the employ of the Vacuum Company and go to Buffalo.

The witness MATTHEWS, being recalled for further cross-examination, said: I think that I called to see Mr. W. E. Cotter, at his house in Philadelphia, somewhere about the second week in May, 1882; it might have been a few months before that; I did not at that time inform him that I was expecting the Standard people to buy our works.

Q. Did you, in answer to a question by him, whom you were making your deal with, answer this, or this in substance, "With Mr. Brewster, or Mr. Brewster and others?"—A. I didn't have any talk with him about any deal; I talked with him about some patents; I never heard any such conversation, or any such question; I didn't so answer.

WILLIAM E. COTTER, a witness on behalf of the defendants, testified:

I live in Philadelphia, and have about eight or nine years; before that I lived at Freedom, Beaver County, Pa.; I am an oil manufacturer at present, and for a few months past in Philadelphia, before that at Freedom; I have been engaged in that business about nineteen years; for the present I am interested in a work with others; at Freedom I was running my own works most of time, while I was there; the later years in which I was running it it was my own; I practically operated the work myself; my specialty has been lubricating oils. In the course of that manufacture

other oils are necessarily produced; during all of that time I have used fire-stills: I have been acquainted with the methods used for the manufacture of oils in other establishments than my own; fire-stills are run for the manufacture of oil sometimes without safety-valves; I have so operated stills in my own manufacture. During all of the time in which I have been a refiner I have had one or more stills running without safety-valves; at the present time I am running one without any safety-valve.

I have known of vapor passing off from the still through the safety-valve into the air, coming down into the fire-box, and there igniting, on two or three occasions; on these occasions I was manufacturing lubricating and burning oil, both at the same time; at the present time I could not say in what stage the distillation was at the time this occurred; it is one that may occur at any time; the result of that occurrence was simply a flash back to the safety-valve, and there burning until it was either smothered out by putting something against it, or disconnecting the flame and the supply that fed the flame; that was not an operation of any difficulty or danger at all.

I have known of a fire-still being operated with a leak in the still above the fire-box; the result was it has simply burned there; the flame has gone no further than the surface of the still, where it was fed by the petroleum that leaked from it, or the vapor, if it was above the line of the petroleum inside, and fed it; I have known that to continue during the entire distillation; upon drawing the fire we would usually take a hose and squirt water on it to put it out.

Q. In operating a fire-still without a safety-valve in the manufacture of lubricating oil in what way is the still relieved of the pressure when the application of heat becomes excessive?—A. In that case it would only have its vent through the vapor-pipe leading through the condenser out through the tail-pipe; it has always been the case that I have found that to be sufficient in the case of an unduly hot fire.

Q. Suppose in the earliest three hours of the application of fire to a charge of 175 barrels of crude, the fire having been sufficient to raise the safety-valve of the still, and the safety-valve blowing off, and the still flowing at the tail-pipe, are you able from those conditions to form an opinion as to what is going on in the still?—A. Yes, sir; I should consider that there was considerable of an eruption in the still going on in the form of boiling water; that is usually the cause of that in distillation; we call it a rumbling; all crude petroleum that I have ever used has had a portion of water in it; the little globules of oil will hold it in suspension; in the ordinary process of distillation I have seen indications of the presence of water by its expulsion in the form of steam; the presence of water in suspension in the petroleum causes a tendency to foam, or to boil over through the vapor-pipes; in the manufacture of lubricating oil from crude petroleum the residuum can not be injured in the early part of distillation by excessive fire; such injury can be caused to the residuum only when the residual product has been condensed down into a smaller body, and when the heat has more action on it by the lessening of the quantity in the still, and by the increasing heat that will surround the still from the longer use of fuel under it.

In the making of lubricating oils the percentage of residual product would vary from 15 to perhaps 22 per cent., according to the kind of oil you were aiming to make; that is the proportionate bulk to which the fire is applied as compared with the original charge of the still. To prevent the scorching of the residuum in the latter stage of distillation it is usually treated with steam, injecting a small quantity of raw steam into the mass.

I have seen the door and front of the fire-box at a fire-still heated to a red color in the course of the distillation. That is a very common occurrence; it is seldom that you run off a still without it.

I know Charles B. Matthews; I first made his acquaintance in 1877 to 1879, somewhere in that time. Sometime shortly before the second week in May, 1882, he called to see me at my house in Philadelphia. In the course of the conversation with me on that occasion he informed me, in substance, that he expected the Standard people would buy out his works. In answer to the question from me whom he was making his deal with, he answered in substance that he was making it with Mr. Brewster, or Mr. Brewster and others.

Between the 1st of December, 1884, and the first or second week in May, 1885, I saw him again at my house in Philadelphia. On that occasion he said to me this, or this in substance: "This thing of building refineries and expecting the Standard to buy them out is a poor investment; at least it seems so to you and me." To that I answered in substance, "The Standard's day for buying out refineries is past." He replied to that in substance, "I intend they shall buy me out or I shall make it very warm for them."

I saw him again at my house in Philadelphia at a time between this last occurrence and the first one. It is impossible for me to locate nearer the date of it. At that time he asked me to aid him in the Buffalo Company's litigations against the Everests and the Standard, saying that if I would I could make a good thing out of it, or that in substance.

Upon cross-examination, the witness said: I now live on Mount Vernon street, Philadelphia; my refinery is at Chester; it is the Cotter Oil Works; I attend to the management of the business; it is a limited company; we don't issue stock; I have an interest in it, and two other persons only; I am sorry to say that I am not known as one of the Standard Oil manufacturers; I don't know that I should say that I am antagonistic to the Standard Oil Company; I have always been a refiner; I was at Philadelphia up to somewhere near 1880; my works did not then burn down; I sold them out; I drew a salary after I sold out; I received a salary of \$3,000 a year after I sold out, my duty being that of looking after the same works that I had formerly had charge of, to manage in my own name, and looking after other business in the way of selling and handling oils.

Some time previous to 1879 my works were burned down; they took fire by the night-man carrying a lantern into the receiving-house, or at least to the door, and setting down there; what we call the tail-house; it was a closed room.

Q. And these gases were coming off from the oil?—A. Coming into that room. We had not taken the precaution to carry them up to the roof. These gases took fire and burned the receiving-house. A man got burned up with it. The receiving-house was right in connection with a group of buildings all adjoining together. Nothing else was burned.

Q. You turned the hose on, or something?—A. No, sir; they did not in this case, I guess.

Q. Did you have an explanation?—A. I presume there was.

Q. It was such a trivial matter you do not recollect it?—A. Well, I was not there at the time.

Q. Did you hear about it?—A. Yes, sir; I only knew in my mind remained the fact of the fire. I have had three fires; the first one was several years previous to that, at the same place; that took fire very much in the same way; it was in this receiving-room, which was a close room with a box set in the wall of the room itself, with a closed door on the inside facing into the receiving-room, and within six feet of where the oils and vapor came out, with a door on the outside to put in and out the lamp; this glass got broken while the lamp was in there burning at night; the glass that is on the inside; it left no protection from the open lamp in the room; the vapors got hold of the flame and we had an explosion; it burned that room out.

The next fire was the winter after that, at Freedom; the man was in the habit of going up to the top of the crude-oil tank to lower a pipe down in the oil, when he went to fill the still; he had a swinging pipe, and we suppose he thoughtlessly did it; he carried a lantern up with him to the top, and laid it there while he lifted the man-plate off from the top of the tank to lower the rope, and the gases coming out of the tank, the vapors coming off from the crude oil of their own accord, came in contact with the flame, and we had a conflagration.

Q. And yet you do not think there is any danger of carrying a lamp around where these vapors are coming off, do you?—A. I should not carry one on top of an oil tank with the man-plate off; it depends altogether where the vapors are; if you would give me my own selection of the quantity of vapor, I would carry a lamp around among these vapors right there in front of you; I should think I ought to know pretty much how much vapor there was there; I am not anxious to go down to the Buffalo works and have them run some vapor on a quiet day on the ground and let me stand in the middle of it and touch it off.

Q. You were sued by the Vacuum Oil Company, were you not?—A. I was.

Q. Upon the Ewing patent?—A. Yes, sir.

Q. And after they commenced that lawsuit they bought you out, did they not?—A. They did not.

Q. To whom did you sell out?—A. To John D. Archbold, after I had been sued on the Ewing patent, a good long while afterwards.

Q. How long after you sold out to John D. Archbold did this action continue? How many hearings did you have?—A. Until I secured an agreement from Mr. Everest that if his patent suit against me terminated in his favor, that he should not claim from me any back royalty on any use he might find I had made of his patent.

Q. Did you not understand that your interest in the lawsuit had been merged practically in the complainant's interest in the action against you?—A. No, sir; I did not; neither did I understand that any decree obtained in that litigation would be collusive; they never got a decree against me, and the case was abandoned.

I stated that I have seen stills used in the manufacture of lubricating oils without the safety-valve; we did not have what is known as the pyrometer attached; I don't have anything to indicate the amount of heat; I run stills without anything to determine the heat, or any safety-valves; I use ordinary precautions about my fires. At the time I saw the vapors ignite and following up to the vent, where it burned, I was standing within a few feet of the flash; I could see the flash; I did not move when I saw it.

In the manufacture of lubricating oils it is not well to continue an extremely hot

fire until you have got down to your tar; the time is usually lessened some; we are more careful of it then; the idea is to reduce the residuum to a certain consistence; if you carry it on further, the residuum is not worthless for the manufacture of oil, but still it is injured; if you go beyond a proper consistence, you are likely to injure your residuum.

All three conversations with Matthews, that I have spoken of, were at my house on Mount Vernon street, Philadelphia; the first was in the spring of 1882, before the second week of May; no one but myself and Mr. Matthews were present; the second was between that and the spring of 1885; no one but he and I was present; the third was between December 1, 1884, and the first or second week in May, 1885; I think the first person to whom I mentioned the conversation of May, 1882, was my wife; I did not mention it to any one else whose name I can recollect; I have mentioned it recently to persons connected with this lawsuit. I came here on my own account, without being sent for; after I had said I would come, they asked me to; I sent word that I would come, to Mr. Archbold, the first day I read in the paper of the trial.

Q. Then you are a volunteer?—A. I am; I read of it in a New York paper, at Wilmington, Del.; that was after that trial had commenced; it was the first notice I saw of it; I telegraphed to Mr. Archbold, at New York; he was not there; I arrived here last Tuesday morning; I am stopping at the Genesee; I knew Mr. Archbold before this; I could not have sold my works to him without knowing him; I wrote to Mr. Archbold about the last of these conversations about a year ago, I guess; I wrote that letter because I wanted to tell him about it. I don't spend any of my time in the Standard office in New York; I don't go there; I was once in the office, and staid, I think, ten minutes.

Being further examined on behalf of the defendants, the witness said: I am not connected with the Standard Oil Company in any way, shape, or form, nor with the Standard Oil Trust, or anything of that name; I have no interest in any way in the Standard Oil Company; I am not in any shape a debtor of the Standard Oil Company; my business is not in any way whatever connected with that of the Standard Oil Company; I don't think that up to to-day they knew that I was carrying on business there in Philadelphia, as a manufacturer; my business is in competition with that of the Standard Oil Company as far as a small business like mine can be classed as competition. The suit brought against me on the Ewing patent was one in which large damages were claimed against me for infringement; after I ceased to manufacture in that concern, that did not in any way tend to diminish the claim against me for damages up to that time; I continued to defend that action against me until I obtained a stipulation waiving all such claims against me, and then I abandoned the defense of it.

Being further cross-examined, the witness said: The capacity of my manufactory is an eighty-five barrel still; I have no contracts as to the location or territory where I shall sell oil; I sell wherever I please, wherever I can find a customer; the Standard Oil Company never heard of my manufactory from me; I don't know that I have met Mr. Archbold but once in a year before I came here.

The defendants here offered in evidence from the pay-roll of the Buffalo Lubricating Oil Company, produced by the witness Matthews, in pursuance of a subpoena, the following entries:

**The payments of wages for the week ending—**

May 28, 1881,	amount to	\$138.63 to 15 employes.
June 4, 1881,	amount to	162.51 to 16 employes.
June 11, 1881,	amount to	112.70 to 13 employes.
June 18, 1881,	amount to	151.93 to 14 employes.
July 2, 1881,	amount to	119.27 to 11 employes.
July 9, 1881,	amount to	130.23 to 10 employes.
July 16, 1881,	amount to	127.70 to 10 employes.
July 23, 1881,	amount to	151.87 to 15 employes.
July 30, 1881,	amount to	142.63 to 12 employes.
Aug. 27, 1881,	amount to	114.13 to 15 employes.
Sept. 17, 1881,	amount to	106.96 to 10 employes.
Oct. 22, 1881,	amount to	163.37 to 19 employes.
Nov. 5, 1881,	amount to	174.40 to 17 employes.
Nov. 12, 1881,	amount to	163.78 to 16 employes.

Each of the preceding dates is Saturday. It also appears from the pay-roll that Jerry Thomas worked upon each day of the week ending Saturday, June 18, 1881.

The names of the employes on several of these dates, as entered in the pay-roll, are as follows:

On July 2 the names of the employes were: C. C. Beardsley, John Avery, B. Taylor, Jerry Thomas, Geo. Massey, P. Griffin, Dick Levis, C. Reanor, T. Miller, J. Sullivan, Louis LaPres.

August 27: C. C. Beardsley, Jerry Thomas, Dick Porter, M. Kiley, F. Bissett, Louis LaPres, John Johnson, Rube Stillwell, Lawrence Moore, F. R. Beardsley.

October 22: C. C. Beardsley, F. R. Beardsley, Jerry Thomas, F. Bissett, M. Kiley, Dick Porter, Louis LaPres, Johnson Gleason, Walter Groves, Bill, Charles Ashley.

October 29: C. C. Beardsley, F. R. Beardsley, Jerry Thomas, F. Bissett, M. Kiley, Dick Porter, L. LaPress, Johnson Gleason, Walter Groves, Charles Ashley, German, Frank LePaige, LaPress' brother, Tim. McGuire, Pat. Griscoll, Wales, W. Brewster.

JOSEPH P. DUDLEY, a witness on behalf of the defendants, testified:

I am manager of the Star Oil Company, and have been in the oil business for about twenty-five years; I have refreshed my recollection by examining records so that I can state what the price of illuminating oils was in the city of Buffalo in the years 1881 and 1882; the price to retail grocers for oil commonly used at that time was 5½ to 6 cents; there are fifty gallons to a barrel; that would be \$2.75 to \$3.00 a barrel for the refined oil.

Upon cross-examination the witness said: In the early part of 1881, the winter of 1881, I think, common oil was 5½ cents; the fluctuations in 1881 were very slight; in the middle of 1881 I should say 150 water-white oil was worth 10 cents; that was the price.

The Star Oil Company is a Standard concern; it is not a manufactory; it distributes oil.

Being further examined on behalf of the defendants the witness said:

Q. Do you know what the price of lubricating oil was?—A. Well, lubricating oil covers a multitude of sins; there were various prices of lubricating oil; from 5 cents, according to quality.

Being further cross-examined the witness said: We are selling 150 water-white oil to-day at 6 cents; I can not tell what the price of crude oil was in Buffalo in 1881; I was not dealing in it; I might have known the prices of crude oil at that time, but I don't know them now.

(Upon looking at a paper presented to him.) That would seem to be a sale of oil by Dudley & Co. on February 19, 1881, of 242½ gallons of 120 at 12 cents per gallon; I think very likely that sale was made; that is a medium grade of oil; it is not what is considered a low grade; that sale was in the spring of 1881; on my former examination I was asked as to the winter of 1881; that is not in the winter of 1881, as I understand; I meant to speak from July, 1881, and so on.

Mrs. CHARLOTTE B. WILSON, a witness on behalf of defendants, testified:

I live in Rochester, and am the wife of J. Scott Wilson; I have known Charles B. Matthews since the winter of 1880, or spring of 1881; I remember his being at my house in Rochester about the middle of March, 1881, and having a conversation there with my husband about coming to Buffalo; they were in the parlor and I was in the back part of the parlor; they are divided by double doors, which were open; I was near enough to hear what they were saying; I then heard Mr. Matthews say to my husband, in substance, that the Standard Oil Company would buy out the new concern; I heard him say further, "We must make a good showing and then the Standard will buy us out."

Upon cross-examination the witness said: I think my husband owned stock in the Buffalo company; I never saw the stock-book of the company.

The witness J. SCOTT WILSON, being further examined on behalf of the defendants, said:

I heard you read the names of the persons from the pay-roll which Mr. Matthews produced; I recognized some of those names as the names of persons employed at the Buffalo Lubricating Oil Works, but not all of them; I can not tell you what ones I did not recognize; we did not have any persons on our pay-roll, that I know of, except those that were employed at the works.

THOMAS G. OUTERBRIDGE, a witness called on behalf of the prosecution, testified as follows:

I reside in the city of Rochester, N. Y., and am one of the attorneys for the defendants in this action; I know Captain Mack; he was employed by me in behalf of the defendants to look up evidence in Corry, Pa., and this employment commenced at least a year ago.

Q. He had no other business except to look up evidence, that you know of?—A. That is all.

It was admitted by the prosecution that water when raised to the densest form of steam is increased six hundred volumes in bulk.

Witnesses from the city of Rochester were examined in support of the general character and standing of the defendants H. B. and C. M. Everest in that community, as follows:

Charles F. Pond, secretary of the Rochester savings bank, who said that during the whole of the period of ten or fifteen years their general reputation was of the very best.

Alfred Wright, manufacturer of perfumery, who said that their general character and standing as men for many years that he had known them had always been high.

Daniel W. Powers, banker, who said that for many years their character and standing as men in that community was very good.

Samuel Sloan, president of the Mechanics' savings bank, who had known the father for twenty years and the son since he was a little boy, that their general character and standing in the community was not surpassed by any business men in the city.

Cornelius R. Parsons, mayor of Rochester for nearly twelve years continuously, who said that their general reputation and standing was excellent.

John H. Rochester, managing officer of the Mechanics' savings bank, who had been acquainted with their character and standing for ten years or more, and said that it was of the highest character.

William S. Kimball, manufacturer of tobacco, who said that it was as good as that of any citizens of Rochester during many years that he had known them.

Rufus A. Sibley, dry goods merchant, of the firm of Sibley, Lindsay & Curr, who had known Charles for ten or twelve years and his father much longer, who said that their character and standing was excellent, and had always been.

Louis Ernst, dealer in hardware, who said that it had been good during all his acquaintance with them.

The witness MILLER, being re-called for further cross-examination, said:

I knew a man in California by the name of Denis; I had a farm in San Bernardino County, on the Colton road; I think I negotiated for the purchase of it in August, and in September or October I went back there.

Q. Did you, in September or October of 1881, at your farm in San Bernardino County, say to Mr. Denis that you would down the Everests if it cost you your life?—A. Never.

AUGUSTUS H. DENIS, a witness for the defense, testified:

I heard the witness Miller, at his farm in San Bernardino County, Cal., in the month of September, 1881, make the remark that he would down the Everests if it cost him his life.

Being cross-examined the witness said: I came from California, but at this present I came from Florida; I live at Tampa; I arrived here Tuesday night; I am raising oranges, and have an orange grove at Tampa; I went there last November; I had stopped there on my way to Havana several times three or four days, but I never lived there before until I purchased this orange grove last November; I resided in California for a year or so; I was living in New Orleans, La., before I went to California; I was born in New Orleans, and lived there off and on all my life; I am of French descent; in New Orleans I was doing nothing, living with my father; he is a lawyer; in California I was with my brother for a while; he was the editor of a newspaper, and I was with him for a while in an office; I did not do much of anything on the paper except help in any way I could; I would occasionally keep the books; I did nothing besides being in the newspaper office.

Q. Did you do anything else but occasionally keep the books?—A. Well, I remained in the office during the day.

Q. You sat down in the office?—A. Yes, sir.

Q. Anything else besides sitting down?—A. As little as I could.

Q. As little as you could?—A. Yes, sir.

I first made the acquaintance of Hiram B. Everest last Wednesday morning, I believe; I never saw him before; I first made the acquaintance of Charles Everest last Tuesday night.

The conversation I have spoken of occurred on Miller's farm, on the Colton Ridge, between Colton and San Bernardino; there was present a German by the name of Frank Mindler, and Mindler's wife was there; after Miller said this, I never told it to any one that I know of, until questioned if I had heard it, then I said I had heard that remark; I was asked by Captain Mack in New Orleans if I had heard any remarks; I saw Captain Mack at the St. Charles Hotel; I think it was January, a year ago; Captain Mack did not write it down, to my knowledge; He was in New Orleans a week or more, I suppose; I do not know how he came to find me; I never told this story to any one except Captain Mack in my life; and Captain Mack came right to New Orleans and found me there.

It was admitted by the district attorney that the number of barrels of crude petroleum run by the Buffalo Lubricating Oil Company to the 1st of January, 1882, was 18,293.

The defendants here rested their case.

HIRAM BENEDICT, a witness called in rebuttal on behalf of the prosecution, testified:

I reside in Lockport; my business is farming and other things; I am one of the directors and also treasurer of the Buffalo Lubricating Oil Company; I know Mr. Alfred P. Wright of this city, and have, perhaps, twenty years; I also know J. Scott Wilson; I was present at the conversation between Alfred P. Wright and Mr. Matthews, at Henry Morse & Co.'s office, in Buffalo, in October or November, 1885; it occupied, I should say, not more than half an hour, it might have been longer; it was talked over there at the time in regard to the law-suits pending, and about the indictment; something was said there by Mr. Matthews about withdrawing the criminal prosecution; Mr. Wright proposed to buy the capital stock of the Buffalo Lubricating Oil Company; he said he would get us a good price for our capital stock, provided we would withdraw the civil and criminal suits; Matthews told him that if they bought the capital stock of the company, they could do what they was a mind to with the civil suits, but with the criminal suit he had nothing to do; the people had that in charge; I told him just what my lawyer told me to tell him beforehand.

I had quite a number of conversations or talks with Mr. Wright on the subject, but only one when Mr. Matthews was present that I recollect.

I know that J. Scott Wilson never owned any stock in the Buffalo company, from the fact that no stock was ever issued at the time or since, that J. Scott Wilson could have.

I came to Buffalo at the first beginning of the business, after Miller left; I could not see that Mr. Wilson ever did anything around there but talk; he was never superintendent of the works; he never had the management of the oils; his business was to sell oil as he was instructed.

Upon cross-examination, the witness said: I am sure that Mr. Wilson was never a stockholder in our company; I mean by that that he never bought any stock; he never was a stockholder; some people bought some and did not get it, but he did not buy any; what I mean is that no stock was issued that he could get or have in his hands or see; there was none issued up to the time he left our concern; there were stockholders, because they subscribed for it and paid for it; I don't know that Mr. Matthews was our stock commissioner for the issuing of stock; I don't know whether I know Matthews' handwriting; I have seen it.

(Paper shown witness.)

Th it looks like Mr. Matthews' signature; I should think it was; the company was not organized then though.

The paper was offered and received in evidence as Exhibit 6.

#### EXHIBIT No. 6.

OFFICE OF BUFFALO LUBRICATING OIL COMPANY,  
BUFFALO, May 2, 1881.

Received of John S. and John G. Wilson, \$100.10 per cent. of \$1,000, subscribed this day to the capital stock of the Buffalo Lubricating Oil Company, Limited.

C. B. MATTHEWS,  
Stock Commissioner.

I know Wilson never made any of the payments; I know it because I know I never received any of the money; the company never received the money; I was not living in Buffalo at that time, I lived in Lockport; in 1881, after the 1st of June, I spent a large portion of my time in Buffalo, more than half of the day-time; I have been here almost every day for the last twenty years; my business here was various things.

Q. And you say that he never paid the balance of his subscription?—A. No; he said he was defunct and could not take it.

Q. I did not ask what he said; what did you say?—A. He said he was defunct and could not take the stock; I carry on some farms; the farms are not in Buffalo; also in the business of boat-building, that is carried on at Lockport; also in the management of some canal boats, that is carried on in Buffalo; also in the forwarding and commission business in Buffalo, and various things besides I do if I think I can make an honest dollar at it in an honest way; those are my regular businesses.

The witness MATTHEWS, being recalled on behalf of the prosecution, testified:

I was not in the city of Philadelphia during the years 1884 and 1885; I know it from my recollection, and from my diary; it shows where I was every day; I have

examined that diary. I know the witness, William O. Allison; I met him in the fall of 1885 at our Main-street office; Mr. Allison said, "I should think you would be tired trying to carry on the oil business, and if I was in your place I would sell out." I told him I would rather sell out than be crushed out; he said he knew more about the Standard's power to crush anybody out than he used to; he asked me what we would take for the stock of our company. I told him that I had had a little talk with our directors, and that we would sell it for \$300,000. He said that then that will control the civil actions, the actions you have pending. I told him it would. He asked me, "Don't you think that is a good deal too much?" I said that they had done us great damage, and that the damage done us, with the value of our works and trade, it would be a reasonable price. He asked me if I could settle, or would settle the criminal action pending. I told him that I could not—had no right to do it—it was out of my hands. He says, "Can you trust the district attorney in that matter?" I told him I could. He says, "The Standard Company can give him anything, even to being governor of a western Territory." I told him I was aware of their power in these matters, but that was a matter that was out of my hands. I did not at any time during that conversation say that the criminal case would be *nolle prossed*. Nothing was said about my being taken into the Standard Oil Company's employment. He asked me if I would come to Cleveland if he telegraphed me to do so. I met Mr. Allison at Syracuse, subsequently, at the Globe Hotel. Nothing was said there about my share of the money, only I said that I was tired, and my share of the money would give me a chance to take a trip to California or Europe, or somewhere. Nothing was said about \$150,000, or \$100,000 being my share, or anything of the kind.

Upon cross-examination the witness said: At some of the conversations, I wouldn't be positive which one, there was something said about my going to Europe or California; there was something said about Miller I remember. It was not said that he could not be got back to testify unless I wished him to come. Something was said about his being out of the State, and upon the subject of his not coming back into the State to testify unless I wished him to. It came in connection with our talking about how this indictment could be managed.

Being further examined on behalf of the people the witness testified: I told him, Mr. Allison, that a persistent effort had been made by the Standard to get Miller out of the State where he was, and out of the country, and I was afraid they would get him away, so that he might not be used in this case. There was not anything said particularly on the subject of Miller, in reference to getting rid of the indictment in case they paid the \$250,000.

The people here rested their case.

J. SCOTT WILSON, being recalled on behalf of the defense, testified:

Ten per cent. was all I paid on the stock; there was no stock issued; I was not required to pay the rest, and I did not pay it; I paid as much as the others did at the time.

The evidence here closed, and the above was all the evidence taken on said trial.

All the evidence offered upon the trial of this action against the defendants Rogers, Archbold, and McGregor, and also all evidence offered in support of the charge of falsely bringing and maintaining suits, has been as far as possible omitted from this bill of exceptions.

The defendants requested the court to direct a verdict of acquittal as to each of the defendants, upon the same grounds as at the close of the proofs for the prosecution.

The motion was denied, and the defendants severally excepted.

The court thereupon proceeded to charge the jury as follows:

*Gentlemen of the jury:*

Wearied and anxious for your release, as I know you are, still, gentlemen, the gravest and most important of your duties is yet to be discharged. You have sworn that you will well and truly try, and a true verdict render, according to the evidence. This duty you are called upon to discharge in reference to the defendants that are on trial before you. Its honest, conscientious performance is demanded by the people; the defendants are entitled to it.

It has been said that this case was an important case, and so it is, for the public is interested in the preservation of public and private rights, as well as public and private property, and is therefore interested in enforcing the laws that are enacted to preserve them. The defendants are interested because their character and personal liberties are at stake. It is also important because of the important personages connected with this litigation, in which is involved the character of men who are known widely throughout the United States in the business and in the commercial world.

The evidence, gentlemen, to which you have listened is of two characters, that which is known as direct evidence, and circumstantial evidence. Direct evidence is

that which is given from the mouths of witnesses who speak from personal knowledge, knowledge which they have derived by means of their senses, as that which they have seen, heard, and can speak of with certainty. Circumstantial evidence is a variety of facts established by means of direct evidence, a variety of circumstances, which, connected and united together, force the mind to a conclusion upon a given subject. And it is commonly likened to a chain with its various links. As I have stated, we have in this case both direct and circumstantial evidence. In deliberating upon the evidence, and in determining the questions which will be submitted to you for your determination, it becomes necessary for you to consider and weigh the evidence, and in doing so you will be called upon to determine the guilt or innocence of these defendants.

In determining the question as to whether a person charged with crime shall be convicted or not it becomes the duty of the jurors to determine the question, and to become satisfied as to the guilt of a person charged, beyond a reasonable doubt, and in case there still remains in the minds of the jurymen a reasonable doubt, then we are commanded, under the statute, to give the prisoner the benefit of such doubt. We are thus, gentlemen, brought to inquire what is a reasonable doubt, for a reasonable doubt is not every fancy that seizes upon the mind of man, but it must be, and is, a doubt which is founded upon some facts, some circumstance, or some theory which creates a reasonable doubt in the ordinary mind of man, and when such doubt exists, founded upon some fact, circumstance, or theory, then the defendants are entitled to the benefit of it. If, however, the jurors become satisfied beyond such reasonable doubt, then the people are entitled to a verdict of conviction.

The statute of our State, gentlemen, provides that where two or more persons shall conspire to commit an offense, and so on, they shall be guilty of a misdemeanor. And the particular provision of the statute to which I wish to call your attention is, that in case two or more persons shall conspire to commit any act injurious to the public health, or to public morals, or to trade and commerce, or for the perversion or obstruction of justice, or the due administration of the law, they shall be deemed guilty of a misdemeanor.

You will thus see, by the provisions of the statute, that in case two or more individuals conspire or combine together to do an act injurious to trade or commerce, that such persons, in so conspiring together, become liable under this statute.

The indictment in this case charges these defendants with conspiracy, and the offense charged is that they conspired together to injure trade and commerce.

The first question, therefore, which it will become necessary for you to determine from the evidence, is as to whether or not there is a combination between these defendants, an agreement, an arrangement, a determination, a conspiring together of these defendants, for the purpose of injuring trade and commerce; this will be the first question for you to determine. If you come to the conclusion that there was such a determination, such a combination, such a conspiring together, or conspiracy, then it will become necessary, in the further determination as to whether a crime has been committed, for you to determine whether or not there has been any overt act committed on the part of these defendants tending to carry out and complete the injury to trade and commerce so agreed upon. These, gentlemen, are the provisions of the statute, and this is the offense which is charged against the defendants in this case. The important question which we are to determine, and which you are called upon to determine here, is as to whether or not these defendants, Hiram B. Everest and Charles M. Everest entered into a conspiracy, or combination, or agreement to injure trade and commerce. In considering this question, it becomes your duty to go back and to review the evidence to which you have listened during the last two weeks.

It appears from this evidence, the undisputed evidence, as I understand it, that there was organized and in operation in the city of Rochester, in this State, a corporation known as the Vacuum Oil Company; that the defendant, Hiram B. Everest, was the president of that corporation, and Charles M. Everest was an officer also of the corporation, and that they were engaged in operating it chiefly with other stockholders. It appears further from the evidence that in 1879, some portion of the stock of this corporation, two-thirds of it, if I recollect correctly, was sold to certain gentlemen in the city of New York, by name Rogers, McGregor, and Archbold, but the operation of the corporate property still continued on under the direction of the Everests, H. B. still continuing to be the president, Charles M. the vice-president, and also, I believe, he was appointed the general manager of it. Thus it continued down until 1881, when Wilson, who was in the employ of that company, Matthews, who was also in the employ of that company, and Miller, another employé, entered into an agreement and an arrangement between themselves to quit the employment of the Vacuum Company, and to come to Buffalo and construct oil works in this city.

It appears that they did come to Buffalo, and entered upon the construction of an oil refinery here, and that this refinery progressed to such a point that on the 15th day of June, of that year, the first run of oil was made from one of the then-completed

stills, and that this run was a 175-barrel run, and that during the progress of the distillation it appears that the safety-valve upon the top of the still blew open, and that there was vapor and gases that escaped through the safety-valve, and that it floated away upon the air.

Now, gentlemen, this is undisputed history in the case. No question is made about it. It is claimed on the part of the public prosecutor, that the blowing open of the safety-valve on the 15th day of June was in accordance with an arrangement previously made by and on the part of these defendants with Miller, by which these works, which were then in progress of completion in the city of Buffalo, were to be injured and destroyed. This is the claim that is presented on the part of the prosecution. And it is claimed that this attempt was made to thus blow up the works in furtherance of the unlawful combination and agreement that was made, or was claimed to have been made, between these defendants at some prior time. Now, gentlemen, this becomes the chief and the important inquiry in this case; and in the consideration of it I invite your attention with much care to the evidence that has been given on behalf of the respective parties in this case, both that on the part of the prosecution and on the part of the defense. It is thus claimed on the part of the prosecution, whilst on the part of the defense it is claimed that there was no agreement or conspiracy between these two defendants to do any injury to the Buffalo works, and on the other hand it is claimed on the part of the defense that there never was any attempt to do any injury to the Buffalo works; but, on the other hand, that the blowing open of the safety-valve on the occasion of June 15 was but an ordinary occurrence, such as was liable to happen in the manufacturing and distillation of oils; that it frequently occurs; and it is claimed that it was merely a careless act, unintentional, and was not done in accordance with any prearranged or concerted plan on the part of the defendants and Miller. Now, gentlemen, as bearing upon the claims of the respective parties in this regard, I invite your attention to the evidence. The first evidence we have as bearing upon this question occurs in the testimony of Mr. Miller, who testifies to his going to Rochester and of his having an interview with Mr. Everest at Mr. Truesdale's office; and his testimony is, in substance, that they were at Truesdale's office whilst they were discussing the question as to how Miller could get relieved from his agreement or contract with the Buffalo people; that whilst they were discussing that question the suggestion was made by Mr. Everest that he could do something in reference to the works; that the suggestion was made that he could cut up something or do something to injure them or something of that kind. This, gentlemen, was the language of Miller as to what took place in Truesdale's office; and then again we have, as bearing upon this question, the testimony of Mr. Truesdale, who was also present; and he tells us that they were discussing this question as to how Miller could get relief, and so on, and then he says that the defendant, H. B. Everest, said: "Suppose he should arrange the machinery so that it would bust up or smash up, what would the consequence be?" to which Mr. Truesdale replied that it was his opinion that if it was negligently and carelessly done, not purposely done, he would only be civilly liable for the damages caused by his negligence, but that if it was willfully, intentionally done, then that there would be a criminal liability. And on the cross-examination Mr. Truesdale further testified that this suggestion was made, and that at the time it was so suggested that they were discussing the question in reference to Miller's getting released, and that the suggestion was made in reference to some careless act on the part of Miller, careless, negligent, act, not intentional act, so that Miller would get discharged; that is, discharged by the Buffalo company. Now, then, one other piece of evidence, and that is on the part of Mr. Miller again, who testifies to having had a conversation with C. M. Everest, and he tells us that it was on or before the 23d day of June, the precise time he is unable to state, but that it was on or before that date, he tells us, and the conversation, as related by Miller, was to the effect that Charles M. told him to go back to Buffalo and construct the pipes so that they could not make good oil. And then it was further suggested to him, as Miller claims, that Charles stated that it would be a good thing if he should give them a scare, or something to that effect. This, gentlemen, I believe is all the evidence, all of the direct evidence bearing upon the question as to whether or not there was an agreement or an arrangement between H. B. Everest and Charles M. Everest to do an unlawful act in reference to the Buffalo works. Now, then, on the part of the defendants, Mr. H. B. Everest, he tells us that no such suggestion was made by him at Mr. Truesdale's office as is related. He tells us that he did not so question Truesdale, but he says that on that or some other occasion, he can not recall which, there was a suggestion made by Mr. Miller in reference to his fixing the pipes, and so on, and that Mr. Everest considered the suggestion as scandalous, and so on. So that, gentlemen, you have the evidence of the respective parties bearing upon this question.

You have to take into consideration all the circumstances that have been sworn to by the various witnesses, bearing upon this transaction, for the purpose of determining in your own minds as to whether or not there was this combination, this agree-

ment, this conspiring together between these defendants. If you come to the conclusion from this evidence, that there was no conspiracy, why, then, so far as this branch of the case is concerned, the defendants would be entitled to your verdict. If, on the other hand, you should come to the conclusion that there was this conspiring together, that there was a conspiracy between these defendants on that occasion, then it will be your duty to pass on and consider the other question, and that is as to whether or not there was an attempt, an act, subsequent to that, on the part of these parties, by which they attempted to carry out the arrangement, the agreement, the conspiracy, made by them.

Now then, for the purpose of determining whether or not this was carried out, whether or not there was an attempt made to blow up the works, we have the evidence as to what took place on the 15th day of June, and as to what occurred on that day, there appears to be little conflict in the testimony of these witnesses. For, as I have already stated, it is a conceded fact that this safety-valve did blow open in the manner described by these witnesses. It is contended on the part of the prosecution that this was a willful act; that it blew open in accordance with that which was intended on the part of these parties beforehand, and that for that purpose, Mr. Miller, who was there in charge of these works, had caused an unreasonably hot fire to be constructed under this still, a hotter fire than was necessary or should have been built on that occasion, and that he went away from the still, and so on, so as to be absent when the explosion did in fact take place. This is the theory that is presented on the part of the prosecution; whilst on the part of the defendants it is claimed that there is no such inference to be drawn from this testimony; that there is nothing in the blowing open of the safety-valve that tended to show any criminality on the part either of these defendants, or of Mr. Miller, and that the building of the fire that was built on that occasion, that it was no hotter or greater fire than was necessary for the rapid distillation of that quantity of oil that had been put in the still.

Now, then, gentlemen, as to what was actually intended by Miller there on that occasion, we are left wholly to the inference that is to be drawn from the surrounding circumstances. Miller is not questioned upon that subject as to whether or not he intended to blow up these works on that occasion. His lips have not been opened. He has not told us whether it was his intention to blow them up, in accordance with the suggestions made to him by these defendants. Therefore, we are left wholly to determine this question from the surrounding circumstances of the case. And if you become satisfied that there was no attempt on the part of Miller there on that occasion to blow up these works, but that this escaping of the gas through the blowing open of the safety-valve was but a careless act, owing to the building of a hot fire, and that there was no wrong intention, why, then, of course, so far as this branch of the case is concerned, the defendants would be entitled to your verdict. But if, on the other hand, you become satisfied, and that beyond reasonable doubt, that there was an attempt there on that occasion to blow up these works, to destroy them, and that a fire had been arranged in accordance with that intent and purpose, and that this was being done by Miller, in accordance with a suggestion or plan that had been previously arranged between him and these defendants, in the city of Rochester, then, gentlemen, it will become your duty to convict of the crime charged.

Much evidence, gentlemen, has been taken as to the effect of blowing open the safety-valve there on this occasion, as to whether or not it was dangerous, as to whether these escaping gases were inflammable or not. Of course, the only importance of this testimony is for the purpose of aiding you in determining what was the intent and purpose of this transaction; whether or not it was the intention to blow up these works in that manner, or whether it was simply a careless act on the part of Miller, or those who were in charge of the still, for which these defendants are not responsible. So much, gentlemen, for the question of the conspiracy as charged in reference to blowing up or injuring of the Buffalo works. There is one other overt act charged in this indictment, which it is claimed was an injury to trade and commerce, and that is that Miller, an employé of the Buffalo works, was enticed away by these defendants. Now, gentlemen, in reference to the enticing away of a servant by one individual from the service of another, it is not of itself criminal, but you have no right to go to your neighbor's and entice your neighbor's servants from his employment, and in case you do so you become liable for damages, such as he can prove that he has sustained by reason of your unlawfully enticing away his servant. Still you would not be guilty of a crime. But if in the enticing away of a servant, if the effect of that is to injure trade and commerce, then, gentlemen, it may become an offense within the provisions of this statute, provided there is a conspiracy, and the enticing away was done in accordance with and in the furtherance of this conspiracy.

Now, gentlemen, the evidence as to whether or not Miller was enticed away is really in a nutshell. There is no question but that he left the employ of the Buffalo Company; but that he re-entered the employ of the Vacuum Company; but that for

some weeks he was in Boston, and that afterwards he went to California. There is no question in reference to that transaction. But it is contended on the part of the prosecution that he was induced to come to Rochester to see Charles M. Everest; that he was requested to come there again and to meet the father, H. B. Everest, when he returned from the West; and that after he had waited upon these gentlemen that representations were made to him to the effect that the Buffalo Company could not continue for any great length of time; that suits were to be brought against them, and that the best thing for him to do was to get out of the company, and to get his property in such a shape as that it could not be reached by execution issued upon a judgment. This is the claim that is presented on the part of the prosecution, and it is in substance the story of Miller.

Now, on the part of the defendants quite a different story is told. It appears in the deposition of Mr. H. B. Everest, which has been read in evidence here, and it is to the effect that he came to Rochester and waited upon him soon after his return from the West, and that he was asked the question as to whether or not he was there for the purpose of making any proposition in reference to his employment; that he had stated that he had made up his mind to leave the Buffalo concern, and that he was upon a promissory note for \$5,000, and he wanted to escape liability; that Mr. Everest then informed him that he had no proposition to make to him, that the time had passed, that he was too late, and so on; and finally, after further conversation in reference to how he had been deceived in reference to his employment and connection with the Buffalo concern, that finally it was talked over and agreed to by them, by which he should go to Mr. Truesdale's office and seek his advice as to what he ought or had best do in the premises; and that subsequently they went to Mr. Truesdale's office, and that powers of attorney were subsequently given, by which he was given power to transfer his property, and so on.

Now, gentlemen, the question of fact for your determination is whether or not these defendants, by sending to Buffalo, or communicating with him in Buffalo whilst he was here in the employ of the Buffalo Company, whether or not they held out any inducement for him to leave the employment of the Buffalo Company, and to enter their employment. Or whether, on the other hand, Miller, of his own free will, in the exercise of his own judgment, made up his mind to leave the Buffalo Company, and then, after having so made up his mind of his own accord, went to Rochester and offered his services to that company. If you come to the conclusion that Miller had determined to quit the Buffalo Company, to get out of it, and save himself from responsibility upon the note, if he could, and that, acting under that determination, he of his own accord went to Rochester and offered his services there to that company, then, gentlemen, they had the right to hire him, because the servant had come to them of his own free will, and tendered his services.

But if, on the other hand, they enticed him away, either by threats or promises; got him to leave the Buffalo Company and enter their employment; then, gentlemen, they would become liable civilly for such damages as the Buffalo parties sustained by reason of having their servant enticed away, and in case you come to the conclusion that the fact of so enticing him away was an injury to trade and commerce, and that that done was in accordance with this conspiracy, which is charged to have been made between these defendants in the city of Rochester to injure and destroy the Buffalo works, then, gentlemen, it would be criminal.

Upon this branch, then, gentlemen, it would be necessary for you to determine whether or not the services of Miller were so essential to the Buffalo works as that the taking away of his services from those works was an injury to trade and commerce. It is contended on the part of the prosecution that he was the experienced man; that he understood about the manufacturing of the stills and their operations, and that there was no one else connected with them that could manufacture good, merchantable oil, or that could carry on the completion of the works properly, and that the taking of him would interfere with and stop to some extent the further completion of the works, and that they were not able to manufacture a good oil thereafter. On the other hand, it was claimed that Miller was not any very great expert; that Mr. Wilson was the chief man in charge of the construction of the works and the manufacturing of the oil; that they were conducted under his directions, and that these parties mainly interested, that is, Mr. Matthews, and so on, expressed joy that Mr. Miller had gone, by stating that they were glad that they had got rid of him, etc. So, that, gentlemen, in case he was not necessary in the construction of the works, or in the manufacturing of the oil, if that could be done as well by others there in their employ, or those who were really at hand, then the enticing of him away would not necessarily retard the work, and it would not follow as a consequence that there was an injury to trade and commerce. But if, on the other hand, you come to the conclusion that he was an essential man there, and that they could not manufacture good, merchantable material without him, and the taking of him away prevented such manufacturing, then you would have the power to say that the enticing away of the servant was an injury to trade and commerce.

So much, gentlemen, for the evidence as bearing upon those two main overt acts charged in the indictment.

There is still another overt act charged, and that is the bringing of false suits; but the bringing of these suits has not resulted in the issuing of any injunction by which the operation of the works has been interfered with. There has not been any evidence produced before us showing that these suits were false suits. The fact that the suits were unsuccessful does not necessarily establish the fact that the individuals bringing them knew that they were false suits beforehand. Because the evidence fails to show want of probable cause upon the question of the bringing of the suits, this prosecution—that is, the prosecution of these suits—may be omitted from your consideration; for I am of the opinion, as I have already expressed in reference to the New York defendants, that the evidence upon the question of these suits is not sufficient to authorize a verdict upon that branch of the case alone. So, that, gentlemen, the question that you are to determine is as to whether or not there was a corrupt agreement and conspiracy between these defendants, and whether or not there was an attempt to carry that conspiracy into force and effect, either by the blowing up or destruction of the works, or by the enticing away of a servant, to the injury of trade and commerce. Having determined this question, you will determine all that it is essential for you to determine in this case.

Now, gentlemen, on the part of the defense it is claimed that there has been some conspiracy on the part of these parties who have been sworn as witnesses for the prosecution; that there was an arrangement between them by which they were to compete with the works of the Vacuum Oil Company; that they were to enter upon the construction of the works here in Buffalo, and that these works were constructed for the purpose of forcing the Standard Oil Company or the Vacuum Oil Company to purchase them out; that that was the scheme and arrangement of these parties. Now, then, gentlemen, as bearing upon that question, why, you have heard the testimony of the witnesses, and I have no further comment to make in reference to it. Much evidence has been given on the part of the defense as to the declarations made by Mr. Matthews and by Mr. Miller on different occasions, and these declarations were introduced in evidence for the purpose of showing Mr. Miller's interest in the litigation, and for the purpose of showing some conspiracy on the part of these parties. Another piece of evidence, gentlemen, to which it becomes my duty to call your attention, is the question of good character. The defendants here have introduced the testimony of several witnesses from the city of Rochester, who have testified in reference to the good character of these defendants. It becomes the duty of the jurors, and it is the right of the defendants, to have this evidence taken into consideration in connection with the evidence, the other evidence that has been given in the case, and it is for you to say from all of the evidence, that of the good character as well as the other evidence, whether or not the defendants are guilty of the crime charged. If you come to the conclusion that they are guilty of the crime, and that beyond reasonable doubt, after having considered all of the evidence, including that of good character, then, gentlemen, it becomes your duty to convict. If, on the other hand, you are not satisfied of their guilt beyond a reasonable doubt, then, of course, it becomes your duty to acquit.

In conclusion, gentlemen, allow me to caution you against any hasty or passionate discussion of the evidence, but coolly, calmly reason, one with another, to the end that your minds may reach a common conclusion, for it is not the judgment of any one of your number that we seek. It is the united wisdom and judgment of you all. Bring to bear, therefore, in the consideration of this case, your cool, deliberate, judgment, and conscientiously answer the questions which are here propounded to you, by your verdict. In doing so, you will have discharged your duty as jurors.

I am requested, gentlemen, to charge, by counsel, the following, which I do charge, and that is: "In order to convict, the prosecution must show that some act, in furtherance of the alleged conspiracy, was done in Erie County."

I have already charged fully that there must be some overt act in order to carry out and complete the conspiracy, and I now charge further, that the act must be done in Erie County in order to entitle the criminal courts of this county to have jurisdiction.

Also, "that the alleged enticement of Miller was not such an act, because nothing in relation to that act was done in the county of Erie." That I refuse.

Also, "that there is no proof to sustain the allegation of maintaining false suits, as there was no proof of want of probable cause for those actions." That I charge.

I also charge you, gentlemen, that "a conspiracy merely to injure a private person by an act not unlawful in itself, does not come within the provisions of the statute forbidding conspiracy to injure trade and commerce."

I also charge that "the conspiracy to injure trade and commerce, which is condemned by the statute as a misdemeanor, must be an injury to public trade and commerce and must tend to injury of the public."

I also charge the following: "Unless the jury find both defendants concurred in a

criminal purpose, they must acquit both, even though they find one to have done wrong."

I charge that it takes two to make a conspiracy. One can not make a conspiracy.

There is one other charge which I make, "that the deposition of Hiram B. Everest is not evidence as against Charles M. Everest." That I charge.

The counsel for the defendants requested the court to charge that, in order to convict, the prosecution must show that some act in furtherance of the alleged conspiracy was done in the county of Erie. The court so charged. And, in the same connection, the counsel for the defendants requested the court to charge that the allege enticement of Miller was not such an act, because nothing in relation to that was done in the county of Erie. The court refused so to charge, and the counsel for the defendants excepted.

The defendants' counsel requested the court to charge the jury that since the evidence shows that Miller had distinctly decided to leave the employment of the Buffalo company before the conspiracy charge was formed, if it was formed, and before he entered such employment, there is no evidence to authorize a finding of any such enticement as constitutes an act in furtherance of the alleged conspiracy.

The court refused so to charge, and the defendants excepted.

The defendants' counsel requested the court to charge the jury that a conspiracy merely to injure a private person, by an act not criminal in itself, does not come within the statute forbidding a conspiracy to injure trade and commerce.

The court refused so to charge, and the defendants excepted.

The defendants' counsel excepted to that portion of the charge in which the court instructed the jury that the enticement of Miller, if proved, was such an overt act as would sustain a conviction, provided the same tended to injure trade and commerce.

The jury rendered a verdict of guilty against the defendants; and thereupon the defendants moved for a new trial, and the court suspended sentence on the verdict until the hearing and decision of such motion; and because none of the said exceptions so offered and made do appear upon the record of said trial, therefore, in the presence of the defendants, the said court has signed said exceptions according to the statute in such case made and provided.

Dated this 21st day of October, 1887.

ALBERT HAIGHT,  
*Justice Supreme Court.*

## EXHIBIT W.

CORY, April 29.

MILLER: Please call at my place at 8 this eve.; quite important.

F. SAXTON.

*Supreme Court, Erie County.*

BUFFALO LUBRICATING OIL COMPANY, LIMITED, }  
 vs. }  
 JOHN D. ARCHBOLD AND HENRY H. ROGERS, im- }  
 pleaded with others. }

The defendants answer the complaint herein as follows: The defendants admit that the plaintiff is a domestic corporation, duly organized in the year 1881, and having its place of business in the city of Buffalo and county of Erie; that its business was and is that of manufacturing and selling oil, especially that of refining crude petroleum, and manufacturing therefrom lubricating oils. That it was and is the owner of valuable lands and expensive buildings, and that it had and now has in its possession the means of manufacturing oils of a superior quality. The defendants admit that said business can only be carried on by means of complicated machinery and scientific processes, and that the plaintiff was and is obliged to employ in and about said business superintendents, workmen, and other laborers of more or less skill. The defendants admit that prior to July 1, 1881, the plaintiff had facilities to manufacture oil from crude petroleum, and that the defendants understood that prior to said date the plaintiff had facilities for manufacturing as aforesaid.

As to each and every allegation in the first paragraph of said complaint contained not hereinbefore specifically admitted the defendants deny any knowledge or information thereof sufficient to form a belief.

Second. The defendants admit that the Standard Oil Company of Ohio is a foreign corporation, organized under the laws of the State of Ohio, and doing business in the city of Cleveland; that it was and for many years had been such a corporation in the year 1881, and that its business was and is that of manufacturing the various illuminating products that may be made from crude petroleum; that the Acme Oil Company is a domestic corporation, which was organized prior to 1877, and still exists; that the president of the Acme Oil Company was and is John D. Archbold; that said Archbold is interested in the Standard Oil Company of Ohio; that the Vacuum Oil Company was and is a domestic corporation, located at and doing business in the city of Rochester, N. Y.; that it was organized about the year 1866, and has been doing business since that time, its business being the same as that of the plaintiff, but not the same as that of the Standard Oil Company and Acme Oil Company; that its principal organizer and promoter was Hiram B. Everest; that its capital stock consisted of one hundred shares, the majority of which were owned by the said Hiram B. Everest and Charles M. Everest, his son, prior to the year 1879; that the amount of money originally paid in by the stockholders of the Vacuum Oil Company for the purpose of furnishing buildings and machinery for doing business was about the sum of \$13,500. The defendants admit that in July, 1879, seventy-five shares of the stock of the Vacuum Oil Company were purchased by Archbold, Rogers, and McGregor, who soon after transferred the same to the same persons who hold and own a majority of the shares of stock of the Standard Oil Company, a corporation engaged in the manufacture and sale of oil; that the consideration for such transfer was the sum of \$200,000; that the persons who transacted the business on the part of the Vacuum Oil Company were the said Everests; that at the same time the Vacuum Oil Company hired the said Everests for five years, with the privilege of ten years, at a salary of \$10,000 per year, said salary being guaranteed by the Acme Oil Company, to manage the Vacuum Oil Company, it being understood that said \$10,000 per year should be divided between said Everests as they saw fit, the said Everests being bound by a contract with the said Acme Oil Company not to refine or manufacture petroleum or deal in any of the products of petroleum, except for and on account of the Vacuum Oil Company, for the period of ten years from the date of said contract; that since July, 1879, the said defendant, John D. Archbold, has taken part in the management of the Vacuum Oil Company, the said Everests remaining in control thereof; that the said Everests have since owned and now own a majority of the twenty-five shares of stock not transferred as aforesaid; that the Standard Oil Company of New York is a domestic corporation, organized August 1, 1882; that its business is similar to that of the Standard Oil Company of Ohio and the Acme Oil Company; that said Hiram B. Everest has been the president of the Vacuum Oil Company since 1879, and the said Charles M. Everest has been vice-president thereof. The defendants deny that since July, 1879, the said Vacuum Oil Company has ceased to be a competitor of the

said Standard Oil Company and Acme Oil Company. As to each and every allegation in the second paragraph of said complaint contained not hereinbefore specifically admitted the defendants deny any knowledge or information thereof sufficient to form a belief.

Third. The defendants deny each and every allegation contained in the third paragraph of said complaint.

Fourth. The defendants deny each and every allegation contained in the fourth paragraph of said complaint.

Fifth. The defendants deny each and every allegation in the fifth paragraph contained in relation to a conspiracy between these defendants, and deny each and every allegation of acts done, advised, or connived at by defendants as such conspirators. They admit that Albert A. Miller was a skilled workman, and allege that he and Charles P. Matthews and J. Scott Wilson had been employes of the Vacuum Oil Company and were acquainted with the patented and secret processes by which said company manufactured oils. These defendants were informed and believed that said parties conspired together to leave the employ of the Vacuum Oil Company and to organize the Buffalo Lubricating Oil Company, Limited, with the intent to illegally use such patented and secret processes, and these defendants, as directors of the Vacuum Oil Company, with the object of preventing the success of such conspiracy and the illegal use of such patented and secret processes, advised their codefendants, Hiram B. Everest and Charles M. Everest, also directors and the active managers of said company, to endeavor to retain the said Miller in the employment of the said company, and after Miller had left the employment of the Vacuum Oil Company, being informed that he was desirous of going back into its employment at increased wages, they further advised that he should be re-employed if it could be done by reasonable increase of his wages. They were afterwards informed that Miller had been re-employed. They further advised that actions at law should be instituted against the plaintiff to prevent infringement of the patents of the Vacuum Oil Company, fully believing and being advised by counsel that said actions were meritorious and just. They further admit that they advised an action to be brought against J. Scott Wilson, but deny that the action was of the nature or for the purposes in said complaint alleged, and they believed and were advised by counsel that said action was meritorious and just. As to the acts of Albert A. Miller and the effects thereof on plaintiff, and the effects of the action against J. Scott Wilson on plaintiff, they deny any knowledge or information thereof sufficient to form a belief. Except as above admitted, qualified, or explained, the defendants deny each and every allegation of of the complaint contained in paragraph fifth.

Sixth. Defendants deny each and every allegation in the sixth paragraph of said complaint contained.

Seventh. The defendants admit that the Vacuum Oil Company brought a suit in the United States circuit court against the plaintiff for the infringement of certain patents relating to the manufacture of oil; that said action was thereafter brought to trial, and that the court entered a decree dismissing the same with costs against the Vacuum Oil Company. As to whether or not the cost and expenses awarded the plaintiff by the decree in said action were totally inadequate to reimburse it for the expense to which it was put, and as to whether or not in defending said action plaintiff was put to an expense of \$3,000 and upwards, and was greatly annoyed and harassed, the defendants deny any knowledge or information thereof sufficient to form a belief. Except as above admitted, qualified, or explained, the defendants deny each and every allegation contained in the eighth paragraph of said complaint.

Eighth. The defendants admit that the Vacuum Oil Company, in or about the month of April, 1882, brought another action against the plaintiff, the bill in which was verified by the said Charles M. Everest, April 17, 1882, for the infringement of certain letters patent for apparatus relating to the manufacture of oil; that said action was thereafter brought to trial, whereupon the court ordered a decree dismissing the same with costs. As to whether or not over and above the costs awarded the plaintiff when said action was dismissed it was compelled to incur liabilities and expend moneys to a very large amount, and as to whether or not in the conduct of the defense to said suit plaintiff was compelled to expend about \$2,500, the defendants deny any knowledge or information thereof sufficient to form a belief.

Except as above admitted, qualified, or explained, the defendants deny each and every allegation of said complaint contained in the ninth paragraph thereof.

Ninth. The defendants deny each and every allegation contained in the eleventh paragraph thereof.

Tenth. The defendants, further answering said complaint, allege that on or about the 9th day of April, 1885, the Vacuum Oil Company, the plaintiff in the suit set forth in the ninth paragraph of said complaint, duly perfected an appeal to the Supreme Court of the United States from the decree of the circuit court thereof dismissing the bill in said suit, and the defendants allege that said suit in said ninth paragraph of the complaint set forth is still pending and undetermined.

Eleventh. The defendants, further answering said complaint, allege that the plaintiff, on the 21st day of September, 1881, for a consideration paid it by the said Albert A. Miller, in the ninth paragraph of the complaint mentioned, did release, acquit, and discharge the said Albert A. Miller of and from all liabilities, including his liability to it for any damages which it had sustained by reason of his leaving its employment, and did then release and discharge the said Albert A. Miller from its further employment.

Twelfth. The defendants, further answering said complaint, allege in defense and in abatement of this action, that at the commencement of this action there was and now is another action pending in the supreme court of this State, in and for the county of Erie, between the same parties as the parties to this action, except that the sole defendants in the former suit were and are Hiram B. Everest and Charles M. Everest, both of whom are made defendants herein, and for the same cause as that set forth in the complaint herein.

Wherefore the defendants demand judgment, that the plaintiff's complaint be dismissed with costs.

S. C. T. DODD,  
*Attorney for defendants, Archbold and Rogers, 26 Broadway, New York.*

STATE OF NEW YORK,  
*County of New York, ss :*

John D. Archbold, being duly sworn, says that he is one of the defendants above named; that the foregoing answer is true to the knowledge of the deponent, except as to the matters therein stated to be alleged on information and belief, and that as to those matters he believes it to be true.

JOHN D. ARCHBOLD.

Subscribed and sworn to before me, this 5th day of September, 1885.

[L. S.]

JAS. W. HALE,  
*Notary Public, New York County, 4 Hanover Street.*

STATE OF NEW YORK,  
*County of New York, ss :*

Henry H. Rogers, being duly sworn, says, that he is one of the defendants above named; that the foregoing answer is true to the knowledge of the deponent, except as to the matters therein stated to be alleged on information and belief, and that as to those matters he believes it to be true.

HENRY H. ROGERS.

Subscribed and sworn to before me, this 5th day of September, 1885.

[L. S.]

JAS. W. HALE,  
*Notary Public, New York County, 4 Hanover Street.*

STATE OF NEW YORK,  
*Erie County Clerk's Office, ss :*

I, Charles A. Orr, clerk of said county, do hereby certify that I have compared the annexed copy, answer, and copy indorsements thereon with an original and its indorsements entered and on file in this office, and find the same to be true transcripts of and from the said originals, and the whole of each thereof.

In witness whereof I have hereto set my hand and affixed the seal of said county, at Buffalo, this 18th day of July, 1888.

[SEAL.]

C. A. ORR,  
*Clerk.*
